Action: provide one of the expected arguments

ORA-32508: no such watchpoint id
Cause: invalid watchpoint id

Action: use oradebug show to list valid watchpoint ids

ORA-32509: watchpoint was already deleted
Cause: trying to delete an already deleted watchpoint

Action: use oradebug show to list valid watchpoint ids

ORA-32510: cannot create watchpoint on unreadable memory
Cause: trying to create watchpoint on invalid address

Action: provide a different valid address

ORA-32511: cannot create watchpoint in memory needed by watchpointing code
Cause: overlap exists between requested memory range to watch and internal memory structures that watchpointing operations need

Action: provide a different address range

ORA-32512: type '*string*' is unknown
Cause: trying to dump an invalid type name

Action: specify a known type

ORA-32514: cannot dump multiple '*string*' types: structure size is unknown
Cause: trying to dump an invalid address

Action: provide a different valid address

ORA-32515: cannot issue ORADEBUG command '*string*' to process '*string*'; prior command execution time exceeds *string* ms
Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command for a time greater than the timeout value specified.

Action: Increase the timeout value.

ORA-32516: cannot wait for process '*string*' to finish executing ORADEBUG command '*string*'; wait time exceeds *string* ms
Cause: The execution of the ORADEBUG command took longer than the the timeout value specified.

Action: Increase the timeout value.

ORA-32517: cannot issue ORADEBUG command '*string*' to process '*string*' (prior command execution time exceeds *string* ms); total wait time exceeds *string* ms
Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command. But, because the total wait time for all targeted processes exceeded the maximum wait time, the ORADEBUG command was not issued to the target process.

Action: Increase the timeout value.

ORA-32518: cannot wait for process '*string*' to finish executing ORADEBUG command '*string*' (waited *string* ms); total wait time exceeds *string* ms
Cause: The total wait time for all targeted processes exceeded the maximum wait time, therefore the wait for the targeted process to finish executing the ORADEBUG command was aborted.

Action: Increase the timeout value.

ORA-32519: insufficient privileges to execute ORADEBUG command: *string*
Cause: Sufficient privileges were not granted.

Action: Perform the operation using a database session that has the required privileges. See the Oracle ORADEBUG documentation for more details.

ORA-32520: error authenticating credentials
Cause: An error was encountered while authenticating credentials.

Action: Check the other error messages for additional information or contact Oracle Support Services.

ORA-32521: error parsing ORADEBUG command: *string*
Cause: An invalid ORADEBUG command was specified.

Action: Specify the correct ORADEBUG command and arguments.

ORA-32522: restricted heap violation while executing ORADEBUG command: [*string*] [*string*] [*string*]
Cause: An invalid memory heap was used in an ORADEBUG command.

Action: Try executing the ORADEBUG command in the current process or contact Oracle Support Services.

ORA-32523: watchpoint cannot be created in dynamic processes
Cause: An attempt was made to create a watchpoint in a process involving threads.

Action: Check the process mode or try creating watchpoints only in the static non-threaded processes.

ORA-32550: Replacement occured despite hint to the contrary
Cause: This should never be signalled; it's internal.

Action: Report to Oracle support.

ORA-32575: Explicit column default is not supported for modifying views
Cause: Default keyword was used to modify views.

Action: Use implicit default - omitting column-value pair.

ORA-32576: missing TYPE keyword
Cause: keyword TYPE is missing.

Action: Use TYPE keyword.

ORA-32577: username must be SYS or SYSTEM
Cause: A user name of SYS or SYSTEM was not specified when providing a password in the CREATE DATABASE statement.

Action: Only passwords for the SYS and SYSTEM users can be provided in the CREATE DATABASE statement. Re-issue the statement with passwords for users SYS or SYSTEM.

ORA-32578: password for SYS already specified
Cause: A password for the SYS user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYS user.

ORA-32579: password for SYSTEM already specified
Cause: A password for the SYSTEM user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYSTEM user.

ORA-32580: both SYS and SYSTEM passwords must be provided
Cause: Passwords for both the SYS and SYSTEM users were not provided in the CREATE DATABASE statement. If one of the passwords was provided, then both should be provided.

Action: Re-issue the CREATE DATABASE statement with a password for both the SYS and SYSTEM users.

ORA-32581: missing or invalid password
Cause: An incorrect password was provided for the SYS or SYSTEM user in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with a valid password.

ORA-32582: table function with left correlation to a table cannot also be left outer-joined to the table
Cause: A table function T2 contains a reference to a table T1. T2 is also left outer-joined to T1. This is not allowed.

Action: Remove the reference to T1 from T2 or remove the left outer-join specification (+).

ORA-32583: query passed to table function has wrong number of elements in select list
Cause: The query used as an input to a table function which takes a a ref cursor as argument has wrong number of elements in the select list which does not correspond to the elements in ref cursor. The ref cursor mentioned here refers to the one referenced in order by parition clauses. This is not allowed.

Action: Make sure that the select list of the query matches the ref cursor columns as defined in the function.

ORA-32584: missing LOG keyword
Cause: keyword LOG is missing.

Action: Use LOG keyword.

ORA-32585: duplicate specification of a supplemental log attribute
Cause: In a create/alter DDL a supplemental log attribute is specified more than once.

Action: Rewrite the Create/Alter DDL such that it has a single occurence of any supplemental log attribute.

ORA-32586: multiple specification of a supplemental logging attribute
Cause: The primary key, unique index, foreign key or all column supplemental logging attribute can be specified at most once in a create/alter ddl.

Action: Rewrite the Create/Alter DDL with single occurence of the offending supplemental logging attribute.

ORA-32587: Cannot drop nonexistent *string* supplemental logging
Cause: specified supplemental log attribute does not exist.

Action: None

ORA-32588: supplemental logging attribute *string* exists
Cause: specified supplemental logging attribute exits.

Action: retry the alter/create ddl after removing this supplemental logging attribute.

ORA-32589: unable to drop minimal supplemental logging
Cause: Minimal supplemental logging could not be dropped as one of primary key, foreign key, unique or all column supplemental logging is enabled at the database level.

Action: Use V$DATABASE to determine the databasewide supplemental logging directives. Minimal supplemental logging could be dropped if and only if no other databasewide supplemental logging directives are enabled.

ORA-32590: log group specification not allowed here
Cause: Supplemental log specification is not allowed in the statement.

Action: Remove the supplemental log specification from the statement.

ORA-32591: connect string too long
Cause: The connect string specified for the database link was more than 2000 characters.

Action: Specify a connect string less than 2000 chracters.

ORA-32592: all columns in log group can not be no log columns
Cause: A supplemental log group must have at least one column of scalar type that is not marked as no log.

Action: Redefine the supplemental log group with at least one column of scalar type that is not marked as no log.

ORA-32593: database supplemental logging attributes in flux
Cause: there is another process actively modifying the database wide supplemental logging attributes.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32594: invalid object category for COMMENT command
Cause: The object category specified is not a valid object for which to use the COMMENT command.

Action: Retry the COMMENT command by specifying an accepted object category. (ie, Table, Operator, Indextype, etc.)

ORA-32595: DDL statement cannot be audited with BY SESSION specified
Cause: An attempt was made to audit a DDL statement with BY SESSION clause specified. DDL statements can be audited BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION to audit the DDL statement.

ORA-32596: duplicate ALTER USER or CREATE USER option
Cause: An ALTER USER option was duplicated.

Action: Remove the duplicate option.

ORA-32597: database supplemental logging attributes inconsistent
Cause: failed to propogate supplemental logging attributes to all RAC instances. Most likely caused by an instance leaving the RAC while this DDL was in progress.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32598: user names cannot be changed in ALTER DATABASE LINK command
Cause: An attempt was made to change the fixed user name of the database link.

Action: None

ORA-32599: cannot create a view in SYS schema with V$ or GV$ name prefix
Cause: An attempt was made to create a view in SYS schema with V$ or GV$ name prefix, which is reserved for fixed views.

Action: Provide a different name for the view or use a different schema.

ORA-32600: RETENTION and PCTVERSION cannot be used together
Cause: cannot use both RETENTION and PCTVERSION together.

Action: Use either RETENTION or PCTVERSION.

ORA-32601: value for retention cannot be provided
Cause: cannot give a value for Retention Period.

Action: do not provide the value for parameter.

ORA-32602: FREEPOOLS and FREELIST GROUPS cannot be used together
Cause: cannot use both FREEPOOLS and FREELIST GROUPS together.

Action: Use either FREEPOOLS or FREELIST GROUPS.

ORA-32603: invalid FREEPOOLS LOB storage option value
Cause: The specified FREEPOOLS LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-32604: invalid REBUILD option
Cause: Keyword FREEPOOLS expected after the REBUILD keyword.

Action: User must specify FREEPOOLS keyword.

ORA-32605: invalid REBUILD option
Cause: cannot rebuild freepools while creating table with lob column.

Action: User must not specify REBUILD... in this context.

ORA-32606: missing NAV keyword in MODEL clause
Cause: The NAV keyword was not specified where it was expected.

Action: Specify the NAV keyword or check the SQL statement.

ORA-32607: invalid ITERATE value in MODEL clause
Cause: The specified ITERATE value must be a 4 byte positive integer.

Action: Choose an appropriate value and retry the operation.

ORA-32608: missing INCREMENT or DECREMENT keyword in FOR loop
Cause: INCREMENT or DECREMENT keyword was not specifiedi where it is expected.

Action: Specify the INCREMENT or DECREMENT keyword or check the SQL statement.

ORA-32609: missing REFERENCE keyword in MODEL clause
Cause: The REFERENCE keyword was not specified where it is expected.

Action: Specify the REFERENCE keyword or check the SQL statement.

ORA-32610: missing SINGLE REFERENCE or DIMENSION keyword in MODEL clause
Cause: SINGLE REFERENCE or DIMENSION keyword was not specified where it is expected.

Action: Specify the applicable keywords or check the SQL statement.

ORA-32611: incorrect use of MODEL CV operator
Cause: CV function was used outside a dimension expression, in UNTIL condition, or with non-dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32612: invalid use of FOR loop
Cause: The MODEL FOR loop was used where it is not allowed. FOR loops are not allowed in complex dimensional predicates, on the right hand side of rules, or in the until condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32613: not a MODEL cell
Cause: The operator requires a MODEL cell as operand.

Action: Specify MODEL cell as operand, check SQL statement.

ORA-32614: illegal MODEL SELECT expression
Cause: An expression other than MODEL aliases, constants, or expressions of the two is specified in the MODEL SELECT clause.

Action: Reformulate the query, perhaps nesting inside another SELECT.

ORA-32615: incorrect use of MODEL IS ANY predicate
Cause: IS ANY predicate is used outside dimension expression or with non-dimensional or different dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32616: missing DIMENSION BY keyword in MODEL clause
Cause: The DIMENSION keyword was not pecified where it is expected.

Action: Specify the DIMENSION keyword or check the SQL statement.

ORA-32617: missing MEASURES keyword in MODEL clause
Cause: The MEASURES keyword was not specified where it is expected.

Action: Specify the MEASURES keyword or check the SQL statement.

ORA-32618: incorrect use of MODEL PREVIOUS function
Cause: The MODEL PREVIOUS function was used outside of MODEL "ITERATE UNTIL" clause, or was nested.

Action: Check the SQL statement and rewrite if necessary.

ORA-32619: incorrect use of MODEL ITERATION_NUMBER
Cause: ITERATION_NUMBER was used outside of an iterated MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32620: illegal subquery within MODEL rules
Cause: A subquery was used illegally within the MODEL rule.

Action: Check the SQL statement and rewrite if necessary.

ORA-32621: illegal aggregation in UNTIL iteration condition
Cause: An aggregate function was used in UNTIL condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32622: illegal multi-cell reference
Cause: Multi-cell reference was specified on a measure expression without an aggregate function.

Action: Use an aggregate function on the measure expression or qualify the cell reference.

ORA-32623: incorrect use of MODEL PRESENT* functions
Cause: A PRESENT* function (IS PRESENT, PRESENTV, PRESENTNNV) was used in a measure expression.

Action: Check the SQL statement and rewrite if necessary.

ORA-32624: illegal reordering of MODEL dimensions
Cause: The expressions to qualify dimensions were specified in an incorrect order within a cell reference.

Action: Reorder dimension expressions in the cell reference.

ORA-32625: illegal dimension in cell reference predicate
Cause: A non-positional dimension was referenced in the predicate.

Action: Check the SQL statement and rewrite if necessary.

ORA-32626: illegal bounds or increment in MODEL FOR loop
Cause: FOR loop allows only numeric and datetime without timezone type for bounds. Only constants of interval and numeric types are allowed as increment/decrement expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32627: illegal pattern in MODEL FOR LIKE loop
Cause: The FOR LIKE pattern had zero or more than one wild characters.

Action: Simplify the pattern to have a single wildcard character.

ORA-32628: invalid nesting of MODEL cell reference
Cause: MODEL cell reference was nested too deeply.

Action: Avoid deep nesting of cell references and rewrite if necessary.

ORA-32629: measure used for referencing cannot be updated
Cause: A measure used in nested referencing is updated by a MODEL rule in the automatic order MODEL.

Action: Modify the SQL statement or use sequential order MODEL.

ORA-32630: multiple assignment in automatic order MODEL
Cause: A MODEL cell was updated on the same measure in multiple MODEL rules. Multiple assignment is not allowed in automatic order MODELs as it causes in ambiguity and nondeterminism.

Action: Use sequential order MODEL or rewrite the rule to avoid this.

ORA-32631: illegal use of objects in MODEL
Cause: An object column was used as a MODEL column. Object types are not allowed as partition by, dimension by or measure expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32632: incorrect subquery in MODEL FOR cell index
Cause: An illegal subquery was specified in MODEL FOR cell index. A subquery used in a MODEL FOR cell index can not have subqueries, correlation, binds and references to WITH tables.

Action: Check the SQL statement and rewrite if necessary.

ORA-32633: MODEL subquery FOR cell index returns too many rows
Cause: Subquery in MODEL FOR cell index returned more than the allowed maximum.

Action: Split the rule into multiple ones.

ORA-32634: automatic order MODEL evaluation does not converge
Cause: Evaluation using automatic rule ordering did not reach a convergence point.

Action: Modify the rules or use sequential order instead.

ORA-32635: not a single cell reference predicate
Cause: A predicate that is not a single cell reference predicate was specified where a single cell reference predicate was expected. A single cell reference predicate is either a constant expression or a predicate of the form <dimension_key = constant_expr>

Action: Make sure that the predicate is a proper single cell reference. In some cases, you might have to put explicit type conversion operators (or casts) on the constant expression.

ORA-32636: Too many rules in MODEL
Cause: The number of rules (possibly after rule unfolding) exceeded the maximum number of rules allowed.

Action: Reduce the number of rules.

ORA-32637: Self cyclic rule in sequential order MODEL
Cause: A self-cyclic rule was detected in the sequential order MODEL. Sequential order MODELs cannot have self cyclic rules to guarantee that the results do not depend on the order of evaluation of the cells that are updated or upserted.

Action: Use ordered rule evaluation for this rule.

ORA-32638: Non unique addressing in MODEL dimensions
Cause: The address space defined for the MODEL (partition by and dimension by expressions) do not uniquely identify each cell.

Action: Rewrite the MODEL clause. Using UNIQUE SINGLE REFERENCE option might help.

ORA-32639: Aggregate functions on reference MODELs are not allowed
Cause: An aggregate function was specified on the cells of a reference MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32640: FOR LIKE loops are not allowed for multi-byte character types
Cause: FOR LIKE loops was specified for a multi-byte character type.

Action: Check the SQL statement and rewrite if necessary.

ORA-32641: invalid expression in MODEL rule ORDER BY clause
Cause: An invalid expression was specified in the MODEL rule ORDER BY clause where only expressions of dimension and measure columns and reference MODEL cell references are allowed

Action: Modify the order by clause in the MODEL rule.

ORA-32642: non-unique cell values from the ORDER BY clause
Cause: The MODEL rule ORDER BY clause did not generate unique values for all cells that satisfy the predicates in the left side of the rule.

Action: Modify the rule ORDER BY clause in the MODEL rule.

ORA-32643: invalid use of window function in MODEL rule
Cause: The window functions can not be used in SQL Model rules that have FOR-loops on the left side or aggregates on the right side.

Action: Modify the MODEL rule.

ORA-32644: this function is not allowed outside of MODEL clause
Cause: A function allowed only within the MODEL clause is used outside of MODEL clause.

Action: Rewrite the SQL statement.

ORA-32690: Hash Table Infrastructure ran out of memory
Cause: Not enough memory.

Action: Increase memory.

ORA-32695: HTI: Not enough memory
Cause: Memory is not enough.

Action: Increase memory.

ORA-32696: HTI: No free slot
Cause: There is not enough memory.

Action: Increase memory.

ORA-32700: error occurred in DIAG Group Service
Cause: An unexpected error occurred while performing a DIAG Group Service operation.

Action: Verify that the DIAG process is still active. Also, check the Oracle DIAG trace files for errors.

ORA-32701: Possible hangs up to hang ID=*string* detected
Cause: Hang Manager detected one or more hangs. These could be valid hangs that require action or the system could be overloaded causing very slow progress which can be interpreted as hangs. If hang resolution is enabled, Hang Manager may attempt to resolve the hang by terminating the ultimate blocker.

Action: Check the incident logs associated with this message for diagnostic information.

ORA-32702: Rolling migration is going on
Cause: DIAG detected rolling migration in IPC.

Action: No action needed. DIAG is shutting down for rolling migration. This error number is solely used for internal purposes.

ORA-32703: deadlock detected: *string*
Cause: Oracle sessions waiting for resources were deadlocked.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32704: Oracle RAC deadlock detected: *string*
Cause: Oracle sessions or processes using Global Enqueue Service were deadlocked waiting for resources.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32706: invalid parameter name or value for Oracle Hang Manager
Cause: An invalid parameter name or value was passed to the DBMS_HANG_MANAGER package when setting an Oracle Hang Manager parameter.

Action: Choose a documented parameter name and value.

ORA-32707: internal error of Oracle Hang Manager parameter management
Cause: An internal error was encountered while processing the Oracle Hang Manager parameter management request.

Action: Check the alert log file for error details.

ORA-32708: DBMS_HANG_MANAGER package not supported for this instance type
Cause: Oracle Hang Manager parameter management was not supported for this instance type.

Action: No action required.

ORA-32717: Hang Manager has reset session infrastructure
Cause: Dynamic sessions forced a session increment.

Action: No action required.

ORA-32730: Command cannot be executed on remote instance
Cause: DIAG is not registered with DIAG Group Service

Action: Issue the command without the cluster database syntax

ORA-32731: Another Parallel Oradebug session is in progress
Cause: Another session for Parallel Oradebug is in progress with the database

Action: Issue the command later when the current session finishes

ORA-32732: Parallel Oradebug session is aborted
Cause: Group reconfiguration is occurring among DIAGs

Action: Issue the command later when group reconfiguration completes

ORA-32733: Error occurred when executing Parallel Oradebug
Cause: Error is encountered during executing command at local node

Action: Check alert log and DIAG trace file for error detail

ORA-32734: Error occurred when sending Oradebug command to remote DIAGs
Cause: IPC communication problem encountered

Action: Check IPC communication between DIAGs and issue the command again

ORA-32735: DIAG process is not running in the instance
Cause: DIAG process is not alive

Action: Check error in DIAG trace file and issue the command again when DIAG is restarted

ORA-32736: Hang analysis aborted due to wrong message type
Cause: DIAG received wrong message.

Action: Check DIAG trace files for errors.

ORA-32737: Hang analysis aborted due to failed memory allocation
Cause: DIAG couldn't allocate buffer for remote copy.

Action: Check DIAG trace files for errors.

ORA-32738: Hang analysis aborted due to failed memory copy
Cause: DIAG couldn't copy buffer to remote node.

Action: Check DIAG trace files for errors.

ORA-32739: Hang analysis aborted due to failed heap re-grow
Cause: DIAG couldn't re-grow the heap for wait-for-graphs.

Action: Check DIAG trace files for errors.

ORA-32740: The requested operation cannot be proceeded
Cause: Operation was aborted because instance termination was in progress.

Action: Retry later after restarting the instance.

ORA-32741: Hang analysis already going on
Cause: Hang analysis was already in process globally or for the instance.

Action: Wait for the current operation to complete and re-run the command.

ORA-32742: Hang analysis initialize failed
Cause: Hang analyzer was not able to allocate memory to initialize.

Action: Check the trace files.

ORA-32743: command cannot be executed on remote instance
Cause: The database was not mounted in SHARED mode.

Action: Mount the database in SHARED mode.

ORA-32761: Turn off Temp LOB Ref Count Feature
Cause: None

Action: Turn off the whole temp lob ref count feature

ORA-32762: Turn on Temp LOB Ref Count Tracing
Cause: None

Action: Check Trace file for debug info

ORA-32763: Turn off N-Pass Temp LOB cleanup
Cause: None

Action: Facilitate debugging and testing

ORA-32766: instr with negative offset: use varchar semantics on LOBs
Cause: The current varchar behavior is different. e.g. instr('abcd', 'cd', -2, 1) returns 3, whereas instr(to_clob('abcd'), 'cd', -2, 1) returns 0, (i.e. no match), because the reverse search starts from offset -2, which points to 'c' and moving backward, i.e. 'd' is ignored. This is symmetric to instr('dcba','dc',2,1), which returns 0.

Action: ORACLE uses the same varchar semantics on LOBs (instr). Using the same example, instr(to_clob('abcd'), 'cd', -2, 1) will return 3 as in the varchar case.

ORA-32767: No server connection for this operation
Cause: The client side sql or plsql function operation requires a connection to the server, but currently no client/server connection existed.

Action: Establish a client/server connection.

ORA-32771: cannot add file to bigfile tablespace
Cause: An attempt was made to add the second file to a bigfile tablespace.

Action: Do not use this command with bigfile tablespace.

ORA-32772: BIGFILE is invalid option for this type of tablespace
Cause: An attempt was made to create a bigfile tablespace that is dictionary managed or locally managed with manual segment-space management.

Action: Either change the tablespace type to locally managed with automatic segment-space management, or create a SMALLFILE tablespace instead.

ORA-32773: operation not supported for smallfile tablespace *string*
Cause: An attempt was made to perform an operation which is supported only for bigfile tablespaces, e.g. resize tablespace.

Action: Use the appropriate clause of the ALTER DATABASE DATAFILE command instead.

ORA-32774: more than one file was specified for bigfile tablespace *string*
Cause: More than one datafile or tempfile was specified in CREATE TABLESPACE command for a bigfile tablespace.

Action: Change command to contain only one file or create a smallfile tablespace instead.

ORA-32775: cannot change size attributes of read only tablespace *string*
Cause: An attempt was made to change size attributes of a tablespace that is read only.

Action: Change the tablespace to read/write and retry the operation.

ORA-32776: Local temporary tablespaces are not allowed in a tablespace group.
Cause: An attempt was made to create or alter a tablespace group to contain a tablespace that is a local temporary tablespace.

Action: Use a tablespace that is not a local temporary tablespace or do not include this tablespace in a group.

ORA-32777: DDL operations are disabled on local temporary tablespaces FOR RIM.
Cause: A DDL operation on a local temporary tablespace FOR RIM was attempted in a system without any read-only running instances.

Action: Add at least one read-only instance to the cluster.

ORA-32778: DDL operations are disabled on local temporary tablespaces FOR LEAF.
Cause: A DDL operation on a local temporary tablespace FOR LEAF was attempted in a system without any read-only running instances.

Action: Add at least one read-only instance to the cluster.

ORA-32779: Operation is not allowed for the local temporary tablespace created FOR RIM or FOR LEAF.
Cause: Local temporary tablespace that was created using FOR RIM or FOR LEAF could not be used as the default local temporary tablespace.

Action: Use the local temporary tablespace that is created FOR ALL.

ORA-32781: Trace event for window functions
Cause: N/A

Action: Set this event only under the supervision of Oracle development. Trace level is a bitfield. LEVEL ACTION ---------- ---------- 0x0001 trace window functions after ordering semantics rewrite 0x0002 trace statistics collected for window functions 0x0004 trace ordering groups generated for window functions 0x0008 trace dynamic sampling statistics expressions 0x0010 trace messages for slave-2-QC communication 0x0020 trace window consolidation rows

ORA-32788: Operation is not allowed due to invalid or mismatched tablespace type.
Cause: Local temporary tablespace could not be used as the default temporary tablespace; Temporary tablespace could not be used as the default local temporary tablespace.

Action: Change the tablespace type and use the valid tablespace.

ORA-32790: Element '*string*' cannot share the default table '*string*' with element '*string*'
Cause: An element in the restriction shared a default table with the corresponding element in it's supertype.

Action: Change the default table's name for the element in restriction.

ORA-32791: prebuilt table managed column cannot have a default on null
Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column with a default on null expression.

Action: Either remove the default on null property, or do not include the column in the materialized view definition.

ORA-32792: prebuilt table managed column cannot be an identity column
Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column that is an identity column.

Action: Either remove the identity property, or do not include the column in the materialized view definition.

ORA-32793: cannot alter a system-generated sequence
Cause: An attempt was made to alter a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be altered.

ORA-32794: cannot drop a system-generated sequence
Cause: An attempt was made to drop a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be dropped.

ORA-32795: cannot insert into a generated always identity column
Cause: An attempt was made to insert a value into an identity column created with GENERATED ALWAYS keywords.

Action: A generated always identity column cannot be directly inserted. Instead, the associated sequence generator must provide the value.

ORA-32796: cannot update a generated always identity column
Cause: An attempt was made to update an identity column created with GENERATED ALWAYS keywords.

Action: A generated always identity column cannot be directly updated.

ORA-32797: identity column sequence mismatch in ALTER TABLE EXCHANGE PARTITION
Cause: The two tables specified in the EXCHANGE have identity columns with sequences that are neither both increasing nor decreasing.

Action: Ensure that the identity columns have sequences with INCREMENT BY having the same sign.

ORA-32798: cannot use ANSI RIGHT or FULL outer join with a left correlation
Cause: An attempt was made to use a lateral view with a left correlation to the first operand of an ANSI RIGHT or FULL outer join.

Action: Rewrite the query without the left correlation.

ORA-32799: cannot rename a system-generated sequence
Cause: An attempt was made to rename a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be renamed.

87
ORA-32800 to ORA-32857

ORA-32800: internal error *string*
Cause: An unexpected error occurred.

Action: Contact Oracle Support Services.

ORA-32801: invalid value *string* for *string*
Cause: An invalid value was specified for a parameter.

Action: Specify a valid value for the parameter.

ORA-32802: value for *string* must be *string*
Cause: An invalid value was specified for a parameter.

Action: Specify the value as indicated by the message.

ORA-32803: value for *string* cannot be altered
Cause: An attempt was made to alter a value that cannot be altered.

Action: Retry the operation without altering the indicated value.

ORA-32804: invalid value *string*, *string* should have form *string*
Cause: A value specified for a parameter has the incorrect form.

Action: Specify a string of the correct form.

ORA-32805: identifier for *string* too long, maximum length is *string* characters
Cause: An identifier string exceeded the maximum allowed length.

Action: Specify a string whose length is less than the maximum allowed length.

ORA-32806: value for *string* is too long, maximum length is *string*
Cause: A value exceeded it's maximum allowed length.

Action: Specify a value whose length is less than the maximum allowed length.

ORA-32807: message system link *string* already exists
Cause: A message system link of the specified name already exists.

Action: Specify a different name.

ORA-32808: message system link *string* does not exist
Cause: A message system link of the specified name does not exist.

Action: Specify a message system link name that already exists.

ORA-32809: foreign queue *string* is already registered
Cause: The foreign queue has already been registered for this message system link (NAME@MSGLINK).

Action: Specify a different name that is not being used for this message system link.

ORA-32810: foreign queue *string* is not registered
Cause: The foreign queue (NAME@MSGLINK) has not been registered for this message system link.

Action: Specify the name of a registered foreign queue.

ORA-32811: subscriber *string* already exists
Cause: The specified subscriber identifier already exists.

Action: Specify a different identifier.

ORA-32812: subscriber *string* does not exist
Cause: The specified subscriber identifier does not exist.

Action: Specify an existing subscriber identifier.

ORA-32813: propagation schedule *string* already exists
Cause: The specified propagation schedule identifer already exists.

Action: Specify a different identifier.

ORA-32814: propagation schedule *string* does not exist
Cause: The specified propagation schedule identifier does not exist.

Action: Specify a schedule identifier that already exists.

ORA-32815: message system link *string* is referenced by a foreign queue
Cause: An attempt was made to remove a message system link currently referenced by one or more registered foreign queues.

Action: Unregister all foreign queues using this message system link and retry the operation.

ORA-32816: foreign queue *string* is referenced by a subscriber or schedule
Cause: An attempt was made to unregister a foreign queue currently referenced by one or more subscribers or propagation schedules.

Action: Remove all subscribers and propagation schedules using this foreign queue and retry the operation.

ORA-32817: message system link *string* is not configured with a log queue for *string*
Cause: An attempt was made to add a propagation subscriber but the message system link was not configured with a log queue for the indicated propagation type.

Action: Alter the message system link to configure the link with a log queue for this propagation type.

ORA-32818: AQ queue *string* does not exist
Cause: An operation was attempted where the specified AQ queue does not exist.

Action: Specify the name of an existing AQ queue.

ORA-32819: AQ queue *string* must be a normal queue
Cause: An operation was attempted where the specified AQ queue exists but is not a normal queue.

Action: Specify the name of an AQ queue which was created as a normal queue (NORMAL_QUEUE).

ORA-32820: subscriber queue and exception queue must use same message system link
Cause: An operation was attempted for INBOUND propagation where the specified subscriber queue and exception queue reference different message system links.

Action: Specify an exception queue that is a registered foreign queue of the same message system link as the subscriber queue.

ORA-32821: subscriber queue and exception queue must have same payload type
Cause: An operation was attempted for OUTBOUND propagation where the AQ queues used for the subscriber queue and exception queue have different payload types.

Action: Specify an exception queue that has the same payload type as the subscriber queue.

ORA-32822: subscriber *string* is marked for removal
Cause: An administration operation was attempted for a subscriber which is marked for removal. If attempting to remove a subscriber, the Messaging Gateway agent is not running or is running but unable to remove the subscriber at this time.

Action: Do not issue propagation administration commands for a subscriber for which removal is pending. Wait for the subscriber to be removed by the agent or issue REMOVE_SUBSCRIBER with the FORCE option to force the subscriber to be removed.

ORA-32823: subscriber exists for queue *string* and destination *string*
Cause: An attempt was made to create a propagation subscriber when one already exists for the specified queue and destination pair.

Action: Specify a different queue and destination pair, or remove the subscriber using that pair and retry the operation.

ORA-32824: schedule exists for source *string* and destination *string*
Cause: An attempt was made to create a propagation schedule when one already exists for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the schedule using that pair and retry the operation.

ORA-32825: Messaging Gateway agent has not been started
Cause: An attempt was made to shut down the Messaging Gateway agent when it is not started.

Action: No action required.

ORA-32826: Messaging Gateway agent has already been started
Cause: An attempt was made to start the Messaging Gateway agent when it is already started.

Action: No action required.

ORA-32827: Messaging Gateway agent must be shut down
Cause: An operation was attempted that requires the Messaging Gateway agent to be shut down.

Action: Issue SHUTDOWN, wait for MGW_GATEWAY view to show a NOT_STARTED status, and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to shut down after a reasonable time period.

ORA-32828: Messaging Gateway agent must be running
Cause: An operation was attempted that requires the Messaging Gateway agent to be started and responsive.

Action: Issue STARTUP, wait for MGW_GATEWAY view to show a RUNNING status, and retry the operation.

ORA-32829: Messaging Gateway agent cannot be shut down while it is starting
Cause: An attempt was made to shut down the Messaging Gateway agent when it is in the process of starting and initializing.

Action: Wait for MGW_GATEWAY view to show a RUNNING status and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to start after a reasonable time period.

ORA-32830: result code *string* returned by Messaging Gateway agent
Cause: The Messaging Gateway agent terminated abnormally due to an unexpected error.

Action: Review the Messaging Gateway log file for further information regarding the problem. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32831: timed out trying to acquire administration lock
Cause: A timeout occurred when attempting an administration operation. Either an administration operation was attempted while the Messaging Gateway agent was starting and initializing, or two administration operations were attempted at the same time.

Action: Retry the operation. If the Messaging Gateway agent is starting, wait for MGW_GATEWAY view to show a RUNNING status and retry the operation.

ORA-32832: failure *string* trying to acquire administration lock
Cause: An unexpected error occurred trying to acquire administration lock.

Action: Retry the operation. Contact Oracle Support Services if the error persists.

ORA-32833: failure *string* trying to release administration lock
Cause: An unexpected error occurred trying to release administration lock.

Action: Contact Oracle Support Services if the error persists.

ORA-32834: Messaging Gateway agent user has not been set
Cause: A Messaging Gateway agent user has not been configured.

Action: Create a database user having role MGW_AGENT_ROLE and issue DB_CONNECT_INFO to configure an agent user.

ORA-32835: database user *string* does not exist
Cause: The specified database user does not currently exist.

Action: Create the user and grant all necessary privileges and roles.

ORA-32836: database user *string* must be granted role *string*
Cause: The specified database user does not have a required role.

Action: Grant the user the indicated role.

ORA-32837: invalid configuration state *string*
Cause: The specified configuration state is invalid.

Action: Remove and re-create the configured entities. Contact Oracle Support Services if the problem cannot be identified or resolved.

ORA-32838: exceeded maximum number of properties
Cause: An attempt was made to alter a property list where the number of properties in the resulting list exceeds the maximum allowed.

Action: Order the elements of the alter list differently so the number of elements in the resulting list is less than the maximum.

ORA-32839: property *string* is reserved, names with MGWPROP$_ prefix are not valid
Cause: An attempt was made to specify a reserved name for a property name.

Action: Use a non-reserved name.

ORA-32840: property name cannot be NULL
Cause: An attempt was made to use NULL for a property name.

Action: Specify a non-NULL name.

ORA-32841: invalid value for property *string*
Cause: An attempt was made to specify an invalid value for a property.

Action: Specify a valid property value.

ORA-32842: value for property *string* cannot be altered
Cause: An attempt was made to alter a property that cannot be altered.

Action: Retry the operation without altering the indicated property.

ORA-32843: value for *string* is outside the valid range of *string* to *string*
Cause: A value was specified that is not in the valid range.

Action: Specify a value within the indicated range.

ORA-32844: exceeded maximum number of *string* values
Cause: An attempt was made to add a value of the specified type but the maximum number of such values has been reached.

Action: No action required.

ORA-32845: Messaging Gateway agent is already running
Cause: An attempt was made to start the Messaging Gateway agent when an agent instance is already running.

Action: Shut down the Messaging Gateway agent currently running, verify the agent process has been terminated, and start the Messaging Gateway agent.

ORA-32846: Messaging Gateway agent cannot be started; status is *string*
Cause: An attempt to start the Messaging Gateway agent failed due to the indicated agent status. A BROKEN status indicates a problem that requires user intervention before the agent can be started.

Action: Review the MGW_GATEWAY view and the Messaging Gateway log file for further information. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32847: operation is not supported on this platform
Cause: An attempt was made to perform an operation that is not supported on this platform.

Action: Switch to a platform on which the operation is supported.

ORA-32848: foreign queue DOMAIN required for JMS unified connections
Cause: A DOMAIN was not specified when registering a foreign queue for a messaging system link that is configured to use the JMS unified messaging model.

Action: Specify a non-NULL value for the DOMAIN parameter.

ORA-32849: *string* cannot be set unless *string* is set
Cause: An attempt was made to specify a value for a parameter that cannot be set unless an associated parameter is also set.

Action: Specify a valid value for both parameters, or, do not specify a value for either parameter.

ORA-32850: agent *string* does not exist
Cause: The specified Messaging Gateway agent name did not exist.

Action: Specify an existing agent name.

ORA-32851: agent *string* already exists
Cause: The specified Messaging Gateway agent name already existed.

Action: Specify a different agent name.

ORA-32852: agent *string* is referenced by a message system link
Cause: An attempt was made to remove a Messaging Gateway agent currently referenced by one or more message system links.

Action: Remove all message system links associated with this agent and retry the operation.

ORA-32853: propagation job *string* does not exist
Cause: The specified propagation job identifier did not exist.

Action: Specify an existing identifier.

ORA-32854: propagation job *string* already exists
Cause: The specified propagation job identifier already existed.

Action: Specify a different identifier.

ORA-32855: propagation job *string* is marked for removal
Cause: An administration operation was attempted for a propagation job which is marked for removal. If attempting to remove a job, the Messaging Gateway agent is not running or is running but unable to remove the job at this time.

Action: Do not issue propagation administration commands for a job for which removal is pending. Wait for the job to be removed by the agent, or, issue REMOVE_JOB with the FORCE option to force the job to be removed.

ORA-32856: operation not supported for propagation job
Cause: An attempt was made to perform an operation that was not supported for a propagation job.

Action: Perform the operation using a propagation job procedure.

ORA-32857: propagation job exists for source *string* and destination *string*
Cause: An attempt was made to create a propagation job, subscriber, or schedule when a propagation job already existed for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the propagation job using that pair and retry the operation.

88

ORA-33000 to ORA-37999

ORA-33000: (AGOPEN00) AGGMAP *workspace object* cannot be accessed because it was compiled by a more recent version of *string*.
Cause: The AGGMAP was already compiled by a more recent version of the product than was being used to execute this command.

Action: Recompile the AGGMAP in the current version.

ORA-33002: (XSAGDNGL00) In AGGMAP *workspace object*, the FLOOR argument of *number* must be less than the CEILING argument of *number*.
Cause: The user specified a floor argument greater than the ceiling argument.

Action: Adjust the floor and ceiling arguments so that the floor is less than the ceiling.
OBSOLETE, please remove this

ORA-33003: (XSAGDIMDROP) *workspace object*, to be transformed during data load, must be a base dimension and not otherwise referenced in the AGGMAP.
Cause: The user tried to specify a dimension in a dataflow-related clause in an aggmap which is already in another RELATION statement, DIMENSION statement, or possibly dimensioning the AGGMAP, or they specified a composite or conjoint dimension, or an object which is not a dimension

Action: Remove the conflicting reference or specify a valid object

ORA-33004: (XSAGDNGL01) *workspace object* is not a relationship array.
Cause: A RELATION clause in the AGGMAP named a workspace object that is not a relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33005: (XSAGDIMBREAK) Invalid breakout for dimension *workspace object*.
Cause: The user specified something that was not a valid dimension or relation on a BREAKOUTDIM line in an aggmap. This might be because the object was not a valid relation, was not over the specified dimension or was multidimensional

Action: Use a valid relation instead

ORA-33006: (XSAGDNGL02) The relation *workspace object* is not related to itself.
Cause: A relation was named in a RELATION clause of the AGGMAP that is not a self-relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33007: (XSAGPVAR) *workspace object* may only be used as one of: an OPERATOR, ARGS, or FROMVAR variable.

ORA-33008: (XSAGDNGL03) The relation *workspace object* is not a relation over a base dimension of AGGMAP *workspace object*.
Cause: A relation was named in a RELATION clause of the AGGMAP that is not a relation for a base dimension of the AGGMAP.

Action: Name a valid self-relation in the RELATION statement, that is, one that has a dimension that dimensions the AGGMAP.

ORA-33009: (XSAGDNGLPREC) In AGGMAP *workspace object*, PRECOMPUTE may only be specified either for the entire AGGMAP or for individual RELATION statements.
Cause: PRECOMPUTE was specified both as a line in the AGGMAP and on at least one of the RELATION lines, or it was specified more than once as a line of the AGGMAP.

Action: Remove either the PRECOMPUTE line, or the PRECOMPUTE specification for all of the RELATION lines.

ORA-33010: (XSAGDNGL04) Relation *workspace object* is duplicated in the AGGMAP *workspace object*.
Cause: Two RELATION statements in the AGGMAP reference the same relation object.

Action: Remove the duplicate RELATION statement.

ORA-33012: (XSAGDNGL05) AGGMAP *workspace object* contains invalid syntax.
Cause: A line in the AGGMAP contains invalid syntax.

Action: Change the line to have valid syntax.

ORA-33014: (XSAGDNGL06) In AGGMAP *workspace object*, variable operator *workspace object* cannot be dimensioned by rollup dimension *workspace object*.
Cause: Operator variables cannot have the rollup dimension as one of their base dimensions.

Action: Modify the definition of the operator variable so that the current rollup dimension is not one of its bases.

ORA-33016: (XSAGDNGL07) In AGGMAP *workspace object*, *workspace object* is not a valid operator or variable name.
Cause: An invalid argument was supplied to the OPERATOR clause in the relation statement.

Action: Fix the OPERATOR clause so that it specifies either a valid variable name or a valid operator.

ORA-33018: (XSAGDNGL08) In AGGMAP *workspace object*, the data type of *workspace object* must be TEXT, not *string*.
Cause: An operator variable was supplied whose data type is not TEXT.

Action: Change the operator clause to reference a TEXT variable.

ORA-33022: (XSAGDNGL10) The measure dimension *workspace object* must be a TEXT or ID base dimension that does not dimension AGGMAP *workspace object*, but is in the same analytic workspace.
Cause: A MEASUREDIM was supplied in the AGGMAP that was not acceptable.

Action: Modify the MEASUREDIM clause to specify a valid dimension.

ORA-33024: (XSAGDNGL11) AGGMAP *workspace object* contains duplicate information.
Cause: The aggmap contains multiple instances of a clause that can only be specified once.

Action: Remove the extra clause.

ORA-33026: (XSAGDNGL12) In AGGMAP *workspace object*, *workspace object* is not a valid valueset.
Cause: A line in the AGGMAP contains an invalid element where a valid valueset is required.

Action: Change the line to have a valid valueset.

ORA-33028: (XSAGDNGL13) In AGGMAP *workspace object*, *workspace object* should be scalar, not a dimensioned valueset.
Cause: A line in the AGGMAP contains a dimensioned valueset where a scalared valueset is required.

Action: Change the line to have a scalar valueset.

ORA-33030: (XSAGDNGL14) In AGGMAP *workspace object*, you can have either a single independent PROTECT statement or PROTECT statements in your RELATION statements.
Cause: The AGGMAP either specified multiple PROTECT statements not on a RELATION line, or specified PROTECT statements both independently and on RELATION lines.

Action: Correct the AGGMAP to have valid syntax.

ORA-33032: (XSAGDNGL15) In AGGMAP *workspace object*, VALUESET *workspace object* must be in extra dimensions of the relation.
Cause: The RELATION phrase contains a VALUESET which is not over the extra dimension of the RELATION.

Action: Correct the RELATION phrase to contain a valueset over the extra dimension or not to contain any valueset.

ORA-33034: (XSAGDNGL16) In AGGMAP *workspace object*, VALUESET *workspace object* in PRECOMPUTE phrase must be in the self dimension of the relation.
Cause: The precompute phrase contains a valueset which is not over the self dimension of the relation.

Action: Correct the relation phrase to contain a valueset over the self dimension or not to contain any valueset.

ORA-33036: (XSAGDNGL17) ARGS option *workspace object* must be a TEXT variable.
Cause: An ARGS value had a non-text data type.

Action: Use a text variable for ARGS.

ORA-33038: (XSAGDNGL18) In AGGMAP *workspace object*, RELATION *workspace object* contains hierarchy dimensions that are also dimensions of the AGGMAP.
Cause: Hierarchy dimensions(extra dimensions) of a RELATION in the AGGMAP are base dimensions of the AGGMAP.

Action: Correct the RELATION not to have hierarchy dimensions(extra dimensions) which are also base dimensions of the AGGMAP.

ORA-33040: (XSAGDNGL19) In AGGMAP *workspace object*, VALUESETS *workspace object* and *workspace object* are both over the same hierarchy dimension.
Cause: Two or more different VALUESETs over the same hierarchy dimension are used in the AGGMAP.

Action: Use the same VALUESET for two RELATION phrases or use two different VALUESETs over two different hierachy dimensions.

ORA-33042: (XSAGDNGL20) In AGGMAP *workspace object*, VALUESET *workspace object* must qualify all relations dimensioned by *workspace object*.
Cause: A VALUESET over a hierarchy dimension qualifies some RELATIONs but not all RELATIONs dimensioned by the same hierarchy dimension.

Action: Use the same VALUESET to qualify all the RELATIONs dimensioned by the same hierarchy dimension.

ORA-33044: (XSAGDNGL21) AGGREGATE operator *string* requires a WEIGHTBY clause, but the ARGS clause in AGGMAP *workspace object* did not specify one.
Cause: The user used an operator which needs weight values but not provided the weight values.

Action: Provide weight values using a WEIGHTBY cluase.

ORA-33045: (XSAGDNGL51) The AGGREGATE operator *string* does not require a weight, but ARGS clause in AGGMAP *workspace object* specified *workspace object* as a weight.
Cause: The ARGS variable specified a weight even though one is not needed.

Action: Modify the ARGS variable so that it does not specify a weight for that operation.

ORA-33046: (XSAGDNGL22) In AGGMAP *workspace object*, you can specify only one SCREENBY clause.
Cause: The AGGMAP contained multiple SCREENBY clauses.

Action: Remove one of the SCREENBY clauses from the AGGMAP.

ORA-33048: (XSAGDNGL23) In AGGMAP *workspace object*, the relation *workspace object* and the relation *workspace object* are both over the same base dimension.
Cause: The AGGMAP contains incompatible RELATION statements.

Action: Remove one of the RELATION statements from the AGGMAP.

ORA-33050: (XSAGDNGL24) AGGMAP *workspace object* cannot be used to aggregate *workspace object*, because it is defined in a different analytic workspace.
Cause: The user attempted to aggregate a variable in another analytic workspace.

Action: Create an AGGMAP in the other analytic workspace to aggregate that variable.

ORA-33052: (XSAGDNGL25) AGGMAP *workspace object* is a dimensioned AGGMAP; it can only be used to aggregate like-dimensioned variables.
Cause: The user attempted to aggregate a variable with different dimensions than the AGGMAP. This is only possible with undimensioned AGGMAPs.

Action: Create a new undimensioned AGGMAP.

ORA-33058: (XSAGDNGL28) In AGGMAP *workspace object*, error code *string* is greater than the maximum error code of *number*.
Cause: The user specified an invalid ERRORMASK value.

Action: Remove the invalid value from the ERRORMASK list.

ORA-33060: (XSAGDNGL29) In AGGMAP *workspace object*, the value for the ERRORLOG MAX option must be greater than 0.
Cause: The user specified an ERRORLOG MAX of 0 or a negative number.

Action: Adjust the AGGMAP so that it uses a positive number.

ORA-33062: (XSAGDNGL30) In ALLOCMAP *workspace object*, WEIGHTBY option *workspace object* must be a numerical VARIABLE or FORMULA.
Cause: The WEIGHTBY clause requires numerical VARIABLE or FORMULA but the user used invalid objects.

Action: Correct the WEIGHTBY cluase to use a valid numerical VARIABLE or FORMULA.

ORA-33064: (XSAGDNGL31) In AGGMAP *workspace object*, the hierarchy dimension QDR *workspace object* cannot refer to the related dimension of the relation.
Cause: The user specified an invalid hierarchy dimension qualified data reference.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33066: (XSAGDNGL32) In AGGMAP *workspace object*, the hierarchy dimension QDR *workspace object* must be a hierarchy dimension of the relation.
Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33068: (XSAGDNGL33) In AGGMAP *workspace object*, the hierarchy dimension QDR over dimension *workspace object* must specify a positive dimension offset.
Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33070: (XSAGDNGL34) In AGGMAP *workspace object*, all QDRs of dimension *workspace object* must map to the same dimension position.
Cause: The user specified two conflicting hierarchy dimension qualified data references.

Action: Adjust the AGGMAP so that it uses a consistent qualified data reference.

ORA-33072: (XSAGDNGL35) In AGGMAP *workspace object*, the hierarchy dimension QDR over dimension *workspace object* must be specified for every relation dimensioned by that hierarchy dimension.
Cause: Multiple dimensions share the same hierarchy dimension, but it is only qualified within a subset of the AGGMAP relations.

Action: Adjust the AGGMAP so that it uses consistent qualified data references.

ORA-33074: (XSAGDNGL36) In AGGMAP *workspace object*, the offset *number* is not a valid offset into dimension *workspace object*.
Cause: The hierarchy dimension offset is an invalid dimension position.

Action: Adjust the AGGMAP so that it uses valid qualified data references.

ORA-33076: (XSAGDNGL37) In AGGMAP *workspace object*, the value '*number*' is not a valid value of dimension *workspace object*.
Cause: The hierarchy dimension offset is an invalid dimension position.

Action: Adjust the AGGMAP so that it uses valid qualified data references.

ORA-33078: (XSAGDNGL39) In AGGMAP *workspace object*, the hierarchy dimension QDR *workspace object* must refer to a dimension.
Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33080: (XSAGDNGL40) In AGGMAP *workspace object*, you cannot reference dimension *workspace object* with both a RELATION statement and a DIMENSION statement.
Cause: The user included both RELATION and DIMENSION statements in the AGGMAP referring to the same AGGMAP.

Action: Remove one of the conflicting clauses.

ORA-33082: (XSAGDNGL41) In AGGMAP *workspace object*, the non-dimensioned valueset *workspace object* must have a parent QDR in its VALUESET statement over the VALUESET's base dimension.
Cause: The VALUESET statement specified a scalar valueset but did not include a qualified data reference to specify the parent.

Action: Add a qualified data reference specifying the parent to the VALUESET statement.

ORA-33084: (XSAGDNGL42) In AGGMAP *workspace object*, you cannot qualify the dimensioned valueset *workspace object*.
Cause: The VALUESET line referred to a dimensioned valueset.

Action: Use a non-dimensioned valueset to limit the status of the dimensioned one.

ORA-33086: (XSAGINIT01) AGGMAP *workspace object* cannot be dimensioned by a conjoint dimension.
Cause: The specified AGGMAP was dimensioned by a conjoint dimension.

Action: Use the CHGDFN command to change the conjoint to a composite dimension.

ORA-33088: (XSAGINIT03) You do not have read permission for AGGMAP object *workspace object*.

ORA-33090: (XSAGINIT05) You must have read permission for *workspace object* to use AGGMAP *workspace object*.

ORA-33092: (XSAGCOMP04) *number* is not the name of a MODEL in any attached analytic workspace.
Cause: An invalid model name was attached to an AGGMAP.

Action: Remove the model from the AGGMAP or create a model with that name.

ORA-33094: (XSAGGMAPLIST01) Your expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.
Cause: formulas likely refer to each other recursively or with a great deal of depth.

Action: eliminate recursion and flatten formula trees.

ORA-33098: (APABBR01) A value of '%V' is not valid for the *workspace object* option.
Cause: An inappropriate value was specified for the named option.

Action: Set a legal value for the option.

ORA-33100: (APABBR02) Value '*number*' is not valid for the *workspace object* option.
Cause: An inappropriate value was specified for the named option.

Action: Set a legal value for the option.

ORA-33106: (APESCBAS01) '*string*' is not a valid value for the ESCAPEBASE option. Valid values are 'd' and 'x'.

ORA-33108: (APFTMAX01) MAXFETCH must be between 1,000 and 2,147,483,647.

ORA-33110: (APXPKTSZ01) XAPIBUFFER must be between 1,000 and 64,512.

ORA-33112: (APFTBUFF01) FETCHBUFFER must be between 1,000 and 64,512.

ORA-33114: (APLIKESC01) *string* is not a valid value for the LIKEESCAPE option because it is more than one character long.

ORA-33116: (APMSTYPE00) MODSIMULTYPE must be either AITKENS or GAUSS.

ORA-33118: (APMTOLER00) Value *number* is out of range for MODTOLERANCE.

ORA-33120: (APMOVFLO00) Value *number* is out of range for MODOVERFLOW.

ORA-33122: (APMGAMMA00) MODGAMMA must be a whole number greater than or equal to zero.

ORA-33124: (APMITERS00) MODMAXITERS must be a whole number greater than zero.

ORA-33126: (APMDAMPF00) MODDAMP must be greater than or equal to zero and less than one.

ORA-33128: (APMERROR00) MODERROR must be either STOP, CONTINUE, or DEBUG.

ORA-33130: (APMERROR01) The current connection type does not support interactive debugging.

ORA-33132: (APPGMGR00) The *workspace object* option value must be between 0 and *number*.

ORA-33134: (APSORTBUFSZ01) The value of SORTBUFFERSIZE must represent a number between 0 and *number*. You supplied *number*.

ORA-33136: (APSPARSX01) The value of SPARSEINDEX cannot be a multi-line string.

ORA-33138: (APSPARSX02) The value '*number*' is not valid for SPARSEINDEX.

ORA-33140: (AUTOCOMP1) *workspace object* is being compiled automatically.

ORA-33141: (XSAWFREEZE1) The analytic workspace *string* is already frozen.
Cause: Attempting to freeze an AW when it is already frozen

Action: Thaw the AW before freezing it again.

ORA-33142: (BADSYN00) The format of the *string* command is incorrect.

ORA-33143: (XSAWFREEZE2) The analytic workspace *string* must be attached RW or RX.
Cause: The AW must be updatable to change the freeze state

Action: Reattach AW before freezing or thawing it again.

ORA-33144: (BADSYN01) The format of the *string* command is incorrect.

ORA-33145: (XSAWFREEZE3) Cannot rollback analytic workspace *string*; generations are in use.
Cause: One or more generations due to be destroyed as part of a rollback to freeze command are currently in use.

Action: Get sessions using those generations to detach the AW.

ORA-33146: (BINENG00) The width argument for binary conversion can only be specified for INTEGER and BOOLEAN data.

ORA-33147: (XSAWFREEZE4) The analytic workspace *string* is not frozen.
Cause: You are attempting to "rollback to freeze" an AW that is not frozen.

Action: Only execute this command on a frozen AW.

ORA-33148: (BINENG01) The width argument for binary conversion must be 1, 2, or 4.

ORA-33150: (BOOLTOK01) *string* is not a Boolean.

ORA-33152: (CDELETE03) The *workspace object* dimension does not have a value at position *number*.

ORA-33154: (CFINDVAL01) The *workspace object* dimension does not have identifiers.

ORA-33156: (CFINDVAL02) exceeds 263.**

ORA-33158: (CGETPOS02) The *workspace object* dimension does not have a value numbered *number*.

ORA-33160: (CGETSEQ02) The *workspace object* dimension does not have a value at position *number*.

ORA-33162: (CGFIN00) principal-value

ORA-33164: (CGFIN01) asset-value

ORA-33166: (CGFIN02) The number of periods of the *string* function cannot be dimensioned by time.

ORA-33168: (CGFIN03) The salvage value argument of the *string* function must be dimensioned by the time dimension.

ORA-33170: (CGFIN04) The decline factor argument of the *string* function cannot be dimensioned by the time dimension.

ORA-33172: (CGFIN05) The portion argument of the *string* function cannot be dimensioned by time.

ORA-33174: (CGFIN06) The switch period argument of the DEPRDECLSW function cannot be dimensioned by time.

ORA-33176: (CGMCALC01) The member list expression in aggregation phrase *number* is multidimensional.

ORA-33178: (CGMCALC02) *workspace object* appears as the dimension of more than one member list expression.

ORA-33180: (CGMCALC03) WEIGHTBY can only be specified for the AVERAGE aggregation method.

ORA-33182: (CGMCALC04) The base measure expression is not dimensioned by *workspace object*.

ORA-33184: (CGMCALC05) A valueset argument to MCALC must have one dimension and be a valueset of the same dimension.

ORA-33186: (CGMODSET01) The ACROSS option is not supported in model equations.

ORA-33188: (CGMODSET02) The left-hand side of an equation involves the *workspace object* dimension, whereas the '*number*' term on the right-hand side involves *workspace object*.

ORA-33190: (CGMODSET03) An internal error caused the model assignment code generator to be called, but no MODEL is currently being compiled.

ORA-33192: (CGTCVT00) TCONVERT requires an argument dimensioned by time.

ORA-33194: (CGTCVT01) The argument to TCONVERT cannot be dimensioned by more than a single time dimension.

ORA-33196: (CGTCVT03) Invalid conversion method for TCONVERT.

ORA-33198: (CGTCVT04) The two conversion methods requested of TCONVERT are incompatible.

ORA-33200: (CGTCVT05) You cannot convert by both DAY and PERIOD. You must use one or the other.

ORA-33202: (CGTCVT06) The breakout dimension *workspace object* is not a time dimension.

ORA-33204: (CGTCVT07) In converting data from time dimension *workspace object* to *workspace object* using TCONVERT, a conversion direction must be given.

ORA-33206: (CGTCVT08) It is not possible to convert data dimensioned by *workspace object* to be dimensioned by *workspace object*.

ORA-33208: (CGTDF00) You can only find the start or end of a time period.

ORA-33210: (CGTDF01) The argument of the BEGINDATE or ENDDATE function must be dimensioned by exactly one time dimension.

ORA-33213: (CINSERT06) The target position for MAINTAIN ADD or MAINTAIN MOVE cannot fall in the range of session-only values.
Cause: The user specified a BEFORE or AFTER clause specifying a position in the range of SESSION dimension values.

Action: Do not use a position clause, or specify a position before the first SESSION value.

ORA-33214: (CINSERT02) The *workspace object* dimension is too large.
Cause: The dimension has too many values.

Action: Deleted values can still take up space in the dimension and cause this error. Try removing the deleted values by exporting the dimension to EIF and reimporting it with the REPLACE DELETE option.

ORA-33215: (CINSERT07) You cannot add session-only values to the *workspace object* dimension.
Cause: The user tried to add a SESSION dimension value while a spreadsheet spreadsheet cursor was open.

Action: Try adding the SESSION value while the cursor is not active.

ORA-33216: (CINSERT03) The *workspace object* dimension does not have a value numbered *number*.

ORA-33217: (CINSERT20) Custom member values cannot be added to concat dimension *workspace object*, or to any of its bases, because it is not defined as UNIQUE.
Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-33218: (CINSERT04) %K is not a valid value for the *workspace object* dimension. Values for this dimension can have at most *number* significant digits after rounding to *number* decimal places.
Cause: The user attempted to insert a value that had too many digits into a NUMBER dimension. For instance, the user might have tried to insert the value 99999 (5 digits) into a dimension with data type NUMBER(4).

Action: Use a smaller number for the dimension value, or define a new dimension with a larger precision and replace the old dimension with the new one.

ORA-33219: (CINSERT05) %K cannot be added to *workspace object* because it is already a value of the dependent UNIQUE concat dimension *workspace object*, from leaf dimension *workspace object*.
Cause: A value cannot be added to a dimension if it conflicts with an existing value in a unique concat dimension containing this dimension.

Action: The concat(s) causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be renamed to make them UNIQUE.

ORA-33220: (CLOPEN01) The time dimension *workspace object* cannot be accessed because it consists of time periods not recognized in this release of *string*.

ORA-33222: (CLOPEN02) The dimension *workspace object* cannot be accessed because it was created by an incompatible version of *string*.

ORA-33223: (CMOVE03) You cannot move a session-only dimension value.
Cause: The user named a SESSION dimension value in the MAINTAIN MOVE command.

Action: Do not try to MAINTAIN MOVE session-only dimension values.

ORA-33224: (CMOVE02) The *workspace object* dimension does not have a value at position *number*.

ORA-33226: (COLDEL01) The starting column must be between 1 and the maximum width of a text value (*number*). You cannot start removing at column *number*.

ORA-33228: (COLDEL02) The columns to be removed must be between 1 and the maximum width of a text value (*number*). You cannot remove column *number*.

ORA-33230: (COLDEL03) The number of columns to be removed must be greater than zero. You cannot remove *number* columns.

ORA-33232: (COLEXTR01) The starting column must be between 1 and the maximum width of a text value (*number*). *number* is out of range.

ORA-33234: (COLEXTR02) The columns to be extracted must be between 1 and the maximum width of a text value (*number*). You cannot extract column *number*.

ORA-33236: (COLEXTR03) The number of columns to be extracted must be greater than or equal to zero. You cannot extract *number* columns.

ORA-33238: (COLINS01) The starting column must be between 0 and the maximum width of a text value (*number*). You cannot start inserting at column *number*.

ORA-33240: (COLREP01) The starting column must be between 1 and the maximum width of a text value (*number*). You cannot start replacing at column *number*.

ORA-33242: (COMPOSITE01) *workspace object* is a dimension composite and does not have position numbers that can be used in this context.

ORA-33243: (XSDPART51) *workspace object* is a PARTITION TEMPLATE and does not have position numbers that can be used in this context.

ORA-33244: (CRENAME01) The *workspace object* dimension does not have a value at position *number*.

ORA-33246: (CRENAME02) The *workspace object* dimension does not have identifiers that can be renamed.

ORA-33247: (CRENAME03) %K is already a value of the dependent UNIQUE concat dimension *workspace object*, from leaf dimension *workspace object*.
Cause: A value cannot be renamed in a dimension if the new value conflicts with an existing value in a unique concat dimension containing this dimension.

Action: The concat(s) causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be changed to make them UNIQUE.

ORA-33248: (CTDDEL04) Deletions from time dimension *workspace object* must occur at either end. *number* values were not deleted.

ORA-33250: (CTDINSRT00) You attempted to add a value that was outside the allowable range of dates for time dimension *workspace object*.

ORA-33252: (CTXENG00) The CONTEXT name cannot be NA.

ORA-33254: (CTXENG01) CONTEXT '*number*' already exists.

ORA-33256: (CTXENG02) CONTEXT '*number*' does not exist.

ORA-33258: (CTXENG03) *workspace object* has not been saved in CONTEXT '*number*'.

ORA-33260: (DIMSHOW01) Partition *number* does not exist.
Cause: The DIMSHOW command specified a nonexistent partition.

Action: Specify the name of an existing partition, or remove the PARTITION qualification from the DIMSHOW command.

ORA-33261: (DIMSHOW02) A partition name may be specified only for a partitioned variable.
Cause: A PARTITION qualification was provided for an object other than a partitioned variable.

Action: Remove the PARTITION qualification.

ORA-33262: (DBERR01) Analytic workspace *string* does not exist, or you do not have sufficient privileges to access it.
Cause: The analytic workspace requested does not seem to be in the current database

Action: Check that you are in the correct schema and have access to the requested AW.

ORA-33263: Could not create analytic workspace *string*
Cause: A serious error was encountered while trying to set up the tables for the named analytic workspace. Possible causes for this error include: - A tablespace that cannot be written to. - Corrupt metadata about which analytic workspace exist. - Table names that the code cannot use. - There are remains of a partially removed analytic workspace.

Action: There should be another error on the error stack. Consult this error to determine what is causing the problem and remove that table.

ORA-33264: (DBERR02) Analytic workspace *string* cannot be accessed because it has been damaged or belongs to an incompatible version of *string*.

ORA-33265: (DBERRBSZ) Analytic workspace *string* cannot be opened. Tablespace blocksize *number* does not match database cache size *number*.
Cause: The blocksize of the containing tablespace didn't match database cache size.

Action: Change either size to make them consistent, or set olap_page_pool_size to 0 to allow automatic OLAP pool management when compatibility is greater than 10.2.

ORA-33266: (DBERR03) Analytic workspace *string* cannot be accessed because it was last modified by an incompatible version of *string*.

ORA-33267: (DBERRRLS) Analytic workspace *string* cannot be accessed because it has fine-grained access control applied to it
Cause: An attempt was made to access the specified analytic workspace's LOB table. The OLAP option detected the table had fine-grained security applied to it. The OLAP option requires full access to this table to operate correctly.

Action: Remove the fine-grained access control.

ORA-33268: (DBERRTHW) Analytic workspace *string* cannot be attached with the THAW option because it was frozen with the NOTHAW option
Cause: An attempt to attach the AW using the thaw option was made; the AW was frozen using the NOTHAW option.

Action: Either attempt the command again without the THAW option.

ORA-33269: while operating on '*string*'
Cause: Error is raised to inform user what object was being worked on when an error occurred during the creation of an AW. It should always be signaled with 33263

Action: See error#33263

ORA-33270: (DBERR05) Analytic workspace *string* already exists.
Cause: The AW CREATE command was passed the name of an analytic workspace that already exists

Action: Specify a different name.

ORA-33271: simulated paging error
Cause: This is an internal error that should never be seen

Action: Contact Oracle technical support

ORA-33272: (DBERR06) Analytic workspace *string* cannot be opened.

ORA-33273: (XSCHKRLS01) Analytic workspace *string* has open cursors and cannot be detached.
Cause: A session attempted to detach an analytic workspace while there are cursors open against it.

Action: Close the open cursor before attempting to close the analytic workspace.

ORA-33274: (DBERR07) Timed out while trying to lock analytic workspace *string* for *string*.
Cause: A lock operation that was supposed to happen very quickly was taking too long. It can be due to another session being stopped while holding that lock, another session crashing while holding that lock, or an internal error.

Action: If another session is stopped, resume that session to let it release the lock. If another session has crashed, wait for a few minutes while PMON or SMON process is recovering that lock. Contact Oracle OLAP Support if none of the situations above apply.

ORA-33275: Autonomous transaction query of an UPDATEd analytic workspace is not supported
Cause: The user made attempt to reference an anayltic workspace that has uncommited updates within an autonomous query.

Action: Either COMMIT or ROLLBACK your uncommited changes, or don't use an autonomous transaction.

ORA-33276: (DBERR08) Another user has analytic workspace *string* attached.

ORA-33277: Could not upgrade analytic workspace *string*.*string*
Cause: A serious error was encountered while trying to alter the tables for the named analytic workspace. Possible causes for this error include: - A tablespace that cannot be written to. - Corrupt metadata about which analytic workspace exist. - Table names that the code cannot use. - There are remains of a partially removed analytic workspace.

Action: There should be another error on the error stack. Consult this error to determine what is causing the problem and remove that table.

ORA-33278: (DBERR09) Analytic workspace *string* cannot be attached in RW or EXCLUSIVE mode until the changes made and updated in MULTI mode are committed or rolled back.
Cause: There are still changes to this analytic workspace that were updated and not committed when the workspace was attached in MULTI mode.

Action: Either try attaching the workspace is RO or MULTI mode or commit or roll back the transaction before trying to attach the workspace in RW or EXCLUSIVE mode.

ORA-33279: (DBERRDDP) Analytic workspace *string* cannot be accessed because the AWLOB column has deduplication enabled.
Cause: An attempt was made to access the specific LOB table of the analytic workspace. The OLAP option detected that the LOB column has deduplication enabled. The OLAP option does not support LOB deduplication.

Action: Alter the table to disable LOB deduplication.

ORA-33280: (DBERR10) Analytic workspace *string* cannot be attached in MULTI mode until the changes made and updated in RW or EXCLUSIVE mode are committed or rolled back.
Cause: There are still changes to this analytic workspace that were updated and not committed when the workspace was attached in RW or EXCLUSIVE mode.

Action: Either try attaching the workspace is RO, RW, or EXCLUSIVE mode or commit or roll back the transaction before trying to attach the workspace in MULTI mode.

ORA-33281: Analytic workspace *string* cannot be modified during a Data Guard rolling upgrade.
Cause: An attempt was made to attach the specified analytic workspace for write while the instance was in the middle of a Data Guard rolling upgrade. The Oracle OLAP option does not support this.

Action: Delay the modifications until after the rolling upgrade completes.

ORA-33282: (DBERR11) Cannot wait for analytic workspace *string* to become available since doing so would cause a deadlock.
Cause: Trying to wait for the workspace to become available caused a deadlock.

Action: Release an analytic workspace that some other user might be waiting for before proceeding to attach this analytic workspace in this mode.

ORA-33284: (DBERR12) Analytic workspace *string* cannot be opened in MULTI mode before converting it by the latest version of *string*.
Cause: The AW is stored in 9i format.

Action: Convert the AW to a later format

ORA-33285: This operation is not permitted on analytic workspaces.
Cause: An attempt was made to directly modify the contents of a table containing an analytic workspace.

Action: Do not modify the table directly; let the OLAP option modify it.

ORA-33286: (DBERR14) The specified access mode for analytic workspace *string* is invalid.

ORA-33287: This DDL operation is not allowed on table "*string*"."*string*"
Cause: A DDL operation was attempted on an analytic workspace table.

Action: No action required. Many DDL operations on analytic workspace tables are restricted to Oracle only.

ORA-33288: (DBERR15) Another user has incompatible access to analytic workspace *string*, and the wait timeout has expired.
Cause: An attempt to access an analytic workspace conflicted with another user's access, and the timeout specified has elapsed.

Action: Wait until the conflicting user is done.

ORA-33289: The Flashback Table operation is not supported on OLAP analytic workspace tables.
Cause: An attempt was made to perform the Flashback Table operation on a table containing an analytic workspace, which is not allowed.

Action: Do not perform a Flashback Table operation on analytic workspace tables.

ORA-33290: (DBERR17) Analytic workspace *string* cannot be attached in the mode you requested because another user has it attached in an incompatible mode.
Cause: An attempt to access an analytic workspace conflicted with another user's access, and no timeout was specified

Action: Wait until the conflicting user is done.

ORA-33291: (DBERRSYNC) Analytic workspace *string* cannto be attached RW until a RESYNC command has brought it up to the current generation.
Cause: Another session has updated the analytic workspace since it was attached in the current session.

Action: Execute a RESYNC AW command to bring the analytic workspace up to the most recent version.

ORA-33292: An attached analytic workspace is blocking this command.
Cause: An attempt was made to drop a tablespace containing an analytic workspace that is currently attached.

Action: Detach the analytic workspace before dropping the tablespace.

ORA-33293: There are OLAP cubes and dimensions referencing an analytic workspace in the tablespace.
Cause: An attempt was made to drop a tablespace containing an analytic workspace that is referenced by OLAP cube and dimension objects.

Action: Drop the OLAP cube and dimension objects before dropping the tablespace.

ORA-33294: (DBERR19) Analytic workspace *string* cannot be created, deleted, or renamed while flashback mode is in effect.

ORA-33295: (DBERR20) An attached analytic workspace is blocking this command.
Cause: A table cannot be dropped because an analytic workspace based on this table is being attached.

Action: Look up the session in question in GV$AW_OLAP and kill it.

ORA-33296: (DBERR21) Analytic workspace *string* can only be attached RO while tablespace *string* is READONLY.
Cause: The underlying tablespace of the analytic workspace is in READONLY status.

Action: Attach the analytic workspace in RO mode or alter the tablespace.

ORA-33297: (DBERR22) Analytic workspace *string* cannot be opened because it was last modified by an incompatible version of *string*.
Cause: The user attempted to attach an old OLAP Services analytic workspace that cannot be converted by this version of OLAP Services.

Action: Either create a new analytic workspace or try using a version of OLAP Services compatible with the one that created this analytic workspace.

ORA-33298: (AWUPG01) Analytic workspace *string* is already in the newest format allowed by the current compatibility setting
Cause: User ran the DBMS_AW.CONVERT procedure on an analytic workspace that was created in or previously upgraded to the current compatibility mode.

Action: If upgrading the analytic workspace is necessary, upgrade the database instance and then re-run DBMS_AW.CONVERT. If the new features offered by upgrading the analytic workspace are not required, then no action is needed.

ORA-33299: Please use DBMS_AW.AW_RENAME to rename this table.
Cause: This table is part of an analytic workspace, and the OLAP option needs to control the rename of the table.

Action: use the OLAP option to rename the table.

ORA-33300: (DBERRPLAT) Analytic workspace *string* encountered an error that may indicate that it was created on a different platform.
Cause: An attempt to transport an analytic workspace from a different platform failed.

Action: Transport the analytic workspace using a supported method, either by using export/import or by rebuilding it using an XML template.

ORA-33301: Unsupported ALTER TABLE operation attempted on analytic workspace table "*string*"."*string*"
Cause: An attempt was made to modify an analytic workspace table using the ALTER TABLE statement.

Action: The OLAP option can manage the table.

ORA-33302: (DBVALID01) SEVERE ERROR: Record *number* multiply used.
Cause: The AW VALIDATE command has detected an error in the structure of the analytic workspace. This error will result in the corruption of one or more objects

Action: Export what you can of the analytic workspace.

ORA-33303: Operation disallowed on OLAP analytic workspace table "*string*"."*string*".
Cause: An attempt was made to perform an operation on an analytic workspace table that was not allowed.

Action: Do not perform the action on the table.

ORA-33304: (DBVALID02) Note: Record *number* was allocated but not used. This can result in wasted space.
Cause: This is a benign message. The AW VALIDATE command found an analytic workspace has some inaccessible space.

Action: Either nothing, or export and recreate the analytic workspace

ORA-33305: (DBVALID06) Note: Record *number* was allocated but not used. This can result in wasted space. (PS *number*)
Cause: This is a benign message. The AW VALIDATE command found an analytic workspace has some inaccessible space.

Action: Either nothing, or export and recreate the analytic workspace

ORA-33306: (DBVALID03) The AW VALIDATE command cannot be used with read-only analytic workspace *string*.
Cause: The AW VALIDATE command does not support read-only access.

Action: Attach the analytic workspace read/write and try again.

ORA-33307: An attempt was made to rename OLAP analytic workspace table to an illegal name
Cause: An attempt was made to rename an OLAP analytic workspace table to a name that did not start with "AW$" or contained characters that can occur only in quoted identifiers, which are not supported by the OLAP DML.

Action: Do not rename the OLAP AW table to a nonsupported name.

ORA-33308: (DBVALID04) SEVERE ERROR: Record *number* used but not allocated
Cause: The AW VALIDATE command has detected a problem that will result in corruption of the analytic workspace. There is no corruption yet.

Action: Export and recreate the analytic workspace.

ORA-33309: (DBVALID05) SEVERE ERROR: Record *number* used but not allocated (PS *number*)
Cause: The AW VALIDATE command has detected a problem that will result in corruption of the analytic workspace. There is no corruption yet.

Action: Export and recreate the analytic workspace.

ORA-33310: (DECIMAL) The number of decimal places must be between *number* and *number*, or *number*. It cannot be *number*.

ORA-33311: The schema cannot be specified when renaming an analytic workspace.
Cause: An attempt was made to rename an analytic workspace that was not in the user's schema. This is not allowed.

Action: Connect as the owner of the analytic workspace to rename it or use DBMS_AW.AW_COPY to move it.

ORA-33312: (DELDENT01) *workspace object* cannot be deleted while there are objects dimensioned by it, or formulas, programs, valuesets, or relations that use it.

ORA-33313: (DELDENT05) *workspace object* cannot be deleted because it is the target of an external partition of a partitioned variable.
Cause: User attempted to delete a variable, but some partitioned variable was defined to use that variable as the target of one of its external partitions.

Action: DELETE the partitioned variable or CHGDFN DROP PARTITION the the external partition from the partitioned variable, then delete the target variable.

ORA-33314: (DELDENT02) *workspace object* cannot be deleted while it is executing.

ORA-33315: (XSDELDENTANON) You cannot delete *workspace object* while looping over unnamed composite *workspace object*.
Cause: While looping over the named anonymous composite, an attempt was made to delete an object which is dimensioned by it.

Action: Delete the object outside of a loop over the dimension.

ORA-33316: (DELDENT03) You cannot delete *workspace object* because you do not have PERMIT permission for it or it is readonly.

ORA-33318: (DELDENT04) The variable *workspace object* cannot be deleted while its NA trigger is executing.

ORA-33320: (DNAMELEN00) The object name *string* has more than *number* characters.

ORA-33324: (DOSCMD01) The current directory is *string*.

ORA-33325: (DOSCMD02) Current directory alias is not set.

ORA-33332: (DSSEXIST01) Use the AW command to establish a current analytic workspace. Then start your current activity again.
Cause: There is no currently active analytic workspace. The command that generated the error requires an active analytic workspace to operate on.

Action: Execute an AW ATTACH or AW CREATE command to establish an active workspace.

ORA-33334: (DSSEXIST04) Analytic workspace *string* is not attached.
Cause: The specified analytic workspace is currently not attached to the session, or the name is misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name .

ORA-33336: (DSSEXIST04A) Analytic workspace *string* is not attached.
Cause: The specified analytic workspace is currently not attached to the session, or the name is misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name .

ORA-33338: (DSSEXIST05) You cannot specify the EXPTEMP analytic workspace.
Cause: The command requires a non-temporary analytic workspace to operate on.

Action: Specify an analytic workspace other than EXPTEMP.

ORA-33339: You cannot detach analytic workspace *string*. It is in use by an API branch.
Cause: The OLAP API is in a branch, and you are not allowed to detach the AW while the branch is active.

Action: End the branch before detaching the AW.

ORA-33340: (DTINFRMT00) A format cannot be an empty string.

ORA-33342: (DTINFRMT01) '*number*' is not a valid format for a *string* value because it has a single angle bracket > that is not part of a field specification.

ORA-33344: (DTINFRMT02) '*number*' is not a valid format for a *string* value because an angle bracket < cannot be the last character.

ORA-33346: (DTINFRMT03) '*number*' is not a valid format for a *string* value because '*string*' is an unrecognized specification.

ORA-33348: (DTINFRMT04) *number* is not a valid format because the B specifier cannot be used with a date.

ORA-33350: (DTINFRMT05) '*number*' is not a valid format because the '*string*' specification cannot be used with a date.

ORA-33352: (DTINFRMT06) '*number*' is not a valid format for a *string* value because the B specifier cannot be used with a period field.

ORA-33354: (DTINFRMT07) '*number*' is not a valid format because the *NAME* specification can only be used once.

ORA-33356: (DTINFRMT08) '*number*' is not a valid VNF format because it contains an ordinal specification.

ORA-33358: (DTINFRMT09) '*number*' is an ambiguous VNF format. The '*string*' specification must be followed by a space or separation character.

ORA-33360: (DTINFRMT10) '*number*' is not a valid VNF format because at least two of the specifications are of the same type.

ORA-33362: (DTINFRMT11) '*number*' is not a valid VNF format because it does not contain enough fields to match one of the defined VNF templates.

ORA-33364: (DTINFRMT12) '*number*' is not a valid VNF format because it contains more information than is allowed.

ORA-33366: (DTINFRMT13) '*number*' is not a valid format for a *string* value because the '*string*' specification has no closing angle bracket >.

ORA-33368: (DTINFRMT14) '*number*' is not a valid format for a *string* value because it contains more than one line of text.

ORA-33370: (DTTOVC01) Unable to print dates longer than *number* characters.

ORA-33372: (DUPCLCHK01) *workspace object* appears more than once in the dimension list.

ORA-33374: (DUPCLCHK02) *workspace object* appears more than once in the dimension list. (It is also a base dimension of *workspace object*.)

ORA-33376: (DUPCLCHK03) *workspace object* and *workspace object* cannot both appear in a dimension list because they share at least one base dimension (*workspace object*).

ORA-33381: (EIFEXPRT20) You cannot EXCLUDE bases from *workspace object*, because it is not a concat dimension.

ORA-33382: (EIFEXPRT01) You cannot export two objects with the same name (*string*).

ORA-33383: (EIFEXPRT21) You cannot EXCLUDE *workspace object* because it is not a base of *workspace object*.

ORA-33384: (EIFEXPRT02) You cannot rename a dimension (*workspace object*) when you export it.

ORA-33385: (EIFEXPRT22) You cannot EXCLUDE *workspace object*, because it is not a dimension.

ORA-33386: (EIFEXPRT03) The expression beginning with *string* has no data type.

ORA-33387: (EIFEXPRT23) EXCLUDE or EXCLUDING can only be used following the name of a concat dimension.

ORA-33388: (EIFEXPRT04) The expression beginning with *string* has too many dimensions.

ORA-33389: (EIFEXPRT24) Concat dimension *workspace object* has *number* bases. You cannot EXCLUDE more than *number* of them.

ORA-33390: (EIFEXPRT05) There are no objects to export.

ORA-33391: (EIFEXPRT25) concat dimension *workspace object* has only 1 base, which cannot be EXCLUDED.

ORA-33392: (EIFEXPRT07) SCATTER name *workspace object* must be a text variable of one dimension shared with the expression.

ORA-33393: (EIFIMPRT01) Object *string* exists in both the EIF file and the current analytic workspace.
Cause: An object with the given name was found in both the EIF file and the current analytic workspace.

Action: Rename the object in the analytic workspace that is causing the name conflict. If the object named in the error message belongs to a cube or a cube dimension, rename that cube or cube dimension.

ORA-33394: (EIFEXPRT08) SCATTER type *workspace object* must be a text variable with the same dimension as the name.

ORA-33396: (EIFEXPRT09) The SCATTER expression must have at least two dimensions and be numeric if TYPE is given.

ORA-33398: (EIFEXPRT10) The SCATTER type value must be INTEGER, SHORTINTEGER, SHORT, or DECIMAL, not *number*.

ORA-33400: (EIFEXPRT11) The scatter name value *number* is not a valid EIF object name.

ORA-33402: (EIFEXPRT12) You cannot export an unnamed dimension composite by itself, but only with an object dimensioned by it.

ORA-33404: (EIFEXPRT13) The format for exporting an expression is:\n EXPORT expression AS name

ORA-33406: (EIFEXPRT14) *workspace object* is not a legal name for an EIF file object.

ORA-33408: (EIFEXPRT15) You cannot use the SCATTER AS syntax because EIFVERSION is set to *number*, and that version cannot import scattered objects.

ORA-33409: (EIFEXPRT16) Cannot use the FULLMAPID or RELATIVEMAPID syntax because NOAPI has been specified.
Cause: An attempt was made to specify FULLMAPID or RELATIVEMAPID syntax with the NOAPI option.

Action: Either specify the API option instead of NOAPI, or remove the FULLMAPID or RELATIVEMAPID option.

ORA-33413: (EIFMAKEF01) You cannot export compressed composite *workspace object* because one of its bases has limited status or a PERMIT READ restriction.
Cause: Export of a compressed composite to an EIF file or lob failed because one or more of the bases had some values that were not in the current status. This can be caused either by a LIMIT command or a PERMIT READ restriction on the dimension.

Action: Either set the base dimensions' statuses to ALL and remove their PERMIT READ programs, or export using the NOAGGR keyword.

ORA-33416: (EIFPATHLIST) You tried to set EIFEXTENSIONPATH to one or more illegal path names.

ORA-33420: (EIFMAKEF03) The EXPORT command has terminated because of insufficient disk space. One or more files could not be created.

ORA-33422: (EIFMAKEF04) Due to insufficient disk space, the extension count of the EIF files(s) could not be recorded. To avoid any potential errors when the file is imported, DO NOT move, delete, or rename any of the EIF extension files. These are files of the form *string*.*string*, where %3p is the extension number. There are *number* such files.

ORA-33424: (EIFMAKEF05) *workspace object* cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33425: (EIFMAKEF15) CAUTION: Exporting NTEXT objects using *string* for the EIF file character set can cause loss of data. To preserve all NTEXT data, export using the UTF8 character set for the EIF file.
Cause: The user exported an object with data type NTEXT, but the EIF file that will result from the EXPORT command is not written in Unicode. Because no non-Unicode file can represent all possible Unicode data, it is possible that some data will be lost when converting from the Unicode NTEXT object to the EIF file. The EIF file will be written in the character set indicated by the "nls_charset" argument of the EXPORT command, or, if no such argument is present, in the database character set.

Action: If the user is certain that the contents of the NTEXT object can be represented in the specified character set, then no action is necessary. Otherwise, the user can add "nls_charset 'UTF8'" to the EXPORT command string. This will result in the EIF file being written in UTF8 Unicode, which can represent all the data contained in NTEXT objects.

ORA-33426: (EIFMAKEF06) The expression named *string* cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33427: (EIFMAKEF16) CAUTION: NTEXT object *workspace object* will be exported with type TEXT.
Cause: User attempted to export an object whose data type is NTEXT, but but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The object will be exported as a TEXT object instead.

Action: No action needed.

ORA-33428: (EIFMAKEF07) One or more SCATTER AS expressions cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33429: (EIFMAKEF17) CAUTION: NTEXT expression will be exported with type TEXT.
Cause: User attempted to export an expression whose data type is NTEXT, but but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The expression will be exported as a TEXT object instead.

Action: No action needed.

ORA-33430: (EIFMAKEF08) *workspace object* cannot be exported because EIFVERSION is set to *number*, and that version does not use *string* objects.

ORA-33432: (EIFMAKEF09) You cannot use the name *string*, because EIFVERSION is set to *number*. That version does not allow object names longer than *number* bytes.
Cause: The object name was too long for the analytic workspace format represented by the current setting of the EIFVERSION option.

Action: Change the value of the EIFVERSION option, or remove the object from the list of objects to be exported.

ORA-33433: (EIFMAKEF09A) You cannot use the name *string*, because EIFVERSION is set to *number*. That version does not allow object names longer than *number* characters.
Cause: The object name was too long for the analytic workspace format represented by the current setting of the EIFVERSION option.

Action: Change the value of the EIFVERSION option, or remove the object from the list of objects to be exported.

ORA-33434: (EIFMAKEF10) You cannot export the AGGMAP object *workspace object* from this version of *string* to version 6.3. The internal format of an AGGMAP has changed too much.

ORA-33436: (EIFMAKEF11) You cannot write an EIF file using the *string* character set, because EIFVERSION is set to *number*. That version does not support that character set.

ORA-33438: (EIFSPARS00) *number* values of *workspace object* will be exported as NA, because they are not in the current status of its base dimensions.

ORA-33440: (EQUPDATE01) The expression for formula *workspace object* contains invalid syntax.

ORA-33442: (ESDREAD01) Discarding compiled code for *workspace object* because there is no NAME dimension.

ORA-33443: (ESDREAD14) Discarding compiled code for *workspace object* because analytic workspace *string* is not attached.
Cause: A program used an analytic workspace name in a qualified object name. The named analytic workspace is not attached at program run time.

Action: No action necessary. The program will be automatically recompiled. It is likely that the recompile will fail with an appropriate exception code, in which case the signaled condition should be corrected and the program re-run.

ORA-33444: (ESDREAD02) Discarding compiled code for *workspace object* because *number* could not be found.

ORA-33445: (ESDREAD15) Discarding compiled code for *workspace object* because *workspace object* and *workspace object*, which were not partition-dependent when the code was compiled, are now partition-dependent.
Cause: Two variables are "partition-dependent" if they share any external partition target variables, or if one is the target of an external partition of the other. If object names referred to non-partition-dependent variables at compile time but refer to partition-dependent variables in the run-time context, the OLAP DML program, formula, or model will be automatically recompiled.

Action: None needed.

ORA-33446: (ESDREAD03) Discarding compiled code for *workspace object* because *number* is now a *string*. It was another kind of object when the code was compiled.

ORA-33447: (ESDREAD16) Discarding compiled code for *workspace object* because *workspace object* and *workspace object*, which were partition-dependent when the code was compiled, are now not partition-dependent.
Cause: Two variables are "partition-dependent" if they share any external partition target variables, or if one is the target of an external partition of the other. If object names referred to partition-dependent variables at compile time but refer to non-partition-dependent variables in the run-time context, the OLAP DML program, formula, or model will be automatically recompiled.

Action: None needed.

ORA-33448: (ESDREAD04) Discarding compiled code for *workspace object* because *number* now has *string* data, whereas it had *string* data when the code was compiled.
Cause: The datatype of the specified variable has changed.

Action: None needed.

ORA-33449: (ESDREAD17) Discarding compiled code for *workspace object* because the partition method or partition dimension of *number* has changed since it was compiled.
Cause: The partitioning method (LIST, RANGE, or CONCAT) or the partition dimension of the partition template is sufficiently different from what it was when the code was compiled that the code must be recompiled.

Action: None needed.

ORA-33450: (ESDREAD05) Discarding compiled code for *workspace object* because *number* now has more or fewer dimensions than it had when the code was compiled.
Cause: The dimensionality of the specified object has changed.

Action: None needed.

ORA-33452: (ESDREAD06) Discarding compiled code for *workspace object* because *number* is now dimensioned by *workspace object*. It was dimensioned by *workspace object* when the code was compiled.
Cause: The dimensionality of the specified object has changed.

Action: None needed.

ORA-33454: (ESDREAD07) Discarding compiled code for *workspace object* because *number* is now *string workspace object*, whereas it was *string workspace object* when the code was compiled.
Cause: The specified object has changed.

Action: None needed.

ORA-33456: (ESDREAD08) Discarding compiled code for *workspace object* because *number* is a(n) *string*, which *string* did not expect to find in a compiled program.
Cause: The type of the specified object has changed.

Action: None needed.

ORA-33458: (ESDREAD09) Discarding compiled code for *workspace object* because *number* is now type *string*, whereas it was type *string* when the code was compiled.
Cause: The type of the specified object has changed.

Action: None needed.

ORA-33460: (ESDREAD10) Discarding compiled code for *workspace object* because object *workspace object* is not in analytic workspace *string*.
Cause: The specified object is not in the same analytic workspace it was in when the compiled object was compiled.

Action: None needed.

ORA-33462: (ESDREAD10A) Discarding compiled code for *workspace object* because object *number* is not in analytic workspace *string*.
Cause: The specified object was not in the same analytic workspace it was when the compiled object was compiled

Action: None needed.

ORA-33464: (ESDREAD11) Discarding compiled code for *workspace object* because two external objects that were different at compile time are now the same object (*workspace object*).

ORA-33466: (ESDREAD12) Discarding compiled code for *workspace object* because model dimension *number* is not in the same analytic workspace as solution variable *number*.

ORA-33468: (ESDREAD13) Discarding compiled code for *workspace object* because *number* is no longer a surrogate of dimension *workspace object*.
Cause: When the compiled code was saved, the specified object was a surrogate of a certain dimension. Now the specified object is a surrogate of a different dimension.

Action: No action needed; program automatically recompiles.

ORA-33472: (EXPCHECK1) The *workspace object* formula cannot be edited or compiled while it is executing.

ORA-33474: (EXPCOMP01) The calculation expression in formula *workspace object* contains a format error.

ORA-33475: (EXPCOMP02) Invalid expression.

ORA-33476: (EXPORT00) Target file (*string*) already exists. No data is being exported.

ORA-33478: (FCFINI02) Too many NA values exist in the input data; *string* cannot fill them all.

ORA-33480: (FCFINI04) An error occurred while filling in the NA values in the input data.

ORA-33482: (FCFINI05) Calculation of starting values and handling of NA values in the input data require at least two cycles of input data.

ORA-33484: (FCFINI06) An error occurred while calculating starting values for the smooth, trend, and seasonal series.

ORA-33486: (FCFINI07) *string* cannot calculate starting values from this input data.

ORA-33488: (FCFINI08) The forecast input has resulted in a divide-by-zero error in the calculation of the smoothed data series.

ORA-33490: (FCFINI09) The forecast input has resulted in a divide-by-zero error in the calculation of the seasonal index series.

ORA-33492: (FCINFO00) There is no saved forecast calculation for the INFO function to retrieve.

ORA-33494: (FCREATE01) File *string* is already open on file unit number *number*.

ORA-33508: (FILEREAD01) Fileunit *number* is invalid. FILEREAD and FILEVIEW can only access input files opened with the FILEOPEN function.

ORA-33510: (FILEREAD04) Unexpected EOF encountered in string while importing data.

ORA-33512: (FILESET01A) The value of the PAGESIZE option must be greater than the combined values of TMARGIN and BMARGIN.

ORA-33514: (FILESET02) The value of the TABEXPAND option must be between 0 and 100 inclusive. You specified *number*.

ORA-33516: (FILESET04) You can set the *string* attribute only if the fileunit is used exclusively for output.

ORA-33520: (FINENG01) The number of periods specified in the *string* function must be greater then 0 and less than or equal to *number*.

ORA-33522: (FINENG02) The second argument of the *string* function cannot be NA while the corresponding first argument is not NA.

ORA-33524: (FINENG03) Both the first and second arguments of the *string* function must be nonnegative.

ORA-33526: (FINENG04) An asset value cannot be NA when the corresponding salvage value is not NA.

ORA-33528: (FINENG05) The asset value must be greater than the salvage value.

ORA-33530: (FINENG06) The first period depreciation strategy argument of the *string* function cannot be NA.

ORA-33532: (FINENG07) The first period depreciation strategy argument of the *string* function must evaluate to the word FULL or HALF.

ORA-33534: (FINENG08) The rate argument of payment or interest function cannot be NA while the corresponding principal argument is not NA.

ORA-33536: (FINENG09) Both the principal and rate arguments of the payment and interest functions must be nonnegative.

ORA-33538: (FINENG10) An internal error (*number*) has occurred while evaluating an interest or payment function.

ORA-33540: (FINENG11) The decline-factor argument must be greater than 0.

ORA-33542: (FISOPEN01) A file identifier cannot exceed *number* characters.

ORA-33546: (FNAMEQRY01) You must specify a file unit number for the *string* option of FILEQUERY.

ORA-33554: (FORCHECK01) While looping over *workspace object*, you cannot change its status or contents.

ORA-33555: (FORCHECK03) While looping over alias dimension *workspace object*, you cannot change the contents of its base *workspace object*.

ORA-33556: (FORCHECK51) While looping over concat dimension *workspace object*, you cannot change the contents of its leaves.

ORA-33557: (MAINTCHK01) You cannot *string* values of dimension *workspace object* during a loop over it.
Cause: User tried to insert or delete a value of the specified dimension while some loop over that dimension was active. The loop could be an explicit FOR or ACROSS loop, or a natural expression evaluation or OLAP_TABLE loop. Also, it could be a loop over the dimension itself or over a derived dimension (like a composite or partition template) or dimension alias that includes it. The insert or delete could be explicitly caused by the MAINTAIN command. It is also possible that the user attempted to assign a value to a variable or partition dimensioned by a composite during a loop over that composite using a qualified data reference (QDR), and that the exception was generated by the engine's attempt to insert a new position in the composite to hold the new value.

Action: Move the dimension maintenance or QDR-based variable assignment outside the dimension loop.

ORA-33558: (LOCKCHECK01) The status or contents of the *workspace object* dimension cannot be changed while the LOCK_LANGUAGE_DIMS option is set to *value*.
Cause: A LIMIT or MAINTAIN was attempted on the named language dimension while the boolean option LOCK_LANGUAGE_DIMS was set to YES.

Action: SET LOCK_LANGUAGE_DIMS to NO and retry the MAINTAIN or LIMIT.

ORA-33560: (FORECAST00) The time dimension (*workspace object*) has no values in status. The forecast cannot be calculated.

ORA-33562: (FORECAST01) The forecast LENGTH must be an non-NA value that is greater than or equal to zero.

ORA-33564: (FORECAST02) Sum of forecast LENGTH and number of time dimension values in status equals *number*. The maximum is *number*.

ORA-33566: (FORECAST03) The values of ALPHA, BETA, and GAMMA must be greater than zero and less than or equal to one.

ORA-33568: (FORECAST04) The forecast PERIODICITY must be greater than or equal to 2.

ORA-33570: (FORECAST05) The forecast PERIODICITY must be less than or equal to the number of historical observations in the input data.

ORA-33572: (FORECAST07) In a forecast calculation, the time dimension (*number*) must have consecutive values in status.

ORA-33574: (FORECAST09) The forecast length extends beyond the end of the time dimension (*number*). Only *number* values will be calculated.

ORA-33576: (FORECAST10) The number of non-NA observations must be greater than 1 to calculate a TREND forecast.

ORA-33578: (FORECAST11) The number of positive observations must be greater than 1 to calculate an EXPONENTIAL forecast.

ORA-33580: (FORECAST12) The number of historical periods (*number*) exceeds the number of values in the current status of *workspace object* (*number*).

ORA-33582: (FORECAST13) The number of historical periods must be a non-NA value greater than zero.

ORA-33584: (FORECAST100) Forecasting Analysis

ORA-33586: (FORECAST101) Variable to Forecast:

ORA-33588: (FORECAST102) Forecast Dimension:

ORA-33590: (FORECAST103) Forecast Method:

ORA-33592: (FORECAST104) Mean Absolute Percent Error:

ORA-33594: (FORECAST105) Forecast Equation:

ORA-33596: (FORECAST106) No forecast values can be shown since no FCNAME variable was specified to hold the results of the forecast.

ORA-33598: (FORECAST107) Actual Value

ORA-33600: (FORECAST108) Fitted Value

ORA-33602: (FORECAST109) Alpha:

ORA-33604: (FORECAST110) Beta:

ORA-33606: (FORECAST111) Gamma:

ORA-33608: (FORECAST112) Periodicity:

ORA-33610: (FORSTEP01) Program control transferred into a FOR loop from outside the loop. This transfer is not allowed.

ORA-33612: (FPUTENG01) The file unit operand of the FILEPUT command does not have a value.

ORA-33614: (FPUTENG02) File *string* was opened for input only.

ORA-33616: (FPUTENG04) The FROM file unit operand of the FILEPUT command does not have a value.

ORA-33618: (FPUTENG05) There is not sufficient room on the page to write data. Check your PAGESIZE, TMARGIN, BMARGIN and header values.

ORA-33620: (FRACRPOS01) *string* is not a valid field option for a record in *string* format.

ORA-33622: (FRAPPEND01) You cannot specify a position when appending to an INTEGER dimension.

ORA-33624: (FRASSIGN01) *workspace object* is a WORKSHEET. You cannot use the Data Reader to assign values to it.

ORA-33625: (FRASSIGN02) You cannot use the APPEND keyword with concat dimension *workspace object*.
Cause: User used the APPEND keyword on a CONCAT target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: APPENDing a value to one of the CONCATs leaves automatically appends to the CONCAT.

ORA-33626: (FRATPUSH01) *string* is not a valid field option for a record in *string* format.

ORA-33628: (FRATPUSH02) Dimension maintenance attributes can only be specified on the left side of the equal sign.

ORA-33630: (FRCBCHEK01) Invalid file unit *number*. Files read by FILEREAD or FILEVIEW must be input files opened via the FILEOPEN function.

ORA-33632: (FRCBCHEK02) No current record is available for file unit *number*.

ORA-33634: (FRCBSET01) *string* is not a valid value for the ORIGIN option of FILESET. Valid values are: *string*.

ORA-33636: (FRERROR01) *number* is not a valid value for *string*. Values for this attribute cannot be less than 1.

ORA-33638: (FRERROR02) *number* is not a valid value for SPACE because it results in a *string* value of *number*.

ORA-33640: (FRERROR03) There is no field of width *number* at column *number*. The current record is only *number* bytes long.

ORA-33642: (FRERROR04) *number* is not a valid width for *string string* data.

ORA-33644: (FRERROR05) NA is not a valid width for *string string* data. There is no default width for this data type.

ORA-33646: (FRERROR06) The string '*string*' is not a valid *string* value.

ORA-33648: (FRERROR07) The current packed field contains the invalid hexadecimal digit "*character*".

ORA-33650: (FRERROR08) The current packed field contains the invalid sign digit "*character*".

ORA-33652: (FRERROR09) *value* is not a valid *workspace object*.

ORA-33654: (FRERROR10) The *workspace object* dimension does not have a value numbered *number*.

ORA-33656: (FRERROR11) The time dimension *workspace object* is empty. You cannot append integer positions to it unless it has at least one value.

ORA-33658: (FRFILPUT01) File *string* is invalid. Source files for FILEPUT must be input files opened via the FILEOPEN function.

ORA-33660: (FRFILPUT02) You cannot write from file *string* to file *string*, because the output file was not opened with the BINARY option.

ORA-33662: (FRFILPUT03) You cannot write from file *string* to file *string*, because the output file was opened with the BINARY option.

ORA-33664: (FRSPARSE01) You cannot specify a dimension list for *workspace object* because it is not a conjoint dimension.

ORA-33666: (FRSTRDLM01) The *string* expression cannot have more than one line.

ORA-33668: (FRSTRDLM02) *number* is not a valid value for the *string* expression.

ORA-33670: (FRSTRDLM03) The *string* and DELIMITER expressions cannot have the same value.

ORA-33672: (FRSTRDLM04) A CSV DELIMITER cannot be set to a double quote or NULL.

ORA-33674: (FTCODE00) Data block size *number* exceeds the maximum size of *number*.

ORA-33678: (GETSCAL00) The text expression specifying a DIMENSION data type cannot evaluate to NA.

ORA-33680: (GETTIMER00) first

ORA-33682: (GETTIMER01) The *number* parameter to *string* is dimensioned by more than one time dimension.

ORA-33684: (GETTIMER02) The *number* parameter to *string* must be dimensioned by a time dimension, or an explicit time dimension must be given.

ORA-33686: (GETTIMER03) The *number* parameter to *string* is not dimensioned by *workspace object*.

ORA-33688: (GETTIMER04) The dimension composite *workspace object* cannot be used as a time dimension.

ORA-33690: (GETXVAL01) The formula *workspace object* cannot be recursively evaluated because the RECURSIVE option is set to NO.

ORA-33692: (GROWENG01) The growrate of an expression must be calculated over a strictly increasing time interval.

ORA-33694: (GROWENG02) The expression in the GROWRATE function must have non-NA values at the beginning and end of the given time interval.

ORA-33696: (GROWENG03) The beginning and ending values of the expression in GROWRATE must both be positive or both be negative.

ORA-33698: (GROWENG04) Cannot calculate the growrate for the values given

ORA-33700: (GROWENG05) The beginning value of the expression in the GROWRATE function must be non zero.

ORA-33704: (ILPCHECK01) *workspace object* is not a program.

ORA-33706: (ILPCHECK12) The *workspace object* program cannot be compiled because it contains structural errors.

ORA-33708: (ILPCHECK13) The *workspace object* program cannot be compiled while it is executing.

ORA-33712: (ILPCHECK22) The *workspace object* program cannot be executed because it contains structural errors.

ORA-33720: (ILPCHECK43) The *workspace object* program cannot be hidden or unhidden while it is executing.

ORA-33722: (ILPCOMP05) All *string* statements must precede the first non-declarative statement.

ORA-33724: (ILPCOMP07) The *workspace object* program could not be compiled because of an unrecoverable error.

ORA-33726: (ILPENG02) *workspace object* cannot be used more than once in simultaneous or nested FOR statements or ACROSS commands.

ORA-33728: (ILPINIT01) You cannot initialize *workspace object* because it is currently running.

ORA-33730: (ILPLNK01) Discarding compiled code for *workspace object* because it was compiled with code version *number*. The current code version is *number*.

ORA-33732: (ILPONLY) The *string* function can only be used in a program.

ORA-33734: (ILPPUT01) Label *string* conflicts with at least one other label in *workspace object*. Labels must be unique for the first 8 characters.

ORA-33736: (ILPPUT02) The *workspace object* program contains unmatched DO or DOEND statements.

ORA-33738: (ILPPUT03) Program *workspace object* contains unmatched IF, WHILE, TEMPSTAT, FOR, or THEN/ELSE statement, or duplicate labels.

ORA-33740: (ILPPUT04) On the line defining label *string* in the *workspace object* program, text following the label has been ignored.

ORA-33742: (ILPPUT06) The *workspace object* program contains too many source lines. The limit is *number* lines. The program has been truncated.

ORA-33744: (ILPPUT07) IMPORTANT: Program *workspace object* contains text on the same line as a DO or DOEND statement, which will be ignored.

ORA-33746: (ILPPUT08) *number* must be preceded by an IF clause.

ORA-33748: (ILPPUT09) *number* must be preceded by a THEN clause.

ORA-33750: (ILPXEQ01) A referenced object can no longer be located. Execution will continue in interpreted mode.

ORA-33756: (ILTRK01) No data has been recorded by the TRACKPRG command.

ORA-33758: (IMPQUAF0) The EIF file *string* does not have any objects in it.

ORA-33760: (IMPQUAF02) \nThere are *number* objects in the EIF file:

ORA-33762: (XSCHGDIM01) Invalid LIMIT argument starting at *string*.

ORA-33766: (INFOFC00) Invalid second argument to INFO(FORECAST *string*).

ORA-33768: (INFOMOD00) Invalid second argument to INFO(MODEL *string*).

ORA-33770: (INFOPARS01) Invalid second argument to INFO(PARSE *string*).

ORA-33772: (INFORG00) Invalid second argument to INFO(REGRESS *string*).

ORA-33774: (INTERP1) *string* is not a command.

ORA-33776: (INTERP1A) *workspace object* is not a command.

ORA-33780: (INTERP3) The *string* command can only be used in a program.

ORA-33782: (INTERP4) The *string* command cannot be executed by ampersand substitution.

ORA-33784: (INTERP5) Ampersand substitution is not permitted in a *string* statement.

ORA-33788: (INTTOK01) *string* is not composed solely of digits.

ORA-33790: (IOERROR01) I/O error on file *string*: *string*.

ORA-33792: (IOERROR02) I/O error on file *string*: Error text not available.

ORA-33796: (IOEXECUT00) The file identifier argument of *string* does not have a value.

ORA-33798: (IOEXECUT01) File *string* is the current OUTFILE or LOG unit, and cannot be closed with the FILECLOSE command.

ORA-33800: (IOEXECUT02A) The LENGTH argument to the FILEGET function (*number*) is negative.

ORA-33802: (IOEXECUT02B) File *string* was opened for writing.

ORA-33804: (IOEXECUT02C) File *string* was opened for binary input. You must use FILEREAD or FILENEXT to read data from this file.

ORA-33806: (IOEXECUT03A) The *string* option of FILEQUERY is not supported in this version of *string*.

ORA-33808: (IOEXECUT03B) You have requested a FILEQUERY option that is not supported in this version of *string*.

ORA-33810: (IOEXECUT04A) The *string* option of FILESET is not supported in this version of *string*.

ORA-33812: (IOEXECUT04B) The *string* option of a file cannot be changed by the FILESET command.

ORA-33814: (IOEXECUT04C) The value to be set for the *string* option cannot be NA.

ORA-33816: (IOEXECUT04D) You have requested a FILESET option that is not supported in this version of *string*.

ORA-33818: (IOEXECUT05) File unit *number* is invalid. *string* can access only input files opened via the FILEOPEN function.

ORA-33820: (IOEXECUT06) The file name argument to *string* cannot be null or blank.

ORA-33822: (IRR01) Time dimension *workspace object* has a range in status of *number* periods. The maximum range allowed by the IRR function is *number* periods.

ORA-33824: (ISDBUILD01) A local scalar named *string* already exists.

ORA-33826: (LINEDEL01) The number of the first line to remove must be between 1 and the expression's total number of lines. *number* is out of range.

ORA-33828: (LINEDEL02) You must remove at least one line. You cannot remove *number* lines.

ORA-33830: (LINEINS01) The line number after which inserting begins (*number*) is negative.

ORA-33832: (LINEREP01) The number of the first line to replace must be between 1 and the expression's total number of lines. *number* is out of range.

ORA-33834: (LINEXTR01) The line number of the first line to extract must be greater than 0. You cannot start extracting at line *number*.

ORA-33836: (LINEXTR02) You must extract at least one line. You cannot extract *number* lines.

ORA-33838: (LLPINIT05) You attempted to loop over the time dimension *workspace object* beyond the allowable range of dates.

ORA-33840: (LOOPCODE01) Multiple relations exist between *workspace object* and the dimensions of the expression to be aggregated. One is *workspace object*, and another is *workspace object*.

ORA-33842: (LOOPCODE02) *workspace object* cannot be used for aggregation. It is unrelated to the data's dimensions, or it is less aggregate than one of them.

ORA-33844: (LOOPCODE03) Time dimensions *workspace object* and *workspace object* are both dimensions of the data. Breaking out the aggregation by time is ambiguous.

ORA-33846: (LXNXTREC00) The input line was terminated by an end-of-file that occurred sooner than expected. The line might be incomplete.

ORA-33848: (LXNXTREC01) The input line was truncated to the maximum allowable size of *number* characters.

ORA-33852: (LXPARSE01) You provided extra input starting at '*string*'.

ORA-33854: (LXTOKEN01) The statement cannot be parsed because it is too long or too complex.

ORA-33856: (LXSUBST01) *string* is not a valid ampersand-substitution expression.

ORA-33858: (LXSUBST02) The value of the ampersand-substitution expression is NA.

ORA-33860: (MAKEDCL01) You have no current analytic workspace. You must attach or create an analytic workspace before defining a new object.

ORA-33862: (MAKEDCL02) You must specify a data type when you define a *string*.

ORA-33864: (MAKEDCL03) You cannot use the data type attribute when you define a *string*.

ORA-33866: (MAKEDCL04) Your current analytic workspace does not contain an object named *workspace object*.

ORA-33868: (MAKEDCL05) You must specify two or more dimensions when you supply a dimension list for a WORKSHEET.

ORA-33870: (MAKEDCL06) You cannot use the *string* attribute when you define a *string*.

ORA-33872: (MAKEDCL07) The *string* DIMENSION must have a data type (ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER), a time period, or a list of bases for a conjoint dimension.

ORA-33874: (MAKEDCL08) *string* is not the name of a valid option.

ORA-33876: (MAKEDCL09) *string* must be an INTEGER dimension.

ORA-33878: (MAKEDCL10) Nested composites are not supported when compatability is 11 or greater.

ORA-33880: (MAKEDCL11) Dimensions specified for a WORKSHEET must be INTEGER dimensions.

ORA-33882: (MAKEDCL12) You cannot use the *string* attribute when you define a *string* of type *string*.

ORA-33883: (MAKEDCL36) You cannot use the *string* attribute when you define an EXTERNAL partition with an existing target.
Cause: User gave the TEMPORARY keyword in the definition of an external partition whose target variable was previously defined.

Action: Any storage characteristics of the external partition are determined by the target variable. These attributes should be set when the target is defined, not when the external partition is defined.

ORA-33884: (MAKEDCL13) You can specify the TEMPORARY attribute only for a variable, dimension, relation, valueset, or worksheet.

ORA-33886: (MAKEDCL14) You cannot define an object dimensioned by NAME, because it is a special reserved dimension used to organize your analytic workspace dictionary.

ORA-33888: (MAKEDCL15) You cannot use the *string* attribute when you define a fixed-width TEXT *string*.

ORA-33890: (MAKEDCL16) You cannot use the dimension list attribute when you define a *string*.

ORA-33892: (MAKEDCL17) You cannot use the *string* attribute when you define a scalar *string*.

ORA-33893: (MAKEDCL18) The TEMPORARY attribute cannot be specified for this type of dimension

ORA-33894: (MAKEDCL20) The WIDTH attribute can only be used with non-scalar TEXT and INTEGER variables, or with TEXT dimensions.

ORA-33895: (MAKEDCL19) You can specify the SHAREMAP attribute only for a multiply dimensioned variable, relation, valueset, or worksheet.

ORA-33896: (MAKEDCL21) The WIDTH attribute for TEXT data must be a number between 1 and 4000.

ORA-33898: (MAKEDCL22) The WIDTH attribute for INTEGER data must be 1.

ORA-33900: (MAKEDCL23) The NOHASH attribute is only valid for conjoint dimensions.

ORA-33902: (MAKEDCL24) The *string* attribute is only valid for conjoint dimensions and dimension composites.

ORA-33904: (MAKEDCL25) *workspace object* is a dimension composite or is dimensioned by a dimension composite. You cannot use it as the type of a *string*.

ORA-33908: (MAKEDCL27) You cannot use the *string* attribute when you define a DIMENSION ALIAS, CONCAT, or PARTITION TEMPLATE.

ORA-33910: (MAKEDCL28) You cannot specify a data type when you define a DIMENSION ALIAS, CONCAT, or PARTITION TEMPLATE.

ORA-33911: (MAKEDCL29) You cannot define a *string* in analytic workspace *string* because it has not been upgraded to version *string*.
Cause: User attempted to define an object that requires a certain compatibility setting in an AW that has not been upgraded to that compatibility level.

Action: Make sure that the database is running in the appropriate compatibility mode, and upgrade the AW.

ORA-33912: (MAKEDCL30) An AGGMAP cannot be dimensioned by a conjoint dimension.

ORA-33914: (MAKEDCL31) You cannot define a dimension alias of another dimension alias.

ORA-33916: (MAKEDCL32) The dimension alias target *workspace object* is not a simple dimension.

ORA-33918: (MAKEDCL33) You cannot define a surrogate of dimension *workspace object* because it is a *string*.
Cause: Not all kinds of dimensions can have surrogates. The user attempted to define a surrogate of a prohibited kind of dimension.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33920: (MAKEDCL34) The *string* SURROGATE must have one of the following data types: ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER.
Cause: The user attempted to define a surrogate without specifying a valid data type.

Action: Specify the data type (ID, NTEXT, TEXT, NUMBER, or INTEGER) in the definition of the surrogate.

ORA-33922: (MAKEDCL35) You cannot define a surrogate of dimension *workspace object* because it is a time dimension.
Cause: The user attempted to define a surrogate on a dimension that has type DAY, WEEK, MONTH, or YEAR.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33934: (MISCOPTI01) OFF

ORA-33936: (MISCOPTI04) NA

ORA-33938: (MISCOPTI05) Press *Enter* to continue.

ORA-33940: (MISCOPTI06) *DDMTXTYY*

ORA-33942: (MODCALL01) Model *workspace object* cannot be run because another model is already active.

ORA-33944: (MODCALL02) Model *workspace object* needs a solution variable; one was not provided.

ORA-33946: (MODCALL03) Model *workspace object* does not take a solution variable, because it has no model dimensions.

ORA-33948: (MODCALL04) A solution variable must be provided for model *workspace object*; however, *workspace object* is not a variable.

ORA-33950: (MODCALL05) The solution variable specified for the model *workspace object* must be numeric. Variable *workspace object* is type *string*.

ORA-33952: (MODCALL08) A solution variable must be specified for model *workspace object*; however, *workspace object* has no dimensions.

ORA-33954: (MODCALL09) Solution variable *workspace object* is not dimensioned by *workspace object*, which is a dimension of model *workspace object*.

ORA-33956: (MODCALL10) The execution of model *workspace object* cannot be completed due to an internal error (TYPE = *number*).

ORA-33958: (MODCALL11) The syntax for invoking a model is:\n model-name [solution-variable] [NOWARN]

ORA-33960: (MODCALL14) Model *workspace object* contains simultaneous equations.

ORA-33962: (MODCALL15) Model *workspace object* failed to converge after *number* iterations in block *number*.

ORA-33964: (MODCALL16) Model *workspace object* diverged during iteration *number* in block *number* while executing statement *number* of model *workspace object*.

ORA-33966: (MODCALL17) The solution variable *workspace object* is referenced as a variable in model *workspace object*.

ORA-33968: (MODCALL18) Solution variable *workspace object* is dimensioned by *workspace object*, which is not a dimension of model *workspace object* but is a dimension of a model execution block.

ORA-33970: (MODCALL19) Solution variable *workspace object* is not dimensioned by *workspace object*, but model *workspace object* contains dimension-based equations that reference its values.

ORA-33972: (MODCHECK01) *workspace object* is not a model.

ORA-33973: (MODCHECK02) The *workspace object* model cannot be compiled while it is executing.

ORA-33974: (MODCHECK12) The *workspace object* model cannot be compiled because it contains structural errors.

ORA-33975: (MODCHECK13) The *workspace object* model cannot be hidden or unhidden while it is executing.

ORA-33976: (MODCHECK22) The *workspace object* model cannot be executed because it contains structural errors.

ORA-33978: (MODCOMP01) *workspace object* has already been named in a DIMENSION statement in this model.

ORA-33980: (MODCOMP02) DIMENSION statements are not allowed after an equation has appeared.

ORA-33982: (MODCOMP03) DIMENSION statements are not allowed after an INCLUDE statement has appeared.

ORA-33983: (MODCOMP15) The DIMENSION statement must list the dimensions of any included models.

ORA-33984: (MODCOMP04) INCLUDE statements are not allowed after an equation has appeared.

ORA-33986: (MODCOMP05) Only one INCLUDE statement is allowed in a model.

ORA-33988: (MODCOMP06) An INCLUDE statement must refer to another model; *workspace object* is not a model.

ORA-33990: (MODCOMP08) Models cannot be included recursively; *workspace object* has already been included.

ORA-33992: (MODCOMP09) The format of the DIMENSION command is:\n DIMENSION dimension1 [dimension2...]

ORA-33994: (MODCOMP10) The format of the INCLUDE command is:\n INCLUDE model

ORA-33996: (MODCOMP11) *workspace object* is not named in a DIMENSION statement in this model.

ORA-33998: (MODCOMP12) You cannot use both *workspace object* and *workspace object* as model dimensions, because *workspace object* is a surrogate of *workspace object*.
Cause: The user attempted to include both a dimension and its surrogate in the DIMENSION statement of a model.

Action: Use either the dimension or the surrogate in the DIMENSION statement of the model, but not both.

ORA-34000: (MODCOMP13) You cannot use both *workspace object* and *workspace object* as model dimensions, because they are both surrogates of dimension *workspace object*.
Cause: The user attempted to include two dimension surrogates of the same dimension in the DIMENSION statement of a model.

Action: Use either of the two surrogates in the DIMENSION statement of the model, but not both.

ORA-34001: (MODCOMP14) Concat leaf dimension *workspace object* already is used in a DIMENSION statement, either explicitly or as a leaf of another concat dimension.
Cause: Either two concat dimensions which share a common leaf dimension, or a concat and one of its leaves where both specified in the DIMENSION statement(s).

Action: Do not specify overlapping concat dimensions, or any leaves of specified concat dimensions.

ORA-34004: (MODGRAPH01) The model *workspace object* cannot be compiled due to internal error *number*. Contact Oracle OLAP Technical support.

ORA-34006: (MODINFO00) There is no saved model information for the INFO function to retrieve.

ORA-34008: (MODINFO01) Model *workspace object* has not been compiled; the information requested is available only after compilation.

ORA-34010: (MODINFO02) Model *workspace object* has not been executed; the information requested is available only after execution.

ORA-34012: (MODPUT06) The *workspace object* model contains too many source lines. The limit is *number* lines. The model has been truncated.

ORA-34014: (MONITOR01) No data has been recorded by the MONITOR command.

ORA-34016: (MONITOR02) No program name has been supplied for the MONITOR command.

ORA-34018: (MSCGADD01) *workspace object* is an INTEGER dimension. Specify only the number of values to be added, not the specific values themselves.

ORA-34019: (MSCGADD03) *workspace object* is not a LIST PARTITION TEMPLATE.
Cause: User attempted to MAINTAINT ADD or DELETE a list value from a RANGE or CONCAT partition template.

Action: Partitioning in a RANGE or CONCAT partition template cannot be changed using the MAINTAIN command.

ORA-34020: (MSCGADD02) *workspace object* is not a time dimension. You cannot add time periods to it.

ORA-34021: (MSCGADD04) You must specify a partition when maintaining PARTITION TEMPLATE *workspace object*.
Cause: User attempted to MAINTAINT ADD or DELETE a list value from a LIST partition template, but didn't specify which partition to add to or delete from.

Action: Specify the partition: maintain (template) add to partition (partitionname) (values) or maintain (template) delete from partition (partitionname) (values)

ORA-34022: (MSCGDEL02) You can only delete time periods from a time dimension.

ORA-34024: (MSCGMRG01) The RELATE keyword cannot be specified when the MERGE expression has no dimensions.

ORA-34026: (MSCGMRG02) *workspace object* is not a relationship between *workspace object* and the dimensions of the source expression.

ORA-34028: (MSCGMRG03) *workspace object*, the value of the RELATE relation, is not one of the dimensions of the source expression.

ORA-34030: (MSCGPOS00) *workspace object* is a time dimension. You can add values to it only FIRST or LAST.

ORA-34031: (MSCGPOS02) *workspace object* is a datetime dimension. Dimension values are automatically maintained in sorted order.

ORA-34032: (MSCGPOS01) *workspace object* is a dimension composite. You cannot specify a position when adding values to it.

ORA-34034: (MSEXECUT00B) *value* is already a value of *workspace object*.

ORA-34036: (MSEXECUT00C) *number* is already a value of *workspace object*.

ORA-34038: (MSEXECUT01) The expression for the position to add, merge, or delete is NA.

ORA-34039: (TRGPRG02) *workspace object* cannot be deleted while its trigger is executing.

ORA-34040: (TRGSET01) The TRIGGERASSIGN command can only be used in an ASSIGN TRIGGER.

ORA-34041: (TRGPRG01) A TRIGGER cannot be called recursively for the same object and event.

ORA-34042: (MSEXECUT03A) The expression for the position to be renamed is NA.

ORA-34044: (MSEXECUT03B) The expression for the new dimension value is NA.

ORA-34046: (MSEXECUT03C) *value* is already a value of *workspace object*.

ORA-34048: (MSEXECUT04) Time dimension *workspace object* is empty. You must give it a value before you can add periods to its beginning or end.

ORA-34050: (MSEXECUT05) The expression for the argument to BEFORE or AFTER is NA.

ORA-34052: (MSEXECUT06) All dimension values must be single line values.

ORA-34054: (MSEXECUT07) *number* is already a value of *workspace object*.

ORA-34056: (MSEXECUT08) The number of periods to add cannot be negative, zero, or NA.

ORA-34058: (MSEXECUT09) The number of periods to delete cannot be negative, zero, or NA.

ORA-34059: (MSEXECUT12) You cannot delete non session-only dimension values from unique concat dimension *workspace object*.
Cause: The user tried to apply MAINTAIN DELETE to a non-SESSION value.

Action: Only use MAINTAIN DELETE to remove SESSION values from a concat dimension.

ORA-34060: (MSEXECUT10) You do not have permission to maintain *workspace object*.

ORA-34061: (MSEXECUT11) Session-only values cannot be added to non-unique concat dimension *workspace object*, or any of its base dimensions.
Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34062: (MXARGS01) = Args:

ORA-34066: (MXARGS03) values of

ORA-34068: (MXBREAK01) The BREAK statement can only be used within a FOR or WHILE loop or within a SWITCH statement.

ORA-34070: (MXBREAK02) The CONTINUE statement can only be used within a FOR or WHILE loop.

ORA-34072: (MXCALL01) *workspace object* is not a PROGRAM.

ORA-34074: (MXCGAF01) The *string* function cannot be used with *string* data.

ORA-34076: (MXCGAF02) *workspace object* is neither a dimension nor the name of a relationship array.

ORA-34078: (MXCGAF03) The dimension *workspace object* appears more than once as an argument to *string*.

ORA-34082: (MXCGAF05) Specify the STATUS keyword only if at least one of the breakout dimensions is not a dimension of the expression argument.

ORA-34084: (MXCGAF06) You cannot specify *workspace object* as a breakout dimension because it is a dimension composite.

ORA-34086: (MXCGAF07) You can only specify a qualified data reference to a breakout relation object. *workspace object* is not a relation.

ORA-34088: (MXCGCE04) The THEN and ELSE expressions must evaluate to values of the same dimension.

ORA-34090: (MXCGCHRL01) The expression argument to *string* is not dimensioned by *workspace object*.

ORA-34092: (MXCGCON01) The use of a hexadecimal value (*string*) is not supported.

ORA-34094: (MXCGCUM00) In the CUMSUM function, the relation (*workspace object*) must refer to the accumulation dimension (*workspace object*).

ORA-34096: (MXCGCUM01) The reset parameter '*workspace object*' is neither a RELATION nor a DIMENSION.

ORA-34098: (MXCGCUM02) The STATUS keyword has no effect unless the first argument has more than one dimension.

ORA-34100: (MXCGCVT01) Values of type *string* are expected.

ORA-34102: (MXCGFIOF01) The *string* option of FILEQUERY is not supported in this version of *string*.

ORA-34104: (MXCGGET01) *workspace object* is not a type of object that contains data values.

ORA-34106: (MXCGGET03) FILEREAD attributes can be specified only in the context of a FILEREAD or FILEVIEW command.

ORA-34108: (MXCGGET04) FILEREAD attributes cannot be specified for the NAME dimension.

ORA-34110: (MXCGGET05) FILEREAD attributes cannot be specified for a constant.

ORA-34112: (MXCGGT01) Values of type *string* cannot be read with the MANY option.

ORA-34114: (MXCGGT02) The RAW attribute applies only to TEXT.

ORA-34116: (MXCGHCVT00) To convert TEXT to date use:\n CONVERT(expression DATE [dateorder])

ORA-34118: (MXCGHCVT01) To convert date to TEXT or ID use:\n CONVERT(expression {ID|TEXT} [dateformat])

ORA-34120: (MXCGHCVT02) To convert time dimension periods to TEXT or ID use:\n CONVERT(expression {ID|TEXT} [vnf-format])

ORA-34122: (MXCGHCVT03) To convert NUMBER to TEXT or ID use:\n CONVERT(expression {ID|TEXT} [output-format])

ORA-34124: (MXCGHCVT04) CONVERT(expression *string*\nTo [format])

ORA-34126: (MXCGKEY01) The first argument to the KEY function must be an expression yielding a dimension value.

ORA-34128: (MXCGKEY02) You cannot apply the KEY function to *workspace object* because it is not a conjoint dimension or composite.

ORA-34130: (MXCGKEY03) *workspace object* is not a component of conjoint dimension *workspace object*.

ORA-34132: (MXCGKEY04) *workspace object* is not a component of composite *workspace object*.

ORA-34134: (MXCGLA01) You are trying to perform an invalid operation. Dates cannot be exponentiated.

ORA-34136: (MXCGMOVE00) The first argument to the *string* function is not dimensioned by *workspace object*.

ORA-34138: (MXCGNPV03) The interest rate expression in the NPV function cannot be dimensioned by *workspace object*.

ORA-34140: (MXCGPFC01) Argument number *number* in the call to *workspace object* is not a simple expression.

ORA-34141: (MXCGPUT00) You cannot use the ASSIGN keyword with DIMENSION *workspace object*.
Cause: User used the ASSIGN keyword on a DIMENSION target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To create a new dimension value in a FILEREAD, SQL FETCH or SQL SELECT command, use the APPEND keyword.

ORA-34142: (MXCGPUT01) You cannot assign values to a *string*.

ORA-34143: (MXCGPUT02) You cannot assign values to SURROGATE *workspace object* because it is type INTEGER.
Cause: The user attempted to assign a value to a dimension surrogate whose data type is INTEGER. INTEGER surrogates, like INTEGER dimensions, cannot have values assigned to them. They can only be referenced by position.

Action: Do not attempt to assign values to an INTEGER surrogate. Values will automatically appear and disappear from the INTEGER surrogate as positions are added to or removed from the underlying dimension.

ORA-34144: (MXCGPUT04) A model cannot assign values to a *string*.

ORA-34145: (MXCGPUT03) You cannot use the APPEND keyword with SURROGATE *workspace object*.
Cause: User used the APPEND keyword on a SURROGATE target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To assign a value to a SURROGATE in a FILEREAD, SQL FETCH or SQL SELECT command, use the ASSIGN keyword.

ORA-34146: (MXCGQDR01) A qualified data reference (QDR) has this format:\n name(dimension1 dimvalue1 [dimension2 dimvalue2...])

ORA-34148: (MXCGQDR02) *workspace object* cannot be used as a qualifier because it is a COMPOSITE or PARTITION TEMPLATE. You can use its component dimensions instead.

ORA-34150: (MXCGQDR05) A dimension can be named only once in a qualified data reference. *workspace object* has been named more than once.

ORA-34152: (MXCGQDR06) The dimensions named in a qualified data reference must be dimensions of the qualified object. *workspace object* is not dimensioned by *workspace object*.

ORA-34154: (MXCGQDR10) *workspace object* has no dimensions, so it cannot have a qualified data reference.

ORA-34156: (MXCGRA00) You cannot compare time periods of different lengths or phases.

ORA-34158: (MXCGRA01) You cannot subtract time periods of different lengths or phases.

ORA-34160: (MXCGRA02) The format of the IN operator is\n *date* IN *time dimension value*.

ORA-34162: (MXCGRAVL01) The expression to be unraveled is not dimensioned by *workspace object*.

ORA-34164: (MXCGVAR01) A dimension used to define a local *string* variable cannot be located. Execution cannot continue.
Cause: A local relation or valueset has become invalid, most probably because an object used by the currently executing program has been deleted.

Action: This is an internal error that should be referred to Oracle technical support.

ORA-34168: (MXCGVFC01) Invalid context for the VALUE function.

ORA-34170: (MXCGVFC02) Data Reader attributes apply to the VALUE function only when it is used in a FILEREAD or FILEVIEW command.

ORA-34172: (MXCGWKDT01) The argument to the WKSDATA function must be the name of a WORKSHEET.

ORA-34176: (MXCHGDCL01) *workspace object* is not the kind of object whose index type can be changed.

ORA-34177: (MXCHGDCL19) *number* cannot be deleted because one or more partitioned variables instantiate it.
Cause: User attempted to CHGDFN DELETE a partition template, but some partitioned variable had data in the partition specified for deletion.

Action: Drop the partitions that are causing the problem, then retry.

ORA-34178: (MXCHGDCL02) *workspace object* cannot be changed to NOHASH. Only an object that was originally defined as NOHASH can be changed back to NOHASH.

ORA-34179: (MXCHGDCL20) *workspace object* is not a PARTITION TEMPLATE.
Cause: User specified an object that is not a partition template where a partition template is required.

Action: Supply the name of a partition template.

ORA-34181: (MXCHGDCL21) *workspace object* is not a partitioned VARIABLE.
Cause: User specified an object that is not a partitioned variable in a place where a partitioned variable is required.

Action: Supply the name of a partitioned variable.

ORA-34182: (MXCHGDCL04) Wrong number of dimensions for *workspace object*; segwidth not changed from: *string*

ORA-34183: (MXCHGDCL22) Partition *number* already exists.
Cause: User attempted to ADD a partition that already existed to a partitioned variable.

Action: None required - the partition already exists.

ORA-34184: (MXCHGDCL05) *string* is not a valid segment width.

ORA-34185: (MXCHGDCL23) Only dimension composites can have optional inversions. *workspace object* is not a dimension composite.

ORA-34186: (MXCHGDCL06) You cannot change *workspace object* to a dimension composite, because it is used as the type of a PROGRAM, RELATION or VALUESET.

ORA-34187: (MXCHGDCL06) REUSE cannot be specified for dimensions that already have deletions.

ORA-34188: (MXCHGDCL07) Only conjoint dimensions can be redefined as composites. *workspace object* is not a conjoint dimension.

ORA-34190: (MXCHGDCL08) You cannot convert the conjoint dimension *workspace object* to a composite because it has the NOHASH attribute.

ORA-34192: (MXCHGDCL09) *workspace object* is a dimension composite and its definition cannot be changed to NOHASH.

ORA-34194: (MXCHGDCL10) You cannot change *workspace object* to a composite while there are permissions applied to it.

ORA-34196: (MXCHGDCL11) Only dimension composites can be redefined as DIMENSIONs. *workspace object* is not a dimension composite.

ORA-34198: (MXCHGDCL12) You cannot change *workspace object* to a composite because its dimension list has one or more duplications.

ORA-34200: (MXCHGDCL13) You cannot change *workspace object* to a dimension composite because there are one or more formulas dimensioned by it.

ORA-34202: (MXCHGDCL14) *workspace object* is not a time dimension.

ORA-34204: (MXCHGDCL15) *workspace object* is not the kind of object to which SEGWIDTH can be applied.

ORA-34206: (MXCHGDCL16) You cannot change *workspace object* to a dimension composite because there are one or more relations dimensioned by it.

ORA-34208: (MXCHGDCL17) You cannot change *workspace object* to a dimension composite because it is used in one or more CONCATENATE or MERGE dimensions.

ORA-34210: (MXCHGDCL18) You cannot change *workspace object* to a dimension composite because one or more surrogates has been defined for it.
Cause: The user attempted to redefine a conjoint dimension as a composite, but the conjoint has one or more surrogates defined. A dimension that has surrogates cannot be redefined as a composite.

Action: Either delete all surrogates for the dimension, or do not attempt to redefine the dimension as a composite.

ORA-34212: (MXCLASS01) An expression was specified where a DIMENSION or a VALUESET was expected.

ORA-34214: (MXCLASS02) *workspace object* is not a dimension.

ORA-34216: (MXCOMP001) *workspace object* cannot be compiled because it is not a PROGRAM, MODEL, AGGMAP, or FORMULA.

ORA-34218: (MXCTX01) *workspace object* cannot be in a CONTEXT because it is not a scalar variable.

ORA-34220: (MXCTX02) *workspace object* cannot be in a CONTEXT because it is not data.

ORA-34222: (MXCTX03) *workspace object* cannot be in a CONTEXT because it is a dimension composite.

ORA-34224: (MXDCL01) Analytic workspace *string* is not attached.

ORA-34226: (MXDCL02) REUSE can only be specified for SIMPLE, COMPOSITE, and CONJOINT dimensions.

ORA-34228: (MXDCL03) Only dimensions can have time periods.

ORA-34230: (MXDCL04) You provided an invalid time period.

ORA-34232: (MXDCL05) A DAY dimension cannot be phased with a BEGINNING or ENDING phrase.

ORA-34234: (MXDCL06) Beginning date translates to an invalid end date.

ORA-34236: (MXDCL07) REUSE cannot be specified in AWs that have not been upgraded to version 12.

ORA-34238: (MXDCL08) A dimension cannot have a data type of DATE.

ORA-34240: (MXDCL09) You cannot specify EXPTEMP as an analytic workspace.

ORA-34242: (MXDCL10) You cannot specify an analytic workspace in this command.

ORA-34243: (MXDCL11) You can only use the *string* keyword when defining a COMPOSITE.
Cause: User supplied the COMPRESSED keyword when defining an object that was not a COMPOSITE.

Action: If the intent is to create a compressed composite, make sure that the object type is COMPOSITE. Otherwise, remove the COMPRESSED keyword from the command string and rerun.

ORA-34246: (MXDCL18) You cannot define an object with a recursive SPARSE dimension list.

ORA-34248: (MXDCL19) You cannot specify a dimension list for the *workspace object* dimension.

ORA-34250: (MXDCL20) The *workspace object* dimension is in the wrong analytic workspace to be used in this DEFINE command.

ORA-34252: (MXDCL21) You have specified the wrong number of dimensions for *workspace object*.

ORA-34254: (MXDCL22) *workspace object* does not belong in the dimension list for composite *workspace object*, or it is in the wrong position.

ORA-34256: (MXDCL23) You must specify a dimension list for *string workspace object* when using it in a definition.

ORA-34258: (MXDCL24) Dimension composite *number* does not exist.

ORA-34260: (MXDCL25) You cannot use *number* to dimension a *string* because it is, or involves, a dimension composite. Use the composite's bases instead.
Cause: The user attempted to use a COMPOSITE in the dimension list of an object that does not allow for such dimensions.

Action: Use the base dimensions of the COMPOSITE in the dimension list.

ORA-34262: (MXDCL26) The object name *string*!*string* can only be defined in analytic workspace *string*, not in the EXPRESS analytic workspace.

ORA-34264: (MXDCL27) The object name *string*!*string* can only be defined in analytic workspace *string*, not in analytic workspace *string*.

ORA-34268: (MXDCL29) *string* objects must be type DIMENSION.

ORA-34270: (MXDCL30) You cannot specify a data type when defining a dimension alias.

ORA-34272: (MXDCL31) You cannot specify a dimension list when defining a dimension *string*.

ORA-34274: (MXDCL32) You cannot specify a width when defining a dimension alias.

ORA-34276: (MXDCL33) (Precision, Scale) arguments can only be used with a NUMBER variable or dimension.
Cause: The user attempted to use NUMBER(Precision) or NUMBER(Precision, Scale) as the datatype in a definition for some object other than a DIMENSION or VARIABLE, such as a FORMULA or PROGRAM. This error can also be produced in cases where a NUMBER data type is not allowed at all.

Action: Use the NUMBER type without specifying a precision or scale. If a NUMBER data type is not allowed at all, this fix will only change the exception message to something more specific.

ORA-34279: (MXDCL37) CONCAT can only be used when defining a DIMENSION.
Cause: The CONCAT keyword was used incorrectly.

Action: Retry the command without the CONCAT keyword.

ORA-34280: (MXDCL38) PARTITION BY can only be used when defining a PARTITION TEMPLATE.

ORA-34281: (MXDCL39) A (precision code) argument can only be used with DATETIME or TIMESTAMP dimensions.

ORA-34284: (MXDCL52) A SPARSE dimension cannot be specified in this context.

ORA-34286: (MXDCL53) *workspace object* cannot be used in this context because it is a *string*.
Cause: User specified a dimension composite, conjoint, or partition template in a place where that kind of dimension is not allowed. For instance, a relation cannot be dimensioned by a composite, and only a variable can dimensioned by a partition template.

Action: Usually, the offending dimension can be replaced with its bases. For instance, a relation cannot be dimensioned by a a composite of PRODUCT and GEOG, but it can be dimensioned by both PRODUCT and GEOG instead.

ORA-34298: (MXDCLEQ01) *workspace object* was not defined as a formula, so you cannot use the EQ command to give it a value.

ORA-34300: (MXDCLEQ02) *workspace object* is not a time dimension, so you cannot define a VNF formatting string for it.

ORA-34302: (MXDCLEQ03) *workspace object* is not a DATETIME or TIMESTAMP dimension, formula, program, or variable, so you cannot define a DATE_FORMAT formatting string for it.

ORA-34304: (MXDCLILP01) There is no current program definition. Define a program or use the CONSIDER command before using the PROGRAM command.

ORA-34306: (MXDCLILP02) *workspace object* was not defined as a PROGRAM.

ORA-34308: (MXDCLILP03) Since you have no current program definition, your PROGRAM entries will be discarded. Type END to return to command level.

ORA-34310: (MXDCLILP04) The *workspace object* program cannot be redefined while it is executing.

ORA-34312: (MXDCLMOD01) There is no current model definition. Define a model or use the CONSIDER command before using the MODEL command.

ORA-34314: (MXDCLMOD02) *workspace object* was not defined as a model.

ORA-34316: (MXDCLMOD03) Since there is no current model definition, the MODEL statements will be discarded. Type END to return to the command line.

ORA-34318: (MXDCLAGR01) There is no current aggmap definition. Define an aggmap or use the CONSIDER command before using the AGGMAP command.

ORA-34320: (MXDELETE00) The object *workspace object* is not in the *string* analytic workspace.

ORA-34324: (MXFETCH01) The ACROSS and DOWN keywords cannot be set to NONE at the same time.

ORA-34328: (MXDEBUG01) = Entering *number* from *number*

ORA-34330: (MXDEBUG02) = Entering *number*

ORA-34332: (MXDEBUG03) = Leaving *number*

ORA-34334: (MXDEBUG04) = Leaving *number*, Value = *value*

ORA-34336: (MXGO00) The *string* keyword can only be used for a model.

ORA-34338: (MXDIMEN01) An object cannot have more than *number* dimensions.

ORA-34340: (MXDINSRT01) An object named *number* already exists in analytic workspace *string*.

ORA-34342: (MXDSS01) IMPORTANT: Analytic workspace *string* is read-only. Therefore, you will not be able to use the UPDATE command to save changes to it.
Cause: This is an informational message that reminds you that you may not save changes to the specified analytic workspace.

Action: None, unless it was desired to save changes to the analytic workspace. In that case, detach and reattach the analytic workspace read-write.

ORA-34343: (MXDSS02) *string* is not a valid analytic workspace name. The name must be one of the following forms: SCHEMA.NAME, NAME, or ALIAS, where NAME is an analytic workspace name, SCHEMA is a schema name, and ALIAS is an analytic workspace alias.

ORA-34344: (MXDSS03) Analytic workspace *string* is not attached.
Cause: The command attempted to operate on an analytic workspace that is not currently attached, or the name of the analytic workspace is misspelled.

Action: Attach the analytic workspace or correct the spelling.

ORA-34346: (MXDSS04) The *string* analytic workspace cannot be detached.
Cause: The specified analytic workspace is an internal workspace and may not be detached by the user.

Action: Specify a different analytic workspace to detach.

ORA-34348: (MXDSS05) *string* is used only for internal purposes and cannot be accessed as an analytic workspace.
Cause: The command attempted to operate on an internal analytic workspace used by the system.

Action: Specify a different analytic workspace.

ORA-34350: (MXDSS06) *string* is an open analytic workspace.
Cause: The specified analytic workspace is currently in use.

Action: The desired action requires an analytic workspace that is not currently in use.

ORA-34352: (MXDSS07) *stringcharacter* R/*character* CHANGED *string*

ORA-34354: (MXDSS08) *stringcharacter* R/*character* UNCHANGED *string*

ORA-34356: (MXDSS09) Analytic workspace *string* is attached in read-only mode, therefore you cannot change its *string*.

ORA-34357: (MXDSS10) *string* is not an alias of analytic workspace *string*.
Cause: User attempted to use AW UNALIAS on a non-existent alias.

Action: Make sure that the command specified the correct analytic workspace and alias. The alias must have been assigned (using AW ALIAS) during the current session and must not have been removed by a previous AW UNALIAS or AW DETACH command.

ORA-34358: (MXDSS14) *number* other users reading
Cause: Used for AW LIST output formatting when %d > 1

Action: None

ORA-34359: (MXDSS11) *string* appears twice in the alias list.
Cause: User included the same name twice in the alias list of an AW ALIAS or AW UNALIAS command.

Action: Remove the duplicate name and try again.

ORA-34360: (MXDSS15) *number* other users writing
Cause: Used for AW LIST output formatting when %d > 1

Action: None

ORA-34361: (MXDSS12) *number* other user reading
Cause: Used for AW LIST output formatting when %d == 1

Action: None

ORA-34362: (MXDSS16) Program *number* does not exist.

ORA-34363: (MXDSS13) *number* other user writing
Cause: Used for AW LIST output formatting when %d == 1

Action: None

ORA-34364: (MXDSS17) The read/write status of analytic workspace *string* has not been changed. To change it, detach and re-attach the analytic workspace.

ORA-34366: (MXDSS19) Security override is not allowed on analytic workspace *string*.

ORA-34368: (MXDSS20) Incorrect response. Security override failure.

ORA-34370: (MXDSS21) Permission to attach analytic workspace *string* denied by a PERMIT program.

ORA-34371: (MXDSS22) Schema name "*string*" contains characters that are not allowed in an analytic workspace name.
Cause: The specified or default schema name contained characters that can occur only in quoted identifiers, which are not supported in OLAP DML.

Action: Specify a schema name containing only characters that can appear in a nonquoted identifer.

ORA-34372: (MXDSS26) An analytic workspace named *string* is already attached.

ORA-34373: schema name contains unsupported characters
Cause: The specified or default schema name, contained characters that can occur only in quoted identifiers, which are not supported in OLAP DML.

Action: Specify a schema name containing only characters that can appear in a nonquoted identifier.

ORA-34376: (MXDSS28) *string* is not a valid analytic workspace name. Analytic workspace names must be *number* characters or less, can contain only letters, digits, underscores, and dollar signs, and cannot begin with a digit or dollar sign.
Cause: The specified analytic workspace or ALIAS name was too long or contained invalid characters.

Action: Verify that the analytic workspace name meets the specified criteria.

ORA-34378: (MXDSS29) *string* is a reserved word and cannot be used as an analytic workspace name.

ORA-34380: (MXEXPORT00) You can only export one worksheet to a spreadsheet file.

ORA-34382: (MXEXPORT01) Worksheets are the only objects you can export to spreadsheet files. *workspace object* is not a worksheet.

ORA-34384: (MXFILEIO01) The *string* option of FILESET is not supported.

ORA-34386: (MXFILEIO02) No more than 9 arguments can be supplied to FILESET.

ORA-34388: (MXFILERD01) The format of the FILEREAD command is:\n FILEREAD unit [STOPAFTER n] [STRUCTURED | CSV | RULED] [fieldlist]

ORA-34390: (MXFILERD02) The format of the FILEVIEW command is:\n FILEVIEW unit [STRUCTURED | RULED] [fieldlist]

ORA-34392: (MXFORCAS00) You cannot calculate a forecast for an expression with no dimensions.

ORA-34394: (MXFORCAS01) You cannot calculate a forecast with an STSEASONAL expression with no dimensions.

ORA-34396: (MXFORCAS02) The expression to be forecast is not dimensioned by *workspace object*.

ORA-34398: (MXFORCAS03) The STSEASONAL expression must be dimensioned by only one dimension.

ORA-34400: (MXFORCAS04) time-series

ORA-34402: (MXFORCAS05) When you specify the forecast LENGTH, you must also specify an FCNAME.

ORA-34404: (MXFORCAS06) When you specify METHOD WINTERS, you must also specify the PERIODICITY.

ORA-34406: (MXFORCAS07) When STSMOOTHED, STTREND, or STSEASONAL is specified, they must all be specified.

ORA-34408: (MXFORCAS08) You specified a forecast phrase that is valid only when METHOD WINTERS is specified.

ORA-34410: (MXFORCAS09) The arguments to FCNAME, FCSMOOTHED, FCTREND, and FCSEASONAL must be numeric. *workspace object* is not numeric.

ORA-34412: (MXFORCAS10) FCNAME, FCSMOOTHED, FCTREND, and FCSEASONAL variables must be dimensioned by time dimension *workspace object*. *workspace object* is not.

ORA-34414: (MXGETFLD01) Your FILEREAD or FILEVIEW statement specifies no width for a *string string* field. There is no default width for this data type.

ORA-34416: (MXGETFLD02) *string* data cannot be read as a *string* value.

ORA-34418: (MXGETFLD03) A STRUCTURED or CSV record cannot contain *string* data.

ORA-34420: (MXGETFLD04) The *string* option of FILEREAD or FILEVIEW cannot be specified for *string* data.

ORA-34422: (MXGETFLD05) The SCALE option of FILEREAD or FILEVIEW cannot be specified for BINARY data other than INTEGER.

ORA-34424: (MXGETFLD06) The *string* option of FILEREAD or FILEVIEW cannot be specified for *string string* data.

ORA-34426: (MXGETFLD07) Values read into the relation *workspace object* must be INTEGER position numbers of its conjoint value dimension.

ORA-34428: (MXGETFLD08) Values read into conjoint dimension *workspace object* must be either INTEGER position numbers or a bracketed list of base dimension values.

ORA-34430: (MXGETFLD09) No data type was specified for one or more of the base dimensions of conjoint dimension *workspace object*.

ORA-34432: (MXGETFLD10) *workspace object* cannot be assigned time dimension data.

ORA-34434: (MXGETFLD11) You cannot read values of a dimension composite directly. You can specify a bracketed list of base dimension values.

ORA-34436: (MXGETFLD12) No data type was specified for one or more of the base dimensions of a dimension composite.

ORA-34438: (MXGETSVN01) A value of the *workspace object* dimension must be a single expression without surrounding angle brackets .

ORA-34440: (MXGETSVN02) A value of the *workspace object* dimension must be a combination of *number* base dimension values surrounded by angle brackets .

ORA-34442: (MXGETSVN03) You cannot use a Qualified Object Name as a value of the NAME dimension.

ORA-34444: (MXGETSVN04) Dimension *workspace object* is not a concatenated dimension.

ORA-34446: (MXGETSVN05) Dimension *workspace object* is not a base of concatenated dimension *workspace object*.

ORA-34448: (MXGOTO01) *string* is not defined as a label.

ORA-34450: (MXIFERR) The IF keyword must be followed by a BOOLEAN expression. The expression starting with *string* is *string*.

ORA-34452: (MXIMPORT01) *string* is a reserved keyword that cannot be used in this context.

ORA-34454: (MXIMPORT02) When importing a spreadsheet, CSV file, or PRN file, the target must be a worksheet. *workspace object* is not a worksheet.

ORA-34456: (MXIMPORT03) The STOPAFTER specification cannot be NA.

ORA-34458: (MXIMPORT04) The RULER expression cannot be missing or NA.

ORA-34460: (MXIMPORT05) The expression identifying the file cannot be NA.

ORA-34462: (MXIMPORT06) The STOPAFTER specification cannot be less than one. The value was *number*.

ORA-34464: (MXIMPORT07) TEXTSTART and TEXTEND are supported only for STRUCTURED PRN files. DELIMITER is supported for STRUCTURED PRN and CSV files.

ORA-34466: (MXIMPORT08) Target *workspace object* is not in analytic workspace *string*.

ORA-34468: (MXIMPORT09) *workspace object* is not a valid target name. You cannot use a Qualified Object Name to specify a target in an EIF import.

ORA-34476: (MXINFO01) The first argument to the *string* function must be FORECAST, PARSE, REGRESS, SEASADJ, or MODEL.

ORA-34478: (MXLOG01) Disk file *string* cannot be opened; it is in use.

ORA-34480: (MXMAINT01) You cannot *string* values of conjoint dimension *workspace object*.

ORA-34481: (MXMAINT07) You cannot *string* values of PARTITION TEMPLATE *workspace object*.
Cause: User attempted to use the MAINTAIN command with some keyword other than ADD or DELETE on a partition template.

Action: It is not possible to MAINTAIN a partition template, except to add or delete values of a partition list.

ORA-34482: (MXMAINT02) You cannot *string* values of time dimension *workspace object*.

ORA-34484: (MXMAINT03) You cannot *string* values of dimension composite *workspace object*.

ORA-34486: (MXMAINT04) You cannot maintain dimension alias *workspace object*.

ORA-34487: (MXMAINT08) You cannot *string* values of non-unique concat dimension *workspace object*.
Cause: The specified MAINTAIN operation can only be applied to UNQUE concats.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34488: (MXMAINT05) You cannot *string* values of concat dimension *workspace object*.

ORA-34489: (MXMAINT06) You cannot maintain *workspace object* because it is a SURROGATE.
Cause: The user attempted to use the MAINTAIN command on a dimension surrogate. The MAINTAIN command can only be used with real dimensions, not surrogates.

Action: Use the MAINTAIN command to modify the underlying dimension of the surrogate instead.

ORA-34490: (MXMOVE00) You cannot use Qualified Object Names in the MOVE command except as part of an expression.

ORA-34492: (MXMSERR00) Analytic workspace object *workspace object* does not exist.

ORA-34494: (MXMSERR01) Analytic workspace *string* does not contain an object named *workspace object*.

ORA-34496: (MXNAME01) The NAME dimension is available only when you have an active analytic workspace.

ORA-34498: (MXNAME02) You cannot use the NAME dimension in this context.

ORA-34500: (MXNAME03) *string* is a reserved keyword that cannot be used in this context.

ORA-34502: (MXNAME03A) *number* is a reserved keyword that cannot be used in this context.

ORA-34504: (MXNAME04) You have no current analytic workspace.

ORA-34506: (MXNAME05) *string* is a local variable that cannot be used in this context.

ORA-34508: (MXNAME06) You cannot qualify references to the NAME dimension.

ORA-34512: (MXNEGERR) The NOT operator can only be used with BOOLEAN expressions. The expression at *string* is *string*.

ORA-34514: (MXOPERR) You cannot *string string* data in the expression that begins with '*string*'.
Cause: The user attempted an invalid operation.

Action: n/a

ORA-34516: (MXPROPER01) A property name cannot be NA.

ORA-34518: (MXPROPER02) A property named *string* does not exist.

ORA-34520: (MXPROPER03) A property name cannot be a multi-line text.

ORA-34522: (MXPROPER04) A property name must be between *number* and *number* bytes long. You supplied a name of *number* bytes.

ORA-34524: (MXPROPER05) The object properties in this analytic workspace cannot be read, because they were created by an incompatible version of *string*.

ORA-34526: (MXPSHPOP01) You cannot *string workspace object* because it is not a scalar variable.

ORA-34528: (MXPSHPOP02) You cannot *string workspace object* because it is not data.

ORA-34530: (MXPSHPOP03) You cannot *string workspace object* because it is a *string*.

ORA-34534: (MXPUTQDR01) A FILEREAD attribute list is not valid in this context.

ORA-34536: (MXRECAP00) COMMAND LOG\n ----------

ORA-34538: (MXRECAP01) The format of the RECAP command is:\n RECAP [ALL|n] [string] [FILE pathname]

ORA-34540: (MXRECAP02) RECAP does not support multi-line strings.

ORA-34542: (MXRECAP03) There are no entries in the command log.

ORA-34544: (MXRECAP04) No matching commands were found.

ORA-34546: (MXRECAP05) The format of the REDO command is:\n REDO [n] [oldtext newtext [option]]

ORA-34548: (MXRECAP06) There is no occurrence *number* of '*number*' in the command.

ORA-34550: (MXRECAP07) Command number *number* is not available.

ORA-34552: (MXRECAP08) Multi-line strings cannot be used in editing the command.

ORA-34554: (MXRECAP09) The string '*number*' does not occur in the command.

ORA-34556: (MXRECAP10) Substituting *number* for *number* would cause the command to exceed the maximum command length (*number*).

ORA-34558: (MXRECAP11) The format of the REEDIT command is:\n REEDIT [n] oldtext newtext [option]

ORA-34560: (MXRECAP12) The *string* command cannot be saved in the command log by REDO or REEDIT or executed by REDO.

ORA-34562: (MXRENAME02) An object named *number* already exists in analytic workspace *string*.

ORA-34564: (MXRENAME03) The SPARSE keyword changes a named composite to unnamed. You cannot apply it to an unnamed composite.

ORA-34566: (MXRENAME04) Only integer dimensions can be named *string*.

ORA-34568: (MXRENAME05) You cannot rename *workspace object* because you do not have PERMIT rights to do it or it is readonly.

ORA-34570: (MXRENAME06) The dimension composite *workspace object* is not in analytic workspace *string*.

ORA-34572: (MXRENAME07) You cannot change *workspace object* to an unnamed composite because it is not a composite.

ORA-34574: (MXRENAME08) You cannot change *workspace object* to an unnamed composite because it has permissions attached.

ORA-34576: (MXRENAME09) You cannot change *workspace object* to an unnamed composite because there are pushed statuses associated with it.

ORA-34578: (MXRENAME10) You cannot change *workspace object* to an unnamed composite because there are no objects dimensioned by it.

ORA-34580: (MXRENAME11) You cannot change *workspace object* to an unnamed composite because there are properties associated with it.

ORA-34582: (MXRENAME12) You cannot change *workspace object* to an unnamed composite, because there is already an unnamed composite with the same base dimensions.

ORA-34584: (MXRENAME13) You cannot change *workspace object* to an unnamed composite, because it appears in the dimension list of unnamed composite *workspace object*.

ORA-34586: (MXRENAME14) You cannot change *workspace object* to an unnamed composite, because unnamed composite *workspace object* appears in its dimension list.

ORA-34588: (MXRENAME15) The object *workspace object* is not in analytic workspace *string*.

ORA-34592: (MXRENAME17) You cannot change *workspace object* to an unnamed composite, because it would cause the dependent object *workspace object* to exceed the limit for the number of named dimensions.

ORA-34594: (MXROLLUP01) *workspace object* is not a data variable.

ORA-34596: (MXROLLUP02) The data type (*string*) of *workspace object* is not INTEGER, DECIMAL, or SHORTDECIMAL.

ORA-34598: (MXROLLUP03) *workspace object* is not related to itself.

ORA-34600: (MXROLLUP04) *workspace object* is not dimensioned by *workspace object*.

ORA-34602: (MXROLLUP05) You must specify which dimension to roll up, since *workspace object* has more than one dimension.

ORA-34604: (MXROLLUP06) *workspace object* is not a relationship array.

ORA-34606: (MXROLLUP07) *workspace object* does not yield values of *workspace object*.

ORA-34608: (MXROLLUP08) *workspace object* is not dimensioned by *workspace object*.

ORA-34610: (MXROLLUP09) The relationship array *workspace object* shares the *workspace object* dimension with *workspace object*. It can only share the rollup dimension itself.

ORA-34612: (MXSHELL01) Your program or expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.

ORA-34614: (MXSHOWCD00) No command was given. There is nothing to show.

ORA-34616: (MXSHOWCD01) No code is generated for the *string* command.

ORA-34618: (MXSHOWCD02) The compiled code for *workspace object* cannot be displayed because the program has been hidden.

ORA-34620: (MXSHOWCD03) No compiled code exists for *string workspace object*.

ORA-34622: (MXSHOWCD04) No text exists for *string workspace object*.

ORA-34624: (MXSORT01) Sort criterion *number* is not dimensioned by *workspace object*.

ORA-34626: (MXSORT02) You must convert WORKSHEET values to a simple data type before using them as a sort criterion.

ORA-34628: (MXSQL99) The SQL "*string*" command can only be used in a program, and it must be compiled before it can be executed.

ORA-34630: (MXSQL00) The format of the SQL DECLARE command is:\n SQL DECLARE cursor-name CURSOR FOR select-command

ORA-34632: (MXSQL01) The format of the SQL OPEN command is:\n SQL OPEN cursor-name

ORA-34634: (MXSQL02) The format of the SQL CLOSE command is:\n SQL CLOSE cursor-name

ORA-34636: (MXSQL03) The format of the SQL FETCH command is:\n SQL FETCH cursor-name [LOOP [count]] INTO :host-var [:host-var ...] [THEN filereadactions]

ORA-34637: (MXSQL11) The format of the SQL IMPORT command is:\n SQL IMPORT cursor-name INTO :host-var [:host-var ...]\n [THEN filereadactions]

ORA-34638: (MXSQL04) The format of the SQL CLEANUP command is:\n SQL CLEANUP

ORA-34639: (MXSQL05) The format of the SQL SELECT command is:\n SQL SELECT rest of select statement INTO :host-var [:host-var ...] [THEN filereadactions]

ORA-34642: (MXSQL08) The format of the SQL PREPARE command is:\n SQL PREPARE statement-name FROM non-select-command

ORA-34644: (MXSQL09) The format of the SQL EXECUTE command is:\n SQL EXECUTE statement-name

ORA-34646: (MXSQL10) The format of the SQL PROCEDURE command is:\n SQL PROCEDURE procedure-name [(parameter {, parameter})]

ORA-34647: (MXSQL18) The text expression in a CURSOR FOR TEXT declaration cannot be NA.
Cause: The text for the SELECT expression in a CURSOR FOR TEXT declaration was evaluated at compile time as NA.

Action: Specify a text expression that is not NA at the time the program containing the SQL DECLARE is compiled.

ORA-34648: (MXSQL19) The SQL command is incomplete.

ORA-34650: (MXSQL20) The SELECT command is not supported by *string*. You must declare a cursor to retrieve SQL data.

ORA-34652: (MXSQL21) The SQL command contains a syntax error.

ORA-34654: (MXSQL23) Host variable expected; use :: to escape a colon.

ORA-34656: (MXSQL24) Additional WHERE clause conditions with CURRENT OF *cursor name* syntax
Cause: A SQL UPDATE or DELETE statement tried to use the CURRENT of *cursor name* syntax with a WHERE clause containing multiple conditions.

Action: When using the CURRENT OF *cursor name* syntax make sure it is the only condition in the WHERE clause.

ORA-34658: (MXSQL25) The words CURSOR FOR TEXT must be followed by a compile-time text expression specifying a SELECT command.
Cause: A SQL DECLARE *csr* CURSOR FOR TEXT command lacked a text expression, or the expression was otherwise invalid.

Action: Specify a single text expression that can be evaluated at compile time to yield a SELECT statement

ORA-34660: (MXSQL26) SQL cursor *string* has already been declared in this compilation.

ORA-34662: (MXSQL27) SQL statement *string* has already been prepared in this compilation.

ORA-34665: (MXSQL30) Concat dimension *workspace object* cannot be used as a target host variable. You must specify one of its leaves, and then set the concat's status from that leaf.

ORA-34666: (MXSWITCH01) Only one DEFAULT label is allowed in a SWITCH.

ORA-34668: (MXSWITCH02) The format of a DEFAULT label statement is:\n DEFAULT:

ORA-34670: (MXSWITCH03) Invalid syntax in case label expression

ORA-34672: (MXSWITCH04) The format of a CASE label statement is:\n CASE case-expression:

ORA-34674: (MXTRACE01) There is no trace in effect.

ORA-34676: (MXTRAP01) *string* is not defined as a label.

ORA-34680: (MXUPDATE03) Analytic workspace *string* is read-only. Therefore, the UPDATE command will not save changes.

ORA-34682: (MXUPDATE04) You have no attached analytic workspaces.

ORA-34684: (MXUPDATE05) All of your attached analytic workspaces are read-only. Therefore, the UPDATE command will not save changes.

ORA-34686: (MXVAR02) *string* is not a valid data type for a declarative statement.

ORA-34688: (MXVAR03) *workspace object* cannot be used as a variable or argument type because it is the name of a dimension composite.

ORA-34690: (MXWATCH01) There are no watchpoints set.

ORA-34692: (MXXEQ01) A division by zero was attempted. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of division by zero.

ORA-34694: (MXXEQ02) Unsupported conversion of RELATION data was attempted.

ORA-34696: (MXXEQ03A) "*number*" is not a number.

ORA-34698: (MXXEQ03B) "*number*" is not a Boolean.

ORA-34700: (MXXEQ05) Function calls are too deeply nested to be evaluated.

ORA-34702: (MXXEQ13) "*number*" is not a valid number format.

ORA-34704: (MXXEQ14) "*number*" does not match number format "*number*".

ORA-34706: (MXXEQ35) *value* is not a valid *workspace object*.

ORA-34708: (MXXEQ36) *value* does not exist.

ORA-34710: (MXXEQ37) Positions in the product of breakout dimensions of an aggregation function cannot exceed 263.**

ORA-34712: (NAFILENAME) The expression identifying the file cannot be NA or blank.

ORA-34718: (NLSCHARSET02) *number* is not a valid, installed NLS character set.

ORA-34719: (NLSCHARSET03) Character data loss in NTEXT/TEXT conversion
Cause: When character set conversion happens between TEXT and NTEXT either implicitly or explicitly, some characters are lost due to no mapping characters in the destination character set.

Action: Make sure all the characters can be mapped to destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE. Note: This message is the OLAP equivalent of ORA-12713.

ORA-34720: (NLSCHARSET04) An unknown character set conversion error occurred.

ORA-34722: (NLSCHARSET05) CAUTION: Character data loss in character set conversion from *string* to *string*
Cause: Some operation required a string to be converted into a different character set, but the string contained characters that didn't exist in the new character set.

Action: Choose different character sets.

ORA-34726: (NLSCHARSET06) CAUTION: String truncated during character set conversion from *string* to *string*
Cause: Some operation required a string to be converted into a different character set. The string required more bytes in the new encoding, and exceeded some byte limit on its allowable length, causing some characters to be removed from the end of the string.

Action: If the byte limit is due to using the ID datatype, consider using the CHAR datatype instead. If the byte limit is due to the limit of 4000 bytes per line of CHAR data, break the long line up into multiple lines.

ORA-34730: (NLSCHARSET08) CAUTION: During character set conversion, some of hidden program *workspace object* was truncated or could not be converted.

ORA-34731: (NLSSORT01) '*number*' is not a valid NLS_SORT specification.
Cause: An unrecognized NLS_SORT value was specified in the SORT command or the SORT, SORTLINES or UNIQUELINES function.

Action: Specify a supported NLS_SORT value.

ORA-34732: (NOCONSIDER) You have no current definition. Define an object or use the CONSIDER command before using the *string* command.

ORA-34738: (NOUPDATE) A severe problem has been detected. Analytic workspace operations have been disabled.
Cause: A previous fatal error has marked the session so that it cannot perform any UPDATEs

Action: Start a new session

ORA-34740: (NOUPDATEDB) Because of a previous error, changes made to the *string* analytic workspace will not be saved.

ORA-34744: (NPV01) Time dimension *workspace object* has a range in status of *number* periods. The maximum range allowed for the NPV function is *number* periods.

ORA-34746: (NPV02) The interest rate in the NPV function is *number*. The value must be greater than -1.

ORA-34748: (NUMARGS1) You supplied *number* argument(s) to the *string* function. You must supply at least *number*.

ORA-34750: (NUMARGS2) The *string* function cannot have any arguments.

ORA-34752: (NUMARGS3) You supplied *number* arguments to the *string* function. It can have no more than *number* arguments.

ORA-34754: (NUMARGS4) You supplied *number* argument(s) to a function that requires at least *number*.

ORA-34756: (NUMARGS5) You supplied arguments to a function that does not take arguments.

ORA-34758: (NUMARGS6) You supplied *number* arguments to a function that can have no more than *number* arguments.

ORA-34760: (NXHANDLE01) Decimal overflow in context that is unprotected by the DECIMALOVERFLOW option. Contact Oracle OLAP technical support.

ORA-34761: (NXHANDLEALLO) A decimal overflow occurred during an ALLOCATE operation. The results are not reliable.
Cause: While performing an ALLOCATE, a decimal overflow occurred

Action: Correct the data or use a higher precision datatype

ORA-34762: (NXHANDLE02) A decimal overflow has occurred. Set DECIMALOVERFLOW to YES if you want NA to be returned as the result of a decimal overflow.

ORA-34764: (NXHANDLE03) A decimal overflow occurred during a ROLLUP operation. The results are not reliable.

ORA-34766: (NXHANDLE04) A decimal overflow occurred during an AGGREGATE operation. The results are not reliable.

ORA-34768: (NXHANDLE05) A decimal overflow occurred while parsing the AGGMAP.

ORA-34770: (OBJENG02) The object name argument to the OBJ function cannot be NA.

ORA-34772: (OBJENG03) *number* contains more than one name.

ORA-34774: (OBJENG04) '*number*' is not the name of a dimension or composite.

ORA-34776: (OBJENG05) Analytic workspace object *number* does not exist.

ORA-34778: (OBJENG06) You cannot use the OBJ function on objects in analytic workspace *string*.

ORA-34780: (OBJLIST01) Analytic workspace '*string*' is not attached.

ORA-34782: (OBJSAVE2) Analytic workspace *string* already has the maximum number of objects (65535).

ORA-34786: (OCI02) The total length of all output variables cannot be more than *number* bytes.

ORA-34796: (OCI08) SQL host variable *number* cannot be bound.
Cause: The data type of the host variable is not supported.

Action: Specify only variables of supported types as host variable names.

ORA-34798: (OCI09) OLAP OCI operation canceled.

ORA-34800: (OCI10) OLAP OCI operation returned '*string*'.

ORA-34802: (OCI11) OLAP OCI operation caused ROLLBACK past an UPDATE of an attached analytic workspace. Current operation canceled.
Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. The current operation is aborted, and the Analytic Workspace detached.

Action: Change the called SQL procedure to avoid the ROLLBACK

ORA-34804: (OCI12) The value of SQL host variable *number* is too long. Use the WIDE keyword for columns that may exceed *number* bytes.
Cause: The host variable had a text value longer than the maximum SQL VARCHAR length

Action: Use the WIDE keyword in the host variable specification, e.g. :WIDE OLAP_object_name

ORA-34805: (OCI13) Statement *number* must have at least one host variable.
Cause: Statements prepared with DIRECT=YES must have at least one host variable.

Action: Add a host variable to the prepared statements declaration.

ORA-34806: (OCI14) Statement *number* can only be executed within an ACROSS command.
Cause: Statements prepared with DIRECT=YES must be executed in an ACROSS command.

Action: Execute the statement within an ACROSS command.

ORA-34828: (OFCENG01) You cannot specify a text dimension value for an INTEGER dimension.

ORA-34830: (OFCENG02) The *string* function cannot be applied to the dimension composite *workspace object*.

ORA-34832: (OFCENG03) *number* is not the name of a dimension or valueset.

ORA-34833: (OFCENG04) The *string* function cannot be applied to the PARTITION TEMPLATE *workspace object*.

ORA-34834: (OKUNDSS01) Analytic workspace *string* must remain current because the *workspace object* program is still executing in it.

ORA-34836: (OKUNDSS03) Analytic workspace *string* cannot be detached because a currently executing command depends upon an object (*workspace object*) it contains.

ORA-34840: (OPCREATE01) The *string* option must be declared with datatype *string*.
Cause: An attempt was made to declare the option with the wrong datatype.

Action: Declare the option with the correct datatype.

ORA-34841: (OPCREATE02) The *string* option must be declared with the READONLY attribute.
Cause: An attempt was made to declare the option without the READONLY attribute.

Action: Declare the option READONLY.

ORA-34842: (OPTWIDTH) *workspace object* must be between *number* and *number*. It cannot be *number*. Its previous value was retained.

ORA-34844: (OPUTNA00) You cannot set an option to NA. The previous value of *workspace object* was retained.

ORA-34846: (OVERRIDE01) *number*

ORA-34848: (PARSE01) The text to be parsed is NA.

ORA-34850: (PARSE02) The expression is not properly constructed.

ORA-34852: (PHASTOVC00) Unsupported type

ORA-34854: (PMTSETUP00) Permission expression for *workspace object* is invalid and will be treated as FALSE.

ORA-34856: (PMTSETUP01) Permission for *workspace object* does not have proper dimensionality of the BY expression.

ORA-34858: (PMTUPDAT01) Permission expression for *workspace object* is invalid and will not be stored.

ORA-34859: (PMTUPDAT07) Permission condition for *workspace object* contains an expression longer than *number* bytes and cannot be stored.
Cause: One of the components of the PERMIT condition was too long.

Action: Rewrite the condition to shorten it.

ORA-34860: (PMTUPDAT02) You do not have PERMIT rights for *workspace object*.

ORA-34862: (PMTUPDAT03) *workspace object* is not a dimension, so you cannot give it MAINTAIN permission.

ORA-34864: (PMTUPDAT04) A BY clause cannot be given with *string* permission for *workspace object*.

ORA-34866: (PMTUPDAT05) You cannot apply permissions to dimension composite *workspace object*. Instead, you can apply permissions to its base dimensions.

ORA-34868: (PMTUPDAT06) You cannot apply permissions to dimension alias *workspace object*. Instead, you can apply permissions to the aliased dimension.

ORA-34870: (PERMIT01) You do not have permission to read this value of *workspace object*.

ORA-34871: (PERMIT06) Session-only value '*value*' of *workspace object* has been deleted because a PERMIT change has revealed a duplicate value.
Cause: Execution of a PERMIT command revealed a permanent dimension or surrogate value having the same name as the SESSION value.

Action: If the SESSION value is still needed, add it with a different name.

ORA-34872: (PERMIT02) You do not have permission to write this value of *workspace object*.

ORA-34873: (PERMIT07) You cannot write this value of *workspace object* since it is readonly.

ORA-34874: (PERMIT03) You do not have permission to run *workspace object*.

ORA-34876: (PERMIT04) You do not have permission to read AGGMAP *workspace object*.

ORA-34877: (PERMIT05) You cannot apply permissions to concat dimension *workspace object*. Instead, you may apply permissions to its leaf dimension(s).

ORA-34880: (PPDTORDR00) DATEORDER must be YMD, YDM, MYD, MDY, DYM, or DMY.

ORA-34882: (PPENG00) The level name for *string* cannot be NA.

ORA-34884: (PPENG01) *number* does not match a PUSHLEVEL command.

ORA-34886: (PPENG02) The option *workspace object* is read-only. Since its value cannot be popped, it cannot be pushed.

ORA-34888: (PPENG03) The status list for *workspace object* is protected by the TEMPSTAT command.

ORA-34892: (PPESCCH01) The ESCAPECHAR option requires a single character.

ORA-34894: (PPESCCH02) The '*string*' character is an invalid choice for the ESCAPECHAR option.

ORA-34896: (PPMONTHS00) At least 12 month names must be given. Only *number* were provided.
Cause: There must be at least one name for each month. Not enough names were provided.

Action: Provide at least 12 names.

ORA-34897: (PPMONTHS01) Blank lines are not allowed in the MONTHNAMES option.
Cause: There is at least one blank line in the string populating the MONTHNAMES option. We do not allow blank month names.

Action: Remove the blank line(s) from the string.

ORA-34900: (PPWKDAYS00) At least 7 day names must be given. Only *number* were provided.
Cause: There must be at least one name for each day. Not enough names were provided.

Action: Make sure there are at least 7 names in the string.

ORA-34901: (PPWKDAYS01) Blank lines are not allowed in the DAYNAMES option.
Cause: There is at least one blank line in the string populating the DAYNAMES option. We do not allow blank day names.

Action: Remove the blank line(s) from the string.

ORA-34902: (PPWKDNY01) The value of WEEKDAYSNEWYEAR must be a number between 1 and 7.

ORA-34904: (VCFMT001) must be multi-line

ORA-34908: (VCFMT003) missing arg

ORA-34910: (VCFMT004) duplicate

ORA-34912: (VCFMT005) error during %%p permutation

ORA-34914: (VCFMT006) non-numeric

ORA-34988: (PRMPINIT216) negate

ORA-34990: (PRNIMPRT01) CAUTION: *number* line(s) in a TEXT PRN file were too long. Each line was truncated to *number* bytes.

ORA-34992: (PRNIMPRT02) CAUTION: *number* field(s) in a STRUCTURED PRN or CSV file were too long. Each field was truncated to *number* bytes.

ORA-34994: (PRNIMPRT03) Unexpected EOF encountered in string while importing data.

ORA-34996: (PRNIMPRT04) Unexpected character '*character*' at end of string.

ORA-35000: (PRNRULER01) The RULER specification does not have any valid field descriptions.

ORA-35002: (PRNRULER02) Zero is not a valid repeat count.

ORA-35004: (PRNRULER03) The repeat count *number* was not followed by a field type.

ORA-35006: (PRNRULER04) The character '*character*' is not a valid field type. The valid types are A, S and T.

ORA-35008: (PRNRULER05) A field description (type *character*) did not include a field width.

ORA-35010: (PRNRULER06) The width (*number*) for an A or T field was too large. The limit is *number*.

ORA-35012: (PRNRULER07) Zero is not a valid width for an S field.

ORA-35014: (PRNRULER08) A repeat count or field width (*string*) was too large. The limit is *number*.

ORA-35016: (QFCHECK00) The analytic workspace and EIF file definitions of *workspace object* have a mismatched type.
Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35017: (QFCHECK06) The Analytic Workspace and EIF file definitions of *workspace object* have different partitioning methods.
Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35018: (QFCHECK01) The analytic workspace and EIF file definitions of *workspace object* have a mismatched data type.
Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35019: (QFCHECK07) The Analytic Workspace and EIF file definitions of *workspace object* have different partition dimensions.
Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35020: (QFCHECK02) The analytic workspace and EIF file definitions of *workspace object* have mismatched dimensioning.
Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35021: (QFCHECK08) The EIF file definition of *workspace object* has some partitions that are not present in the existing Analytic Workspace object.
Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35022: (QFCHECK03) The analytic workspace and EIF file definitions of *workspace object* have a mismatched relation.
Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35023: (QFCHECK09) The analytic workspace and EIF file definitions of *workspace object* have incompatible partition definitions.
Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35024: (QFCHECK04) The analytic workspace and EIF file definitions of *workspace object* have mismatched time dimension attributes.
Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35026: (QFCHECK05) The analytic workspace and EIF file definitions of *workspace object* have a mismatched ALIASOF dimension.
Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35028: (QFASCII00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35029: (QFPART00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35030: (QFDATA00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35031: (QFSVNS00) The IMPORT command has terminated because of a defect in the EIF file.
Cause: The EIF file contains a compressed composite with defective aggregation data.

Action: Recreate the EIF file using the NOAGGR keyword.

ORA-35032: (QFDATA01) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35034: (QFDATA02) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35036: (QFGETBUF00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35038: (QFGETHDR00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35040: (QFOBJECT90) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35042: (QFOBJECT92) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35044: (QFOBJECT93) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35046: (QFOBJECT94) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35048: (QFOBJECT97) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35050: (QFPUTILP97) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35052: (QFPUTILP98) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35054: (QFPUTILP99) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35056: (QFSTRING00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35058: (QFVC00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35060: (QFVC01) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35062: (QFGET01) Duplicate files found for extension number *number* of EIF file *string*.
Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and found two EIF extension files with the same name (differing at most by the case used in the final name component.

Action: Delete, rename or move any files that are not to be read by IMPORT.

ORA-35066: (QFGET03) Extension number *number* is missing for EIF file *string*.
Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and could not find the appropriately numbered extension file.

Action: Move the missing file into one of the searched directories.

ORA-35070: (QFHEAD00) File *string* is not in EIF format, so you cannot import it with the EIF specification.

ORA-35071: (QFHEAD06) EIF file *string* cannot be imported because analytic workspace *string* has not been upgraded to version *string*.
Cause: User attempted to import from an EIF file that was created by a newer version of the product into an AW that was created by a older version of the product.

Action: Make sure that the compatibility mode parameter in the init.ora of the importing instance specifies a version that is at least as high as the parameter was in the exporting instance. Then, convert the AW to the latest storage format and reexecute the import command. Alternatively, change the EIFVERSION option of the exporting instance to a lower number, recreate the EIF file, and import the new file.

ORA-35074: (QFHEAD02) EIF file *string* cannot be read by this version of *string*.
Cause: The EIF file was created with an internal version number indicating it may contain objects that are not compatible with the current Oracle OLAP version, or the EIF file is in an obsolete format.

Action: If possible, set EIFVERSION in the exporting instance to a lower number, recreate the EIF file, and import the new file.

ORA-35076: (QFHEAD04) CAUTION: The textual data in EIF file *string* is encoded in a character set that is not recognized by this version of *string*.
Cause: IMPORT could not recognize the character set specification in the EIF file.

Action: Check the imported text data. If it was not imported correctly, recreate the EIF file with a character set supported by the current Oracle version.

ORA-35078: (QFHEAD05) An EIF extension file header for *string* is not in the correct format.
Cause: An EIF extension file in multi-file IMPORT did not contain correct header information.

Action: Check to be sure that EIFEXTENSIONPATH is set correctly and that all the extension files for the current IMPORT were created by the same EXPORT command as the main EIF file.

ORA-35080: (QFOBJECT01) You cannot rename dimensions when you import them. The *string* dimension cannot be imported as *string*.

ORA-35082: (QFOBJECT02) You cannot import changes to the *workspace object* program now, because it is currently executing.

ORA-35084: (QFOBJECT06) CAUTION: *string* is being imported. However, this is a reserved word, so you must rename the new object before you can use it.

ORA-35086: (QFOBJECT07) " *number* dimension values "

ORA-35087: (QFOBJECT09) *number*\nInvalid

ORA-35088: (QFOBJECT08) " *number* dimension value combinations "

ORA-35090: (QFPARSE00) The object *string* cannot be imported because it does not exist in the EIF file.

ORA-35092: (QFPARSE01) You cannot import the object *string* into both *string* and *string* at the same time. To import an object into two different analytic workspaces, use two separate IMPORT commands with different INTO arguments.

ORA-35094: (QFPARSE02) The object *string* cannot be imported into analytic workspace *string* because an object named *string* already exists in analytic workspace *string*. To force a new *string* to be created, use an INTO argument on the IMPORT command.

ORA-35095: (QFSVNS01) One or more imported values of fixed-width dimension *workspace object* have been truncated.
Cause: The data in the EIF file was exported from a dimension with wider values than the target dimension will accommodate.

Action: Change the definition of the target dimension, or check to be sure that multiple values from the target dimension have not become identical during the import process. This could cause data loss as data from later dimension values overstores data imported earlier.

ORA-35096: (QUAFEOF) An unexpected end-of-file occurred in the EIF file. Check to make sure you have all the imported data that you expected.

ORA-35098: (RDPOW01) You cannot raise zero to a negative power.

ORA-35100: (RDPOW02) You cannot raise a negative number to a non-integer power.

ORA-35102: (READONLY00) The option *workspace object* is read-only. Its previous value was retained.

ORA-35104: (REALDTOK01) "*string*" is not a number.

ORA-35106: (REGRESS00) The regression was not calculated because of a linear relationship between your independent variables.
Cause: The values of the specified independent variables are not independent. For example, one may be a multiple of the other.

Action: Chose independent variables whose values are truly independent of one another.

ORA-35108: (REGRESS01) The number of non-NA observations with weights greater than zero (*number*) is too small to calculate a regression.

ORA-35110: (REGRESS02) The number of independent variables cannot exceed *number*.

ORA-35112: (REGRESS03) Regression Analysis

ORA-35114: (REGRESS04) Dependent Variable:

ORA-35116: (REGRESS05) WEIGHTBY Variable:

ORA-35118: (REGRESS06) Regressor

ORA-35120: (REGRESS07) Coefficient

ORA-35122: (REGRESS08) Std. Error

ORA-35124: (REGRESS09) T-ratio

ORA-35126: (REGRESS10) Corrected R-square

ORA-35128: (REGRESS11) F-Statistic (%1 %2)

ORA-35130: (REGRESS12) Number of observations

ORA-35132: (REGRESS13) Standard error of estimate

ORA-35134: (RGACCUM01) A weighted regression cannot be calculated if any of the weights specified is less than zero.

ORA-35136: (RGINFO00) There is no saved regression information for the INFO function to retrieve.

ORA-35138: (RPACROSS01) You must specify dimension values if you use *string* in an ACROSS phrase.

ORA-35140: (RPACROSS02) ACROSS must be followed by the name of a dimension or an expression with one dimension.

ORA-35142: (RPCOLUMN01) Multiple ACROSS phrases specifying the same dimension (*workspace object*) cannot be given for the same column.

ORA-35144: (RPFORMAT01) The value of the *string* attribute in column *number* is NA.

ORA-35146: (RPFORMAT02) The value of the *string* attribute in column *number* is negative.

ORA-35148: (RPFORMAT03) The value of the *string* attribute in column *number* is zero.

ORA-35150: (RPFORMAT04) The INDENT value for column *number* equals or exceeds the WIDTH.

ORA-35152: (RPFORMAT05) Column *number* extends past the maximum length (*number*) of a report line.

ORA-35154: (RSEXECUT01) The *string* function can only be used in a ROW or REPORT command.

ORA-35156: (RSEXECUT02) An argument to *string* was NA.

ORA-35158: (RSEXECUT03) Column index *number* in *string* is before the first or after the last report column.

ORA-35160: (RSEXECUT04) Totaling level index *number* in *string* is not between 1 and 256.

ORA-35162: (RSEXECUT05) The column number (*number*) in *string* must be greater than zero.

ORA-35164: (RSEXECUT06) An argument (*number*) to *string* must be zero or greater.

ORA-35166: (SIGENG01) *string*

ORA-35168: (SIGENG02) (*number*) Contact the administrator of your *string* application.

ORA-35170: (SIGENG03) The "errorname" argument to the SIGNAL command is NA.

ORA-35171: you may not signal error number *string* with the SIGNAL command
Cause: The user attempted to explicitly signal an invalid error number with the OLAP DML SIGNAL command

Action: Signal another error number

ORA-35172: (SNCHILD01) There is duplicate information beginning at *string*, or this information conflicts with a keyword.

ORA-35174: (SNSYN100) The word *string* must be followed by a name.

ORA-35176: (SNSYN101) The format of the AGGMAPINFO function is:\n \n AGGMAPINFO(aggmap-name { RELATIONS | NUMRELS | AGGINDEX | STORE | SHARE | FCACHE | MAPTYPE | { RELATION | PRECOMPUTE | STATUS } expression})

ORA-35178: (SNSYN102) The format of the INFILE command is:\n \n INFILE {EOF | filename} [NOW] [NLS_CHARSET name] [TABEXPAND expression]

ORA-35180: (SNSYN103) The format of the OUTFILE command is:\n \n OUTFILE [APPEND] {EOF | TRACEFILE | filename [NOCACHE] [NLS_CHARSET name]}
Cause: The user specified incorrect syntax for the OUTFILE command.

Action: n/a

ORA-35182: (SNSYN104) The format of the WKSDATA function is:\n \n WKSDATA(worksheetname)

ORA-35184: (SNSYN105) The dimension name (*string*) must be followed by one of these keywords: TO, KEEP, ADD, REMOVE, COMPLEMENT, SORT, or INSERT.

ORA-35186: (SNSYN106) The word *string* must be followed by an argument such as a dimension value.

ORA-35188: (SNSYN107) The word *string* must be followed by an expression.

ORA-35190: (SNSYN108) The TOP or BOTTOM value (*string*) must be followed by the keyword BASEDON or PERCENTOF and an expression.

ORA-35192: (SNSYN109) The dimension name must be followed by a sort order (A or D) and a sort criterion expression.

ORA-35194: (SNSYN110) The format of the INFO function is:\n \n INFO({FORECAST|PARSE|REGRESS|MODEL} choice [index1 [index2 ...]])

ORA-35196: (SNSYN111) The format of the CHARLIST function is:\n \n CHARLIST(expression [dimension1 [dimension2 ...]])

ORA-35198: (SNSYN112) The dimension name (*string*) must be followed by one of these keywords: ADD, BULKRENAME, DELETE, MERGE, MOVE, or RENAME.

ORA-35200: (SNSYN113) An angle bracket (>) is missing after *string*.

ORA-35202: (SNSYN114) A right parenthesis or an operator is expected after *string*.

ORA-35204: (SNSYN115) A label is missing after *string*.

ORA-35206: (SNSYN116) The word UNION must be followed by a parenthesized list of LIST clauses.

ORA-35208: (SNSYN117) An expression, SKIP, <, or ACROSS must follow '*string*', or this expression conflicts with a keyword.

ORA-35210: (SNSYN118) A colon (:) is required after an ACROSS phrase.

ORA-35212: (SNSYN119) The format of the UNRAVEL function is:\n \n UNRAVEL(expression [dimension1 [dimension2 ...]])

ORA-35214: (SNSYN120) The format of the COMPILE command is:\n \n COMPILE name [THREADS #]

ORA-35216: (SNSYN121) The fileunit (*string*) must be followed by an attribute (such as DATE) and a new value for the attribute.

ORA-35218: (SNSYN122) The format of LEAD and the LAG functions is:\n \n function(time-series nperiods time-dimension [STATUS|NOSTATUS])

ORA-35220: (SNSYN123) The format of the EXISTS function is:\n \n EXISTS(text-expression)

ORA-35222: (SNSYN135) The format of the EXTCHARS function is:\n \n EXTCHARS(text-expression [start [length]])

ORA-35224: (SNSYN136) The format of the EXTLINES function is:\n \n EXTLINES(text-expression [start [length]])

ORA-35226: (SNSYN137) The format of the FINDCHARS function is:\n \n FINDCHARS(search-text find-text [start [LINENUM]])

ORA-35228: (SNSYN138) The format of the FINDLINES function is:\n \n FINDLINES(search-text find-text)

ORA-35230: (SNSYN139) The format of the JOINCHARS function is:\n \n JOINCHARS(text-expression1 text-expression2 ...)

ORA-35232: (SNSYN140) The format of the JOINLINES function is:\n \n JOINLINES(text-expression1 text-expression2 ...)

ORA-35234: (SNSYN141) The format of the NUMCHARS function is:\n \n NUMCHARS(text-expression)

ORA-35236: (SNSYN142) The format of the NUMLINES function is:\n \n NUMLINES(text-expression)

ORA-35238: (SNSYN143) The format of the UPCASE function is:\n \n UPCASE(text-expression)

ORA-35240: (SNSYN144) The format of the TEXTFILL function is:\n \n TEXTFILL(text-expression width)

ORA-35242: (SNSYN145) The format of the INSCHARS function is:\n \n INSCHARS(text-expression characters [after-position])

ORA-35244: (SNSYN146) The format of the INSLINES function is:\n \n INSLINES(text-expression newtext [after-expression])

ORA-35246: (SNSYN147) The format of the REMCHARS function is:\n \n REMCHARS(text-expression start [length])

ORA-35248: (SNSYN148) The format of the REMLINES function is:\n \n REMLINES(text-expression start [length])

ORA-35250: (SNSYN149) The format of the REPLCHARS function is:\n \n REPLCHARS(text-expression characters [start-position])

ORA-35252: (SNSYN150) The format of the REPLLINES function is:\n \n REPLLINES(text-expression newtext [start-line])

ORA-35254: (SNSYN151) The format of the SORTLINES function is:\n \n SORTLINES(text-expression [A|D] [nls_sort [sort-exp]])

ORA-35256: (SNSYN152) The format of the INLIST function is:\n \n INLIST(text-master text-sublist)

ORA-35258: (SNSYN153) The format of the BLANKSTRIP function is:\n \n BLANKSTRIP(text-expression [LEADING|TRAILING|BOTH])

ORA-35260: (SNSYN154) The format of the ARG function is:\n \n ARG(n)\nwhere "n" specifies the number of the argument to be returned.

ORA-35262: (SNSYN155) The format of the QUAL function is:\n \n QUAL(expression dimension1 dimvalue [dimension2 dimvalue ...])

ORA-35264: (SNSYN156) The format of the ARGFR function is:\n \n ARGFR(start-arg-no)

ORA-35266: (SNSYN157) The format of the CONVERT function is:\n \n CONVERT(expression datatype [options])

ORA-35268: (SNSYN158) The format of the OBJ function is:\n \n OBJ(choice ['name']) or OBJ(choice [text-expression])

ORA-35270: (SNSYN159) The format for this type of aggregation function is:\n \n function(expression [[STATUS] dimensions])

ORA-35272: (SNSYN161) The ROWTOTALS attribute must immediately precede an ACROSS keyword.

ORA-35274: (SNSYN162) The first argument to GET must be a data type or the name of a dimension optionally preceded by the word NEW or VALID.

ORA-35276: (SNSYN163) The format of the ALLOCATE command is:\n \n ALLOCATE varname [SOURCE svarname] [BASIS bvarname [ACROSS dimname]] [TARGET tvarname [TARGETLOG logvarname]] [USING aggmap]
Cause: The user used incorrect syntax for the ALLOCATE command.

Action: Correct the calling syntax.

ORA-35278: (SNSYN164) A right parenthesis [)] is missing after "*string*".

ORA-35280: (SNSYN165) The format of the AGGREGATE command is:\n \n AGGREGATE varname1 [varname2 varname3 ...] [USING aggmap-name] [COUNTVAR intvar-name1 [intvar-name2 intvar-name3 ...]] [FUNCDATA] [FORCEORDER] [PARALLEL #] [{FROM|FROMVAR} fromname [, fromname2 ...]]
Cause: The user used incorrect syntax for the AGGREGATE command.

Action: Correct the calling syntax.

ORA-35282: (SNSYN166) The format of the AGGREGATE function is:\n \n AGGREGATE(varname [USING aggmap-name] [COUNTVAR intvar-name] [FORCECALC] [FORCEORDER] [{FROM|FROMVAR} fromname [, fromname2 ...]])
Cause: The user used incorrect syntax for the AGGREGATE function.

Action: Correct the calling syntax.

ORA-35284: (SNSYN167) The format of the IRR function is:\n \n IRR(cashflows time-dimension)

ORA-35286: (SNSYN168) The format of the NPV function is:\n \n NPV(cashflows discount-rate time-dimension)

ORA-35288: (SNSYN169) The format of a moving function is:\n \n function(expression, start, stop, stepsize, dimension)

ORA-35290: (SNSYN170) The format of the CUMSUM function is:\n \n CUMSUM(expression [STATUS] dimension [resetdimension])

ORA-35292: (SNSYN171) The format of the ISVALUE function is:\n \n ISVALUE(dimension expression)

ORA-35294: (SNSYN173) The format of the STATLEN function is:\n \n STATLEN(dimension)

ORA-35296: (SNSYN174) The format of the STATLIST function is:\n \n STATLIST(dimension [INTEGER] [width])

ORA-35298: (SNSYN175) The format of the STATFIRST function is:\n \n STATFIRST(dimension)

ORA-35300: (SNSYN176) The format of the STATLAST function is:\n \n STATLAST(dimension)

ORA-35302: (SNSYN177) The format of the STATMIN function is:\n \n STATMIN(dimension)

ORA-35304: (SNSYN178) The format of the STATMAX function is:\n \n STATMAX(dimension)

ORA-35306: (SNSYN179) The format of the STATVAL function is:\n \n STATVAL(dimension nth-value-to-find [INTEGER])

ORA-35308: (SNSYN180) The format of the STATRANK function is:\n \n STATRANK(dimension [dimension-value])

ORA-35310: (SNSYN181) The format of the INSTAT function is:\n \n INSTAT(dimension dimension-value)

ORA-35312: (SNSYN182) The format of the COLVAL function is:\n \n COLVAL(column-number)

ORA-35314: (SNSYN183) The format of the RUNTOTAL function is:\n \n RUNTOTAL(subtotal-number)

ORA-35316: (SNSYN184) The format of the SUBTOTAL function is:\n \n SUBTOTAL(subtotal-number)

ORA-35318: (SNSYN185) The format of the INTPART function is:\n \n INTPART(expression)

ORA-35492: (SNSYN314) The format of the MAXBYTES function is:\n \n MAXBYTES(text-expression)

ORA-35494: (SNSYN315) The word ACROSS must be followed by a dimension name.

ORA-35496: (SNSYN316) The format of the FILTERLINES function is:\n \n FILTERLINES(source-exp, filter-exp)

ORA-35498: (SNSYN318) The format of the DBGOUTFILE command is:\n \n DBGOUTFILE [APPEND] {EOF | filename [NOCACHE]}

ORA-35500: (SNSYN319) The format of the OBSCURE function is:\n \n OBSCURE ({HASH | HIDE | UNHIDE | ENCRYPT} [, TEXT],\n seed-text, input-text)

ORA-35502: (SNSYN324) INSERT must be followed by FIRST, LAST, BEFORE dimension-value, or AFTER dimension-value.

ORA-35504: (SNSYN325) Invalid format for IMPORT command.

ORA-35510: (SNSYN330) The format of the CATEGORIZE function is:\n \n CATEGORIZE(expression {group literal list | group expression})

ORA-35512: (SNSYN331) The format of the CORRELATION function is:\n \n CORRELATION(expression1, expression2, method, [BASEDON dimension1 [dimension2 ...]])

ORA-35514: (SNSYN332) The format of the MODE function is:\n \n MODE(expression, BASEDON dimension)

ORA-35516: (SNSYN333) The format of the PERCENTAGE function is:\n \n PERCENTAGE(expression [BASEDON dimension1 [dimension2 ...]])

ORA-35518: (SNSYN334) The format of the RANK function is:\n \n RANK(expression, method, BASEDON dimension)

ORA-35520: (SNSYN335) The format of the SMOOTH function is:\n \n SMOOTH(expression, method, parameters [BASEDON dimension1 [dimension2 ...]])

ORA-35522: (SNSYN336) The format of the NLSITEMS function is:\n \n NLSITEMS({LANGUAGE | TERRITORY})

ORA-35524: (SNSYN337) The format of the NLSAVAIL function is:\n \n NLSAVAIL({LANGUAGE | TERRITORY} itemname)

ORA-35526: (SORTENG10A) The expression for TOP or BOTTOM has a value of NA.

ORA-35528: (SORTENG10B) In the TOP or BOTTOM phrase, you requested a negative number of dimension values (*number*).

ORA-35529: (SORTENG10D) You cannot sort more than 231 - 1 values.**

ORA-35530: (SORTENG10C) You cannot specify a percentage greater than 100 or less than 0. You requested *number*.

ORA-35532: (SPSFILE1) The file you specified is not in *string* format.

ORA-35534: (SPSFILE2) *string* files require worksheets with only two dimensions.

ORA-35536: (SPSFILE3) PRN files require worksheets with only two dimensions.

ORA-35538: (SPSIDIF01) A record (*string*) that was not in DIF format was read while importing file *string*.

ORA-35540: (SPSIWKS1) An unexpected end-of-file occurred in spreadsheet file *string*. Check your data to make sure you imported all you expected.

ORA-35542: (SPSRREC01) An unexpected end-of-file occurred while importing file *string*. Check your data to make sure you imported all you expected.

ORA-35544: (SQA03) The SQL data in column *number* of your fetch statement cannot be converted to type *string*.

ORA-35548: (SQCGEXE01) SQL statement-name '*string*' has not been prepared in the current program.

ORA-35550: (SQCGOPN01) SQL cursor '*string*' has not been declared in the current program.

ORA-35554: (SQCSRNAM00) SQL cursor name '*number*' has an invalid length of *number*. A cursor name must have a length of 1 to 18 bytes, inclusive.

ORA-35556: (SQCSRNAM01) SQL cursor name '*number*' has an invalid first character. Use a-z, @, # or $.

ORA-35558: (SQCSRNAM02) SQL cursor name '*number*' contains an invalid character. Use a-z, 0-9, @, #, $ and _.

ORA-35559: (SQCSRNAM03) SQL cursor name cannot be INTO.

ORA-35560: (SQGETCD01) Conjoint dimension *workspace object* cannot be an input host variable. You can use the current values of its bases via the KEY function.

ORA-35561: (XSRWLD01) Object *workspace object* is not a valid target.
Cause: An invalid object was specified as a target.

Action: Choose a valid object as a target.

ORA-35562: (SQLIMP01) The SQL IMPORT command will produce *number* columns of output, but you have provided *number* host variables in your INTO clause.
Cause: The expression is the source query do not match the targets in the INTO clause.

Action: Make sure the the expressions in the source query match the targets in the INTO clause.

ORA-35563: (XSRWLD17) Multiple values exist for an attribute of this dimension member.
Cause: Multiple source table rows containing different values for a dimension attribute were found. Only the first of the multiple rows has been loaded.

Action: Fix the mapping or remove the rows with conflicting attribute values.

ORA-35564: (XSRWLD02) Cannot convert from the *string* type to the *string* type.
Cause: Conversion from source to target is not allowed

Action: Choose a different target datatype

ORA-35565: (XSRWLD03) For object *workspace object* only APPEND, MATCH or ASSIGN may be used.
Cause: An incorrect setting was applied to the target

Action: For DIMENSIONs use APPEND or MATCH, for SURROGATEs use ASSIGN.

ORA-35566: (XSRWLD04) Object *workspace object* cannot be used with QDRs
Cause: A QDR was placed on a target dimension

Action: Remove the QDR on the target dimension

ORA-35568: (SQLIMP03) The datatype of variable *number* should be INTEGER, LONGINTEGER or SHORTINTEGER.
Cause: The target variable was not INTEGER, LONGINTEGER or SHORTINTEGER.

Action: The target variable must be INTEGER, LONGINTEGER or SHORTINTEGER.

ORA-35569: (XSRWLD05) An error was encountered in converting data *string* to *string* in column *number*.
Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35570: (XSRWLD06) A column value is not a valid member of its target dimension.
Cause: The source value for a dimension is not an existing member of the dimension.

Action: Ensure the column value is an existing member of its target dimension.

ORA-35571: (XSRWLD07) The maximum number of load errors has occurred. No changes from this step were committed to the database.
Cause: The number of load errors exceeded the specified maximum.

Action: Fix the load errors, or increase the maximum number allowed and rerun the load.

ORA-35572: (XSRWLD08) A column value is not a valid member of its related dimension.
Cause: The source data for a relation is not a member of the related dimension.

Action: Ensure the source data is a valid member of the related dimension.

ORA-35573: (XSRWLD09) An incoming dimension value is null.
Cause: A source value for a dimension is null.

Action: Ensure the source data for the dimension is not null.

ORA-35574: (SQLOUT02) SQL cursor '*number*' is not known in the current logical unit of work.

ORA-35575: (SQLOUT04) The *string* command will produce *number* columns of output, but you have provided *number* host variables in your INTO clause.

ORA-35576: (SQLOUT09) SQL cursor '*number*' is not open.

ORA-35577: (SQLOUT10) SQL cursor '*number*' has already been declared with a different SELECT statement.

ORA-35578: (SQLOUT11) SQL cursor '*number*' cannot be used with CURRENT OF *cursor name* syntax
Cause: The CURRENT OF *cursor* syntax in the WHERE clause tried to use a cursor that was not declared with the FOR UPDATE [of *column name*] SQL syntax.

Action: Add the FOR UPDATE [OF *column name*] SQL syntax to the cursor specified.

ORA-35579: (SQLOUT12) SQL cursor '*number*' has already been opened.

ORA-35580: (XSRWLD10) An incoming column contains a data type mismatch.
Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35581: (XSRWLD11) You do not have permission to write this value of the target.
Cause: You do not have sufficient permissions to write to the specified target.

Action: Ask the owner of the schema or OLAP DBA to grant you sufficient permissions.

ORA-35582: (XSRWLD12) Cannot change the level of dimension member "*number*" from "*number*" to "*number*" within a single load.
Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35583: (XSRWLD13) Cannot change the level of a dimension member within a single load.
Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35584: (SQLOUT17) The *string* procedure requires *number* parameters.

ORA-35585: (XSRWLD14) This SQL query generated rejected records.
Cause: Rejected records were generated by this query.

Action: Locate the records that were rejected and resolve the rejection (for example, data, mapping, and so on).

ORA-35586: (SQLOUT19) The parameter list passed to the procedure is syntactically incorrect.

ORA-35587: (SQLOUT20) The nesting of table functions and SQL commands has exceeded the maximum of *number* levels.
Cause: The nesting of table functions with the PREDMLCMD token populated with an OLAP DML expression that use the embedded SQL support to access another table function which contains a table functions with the PREDMLCMD token filled in with an OLAP DML expression that uses the embedded SQL support.

Action: Reduce the level of nesting between table functions and OLAP DML embedded SQL support.

ORA-35588: (XSRWLD15) Cannot change the parent of existing dimension member "*number*" from "*number*" to "*number*" in LOAD RETAIN mode.
Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD [NO] SYNCH mode.

ORA-35589: (XSRWLD16) Cannot change the parent of an existing dimension member in LOAD RETAIN mode.
Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD [NO] SYNCH mode.

ORA-35590: (SQPHRASE01) The host variable expression has invalid syntax.

ORA-35592: (SQRT00) The argument to SQRT is negative. Set ROOTOFNEGATIVE to YES if you want NA to be returned for the root of a negative number.

ORA-35594: (SSCGEXP01) The LIMIT criterion expression must be dimensioned by *workspace object*.

ORA-35596: (SSCGEXP02) The LIMIT criterion expression must be dimensioned by *workspace object*, which is a component of *workspace object*.

ORA-35600: (SSCGLIMT01) The IFNONE label is not allowed when you specify NULL status.

ORA-35602: (SSCGLIMT02) You cannot limit dimension composite *workspace object*.

ORA-35603: (SSCGLIMT03) You cannot limit PARTITION TEMPLATE *workspace object*.

ORA-35604: (SSCGNULL01) The phrase "IFNONE label" can only be used when the LIMIT command executes in a program.

ORA-35606: (SSCGNULL02) *string* is not defined as a label.

ORA-35608: (SSCGPOS01) You cannot limit a dimension to values of type *string*. Use the CONVERT function if necessary.

ORA-35610: (SSCGREL01) *workspace object* and *workspace object* are not related.

ORA-35612: (SSCGREL02) Related dimension values are not allowed when you specify a scalar or multi-dimensional relationship array.

ORA-35614: (SSCGREL03) *workspace object* is not a relationship involving *workspace object*.

ORA-35622: (SSCGREL07) *workspace object* is not a relation of *workspace object*.

ORA-35623: (XSSCLLEV07) *workspace object* is not a valueset of *workspace object*.

ORA-35624: (SSCGREL08) *workspace object* is not dimensioned by *workspace object*.

ORA-35625: (XSSCLLEV08) *workspace object* is not dimensioned by *workspace object*.

ORA-35626: (SSCGREL09) *workspace object* is not related to itself.

ORA-35627: (XSSCLEV09) *workspace object* is not a relationship array.

ORA-35628: (SSCGREL10) *workspace object* is not a dimension of relation *workspace object*.

ORA-35629: (XSBASLIM00) *workspace object* does not have base dimensions.

ORA-35630: (SSCGREL11) While limiting dimension *workspace object*, you cannot use it to qualify relation *workspace object*.

ORA-35632: (SSCGREL12) While limiting an alias of *workspace object*, you cannot use it to qualify relation *workspace object*.

ORA-35633: (STATEQ01) Both arguments to STATEQUAL must be status lists of the same dimension.

ORA-35634: (SSCGVALS01) The format of a related dimension list is:\n related-dimension [valuelist] | relationship-array-name

ORA-35636: (SSCGVALS02) *workspace object* is a dimension composite and its position numbers cannot be used in LIMIT NOCONVERT.

ORA-35638: (SSEXECUT02) NA is not a value of *workspace object*.

ORA-35640: (SSEXECUT03) You cannot MAINTAIN ADD *workspace object* while it is being LIMITed.

ORA-35642: (SSEXECUT07A) The expression for the beginning of the dimension range has a value of NA.

ORA-35644: (SSEXECUT07B) The expression for the end of the dimension range has a value of NA.

ORA-35646: (SSEXECUT08) The expression for BEFORE or AFTER has a value of NA.

ORA-35648: (SSEXECUT09) The expression for FIRST or LAST has a value of NA.

ORA-35650: (SSEXECUT15) The expression for BEFORE or AFTER is not in current status.

ORA-35652: (SSFRLST01) In the FIRST or LAST phrase, you requested a negative number of dimension values (*number*).

ORA-35654: (SSNULL) The status of the *workspace object* dimension cannot be set to null.

ORA-35656: (STATCHK00) *workspace object* has no values in status.

ORA-35658: (STATLIST01) The data width argument to the STATLIST function must be greater than zero.

ORA-35660: (STATVAL03) The *workspace object* dimension does not have a status value numbered *number*.

ORA-35662: (STKTOINF01) The width argument to the CONVERT(... INFILE) function was *number*. The limit is *number*.

ORA-35664: (STKTOINF02) Conversion to INFILE would produce a value *number* bytes wide, exceeding the maximum input line length *number*.

ORA-35666: (STRBYT01) NTEXT arguments to the BYTE functions must be converted to TEXT. Use CONVERT(value TEXT NOTRANSLATE) to avoid translation.

ORA-35668: (STRCHG01) The oldtext and newtext arguments must be single-line text values.

ORA-35670: (STRCHG02) The oldtext argument must contain at least one character.

ORA-35672: (STRCHG03) The number-to-change argument must be greater than 0.

ORA-35674: (STRDEL01) The position of the first character to remove must be at least 1.

ORA-35676: (STRDEL02) You must remove at least one character. You cannot remove *number* characters.

ORA-35678: (STREXTR01) The position of the first character to extract must be greater than zero. You cannot start extracting at position *number*.

ORA-35680: (STREXTR02) You must extract at least one character. You cannot extract *number* characters.

ORA-35682: (STRFIND01) The start argument must be at least 1.

ORA-35684: (STRINS01) Insertion must begin after a character position of zero or greater.

ORA-35686: (STRINS02) The length of one line of a text value cannot exceed *number* characters. You attempted to create a line with *number* characters.

ORA-35688: (STRREP01) The position of the first character to replace must be at least 1.

ORA-35690: (SUBGONE00) You have requested a feature or used a command that is not supported in this release.

ORA-35692: (TDENDPT00) Dimension *workspace object* is empty.

ORA-35694: (TDINCNUM00) You attempted to work with a date outside of the allowable range.

ORA-35696: (TEXTFENG01) The data width argument to the TEXTFILL function must be greater than zero.

ORA-35698: (TFGROUP01) Dimension *workspace object* appears in more than one GROUP phrase, either directly or via a dimension composite or conjoint dimension.

ORA-35700: (TFGROUP02) An expression used in a GROUP phrase must have exactly one dimension.

ORA-35702: (TFPARSE01) Dimension *workspace object* appears in both the DOWN phrase and a GROUP phrase, either directly or via a conjoint dimension or composite.

ORA-35704: (TFPARSE02) Dimension *workspace object* appears in both the DOWN phrase and an ACROSS phrase, either directly or via a conjoint dimension or composite.

ORA-35706: (TFPARSE03) Dimension *workspace object* appears both inside and outside an ACROSS loop.

ORA-35708: (TFPARSE04) The expressions used in the DOWN phrase must all have the same single dimension.

ORA-35710: (TFPARSE05) The DOWN phrase must be a single expression or a list of expressions enclosed in angle brackets .

ORA-35712: (TFPARSE07) Dimension *workspace object* appears in both an ACROSS phrase and a GROUP phrase, either directly or via a conjoint dimension or composite.

ORA-35716: (TRIGGER00) NA trigger calls exceed the maximum allowable depth of *number*.

ORA-35718: (TRIGGER01) The NA trigger expression for variable *workspace object* contains a format error.

ORA-35720: (TRIGGER02) The NA trigger for *workspace object* could not be executed recursively because the RECURSIVE option is set to NO.

ORA-35726: (TSFENG01) The starting point (*number*) for a moving function must be less than or equal to the stopping point (*number*).

ORA-35728: (TSFENG02) The step value (*number*) for a moving function must be greater than zero.

ORA-35730: (TSFENG03) The starting point, stopping point, and step value for a moving function cannot be NA.

ORA-35732: (UNITCHEK01) *number* is an invalid file unit number.

ORA-35734: (UNITCHEK02) File unit *number* is not open.

ORA-35736: (VALNAME01) You cannot define NAME. NAME is a special reserved dimension used to organize your analytic workspace dictionary.

ORA-35738: (VCLEX01) "*number*" is not a valid dimension value because it contains invalid characters or blanks, but it is not enclosed in single quotes.

ORA-35740: (VCLEX02) *string* is too large to be an integer.

ORA-35742: (VCLEX06) *number* already exists in the *string* analytic workspace.

ORA-35744: (VCLEX07) "*number*" is not a valid name because it contains invalid characters or blanks.

ORA-35746: (VCLEX08) *string* is too large to be a short integer.

ORA-35748: (VCOVRFLW01) A text value cannot be more than *number* characters long. Your value is *number* characters long.

ORA-35749: (VCHEX01) '*character*' is not a valid hexadecimal digit.
Cause: The text being converted contains an invalid hexadecimal digit.

Action: Replace the character with a digit in the range 0-9 or A-F.

ORA-35750: (VCTOBOOL01) A multiline text value cannot be converted to a BOOLEAN.

ORA-35752: (VCTODT00) '*string*' is not a valid date order. Valid orders are YMD, YDM, MYD, MDY, DMY, and DYM.

ORA-35754: (VCTODT01) '*number*' is not a valid date because *number* is out of range for a month.

ORA-35756: (VCTODT02) '*number*' is not a valid date because *number* is out of range for a year.
Cause: n'%1p'

Action: n/a

ORA-35758: (VCTODT03) '*number*' is not a valid date because *number* is out of range for a day of the month.

ORA-35760: (VCTODT04) '*number*' is not a valid date because it is ambiguous.

ORA-35762: (VCTODT05) '*number*' is not a valid packed numeric date.

ORA-35764: (VCTODT06) '*number*' is not a valid date.

ORA-35766: (VCTODT07) '*number*' is not a valid date or name for the *workspace object* dimension.

ORA-35768: (VCTODT08) '*number*' is not a valid name for *workspace object*, because the period *number* is out of range.

ORA-35770: (VCTODT15) '*number*' is not a valid date. The numeric field '*string*' cannot be interpreted.

ORA-35772: (VCTODT16) '*number*' is not a valid date. '*string*' is the second year field encountered.

ORA-35774: (VCTODT17) '*number*' is not a valid date. A second alphabetic field, '*string*', is not allowed.

ORA-35776: (VCTODT18) '*number*' is not a valid date. A date cannot end with a separation character.

ORA-35778: (VCTODT19) '*number*' is not a valid date. Input after '*string*' is extra.

ORA-35780: (VCTODT20) A date cannot be an empty string.

ORA-35782: (VCTODT21) '*number*' is not a valid date because it is incomplete.

ORA-35784: (VCTODT22) '*number*' is not a valid date. Packed numeric notation must be 6 or 8 digits long.

ORA-35786: (VCTODT23) '*number*' is not a valid date. '*string*' cannot be recognized as a month name.

ORA-35788: (VCTODT24) '*number*' is not a valid date. There are too many leading zeros beginning at '*string*'.

ORA-35790: (VCTODT25) '*number*' is not a valid date. A date cannot begin with '*string*'.

ORA-35792: (VCTODT27) '*number*' is not a valid date. '*string*' is not a valid character.

ORA-35794: (VCTORD01) A multiline text value cannot be converted to a number.

ORA-35796: (VERFAIL01) Your response does not meet the requirements for this item.

ORA-35798: (VERFAIL02) *string*

ORA-35800: (VSDOKAY01) Discarding compiled code for *workspace object*, because *number* now resolves to a value of *workspace object*. Previously, it resolved to a value of *workspace object*.

ORA-35802: (VSDOKAY02) Discarding compiled code for *workspace object*, because *number* is no longer a value of *workspace object*.

ORA-35804: (WATCHXEQ01) Watch point *number*: *number* is true in *workspace object* at statement:

ORA-35810: (XSINPUTERR) The command has requested more input than was supplied in the command string.
Cause: The command required input that was not supplied in the string.

Action: Reexecute the command with the required input.

ORA-35812: (XSACROSS01) The *string* command cannot be executed by ACROSS.

ORA-35818: (XSCAT01) Group definition values cannot be NA.

ORA-35820: (XSCAT02) Each group definition value must be greater than its predecessor.

ORA-35822: (XSCGCAT01) The source expression must be numeric.

ORA-35824: (XSCGCAT02) The group expression must be numeric.

ORA-35826: (XSCGCAT03) The group expression must be one-dimensional.

ORA-35828: (XSCGCORR01) Data expressions must be numeric.

ORA-35830: (XSCGCORR02) BASEDON names must be dimensions.

ORA-35832: (XSCGCORR03) BASEDON names must be dimensions of both data expressions.

ORA-35834: (XSCGCORR04) You have named duplicate BASEDON dimensions.

ORA-35836: (XSCGCORR05) The two expressions must have at least one common dimension.

ORA-35838: (XSCGMODE01) The data expression must be numeric.

ORA-35840: (XSCGMODE02) BASEDON names must be dimensions.

ORA-35842: (XSCGMODE03) BASEDON names must be dimensions of the data expression.

ORA-35844: (XSCGMODE04) You have named duplicate BASEDON dimensions.

ORA-35846: (XSCGPCTAGE01) The data expression must be numeric.

ORA-35848: (XSCGPCTAGE02) BASEDON names must be dimensions.

ORA-35850: (XSCGPCTAGE03) BASEDON names must be dimensions of the data expression.

ORA-35852: (XSCGPCTAGE04) You have named duplicate BASEDON dimensions.

ORA-35854: (XSCGRANK01) The data expression must be numeric.

ORA-35856: (XSCGRANK02) BASEDON names must be dimensions.

ORA-35858: (XSCGRANK03) BASEDON names must be dimensions of the data expression.

ORA-35860: (XSCGRANK04) You have named duplicate BASEDON dimensions.

ORA-35862: (XSCGSMOOTH01) The data expression must be numeric.

ORA-35864: (XSCGSMOOTH02) You have not supplied enough smoothing parameters.

ORA-35866: (XSCGSMOOTH03) The smoothing parameters must be numeric.

ORA-35868: (XSCGSMOOTH04) BASEDON names must be dimensions.

ORA-35870: (XSCGSMOOTH05) BASEDON names must be dimensions of the data expression.

ORA-35872: (XSCGSMOOTH06) You have named duplicate BASEDON dimensions.

ORA-35874: (XSFCAST01) The *string* forecasting option cannot be set.

ORA-35876: (XSFCAST02) You must use an INTO phrase to specify an output location for the forecast results.

ORA-35878: (XSFCAST03) The *string* forecasting option cannot be queried.

ORA-35880: (XSFCAST04) You cannot specify a trial number when querying the *string* forecasting option.

ORA-35882: (XSFCAST05) You must specify a trial number when querying the *string* forecasting option.

ORA-35884: (XSFCAST06) The forecasting context handle cannot be NA.

ORA-35886: (XSFCAST07) The time dimension *workspace object* has *number* values in status. The limit is *number*.

ORA-35888: (XSFCAST08) The time dimension *workspace object* has no values in status.

ORA-35890: (XSFCAST09) The time dimension *workspace object* has only *number* values in status. You cannot specify *number* historical periods.

ORA-35892: (XSFCAST10) The *string* target variable must also be dimensioned by *string*.

ORA-35894: (XSFCAST11) *string* must be less than or equal to *string*. The current values are *number* and *number*, respectively.

ORA-35896: (XSFCAST12) The value of *string* must evenly divide the difference between MIN and MAX values. The current values are *number*, *number*, and *number*.

ORA-35898: (XSFCAST13) The trial number for querying *string* cannot be NA.

ORA-35900: (XSFCAST14) *number* is not the handle of an open forecasting context.

ORA-35902: (XSFCAST15) You cannot specify an NA value for *string*.

ORA-35904: (XSFCAST16) Values of *string* must be between *number* and *number*. You specified *number*.

ORA-35906: (XSFCAST17) Values of *string* must be between *number* and *number*. You specified *number*.

ORA-35908: (XSFCAST18) '*number*' is not a recognized value of *string*.

ORA-35910: (XSFCAST19) The forecasting context *number* has been invalidated because one or more of the extra dimensions of the time-series expression is no longer available.

ORA-35912: (XSFCAST20) A forecasting context identified by the text '*string*' already exists. Its handle is *number*.

ORA-35914: (XSFCAST21) Values of the TRADINGDAYS expression cannot be less than or equal to zero.

ORA-35916: (XSHIDE01) *workspace object* is not a program or model.

ORA-35917: (XSHIDE05) You cannot HIDE model *workspace object* because the analytic workspace in which it is defined has not been upgraded to version *string*.
Cause: User attempted to apply the HIDE command to a model in an AW that has not been upgraded to the necessary compatibility level.

Action: Make sure that the database is running in the appropriate compatibility mode, and upgrade the AW.

ORA-35918: (XSHIDE02) You do not have access to *workspace object*.

ORA-35919: (XSHIDE06) The encryption seed for *string* must be at least *number* characters long.
Cause: Seed text shorter than the minimum required length was specified.

Action: Supply seed text that is at least as long as the length specified.

ORA-35920: (XSHIDE03) The encryption seed for HIDE and UNHIDE must be a non-empty, one-line TEXT value.

ORA-35922: (XSHIDE04) *workspace object* is already hidden.

ORA-35924: (XSMOOTH01) Smoothing parameters cannot be NA.

ORA-35926: (XSMOOTH02) Smoothing constants must be between 0 and 1.

ORA-35928: (XSMOOTH03) Cannot compute valuespace offset

ORA-35930: (XSPCTAGE01) Cannot compute valuespace offset

ORA-35932: (XSPGFTCH01) Analytic workspace *string* is not attached.

ORA-35934: (XSPGFTCH02) No fetch analytic workspace specified

ORA-35936: (XSPGFTCH03) PageSpace has *number number* pages.

ORA-35950: (OBSCURE01) The seed expression argument to OBSCURE cannot be NA.

ORA-35951: (OBSCURE02) The ENCRYPT option of OBSCURE is not supported at the current compatibility level.
Cause: An attempt was made to use the ENCRYPT option of the OBSCURE function, which is not supported for a compatibility level earlier than 12.2.0.2.

Action: Raise the compatibility level or choose a different OBSCURE option.

ORA-35952: (XSSPFC01) The *string* dimension *workspace object* and the *string* dimension *workspace object* must have the same number of values in status for SPFCEXEC method *number*.
Cause: This method requires the named dimensions to have the same number of values in status, but the user provided statuses of different lengths.

Action: Relimit the dimensions so that their status lengths are the same.

ORA-35958: (XSPGREPORT01) Of *number* allocated pages *number* are currently in use, *number* are available for use, *number* are hard-locked, and *number* are soft-locked.

ORA-35964: (COPYDFN01) You must have a current analytic workspace to perform a COPYDFN.

ORA-35966: (COPYDFN02) The format of the COPYDFN command is:\n\n COPYDFN newname oldname.

ORA-35968: (COPYDFN03) Analytic workspace object %1 does not exist.

ORA-35970: (COPYDFN05) You cannot copy the definition of an OPTION.

ORA-35972: (COPYDFN06) %1 is an invalid name for an analytic workspace object.

ORA-35974: (DBDESC00) There are no objects in this analytic workspace.

ORA-35976: (DBDESC01) Last updated: %1 Time: %2

ORA-35978: (DBDESC02) Print date: %1 Time: %2

ORA-35980: (DBDESC03) %1 contains:

ORA-35982: (DBDESC04) This report is in two parts:\n\n - Object Listing: An alphabetic list of analytic workspace objects \n beginning on the next page.\n\n - Object Descriptions: Detailed descriptions of all analytic workspace objects \n sorted by object type and alphabetically by name.

ORA-35984: (DBDESC05) Object List

ORA-35986: (DBDESC06) Description of %1 objects

ORA-35988: (DBDESC07) Description of PROGRAM %1

ORA-35990: (DBDESC08) Description of MODEL %1

ORA-35992: (DBDESC09) (Cont'd)

ORA-35994: (DBDESC10) Page

ORA-35996: (DBDESC11) Analytic Workspace:

ORA-35998: (DBDESC12) Updated:

ORA-36000: (DBDESC13) At:

ORA-36002: (DBDESC14) NAME

ORA-36004: (DBDESC15) TYPE

ORA-36006: (DBDESC16) DESCRIPTION

ORA-36008: (DBDESC17) Analytic Workspace Listing

ORA-36010: (DBDESC18) Page

ORA-36016: (XSHIERCK01) One or more loops have been detected in hierarchy *workspace object* over *number*. The loops include *number* items (*number* and *number*).

ORA-36017: (XSHIERCK10) The definition of hierarchy *workspace object* over *number* in level *number* is not star consistent. The collision parents include *number*.
Cause: The definition of the hierarchy was not star consistent.

Action: Change the definition of the hierarchy.

ORA-36018: (XSHIERCK02) The format of the HIERCHECK command is:\n\n HIERCHECK relation [STATUS|NOSTATUS|valueset] [MULTIPATH] [CONSISTENT] [{BALANCED|STAR_CONSISTENT} levelrelation] \nOr\n HIERCHECK aggmap [MULTIPATH] [CONSISTENT]
Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36019: (XSHIERCK11) The format of the HIERSHAPE function is:\n\n HIERSHAPE(relation[(qdr)] {level|ragged|skiplevel|regular} USING levelrel [INHIERARCHY inhvs] LEVELORDER levelvs)
Cause: The wrong object type or the wrong object definition was specified.

Action: Change the object type or use the correct object definition.

ORA-36020: (XSHIERCK03) The definition of hierarchy *workspace object* over *number* is inconsistent.
Cause: The definition of the hierarchy was inconsistent.

Action: Change the definition of the hierarchy.

ORA-36021: (XSHIERCK12) The format of the HIERCHECK function is:\n\n HIERCHECK(relation [STATUS|NOSTATUS|valueset] [MULTIPATH] [CONSISTENT] [{BALANCED|STAR_CONSISTENT} levelrelation]) \nOr\n HIERCHECK(aggmap [MULTIPATH] [CONSISTENT])
Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36022: (XSHIERCK04) Valuesets specified in the HIERCHECK command must be scalar. *workspace object* is dimensioned.
Cause: The HIERCHECK command specified a dimensioned valueset.

Action: Specify a scalar valueset in its place.

ORA-36024: (XSHIERCK05) Valueset *workspace object* must contain values of one of the extra dimensions of relation *workspace object*.
Cause: The HIERCHECK command specified a valueset over an invalid dimension.

Action: Specify a valueset containing values of one of the self-relation's extra dimensions (the dimensions in the relation's dimension list, minus the self-related dimension itself).

ORA-36025: (XSHIERCK06) The level dimension of the level relation *workspace object* is the same as the relation dimension *workspace object*.
Cause: The level dimension was the same as the relation dimension.

Action: Change the definition of the level relation.

ORA-36026: (XSHIERCK07) Level relation *workspace object* is not dimensioned by relation dimension *workspace object*.
Cause: The level relation was not dimensioned by the relation dimension.

Action: Change the definition of the level relation.

ORA-36027: (XSHIERCK08) Hierarchy *workspace object* is not balanced.
Cause: The current hierarchy was not balanced.

Action: Change the hierarchy to balanced.

ORA-36028: (XSHIERCK09) Hierarchy *workspace object* has multiple paths from *number* to *number*.
Cause: The current hierarchy had multiple paths.

Action: Remove multiple paths from the hierarchy.

ORA-36034: (XSMHIERCK00) One or more loops have been detected in relationship *workspace object* over *workspace object*. The last *number* of the items are *number*.
Cause: A relation was used that had loops in it. There were more items involved than could be reported.

Action: Correct the relation so that it does not contain loops.

ORA-36035: (XSMHIERCKREL) One or more loops have been detected in *workspace object*. *number* items involved are *number*.
Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-36036: (XSMHIERCK01) One or more loops have been detected in relationship *workspace object* over *workspace object*. The *number* items involved are *number*.
Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-36038: (INTL00) No application code specified

ORA-36040: (INTL01) IMPORTANT: The length of the following phrase(s) exceeds %1. They will be truncated.

ORA-36042: (INTL02A) The %1 language analytic workspace for %2 could not be attached, and there is no English-language analytic workspace for this application.

ORA-36044: (INTL02B) Neither the %1 language analytic workspace nor the %2 language analytic workspace could be attached for %3, and there is no English-language analytic workspace for this application.

ORA-36050: (INTL06) Invalid option specified. Option must be either OSM, CA, or blank.

ORA-36052: (LISTBY00) LISTBY cannot be called as a function returning a value.

ORA-36054: (LISTBY01) You must have a current analytic workspace to use the LISTBY command.

ORA-36056: (LISTBY02) The syntax of the LISTBY command is:\n LISTBY dimension [dimension ...]\nDimension composites can also be named.

ORA-36058: (LISTBY03) %1 does not exist in any attached analytic workspace.

ORA-36060: (LISTBY04) %1 is not a dimension or composite.

ORA-36062: (LISTBY05) %1 is in a different analytic workspace from previously specified object(s) "%2".

ORA-36064: (LISTBY06) The syntax for specifying an unnamed composite is:\n SPARSE*dimension-list*\nwhere 'dimension-list' is a list of simple or conjoint dimensions or named composites.

ORA-36066: (LISTBY07) %1 objects dimensioned by or related to %2 in analytic workspace %3

ORA-36068: (LISTNAMES00) Analytic workspace %1 is not attached.

ORA-36070: (LISTNAMES01) There are no objects in the analytic workspace of the following types:\n%1

ORA-36072: (LISTNAMES02) There are no objects in the analytic workspace.

ORA-36074: (LISTNAMES03) There are no objects in the analytic workspace that match '%1'.

ORA-36076: (LISTNAMES04) %1 is not a valid keyword for LISTNAMES.\nValid keywords are:\nALL, SORT or UNSORT, AW workspace-name\n%2

ORA-36078: (MODEL00) Specify the name of a model for the report.

ORA-36080: (MODEL01) %1 does not exist.

ORA-36082: (MODEL02) %1 is not a model.

ORA-36084: (MODEL03) Model %1 has not been compiled.

ORA-36086: (MODEL04) Information is not available for model %1.

ORA-36088: (MODEL05) Model %1 is not the most-recently executed model.

ORA-36090: (MODEL06) Solution status:

ORA-36092: (MODEL07) Model options in use:

ORA-36094: (MODEL08) Solution status:

ORA-36096: (MODEL09) Iterations:

ORA-36098: (MODEL10) Divergent statement

ORA-36100: (MODEL11) Model: %1

ORA-36102: (MODEL12) Statement %1%2

ORA-36104: (STATUS00) You must have a current analytic workspace to use the STATUS command.

ORA-36106: (STATUS01) There are no dimensions in your current analytic workspace.

ORA-36108: (STATUS02) There are no dimensions in analytic workspace %1.

ORA-36110: (STATUS03) %1 has no dimensions.

ORA-36112: (STATUS04) The current status of %1 is:

ORA-36114: (STDHDR00) Page

ORA-36116: (TRACKREPORT00) Program name

ORA-36118: (TRACKREPORT01) Exclusive cost

ORA-36120: (TRACKREPORT02) Inclusive cost

ORA-36122: (TRACKREPORT03) Number of calls

ORA-36124: (XLIST00) %1 exceptions found.

ORA-36126: (XLIST01) %1 already exists.

ORA-36128: (XLIST03) The exception criterion must be a single expression.

ORA-36130: (XLIST04) The exception criterion must be a BOOLEAN expression.

ORA-36132: (XLIST05) The exception criterion must be dimensioned.

ORA-36134: (XLIST06) %1 is not an exception list.

ORA-36136: (XLIST07) There is no current exception list. You can use the NAMEXL command to specify one.

ORA-36138: (XLIST08) %1 has been deleted.

ORA-36140: (XREF00) References To:

ORA-36142: (XREF01) Referenced By:

ORA-36144: (XREF02) NONE

ORA-36145: (SETPROP01) The property "%1" cannot be set for measure "%2".
Cause: A property name was given that is not one of the allowed properties to be set.

Action: Specify one of the legal property names.

ORA-36146: (READSIZE01) The *string* expression cannot be missing or NA.

ORA-36148: (READSIZE02) The minimum value for *string* is *number*. You specified a value of *number*.

ORA-36152: (READSIZE04) The maximum value for *string* is *number*. You specified a value of *number*.

ORA-36154: (XSMXAGGR01) *workspace object* is not a data variable.
Cause: An object was specified on the Aggregate command line that was not a variable

Action: Specify a variable instead

ORA-36155: (XSMXAGGRFROM) *workspace object* must be a variable or formula of a similar data type to *workspace object* to be used with FROM, or a TEXT variable or formula to be used with FROMVAR.
Cause: The user specified an illegal variable for use with FROM or FROMVAR on the AGGREGATE command line

Action: Specify a legal variable instead

ORA-36156: (XSMXAGGR02) When using the BOOLEAN or FORMULA WEIGHT *workspace object*, WNAFILL is the only valid option.

ORA-36157: (XSMXAGGRCOMMIT) To use the AUTOCOMMIT keyword, you must also specify the AUTOUPDATE keyword.
Cause: The user specified AUTOCOMMIT but not AUTOUPDATE on the AGGREGATE command line, which is illegal

Action: Either also specify AUTOUPDATE or don't specify AUTOCOMMIT

ORA-36158: (XSMXAGGR03) *workspace object* must be an AGGMAP object.

ORA-36160: (XSMXAGGR04) You cannot use *string* on scalar VARIABLE *workspace object*.
Cause: The user tried to run the AGGREGATE or AGGCOUNT command or function on a scalar variable.

Action: Specify a dimensioned variable instead

ORA-36161: (XSAGGRRUVCV) Aggregation variable *workspace object* cannot have itself as a COUNTVAR.
Cause: The user specified the same variable as both an aggregation variable and a COUNTVAR

Action: Specify a different COUNTVAR

ORA-36162: (XSMXAGGR05) COUNTVAR variable *workspace object* must be of type INTEGER, not *string*.
Cause: The user specified a non-INTEGER variable as a COUNTVAR for aggregation

Action: Redefine the COUNTVAR to be an INTEGER

ORA-36164: (XSMXAGGR07) When using the COUNTVAR clause, the number of variables to be aggregated (*number*) must match the number of COUNTVAR variables (*number*).
Cause: The user specified a COUNTVAR clause to the AGGREGATE command, but the number of COUNTVAR variables specified did not match the number of variables to be aggregated

Action: Specify a separate COUNTVAR for each variable

ORA-36165: (XSAGGCNTPROP) Variable *workspace object* cannot have both an AGGCOUNT and the $COUNTVAR property.
Cause: An attempt was made to add the $COUNTVAR property to a variable which already had an AGGCOUNT, or vice versa.

Action: Delete the already existing $COUNTVAR property or AGGCOUNT first.

ORA-36166: (XSMXAGGR08) *workspace object* is not a VARIABLE.
Cause: An attempt was made to perform an AGGREGATE or other action on an object which is not a variable.

Action: Specify a variable instead.

ORA-36167: (XSAGGRFORM) *workspace object* is an illegal AGGMAP for aggregating a FORMULA.
Cause: The user attempted to aggregate a FORMULA using an AGGMAP that is not valid for aggregating FORMULAs. The AGGMAP must specify PRECOMPUTE(NA) for all relation lines and must not specify any caching.

Action: Correct the AGGMAP so it is legal for aggregating a FORMULA.

ORA-36168: (XSMXAGGR10) COUNTVAR variable *workspace object* must have the same dimensionality as *workspace object*
Cause: The user specified a COUNTVAR variable which is missing at least one dimension of the aggregation variable

Action: Specify a COUNTVAR variable which has at least as many base dimensions as the aggregation variable

ORA-36170: (XSMXAGGR12) The data type of the WEIGHT *workspace object* must be numeric or BOOLEAN, not *string*.
Cause: The user specified a WEIGHT variable or formula which wasn't numeric or boolean

Action: Specify a numerical or boolean weight instead

ORA-36172: (XSMXAGGR18) WEIGHT option WNOAGG cannot be used with the WSTORE, WVARPRIORITY, or WAGGPRIORITY options on WEIGHT *workspace object*.

ORA-36174: (XSMXAGGR23) *workspace object* must be either a VARIABLE, a RELATION or a FORMULA.
Cause: The user specified something that was not a variable, a relation or a formula as a weight for AGGREGATE

Action: Specify a valid variable, relation or formula instead

ORA-36176: (XSMXAGGR25) Relation *workspace object* must be a one-dimensional self-relation to be used as a weight for AGGREGATE.
Cause: The user specified an illegal relation as a weight. The relation might have been multidimensional, not a self-relation, or not a relation over one of the bases of the aggregation variable.

Action: Specify a valid self relation over one of the bases of the aggregation variable.

ORA-36178: (XSAGGR01) To be used with AGGREGATE, AGGMAP *workspace object* must be declared with the AGGMAP command.
Cause: The user used the ALLOCMAP command to define the AGGMAP, so the AGGMAP can only be used with the ALLOCATE command, or the AGGMAP has no contents attached to it.

Action: Use the AGGMAP command to define the AGGMAP.

ORA-36179: (XSNOAGM) No AGGMAP was specified for VARIABLE *workspace object*.
Cause: The user used the AGGREGATE command without specifying an AGGMAP on the command line, with a variable which had no $AGGMAP property.

Action: Specify an AGGMAP on the AGGREGATE command line, or add the $AGGMAP property to the variable in question.

ORA-36180: (XSAGGR08) AGGREGATE cannot function because there is a permission clause associated with variable *workspace object*.
Cause: When using AGGREGATE, only simple permissions and permissions on base dimensions are valid.

Action: Remove the permissions clause from the variable causing problems.

ORA-36181: A VARIABLE cannot have both the $AGGREGATE_FROM and $AGGREGATE_FROMVAR properties applied to it.
Cause: The user attempted to add both the $AGGREGATE_FROM and $AGGREGATE_FROMVAR properties to a single variable.

Action: Remove the existing property before applying the new one.

ORA-36182: (XSAGGR09) Could not locate a value for variable *number* in measure dimension *workspace object*.
Cause: A measure dimension was supplied in the AGGMAP, but a position for the variable was not found in it.

Action: Add a position for the variable in the measure dimension.

ORA-36184: (XSAGGR10) You do not have sufficient permissions for the variable *workspace object*.
Cause: The user lacked the permissions necessary for the aggregation variable.

Action: Remove the restricting permissions from the variable or base dimension.

ORA-36185: (XSAGGR11) *workspace object* does not have any AGGCOUNT information.
Cause: User attempted an operation (such as the AVERAGE aggregation operator or the AGGCOUNT function) that requires a variable to have AGGCOUNT information on a variable that does not.

Action: Define the variable using the WITH AGGCOUNT clause, or use the CHGDFN ADD AGGCOUNT command to enable AGGCOUNT for the variable.

ORA-36186: (XSAGGR12) You must use a COUNTVAR when aggregating with AVERAGE.

ORA-36188: (XSAGGR16) AGGREGATE read a value less than 1 out of COUNTVAR variable *workspace object*. Either the values of the COUNTVAR variable are stored improperly, or there is problem in AGGREGATE. If no one has modified the values in this COUNTVAR, contact Oracle customer support.
Cause: Either someone improperly changed the COUNTVAR variable, or AGGREGATE has an error.

Action: Set the COUNTVAR variable to NA before starting AGGREGATE. If you previously set the COUNTVAR variable to NA, then contact Oracle OLAP technical support.

ORA-36190: (XSAGGR26) *workspace object* is of type *string*. The numerical calculation *string* requires INTEGER, DECIMAL or SHORTDECIMAL data.

ORA-36192: (XSAGGR27) *workspace object* is of type *string*. The boolean calculation *string* requires BOOLEAN data.

ORA-36194: (XSAGGR28) *workspace object* is of type *string*. The requested operation requires INTEGER, DECIMAL, SHORTDECIMAL or BOOLEAN data.

ORA-36196: (XSAGGR32) '*number*' is an invalid argument specifier for AGGREGATE.

ORA-36198: (XSAGGR33) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because the operator variable with more than 1 line dimensions is not supported for bases of a COMPRESSED COMPOSITE.
Cause: The user specified an aggregation the operator variable with more than 1 line dimensions that is not supported by COMPRESSED COMPOSITES.

Action: Use a MODEL for the calculation, or use an uncompressed COMPOSITE.

ORA-36200: (XSAGGR34) AGGREGATE operator *string* requires a WEIGHTBY clause, but ARGS variable *workspace object* did not specify one.
Cause: The given operator requires a WEIGHT specification, but the ARGS variable did not supply one.

Action: Modify the ARGS variable to specify a weight for the operation.

ORA-36201: (XSAGGR35) Cannot aggregate *workspace object*(partition *workspace object*) because the subpartition is itself partitioned.
Cause: Attempted to aggregate an intermediate partition of a variable with nested partitioning.

Action: rerun the aggregate command seperately for each ultimate partition or just for the variable as a whole

ORA-36202: (XSAGOP01) '*number*' is not a valid aggregation operator.
Cause: An invalid string was provided for an aggregation operator.

Action: Check the spelling of the operator to make sure you are specifying a valid one.

ORA-36204: (XSAGOP04N) In AGGMAP *workspace object*, the NAOPERATOR *string* must be HFIRST, HLAST or HEVEN.
Cause: An invalid NAOPERATOR was specified.

Action: Specify HFIRST, HLAST or HEVEN.

ORA-36206: (XSAGOP04R) In AGGMAP *workspace object*, REMOPERATOR *string* must be MIN, MAX, FIRST, LAST, HFIRST or HLAST.
Cause: An invalid REMOPERATOR was specified.

Action: Specify one of the legal operators.

ORA-36208: (XSAGOP05N) In AGGMAP *workspace object*, you can only specify NAOPERATOR *string* with the PROPORTIONAL or EVEN operators, not *string*.
Cause: The user specified an NAOPERATOR when you were not using PROPORTIONAL or EVEN.

Action: Remove the NAOPERATOR clause from the RELATION line.

ORA-36210: (XSAGOP05R) In AGGMAP *workspace object*, you can only specify the REMOPERATOR *string* with the PROPORTIONAL, EVEN, or HEVEN operators, not *string*.
Cause: The user specified a REMOPERATOR without using PROPORTIONAL, EVEN, or HEVEN.

Action: Remove the REMOPERATOR clause from the RELATION line.

ORA-36212: (XSAGOP06) In AGGMAP *workspace object*, you can only specify the MIN, MAX, FLOOR, and CEILING arguments while using the PROPORTIONAL operator, not *string*.
Cause: The user specified MIN, MAX, FLOOR, or CEILING when using an operator other than PROPORTIONAL.

Action: Remove the incorrect argument from the RELATION line.

ORA-36214: (XSRELOBC01) The value of INDEXCACHESIZE must be positive.

ORA-36216: (XSOPARM01) A DIMENSION must have a data type (ID, TEXT, or INTEGER), a time period, or a list of bases for a conjoint dimension.

ORA-36220: (XSLPDSC01) All dimensions in LIST *number* are also in the IGNORE clause.
Cause: One of the dimension lists in the dimension loop descriptor had no base dimensions except those in the IGNORE list. This leaves no dimensions for looping over.

Action: Fix the dimension loop descriptor.

ORA-36221: (XSLPDSC02) LIST *number* and LIST *number* have different base dimensions.
Cause: The base dimensions of the dimension lists given in the loop descriptor do not match.

Action: Ensure that each dimension list has the same set of looping base dimensions. If necessary, use IGNORE within a lists to discard base dimensions that should not be looped.

ORA-36222: (XSLPDSC03) duplicate IGNORE or DENSE information for dimension *workspace object*
Cause: An IGNORE or DENSE list in a dimension loop descriptor included the dimension twice, included two different valuesets of the dimension, or includes the dimension and a valueset of the dimension.

Action: Only use the dimension or a valueset of the dimension once in an IGNORE or DENSE list.

ORA-36223: (XSLPDSC04) object *workspace object* in IGNORE or DENSE list has illegal type
Cause: An IGNORE or DENSE list in a dimension loop descriptor included and object that was not a dimension or a valueset, was a conjoint dimension, or was a dimensioned valueset.

Action: Only use simple dimensions and undimensioned valuesets in the IGNORE or DENSE list.

ORA-36224: (XSLPDSC05) *workspace object* is not a loop dimension
Cause: An IGNORE or DENSE list in a dimension loop descriptor referenced a dimension (or a valueset of a dimension) that was not a base dimension of the loop dimension list.

Action: Remove the dimension or valueset from the IGNORE or DENSE list.

ORA-36225: (XSLPDSC06) A LOOP AGGMAP list must contain an aggmap object, followed by one or more variables and/or dimensions.
Cause: An invalid AGGMAP list was specified. Either to few objects were specified, or an incorrect type of object was used.

Action: Specify a valid AGGMAP list consisting of an aggmap object, followed by one or more variables and/or dimensions.

ORA-36226: (XSLPDSC07) The syntax of the $LOOP property on formula *workspace object* is incorrect.
Cause: Unrecognized contents in the $LOOP property of a formula in the table function measure list.

Action: Restrict the contents of the $LOOP property to valid elements (other than OPTIMIZED and MEASURES) of the table function LOOP directive.

ORA-36230: (XSANALYZ00) object *workspace object* cannot be used in the ANALYZE command
Cause: An object that cannot be analyzed was used in the ANALYZE command.

Action: Analyze VARIABLES, RELATIONS, DIMENSIONS, or SURROGATES.

ORA-36231: (XSANALYZ01) object *workspace object* cannot be used in the INHIERARCHY clause
Cause: An invalid INHIERARCHY object was referenced.

Action: Use either a VALUESET or boolean VARIABLE.

ORA-36232: (XSANALYZ02) a level list was specified when a language dimension was present
Cause: A level list dimension was specified when a language dimension was present.

Action: Remove the USING clause.

ORA-36233: (XSANALYZ03) the dimensionality of object *workspace object* does not match the ANALYZE command
Cause: The dimensionality of the object did not match the ANALYZE command syntax used.

Action: Match the ANALYZE syntax to the dimensionality of the specified object.

ORA-36234: (XSANALYZ04) all objects in the current status of the NAME dimension must have the same dimensionality when used with the ANALYZE command
Cause: The dimensionality of at least one of the objects listed in the NAME dimension does not match the rest of the objects.

Action: Make sure all objects listed in the NAME dimension have the same dimensionality.

ORA-36236: (XSANALYZ06) the AW format must be 11.0.0.0 or higher to use the ANALYZE command
Cause: The AW version is less than 11.0.0.0

Action: Make sure the compatible mode is 11.0.0.0 or higher and upgrade the AW

ORA-36237: (XSANALYZ07) analytic workspace *string.string* must be attached RW or EXCLUSIVE mode
Cause: The analytic workspace was already attached RO or MULTI mode.

Action: Detach the analytic workspace.

ORA-36238: (XSANALYZ08) object *string.string* does not exist
Cause: The object name does not exist

Action: Check the spelling and case of the object name

ORA-36258: (XSAGINFO00) When the AGGMAPINFO function is called, *workspace object* must be an AGGMAP.
Cause: The AGGMAPINFO function was called with an object that is not an AGGMAP.

Action: Modify the call to AGGMAPINFO to specify an AGGMAP object.

ORA-36260: (XSAGHIERPART00) Aggregating from partition %J to partition %J over hierarchy *workspace object* creates an increase in sparsity.
Cause: In the partition creation / aggmap creation a situation developed such that when aggregating over a particular dimension of the aggmap a partition boundary was crossed such that the sparsity of the target partition included dimensions that were not in the sparsity of the source partition. Since the process of aggregation always densifies rather than sparsifying this is an extremely suboptimal design and it is not supported by the aggregate system.

Action: Set up your partitioning such that for any partition boundary the source and target partitions of the aggregation will always move towards denser partitions. For any child (c) and any parent (p) where (c) and (p) are in different partitions it must be the case that the parent partition contains no dimension in the composite that the child partition does not contain in its composite.

ORA-36261: (XSAGPARTDEP00) Can not Aggregate PARTITION TEMPLATE %J because the path of aggregation would recursively enter partition %J.
Cause: The partitioning scheme was such that while aggregating there exists a cell (m) such that both one of its descendants and one of its ancestors are both in the referenced partition, while (m) is in a different partition.

Action: Change the partitioning scheme.

ORA-36262: (XSAGREMOD00) MODEL *workspace object* was not attached to the AGGMAP.

ORA-36264: (XSAGREMOD01) Removed MODEL: *number*

ORA-36266: (XSCGMDLAGG00) Invalid context for the AGGREGATION function
Cause: The AGGREGATION function was used outside of the MODEL context.

Action: Use AGGREGATION only in a model.

ORA-36267: (XSCGMDLAGG09) *workspace object* has no dimensions, so it cannot have a qualified data reference.
Cause: A dimension qualification was specified for a valueset with no dimensions.

Action: Remove the qualification.

ORA-36268: (XSCGMDLAGG01) '*string*' is not a valid dimension value.
Cause: The AGGREGATION parameter list included a value that does not exist in the MODEL dimension that contains the target of the AGGREGATION

Action: Specify only values from the appropriate MODEL dimension

ORA-36269: (XSCGMDLAGG10) '*workspace object*' does not exist or is not a dimension.
Cause: A nonexistent or invalid object was specified as a QDR dimension.

Action: Specify existing dimensions only.

ORA-36270: (XSCGMDLAGG03) The parameter list for the AGGREGATION function includes duplicate values.
Cause: One or more duplicate values appeared in the AGGREGATION parameter list.

Action: Remove the duplication.

ORA-36271: (XSCGMDLAGG11) *workspace object* is not in the dimension list of valueset *workspace object*.
Cause: A QDR dimension was specified that does not appear in the valueset's dimension list.

Action: Specify only dimensions in the valueset's dimension list.

ORA-36272: (XSCGMDLAGG04) '*workspace object*' is not a valid operator for the AGGREGATION function.
Cause: An invalid AGGREGATION operator was specified.

Action: Correct the invalid operator.

ORA-36273: (XSCGMDLAGG12) Dimension *workspace object* appears more than once in the QDR.
Cause: A dimension was specified more than once in the QDR.

Action: Remove the duplication.

ORA-36274: (XSCGMDLAGG05) The operator used in this equation needs a weight variable.
Cause: An invalid weight variable was specified.

Action: Correct the invalid weight variable.

ORA-36275: (XSCGMDLAGG13) *string* is not a valid *workspace object*.
Cause: A value was specified that does not exist in the QDR dimension.

Action: Specify an existing value.

ORA-36276: (XSCGMDLAGG06) The current operator does not need a weight variable.
Cause: A weight variable was specified in a context that does not support it.

Action: Remove the weight variable.

ORA-36278: (XSCGMDLAGG07) *workspace object* does not exist or is not valueset.
Cause: A nonexistent or invalid object was specified where a valueset is required.

Action: Specify an existing valueset only.

ORA-36280: (XSCGMDLAGG08) Valueset *workspace object* does not contain values of any dimension of the current model.
Cause: AGGREGATION specified a valueset of a dimension not listed in a DIMENSION statement for the current model.

Action: Add the valueset's dimension to the model's DIMENSION list, or choose a different valueset.

ORA-36282: (DNAMELEN01) Object name *string* is longer than *number* bytes.

ORA-36286: (EIFMAKEF12) The EXPORT command terminated, because there was not enough disk space in path *string* to contain a complete extension file.

ORA-36290: (EIFMAKEF14) You cannot export object *workspace object*, because EIFVERSION is set to *number*. That version does not support *string string*s.
Cause: The user tried to export a NUMBER dimension to an EIF file with the EIFVERSION option set to a number less than 80000. Versions previous to that eversion do not support NUMBER dimensions.

Action: A NUMBER dimension cannot be used in a version of older than 9.2.0. If

ORA-36300: (XSCGTERM01) The command is too long or complex to compile. Eliminate or simplify expressions, or remove or shorten text constants.

ORA-36302: (MXCLASS03) You cannot reference an analytic workspace NAME dimension using a QON. You can only access the NAME dimension of the current analytic workspace.

ORA-36304: (MXDCLAGR02) *workspace object* was not defined as an AGGMAP.

ORA-36306: (MXDCLAGR03) Since there is no current aggmap definition, the AGGMAP statements will be discarded. Type END to return to the command line.

ORA-36308: (MXDCLAGR04) The object *workspace object* has been defined as an AGGMAP, and it cannot be redefined as an ALLOCMAP.

ORA-36310: (MXDCLAGR05) The object *workspace object* has been defined an ALLOCMAP, and it cannot be redefined as an AGGMAP.

ORA-36312: (PHYS00) *workspace object* must be a dimension, dimensioned variable or relation.
Cause: The user specified an invalid OLAP object while attempting to use the PHYSICAL function

Action: Specify a valid object

ORA-36313: (PHYS03) The VALUE option of PHYSICAL cannot be applied to a variable.
Cause: the VALUE argument to PHYSICAL was supplied for a variable.

Action: remove VALUE or specify a relation or dimension.

ORA-36314: (PHYS01) *workspace object* must be a dimension, relation or variable.
Cause: The user specified an invalid OLAP object while attempting to use the PHYSICAL command

Action: Specify a valid object

ORA-36315: (PHYS04) You must specify the VALUE option for scalar relation *workspace object*.
Cause: The VALUE argument to PHYSICAL was omitted for a scalar relation

Action: specify VALUE or choose a dimensioned relation

ORA-36316: (PHYS02) Relation *workspace object* must be a single-dimensional relation that relates one INTEGER dimension to another.
Cause: The user specified an invalid relation while attempting to use the PHYSICAL command

Action: Specify a valid relation

ORA-36320: (PPENG05) No more than *number* push levels are allowed.

ORA-36322: (PPENG06) *workspace object* cannot be pushed more than *number* times.

ORA-36324: (PPNLSOPT00) '*number*' is not a legal value for the *string* option. The previous value was retained.

ORA-36330: (SNSYN124) The format of the PHYSICAL command is:\n \n PHYSICAL [dimension|relation]

ORA-36332: (SNSYN125) The format of the PHYSICAL function is:\n \n PHYSICAL(dimension|variable|{relation [VALUE]})

ORA-36334: (SNSYN126) The format of the TO_DATE function is:\n \n TO_DATE(value [format] [{option optionvalue}...])

ORA-36336: (SNSYN127) The format of the TO_CHAR function is:\n \n TO_CHAR(value [format] [{option optionvalue}...])

ORA-36338: (SNSYN128) The format of the TO_NUMBER function is:\n \n TO_NUMBER(value [format] [{option optionvalue}...])

ORA-36339: (SNSYN129) The format of the TO_NCHAR function is:\n \n TO_NCHAR(value [format] [{option optionvalue}...])

ORA-36340: (SNSYN130) The format of the PARTITIONCHECK function is:\n \n PARTITIONCHECK(aggmap, partition_template)
Cause: Bad syntax

Action: Correct syntax

ORA-36341: (SNSYN131) The format of the TO_TIMESTAMP function is:\n \n TO_TIMESTAMP(value [format] [{option optionvalue}...])

ORA-36342: (SNSYN200) The format of the CLEAR command is:\n \n CLEAR [ALL | STATUS] [AGGREGATES | CHANGES | PRECOMPUTES | NONPRECOMPUTES | CACHE] FROM var1 [var2, var3...] [USING aggmap]
Cause: The syntax for the CLEAR command was invalid.

Action: Modify your syntax using the correct format.

ORA-36344: (SNSYN272) The format of the AGGREGATION function is:\n \n AGGREGATION(dimension-value [dimension-value ...]) [OPERATOR operatorname [WEIGHT | WEIGHTBY weightvar]]

ORA-36346: (SNSYN338) The format of the TRUNC function is:\n \n TRUNC(expression1 [, expression2])

ORA-36348: (SNSYN339) The format of the CEIL function is:\n \n CEIL(number)

ORA-36350: (SNSYN340) The format of the FLOOR function is:\n \n FLOOR(number)

ORA-36352: (SNSYN341) The format of the ADD_MONTHS function is:\n \n ADD_MONTHS(date, number of months)

ORA-36354: (SNSYN342) The format of the LAST_DAY function is:\n \n LAST_DAY(date)

ORA-36356: (SNSYN343) The format of the MONTHS_BETWEEN function is:\n \n MONTHS_BETWEEN(date, date)

ORA-36358: (SNSYN344) The format of the NEW_TIME function is:\n \n NEW_TIME(date, zone, new zone)

ORA-36360: (SNSYN345) The format of the NEXT_DAY function is:\n \n NEXT_DAY(date, day name)

ORA-36362: (XPROPEN01) Discarding compiled code for *workspace object* because it was compiled with code version *number*. The current code version is *number*.

ORA-36376: (XSAGZERO) AGGREGATE attempted to divide by zero. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of a division by zero.
Cause: A calculation in the current AGGREGATE command attempted to divide by zero as a result of an AVERAGE, WAVERAGE, HAVERAGE or HWAVERAGE operation.

Action: Either fix the data, or set DIVIDEBYZERO to YES to return NA instead of signaling an error.

ORA-36378: (XSAGTHRWEIGHT) While running AGGREGATE with multiple threads, the weight variable *workspace object* specified by your ARGS variable *workspace object* must exist in the same analytic workspace as your AGGMAP *workspace object*.
Cause: While running AGGREGATE in threaded mode, you attempted to specify a WEIGHT variable in another analytic workspace.

Action: Use a weight variable from the same analytic workspace as the aggmap and rollup variable.

ORA-36380: (AGGRECURSE) AGGREGATE was called recursively, which is not allowed.
Cause: A model, NATRIGGER, or other object called the AGGREGATE function or command while another AGGREGATE function or command was already in progress.

Action: Modify your objects so that they do not need to have two AGGREGATE commands or functions executing at once.

ORA-36387: (XSPARTCHECK00) Object *workspace object* must be an AGGMAP.

ORA-36388: (XSPARTCHECK01) Object *workspace object* must be a PARTITION TEMPLATE.

ORA-36389: (XSAGPARTDEP01) Can not aggregate from PARTITION *number* into PARTITION *number* due to increasing sparsity along DIMENSION %J.
Cause: The user is attempting to use partitions as a means of sparsity control, however they have set up their partitions in a manner that simply makes no sense. It is a simple fact that during aggregation data becomes more dense, not less dense, and yet their partitions indicate the opposite.

Action: Modify the partition template add the specified dimension into the source composite, or removing it from the target composite.

ORA-36391: (XSMXCLEA01) When CLEAR is used with the STATUS keyword or an AGGMAP, *workspace object* must be dimensioned identically to *workspace object*.
Cause: The user specified objects whose dimensionality didn't match

Action: Break up the CLEAR command into multiple commands where the dimensionality of the objects matches

ORA-36392: (XSMXCLEA02) When using CLEAR with the PRECOMPUTES or NONPRECOMPUTES options, you must specify an AGGMAP.
Cause: The user didn't specify an AGGMAP with the CLEAR command.

Action: specify an aggmap by adding a USING phrase to the CLEAR command, or attach a '$AGGMAP' property to the variable.

ORA-36393: (XSMXCLEA03) When using the AGGREGATES, CHANGES or CACHE options, you must specify the ALL keyword.
Cause: The user didn't use the ALL keyword when using CHANGES or CACHE.

Action: Specify the ALL keyword.

ORA-36394: (XSMXCLEA04) When using CLEAR on the AGGMAP *workspace object*, CACHE is the only valid directive.
Cause: The user attempted to CLEAR an AGGMAP using a directive other than CACHE.

Action: Amend the CLEAR line to only use the CACHE keyword with AGGMAPs.

ORA-36395: (XSMXCLEA05) To CLEAR ALL AGGREGATES from *workspace object*, you must specify an AGGMAP.
Cause: The CLEAR command could not determine how the variable was aggregated because the variable is not dimensioned by a compressed composite.

Action: Specify an aggmap by adding a USING phrase to the CLEAR command, or attach a '$AGGMAP' property to the variable.

ORA-36397: (XSSPROPNA) The value of property *string* cannot be NA.
Cause: The user tried to set a system-reserved property on an OLAP object to NA

Action: Set the property to a non-NA value

ORA-36398: (XSSPROP01) Property name '*number*' is invalid because only system-reserved property names can begin with '$'.
Cause: The user attempted to add a property which starts with $ but is not a reserved property name

Action: Remove the $ from the property name

ORA-36399: (XSSPROPDTYPE) The data type of property *string* must be *string*.
Cause: The user tried to set a system-reserved property on an OLAP object to a value with an illegal datatype

Action: Set the property with the proper datatype

ORA-36400: (XSSPROP02) *workspace object* is not a valid variable name.
Cause: Not a valid variable name

Action: Change to a valid variable name

ORA-36401: (XSSPROPOTYPE) Property *string* may only be applied to objects of type *string*.
Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36402: (XSSPROP03) The property '$*string*' requires a leading "$" because it is a system-reserved property name.
Cause: The user tried to specify a property name which is reserved, but did not use a leading $

Action: Either add a leading $ or choose another property name

ORA-36403: (XSBADSPROP) *number* is an illegal value for system-reserved property *string* on *workspace object*.
Cause: The user tried to specify an illegal value for a special property

Action: Specify a legal value.

ORA-36404: (XSSPROP04) Property *string* cannot be applied to an undimensioned (scalar) TEMPORARY variable.
Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36405: (XSSPROP05) Property ignored for object *workspace object*:
Cause: A property was ignored during import.

Action: Refer to the message that follows this one and correct the error it describes.

ORA-36406: (VCACHE00) '*number*' is an invalid value for the VARCACHE option. The only permissible values are 'SESSION', 'VARIABLE', and 'NONE'.
Cause: The user tried to assign an invalid value to the VARCACHE option

Action: Assign one of the valid values

ORA-36410: (VCACHE03) '*number*' is an invalid value for the $VARCACHE property. The only permissible values are 'DEFAULT', 'SESSION', 'VARIABLE', and 'NONE'.
Cause: The user tried to assign an invalid value to the $VARCACHE property on a variable

Action: Assign one of the valid values

ORA-36608: (XSAGHOVERFLOW) The depth of the hierarchies encountered while processing a composite dimension in AGGREGATE caused a counter overflow.
Cause: The depth of the hierarchies that are part of a composite exceeded 4 billion levels during the merge.

Action: Reduce the number of levels in the hierarchies, reduce the number of dimensions in the composite, or do not aggregate over all dimensions at once.

ORA-36610: (XSLMS00) Unable to locate a message file for OLAP message: *value*
Cause: An internal OLAP DML program in the EXPRESS Analytic Workspace failed to retrieve a user message.

Action: Contact support.

ORA-36612: (XSLMS01) invalid OLAP message number: *value*
Cause: An internal OLAP DML program in the EXPRESS Analytic Workspace attempted to retrieve a non-existent message.

Action: Contact support.

ORA-36616: (XSAGMODHIER01) There is a cycle formed by MODEL *workspace object* and other embedded or containing models with the same dimension, *workspace object*.
Cause: Inclusion of a dynamic model formed a cycle in the named dimension.

Action: Edit the models involving this dimension to remove the cycle.

ORA-36617: (XSAGMODHIER02) There is a self-cycle equation in MODEL *workspace object*.
Cause: The model for relation modification included a self-cycle equation.

Action: Remove the self-cycle equation from the model.

ORA-36618: (XSAGMODDIM00) *workspace object* is not a valid dynamic model for AGGMAP.
Cause: The model failed one of the following tests: 1) only one dimension (aside from LAG/LEAD dimensions); 2) assignment to dimension values only; 3) a single simple solution block; 4) no time-series functions with variable step values.

Action: Edit the model so that it conforms to the above requirements.

ORA-36620: (XSAGMODDIM01) MODEL *workspace object* cannot find the matching embedded model.
Cause: AGGMAP ADD model could not find the matching embedded model.

Action: Add the matching embedded model to the AGGMAP.

ORA-36621: (XSAGMODDIM02) You cannot AGGREGATE the individual partition using static model *workspace object* because a partition dimension or its deriver *workspace object* appears in the equation of the step or simultaneous block.
Cause: An attempt was made to AGGREGATE the individual partition using the static model with the partition dimension in the equation of the step or simultaneous block.

Action: AGGREGATE the variable instead of the individual partition.

ORA-36622: (XSAGMODLIST00) *workspace object* cannot be added to the AGGMAP *workspace object* because it is not a valid MODEL.
Cause: An object specified in AGGMAP ADD was not a model.

Action: Specify the name of a model.

ORA-36626: (XSAGMODLIST02) MODEL *workspace object* was skipped because there is already a MODEL by that name attached to AGGMAP *workspace object*.
Cause: An attempt was made to add the same model to the AGGMAP twice.

Action: None required.

ORA-36628: (XSAGMODLIST03) MODEL *workspace object* could not be added to AGGMAP *workspace object*.
Cause: The dimension of the model did not match a hierarchy of the aggmap.

Action: Add a RELATION statement to the AGGMAP for that dimension.

ORA-36630: (XSDUNION00) An empty base dimension list was specified in the concat dimension definition.
Cause: An empty concat dimension list was specified.

Action: Specify a valid list of dimensions when defining a concat dimension.

ORA-36632: (XSDUNION01) The concat dimension *workspace object* is not currently defined as UNIQUE.
Cause: Attempt was made to CHGDFN a concat, which is already non-unique, to NOT UNIQUE.

Action: Since the concat is already non-unique, this command is unnecessary.

ORA-36634: (XSDUNION02) INTEGER dimension *workspace object* cannot be used as a concat dimension base.
Cause: The user cannot specify INTEGER base dimensions when defining a concat dimension.

Action: Change the datatype of the INTEGER base dimension, or omit it from the concat.

ORA-36635: (XSDUNION03) The base dimension *workspace object* has an invalid datatype for use in a UNIQUE concat definition.
Cause: Base dimensions of a unique concat must have TEXT or ID datatypes.

Action: Specify a valid list of dimensions when defining a unique concat dimension.

ORA-36636: (XSDUNION04) The unique concat dimension *workspace object* cannot be changed to NOT UNIQUE, because it is a base of at least one other unique concat dimension.
Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any dependent unique concat dimensions to NOT UNIQUE and retry.

ORA-36637: (XSDUNION05) The concat dimension cannot be defined as UNIQUE because it has a non-unique concat base dimension *workspace object*.
Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any non-unique concat base dimensions to UNIQUE and retry.

ORA-36638: (XSDUNION17) Concat dimension *workspace object* cannot be changed to UNIQUE because it has a non-unique concat base dimension *workspace object*.
Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any non-unique concat base dimensions to UNIQUE and retry.

ORA-36639: (XSDUNION18) UNIQUE cannot be applied to this concat dimension because leaves *workspace object* and *workspace object* share the value *number*.
Cause: Unique concat base dimensions cannot contain duplicate values.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36640: (XSDUNION19) Concat dimension *workspace object* cannot be changed to UNIQUE because base dimension *workspace object* does not have a TEXT or ID datatype.
Cause: Base dimensions of a unique concat must have TEXT or ID datatypes.

Action: n/a

ORA-36641: (XSDUNION20) The concat dimension must be defined as UNIQUE because base dimension *workspace object* contains custom member values.
Cause: The UNIQUE keyword was not specified in the concat dimension definition, and is required if any of its base dimensions contain custom member values.

Action: Define the concat as UNIQUE, or remove all base custom member values.

ORA-36642: (XSDUNION06) Concat dimension list contains duplicate leaf dimension *workspace object*.
Cause: Duplicate concat leaf dimension was found.

Action: Remove duplicate concat base dimensions and retry.

ORA-36643: (XSDUNION21) Concat dimension *workspace object* cannot be changed to NOT UNIQUE because it contains custom member values.
Cause: Only UNIQUE concat dimensions can have custom member values or base dimensions which contain custom member values.

Action: Remove all custom member values from the concat and all of its bases, and retry.

ORA-36644: (XSDUNION07) Concat dimension *workspace object* contains a previously detected leaf dimension.
Cause: Concat dimension contains a previously detected leaf dimension.

Action: n/a

ORA-36646: (XSDUNION08) Only concat dimensions can be redefined as UNIQUE. *workspace object* is not a concat dimension.
Cause: UNIQUE keyword was used with an invalid object.

Action: Retry without the UNIQUE keyword.

ORA-36648: (XSDUNION09) Concat dimension *workspace object* is already defined as UNIQUE.
Cause: Attempt to change a concat dimension to UNIQUE, but it is already UNIQUE.

Action: n/a

ORA-36650: (XSDUNION10) Concat dimension *workspace object* cannot be changed to UNIQUE. Leaves *workspace object* and *workspace object* share the value *number*.
Cause: Unique concat base dimensions cannot contain duplicate values.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36652: (XSDUNION11) *workspace object* is not a *string* type dimension.
Cause: The CHGDFN BASE ADD command is only valid for concat dimensions.

Action: n/a

ORA-36654: (XSDUNION12) *workspace object* cannot be added to *workspace object* because it conflicts with the dimensions of object *workspace object*.

ORA-36656: (XSDUNION13) *workspace object* is already a member of *workspace object* and cannot be added.

ORA-36658: (XSDUNION14) *workspace object* is not a direct base of *workspace object*.

ORA-36660: (XSDUENG00) The first argument to the *string* function must be an expression yielding a dimension value.

ORA-36662: (XSDUENG01) You cannot apply the *string* function to *workspace object* because it is not a concat dimension.

ORA-36663: (XSDPART01) You must specify a dimension list when defining a PARTITION TEMPLATE.

ORA-36664: (XSDPART02) You must specify a partitioning method and one or more partition dimensions when defining a PARTITION TEMPLATE.
Cause: User tried to define a PARTITION TEMPLATE without a PARTITION BY clause.

Action: Add a PARTITION BY clause.

ORA-36665: (XSDPART03) *workspace object* is not in the dimension list of the PARTITION TEMPLATE.
Cause: While defining a partition template, user attempted to specify a partition dimension that is not a dimension of the partition template itself.

Action: Choose a partition dimension from among the dimensions of the partition template.

ORA-36666: (XSDPART04) *workspace object* is not a concat dimension.
Cause: User tried to define a partition template with PARTITION BY CONCAT(... dim ...) where dim is not a concat dimension.

Action: Only concat dimensions can serve as partition dimensions with CONCAT partitioning. Choose a different partition dimension.

ORA-36667: (XSDPART05) *string* is not a legal CONCAT partition.
Cause: User attempted to use RANGE or LIST syntax in defining a CONCAT partition template.

Action: Use CONCAT partition syntax.

ORA-36668: (XSDPART06) *string* is not a legal RANGE partition.
Cause: User attempted to use CONCAT or LIST syntax in defining a RANGE partition template.

Action: Use RANGE partition syntax.

ORA-36669: (XSDPART07) *string* is not a legal LIST partition.
Cause: User attempted to use RANGE or CONCAT syntax in defining a LIST partition template.

Action: Use LIST partition syntax.

ORA-36670: (XSDPART08) *workspace object* is an INTEGER or NTEXT dimension, or contains an INTEGER or NTEXT dimension. INTEGER and NTEXT dimensions cannot be used as partition dimensions.
Cause: User attempted to define a partition template partitioned by an INTEGER or NTEXT dimension or a concat containing an NTEXT leaf.

Action: Either pick a different partition dimension, or redefine the dimension to use a different datatype.

ORA-36671: (XSDPART09) Leaves of *workspace object* have different datatypes. A partition dimension cannot have more than one datatype when RANGE partitioning is used.
Cause: User attempted to define a range partition template with a concat partition dimension, and the concat had two leaf dimensions with different datatypes.

Action: Pick a different partition dimension.

ORA-36672: (XSDPART10) A RANGE or LIST PARTITION TEMPLATE can only have a single partition dimension.
Cause: User attempted to define a RANGE or LIST partition template with more than one partition dimension.

Action: Remove all but one of the dimensions from the PARTITION BY RANGE(...) or PARTITION BY LIST(...) clause of the partition template definition.

ORA-36673: (XSDPART11) Use simple leaf values to identify concat dimension values in a VALUES LESS THAN clause, rather than the <LEAF: VALUE> format.
Cause: When defining a RANGE partition template with a concat dimension for the partition dimension, the user attempted to define a range using the <LEAF: VALUE> format of a concat dimension value.

Action: Use just the leaf value. Instead of "VALUES LESS THAN <leaf: value>", just say, "VALUES LESS THAN value".

ORA-36674: (XSDPART12) Invalid dimension value starting at *string*.
Cause: When defining a RANGE or LIST partition template, the user specified an invalid value in a VALUES LESS THAN or VALUES clause. An "invalid value" can be one of two things: a value whose datatype does not match the partition dimension's datatype, or a non-constant value.

Action: Modify the offending VALUES LESS THAN or VALUES phrase.

ORA-36675: (XSDPART13) A RANGE or LIST PARTITION TEMPLATE cannot have a conjoint for its partition dimension.

ORA-36676: (XSDPART14) Missing dimension list for *string*.
Cause: User attempted to define a CONCAT partition template, and didn't supply a list of dimensions for one of the partition definitions.

Action: Give a dimension list for each partition.

ORA-36677: (XSDPART15) Duplicate value in value lists of *number* and *number*
Cause: In a LIST PARTITION TEMPLATE definition, a value appeared in more than one value list, or more than once within a single value list.

Action: List each value only once.

ORA-36678: (XSDPART16) *workspace object* is missing from one or more partition dimension lists.
Cause: In the definition of a partition template, one of the partitions had a dimension list that did not contain all the dimensions of the partition template.

Action: Add the offending dimension to the partition's dimension list, or delete it from the partition template's dimension list. If using CONCAT partitioning and the missing dimension is a partition dimension, add to the partition dimension list any leaf of the partition dimension or any concat of leaves of the partition dimension.

ORA-36679: (XSDPART17) *workspace object* contains a leaf (*workspace object*) that is not part of the partition dimension *workspace object*.
Cause: In the definition of a CONCAT partition template, one of the partitions was dimensioned by a dimension that is "concat-related" to a partition dimension, meaning it shares some leaves with the partition dimension, but it contained some leaves that are not in the partition dimension.

Action: Either modify the dimensionality of the partition template to include a concat dimension that contains all the desired leaves, or pick a different dimension for the partition.

ORA-36680: (XSDPART18) *workspace object* is not a dimension of the PARTITION TEMPLATE.
Cause: In the definition of a partition template, one of the partitions was dimensioned by a dimension that was not given in the dimension list of the partition template.

Action: Remove the offending dimension from the partition's dimension list, or add it to the partition template's dimension list.

ORA-36681: (XSDPART19) Partitions *string* and *string* are out of order.
Cause: In the definition of a range partition template, a partition with a lower range boundary was listed after a partition with a higher range boundary.

Action: Alter the order of the partition definition list.

ORA-36682: (XSDPART20) Partition name *string* appears more than once.
Cause: A list of analytic workspace partitions was specified in which the partition name appeared more than once.

Action: Remove all but the first instance of the partition name from the list.

ORA-36683: (XSDPART21) Partition *string* dimensioned by more than one composite.
Cause: It is illegal to define a partition template in which one of the partitions is dimensioned by more than one composite.

Action: Make sure that the partition template being defined has at most one composite per partition.

ORA-36684: (XSDPART22) You cannot rename values of DIMENSION *workspace object* because it is the partition dimension of RANGE PARTITION TEMPLATE *workspace object*
Cause: User attempted to rename a value of a dimension that serves as the partition dimension of some RANGE or LIST partition template.

Action: It is not possible to rename values in such a dimension without deleting all RANGE and LIST partition templates that are partitioned by it.

ORA-36685: (XSDPART23) Only CONCAT partition templates can be subpartitioned.
Cause: User attempted to define a RANGE or LIST partition template with one or more partitions dimensioned by another partition template.

Action: Use only regular dimensions and composites to dimension each partition of the RANGE or LIST template.

ORA-36686: (XSDPART24) Value *number* is not in partition *number*.
Cause: User attempted to reorganize a list partition template by removing a value from some partition's list, but the value was not in the list.

Action: Ensure that the given values match the given partition.

ORA-36687: (XSDPART25) You cannot use compressed composite *workspace object* to dimension multiple partitions of the partition template, because its dimension list includes the PARTITION BY dimension *workspace object*.
Cause: The specified PARTITION BY dimension also occurred in the dimension list of a compressed composite used to dimension multiple partitions.

Action: Ensure that no PARTITION BY dimension occurs among the bases of the compressed composite used to dimension multiple partitions.

ORA-36688: (NTEXTCNV00) Error during conversion from TEXT to NTEXT.
Cause: An unknown character set conversion error occurred when converting a TEXT value to an NTEXT value.

Action: Unknown.

ORA-36691: (NTEXTCNV02) Invalid escape sequence in argument to UNISTR function: *string*.
Cause: The user called the UNISTR function on a string that had an invalid escape sequence. The only valid escape sequences in UNISTR are 1.) an escape-escape sequence, and 2.) an escape, followed by exactly four hexadecimal digits.

Action: Make sure that all escape sequences in UNISTR arguments are exactly four hexadecimal digits. To represent codepoints whose value is less than 0x1000, use preceding zeros. WRONG: 0x10; RIGHT: 0x0010.

ORA-36692: (XSRELGID24) A level relation must be specified for the GROUPSET and ROLLUP options of GROUPINGID.
Cause: level relation was not specified.

Action: Specify a level relation.

ORA-36693: (XSRELGID25) INHIERARCHY cannot be specified with the GROUPSET and ROLLUP options of GROUPINGID.
Cause: INHIERARCHY option was specified.

Action: Remove INHIERARCHY option.

ORA-36694: (XSRELTBL01) The value cannot be added to dimension *workspace object*.
Cause: Unknown.

Action: Check the context and permission for dimension maintenance.

ORA-36695: (XSRELGID26) The length of GID dimension status is *number*. The length of LEVEL dimension status is *number*.
Cause: GID dimension status did not match LEVEL dimension status.

Action: Change either GID dimension status or LEVEL dimension status.

ORA-36696: (XSRELTBL02) QDR dimension *workspace object* should not be the related dimension of the relation.
Cause: An ineligible dimension was specified in the Qualified Data Reference

Action: Do not attempt to qualify this dimension.

ORA-36698: (XSRELTBL03) QDR dimension *workspace object* should be in the dimension list that dimensions the relation.
Cause: The named dimension was not in the relation's dimension list.

Action: Select only dimensions that are in the relation's dimension list.

ORA-36700: (XSRELTBL04) Dimension *workspace object* cannot be qualified more than once.
Cause: The same dimension was specified more than once in the QDR.

Action: Specify each QDR dimension only once.

ORA-36702: (XSRELTBL05) The format of the HIERHEIGHT function is: \n HIERHEIGHT(relation [,] level)\n level >= 1.
Cause: The HIERHEIGHT function was specified incorrectly.

Action: Make sure the format is correct.

ORA-36704: (XSRELTBL06) *workspace object* should be dimensioned by *workspace object*.
Cause: The level relation is not dimensioned by the source relation dimension.

Action: Make sure the level relation has the correct definition.

ORA-36706: (XSRELTBL07) *workspace object* should be dimensioned by *workspace object* and one level dimension.
Cause: The destination relation has the wrong definition.

Action: Make sure the destination relation has the correct dimensions.

ORA-36708: (XSMXALLOC00) Variable *workspace object* must be dimensioned to be used by the ALLOCATE command.
Cause: The user supplied an undimensioned (scalar) variable to the ALLOCATE command.

Action: Use a dimensioned variable.

ORA-36710: (XSMXALLOC01) TARGETLOG variable *workspace object* must be dimensioned identically to TARGET variable *workspace object*.
Cause: The user attempted to execute ALLOCATE with mismatched TARGET and TARGETLOG variables

Action: Use TARGET and TARGETLOG variables with matching dimensionality.

ORA-36712: (XSMXALLOC02) Relation *workspace object* must be a one-dimensional self-relation to be used as a SOURCE or BASIS with ALLOCATE.
Cause: The user specified an invalid source or basis relation on the ALLOCATE command line.

Action: Modify the relation to be a one-dimensional self-relation.

ORA-36714: (XSMXALLOC03) TARGETLOG variable *workspace object* must have the same data type as TARGET variable *workspace object*.
Cause: The user specified a TARGETLOG variable that had a different data type from the TARGET variable.

Action: Use TARGETLOG and TARGET variables with an identical data type.

ORA-36718: (XSALLOC00) You do not have the necessary permissions to use AGGMAP *workspace object*.
Cause: The user did not have sufficient permissions to run the ALLOCATE command

Action: Change to a user ID with the appropriate permissions, or use objects that you have permission to use.

ORA-36720: (XSALLOC01) To be used with ALLOCATE, your AGGMAP *workspace object* must be defined with the ALLOCMAP command.
Cause: The user used the AGGMAP command to define the AGGMAP, so either the AGGMAP can only be used with the AGGREGATE command, or the AGGMAP has no contents attached to it.

Action: Use the ALLOCMAP command to define the AGGMAP.

ORA-36722: (XSALLOC02) In AGGMAP *workspace object*, you specified an NA or ZERO sourceval but supplied formula *workspace object* as your source for ALLOCATE.
Cause: The user requested that source values be modified during the allocation, but that is not possible when using a formula source.

Action: Either use a VARIABLE source or remove the SOURCEVAL specification for your ALLOCMAP.

ORA-36724: (XSALLOC03) *workspace object* cannot include more dimensions than the source variable.

ORA-36726: (XSALERR00) The character '*character*' is not a valid format specifier for the ALLOCATE error log.
Cause: The user specified an invalid formatter in the ALLOCERRLOGHEADER or ALLOCERRLOGFORMAT options.

Action: Correct the option to have a valid format.

ORA-36728: (XSALERR01) While performing the ALLOCATE command with AGGMAP *workspace object*, the error logging limit of *number* was exceeded.
Cause: The user specified an ERRORLOG MAX value in the ALLOCMAP, but more errors were encountered while performing the allocation.

Action: Either set ERRORLOG NOSTOP, reduce the allocation errors, or increase the ERRORLOG MAX setting

ORA-36730: A deadlock occurred allocating data.

ORA-36731: An NA basis parent cell was encountered.

ORA-36732: A value was less than the FLOOR specification.

ORA-36733: A value exceeded the CEILING specification.

ORA-36734: A value was less than the MIN specification.

ORA-36735: A value exceeded the MAX specification
Cause: .

Action: n/a

ORA-36736: Renormalizing data

ORA-36737: The logging limit was exceeded.

ORA-36738: Falling back to NAOPERATOR after deadlock.

ORA-36739: Redistributing remainder with REMOPERATOR.

ORA-36740: A CHILDLOCK was detected in your valueset
Cause: .

Action: n/a

ORA-36741: A source was OVER ALLOCATED to its children

ORA-36761: (XSLANGDM01) Analytic workspace *string* already contains a dimension (%J) with the *string* property.
Cause: An attempt was made to apply this property to more than one dimension in the AW.

Action: Remove the property from the named dimension and try the command again.

ORA-36762: (XSLANGDM02) You cannot modify the *string* property of %J because analytic workspace *string* is attached in MULTI mode.
Cause: An attempt was made to add or delete a $DEFAULT_LANGUAGE property in an AW attached in multiwriter mode.

Action: Attach the AW in a different mode.

ORA-36763: (XSAGGCNTMOVE01) Aggregation variable *workspace object* cannot have itself as an AGGCOUNT.
Cause: An attempt was made to turn a variable into its own AGGCOUNT.

Action: Select a different AGGCOUNT variable.

ORA-36764: (XSAGGCNTMOVE02) AGGCOUNT variable *workspace object* must be of type INTEGER, not *string*.
Cause: An attempt was made to create a non-INTEGER AGGCOUNT.

Action: Select an INTEGER AGGCOUNT variable.

ORA-36765: (XSAGGCNTMOVE03) A *string* aggregation variable cannot have a *string* AGGCOUNT.
Cause: The specified AGGCOUNT variable did not have the same permanence as the aggregation variable.

Action: Select an AGGCOUNT variable with the same TEMPORARY or PERMANENT attribute as the aggregation variable.

ORA-36766: (XSAGGCNTMOVE04) *workspace object* cannot be used as an AGGCOUNT because it has an AGGCOUNT.
Cause: The specified AGGCOUNT variable had its own AGGCOUNT

Action: Select a different variable, or remove the AGGCOUNT using CHGDFN.

ORA-36767: (XSAGGCNTMOVE05) *workspace object* cannot be used as an AGGCOUNT while there are permissions applied to it.
Cause: The specified AGGCOUNT variable had its own permissions distinct from those on the aggregation variable.

Action: Select a different AGGCOUNT variable, or remove the permissions. In some cases this may require an UPDATE before the command can succeed.

ORA-36768: (XSAGGCNTMOVE06) An aggregation variable and its AGGCOUNT must have the same base dimensions.
Cause: An AGGCOUNT variable was specified with different base dimensions than the aggregation variable.

Action: Select an AGGCOUNT variable with exactly the same base dimensions as the aggregation variable.

ORA-36777: Unable to allocate *string* bytes for the OLAP page pool.
Cause: Insufficient memory was available to allocate the needed memory for the online analytical processing (OLAP) page pool. One cause is the value of the OLAP_PAGE_POOL_SIZE initialization parameter.

Action: Check the value of the OLAP_PAGE_POOL_SIZE initialization parameter. It cannot be larger than 90% of the value of the PGA_AGGREGATE_LIMIT initialization parameter.

ORA-36778: (XSPGTRLOW) The amount of available temporary storage is still low. Free some temporary storage immediately. You can do so, for example, by UPDATING or DETACHING an analytic workspace.
Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-36779: Invalid parameter value.
Cause: The specified value for the OLAP_PAGE_POOL_SIZE initialization parameter was out of range. The OLAP_PAGE_POOL_SIZE initialization parameter must be between 2097152 and 2147483647, and smaller than 90% of the PGA_AGGREGATE_LIMIT initialization parameter. Additionally, you cannot use a fixed-size OLAP page pool with multiple tablespace block sizes. The OLAP_PAGE_POOL_SIZE initialization parameter remains unmodified.

Action: None

ORA-36780: (IOSEC01) Current Directory Alias is not set. Cannot complete *string*.

ORA-36782: (IOSEC02) Directory Alias used in *string* does not exist, or you do not have sufficient privileges to access it.

ORA-36783: Directory alias used in *string* does not exist, or you do not have sufficient privileges to access it.
Cause: The directory alias did not exist, or you did not have sufficient privileges to access it.

Action: Use CREATE DIRECTORY *name* AS 'path'. Then grant privileges to that directory alias.

ORA-36784: (IOSEC03) *string* is an invalid directory or file name.

ORA-36785: Invalid directory or file name *string*.

ORA-36786: (IOSEC04) File *string* does not exist or cannot be accessed.

ORA-36792: (IOSEC07) Error accessing file *string*.

ORA-36793: Error accessing file *string*.

ORA-36800: (XSTBLFUNC00) The OLAP_TABLE function can only have a single LOOP statement within the LIMITMAP
Cause: The OLAP table function given used more than one LOOP statement.

Action: It is currently impossible to specify more than one LOOP composite, either remove one of the statements (and loop densely over relevant dimensions), or create a new composite that encompasses both loops and have a single loop statement refer to that.

ORA-36802: (XSTBLFUNC01) The OLAP_TABLE function must contain a DATAMAP that executes a FETCH command or a LIMITMAP.
Cause: There is no limitmap on the table function and either the datamap does not contain a fetch, or it errored before the fetch was called.

Action: Check the datamap for errors, make sure that it executes a fetch statement, if it is not intended to execute the fetch then make sure that the table function has a valid limitmap.

ORA-36804: (XSTBLFUNC02) The OLAP_TABLE function encountered an error while parsing the LIMITMAP.
Cause: Invalid LIMITMAP syntax, or the name resolution failure of an ANALYTIC WORSKPACE OBJECT.

Action: Check the syntax of the limit map, check that the OLAP_TABLE function refers to a valid analytic workspace, check that all analytic workspace objects within the limitmap actually exist within the analytic workspace

ORA-36806: (XSTBLFUNC03) The OLAP_TABLE function refers to an invalid ADT attribute: *string*.
Cause: The limitmap refers to a matching of ADT attribute to AW object, but the ADT attribute is not an element of the specified ADT table. Most commonly this is a typo.

Action: Add the attribute to the ADT, correct the LIMITMAP, or remove the reference from the LIMITMAP.

ORA-36808: (XSTBLFUNC04) The OLAP_TABLE function LEVELREL clause cannot declare *number* ADT fields from *number* AW fields.
Cause: The limitmap has a levelrel clause which has a different number of values in the list to the right of the FROM than it has to the left.

Action: Change the limitmap so that there is a 1:1 mapping of adt and aw elements.

ORA-36810: (XSTBLFUNC05) Analytic workspace object *number* does not exist.
Cause: The limitmap refers to a non-existent aw object.

Action: Change the limitmap or define the object

ORA-36812: (XSTBLFUNC06) Invalid Syntax at '?'.
Cause: The limitmap has a question mark character outside the context of a string.

Action: Fix the limitmap

ORA-36814: (XSTBLFUNC07) The datatype of the column used in the ROW2CELL clause of a LIMITMAP must be RAW(16).
Cause: Datatype of column used in ROW2CELL clause of a LIMITMAP is not RAW(16).

Action: Change datatype to RAW(16).

ORA-36815: (XSTBLFUNC08) The OLAP_TABLE has attempted to use an AW single row function with the aw_attach parameter set to DURATION QUERY.
Cause: The OLAP_TABLE aw_attach parameter was set to DURATION QUERY.

Action: Change the OLAP_TABLE aw_attach parameter to DURATION SESSION.

ORA-36816: (XSTBLFUNC09) The *workspace object* dimension is of datatype *string* which does not support custom member upserts.
Cause: Custom members were attempted to be added via an upsert to a dimension that does not support them

Action: Disable the AW Hash optimization for this query

ORA-36817: (XSTBLFUNC10) The LIMITMAP LOOP clause specifies an invalid type of object. *workspace object* must be a DIMENSION or COMPOSITE.
Cause: An invalid type of object was specified in the LOOP clause.

Action: Correct the LOOP clause.

ORA-36818: (XSTBLFUNC11) A LIMITMAP DIMENSION clause specifies an invalid type of object. *workspace object* must be a DIMENSION.
Cause: An invalid type of object was specified in the DIMENSION clause.

Action: Correct the DIMENSION clause.

ORA-36819: (XSTBLFUNC12) *workspace object* cannot be used in a LIMITMAP *string* clause.
Cause: An invalid type of object was specified in a LIMITMAP clause.

Action: Correct the LIMITMAP clause.

ORA-36820: (XSLMINFO00) The LIMITMAPINFO function encountered an error while parsing the LIMITMAP.
Cause: Invalid LIMITMAP syntax.

Action: Correct the syntax of the limit map.

ORA-36821: (XSJPUSH00) An error occurred while attempting to push a join of 2 AW tables.
Cause: Unknown.

Action: Re-execute the query with parameter _optimizer_aw_join_push_enabled = FALSE.

ORA-36825: (XSTBLFUNC13) An error occurred expanding the cube_name argument in the OLAP table function
Cause: Incorrect metadata or invalid cube name

Action: Correct the metadata.

ORA-36826: (XSTBLFUNC14) OLAP C Looper is disabled by event 37395
Cause: init.ora event 37395 includes level 8 which disables the OLAP C looper

Action: Remove event level 8 and use explicit FETCH function for OLAP_TABLE

ORA-36830: (XSLMGEN00) Object *string*.*string* does not exist
Cause: The object does not exist

Action: Check view token for errors

ORA-36831: (XSLMGEN01) View token cannot be NA
Cause: A NA was passed as the view token

Action: Pass in a valid view token

ORA-36832: (XSLMGEN02) View token cannot be greater than 4000 bytes
Cause: A view token was greater than 4000 bytes

Action: Pass in a view token less than 4000 bytes

ORA-36833: (XSLMGEN03) View token cannot be blank
Cause: A blank was passed as the view token

Action: Pass in a valid view token

ORA-36834: (XSLMGEN04) Column tag is greater than 30 bytes
Cause: A value greater than 30 bytes was passed as the column tag

Action: Pass in a column tag of 30 bytes or less

ORA-36835: (XSLMGEN05) Dimension *string*.*string* hierarchy *string* level *string* is missing a COLUMNNAME property value
Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36836: (XSLMGEN06) The dimensionality of object *string*.*string* is different than the view token
Cause: The dimensionality of the cube does not match the view token

Action: Check view token for unrelated hierarchies clauses

ORA-36837: (XSLMGEN07) Object owner *string* is different than *string*
Cause: The object owners are different

Action: Make the object owners match

ORA-36838: (XSLMGEN08) Dimension *string*.*string* attribute *string* is missing a COLUMNNAME property value
Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36839: (XSLMGEN09) Cube *string*.*string* measure *string* is missing a COLUMNNAME property value
Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36840: (XSLMGEN10) Cube *string*.*string* has no measures
Cause: The cube has no measures

Action: Add a measure to the cube

ORA-36841: (XSLMGEN11) Dimension *string*.*string* was not found
Cause: The view token referenced a dimension that does not exist

Action: Pass in a dimension that does exist

ORA-36842: (XSLMGEN12) Hierarchy *string*.*string*.*string* was not found
Cause: The view token referenced a hierarchy that does not exist

Action: Pass in a hierarchy that does exist

ORA-36843: (XSLMGEN13) Dimension *string*.*string* hierarchy *string* is missing a PHYSICALNAME property value
Cause: The property PHYSICALNAME has no value

Action: Populate the property PHYSICALNAME with a value

ORA-36844: (XSLMGEN14) Dimension *string*.*string* is missing a *string* property value
Cause: The dimension is missing a required property

Action: Check dimension property values

ORA-36845: (XSLMGEN15) Owner is greater than 30 bytes
Cause: The owner passed is greater than 30 bytes

Action: Pass in an owner that is 30 bytes or less

ORA-36846: (XSLMGEN16) AW name is greater than 30 bytes
Cause: The AW name passed is greater than 30 bytes

Action: Pass in an AW name that is 30 bytes or less

ORA-36847: (XSLMGEN17) AW name is blank
Cause: The AW name passed is blank

Action: Pass in an AW name that has a value

ORA-36848: (XSLMGEN18) Object name *string* is different than *string*
Cause: The object names are different

Action: Make the object names match

ORA-36849: (XSLMGEN19) AW owner does not match View token owner
Cause: The AW owner does not match the View token owner

Action: Match AW ower to View token object owner

ORA-36850: (XSLMGEN20) View token *string* is not correct
Cause: The view token is not correct

Action: Check view token syntax for errors

ORA-36861: (XSTFRC01) SQL Cache ID parameter is invalid or missing.
Cause: SQL Cache ID parameter is required to identify SQL cache to query

Action: Supply a valid SQL Cache ID. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36862: (XSTFRC02) Column number for this SQL Cache must be between 1 and *number*. Specified column number *number* is invalid.
Cause: Column Map references a column number that is greater than the maximum column number in SQL Cache

Action: Reference a correct column number. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36871: (XSFTDSC01) Object *string* cannot be used to define a column in a LIMITMAP.
Cause: The object cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36872: (XSTFDSC02) Column type specifier cannot be used when the table function data type is specified.
Cause: Column type can only be used with implicitly-specified table functions

Action: Remove column type from reference from the LIMITMAP or remove the explicit table function data type specification.

ORA-36873: (XSTFDSC03) Column type must be specified explicitly.
Cause: Missing column type specification.

Action: Please, make sure to specify a column type in COLUMN MAP. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36874: (XSTFDSC04) Expression *string* cannot be used to define a column in a LIMITMAP.
Cause: The expression cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36875: (XSTFDSC05) LIMITMAP is missing or is not a string literal.
Cause: Table functions that have an automatic ADT require LIMITMAP to be a string literal.

Action: Either specify ADT for the table function or specify LIMITMAP as a string literal.

ORA-36876: (XSTFDSC06) The column datatype *string* is not supported in OLAP table functions.
Cause: The object type layer does not support column datatype.

Action: Use a supported column datatype.

ORA-36881: (XSSRF00) The OLAP DML ROW2CELL function can only be used in a LIMITMAP.
Cause: Using the ROW2CELL function outside of the LIMITMAP.

Action: Remove use of the ROW2CELL function.

ORA-36882: (XSSRF01) The second parameter of an AW single row function cannot be NULL.
Cause: The second parameter of the AW single row function was NULL

Action: Pass a valid OLAP DML expression as the second parameter of the AW single row function

ORA-36883: (XSSRF02) The first parameter of an AW single row function cannot be NULL.
Cause: The first parameter of the AW single row function was NULL

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36884: (XSSRF03) The value of the first parameter of the AW single row function is incorrect.
Cause: The column specified in the LIMITMAP ROW2CELL clause was not the first parameter of the AW single row function.

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36885: (XSSRF04) Error rewriting OLAP DML expression. Column name too big
Cause: The column name specified in the OLAP DML expression was larger than 30 bytes.

Action: Make sure the column name specified in the OLAP DML expression is less than or equal to 30 bytes.

ORA-36886: (XSSRF05) Error rewritting OLAP DML expression. Rewritten expression is greater than *number* bytes
Cause: The rewritten OLAP DML expression was larger than the output buffer.

Action: Create a smaller OLAP DML expression.

ORA-36887: (XSSRF06) Error rewriting OLAP DML expression. Column name *string* is not a valid ADT column.
Cause: The column name passes does not exist.

Action: Only reference columns that exist.

ORA-36902: (XSAGDNGL43) In AGGMAP *workspace object*, the MODEL *workspace object* is not a model over a base dimension of the AGGMAP.
Cause: Model may include equations others than dimension values, or blocks other than simple blocks.

Action: Make sure model only includes the simple blocks with dimension values.

ORA-36904: (XSAGDNGL44) In AGGMAP *workspace object*, RELATION *workspace object* occurs after a dynamic model. The dynamic model must be the last calculation within the AGGMAP.
Cause: Before the current relation, dynamic model exists.

Action: Make sure the dynamic model is the last statement.

ORA-36910: (XSAGDNGL47) In AGGMAP *workspace object*, DYNAMIC MODEL *workspace object* can only edit the top level of its matching relation hierarchy.
Cause: The model attempted to edit a child node in the relation hierarchy.

Action: Remove this attempt from the model definition.

ORA-36912: (XSAGDNGL48) In AGGMAP *workspace object*, MODEL *workspace object* cannot be simultaneous.
Cause: The aggmap contained a simultaneous model.

Action: Change the model definition so that it is no longer simultaneous.

ORA-36913: (XSAGDNGL49) In AGGMAP *workspace object*, LOAD_STATUS object *workspace object* must be an undimensioned VALUESET over the relation dimension.
Cause: The object refered to by the LOAD_STATUS clause of the aggmap wasn't an undimensioned valueset over the related dimension

Action: Change the aggmap definition so that it doesn't refer to an invalid object

ORA-36914: (XSAGDNGL50) In AGGMAP *workspace object*, LOAD_STATUS valueset *workspace object* contains both a child and its ancestor.
Cause: The LOAD_STATUS valueset is not allowed to contain both a dimension value and an ancestor of that value.

Action: Perform a limit remove ancestors on the valueset and confirm that the result matches the intended load.

ORA-36920: (XSVPMVTOPART01) *workspace object* cannot become anonymous because it has properties.
Cause: The OLAP DML command would result in a named object becoming an anonymous object, but the object had one or more properties associated with it.

Action: Remove the properties using the PROPERTY command. In some cases an UPDATE may be required before the command can proceed.

ORA-36921: (XSVPMVTOPART02) *workspace object* and *workspace object* are not in the same analytic workspace.
Cause: The OLAP DML command requires certain objects to be in the same analytic workspace, and the command string specified objects from two different analytic workspaces.

Action: If more than one analytic workspace is attached to the session, make sure that the object names given in the command are unique across all attached analytic workspaces. Use qualified object names (QON's) if necessary.

ORA-36922: (XSVPMVTOPART03) *workspace object* is the target of an external partition of a partitioned variable.
Cause: An attempt was made to perform some prohibited operation on a variable which is itself a partition of some other variable.

Action: If desired, use the CHGDFN command to DROP the partition from the partitioned variable, and then run the command again.

ORA-36923: (XSVPMVTOPART04) *workspace object* is not a LIST or RANGE PARTITION TEMPLATE.
Cause: The user ran a command that only operates on a LIST or RANGE partition template (or a variable dimensioned by a LIST or RANGE partition template) on some other kind of analytic workspace object.

Action: Rerun the command on a LIST or RANGE partition template or a variable dimensioned by a LIST or RANGE partition template.

ORA-36924: (XSVPMVTOPART05) *workspace object* is not in a COMPOSITE.
Cause: The OLAP DML command expected that the variable would be dimensioned by a composite containing the specified dimension, the specified dimension within a composite.

Action: Rerun the command on some variable is dimensioned by a composite containing the specified dimension.

ORA-36925: (XSVPMVTOPART06) Partition *number* has some values that are not in *workspace object*.

ORA-36926: (XSVPMVTOPART07) More than one variable is dimensioned by *workspace object*.

ORA-36930: Cannot start a recursive call to Oracle OLAP because a ROLLBACK past an UPDATE to an attached analytic workspace has been performed.
Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. A recursive Oracle OLAP call cannot be made until the control returns to the initial OLAP call and the affected Analytic Workspaces detached.

Action: Change the called SQL procedure to avoid the ROLLBACK

ORA-36940: (XSDPENG00) You cannot apply the PARTITION function to *workspace object* because it is not a partition template.

ORA-36950: (XSFCAST22) The list of *string* values cannot have more than *number* members. You supplied *number*.
Cause: There are more than the maximum number of OFFSET or PERIODICITY values.

Action: Remove some of the values.

ORA-36951: (XSFCAST28) The ALLOCLAST parameter cannot be set to YES unless PERIODICITY specifies more than one cycle.
Cause: ALLOCLAST was set to YES when PERIODICITY specified a single value rather than a list of nested cycles.

Action: Set ALLOCLAST to FALSE (the default), or specify more than one value for PERIODICITY (in the form of a parenthesized list).

ORA-36952: (XSFCAST23) You cannot specify a cycle number when querying the *string* forecasting option.
Cause: A cycle number was specified in a call to FCQUERY to retrieve forecast data not related to a cycle.

Action: Remove the cycle specification from the call to FCQUERY.

ORA-36954: (XSFCAST24) The cycle number must be between 1 and *number*. You specified *number*.
Cause: A cycle number less than 1 or greater than the maximum value was specified in a call to FCQUERY.

Action: Specify a number in the indicated range.

ORA-36956: (XSFCAST25) There are only *number* PERIODICITY values. You cannot specify more OFFSET values.
Cause: More OFFSET values were specified than PERIODICITY values.

Action: Supply only as many OFFSETs as there are PERIODICITY values.

ORA-36958: (XSFCAST26) The OFFSET value for cycle *number* cannot be greater than the cycle's PERIODICITY, which is *number*. You specified *number*.
Cause: The OFFSET for a cycle exceeded the PERIODICITY for that cycle.

Action: Supply an OFFSET less than or equal to the PERODICITY for the corresponding cycle.

ORA-36960: (XSFCAST27) The value of the *string* expression must be an odd number. You specified *number*.
Cause: An even number was given for an option that requires an odd number.

Action: Supply an odd number or let the option default.

ORA-36961: Oracle OLAP is not available.
Cause: The user attempted to utilize functionality found only in Oracle OLAP, but OLAP has not been enabled in the executable.

Action: Install the Oracle OLAP option

ORA-36962: (XSRELTBL08) *string* is not a valid *workspace object*.
Cause: The specified value does not exist in the dimension.

Action: Specify an existing value of the dimension.

ORA-36963: (XSRELTBL16) INHIERARCHY object *workspace object* should be a valid valueset or boolean variable.
Cause: Invalid valueset or variable was specified.

Action: Specify a valid valueset or variable.

ORA-36964: (XSRELTBL09) *workspace object* is not a valid level relation.
Cause: The specified level relation was not consistent with the parentage hierarchy.

Action: Fix one or both of the relations involved so that all parents are at a higher level than their children.

ORA-36965: (XSRELTBL17) Invalid LEVELORDER valueset *workspace object*.
Cause: Invalid LEVELORDER valueset was specified.

Action: Specify a valid valueset.

ORA-36966: (XSRELTBL10) *workspace object* must be a dimension.
Cause: The qualified object must be a dimensions.

Action: Remove the named object from the QDR.

ORA-36967: (XSRELTBL18) Invalid INHIERARCHY valueset *workspace object*.
Cause: Invalid valueset was specified.

Action: Specify a valid valueset.

ORA-36968: (XSRELTBL11) Invalid relation *workspace object*.
Cause: Non-object or an object other than a RELATION was specified as source or destination.

Action: Specify RELATION objects.

ORA-36969: (XSRELTBL19) Merged family relation cannot take INHIERARCHY option.
Cause: INHIERARCHY option was specified.

Action: Remove INHIERARCHY option.

ORA-36970: (XSRELTBL12) *workspace object* must be a self-relation.
Cause: The specified source relation was not a self-relation.

Action: Specify a self-relation as the source.

ORA-36971: (XSRELTBL19) Merged family relation cannot take LEVELORDER option.
Cause: LEVELORDER option was specified.

Action: Remove LEVELORDER option.

ORA-36972: (XSRELTBL13) Relation *workspace object* must be dimensioned by *workspace object*.
Cause: Destination relation is not dimensioned by source relation dimension.

Action: Give a correct destination relation.

ORA-36974: (XSRELTBL14) *workspace object* is not a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.
Cause: The named variable had either the wrong data type or the wrong dimensions.

Action: Specify a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.

ORA-36975: (XSRELTBL15) You must specify a USING clause naming a relation with same level dimension as LEVELORDER valueset *workspace object*.
Cause: USING was omitted from the HIERHEIGHT command, or specified a relation containing values of a different dimension than the LEVELORDER valueset.

Action: Provide a USING clause naming a relation containing values from the correct level dimension. ----------

ORA-36976: (XSRELGID00) Invlid GROUPINGID destination relation or variable *workspace object*.
Cause: Non-Object or invalid relation or invlid variable.

Action: Specify the valid relation or variable.

ORA-36977: (XSRELGID17) The GROUPINGID command does not support hierarchies with more than 126 levels.
Cause: The user specified a hierarchy with more than 126 levels.

Action: Decrease the number of levels in the hierarchy.

ORA-36978: (XSRELGID01) *workspace object* must be a self-relation.
Cause: Source relation is not a self-relation.

Action: Specify a self-relation as the source relation.

ORA-36979: (XSRELGID18) Property *number* can only be set by the GROUPINGID command.
Cause: You tried to set the $GID_DEPTH property.

Action: Stop to set the $GID_DEPTH property.

ORA-36980: (XSRELGID02) Variable *workspace object* must have a numeric data type.
Cause: The destination variable does not have a numeric data type.

Action: Make sure the variable is numeric.

ORA-36981: (XSRELGID19) The format of the GROUPINGID function is:\n \n GROUPINGID(gidrel1 [gidrel2]...)
Cause: Bad syntax

Action: Correct syntax

ORA-36982: (XSRELGID03) The destination variable/relation *workspace object* must be dimensioned by all dimensions of the source relation *workspace object* that have more than one value in status.
Cause: Destination variable/relation does not have enough dimensionality to hold the result from the multi-dimensional source relation.

Action: Either limit the status of hierarchy dimensions or redefine the destination variable/relation with the extended dimensionality

ORA-36983: (XSRELGID20) The groupingid relation *workspace object* repeats.
Cause: The groupingid relation repeated.

Action: Remove the duplicated groupingid relation.

ORA-36984: (XSRELGID04) A value cannot be inserted into dimension *workspace object*.

ORA-36985: (XSRELGID21) The source relation can be omitted only when using both surrogate GID and level order valueset.
Cause: Source relation was not specified.

Action: Specify the source relation or both surrogate gid and level order valueset.

ORA-36986: (XSRELGID05) Relation *workspace object* must be dimensioned by *workspace object*.
Cause: The destination relation is not dimensioned by the dimension of the source relation.

Action: Redefine the destination relation or choose another relation with the correct dimensionality.

ORA-36988: (XSRELGID06) The related dimension of relation *workspace object* must be of type NUMBER.
Cause: The related dimension of the destination relation has the wrong data type.

Action: Redefine the destination relation or choose another relation whose related dimension is of type NUMBER.

ORA-36989: (XSRELGID23) GROUPSET and ROLLUP options in GROUPINGID require the destination relation.
Cause: Either variable or surrrogate dimension was specified as destination.

Action: Specify the destination relation.

ORA-36990: (XSRELGID07) The level relation *workspace object* should be dimensioned by a level dimension.
Cause: The level relation is not dimensioned by a level dimension.

Action: Redefine the level relation or choose another relation with the correct dimensionality.

ORA-36991: (XSRELGID08) The level relation and level order valueset provide inconsistent level mappings.
Cause: There is a conflict between the hierarchy/level relation and the level order valueset.

Action: Choose objects that do not conflict.

ORA-36992: (XSRELGID09) A level relation is needed to produce a surrogate dimension gid.
Cause: A level relation was not specified.

Action: Specify a level relation.

ORA-36993: (XSRELGID10) OBJECT *workspace object* must be a VARIABLE, RELATION, or a numeric SURROGATE DIMENSION based on the level dimension *workspace object*.
Cause: not a surrogate dimension, or the surrogate dimension is not based on the level dimension.

Action: modify/change the surrogate dimension.

ORA-36994: (XSRELGID11) The SURROGATE DIMENSION *workspace object* must be numeric.
Cause: The surrogate dimension is not numeric

Action: Change the surrogate dimension as numeric

ORA-36995: (XSRELGID12) There are duplicate values in the surrogate dimension gid. Use the levelorder option to resolve the ambiguity.
Cause: more than 1 hierarchies in the current computing scope.

Action: use inhierarchy to limit

ORA-36996: (XSRELGID13) Valueset *workspace object* should be defined over dimension *workspace object*.
Cause: Valueset doesn't match the dimension

Action: Change the valueset's dimension

ORA-36997: (XSRELGID14) For variable or relation grouping ids, a level relation is needed when a level order valueset is specified.
Cause: no level relation exists with level order valueset.

Action: provide the level relation.

ORA-36998: (XSRELGID15) LEVEL ORDER VALUESET *workspace object* and LEVEL RELATION *workspace object* have the different level dimensions.
Cause: either level order valueset or level relation has wrong level dimension.

Action: choose the correct level dimension

ORA-36999: (XSRELGID16) OBJECT *workspace object* is not a surrogate dimension, a source relation must be specified when creating any non-surrogate grouping id.
Cause: use variable/relation gid without providing the source relation

Action: use the surrogate or provide the source relation

ORA-37000: (NOTALIAS00) *workspace object* is not an ALIAS DIMENSION of *workspace object*.
Cause: The user specified an object which is not alias dimension of the first dimension

Action: Specify an alias dimension of the first dimension

ORA-37001: You have one or more attached but unupdated analytic workspaces.
Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Either issue the update command to update the AWs, or pass TRUE as the force parameter to dbms_aw.shutdown()

ORA-37002: Oracle OLAP failed to initialize. Please contact Oracle OLAP technical support.
Cause: A severe error occurred while initializing OLAP.

Action: Contact support (and possibly OLAP development) for help in debugging the issue.

ORA-37003: (AWLISTALL01) *number* readers
Cause: used in AW(LISTALL) output formatting when %d is 0

Action: None

ORA-37004: (AWLISTALL02) *number* reader
Cause: used in AW(LISTALL) output formatting when %d is 1

Action: None

ORA-37005: (AWLISTALL03) *number* readers
Cause: used in AW(LISTALL) output formatting when %d is > 1

Action: None

ORA-37006: (AWLISTALL04) *number* writers
Cause: used in AW(LISTALL) output formatting when %d is 0

Action: None

ORA-37007: (AWLISTALL05) *number* writer
Cause: used in AW(LISTALL) output formatting when %d is 1

Action: None

ORA-37008: (AWLISTALL06) *number* writers
Cause: used in AW(LISTALL) output formatting when %d is > 1

Action: None

ORA-37010: (XSACQUIRE_DIFFAW) When using the CONSISTENT WITH clause, all objects must come from the same analytic workspace.
Cause: The ACQUIRE command cannot keep objects from several workspaces consistent with each other

Action: Omit the CONSISTENT WITH clause or make sure all objects being acquired belong to the same analytic workspace.

ORA-37011: (XSACQUIRE_LOCKED) Object *workspace object* is locked by another user.
Cause: Could not acquire (or acquire consistent) the object, since it is locked by another user

Action: Try to acquire this object later

ORA-37012: (XSACQUIRE_TIMEOUT) Object *workspace object* is locked by another user and the WAIT timed out.
Cause: Could not acquire (or acquire consistent) the object for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37013: (XSACQUIRE_DEADLOCK) Cannot wait to acquire object *workspace object*, since doing so would cause a deadlock.
Cause: Waiting to acquire the object would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37014: (XSACQUIRE_ACQUIRED) Object *workspace object* is already acquired.
Cause: The object is already acquired

Action: Do not try to acquire this object again

ORA-37015: (XSACQUIRE_YNRESYNC) Object *workspace object* is ambiguously listed to be acquired both with and without RESYNC.
Cause: The object is listed in with resync list and no resync list. Such usage is ambiguous as to the user's intent on preserving or not preserving private changes.

Action: Do not list the object both with and without RESYNC

ORA-37016: (XSACQUIRE01) You must specify objects to acquire for the ACQUIRE command.
Cause: A list of objects to acquire with or without resync is missing

Action: Specify the list of objects to acquire

ORA-37018: (XSACQUIRE03) Multiwriter operations are not supported for object *workspace object*.
Cause: Multiwriter presently does not work for this object type

Action: Attach the AW in RW or EXCLUSIVE modes to modify this object.

ORA-37020: (XSMULTI01) Analytic workspace *string* is not in MULTI mode.
Cause: The workspace for an object is not in multiwriter mode. Hence, no multiwriter operations are allowed on the objects in the workspace

Action: Attach the workspace in the multiwriter mode or do not use multiwriter commands with it.

ORA-37021: (XSMULTI02) Object *workspace object* is not acquired.
Cause: The object must be acquired for this multiwriter operation

Action: Do not use this multiwriter operation on an object that is not acquired

ORA-37023: (XSMLTUPD01) Object *workspace object* cannot be updated without dimension *workspace object*.
Cause: One cannot update an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37026: (XSMLTRESYNC01) Object *workspace object* cannot be resynced without dimension *workspace object*.
Cause: One cannot resync an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37027: (XSMLTRESYNC02) Object *workspace object* cannot be resynced without modified object *workspace object* because they share a modified composite dimension.
Cause: When one resyncs an object that is dimensioned by a composite dimension, the composite dimension is resynced automatically, dropping all new tuples. This cannot be done, however, if the automatic resync of the composite dimension might cause data in an object that shares the composite dimension to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the composite dimension is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37028: (XSMLTRESYNC03) Object *workspace object* cannot be resynced without modified object *workspace object* because they share a modified dimension map.
Cause: When one resyncs an object that is dimensioned by a dimension map, the dimension map is resynced automatically, dropping all changes. This cannot be done, however, if the automatic resync of the dimension map might cause data in an object that shares the dimension map to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the dimensions map is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37030: (XSMLTMAINT01) You cannot maintain *workspace object* because it is not ACQUIRED.
Cause: One cannot maintain a dimension in a multiwriter AW if it is not acquired.

Action: Acquire the dimension first.

ORA-37031: (XSMLTMAINT02) You cannot DELETE values of dimension *workspace object* in MULTI mode.
Cause: DELETE is allowed in multiwriter mode only for SESSION dimension members

Action: Attach the AW in a R/W mode and perform the DELETE operation

ORA-37032: (XSMLTMAINT03) You cannot MAINTAIN partition template *workspace object* in MULTI mode.
Cause: User attempted to add or remove values from a LIST partition template's lists while the AW containing the partition template was attached in multiwriter mode.

Action: Do the maintenance in read only or read-write mode.

ORA-37035: (XSMLTDCL01) You can only DEFINE SESSION objects in analytic workspace *string* because it is attached in MULTI mode.
Cause: Persistent object definition in multiwriter mode is not allowed.

Action: Do all persistent object definitions in read-write mode.

ORA-37036: (XSMLTDCL02) You cannot DELETE objects in analytic workspace *string* because it is attached in MULTI mode.
Cause: One cannot delete objects in an analytic workspace attached in MULTI mode.

Action: Do all object in read-only or read-write mode.

ORA-37037: (XSMLTDCL03) You cannot RENAME objects in analytic workspace *string* because it is attached in MULTI mode.
Cause: One cannot rename objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37038: (XSMLTDCL04) You cannot change definitions of objects in analytic workspace *string* because it is attached in MULTI mode.
Cause: One cannot used CHGDFN command on objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37039: (XSMLTDCL05) You cannot maintain triggers in analytic workspace *string* because it is attached in MULTI mode.
Cause: One cannot use TRIGGER command on objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37040: (XSACQUIRE_DEP_LOCKED) Composite, concat, dimension map, or internal partition *workspace object* is locked by another user.
Cause: Some object required locking a composite, concat, dimension map, or internal partition, which is locked by another user

Action: Try to acquire this object later

ORA-37041: (XSACQUIRE_DEP_TIMEOUT) Composite, concat, dimension map, or internal partition *workspace object* is locked by another user and the WAIT timed out.
Cause: Some object required locking a composite, concat, dimension map, or internal partition, which could not be locked for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37042: (XSACQUIRE_DEP_DEADLOCK) Cannot wait to acquire composite, concat, dimension map, or internal partition *workspace object*, since doing so would cause a deadlock.
Cause: Some object required locking a composite, concat, dimension map, or internal partition, which would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37043: (XSACQUIRE_DEP_OLDGEN) Composite, concat, dimension map, or internal partition *workspace object* cannot be locked, since another user has committed a new one already.
Cause: Some object required locking a composite, concat, dimension map, or internal partition in the present generation, which is not possible, since a newer generation already exists.

Action: Try to acquire the main object with resync

ORA-37044: (XSACQUIRE_OLDGEN) Cannot acquire object *workspace object* without resync.
Cause: Could not acquire the object without resync because another user has committed a newer version of it already.

Action: Try to acquire this object with resync parameter

ORA-37050: (XSMLTDCL06) You cannot use the RELATION command with *workspace object* because analytic workspace *string* is attached in MULTI mode.
Cause: One cannot use the RELATION command on objects in an analytic workspace attached in MULTI mode.

Action: Change the default relation when the analytic workspace is attached in RW or Exclusive mode.

ORA-37051: (XSAWRESREV01) You cannot RESYNC or REVERT analytic workspace *string* because one or more objects have been defined in it during this session.

ORA-37052: (XSAWRESREV02) You cannot RESYNC or REVERT analytic workspace *string* because one or more objects have been deleted from it during this session.

ORA-37053: (XSAWRESREV03) You cannot RESYNC or REVERT analytic workspace *string* because one or more of its objects have had their definitions changed during this session.

ORA-37054: (XSAWRESREV04) You cannot RESYNC or REVERT analytic workspace *string* because it contains one or more unnamed composites renamed during this session.

ORA-37055: (XSAWRESREV05) You cannot RESYNC analytic workspace *string* because another session has changed the definitions of one or more objects it contains.

ORA-37056: (XSAWRESREV06) You cannot RESYNC or REVERT analytic workspace *string* because one or more SESSION dimensions or composites are based on *workspace object*.

ORA-37060: (XSMCSESS08) *number* is not a valid custom member in dimension *workspace object*.
Cause: No custom member or invalid custom member

Action: Create the custom member or use the correct custom member

ORA-37072: (XSMCSESS00) Object *workspace object* has the wrong type.
Cause: The object is not of the object type specified in the APPLY clause

Action: Specify the correct object type

ORA-37073: (XSMCSESS01) Applied relation *workspace object* must be dimensioned by dimension *workspace object*.
Cause: Applied relation has the different dimension from the dimension currently being maintained

Action: Maintain relation dimension

ORA-37074: (XSMCSESS02) Variable *workspace object* has no default aggmap.
Cause: The applied variable has no default aggmap

Action: Use variable with the default aggmap or aggmap directly

ORA-37075: (XSMCSESS03) You cannot rename a session-only dimension value.
Cause: The user tried to apply MAINTAIN RENAME to a SESSION value.

Action: Delete the old value and add a new one with the desired name.

ORA-37076: (XSMCSESS04) *workspace object* is not the type of dimension that can have session-only values. Valid types are TEXT, NTEXT, ID, NUMBER, and CONCAT with the UNIQUE attribute.
Cause: The user tried to add a SESSION value to a dimension type that does not support SESSION values.

Action: Use a dimension of one of the listed types.

ORA-37077: (XSMCSESS05) Object *workspace object* is specified more than once.
Cause: The same object name was given more than once in the apply clause or in the step dimension list.

Action: Remove the repetitions.

ORA-37078: (XSMCSESS06) The dimension being maintained (*workspace object*) cannot also be used as a step dimension.
Cause: The dimension being maintained was named as a step dimension.

Action: Remove this dimension from the list of step dimensions.

ORA-37079: (XSMCSESS07) Aggmap *workspace object* cannot be used for AGGREGATE.
Cause: The current aggmap may be for ALLOCATE

Action: Choose the correct aggmap for AGGREGATE only.

ORA-37080: Advice requested for hierarchy with too many levels
Cause: A request was made for advice on a hierarchy with more levels than are supported.

Action: Only request advice for hierarchies with less than 32 levels.

ORA-37082: Invalid percent
Cause: A request was made for advice with an illegal percent value.

Action: Request between 0 and 100 percent precomputation.

ORA-37083: Invalid object *string*
Cause: A request was made for advice with an illegal object name.

Action: Request using valid object names.

ORA-37084: Output valueset *string* must match *string*'s dimensionality
Cause: A request was made for advice for a relation with different dimensionality from the output valueset.

Action: Request using objects that have the same dimensionality.

ORA-37086: *string* is not a valueset
Cause: An operation was attempted that supports only valuesets as precompute expressions in an aggmap, yet a different kind of precompute expression was used.

Action: Replace this limit expression with an equivalent valueset and retry the operation. General precompute expressions are deprecated.

ORA-37093: (XSOBJORG_BAD_CUBE) invalid property "*string*" specified for cube "*string*.*string*"
Cause: Either the specified cube did not have an AW organization, or the specified property did not apply to cubes.

Action: Specify a property that applies to cubes and a cube with an AW organization.

ORA-37094: (XSOBJORG_BAD_DIM) invalid property "*string*" specified for dimension "*string*.*string*"
Cause: Either the specified dimension did not have an AW organization, or the specified property did not apply to dimensions.

Action: Specify a property that applies to dimensions and a dimension with an AW organization.

ORA-37095: (XSOBJORG_BAD_MEAS) invalid property "*string*" specified for measure "*string*.*string*.*string*"
Cause: Either the specified measure did not have an AW organization, or the specified property did not apply to measures.

Action: Specify a property that applies to measures and a measure with an AW organization.

ORA-37096: (XSOBJORG_BAD_ATTR) invalid property "*string*" specified for base attribute "*string*.*string*.*string*"
Cause: Either the specified base attribute did not have an AW organization, or the specified property did not apply to base attribute.

Action: Specify a property that applies to base attributes and a base attribute with an AW organization.

ORA-37097: (XSOBJORG_BAD_DIM_LEVEL) invalid property "*string*" specified for dimension level "*string*.*string*.*string*"
Cause: Either the specified dimension level did not have an AW organization, or the specified property did not apply to dimension levels.

Action: Specify a property that applies to dimension levels and a dimension level with an AW organization.

ORA-37098: (XSOBJORG_BAD_MODEL) invalid property "*string*" specified for dimension calculation model "*string*.*string*.*string*"
Cause: Either the specified dimension calculation model did not have an AW organization, or the specified property di not apply to dimension calculation models.

Action: Specify a property that applies to dimension calculation models and a dimension calculation model with an AW organization.

ORA-37099: (XSOBJORG_BAD_DIMALITY) invalid property "*string*" specified for dimensionality "*string*.*string*.*string*"
Cause: Either the specified dimensionality did not have an AW organization, or the specified property did not apply to dimensionalities.

Action: Specify a property that applies to dimensionalities and a dimensionality with an AW organization.

ORA-37100: (XSUNCOMMITTED) You have one or more updated but uncommitted analytic workspaces.
Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Issue the commit command. ---- 37101 - 37110 are reserved for partitioned variables ----

ORA-37101: (XSVPART01) Partitioning information can only be given for variables dimensioned by a PARTITION TEMPLATE.
Cause: User attempted to define or reference an AW object with the "all internal" phrase or internal / external partition list, but the object was not a variable, was not dimensioned by a partition template, or was an already existing target of an external partition.

Action: Eliminate phrases specific to partitioned variables from the definition string, or dimension the variable by a partition template.

ORA-37102: (XSVPART02) Invalid partition name *string*.
Cause: The user gave an invalid partition name. When defining a partitioned variable, this message indicates that the partition name does not exist in the partition template. In any other context, it indicates that the partitioned variable or partition template does not have a partition with the given name.

Action: Supply a valid partition name.

ORA-37103: (XSVPART03) The dimensionality or datatype of *workspace object* does not match the dimensionality or datatype of the partition.
Cause: User attempted to define a partitioned variable with an external partition, but the target of the external partition had incorrect dimensionality or datatype.

Action: Pick a different target variable. The target variable must be dimensioned by exactly the same dimensions, composites, and partition templates, in the same order, as are specified in the partition template, and must have the exact same datatype (including width, precision, and scale) as the partitioned variable itself.

ORA-37104: (XSVPART04) A partitioned variable must be dimensioned by a single partition template only.
Cause: User attempted to define a partitioned variable with more than one partition templates, or a partition template and one or more other dimensions, in the dimension list.

Action: Use only a partition template in the dimension list of the variable. All dimensions of the variable must be included in the definition of the partition template.

ORA-37105: (XSVPART05) Only variables dimensioned by a CONCAT PARTITION TEMPLATE can have *string* partitions.
Cause: User attempted to create an external partition on a partitioned variable, but the variable was dimensioned by a RANGE or LIST partition template.

Action: Declare the partition INTERNAL instead of EXTERNAL, or use a CONCAT partition template in place of the RANGE or LIST partition template.

ORA-37106: (XSVPART06) Invalid partition name *number*.
Cause: The user gave an invalid partition name.

Action: Supply a valid partition name.

ORA-37107: (XSVPART07) Attempt to write to non-existent partition of *workspace object*.
Cause: Some action attempted to write data to a partitioned variable, but the variable didn't have a partition for that data. This can result from a partition template that does not assign all possible dimension values to some subcube, or from a partitioned variable that does not have a partition for one of the partitions defined by the partition template.

Action: Make sure that the cell being written is assigned to some partition by the partition template, and that the variable has an actual partition associated with the partition of the template. Use the CHGDFN template DEFINE... command to define new partitions within the template, and the CHGDFN variable ADD... command to add new partitions to the variable. Alternatively, the PARTWRITEERR can be set to false, in which case data being written to a non-existent partition will be silently discarded.

ORA-37108: (XSVPART08) *workspace object* has an AGGCOUNT, but *workspace object* does not.
Cause: An attempt was made to add a partition to a partitioned variable. Either the partition was defined WITH AGGCOUNT and the partitioned variable was not, or the partitioned variable was defined WITH AGGCOUNT and the partition was not.

Action: Use CHGDFN ADD AGGCOUNT or CHGDFN DROP AGGCOUNT to either add or remove an AGGCOUNT from either the partition or the partitioned variable.

ORA-37109: (XSVPART09) Partition *workspace object* and its parent variable *workspace object* cannot both be specified.
Cause: Partition and its parent partition were operated upon together.

Action: Remove the partition from the object list.

ORA-37111: Unable to load the OLAP API sharable library: (*string*)
Cause: This happens if: (1) the OLAP API sharable library is missing. (2) a sharable library upon which the OLAP API sharable library depends is missing. (3) the OLAP API sharable library is the wrong version.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37113: OLAP API initialization error: (*string*)
Cause: OLAP API initialization failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37114: OLAP API bootstrap error: (*string*)
Cause: OLAP API bootstrapping failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37115: New OLAP API history is not allowed
Cause: If there are active OLAP API sessions, it is not allowed to start a new OLAP API history by setting _olapi_history_retention parameter to true.

Action: Wait until all active OLAP API sessions terminate before resetting _olapi_history_retention parameter to true.

ORA-37116: OLAP API table function error: (*string*)
Cause: OLAP API table function failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37117: olapi history retention has been disabled
Cause: Under certain circumstances, for example, when the database is read only, olapi history retention is not possible because it requires updating persistent tables from time to time. If olapi history retention has been disabled, setting _olapi_history_retention parameter to true has no effect.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37118: The OLAP API library was not preloaded.
Cause: In shared-server mode, the OLAP API library should be loaded during process initialization to ensure that the C++ virtual table addresses are identical in all shared-server

processes. The OLAP API session was executing in a process in which the library had not been loaded.

Action: Set option _XSOLAPI_LOAD_AT_PROCESS_START to SHARED_SERVER or ALWAYS, restart the instance, and try again.

ORA-37119: Incompatible OLAP API library load address
Cause: The OLAP API session was executing in a process in which the OLAP API sharable library was loaded which was at a different address than the process in which the OLAP API session originated.

Action: Set option _XSOLAPI_LOAD_AT_PROCESS_START to ALWAYS, restart the instance, and try again.

ORA-37120: expression string is null
Cause: expression parser received a null string for syntax analysis.

Action: Prepare a non-null and well-formed MDX query string and try again.

ORA-37121: AW Spreadsheet invalidated
Cause: While this cursor was open, a command was issued that changed the underlying data to become inconsistent.

Action: Perform the query again, avoid performing dimension maintenance and cache clears during spreadsheet processing.

ORA-37122: AW Session cache disabled
Cause: A SQL Spreadsheet was attempted while the AW Session cache was disabled.

Action: Enable the session cache and perform the query again.

ORA-37123: (XSCCOMP17) Can not AGGREGATE *workspace object*(partition *number*) because it depends on unaggregated compressed partition *number*.
Cause: attempted to use a feature not supported by CC's in the current AW format

Action: Remove the unsupported feature from the aggmap, or upgrade the AW

ORA-37124: (XSCCOMP16) COMPRESSED COMPOSITES with *string* are not supported in analytic workspace *string* because it has not been upgraded to version *string*.
Cause: attempted to use a feature not supported by CC's in the current AW format

Action: Remove the unsupported feature from the aggmap, or upgrade the AW

ORA-37126: (XSCCOMP01) The COMPRESSED COMPOSITE *workspace object* can only be used as a base of a single variable.
Cause: The user attempted to DEFINE a variable dimensioned by a COMPRESSED COMPOSITE, but that COMPRESSED COMPOSITE is already being used by another VARIABLE.

Action: Create a second COMPRESSED COMPOSITE for the second VARIABLE or add a measure dimension to the first variable.

ORA-37127: (XSCCOMP02) The COMPRESSED COMPOSITE *workspace object* must be last in the dimension list.
Cause: The user attempted to DEFINE a variable dimensioned by a COMPRESSED COMPOSITE, but gave a slower varying dimension in the dimension list.

Action: Put the COMPRESSED COMPOSITE last in the dimension list when defining the VARIABLE.

ORA-37128: (XSCCOMP20) The partition template *workspace object* has already used the COMPRESSED COMPOSITE *workspace object*.
Cause: The COMPRESSED COMPOSITE specified for either a variable or partition template is already in use in another partition template.

Action: Define a different COMPRESSED COMPOSITE.

ORA-37129: (XSCCOMP04) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object*. All static MODEL statements must precede all RELATION statements over the bases of the COMPRESSED COMPOSITE.
Cause: The AGGMAP was defined with a MODEL statement after a RELATION statement over a base of the COMPRESSED COMPOSITE.

Action: Change the AGGMAP so that the MODEL statements appear before the RELATION statements.

ORA-37130: (XSCCOMP05) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because you must specify AGGINDEX OFF when there is a PRECOMPUTE clause on a RELATION over base *workspace object*.
Cause: A PRECOMPUTE clause was specified in the AGGMAP for a RELATION over a base of a COMPRESSED COMPOSITE, but AGGINDEX was ON

Action: Remove the PRECOMPUTE clause from the AGGMAP, or add AGGINDEX OFF

ORA-37131: (XSCCOMP06) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because the OPERATOR *string* is not supported for bases of a COMPRESSED COMPOSITE.
Cause: The user specified an aggregation OPERATOR that is not supported by COMPRESSED COMPOSITES.

Action: Use a MODEL for the calculation, or use an uncompressed COMPOSITE.

ORA-37132: (XSCCOMP07) Incremental aggregation over the dense DIMENSION *workspace object* is not supported when aggregating a VARIABLE dimensioned by a COMPRESSED COMPOSITE.
Cause: The status of the specified dimension did not include all detail cells.

Action: Add all detail cells to the status of the dimension and reissue the AGGREGATE command.

ORA-37133: (XSCCOMP08) You cannot write into an aggregated VARIABLE dimensioned by a COMPRESSED COMPOSITE. Use the CLEAR AGGREGATES command to reenable write access.
Cause: The user attempted to store a value into to a variable dimensioned by a compressed composite, and the variable had previously been precomputed using the AGGREGATE command. Once the AGGREGATE command is run on a variable dimensioned by a compressed composite, it becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. Note that CLEAR AGGREGATES will remove all the data computed during the last AGGREGATE command on this variable.

ORA-37134: (XSCCOMP09) You cannot add new values to *workspace object* because it includes positions for precomputed aggregate values.
Cause: The user attempted to create a new position in a compressed composite, either directly (using MAINTAIN MERGE or MAINTAIN ADD) or by storing a value into the variable dimensioned by the compressed composite. This is not allowed when the variable has been precomputed using the AGGREGATE command. Once the AGGREGATE command is run on a variable dimensioned by a compressed composite, the compressed composite becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. Note that CLEAR AGGREGATES will remove all the data computed during the last AGGREGATE command on this variable.

ORA-37135: (XSCCOMP19) The COMPRESSED COMPOSITE *workspace object* in the current defined partition template should be unique or global.
Cause: The COMPRESSED COMPOSITE was neither unique nor global. Unique means each subpartition should have different COMPRESSED COMPOSITEs; Global means all subpartitions should use the same COMPRESSED COMPOSITE if they use any COMPRESSED COMPOSITE.

Action: Redefine the partition template.

ORA-37136: (XSCCOMP11) Cannot ROLLUP dimension *workspace object* which is a base of COMPRESSED COMPOSITE *workspace object*, use AGGREGATE instead.
Cause: The user ran ROLLUP on a variable dimensioned by a COMPRESSED COMPOSITE.

Action: Instead of using ROLLUP, generate an aggmap and use AGGREGATE

ORA-37137: (XSCCOMP12) You cannot CHGDFN *workspace object* because it is a COMPRESSED COMPOSITE.
Cause: The user tried to CHGDFN a compressed composite

Action: If the change is desired then delete the old composite and create a new one.

ORA-37138: (XSCCOMP13) You cannot delete values from *workspace object* because it is an aggregated COMPRESSED COMPOSITE.
Cause: The user tried to MAINTAIN DELETE from an aggregated COMPRESSED COMPOSITE.

Action: In order to perform this sort of maintenance the composite must first be cleared. This can be done by running the CLEAR AGGREGATES command on the variable dimensioning the composite. Note that this will remove all data computed during the last AGGREGATE command.

ORA-37139: (XSCCOMP14) Cannot AGGREGATE *workspace object* using AGGMAP *workspace object* because you can not AGGREGATE a variable

dimensioned by a COMPRESSED COMPOSITE using an AGGMAP with a PROTECT clause.
Cause: The user tried to AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE with an AGGMAP that included a PROTECT clause.

Action: Modify the aggmap or create a new aggmap that does not include a PROTECT clause and reaggregate.

ORA-37140: (XSCCOMP15) Cannot AGGREGATE partitioned variable *workspace object* using AGGMAP *workspace object* because you cannot use the base of a COMPRESSED COMPOSITE as a partition dimension.
Cause: The user tried to run aggregate on a partitioned variable with a partition dimension that is a base of a COMPRESSED COMPOSITE.

Action: Repartition the data, drop the partition dimension from the aggmap, or don't use COMPRESSED COMPOSITES.

ORA-37141: (XSSQLMDQ01) Invalid host variable syntax for MDQUERY procedure.
Cause: The schema and analytic workspace name for the MDQUERY cursor declaration were incorrectly specified.

Action: Specify the schema and awname as a host variable name preceded by a colon, or as a text literal string of the form 'SCHEMA.AWNAME' or '*.*' (quotes optional).

ORA-37142: (XSSQLMDQ02) Invalid host variable data type for MDQUERY procedure: *string* expected.
Cause: The user specified a host variable that was not of the correct type.

Action: Choose a different host variable.

ORA-37143: (XSSQLMDQ03) *string* is not a valid analytic workspace name.
Cause: The user specified an analytic workspace name not qualified by a schema name, or one or both components of the name exceed the maximum length

Action: Specify a schema-qualified analytic workspace name with components no longer than 30 characters long.

ORA-37144: (MDQUERY01) *string* is not a valid metadata object type for MDQUERY.
Cause: The user specified an unrecognized first argument to MDQUERY

Action: Specify a recognized object type (CUBE or DIMENSION)

ORA-37145: (XSTTS_PLAT) Cannot transport analytic workspace across platforms.
Cause: The user attempted to transport a tablespace containing an analytic workspace from one platform to another.

Action: Use export/import to move an analytic workspace across platforms.

ORA-37146: (XSCCOMP18) The variable *workspace object* is already dimensioned by the COMPRESSED COMPOSITE *workspace object*.
Cause: An attempt was made to define the partition template dimensioned by the COMPRESSED COMPOSITE which had dimensioned the variable.

Action: Define the second COMPRESSED COMPOSITE.

ORA-37147: (XSCCOMP21) The variable *workspace object* must be in the current operation group of the COMPRESSED COMPOSITE *workspace object*.
Cause: The variable dimensioned by the COMPRESSED COMPOSITE was not in the object list of the current operation group. For AGGREGATE, all variables dimensioned by the same COMPRESSED COMPOSITE also must use the same aggmap

Action: Add the variable into the object list of the current operation group.

ORA-37148: (XSCCOMP22) *workspace object* is an aggregated COMPRESSED COMPOSITE.
Cause: Defined the variable or partition template with the aggregated COMPRESSED COMPOSITE.

Action: Clear the COMPRESSED COMPOSITE or use a new COMPRESSED COMPOSITE

ORA-37149: (XSCCOMP23) Individual partitions of the variable dimensiond by *workspace object* cannot be aggregated separately.
Cause: An attempt was made to aggregate partitions of a variable dimensioned by a global COMPRESSED COMPOSITE partition template.

Action: Aggregate the partitioned variable dimensioned by the global COMPRESSED COMPOSITE.

ORA-37150: line *string*, column *string*, *string*
Cause: expression syntax error was found in expression query string.

Action: Check the error message details and make the corrections.

ORA-37151: expression parser initialization error
Cause: expression parser initialization failed

Action: Please report this to Oracle Support Services.

ORA-37152: MDX query error: (*string*)
Cause: An exception occurred while MDX query was processed.

Action: Check the error message details and try again.

ORA-37153: unknown exception caught: (case *string*)
Cause: An unknown exception was caught while MDX query was processed.

Action: Please report it to Oracle Support Services.

ORA-37154: OLAP API initialization error: (case *string*)
Cause: OLAP API initialization failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37155: OLAP API bootstrap error: (case *string*)
Cause: OLAP API bootstraping failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37156: (*string*)
Cause: unknown

Action: Check the error message details.

ORA-37157: expression syntax error was found in expression string but error text was missing
Cause: This happened because the message file was missing.

Action: Make sure that the message file xsous.msb is located in $ORACLE_HOME/olap/mesg and rerun your expression query.

ORA-37158: Bad clob or varray IN-args: (case *string*)
Cause: When in clob or varray mode, the PL/SQL mappings of OLAP API's IDL interface methods were executed blindly with null clob/varray or non-null clob/varray containing garbages.

Action: Do not blindly execute them as doing so does not make sense unless you understand how OLAP API works internally.

ORA-37159: C++ virtual table addresses become invalid due to session migration in shared server mode.
Cause: Exec-shield is the primary reason that caused this error in shared server mode. When exec-shield is turned on, there is no way to ensure that the C++ virtual table addresses are identical in all shared-server processes.

Action: Set option _XSOLAPI_FIX_VPTRS to TRUE, restart the instance, and try again.

ORA-37160: OLAP object does not exist
Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37161: invalid privilege specified for OLAP object
Cause: An attempt was made to grant or revoke an invalid privilege on an OLAP object.

Action: Specify a valid privilege.

ORA-37162: OLAP error
Cause: An exception was raised by OLAP code.

Action: Check error messages and correct any reported problems.

ORA-37163: cannot delete or truncate AW with dependent CUBES or CUBE DIMENSIONS
Cause: User attempted to delete or truncate an AW which currently has a CUBE or CUBE DIMENSION defined over it

Action: Drop the corresponding CUBE or CUBE DIMENSION before deleting the AW

ORA-37164: The current SQL statement does not support this OLAP object
Cause: The OLAP object is not supported in the current SQL statement.

Action: Use a valid SQL command on the OLAP object.

ORA-37165: cannot use EIF IMPORT into a non-empty Analytic Workspace (*string.string*)
Cause: An attempt was made to use EIF IMPORT to populate a non-empty Analytic Workspace.

Action: Ensure that the target Analytic Workspace is empty before populating it with EIF IMPORT.

ORA-37166: (XSOQ_BAD_OBJ) OLAP object "*string.string*" does not exist
Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37167: (XSOQ_BAD_SUBOBJ) OLAP object "*string.string.string*" does not exist
Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37168: (XSOBJORG_UNSUPP_OBJ) unsupported OLAP object "*string.string*" for OBJORG function
Cause: The specified OLAP object was of a type that is not supported by the OBJORG function.

Action: Specify an OLAP object of a type that the OBJORG function supports.

ORA-37169: (XSOBJORG_UNSUPP_SUBOBJ) unsupported OLAP object "*string.string.string*" for OBJORG function
Cause: The specified OLAP object was of a type that is not supported by the OBJORG function.

Action: Specify an OLAP object of a type that the OBJORG function supports.

ORA-37170: (XSOBJORG_NA) The top-level object name argument to the OBJORG function cannot be NA.
Cause: You passed NA as the second argument to the OBJORG function.

Action: Pass the name of the top-level object instead.

ORA-37171: dimension sources not specified
Cause: The user passed an empty or null collection to DBMS_AW.ADVISE_SPARSITY

Action: Specify a valid set of dimension sources

ORA-37172: illegal dimension type
Cause: The user specified an invalid member of the DIMTYPE field in the dimension sources argument

Action: Specify one of the valid enumerated values in DBMS_AW

ORA-37173: null dimension source data
Cause: The user specified NULL for one of the members of the dimension sources argument

Action: Specify a value

ORA-37174: source SQL must be a SELECT statement
Cause: The user specified an INSERT, UPDATE, DELETE or other type of SQL statement

Action: Specify a SQL SELECT statement instead

ORA-37175: column *string* is not a column of source data
Cause: A dimension column was specified which did not exist in the input data

Action: Specify one of the columns of the input data

ORA-37176: argument *string* is not valid for the sparsity advisor
Cause: An invalid argument was passed to the advisor

Action: Specify a TABLE, VIEW or SELECT statement instead

ORA-37177: column *string* does not have any leaf values
Cause: The specified dimension column or fact table did not contain any leaf values

Action: Populate the source data

ORA-37178: column *string* has no values
Cause: The specified dimension column did not contain any values

Action: Populate the source data

ORA-37179: expected at least one column for dimension *string*, got *string*
Cause: Not enough columns were specified for the dimension

Action: Specify more source columns, or change the dimension to another type

ORA-37180: expected exactly one column for dimension *string*, got *string*
Cause: Expected a single source column for the dimension. Either none or more than one was specified.

Action: Specify exactly one column, or change the dimension to another type

ORA-37181: expected exactly *string* columns for dimension *string*, got *string*
Cause: Expected a certain number of source columns for the dimension. Either none or the wrong number of columns was specified.

Action: Specify the right number of columns, or change the dimension to another type

ORA-37182: you may only specify one dimension to partition
Cause: The user passed a DIMENSION_SOURCE_T to ADVISE_SPARSITY which specified partitioning on more than one dimension

Action: Remove all but one of the partitioning requests

ORA-37183: illegal value *string* for PARTBY
Cause: The user passed a value other than PARTBY_DEFAULT, PARTBY_NONE or PARTBY_FORCE to DBMS_AW.ADVISE_SPARSITY *Acton: Supply a legal value instead

Action: n/a

ORA-37184: illegal value *string* for ADVMODE
Cause: The user passed a value other than ADVICE_DEFAULT, ADVICE_FAST or ADVICE_FULL to DBMS_AW.ADVISE_SPARSITY *Acton: Supply a legal value instead

Action: n/a

ORA-37185: length of *string* (*string*) exceeds maximum (*string*)
Cause: The user passed an excessively long value

Action: Specify a legal value

ORA-37186: null child value for parent (*string*) found in parent-child hierarchy
Cause: While reading values for a parent-child hierarchy, a NULL child value was found for a non-NULL parent

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37187: null parent and child pair found in parent-child hierarchy
Cause: While reading values for a parent-child hierarchy, a row was retrieved which had both null child and parent values.

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37188: unexpected null result while querying *string*
Cause: While querying the input fact table, the sparsity advisor unexpectedly got no results, possibly due to changes being made during operation.

Action: Retry the operation ensuring that the data is not changed while the sparsity advisor is running / Errors from 37200 - 37399 are reserved for events

ORA-37400: analytic workspace does not exist
Cause: The user attempted to create an OLAP MV or Table on an AW that does not exist.

Action: Specify a valid AW in the ORGANIZATION CUBE clause

ORA-37401: you may not perform this operation on a system analytic workspace
Cause: The user attempted to create a CUBE MV or Table on a system-created AW.

Action: Specify a valid AW in the ORGANIZATION CUBE clause

ORA-37402: analytic workspace object does not exist
Cause: The user attempted to create a CUBE MV or Table mapping to an object that does not exist in the AW.

Action: Specify a valid AW object name in the ORGANIZATION CUBE clause.

ORA-37403: invalid analytic workspace object type
Cause: The user attempted to create a CUBE MV or Table mapping to an object that is not the correct type.

Action: Specify a valid AW object name in the ORGANIZATION CUBE clause.

ORA-37404: Create table as select disallowed for CUBE ORGANIZED tables
Cause: User attempted to create a CUBE ORGANIZED table by doing a create table as select.

Action: Do a create table followed by an insert as select

ORA-37405: unknown ORGANIZATION CUBE keyword
Cause: An unknown keyword was encountered while parsing the ORGANIZATION CUBE clause

Action: Correct the ORGANIZATION CUBE syntax

ORA-37406: invalid option for a CUBE ORGANIZED table
Cause: An attempt to specify one or more options for a CUBE ORGANIZED table such as: [NO]CACHE, NO LOGGING, CLUSTER, (NO)COMPRESS

Action: Remove the illegal option(s)

ORA-37407: invalid column type for a CUBE ORGANIZED table
Cause: A illegal column type is specified in a CUBE ORGANIZED table.

Action: Do not use column types such as LONG, LOB

ORA-37408: Truncate table disallowed for CUBE ORGANIZED tables
Cause: User attempted to perform a TRUNCATE operation on a CUBE ORGANIZED table

Action: Remove data with DELETE or drop the table and recreate it

ORA-37409: cannot delete or truncate AW used by CUBE ORGANIZED table
Cause: User attempted to delete or truncate an AW which currently has a CUBE ORGANIZED table or MV defined over it

Action: Drop the corresponding table or MV before deleting the AW

ORA-37410: cannot delete or modify AW object referenced by CUBE ORGANIZED table
Cause: User attempted to delete, chgdfn, or otherwise modify an object referenced by a CUBE ORGANIZED table or MV

Action: Drop the corresponding table or MV before manipulating the object

ORA-37411: invalid object type
Cause: User referenced an invalid object type

Action: Use an appropriate object

ORA-37412: column not mapped by ORGANIZATION CUBE clause
Cause: Not all columns in the table or MV definition were mapped in the ORGANIZATION CUBE clause

Action: Make sure that all columns are mapped

ORA-37413: column referenced multiple times in ORGANIZATION CUBE clause
Cause: The same column name was referenced multiple times inside of the ORGANIZATION CUBE clause

Action: Supply unique mappings for each column

ORA-37414: dimension without mapping or hierarchy in ORGANIZATION CUBE clause
Cause: A dimension was listed in the ORGANIZATION CUBE clause but no mapping information was supplied

Action: Provide either a column mapping or hierarchy for the dimension

ORA-37415: AW schema must match TABLE or MATERIALIZED VIEW schema
Cause: An ORGANIZATION CUBE table or MV on top of an existing AW must be created in the same schema as the AW

Action: Create the new object in the same schema as the AW

ORA-37416: multiple GROUPING IDs found for ORGANIZATION CUBE
Cause: Multiple GROUPING IDs for the ORGANIZATION CUBE TABLE or MATERIALIZED VIEW

Action: Remove the duplicates

ORA-37417: variable does not have an AGGCOUNT
Cause: A COUNT clause was specified in the ORGANIZATION CUBE description for a variable that does not have an AGGCOUNT

Action: chgdfn the variable to include an AGGCOUNT

ORA-37418: detail query cannot be derived
Cause: If an ORANIZATION CUBE MV is to automatically derive its loading clause, then its definition query cannot contain set operators (eg UNION ALL), a HAVING clause, START WITH or a SQL MODEL clause. The definition query contains these or other unsupported syntax.

Action: Use an explicit ORGANIZATION CUBE clause, or simplify the defining query.

ORA-37419: ORGANIZATION CUBE clause not allowed in explain mview
Cause: User tries to explain mview on a CREATE MATERIALIZED VIEW statement that contains a ORGANIZATION CUBE clause.

Action: Remove the ORGANIZATION CUBE clause from the CREATE MATERIALIZED MATERIALIZED VIEW statement.

ORA-37420: unsupported feature with CUBE ORGANIZED materialized view
Cause: User attempts operations such as creating a mv log on an CUBE ORGANIZED MATERIALIZED VIEW.

Action: Do not do that.

ORA-37421: specified pseudocolumn is not supported by CUBE ORGANIZED tables
Cause: An unsupported pseudocolumn was referenced with a CUBE ORGANIZED table.

Action: Remove the unsupported pseudocolumn.

ORA-37422: illegal attempt to write to a calculated column
Cause: An attempt was made to write to a calculated column which could not be written to.

Action: List only the non-calculated columns in your DML command.

ORA-37423: operation not supported on CUBE ORGANIZED tables
Cause: The attempted operation was not supported with CUBE ORGANIZED tables.

Action: Do not attempt this operation on CUBE ORGANIZED tables.

ORA-37424: alter materialized view (MV) on a primary cube organized MV failed to find secondary cube MV table
Cause: The operation failed due to the missing secondary cube materialized view (MV) table in alter MV.

Action: Recreate the primary CUBE MV and make sure the secondary cube MV table is correctly created.

ORA-37521: (HASHSCAN00) Dimension *string* contains duplicate values. Please contact Oracle OLAP Technical Support.
Cause: The named dimension contains duplicate values.

Action: Contact Technical Support for instructions.

ORA-37522: (HASHSCAN01) You must specify the name of an existing TEXT or NTEXT dimension.
Cause: the _HASHSCAN program was invoked with an invalid argument

Action: Provide a text expression yielding the name of an existing TEXT dimension

ORA-37527: (XSCHGDFN01) SESSION values of dimension *string* are being automatically deleted.
Cause: When using CHGDFN to rebuild the hash index of a TEXT or NTEXT dimension, SESSION values were encountered.

Action: Recreate the SESSION values after the CHGDFN command completes. Information about the deleted values has been written to the trace file.

ORA-37528: (XSOBJORG_BAD_HIER) invalid property "*string*" specified for hierarchy "*string*.*string*.*string*"
Cause: Either the specified hierarchy did not have an AW organization, or the specified property did not apply to hierarchies.

Action: Specify a property that applies to hierarchy and a dimension with an AW organization.

ORA-37530: (XSCCLOAD01) When aggregating between compressed partitions the base dimensions of *workspace object* did not match the base dimensions of *workspace object*.
Cause: When aggregating a partitioned variable the dimensionality of any compressed partitions should be identical.

Action: Delete the upper partition and redefine it with a composite that matches the lower partition. If it is dependent on multiple partitions with varying sparsity you must first unify the the sparsity of the source partitions.

ORA-37531: (XSCCLOAD02) When aggregating between compressed partitions the source partitions were aggregated with a different AGGMAP, or the RELATIONS have changed since the source partitions were aggregated.
Cause: When aggregation crosses partition boundaries within a compressed variable the individual partitions must all be aggregated using a similar aggmap over the same unaltered relations.

Action: Modify the aggmap for the upper partition to more exactly match the aggmap of the source partitions, or if the aggmap is already similar, re-aggregate the source partitions to pick up any changes to the relations.

ORA-37541: Hierarchy element DIMENSION_MEMBER can aggregate into element MEMBER_ANCESTOR through multiple paths.
Cause: When a low level hierarchy element can reach an aggregate element by more than one path through the hierarchy, it is said to have multiple paths. The danger is that the value of the low level hierarchy element will have its value counted multiple times (once per path) in the total of the aggregate element.

Action: Eliminate multiple paths from the hierarchy.

ORA-37542: DIMENSION_MEMBER makes hierarchy HIERARCHY1 unbalanced.
Cause: A hierarchy is balanced if: 1) All members of a level are at the same depth from the root of the hierarchy and 2) All the members in different levels are at different depths from the root of the hierarchy.

Action: Fix the hierarchy so that it is balanced. This is often done by looking for nulls in the middle levels of a hierarchy.

ORA-37543: Hierarchy member DIMENSION_MEMBER is inconsistent across HIERARCHY1 and HIERARCHY2.
Cause: Two hierarchies are inconsistent when members that appear in both hierarchies have different ultimate leaves.

Action: This problem is usually resolved by defining a new dimension member for the secondary hierarchy, or fixing the hierarchy table so that the definitions of the member match across hierarchies.

ORA-37544: Dimension members DIMENSION_MEMBER and MEMBER_ANCESTOR make this dimension star inconsistent.
Cause: A dimension is "star consistent" when it can be represented in a star schema table. This requires that a hierarchy level map to a single underlying column. If a level is shared across one or more hierarchies, it must have the same set of members in each hierarchy (to share a column).

Action: Create a different level for the secondary hierarchy. This provides a separate level column for each hierarchy.

ORA-37545: DIMENSION_MEMBER is part of a hierarchy loop.
Cause: A hierarchy has loops when the ancestor of a dimension member uses that member as its parent. Note that some loops are created across hierarchies. For example, in hierarchy 1, dimension member A is the parent of B, B is the parent of C and in hierarchy 2, C is that parent of A forms a hierarchy loop.

Action: Change the hierarchies so that the loop is eliminated or move the problem hierarchy to a different dimension.

ORA-37546: (XSHIERSP00) Levelorder valueset is empty.
Cause: An empty levelorder valueset was specified for the HIERSHAPE function.

Action: specify a non-empty levelorder valueset.

ORA-37547: (XSHIERSP01) DIMENSION_MEMBER has no level associated with it.
Cause: DIMENSION_MEMBER did not have an associated level. Level based hierarchies must have a level for every dimension member.

Action: Add level assignments for all dimension members in the hierarchy.

ORA-37548: (XSHIERSP02) DIMENSION_MEMBER is not specified as a member of HIERARCHY1.
Cause: When a dimension member is part of a hierarchy, it appears in the INHIER valueset associated with the hierarchy. This dimension member is missing from this value set and thus should not be part of this hierarchy.

Action: Alter the hierarchy's membership to include the specified dimension member.

ORA-37549: (XSHIERSP03) The level of DIMENSION_MEMBER is not lower than the level of MEMBER_ANCESTOR.
Cause: A dimension member has a parent that is lower or on the same level as this member according to the levelorder valueset.

Action: Fix the child and/or parent levels so that every dimension member has a parent whose level is higher than the level of this member.

ORA-37550: (XSHIERSP04) The level of MEMBER_ANCESTOR is not one level above DIMENSION_MEMBER.
Cause: A dimension member has a parent that is not one level above the level of this member according to the levelorder valueset.

Action: Fix the child and/or parent levels so that every dimension member has a parent whose level is one level above the level of this member according to the levelorder.

ORA-37551: (XSHIERSP05) Leaf value DIMENSION_MEMBER is not on the same level as the rest of leaf dimension values.
Cause: The detail or leaf values of this hierarchy must all have the same level. This member is on a different level than most of the leaf values.

Action: Fix DIMENSION_MEMBER's level so that all leaves are on the same level.

ORA-37552: (XSHIERSP06) DIMENSION_MEMBER is associated with a level not found in the levelorder valueset.
Cause: DIMENSION_MEMBER must have an associated level that is found in the levelorder valueset so that we can figure out DIMENSION_MEMBER's level depth.

Action: Fix DIMENSION_MEMBER's associated level.

ORA-37553: A cycle between *number* and *number* has been detected in relation *workspace object* over *workspace object*.
Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-37554: A cycle between *number* and *number* has been detected in relation *workspace object*.
Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-37560: lob locator invalid for specified log target
Cause: A lob locator was passed as a target to DBMS_CUBE_LOG.ENABLE, but the log_target was not DBMS_CUBE_LOG.TARGET_LOB

Action: Specify LOG_TARGET_LOB as the log_target, or specify a valid location instead

ORA-37561: unknown logging type
Cause: An invalid log_type was specified

Action: Specify a valid logging type from the DBMS_CUBE_LOG package

ORA-37562: unknown logging target
Cause: An invalid log_target was specified

Action: Specify a valid logging target from the DBMS_CUBE_LOG package

ORA-37563: invalid log verbosity
Cause: An invalid log_verbosity was specified

Action: Specify a valid logging verbosity from the DBMS_CUBE_LOG package

ORA-37564: unknown log table version
Cause: Could not determine the version of the specified logging table

Action: Specify a valid target table, or use DBMS_CUBE_LOG.TABLE_CREATE to create one

ORA-37565: invalid parameter for specified log type
Cause: The log_type specified does not support the specified parameter, for instance, DBMS_CUBE_LOG.MAX_ERRORS is not valid for

Action: Specify a valid log_type / log_param combination

ORA-37566: invalid log location
Cause: The specified log location is in an invalid format. For file targets it must be of the form 'directory_alias/filename'

Action: Specify a valid log location

ORA-37567: log location not specified
Cause: The log location was not specified for a log target which requires one

Action: Specify a valid log location

ORA-37568: invalid log parameter
Cause: An invalid log_param was passed to dbms_cube_log.set_parameter or get_parameter

Action: Specify a valid parameter

ORA-37569: invalid log parameter value
Cause: An invalid value was passed to dbms_cube_log.set_parameter

Action: Specify a valid value

ORA-37570: invalid log specification
Cause: An invalid logging specification was supplied to DBMS_CUBE_LOG.SET_LOG_SPEC

Action: Correct the syntax being supplied

ORA-37571: invalid SQL ID
Cause: Either the SQL ID supplied was invalid or no associated logging information was captured.

Action: Specify a valid SQL ID.

ORA-37572: invalid ID
Cause: An invalid ID was supplied for the given SQL ID.

Action: Specify a valid ID for that SQL ID.

ORA-37573: no limits logged
Cause: There were no corresponding OLAP filters to the supplied information.

Action: Specify predicates on the original query or specify a new SQL ID or ID.

ORA-37574: error logging to table "*string*.*string*"
Cause: An error occurerd attempting to write log records to the named table.

Action: Make sure the user has permissions to write to the table.

ORA-37575: Invalid cube operations log component, "*string*".
Cause: Invalid cube operations log component value.

Action: Provide a valid cube operations log component or accept the default value by leaving the parameter unspecified.

ORA-37576: Invalid cube operations log handle id.
Cause: An invalid cube operations log handle id was specified. No oplog handle found for oplogHandleId parameter.

Action: Provide a valid cube operations log handle id for oplogHandleId. Use DBMS_CUBE_LOG.START_OPLOG to get a valid handle id.

ORA-37577: Invalid cube operations log message name.
Cause: Cube operations log message name value is NULL.

Action: Provide a valid non-null cube operations log message name.

ORA-37578: Invalid cube operations log operation value.
Cause: Cube operation log operations value is NULL.

Action: Provide a valid non-null cube operations log operation value.

ORA-37580: The EXPRESS AW does not exist.
Cause: The EXPRESS AW does not exist.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37581: The EXPRESS AW has not been properly installed.
Cause: The EXPRESS AW has not been properly installed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37582: The EXPRESS AW version *string* is different than the Oracle version *string*.
Cause: The EXPRESS AW version does not match the current Oracle version.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37600: (XSPGERRPERMDETACH) Ran out of tablespace storage while updating analytic workspace *string*
Cause: Ran out of lob segment space.

Action: Increase tablespace storage. AW may need to be detached.

ORA-37601: (XSPGERRTEMP) Ran out of temporary storage while writing to analytic workspace with ID=*number*. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.
Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37602: (XSPGERRTEMPUSER) Ran out of temporary storage while writing to analytic workspace *string*. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.
Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37603: (XSPGERRTEMPSYSTEM) Ran out of temporary storage while writing to a system temporary analytic workspace. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.
Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37604: (XSPGERRPQUPD) Parallel updating analytic workspace *string* failed
Cause: Unexpected error occurred to parallel update servers.

Action: Check the error underneath and act accordingly. AW may need to be detached.

ORA-37605: error during OLAP AW UPDATE
Cause: An error occurred during the UPDATE process

Action: Refer to the next error in the error stack

ORA-37996: (SNSYN950) The format of the SYSINFO function is:\n SYSINFO(option)

ORA-37999: Serious OLAP error: *string*. Please contact Oracle Technical Support.
Cause: Something unexpected occurred in the OLAP system

Action: Contact Oracle technical support

89

ORA-38001 to ORA-39974

ORA-38001: RBO Disable constant predicate elimination optimization

ORA-38002: CBO enable restriction on type of join (NL only) for a query block with pushed predicate

ORA-38003: CBO Disable column stats for the dictionary objects in recursive SQL

ORA-38004: CBO (9.0.1 ONLY) Enable column stats for the dictionary objects in recursive SQL

ORA-38005: CBO disable fix for bug 2251373

ORA-38006: DBMS_STATS override commit threshold for (sub)partition level stats

ORA-38008: CBO disable costing overhead of inlist iteration

ORA-38009: CBO disable fix for bug 2109825

ORA-38010: CBO disable push predicate, driven by functional index into PV

ORA-38011: CBO disable truncation of bind when dealing with fixed char descend index expression

ORA-38012: CBO disable normalization of b-tree index selectivity

ORA-38013: CBO disable delayed ANY=>EXISTS conversion for colocated subquery of CTAS

ORA-38014: CBO disable grouping pruning if star_transformation is enabled

ORA-38015: CBO enable unnesting of more than one subquery based on CVM

ORA-38016: CBO disable full functional index scan

ORA-38017: CBO disable push of join predicate for a table with RLS

ORA-38018: CBO disable full statistics load for evaluation of average row length

ORA-38020: CBO disable fix for bug 2324795

ORA-38021: CBO disable view merge with multi-referenced non-deterministic function

ORA-38022: CBO disable Distinct Sort Elimination at subquery unnest

ORA-38023: CBO disable fix for bug 2853398

ORA-38025: CBO enable generation of excessive semijoin subqueries

ORA-38026: CBO enable bitmap plan based on domain index, with no domain index driver

ORA-38027: CBO disable evaluation column gnd using inlist gnd

ORA-38028: DBMS_STATS disable small object optimization

ORA-38029: object statistics are locked
Cause: An attept was made to modify optimizer statistics of the object.

Action: Unlock statistics with the DBMS_STATS.UNLOCK_TABLE_STATS procedure on base table(s). Retry the operation if it is okay to update statistics.

ORA-38030: CBO enable strongly connected preds for intersect to join

ORA-38031: CBO disable the fix for bug 2663857

ORA-38032: CBO disable the fix for bug 3063008

ORA-38033: CBO disable costing of push join predicate in OJ view

ORA-38034: CBO disable the fix for bug 2871645

ORA-38036: NSO disable the fix for bug 3070157

ORA-38037: CBO disable the fix for bug 3405237

ORA-38038: CBO disable the fix for bug 3168961

ORA-38039: CBO enable view merge/ subquery ANY=>EXISTS conversion having view(subquery) predicates in front of outer query block (connecting) predicates

ORA-38040: DBMS_STATS minimum sample size in number of rows (0 = internal default)

ORA-38041: DBMS_STATS auto_sample_size overrides

ORA-38042: CBO disable usage of tjp when generating pruning subquery

ORA-38044: CBO disable expression folding at evaluation of a predicate selectivity

ORA-38047: CBO disable join back elimination of 1-row tables

ORA-38048: CBO enable the fix for bug 3400412

ORA-38049: CBO disable the fix for bug 3406977

ORA-38050: CBO disable the fix for bug 2943173

ORA-38051: CBO disable the fix for bug 3349903

ORA-38052: CBO disable the fix for bug 3317309

ORA-38053: DBMS_STATS override automatic sample size adjustment

ORA-38054: VOP enable the fix for bug 3537765

ORA-38055: CBO disable the fix for bug 3193835

ORA-38056: CBO disable peeking of form func(:b) bug 3668224

ORA-38057: CBO disable special numeric string normalization for bug 3567928

ORA-38058: CBO disable the fix for bug 3756797

ORA-38060: CBO enable the fix for bug 3517431(enable NL with view on right side)

ORA-38061: CBO disable unnest of a subquery with WITH subqueries

ORA-38063: CBO disable the fix for bug 3903100

ORA-38064: CBO disable the fix for bug 3488546

ORA-38065: CBO disable the fix for bug 3746511

ORA-38066: NSO regulate unnesting, semijoin elimination for IN and EXISTS subqueries with a view

ORA-38067: CBO enable peeking at replaced literal in equality(inequality) predicate

ORA-38068: CBO enable override of guess impact on index choice

ORA-38069: CBO disable duplicate predicate elimination

ORA-38073: CBO disable the fix for bug 4308414

ORA-38074: CBO disable the fix for bug 4275716

ORA-38075: CBO enables fix for bug 4235962

ORA-38076: CBO enables fix for bug 4258835

ORA-38077: CBO enables fix for bug 4488689

ORA-38078: CBO disables fix for bug 4708389

ORA-38079: SQL Diagnostic

ORA-38087: dbms_stats enable fix of bug 5842686

ORA-38090: CBO dump virtual columns in EXPLAIN PLAN

ORA-38091: CBO forces native full outer join

ORA-38094: dbms_stats enable fix of bug 6934892

ORA-38098: CBO reject various transformation even if chosen

ORA-38100: enable tracing of DML frequency tracking

ORA-38101: Invalid column in the INSERT VALUES Clause: *string*
Cause: INSERT VALUES clause refers to the destination table columns

Action: n/a

ORA-38102: Invalid column in the INSERT WHERE Clause: *string*
Cause: INSERT WHERE clause refers to the destination table columns

Action: n/a

ORA-38103: Invalid column in the UPDATE SET Clause: *string*
Cause: UPDATE SET clause refers to the source table columns in the LHS

Action: n/a

ORA-38104: Columns referenced in the ON Clause cannot be updated: *string*
Cause: LHS of UPDATE SET contains the columns referenced in the ON Clause

Action: n/a

ORA-38105: Delete not yet supported when Update row-migration is possible
Cause: When Update Row-Migration is possible, Delete in MERGE is not yet supported

Action: n/a

ORA-38106: MERGE not supported on join view or view with INSTEAD OF trigger.
Cause: The MERGE operation contained a join view or view with INSTEAD of trigger which is not supported.

Action: When using MERGE to modify a view, you must only specify a single table in the view, and the view cannot have an INSTEAD OF trigger.

ORA-38131: specified SQL handle *string* does not exist
Cause: The specified SQL handle did not exist in the repository.

Action: Specify correct SQL handle.

ORA-38132: specified SQL ID *string* does not exist
Cause: The SQL statement for SQL ID did not exist in the cursor cache.

Action: Specify correct SQL ID.

ORA-38133: invalid parameter name *string* specified
Cause: An invalid parameter name was specified.

Action: Verify the name of the parameter.

ORA-38134: invalid parameter value *string* specified
Cause: An invalid parameter value was specified.

Action: Verify the parameter value.

ORA-38135: invalid fixed status value specified
Cause: Specified fixed status value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38136: invalid attribute name *string* specified
Cause: An invalid attribute name was specified.

Action: Verify the name of the attribute.

ORA-38137: invalid attribute value *string* specified
Cause: An invalid attribute value was specified.

Action: Verify the attribute value.

ORA-38138: plan name is missing or NULL
Cause: A valid plan name was not specified.

Action: Specify a valid plan name.

ORA-38139: concurrent DDL Error in load plans operation
Cause: A concurrent DDL operation was performed during a load plans operation.

Action: Try operation again.

ORA-38140: no SQL plan baselines were found
Cause: No SQL plan baselines were found during pack or unpack operation.

Action: Specify correct selection criterion.

ORA-38141: SQL plan baseline *string* does not exist
Cause: A SQL plan baseline name was specified that did not exist.

Action: Verify the name of the SQL plan baseline.

ORA-38142: SQL plan baseline named *string* already exists
Cause: A SQL plan baseline already exists with the name specified.

Action: Specify a different name or drop the existing SQL plan baseline.

ORA-38143: invalid enabled status value specified
Cause: Specified enabled status value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38144: specified plan name *string* does not exist
Cause: The specified plan name did not exist in the repository.

Action: Specify correct plan name.

ORA-38145: neither SQL handle nor plan name specified
Cause: The SQL handle or plan name was not specified. The SQL handle or plan name is required.

Action: Specify either SQL handle or plan name or both.

ORA-38146: invalid verify value specified
Cause: Specified verify value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38147: invalid commit value specified
Cause: Specified commit value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38148: invalid time limit specified
Cause: Specified time limit value was not a positive integer.

Action: Specify a positive integer value.

ORA-38149: There is no recommended action for object *string* in task *string*.
Cause: The advisor did not generate a recommended action for the given object and task.

Action: Choose a different object and retry the operation.

ORA-38150: not enough room for filter length *string*; *string* characters remaining
Cause: An auto-capture filter was too large to fit in the remaining space. Each filter requires a number of characters equal to the size of its value plus one.

Action: Remove other filters to make room for the new filter.

ORA-38151: module name is too long
Cause: The provided module name was too long.

Action: Provide a valid module name.

ORA-38152: action name is too long
Cause: The provided action name was too long.

Action: Provide a valid action name.

ORA-38153: Software edition is incompatible with SQL plan management.
Cause: SQL plan management could be used only with Oracle Database Enterprise Edition.

Action: Ensure that Oracle is linked with the Enterprise Edition options.

ORA-38171: Insufficient privileges for SQL management object operation
Cause: A DDL operation was attempted on a SQL management object by a session without the proper privileges.

Action: Grant the appropriate privilege.

ORA-38172: No SQL management object satisfies specified filters
Cause: An attempt was made to perform an operation by specifying filters that did not target any SQL management objects.

Action: Try different filters.

ORA-38173: Invalid value *string* specified for SQL management object attribute *string*
Cause: An invalid attribute value was specified.

Action: Specify a valid attribute value.

ORA-38301: can not perform DDL/DML over objects in Recycle Bin
Cause: Tried to perform DDL or DML operation on Recycle Bin object.

Action: DDL or DML operations are not permitted on Recycle Bin objects.

ORA-38302: invalid PURGE option
Cause: Invalid purge option specified.

Action: Specify a valid purge option.

ORA-38303: invalid option for PURGE TABLESPACE
Cause: Either a token other than USER was found following the tablespace name or some text was found following USER *user name*.

Action: Place nothing or only USER *user name* after the tablespace name

ORA-38304: missing or invalid user name
Cause: A valid user name was expected.

Action: Specify a valid user name.

ORA-38305: object not in RECYCLE BIN
Cause: Trying to Flashback Drop an object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be Flashback Dropped.

ORA-38306: this object is not recoverable standalone
Cause: Trying to flashback drop an object other than of type TABLE.

Action: Only tables are recoverable.

ORA-38307: object not in RECYCLE BIN
Cause: Trying to Purge the object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be PURGEDED.

ORA-38308: invalid FLASHBACK DROP option
Cause: Invalid Flashback Drop option specified.

Action: Specify a valid Flashback Drop option.

ORA-38309: object not purgable
Cause: An attempt was made to purge an object that is either not purgable or else dependent upon some other object.

Action: Cannot purge this object.

ORA-38310: cannot purge tablespace for other users
Cause: An attempt was made to purge the tablespace for a different user by a user who does not have system DBA priviledges.

Action: Cannot purge the tablespace for some other user.

ORA-38311: cannot purge objects owned by other users
Cause: An attempt was made to purge an object which is owned by some other user.

Action: Cannot purge this object.

ORA-38312: original name is used by an existing object
Cause: An attempt was made to recover an object preserving the original name, but that name is taken up by some other object.

Action: use the RENAME clause to recover the object with a different name.

ORA-38320: policy does not exist
Cause: An attempt was made to delete a nonexistent policy.

Action: Correct the policy name.

ORA-38321: duplicate policy name specified
Cause: A policy name was specified that already existed under this schema.

Action: Correct the policy name.

ORA-38322: scope of policy not specified
Cause: An attempt was made to add a policy without the scope.

Action: Specify a scope when creating a policy.

ORA-38323: policy conflicts with policy *string*
Cause: An attempt was made to create a policy with the same action type and based on the same statistic as another policy on the object.

Action: Use a different action and/or statistic for the new policy, or delete the old policy.

ORA-38324: policy conflicts with policy *string*
Cause: An attempt was made to create a policy with the same action, scope and compression level as another policy on the object.

Action: Use a different action, scope and/or level for the new policy, or delete the old policy.

ORA-38325: policy conflicts with policy *string*
Cause: An attempt was made to create a compression policy that conflicts with another policy on the object.

Action: Change the policy so that policies with a higher compression level take effect after policies with a lower compression level, or delete the old policy.

ORA-38326: schema level policies are not supported
Cause: Attempt was made to create a schema level policy.

Action: Do not create a schema level policy.

ORA-38327: invalid argument value
Cause: The specified API argument values were of the wrong value range.

Action: Supply valid values for the API.

ORA-38328: inconsistent internal state
Cause: An inconsistency was detected in ILM related data in the dictionary.

Action: Contact Oracle Support Services.

ORA-38329: internal ILM error
Cause: An internal error occurred during execution of ILM related activity. Further information can be found in the alert log.

Action: Fix the problem and retry the operation.

ORA-38330: insufficient privilege for ILM operation
Cause: Sufficient privileges were not granted for the ILM operation.

Action: Retry operation with sufficient privileges granted. Consult documentation for privileges required to perform the ILM operation.

ORA-38331: row-level write activity tracking not enabled on the table
Cause: An attempt was made to create a modification time-based policy when row-level write tracking was not enabled on the object.

Action: Ensure that row-level write tracking is enabled on the table.

ORA-38332: valid time periods were not present on the table
Cause: An attempt was made to create a valid time-based policy when valid time periods were not present on the table.

Action: Add valid time periods to the table.

ORA-38333: row-level access activity tracking not enabled on the table
Cause: An attempt was made to create an access time-based policy when row-level access tracking was not enabled on the object.

Action: Ensure that row-level access tracking is enabled on the table.

ORA-38334: segment-level access activity tracking not enabled on the table
Cause: An attempt was made to create an access time-based policy when segment-level access tracking was not enabled on the object.

Action: Ensure that segment-level access tracking is enabled on the table.

ORA-38335: sysdba privilege is required
Cause: SYSDBA privilege is required for applying ILM policies on a tablespace.

Action: Grant user SYSDBA role before applying tablespace level ILM policies.

ORA-38336: invalid policy
Cause: A row level policy was used with a compression level other than OLTP.

Action: Use the OLTP compression level with row level compression policies.

ORA-38337: invalid policy
Cause: A custom policy is only allowed at the segment level.

Action: Change the scope of the policy to be of type segment.

ORA-38338: incorrect ILM policy scope
Cause: An attempt was made to create an Information Lifecycle Management (ILM) policy with incompatible scope.

Action: Ensure that the scope of the ILM policy is compatible.

ORA-38339: invalid action specified
Cause: An invalid action was specified in the policy definition.

Action: Specify a valid action in the policy definition.

ORA-38340: invalid policy
Cause: An attempt was made to create a custom policy at the tablespace level.

Action: Specify the policy directly on the desired objects.

ORA-38341: policy conflicts with policy *string*
Cause: An attempt was made to create more than one storage tiering policy directly on an object.

Action: Delete the conflicting policy before creating a new policy.

ORA-38342: heat map not enabled
Cause: An attempt was made to create an Information Lifcecycle Management (ILM) policy when heat map was not enabled.

Action: Enable heat map before creating a new ILM policy.

ORA-38343: ADO online mode not supported with supplemental logging enabled
Cause: An attempt was made to perform an automatic data optimization (ADO) operation with supplemental logging enabled.

Action: Disable supplemental logging or switch to ADO offline mode and retry.

ORA-38345: object not enabled for in-memory column store
Cause: An attempt was made to create a policy on an object that was not enabled for in-memory column store.

Action: Enable the object for in-memory column store and specify the policy.

ORA-38346: ILM operation not supported
Cause: An attempt was made to use an Information Lifecycle Mangement (ILM) operation that is not supported for the current SQL statement.

Action: Use the operation with a supported SQL statement.

ORA-38347: join group cannot be created
Cause: Join group cannot be created on the specified tables.

Action: Check to see that the database is not in standby mode and has read-write privileges, the specified tables for creating join group are ready for processing and the dictionary tables im_domain$, im_joingroup$ are also present. Then, retry the operation.

ORA-38348: join group cannot be dropped
Cause: The specified join group cannot be dropped.

Action: Check to see that the database is not in standby mode and has read-write privileges, and the dictionary tables im_domain$, im_joingroup$ are present. Then, retry the operation.

ORA-38349: join group cannot be altered
Cause: The specified join group cannot be altered.

Action: Check to see that the database is not in standby mode and has read-write privileges, the specified tables used in altering join group are ready for processing and the dictionary tables im_domain$, im_joingroup$ are also present. Then, retry the operation.

ORA-38350: join group not supported on given columns
Cause: One of the columns used for the join group was not supported because the column property field was non-zero.

Action: Retry the operation on the join group without including the unsupported column.

ORA-38351: join group not supported on abstract data type columns
Cause: One of the columns used for the join group was of the abstract data type.

Action: Retry the operation on the join group without including columns of the abstract data type.

ORA-38352: cannot alter column present in a join group
Cause: The alter table operation caused one of the columns to become unsupported for a join group.

Action: Drop the column from the join group and retry the operation.

ORA-38353: This table type is not supported by the ROW ARCHIVAL clause.
Cause: An attempt was made to create or alter table to enable ROW ARCHIVAL, but ROW ARCHIVAL is not supported for these table types.

Action: None

ORA-38354: syntax error; operation on join group cannot be done
Cause: There was a syntax error found for either the create, alter, or drop in-memory join group.

Action: Use the correct syntax.

ORA-38391: disabling ILM filtering

ORA-38393: ILM internal out-of-space error
Cause: Information Lifecycle Management (ILM) internal operation encountered out-of-space error.

Action: None

ORA-38394: test event for table ILM operations
Cause: Internal testing event for table Information Lifecycle Management (ILM) operations.

Action: None

ORA-38395: debug event for table ILM operations
Cause: There was an internal debugging event for table Information Lifecycle Management (ILM) operations.

Action: None

ORA-38396: table is already enabled for the ILM feature
Cause: The table was already enabled for the specified Information Lifecycle Management (ILM) feature.

Action: No action required.

ORA-38397: table is not enabled for the ILM feature
Cause: An attempt was made to perform an Information Lifecycle Management (ILM) operation on a table on which the specified ILM feature is not enabled.

Action: No action required.

ORA-38398: DDL not allowed on the system ILM column
Cause: An attempt was made to drop, rename, or modify a system Information Lifecycle Management (ILM) column.

Action: No action required.

ORA-38399: cannot update the system ILM column
Cause: An attempt was made to update a system Information Lifecycle Management (ILM) column.

Action: No action required.

ORA-38400: cannot combine ILM operation with other operations
Cause: An attempt was made to combine Information Lifecycle Management (ILM) operation with other ALTER TABLE operations.

Action: Ensure that ILM is the sole operation specified in ALTER TABLE.

ORA-38401: synonym *string* not allowed
Cause: An attempt was made to use a synonym for a data type of an attribute or a table alias.

Action: Use the object name instead of the synonym.

ORA-38402: invalid name: empty string or spaces in the name
Cause: There were spaces in the name.

Action: Remove spaces in the name or use quotes around the name.

ORA-38403: attribute set name may not be longer than 22 characters
Cause: The attribute set name was longer than 22 characters.

Action: Choose a name that has 22 or fewer characters.

ORA-38404: schema extension not allowed for the attribute set name
Cause: There was a schema extension for the attribute set name. Attribute sets are always created in the current schema and thus schema extended names are not allowed.

Action: Create the attribute set from the appropriate schema.

ORA-38405: quotes not allowed in the attribute set name
Cause: The attribute set name contained quotes.

Action: Remove quotes in the attribute set name.

ORA-38406: attribute set *string* already exists
Cause: An attribute set with a matching name already exists in the current schema.

Action: Drop the existing attribute set or choose a different name.

ORA-38407: The ADT associated with the attribute set already exists.
Cause: The Abstract type (ADT) with the same name as the attribute set already exists in the current schema.

Action: Create the attribute set for the existing ADT or drop the ADT.

ORA-38408: The ADT "*string*" does not exist in the current schema.
Cause: An attempt was made to create the attribute set from a nonexistent ADT.

Action: Make sure that the ADT with the same name as the attribute set exists in the current schema.

ORA-38409: invalid name or option for the attribute set: *string*
Cause: An invalid name or option was used for the attribute set.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38410: schema extension not allowed for the table name
Cause: An attempt was made to use a schema extended name for the table storing expressions.

Action: The table storing expressions and the corresponding attribute set should be created in the same schema.

ORA-38411: invalid datatype for the column storing expressions
Cause: An attempt was made to create an expression column from a column of invalid datatype.

Action: Create a VARCHAR2 or CHAR column to store expressions in a table.

ORA-38412: Expression set column *string* does not exist.
Cause: The column storing expressions does not exist.

Action: Pass a valid name for the column storing expressions.

ORA-38413: elementary attribute name may not be longer than 32 characters
Cause: An attempt was made to create an elementary attribute with a name longer than 32 characters.

Action: Use a shorter name for the elementary attribute.

ORA-38414: invalid datatype for the attribute *string*
Cause: The datatype specified for the attribute was invalid.

Action: If the datatype is an ADT, make sure that the ADT exists and the current user has execute permissions to it.

ORA-38415: invalid name or datatype for the attribute: *string*
Cause: An invalid name or datatype was used for the attribute.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38416: A stored attribute may not be longer then 300 characters.
Cause: An attempt was made to create a stored or indexed attribute longer than 300 characters.

Action: A predicate with such attribute may not be indexed. It will be evaluated as sparse predicate.

ORA-38417: attribute set *string* does not exist
Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set or choose an existing attribute set.

ORA-38418: ADT associated with the attribute set *string* does not exist
Cause: The ADT with the same name as the attribute set was not found in the current schema.

Action: Drop the attribute set and recreate it.

ORA-38419: invalid identifier in attribute : *string*
Cause: An identifier used in the stored/indexed attribute sub-expression was not defined or was invalid.

Action: Create all the required elementary attributes and user-defined functions and try again.

ORA-38420: invalid stored attribute sub-expression: *string*
Cause: The sub-expression used for the stored expression was invalid.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38421: attribute *string* already exists
Cause: An attribute with a matching name (or form) already exists in the attribute set.

Action: Drop the existing attribute or choose a different name for the new attribute.

ORA-38422: invalid datatype for the attribute: *string*
Cause: An attempt was made to create an attribute with invalid datatype.

Action: If the data type of the attribute is an ADT, make sure that the type exists.

ORA-38423: Attribute set created from an ADT may not be extended.
Cause: An attempt was made to add an elementary attribute to an attribute set created from an ADT.

Action: Create a new attribute set and add all the required elementary attributes one at a time.

ORA-38424: no attribute set currently assigned to the expression set
Cause: An attempt was made to un-assign an attribute set from an expression set when there is no attribute set assigned to it.

Action: No action is required.

ORA-38425: attribute set used for an index object may not be unassigned
Cause: An attempt was made to un-assign an attribute set from an expression set when there is an Expression Filter index defined on the column.

Action: Drop the index before un-assigning the attribute set.

ORA-38426: attribute set assigned to an expression set may not be dropped
Cause: An attempt was made to drop an attribute set when it is still associated with an expression set.

Action: Un-assign the attribute set from the expression set before dropping it.

ORA-38427: attribute *string* does not exist
Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set.

ORA-38428: too many attributes selected for indexing
Cause: An attempt was made to create an expression filter index with more than 490 indexed attributes.

Action: Remove some of the indexed attributes. Make sure that the default indexed attributes associated with the attribute set combined with the indexed attributes specified in the Create Index Parameters clause are less than or equal to 490.

ORA-38429: invalid datatype for a stored attribute: *string*
Cause: The (resulting) datatype for the attribute was not appropriate for storing.

Action: Choose a stored attribute that has a resulting datatype of NUMBER, VARCHAR2, CHAR or DATE.

ORA-38430: Operation "*string*" not supported in the current release.
Cause: An attempt was made to perform an unsupported operation.

Action: Do not use the operation.

ORA-38431: could not evaluate subexpression "*string*" for rowid "*string*"
Cause: Either the expression was not a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38432: EVALUATE operator only allowed on an expression column
Cause: An attempt was made to use the EVALUATE operator on a column not configured as a column storing expressions.

Action: Assign an attribute set to the column.

ORA-38433: index "*string*" could not be maintained due to "*string*"
Cause: The error was caused by the recursive operation.

Action: Fix the error and retry.

ORA-38434: could not evaluate expression "*string*"
Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects or there is a missing attribute value.

Action: Set serveroutput ON for more details.

ORA-38435: missing elementary attribute value or invalid name-value pairs
Cause: The second argument to the EVALUATE operator had either a missing attribute or an invalid value for an attribute.

Action: Try again after fixing the error.

ORA-38436: attribute set used for an Expression set may not be modified.
Cause: An attempt was made to add an elementary attribute to an attribute set assigned to an expression set.

Action: Un-assign the attribute set and try again.

ORA-38437: The ADT "*string*" may not contain any user methods.
Cause: An attempt was made to create an attribute set from an ADT that has one or more user methods.

Action: Drop the ADT and recreate it with no user methods.

ORA-38438: getVarchar not possible due to "*string*" datatype in the attribute set
Cause: An attempt was made to use the getVarchar API when the attribute set has one or more non-scalar types.

Action: Use AnyData conversion to encode the data item.

ORA-38439: invalid operation "*string*"
Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP

ORA-38440: attribute set *string* does not exist
Cause: An attempt was made to copy an attribute set that is not accessible from the current schema.

Action: Grant execute permissions on the corresponding ADT to the current user and try again.

ORA-38441: System could not derive the list of STORED and INDEXED attributes.
Cause: The attribute set was created without default index parameters.

Action: Specify the default index parameters for the attribute set or include a valid PARAMETERS clause for the CREATE INDEX command.

ORA-38442: The ADT "*string*" is not in a valid state.
Cause: An attempt was made to use an ADT that is not in a valid state.

Action: Check the INCOMPLETE field in the user_types catalog view to make sure that the ADT is in a valid state. Drop the invalid ADT and recreate the corresponding attribute set.

ORA-38443: An attribute set should be assigned to the expression set for statistics collection.
Cause: An attempt was made to collect statistics for an expression set with no attribute set assigned to it.

Action: Assign an attribute set to the expression set before collecting the statistics.

ORA-38444: statistics do not exist for the expression set
Cause: An attempt was made to clear the statistics that do not exist.

Action: No action was required.

ORA-38445: TOP clause not allowed with no statistics
Cause: An attempt was made to use the TOP parameters clause with no statistics available for the expression set.

Action: Collect statistics for the expression set and try again.

ORA-38446: Error with embedded ADT "*string*" in the attribute set.
Cause: The embedded ADT has errors.

Action: Set serveroutput ON for additional information.

ORA-38447: Type required for the embedded ADT attribute "*string*" is missing
Cause: Object type required for the embedded ADT was missing.

Action: Set serveroutput ON for additional information.

ORA-38448: Indexing predicates with "*string*" operator is not supported.
Cause: An unsupported operator was used in the exf$indexoper array.

Action: Choose the operators from this list : =, <, >, <=, >=, !=, is null, is not null, nvl, and between.

ORA-38449: table "*string*" does not exist or is not accessible
Cause: An attempt was made to create a table alias for a table that does not exist or is not accessible.

Action: Grant select privileges on the table to the current user.

ORA-38450: error computing a stored attribute for the expression set.
Cause: Either values for one of the attributes was incorrect or a stored attribute was invalid due to broken dependencies.

Action: Correct the input.

ORA-38451: index is in an inconsistent state
Cause: One or more secondary objects used to maintain the index did not exist

Action: Drop the index and recreate it.

ORA-38452: Expression Filter index name may not be longer than 25 characters
Cause: An attempt was made to use a name longer than 25 characters for the Expression Filter index.

Action: Choose a name that has 25 or fewer characters

ORA-38453: ExpFilter index should be created in the same schema as the base table.
Cause: An attempt was made to create the Expression Filter index in a schema other than that of the base table.

Action: Create the index in the same schema as the base table.

ORA-38454: attribute set not defined for the column being indexed
Cause: An attempt was made to create an Expression Filter index on a column with no attribute set association.

Action: Assign an attribute set to the expression set column begin indexed.

ORA-38455: Expression Filter index should be created by the owner.
Cause: An attempt was made to create the Expression Filter index by a user who is not the owner of the index.

Action: Create the index using owner's privileges.

ORA-38456: The attribute set "*string*" is in an inconsistent state.
Cause: The attribute set was in an inconsistent state due to broken dependencies.

Action: Set serveroutput ON for more details. The attribute set may not be reused after this error.

ORA-38457: The attribute "*string*" is not a valid XMLType attribute.
Cause: An attempt was made to use a non-XMLType attribute to configure XPath filtering.

Action: Use an attribute of sys.XMLType datatype to configure XPath filtering.

ORA-38458: invalid operation "*string*" for XPATH_FILTER_PARAMETERS
Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP.

ORA-38459: XML Tag "*string*" not found for the XMLType attribute "*string*"
Cause: An Attempt was made to use a non-existent XML Tag.

Action: Correct the name of the XML Tag or the XMLType attribute.

ORA-38460: filtering based on datatype "*string*" not supported for XML Tags
Cause: An attempt was made to configure XPath filtering with an XML Tag of unsupported datatype.

Action: Leave the XML Tag out of filter parameters. It will be processed as sparse predicate

ORA-38461: XML Tag "*string*" already exists for the XMLType attribute "*string*"
Cause: An attempt was made to create a duplicate XML Tag.

Action: Choose a different XML Tag.

ORA-38462: invalid attribute list
Cause: The input was missing an attribute list or had null values for the attribute names.

Action: Correct the input.

ORA-38463: invalid XML Tag list
Cause: The input was missing a tag list or had null values for the tag names.

Action: Correct the input.

ORA-38464: expression set is not empty.
Cause: An attempt was made to assign an attribute set to a non-empty expression set.

Action: Use FORCE = 'TRUE' to validate all the existing expressions.

ORA-38465: failed to create the privilege checking trigger due to: *string*
Cause: Creation of the trigger failed due to the error listed in the message.

Action: Set serveroutput ON for more information.

ORA-38466: user does not have privileges to CREATE/MODIFY expressions
Cause: An attempt was made to INSERT or UPDATE a column storing expression without appropriate permissions.

Action: Appropriate privileges on the expression set should be granted by the owner of the expression set.

ORA-38467: user cannot GRANT/REVOKE privileges to/from himself
Cause: An attempt was made to GRANT or REVOKE privileges to or from the current user.

Action: The the to_user or from_user field should be different from the user performing the operation.

ORA-38468: column "*string*" is not identified as a column storing expressions.
Cause: An attempt was made to grant permission on a nonexistent expression set.

Action: Make sure that the table and the column exist and an attribute set is associated with the column.

ORA-38469: invalid privilege for an expression set: *string*
Cause: An attempt was made to use an invalid privilege.

Action: See documentation for a valid privilege.

ORA-38470: cannot revoke a privilege that was not granted.
Cause: An attempt was made to revoke a privilege that had not been granted.

Action: Check catalog views to see if the user has the privilege.

ORA-38471: ROWIDs for table aliases cannot be null
Cause: An attempt was made to pass a null value for the table alias attribute in the data item, which is not permitted.

Action: Pass a valid rowid value for the table alias.

ORA-38472: VARCHAR representation of the data item is too long.
Cause: The VARCHAR representation of data item was too long.

Action: Use the EVALUATE operator with AnyData argument instead.

ORA-38473: cannot drop a type used for Expression Filter attribute set
Cause: An attempt was made to drop an ADT that was used to maintain an attribute set for the Expression Filter.

Action: Query USER_EXPFIL_ATTRIBUTE_SETS view to see the dependency.

ORA-38474: attribute set may not have attributes of TABLE COLLECTION type.
Cause: An attempt was made to create an attribute with a TABLE COLLECTION type.

Action: Use VARRAYs instead of table collection, if possible.

ORA-38475: The attribute set and the associated ADT are out of sync.
Cause: The ADT was directly modified by CREATE or ALTER operations.

Action: Drop the attribute set and recreate it from scratch.

ORA-38476: abstract type used for an Attribute set may not be modified.
Cause: An attempt was made to alter a type (ADT) that is used to maintain an attribute set of an Expression set.

Action: Do not modify the ADT directly. Use DBMS_EXPFIL APIs instead.

ORA-38477: attribute set cannot be derived from an evolved type or a subtype.
Cause: An attempt was made to create an attribute set from an evolved ADT or a subtype.

Action: The ADT used for the attribute set cannot be an evolved type or a subtype.

ORA-38478: creation of system trigger EXPFIL_DROPOBJ_MAINT failed
Cause: The creation of the system trigger EXPFIL_DROPOBJ_MAINT failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the Expression Filter dictionary could have some stale entries.

ORA-38479: creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed
Cause: The creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the user will be able to evolve ADTs associated with the attribute set, thus causing spurious errors.

ORA-38480: creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed.
Cause: The creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed due to errors in SYS.EXF$DBMS_EXPFIL_SYSPACK package.

Action: Try a clean installation again. If this error is ignored, a RENAME of the expression table may cause the EVALUATE queries to fail.

ORA-38481: ADT "*string*" is used for a dependent object.
Cause: An attempt was made to create an attribute set from an ADT which is used by one or more dependent objects.

Action: Use a new ADT instead.

ORA-38482: no elementary attributes defined in the attribute set
Cause: An attempt was made to use an empty attribute set.

Action: Create one or more elementary attributes for the attribute set.

ORA-38483: invalid FUNCTION/PACKAGE/TYPE name: "*string*"
Cause: An attempt was made to use an invalid name format.

Action: The function/package/type name should be specified in the following format [owner.]object_name

ORA-38484: FUNCTION/PACKAGE/TYPE *string* does not exist
Cause: Attempt was made to use a object that does not exist.

Action: Query ALL_OBJECT view to ensure that the object exists.

ORA-38485: invalid object type for the user-defined function
Cause: An attempt was made to use an invalid object as a function.

Action: Valid object types are FUNCTION / PACKAGE / TYPE

ORA-38486: FUNCTION/PACKAGE/TYPE already exists for the attribute set
Cause: An attempt was made to add a duplicate function to the list.

Action: Use a different object name.

ORA-38487: FUNCTION/PACKAGE/TYPE "*string*" not allowed in the expression
Cause: An attempt was made to use an un-approved function in the expression.

Action: Add the function to the corresponding attribute set

ORA-38488: attribute set already assigned to the column storing expressions
Cause: An attempt was made to reassign an attribute set to an expression column.

Action: Query USER_EXPFIL_EXPRESSION_SETS view to find the attribute set assigned the expression set

ORA-38489: predicate table creation failed due to: ORA*string*
Cause: Predicate table creation failed due to the reported error.

Action: Set serveroutput ON for additional information

ORA-38490: invalid name: quotes do not match
Cause: The quotes in the name did not match.

Action: Correct the name to match the quotes.

ORA-38491: could not evaluate subexpression for rowid "*string*"
Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38492: invalid ALTER INDEX parameters clause "*string*"
Cause: An invalid parameters clause was specified with the ALTER INDEX command.

Action: See documentation for a valid list of parameters.

ORA-38493: feature not enabled : Expression Filter index
Cause: An attempt was made to create an Expression Filter index in Standard Edition.

Action: Do not attempt to use this feature.

ORA-38494: column in the table alias and an attribute have matching names
Cause: One of the attributes in the set has the same name as the name of one of the columns in the table configured for table alias.

Action: If possible, use a different name for the attribute.

ORA-38495: data type for the stored attribute *string* is inconsistent.
Cause: The actual data type for the stored attribute configured for the Expression Filter index object did not match the data type recorded in the Expression Filter dictionary.

Action: Delete the attribute from the default index attributes and recreate it.

ORA-38496: Expression Filter index is not in a valid state
Cause: An attempt was made to REBUILD an Expression Filter index that was not valid.

Action: Use DEFAULT keyword in the parameters clause to rebuild the index from defaults or drop and recreate the index.

ORA-38497: Expression Filter index does not exist
Cause: Index with a matching name does not exist or the index was not created using ExpFilter indextype.

Action: Identify the correct index using the Expression Filter catalog views

ORA-38498: invalid stored attribute for the index object : *string*
Cause: The expression filter index object has a stored or indexed attribute that had broken dependencies.

Action: Make sure that all the identifiers used in the attribute are valid.

ORA-38499: expression set already configured for stored/indexed attributes
Cause: The expression set already had a list of stored and indexed attributes. Additional attributes cannot be specified in the CREATE INDEX parameters clause.

Action: Remove TOP, STOREATTRS and INDEXATTRS clauses from the parameters clause or clear the expression set statistics using DBMS_EXPFIL.INDEX_PARAMETERS API.

ORA-38500: *string*
Cause: There was a generic error

Action: See documentation for further information.

ORA-38501: sub-query not allowed in the expression
Cause: An attempt was made to use a sub-query in the expression.

Action: Do not use sub-queries in the expressions.

ORA-38502: invalid XML tag: *string*
Cause: An attempt was made to use an invalid XML tag for the index.

Action: Correct the XML tag and retry.

ORA-38503: index already defined using the parameters
Cause: An attempt was made to modify the index parameters after the index creation.

Action: Drop the index and retry.

ORA-38504: this operator not allowed with the configured attribute set
Cause: An attempt was made to use the operator binding with an attribute set containing more than one (table alias) attribute. This is not permitted.

Action: Use a different operator binding.

ORA-38505: invalid default value for the attribute
Cause: An attempt was made to use an invalid default value or a default that is larger than 100 characters.

Action: Specify a correct default value.

ORA-38506: invalid attribute type for text predicates
Cause: An attempt was made to use an invalid type for an attribute configured for text predicates.

Action: Use either a VARCHAR or a CLOB attribute instead.

ORA-38507: attributes of *string* data type should be indexed
Cause: An attempt was made to configure an attribute of spatial or text data type as stored predicate group.

Action: Configure them as indexed predicate groups instead.

ORA-38601: FI Not enough memory for frequent itemset counting: *string*
Cause: The memory size did not satisfy the minimum memory requirement.

Action: In workarea_size_policy='manual' mode, set _fic_area_size to a reasonably larger value. Or, In workarea_size_policy='auto' mode, this error should never happen.

ORA-38602: FI invalid input cursor
Cause: The input cursor did not return exactly two columns for transactional input format or the input cursor didn't have consistent data types for horizontal input format

Action: For transactional input format, specify that the input cursor returns exactly two columns: one for transaction-id, one for item-id. For horizontal input format, make sure the input cursor's columns have the same data types.

ORA-38603: FI including & excluding cursor can only return one column
Cause: The including & excluding cursor did not return exactly one column.

Action: Specify that the cursor return only one column: item-id.

ORA-38604: FI including & excluding cursor item-id type must match input cursor item-id type
Cause: The including & excluding cursor item-id type did not match input cursor item-id type

Action: Specify that the item-id type of the cursors match each other.

ORA-38605: FI not enough memory(*string*K) for candidate generation(*string*K)
Cause: There was insufficient available memory for candidate generation.

Action: In workarea_size_policy='manual' mode, set _fic_area_size to a reasonably larger value. Or, in workarea_size_policy='auto' mode, set pga_aggregate_target to a reasonably larger value.

ORA-38606: FI support threshold not between [0, 1]
Cause: The user inputed a support threshold not in the range of [0, 1].

Action: The user should adjust the input value in the range of [0, 1].

ORA-38607: FI minimum and maximum itemset length not between [1, *string*]
Cause: The inputed minimum or maximum itemset length exceed the internal maximum itemset length or less than 1.

Action: The user should adjust the input value not larger than the internal maximum itemset length and not less than 1.

ORA-38608: FI itemset minimum-length(*string*) should not be greater than maximum length(*string*)
Cause: The user inputed minimum length is more than maximum length.

Action: The user should adjust the input values to make the minimum length less than or equal to the maximum length.

ORA-38609: FI Not enough memory for tree counting, requires at least *string*KB
Cause: The memory size did not satisfy the minimum memory requirement for tree counting.

Action: In workarea_size_policy='manual' mode, set _fic_area_size to a reasonably larger value. Or, In workarea_size_policy='auto' mode, this error should never happen.

ORA-38610: FI "*string*" name prefix is reserved for frequent itemset counting
Cause: An error occurred because DBMS_FREQUENT_ITEMSET and prefix ORA_FI are reserved for the DBMS_FREQUENT_ITEMSET package's internal use.

Action: Do not re-define functions with names starting with DBMS_FREQUENT_ITEMSET package or ORA_FI.

ORA-38611: FI input cursor's item type is not supported
Cause: The input cursor's item type is not number or character type

Action: Redefine the input cursor so that item type is number or character type.

ORA-38612: FI item length cannot exceed half of one database block.
Cause: The item's length was more than half of one database block.

Action: Redefine the data type of the item column so that its maximum length is less than half of one database block.

ORA-38613: FI Cursor is returning less than 2 columns.
Cause: Cursor parameter is returning less than 2 columns.

Action: Modify the Cursor argument to return 2 columns.

ORA-38620: DT expressions in input cursor do not have an alias name
Cause: Expressions in input cursor do not have an alias name.

Action: Add an alias name for the expression.

ORA-38621: Decision Tree maximum depth setting not between [2, 20]
Cause: The user specified a max tree depth not in the range of [2, 20].

Action: The user should adjust the input value to be in the range of [2, 20].

ORA-38622: Decision Tree not enough memory, requires at least *string*KB
Cause: The memory size did not satisfy the minimum memory requirement for decision tree building.

Action: In workarea_size_policy='manual' mode, set _dtree_area_size to a reasonably larger value. Or, In workarea_size_policy='auto' mode, please raise pga_aggregate_target to a reasonably larger value.

ORA-38700: Limit of *string* flashback database logs has been exceeded.
Cause: The maximum number of flashback database log files was exceeded.

Action: DB_FLASHBACK_RETENTION_TARGET may be set to high. Modify it to a smaller value.

ORA-38701: Flashback database log *string* seq *string* thread *string*: "*string*"
Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38702: Cannot update flashback database log file header.
Cause: Could not write to the flashback database log file.

Action: Restore access to the file.

ORA-38703: Type *string* in header is not a flashback database log file.
Cause: A corrupt flashback database log file header was read.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38704: Checksum error in flashback database log file header.
Cause: The flashback database log file header contained a checksum that does not match the value calculated from the file header as read from disk. This means the file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38705: Expected block size *string* does not match *string* in log header.
Cause: When the flashback log file header was read, the block size in the control file did not match the block size contained in the header.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38706: Cannot turn on FLASHBACK DATABASE logging.
Cause: An ALTER DATABASE FLASHBACK ON command failed. Other messages in the alert log describe the problem.

Action: Fix the problem and retry.

ORA-38707: Media recovery is not enabled.
Cause: An ALTER DATABASE FLASHBACK ON command failed because media recovery was not enabled.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG command and then retry the command.

ORA-38708: not enough space for first flashback database log file
Cause: An ALTER DATABASE FLASHBACK ON command failed because there was not enough space in the Recovery Area for the first flashback database log file.

Action: Make more space in the Recovery Area. For example, this can be done by increasing the value of DB_RECOVERY_FILE_DEST_SIZE.

ORA-38709: Recovery Area is not enabled.
Cause: An ALTER DATABASE FLASHBACK ON command failed because the Recovery Area was not enabled.

Action: Set DB_RECOVERY_FILE_DEST to a location and retry.

ORA-38710: Flashback log version *string* is incompatible with ORACLE version *string*.
Cause: The flashback database log file was rejected because it appeared to be written by an incompatible version of Oracle.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38711: Corrupt flashback log block header: block *string*
Cause: A corrupt Flashback Database log file block header was read. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38712: Corrupt flashback log record header: block *string*, offset *string*.
Cause: A corrupt flashback database log record header was read. Either the record type or length were incorrect. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38713: Flashback Database logging is already turned on.
Cause: An ALTER DATABASE FLASHBACK ON command had no effect because flashback database logging was already on.

Action: No action required.

ORA-38714: Instance recovery required.
Cause: An ALTER DATABASE FLASHBACK ON command failed because the database either crashed or was shutdown with the ABORT option.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

ORA-38715: Invalid log number specified in the DUMP FLASHBACK command.
Cause: An invalid log number was used when dumping a flashback database log file.

Action: Specify a valid flashback database log number.

ORA-38716: Must supply an integer for the TYPE option.
Cause: An invalid value was specified for TYPE in the DUMP FLASHBACK command.

Action: Specify an integer value.

ORA-38717: Invalid DUMP FLASHBACK option.
Cause: An invalid option was specified in the DUMP FLASHBACK command. Currently the only options allowed are: DBA, TYPE, and LOGICAL.

Action: Retry the command with the correct options.

ORA-38718: Invalid thread number specified in the DUMP FLASHBACK command.
Cause: An invalid thread number was used in dumping the flashback database log files for a thread.

Action: Specify a valid thread number.

ORA-38719: Invalid DUMP FLASHBACK object.
Cause: An invalid object was specified in a DUMP FLASHBACK command. Currently the only objects allowed are: LOGFILE or THREAD.

Action: Retry the command with the correct options.

ORA-38720: Missing log file name or number.
Cause: A log file name or number was missing in a DUMP FLASHBACK LOGFILE command.

Action: Supply a valid log file name or number.

ORA-38721: Invalid file number.
Cause: An invalid file number was specified in the DBA clause of a DUMP FLASHBACK command.

Action: Supply a valid file number.

ORA-38722: ON or OFF expected.
Cause: The ALTER DATABASE FLASHBACK command was specified without the ON or OFF keyword.

Action: Retry the command with the ON or OFF keyword.

ORA-38723: Invalid SCN expression.
Cause: The SCN keyword was specified in a FLASHBACK DATABASE command but the SCN expression was invalid.

Action: Retry the command using a valid SCN number.

ORA-38724: Invalid option to the FLASHBACK DATABASE command.
Cause: An invalid option was specified to the FLASHBACK DATABASE command. Valid options are: SCN or TIMESTAMP.

Action: Correct the syntax and retry the command.

ORA-38725: specified name "*string*" does not match actual "*string*"
Cause: The database name specified in a FLASHBACK DATABASE command did not match the name of the currently mounted database.

Action: Correct the database name spelling or DISMOUNT the mounted database and mount the correct database.

ORA-38726: Flashback database logging is not on.
Cause: A FLASHBACK DATABASE command was tried but flashback database logging has not been enabled.

Action: Flashback database logging must be enabled via the ALTER DATABASE FLASHBACK ON command before a FLASHBACK DATABASE command can be tried. If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38727: FLASHBACK DATABASE requires a current control file.
Cause: The control file being used is a backup control file.

Action: FLASHBACK DATABASE cannot be used with a backup control file. If the database must be taken back in time then a restore and an incomplete recovery must be performed.

ORA-38728: Cannot FLASHBACK DATABASE to the future.
Cause: An SCN or time stamp provided in a FLASHBACK DATABASE command was in the future.

Action: Supply a proper SCN or time stamp and retry the command.

ORA-38729: Not enough flashback database log data to do FLASHBACK.
Cause: There was not enough flashback database log data to do the FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38730: Invalid SCN/TIMESTAMP expression.
Cause: The expression supplied in a FLASHBACK DATABASE command was invalid.

Action: Retry the command using a valid number or time stamp expression.

ORA-38731: Expected version *string* does not match *string* in log header.
Cause: The version of the flashback database log file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38732: Expected file size *string* does not match *string*.
Cause: The file size indicated in the control file did not match the file size contained in the flashback log file header. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38733: Physical size *string* less than needed *string*.
Cause: A flashback database log file shrank in size. This was likely to have been caused by operator or operating system error.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38734: Flashback log is inconsistent; belongs to another database.
Cause: The database ID in the flashback database log file did not match the database ID in the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38735: Wrong log number *string* in flashback log file header.
Cause: The log file number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38736: Wrong thread number *string* in flashback log file header.
Cause: The thread number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38737: Expected sequence number *string* doesn't match *string*
Cause: The flashback database log is corrupted or is an old version.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38738: Flashback log file is not current copy.
Cause: A check of flashback database log file header at database open found that the flashback database log appeared to be an incorrectly restored backup. Flashback database log files cannot be backed up and restored.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38739: Flashback log file is more recent than control file.
Cause: The control file change sequence number in the flashback database log file was greater than the number in the control file. This implies that the wrong control file was being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: FLASHBACK DATABASE can only be used with the current control file. If it is not available, then a restore and an incomplete recovery must be performed instead.

ORA-38740: Usable blocks value *string* is not valid.
Cause: A flashback database log file header contained a usable blocks value greater than the file size. The flashback database log file file is corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38741: Formatted blocks value *string* is not valid.
Cause: The formatted blocks value in the flashback database log file was greater than the file size. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38742: Flashback log file has incorrect log reset status.
Cause: The flashback database log file header had log reset data that was different than the control file. The log was probably an incorrectly restored backup. Flashback database logs cannot be backed up.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38743: Time/SCN is in the future of the database.
Cause: The Time/SCN provided in a FLASHBACK DATABASE command was in the future of the database.

Action: Retry the command with a correct Time/SCN or RECOVER the database.

ORA-38744: file *string* is not the same file seen at start of flashback
Cause: A different copy of the file was accessed the last time FLASHBACK DATABASE looked at the file header. A backup of the file was restored or the meaning of the file name changed during FLASHBACK DATABASE.

Action: Ensure the correct file is available, then retry FLASHBACK DATABASE.

ORA-38746: error occurred while restoring data block (file# *string*, block# *string*)
Cause: An error occurred during a FLASHBACK DATABASE command. See other errors on error stack.

Action: Investigate why the error occurred. It may be that the flashback database log data is corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38747: corrupt before image (file# *string*, block# *string*)
Cause: A corrupt data block before image was encountered during a FLASHBACK DATABASE command.

Action: The flashback log data is probably corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38748: cannot flashback data file *string* - file is in use or recovery
Cause: An attempt to do FLASHBACK DATABASE found that the file was not available for recovery. Either it was online and the database was open in some instance, or another process was currently doing media recovery or flashback on the file.

Action: Do not do FLASHBACK DATABASE.

ORA-38749: A media recovery has been started.
Cause: An attempt was made to start a FLASHBACK DATABASE in the same session as a media recovery.

Action: Complete or cancel the first media recovery session.

ORA-38750: FLASHBACK DATABASE may not be performed using a dispatcher.
Cause: An attempt was made to use a dispatcher process for FLASHBACK DATABASE. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform FLASHBACK DATABASE.

ORA-38751: Flashback database log: "*string*"
Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38752: file *string* does not exist
Cause: During an RMAN FLASHBACK DATABASE conversation, a file was listed which was not part of the database. The RMAN conversation was aborted.

Action: Retry the conversation with the appropriate file numbers.

ORA-38753: Cannot flashback data file *string*; no flashback log data.
Cause: An attempt to perform a FLASHBACK DATABASE failed because the file does not have enough flashback log data to cover the time to flash back. Either the file did not have flashback generation enabled for it, or had flashback generation turned off for it some time during the time span of the flashback.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38754: FLASHBACK DATABASE not started; required redo log is not available
Cause: A FLASHBACK DATABASE command did not start. A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38755: Flashback is already turned on for this tablespace.
Cause: An attempt was made to turn on flashback database logging for a tablespace that already has flashback turned on.

Action: No action required.

ORA-38756: Flashback is already turned off for this tablespace.
Cause: An attempt was made to turn off flashback database logging for a tablespace that already has flashback off.

Action: No action required.

ORA-38757: Database must be mounted and not open to FLASHBACK.
Cause: An attempt to Flashback a database was made when the database was not mounted or was already open.

Action: Mount the database and retry the FLASHBACK command.

ORA-38758: cannot flashback data file *string*; restored since last recovery
Cause: An attempt to do FLASHBACK DATABASE found that the file was restored since the last standby recovery. The file cannot be flashed back.

Action: The file must be taken offline before continuing with the FLASHBACK DATABASE command.

ORA-38759: Database must be mounted by only one instance and not open.
Cause: An attempt to turn on or off Flashback Database logging was made when the database was open or mounted by more than one instance.

Action: Mount the database in only one instance and retry the command.

ORA-38760: This database instance failed to turn on flashback database
Cause: Database flashback is on but this instance failed to start generating flashback data. Look in alert log for more specific errors.

Action: Correct the error or turn off database flashback.

ORA-38761: redo log sequence *string* in thread *string*, incarnation *string* could not be accessed
Cause: A redo log needed for the recovery portion of FLASHBACK could not be read or opened. The FLASHBACK operation failed.

Action: Restore the log and retry the FLASHBACK command.

ORA-38762: redo logs needed for SCN *string* to SCN *string*
Cause: The FLASHBACK DATABASE operation failed. The recovery portion of FLASHBACK DATABASE needed redo from the first SCN to the second, but one or more of the redo logs in the range could not be read or opened.

Action: Check the FLASHBACK DATABASE command trace file for a description of the inaccessible redo logs, restore access to them, and retry the FLASHBACK DATABASE command.

ORA-38763: flashback not started; enabled threads have changed
Cause: A FLASHBACK DATABASE command did not start. The set of enabled threads changed during the time to flash back.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38764: flashback not started; datafile *string* enabled threads are different
Cause: A FLASHBACK DATABASE command did not start. The datafile was restored from a backup taken when the enabled threads were different than at the time of the flashback.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38765: Flashed back database cannot be opened read-only.
Cause: A complete recovery was performed after a database flashback but the database was not opened for read-write access, or a FLASHBACK DATABASE command failed.

Action: If a complete recovery was performed after a database flashback, open the database for read-write access. If a FLASHBACK DATABASE command failed, fix what caused the command to fail and retry the command, or recover and open the database for read-write access.

ORA-38766: cannot flashback data file *string*; file resized smaller
Cause: An attempt to do FLASHBACK DATABASE found that the file was shrunk during the time to flash back.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38767: flashback retention target parameter mismatch
Cause: The value of parameters DB_FLASHBACK_RETENTION_TARGET must be same in all instances. All databases must have same flashback retention target parameters.

Action: Check DB_FLASHBACK_RETENTION_TARGET values in all instances.

ORA-38768: resizing datafile *string* failed
Cause: An operating system error occurred when Flashback Database tried to shrink (resize) a datafile. Flashback shrinks a file in order to undo the effects of a file expand, for example, an autoextension of the file.

Action: Recover the database to return it to its previous state, or fix the cause of the operating system error and retry the Flashback. If that is not possible, then the file can be taken offline and the Flashback command retried. The file will have to be restored from a backup and rolled forward.

ORA-38769: FLASHBACK DATABASE failed after modifying data.
Cause: A FLASHBACK DATABASE command failed after modifying the the database. Look in the alert log for more information about the failure.

Action: Recover the database to return it to its previous state, or fix the cause of the error and retry the Flashback.

ORA-38770: FLASHBACK DATABASE failed during recovery.
Cause: A FLASHBACK DATABASE command successfully restored the database but failed during the recovery step. Look in the alert log for more information about the failure.

Action: Fix the error and then recover the database to the same SCN or timestamp used in the FLASHBACK DATABASE command.

ORA-38771: unnamed datafile(s) added to control file by flashback recovery
Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile that could not be added to the control file. An entry has been added to the control file for the new datafile, but with the file name UNNAMEDnnnn, where nnnn is the file number. Related error messages provide the file names that were originally used to create the files.

Action: Rename the file in the control file, or use the ALTER ALTER DATABASE CREATE DATAFILE command to create a file suitable for recovery. If the file is not going to be recovered, then take it offline with the FOR DROP option. The recovery step of Flashback can be resumed by entering a RECOVERY command with the same SCN or timestamp as used in the FLASHBACK DATABASE command. For example, RECOVER AUTOMTAIC DATABASE UNTIL CHANGE *flashback-scn*.

ORA-38772: cannot add datafile '*string*' - file could not be created
Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile and could not recreate the file. The error from the creation attempt is displayed in another message. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file.

ORA-38773: cannot add data file '*string*' - file already part of database
Cause: The recovery step of FLASHBACK database encountered the creation of a datafile and could not create the file because the file name is already in use in the database. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file with a different name.

ORA-38774: cannot disable media recovery - flashback database is enabled
Cause: An attempt was made to disable media recovery while flashback database was enabled.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable media recovery.

ORA-38775: cannot disable recovery area - flashback database is enabled
Cause: An attempt was made to set DB_RECOVERY_FILE_DEST to null while flashback database was enabled. Flashback database requires DB_RECOVERY_FILE_DEST to be set.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable the recovery area.

ORA-38776: cannot begin flashback generation - recovery area is disabled
Cause: During a database mount, the RVWR process discovered that the recovery area was disabled. DB_RECOVERY_FILE_DEST must have been set null or removed from the INIT.ORA file while the database was unmounted.

Action: Flashback database requires the recovery area to be enabled. Either enable the recovery area by setting the DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE initialization parameters, or turn off flashback database with the ALTER DATABASE FLASHBACK OFF command.

ORA-38777: database must not be started in any other instance
Cause: A command was attempted that required the database to be mounted in this instance and not started in any other instance. ALTER DATABASE OPEN RESETLOGS requires that the database be started in only one instance if flashback database logging is enabled.

Action: Ensure that the no other instances are started. Then retry the command.

ORA-38778: Restore point '*string*' already exists.
Cause: The restore point name of the CREATE RESTORE POINT command already exists. A restore point name must be unique.

Action: Either use a different name or delete the existing restore point with the same name.

ORA-38779: cannot create restore point - too many restore points.
Cause: The maximum number of restore points already have been created.

Action: Delete some existing restore point and retry the operation.

ORA-38780: Restore point '*string*' does not exist.
Cause: The restore point name specified in the command did not exist.

Action: Look up restore points by query restore point tables.

ORA-38781: cannot disable media recovery - have guaranteed restore points
Cause: An attempt was made to disable media recovery while there is at least one guaranteed restore point.

Action: Drop all guaranteed restore points and then disable media recovery.

ORA-38782: cannot flashback database to non-guaranteed restore point '*string*'
Cause: An attempt was made to flashback database to a non-guaranteed restore point while flashback database is off. You can only flashback a database to guaranteed restore point when flashback database is not on.

Action: Consider picking a guaranteed restore point to flashback the database to, if there is one.

ORA-38783: Instance recovery required.
Cause: An attempt was made to create a restore point when the database is in mount mode but it was not shutdown cleanly before it was mounted. In order to create a restore point when the database is mounted, the database must be shutdown cleanly before it is mounted.

Action: Consider one of the following: 1. Create the restore point after opening the database. 2. Open the database, shut it down cleanly, mount the database, and retry creating the restore point.

ORA-38784: Cannot create restore point '*string*'.
Cause: An attempt to create a restore point failed. See other errors on the error stack and in the alert log for the specific reason.

Action: Fix the problem and retry.

ORA-38785: Media recovery must be enabled for guaranteed restore point.
Cause: Media recovery is not enabled. Media recovery must be enabled in order to create a guaranteed restore point.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG statement and then retry the command.

ORA-38786: Recovery area is not enabled.
Cause: An attempt was made to perform a command that requires Flash recovery area to be enabled.

Action: Set DB_RECOVERY_FILE_DEST to an appropriate location and retry.

ORA-38787: Creating the first guaranteed restore point requires mount mode when flashback database is off.
Cause: While flashback database is not on, an attempt was made to create the first guaranteed restore point while the database is open.

Action: Mount the database and retry.

ORA-38788: More standby database recovery is needed
Cause: An attempt was made to create a restore point or a guaranteed while a physical standby database is not cleanly checkpointed.

Action: Perform more standby database recovery via managed standby database recovery. Cancel managed recovery and retry the command.

ORA-38789: File name is too long.
Cause: The file name provided in the command was longer than the maximum allowed.

Action: Use a shorter file name.

ORA-38790: BEFORE must be specified with RESETLOGS
Cause: The FLASHBACK DATABASE command included the RESETLOGS parameter but not the BEFORE parameter.

Action: Retry the command with TO BEFORE RESETLOGS.

ORA-38791: flashback did not start because file *string* was not in a valid incarnation
Cause: Flashback could not be started because a file was checkpointed or fuzzy at a point where the file can neither be restored nor recovered to our restore target. In order for a file to be brought to the restore target, the file has to be in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

Action: Manually restore or recover the file to a point where it is in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

ORA-38792: encountered unknown flashback record from release *string*
Cause: A Flashback Database logfile contains a record written by a future Oracle release and is unknown by this release.

Action: The given release of Oracle must be installed in order to use these flashback database log files.

ORA-38793: cannot FLASHBACK the database or pluggable database to a future SCN or time
Cause: The Flashback Pluggable Database target SCN or timestamp is greater than the current database or pluggable database SCN/timestamp and the database or pluggable database incarnation is not the last opened incarnation.

Action: If the target SCN or timestamp is in the current incarnation or a child incarnation whose branch point is after the current database or pluggable database SCN then RECOVER DATABASE or RECOVER PLUGGABLE DATABASE to the target SCN or time. If the target SCN or timestamp is in a child incarnation whose branch point is prior to the current database or pluggable database SCN then FLASHBACK DATABASE to before the branch point. Next, use RMAN to reset the database or pluggable database to the child incarnation. Finally, RECOVER DATABASE OR PLUGGABLE DATABASE to the target SCN time.

ORA-38794: Flashback target time not in current incarnation
Cause: The Flashback Database target timestamp is not in the database's current incarnation or any of its ancestors.

Action: Use a different target timestamp or use RMAN to reset the database to the appropriate incarnation.

ORA-38795: WARNING: FLASHBACK DATABASE succeeded but OPEN RESETLOGS would fail
Cause: FLASHBACK DATABASE succeeded. However, if ALTER DATABASE OPEN RESETLOGS command was attempted now, it would fail with the specified error.

Action: Fix the error before trying ALTER DATABASE OPEN RESETLOGS.

ORA-38796: Not enough flashback database log data to undo FLASHBACK.
Cause: There was not enough flashback log data to undo the flashback so a flashback was not started.

Action: It is still possible to get to the restore target by doing a flashback until the resetlogs branch point of the restore target is reached. This can be done by executing multiple "flashback to before resetlogs" commands, or by doing a flashback to the exact time or SCN of the desired resetlogs branch point. Note that this flashback cannot be undone should an error occur. The only option is to complete the flashback.

ORA-38797: Full database recovery required after a database has been flashed back
Cause: An attempt was made to recover some datafiles or tablespaces of a database after the database had been flashed back. In order to recover control file and all datafiles correctly, full database recovery is required after a database has been flashed back.

Action: Recover the whole database instead.

ORA-38798: Cannot perform partial database recovery
Cause: See other other messages on error stack for the cause.

Action: See other other messages on error stack for the action.

ORA-38799: Cannot drop guaranteed restore point internally created for snapshot standby
Cause: An attempt is made to drop the guaranteed restore point Oracle created internally for a snapshot standby.

Action: Use the "alter database convert to physical standby" command to convert the snapshot standby to a normal physical standby. This will automatically flashback the database and drop this guaranteed restore point.

ORA-38800: Cannot start Redo Apply on the open physical standby database
Cause: An attempt was made to start Redo Apply on an open physical standby database instance.

Action: Make sure the primary database is at compatibility 11.0.0 or higher. The redo logs to be recovered on an open physical standby database must be generated at compatibility 11.0.0 or higher. If you have any redo below 11.0.0 to be applied on the standby, you must apply them on a mounted standby before restarting recovery on an open standby when the log format advances to 11.0.0 or higher. If this is a RAC standby database, make sure the ACTIVE_INSTANCE_COUNT parameter is not set.

ORA-38801: improper value for ORA_EDITION
Cause: An improper value was used for ORA_EDITION when trying to specify an edition to use at login time. The value is not understandable as an identifier, or is too long.

Action: Correct the value for ORA_EDITION and try again.

ORA-38802: edition does not exist
Cause: This error occurred because a reference was made to an edition that does not exist or that the current user does not have privileges on.

Action: Check the edition name and verify that the current user has appropriate privileges on the edition.

ORA-38803: edition is unusable
Cause: This error occurred because a reference was made to an unusable edition.

Action: Use another edition.

ORA-38804: not a legal edition name
Cause: This error occurred because an attempt was made to create an edition called ORA$BASE, DATABASE_DEFAULT, or USER_DEFAULT. These are not legal edition names. Or a value provided as an edition name is not understandable as an identifier, or is too long.

Action: Choose a different name for the edition.

ORA-38805: edition is in use
Cause: An attempt was made to ALTER or DROP an edition that was being used in another session or was the database default edition.

Action: Retry when the edition is not in use and is not the database default edition.

ORA-38806: edition is being altered or dropped
Cause: An attempt was made to use an edition that was in the process of being altered or dropped.

Action: Use a different edition.

ORA-38807: Implementation restriction: an edition can have only one child
Cause: This error occurred because an attempt was made to create more than one child edition for a parent edition.

Action: Create the edition as a child of the leaf edition.

ORA-38808: edition has a usable parent and a usable child
Cause: An attempt was made to make an edition with a usable parent and a usable child edition unusable.

Action: An edition with a usable parent and a usable child edition cannot be made unusable. Retry after either parent or child has been made unusable.

ORA-38809: edition must be unusable
Cause: This error occurred because an attempt was made to drop a usable edition.

Action: Retry after the altering the edition to be unusable.

ORA-38810: Implementation restriction: cannot drop edition that has a parent and a child
Cause: This error occurred because an attempt was made to drop an edition that has a parent and a child edition.

Action: Retry after dropping the parent or child edition.

ORA-38811: need CASCADE option to drop edition that has actual objects
Cause: This error occurred because an attempt was made to drop an edition that has actual objects.

Action: Specify CASCADE option in drop command.

ORA-38812: maximum number of editions reached
Cause: The number of editions has reached the limit.

Action: Drop some editions before creating new ones.

ORA-38813: editions not supported for schema *string*
Cause: The Oracle-supplied schema did not support editions.

Action: Do not attempt to enable editions for the specified Oracle-supplied schema.

ORA-38814: ALTER SESSION SET EDITION must be first statement of transaction
Cause: An attempt was made to execute an edition switch within an open transaction.

Action: Commit or rollback the transaction and reexecute the statement, or use DBMS_SESSION.SET_EDITION_DEFERRED if its deferred effect is appropriate.

ORA-38815: ALTER SESSION SET EDITION must be a top-level SQL statement
Cause: An edition switch failed because it was executed from a PL/SQL block or using recursive SQL.

Action: Execute the statement from a top-level OCI call, or use dbms_session.set_edition if its deferred effect is appropriate.

ORA-38816: edition has a child that inherits objects from the edition
Cause: This error occurred because an attempt was made to drop an edition that a child that inherits objects from the edition.

Action: Retry after the child edition has no inherited objects.

ORA-38817: Insufficient privileges
Cause: You did not have sufficient privileges to execute the subprogram package DBMS_EDITIONS_UTIL.

Action: Obtain the necessary privileges. Please see the package specification for details.

ORA-38818: illegal reference to editioned object *string*.*string*
Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make this object editioned; or do not make the illegal reference.

ORA-38819: user *string* owns one or more objects whose type is editionable and that have noneditioned dependent objects
Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make sure that those objects owned by this user whose type is editionable have no noneditioned dependent objects; or use the FORCE option.

ORA-38820: user has evolved object type
Cause: User could not be edition enabled if it has evolved object type.

Action: Reset the evolved object type first.

ORA-38821: unsupported DBMS_SQL Edition operation
Cause: Could not bind or define ADT, VARRAY, nested table or REF data type when the specified Edition is different from the current edition.

Action: Use the current Edition.

ORA-38822: referential integrity constraints not allowed on editioned views
Cause: An attempt was made to create a referential integrity constraint to or from an editioned view or enable editions for a user that has views with referential integrity constraints.

Action: Do not attempt to create editioned views with referential integrity constraints.

ORA-38823: Crossedition triggers are not allowed to exist when dropping the root edition
Cause: An attempt was made to drop the root edition when enabled crossedition trigger exists.

Action: Drop or disable all the crossedition triggers before dropping the root edition.

ORA-38824: A CREATE OR REPLACE command may not change the EDITIONABLE property of an existing object.
Cause: An attempt was made to replace an existing object with a different value for the EDITIONABLE property.

Action: Switch the EDITIONABLE property in the REPLACE statement, or alter the existing object to have an EDITIONABLE property matching the EDITIONABLE property in the REPLACE statement.

ORA-38825: The EDITIONABLE property of an editioned object cannot be altered.
Cause: An attempt was made to alter the EDITIONABLE property of an object whose type has been enabled for editioning in the owner's schema.

Action: Drop the object and re-create it with the desired EDITIONABLE state.

ORA-38826: The EDITIONABLE property of a TYPE or PACKAGE specification and its body must match.
Cause: An attempt was made to create a TYPE or PACKAGE specification or body whose EDITIONABLE property did not match its counterpart.

Action: Switch the EDITIONABLE property in the CREATE statement, or alter the existing object to have an EDITIONABLE property matching the EDITIONABLE property in the CREATE statement.

ORA-38827: DBMS_SESSION.SET_EDITION_DEFERRED failed due to change of PDB.
Cause: An edition switch failed because an attempt was made to change pluggable database (PDB) before the edition switch took effect.

Action: Do not change PDB before the edition switch takes effect.

ORA-38828: DBMS_SESSION.USE_DEFAULT_EDITION_ALWAYS mode is on.
Cause: A change of the session-level edition failed because the overriding USE_DEFAULT_EDITION_ALWAYS mode was on.

Action: Do not change the session-level edition, or first turn off USE_DEFAULT_EDITION_ALWAYS mode.

ORA-38829: FLASHBACK DATABASE failed before modifying any data.
Cause: The FLASHBACK DATABASE command failed before modifying the the database. Look in the alert log for more information about the failure.

Action: Fix the cause of the error and retry the FLASHBACK DATABASE command.

ORA-38850: an enabled thread missing from control file
Cause: A CREATE CONTROLFILE statement was given that did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

ORA-38851: cannot mark the current instance (redo thread) as disabled
Cause: The standby switchover or failover operation failed because it needs to mark the current instance (redo thread) as disabled.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38852: cannot mark the current instance (redo thread) as disabled
Cause: The open resetlogs or standby activation operation failed because it must use a different instance (redo thread) than the current instance (redo thread) to open the database.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38853: cannot mark instance *string* (redo thread *string*) as disabled
Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38854: cannot mark instance *string* (redo thread *string*) as disabled
Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38855: cannot mark instance *string* (redo thread *string*) as enabled
Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38856: cannot mark instance *string* (redo thread *string*) as enabled
Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38857: cannot mark redo thread *string* as enabled
Cause: The standby switchover or failover operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38858: cannot mark redo thread *string* as enabled
Cause: The open resetlogs or standby activation operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38859: instance *string* (thread *string*) is not ready to be disabled
Cause: The command attempted to switch the instance (thread) into a new log before disabling it. The switch attempt failed because all eligible online logs were either being cleared or not completely archived yet.

Action: Wait a few minutes and retry.

ORA-38860: cannot FLASHBACK DATABASE during instantiation of a logical standby
Cause: The command was not permitted because the controlfile indicates the database was in the process of becoming a logical standby database but the controlfile conversion had not completed.

Action: If in the process of creating a logical standby database, perform the remaining instantiation procedures to completion. If this flashback operation followed a Data Guard failure, permit the errant Data Guard operation to successfully complete. Once the instantiation is complete, reissue the flashback operation.

ORA-38861: flashback recovery stopped before reaching recovery target
Cause: Flashback recovery on the standby ended early because the user attempted to flashback to an SCN or time for which there were no redo logs. Most likely, the user is trying to flashback to a future time in the database that the database has never recovered through. Check the alert log to find out which SCN the database recovered to.

Action: Flashback to an older SCN or acquire the necessary redo logs.

ORA-38862: Flashback database logs are in use.
Cause: The command could not be performed because the flashback database logs were locked by another operation, such as FLASHBACK DATABASE or a query of V$FLASHBACK_DATABASE_LOG.

Action: Wait for the other operation to complete.

ORA-38863: datafile *string* has been restored from an optimized RMAN backup.
Cause: Flashback Database could not flash back the file because it was restored from an RMAN optimized backup with deallocated objects. Flashback cannot revert the file to a time before the last deallocation in the datafile backup.

Action: Restore the file from a backup prior to the Flashback target SCN or time and then retry the command.

ORA-38864: cannot create a guaranteed restore point with user specified SCN or time.
Cause: An SCN or timestamp was specified when creating a guaranteed restore point. This is not supported. You can only create a guaranteed restore point as of the current time.

Action: Avoid this combination of options for creating a restore point.

ORA-38865: cannot create restore point for a future SCN or time.
Cause: An attempt was made to create a restore point with an SCN or timestamp that is in the future.

Action: Revise the SCN or timestamp specified so that it is an SCN or timestamp in the past.

ORA-38866: cannot create restore point for an SCN or time before current database incarnation.
Cause: An attempt was made to create a restore point with an SCN or timestamp that is before the beginning of the current database incarnation.

Action: Revise the SCN or timestamp specified so that it is within current database incarnation.

ORA-38867: database not open: cannot create restore point with the specified timestamp
Cause: An attempt was made to create a restore point with the specified timestamp while the database was not open. The database must be open in order to map the timestamp to an SCN.

Action: Open the database first or pick another way to create the restore point.

ORA-38868: warning: the control file may have incorrect data file structure
Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database and all pluggable databases read-only to synchronize the control file with the database dictionary. You can also force recovery to proceed by invoking recovery again.

ORA-38869: datafile *string* has been restored from an RMAN backup with undo block compression.
Cause: Flashback Database could not flash back the database because a file was restored from an RMAN backup with undo block compression, and the Flashback target was to a time when the missing undo may be needed to open the database.

Action: Restore an earlier backup of the file and retry the command or Flashback to a later time.

ORA-38870: cannot backup a control file that may have incorrect data file structure.
Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database read-only to synchronize the control file with the database dictionary to fix the control file.

ORA-38871: cannot enable flashback before open resetlogs after incomplete recovery.
Cause: To enable flashback on a primary database, the database must be clean without requiring open resetlogs.

Action: Open resetlogs first and then enable flashback database.

ORA-38872: Cannot perform backup control file recovery if Flashback Database is enabled.
Cause: RECOVER DATABASE with the BACKUP CONTROLFILE option, or a database recovery that required the control file be made a backup failed because Flashback Database was enabled or there was a guaranteed restore point.

Action: Disable Flashback Database or remove the guaranteed restore point and retry the command.

ORA-38873: missing incarnation information
Cause: Flashback Database failed because incarnation information was not found in the control file. The Flashback target incarnation was not in the control file or had a missing parent incarnation.

Action: Register logs from the missing incarnations and retry the command.

ORA-38874: cannot flashback data file *string* - missing incarnation information
Cause: Flashback Database failed because incarnation information for the start of the offline range for a file was not found in the control file. Flashback could not update the file's header with the missing incarnation's resetlogs information.

Action: Check the trace log for the offline range of the data file. If redo logs from the missing incarnation can be found, register the logs in the control file and retry the command.

ORA-38875: FLASHBACK DATABASE not started; in test mode
Cause: The FLASHBACK DATABASE command was not performed because it was started in test mode.

Action: No action required.

ORA-38876: redo logs not required
Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs were required to perform the tested FLASHBACK DATABASE command.

Action: No action required.

ORA-38877: required redo logs are available
Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs required to perform the tested FLASHBACK DATABASE command were missing.

Action: No action required.

ORA-38878: required redo log is not available
Cause: A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38879: Cannot flashback data file *string*; may not be able to undo all changes.
Cause: A data file was plugged in when there was a guaranteed restore point, but Flashback Database was not enabled. It is possible that some changes to the data file, after it was converted, were not logged to the Flashback Database logs.

Action: If the FLASHBACK DATABASE command was meant to rewind the database to a time before the file was plugged in, take the data file offline and retry the command. If the FLASHBACK DATABASE command was meant to rewind the database to a time after the file was plugged in, restore the original version of the plugged in file and retry the command.

ORA-38880: Cannot advance compatibility from *string* to *string* due to guaranteed restore points
Cause: Flashback database cannot undo the advance of database compatibility. Therefore, one cannot advance the compatibility of the database while there are guaranteed restore points in the database.

Action: Drop all guaranteed restore points first and retry, or delay the advance of database compatibility to a later time.

ORA-38881: Cannot drop tablespace *string* on primary database due to guaranteed restore points.
Cause: An attempt was made to drop a tablespace on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points first and retry, or delay dropping the tablespace until all guaranteed restore points are removed.

ORA-38882: Cannot drop tablespace *string* on standby database due to guaranteed restore points.
Cause: An attempt was made to drop a tablespace on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38883: Cannot shrink data file *string* on primary database due to guaranteed restore points.
Cause: An attempt was made to shrink a data file on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points first and retry, or delay the data file resize until all guaranteed restore points are removed.

ORA-38884: Cannot shrink data file *string* on standby database due to guaranteed restore points.
Cause: An attempt was made to shrink a data file on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38885: WARNING: Flashback database has been disabled while fast-start failover is enabled.
Cause: Flashback database was disabled while fast-start failover was enabled.

Action: Enable flashback database if fast-start failover is enabled.

ORA-38886: WARNING: Flashback database was disabled due to error when writing flashback database logs.
Cause: Recovery writer (RVWR) encountered an error when writing flashback database logs.

Action: See the error stack in the alert log.

ORA-38887: WARNING: Recovery writer (RVWR) hang due to error when writing flashback database logs.
Cause: An error occurred while writing to the flashback database logs.

Action: Shutdown the instance or turn off flashback database.

ORA-38888: invalid redo thread number
Cause: The provided thread number was invalid.

Action: Specify a valid redo thread number.

ORA-38900: missing mandatory column "*string*" of error log table "*string*"
Cause: Mandatory column of error logging table is not present

Action: Add the named column to the error logging table. Consult ORACLE documentation for the correct data type.

ORA-38901: column "*string*" of table "*string*" must be one of the first "*string*" columns
Cause: Mandatory information column of error logging table is present, but must be at the beginning of the row.

Action: Create the error logging table correctly. Consult ORACLE documentation for the correct format of an error logging table.

ORA-38902: errors in array DML exceed *string*
Cause: The operation failed because the array DML had more errors than can be stored internally for BATCH ERRORs.

Action: Do not use BATCH ERROR mode when array DML has more error rows than the number specified in the error.

ORA-38903: DML error logging is not supported for abstract column "*string*"
Cause: A DML Error Logging operation was attempted on a table which has an ADT, REF, VARRAY, or nested table column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not abstract column types.

ORA-38904: DML error logging is not supported for LOB column "*string*"
Cause: A DML Error Logging operation was attempted on a table which has a CLOB, NCLOB, or BLOB column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not LOB column types.

ORA-38905: DML error logging is not supported for LONG column "*string*"
Cause: A DML Error Logging operation was attempted on a table which has a LONG, or LONG RAW column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not long column types.

ORA-38906: insert into DML Error Logging table "*string*" failed
Cause: An error occurred when attempting to log a DML Error on behalf of the DML Error logging clause. This may be intended if a trigger is defined on the error table (which in turn errors out in certain cases).

Action: Determine root cause of error (in error stack).

ORA-38907: DML error logging is not supported for FILE column "*string*"
Cause: A DML Error Logging operation was attempted on a table which has a BFILE column and the Error Logging table referred to the specified column.

Action: Either don't use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not BFILE column types.

ORA-38908: internal error occurred during DML Error Logging
Cause: An unexpected error occurred while executing recursive SQL to insert a row into the DML Error Logging table.

Action: Report this error to Oracle Support.

ORA-38909: DML Error logging is not supported with BATCH ERROR mode
Cause: A DML Error Logging operation was attempted on a table which has BATCH ERROR mode also specified.

Action: Refrain from using both DML Error Logging and BATCH ERROR mode on the same table.

ORA-38910: BATCH ERROR mode is not supported for this operation
Cause: BATCH ERROR mode specified for this operation.

Action: Refrain from using BATCH ERROR mode with this operation.

ORA-38911: unique constraint (*string*.*string*) violated
Cause: An INSERT statement with a CHANGE_DUPKEY_ERROR_INDEX hint tried to insert a duplicate key into a table.

Action: Either remove the unique restriction or do not insert the key.

ORA-38912: An index must be specified in the index hint
Cause: Index specification was missing in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: In the hint, specify a unique index that exists on the table.

ORA-38913: Index specified in the index hint is invalid
Cause: The index specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint could not be found.

Action: Specify a unique index that exists on the table. The index cannot be a non-unique index or a bitmap index.

ORA-38914: Either mutate the error or ignore row on unique violation
Cause: IGNORE_ROW_ON_DUPKEY_INDEX and CHANGE_DUPKEY_ERROR_INDEX were both specified in the same statement.

Action: You cannot specify both hints in the same statement. Remove one of these two hints, or both, from the statement.

ORA-38915: Multiple indexes in change or ignore duplicate key hint
Cause: Multiple indexes were specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: Only one index must be specified in the hint.

ORA-38916: CHANGE_DUPKEY_ERROR_INDEX hint disallowed for this operation
Cause: CHANGE_DUPKEY_ERROR_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38917: IGNORE_ROW_ON_DUPKEY_INDEX hint disallowed for this operation
Cause: IGNORE_ROW_ON_DUPKEY_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38918: RETRY_ON_ROW_CHANGE hint disallowed for this operation
Cause: RETRY_ON_ROW_CHANGE hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38919: remote table not supported for DML error logging
Cause: A remote table was specified in the DML error logging clause.

Action: You cannot specify a remote table to which errors will be logged. Specify a local table only.

ORA-38950: Source platform *string* not cross platform compliant
Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V$TRANSPORTABLE_PLATFORM.

ORA-38951: Target platform *string* not cross platform compliant
Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V$TRANSPORTABLE_PLATFORM.

ORA-38952: Source database not 10.0.0.0 compatible
Cause: Cross platform transport is not supported unless database compatibility is advanced to 10.0.0.0 or higher

Action: Use the compatible parameter to advance source database compatibility and redo the transport

ORA-38953: Cross platform transport is not supported between source platform *string* and target platform *string*

ORA-38954: Cross platform transport is not supported between source platform identifier *string* and target platform identifier *string*
Cause: The platform identifier in the transported file indicated that the datafile format was different than the target database datafile format.

Action: For a list of supported platforms, query fixed view SYS.V$TRANSPORTABLE_PLATFORM. If both platforms are present, Contact Oracle support

ORA-38955: Source platform *string* not cross platform compliant
Cause: The platform identifier in the transported file indicated that this platform is not supported for a cross platform transport.

Action: For a list of supported platforms, query fixed view SYS.V$TRANSPORTABLE_PLATFORM.

ORA-38956: Target platform *string* not cross platform compliant
Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V$TRANSPORTABLE_PLATFORM.

ORA-38958: Source platform *string* is in different byte order than target platform *string*
Cause: Probably a conversion was not done before the import phase of the transport.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38959: Failed to update block 0 to new version 10 format
Cause: An attempt was made to update block 0 to version 10 format.

Action: check additional error messages and contact Oracle Support Services.

ORA-38960: File *string* from platform *string* is not compatible with current platform *string*
Cause: The file was directly copied to this platform from a platform with a different endian ordering.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38961: data file: *string*
Cause: Reporting file name for details of another error.

Action: See associated error message.

ORA-39000: bad dump file specification
Cause: The user specified a dump file that could not be used in the current job. Subsequent error messages describe the inadequacies of the dump file.

Action: Specify a dump file that is usable for the job.

ORA-39001: invalid argument value
Cause: The user specified API parameters were of the wrong type or value range. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Correct the bad argument and retry the API.

ORA-39002: invalid operation
Cause: The current API cannot be executed because of inconsistencies between the API and the current definition of the job. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with the current job or redefine the job in a manner that will support the specified API.

ORA-39003: unable to get count of total workers alive
Cause: Attempt to get count of total worker processes alive failed.

Action: Check the additional error messages to see what caused the failure. Correct the error, if possible, and try the operation again. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39004: invalid state
Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39005: inconsistent arguments
Cause: The current API cannot be executed because of inconsistencies between arguments of the API call. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with itself.

ORA-39006: internal error
Cause: An unexpected error occurred while processing a Data Pump job. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Contact Oracle Customer Support.

ORA-39012: Client detached before the job started.
Cause: The client detached or ended their session before the Data Pump job was started.

Action: Create new job and remain attached to the job until it is started.

ORA-39013: Remapping the SYSTEM schema is not supported.
Cause: A remap_schema transform with the SYSTEM schema was specified.

Action: Retry the import command without remapping the SYSTEM schema.

ORA-39014: One or more workers have prematurely exited.
Cause: One or more of the worker processes exited before the job was completed. With no workers, the master process will terminate the job.

Action: Rerun the job. If problem persists, contact Oracle Customer Support.

ORA-39015: job is not running
Cause: An API was executed that required the job to be running, but the job was not active.

Action: Retry the API. If problem persists, contact Oracle Customer Support.

ORA-39016: Operation not supported when job is in *string* state.
Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39017: Worker request not supported when job is in *string* state.
Cause: The state of the job precludes the execution of a worker request. This is an internal error.

Action: Contact Oracle Customer Support.

ORA-39018: master process received invalid message number *string*
Cause: Internal Error

Action: Contact Oracle Customer Support.

ORA-39019: invalid operation type *string*
Cause: User specified an invalid operation name on an DBMS_DATAPUMP.OPEN API or an invalid operation name was specified in the master table for a restart API.

Action: Correct the operation name and recreate the job.

ORA-39020: invalid mode type *string*
Cause: User specified an invalid mode on an DBMS_DATAPUMP.OPEN API or an invalid mode was specified in the master table for a restart API.

Action: Correct the mode and recreate the job.

ORA-39021: Database compatibility version *string* is not supported.
Cause: User selected COMPATIBLE as the version on an DBMS_DATAPUMP.OPEN API, but the current database compatibility version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39022: Database version *string* is not supported.
Cause: User selected LATEST as the version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39023: Version *string* is not supported.
Cause: User specified an explicit version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39024: wrong schema specified for job
Cause: Internal error caused by the master process finding inconsistencies between the schemas specified for the job.

Action: Contact Oracle Customer Support.

ORA-39025: jobs of type *string* are not restartable
Cause: Attempt to restart a job which was not restartable.

Action: Recreate the job via the open API.

ORA-39026: master table is inconsistent on validation *string*
Cause: Job cannot be restarted because it failed a validation check. Validation checks are of the form -xx.y where -xx is the value of the PROCESS_ORDER column in the master table where the error was detected and y is the actual validity check for the row.

Action: Recreate the job. If master table has not been modified, but problem persists, contact Oracle Customer Support.

ORA-39027: wrong version of master table
Cause: Job cannot be restarted because the version of the database upon which the job started is different than the current version of the database and the format of the master table has changed between the versions.

Action: Recreate the job.

ORA-39028: cannot restart job from *string* state
Cause: The job was not in a suitable state for restart. Jobs must begin executing before they can be restarted.

Action: Recreate the job.

ORA-39029: worker *string* with process name "*string*" prematurely terminated
Cause: The specified worker process terminated unexpectedly. Subsequent messages describe the reason for the termination.

Action: In many cases, the Data Pump will attempt to automatically restart the worker. If problem persists, contact Oracle Customer Support.

ORA-39030: invalid file type *string*
Cause: An invalid filetype was specified for an DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the filetype parameter and reissue the API request.

ORA-39031: invalid filter name *string*
Cause: An invalid filter name was specified on a DBMS_DATAPUMP.DATA_FILTER API call.

Action: Correct the filter name parameter and reissue the API request.

ORA-39032: Parameter *string* is not supported in *string* jobs.
Cause: The specified parameter was not supported for the specified class of jobs.

Action: Re-create the job with the appropriate mode or operation type.

ORA-39033: Data cannot be filtered under the direct path access method.
Cause: The user specified that the data access method for the job was direct which precludes the use of certain data filters.

Action: Use the SUBQUERY or the SAMPLE data filter with the automatic data access method.

ORA-39034: Table *string* does not exist.
Cause: The user referenced a table in an API that did not exist.

Action: Correct table name and retry API.

ORA-39035: Data filter *string* has already been specified.
Cause: The user has already specified a data filter that matches on the filter name, schema name, and table.

Action: Specify a different data filter.

ORA-39036: invalid metadata filter name *string*
Cause: An invalid metadata filter name was specified on a DBMS_DATAPUMP.METADATA_FILTER API call.

Action: Correct the metadata filter name parameter and reissue the API request.

ORA-39037: Object type path not supported for *string* metadata filter.
Cause: An object type path was specified for the filter, but the filter does not support the object type path parameter.

Action: Remove the object type path parameter.

ORA-39038: Object path "*string*" is not supported for *string* jobs.
Cause: The specified object type path is invalid for the job mode.

Action: Correct the object type path.

ORA-39039: Schema expression "*string*" contains no valid schemas.
Cause: The specified SCHEMA_EXPR filter resulted in no schemas being selected.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39040: Schema expression "*string*" must identify exactly one schema.
Cause: For TABLE mode jobs, the SCHEMA_EXPR filter must identify exactly one schema.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39041: Filter "*string*" either identifies all object types or no object types.
Cause: A Metadata filter specifying path names either returned all objects or no objects in the job.

Action: Correct the the metadata filter specification.

ORA-39042: invalid transform name *string*
Cause: An invalid transform name was specified on a DBMS_DATAPUMP.METADATA_TRANSFORM API call.

Action: Correct the transform name parameter and reissue the API request.

ORA-39043: Object type *string* is not supported for *string*.
Cause: The specified object type is invalid for the specified transform or remap.

Action: Correct the object type.

ORA-39044: Metadata transform *string* has already been specified.
Cause: The user has already specified the metadata transform for the same class of object types.

Action: Specify a different object_type for the transform.

ORA-39045: invalid metadata remap name *string*
Cause: An invalid metadata remap name was specified on a DBMS_DATAPUMP.METADATA_REMAP API call.

Action: Correct the metadata remap name parameter and reissue the API request.

ORA-39046: Metadata remap *string* has already been specified.
Cause: The user has already specified a metadata remap that matches on the remap name and original value.

Action: Specify a different original value.

ORA-39047: Jobs of type *string* cannot use multiple execution streams.
Cause: The user specified a value of parallelism that is precluded by the operation type or mode of the job.

Action: Specify only a parallelism of 1 for this type of job.

ORA-39048: Unable to start all workers; only *string* worker(s) available.
Cause: The full degree of parallelism could not be honored due process limits, resource limits, or other internal errors.

Action: Increase process/resource limits for the job.

ORA-39049: invalid parameter name *string*
Cause: An invalid parameter name was specified on a DBMS_DATAPUMP.SET_PARAMETER API call.

Action: Correct the parameter name and reissue the API request.

ORA-39050: parameter *string* is incompatible with parameter *string*
Cause: Two parameters were set that were incompatible with each other. Only the first parameter setting will be used.

Action: Decide which parameter is to be used and stick to it.

ORA-39051: parameter *string* specified multiple times
Cause: The user has already specified a parameter that matches on the name and the specific parameter doesn't support duplicate definitions.

Action: Specify non-repeatable parameters only once.

ORA-39052: cannot specify SKIP_CURRENT on initial start of a job.
Cause: The user has already specified SKIP_CURRENT for a job that has never executed.

Action: Only specify SKIP_CURRENT when restarting a job.

ORA-39053: parameter or attribute *string* must be defined for a *string* job
Cause: The job being defined cannot be started because it is missing the specified definition.

Action: Specify the omitted parameter or attribute before starting the job.

ORA-39054: missing or invalid definition of the SQL output file.
Cause: The job being defined could not be started because it was missing the file to receive the SQL output of the job, the SQL output file name conflicted with the output LOG file, or the definition was unusable.

Action: Specify a valid directory name and file name for the SQL file.

ORA-39055: The *string* feature is not supported in version *string*.
Cause: The user attempted to use a feature that was not enabled in the database version specified for the current job. Typically, this error occurs if the compatibility level of the database is below the current version of the database or if the user explicitly specifies a version for a Data Pump job.

Action: Specify the current database version as a version parameter for the the job.

ORA-39056: invalid or duplicate log file specification
Cause: The log file for the job was incorrectly specified.

Action: Specify a valid directory name and file name for the log file.

ORA-39057: invalid worker request *string* for *string* jobs.
Cause: The worker process sent a message that wasn't supported for the current job.

Action: Internal error -- contact Oracle Customer Support and report the error.

ORA-39058: current object skipped: *string* of type *string*
Cause: The user specified SKIP_CURRENT when restarting a job. This message is a confirmation that the object will not be imported.

Action: User must manually define the object in the target database.

ORA-39059: dump file set is incomplete
Cause: An IMPORT or SQL_FILE operation was being performed but not all of the files from the EXPORT dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39060: table(s) dropped because of conflict with master table
Cause: A table specified by a job was not included because its definition would collide with the master table definition for the current job.

Action: After the job completes. Import the conflicting tables using a unique job name to avoid conflicts with normal user tables.

ORA-39061: import mode *string* conflicts with export mode *string*
Cause: The mode used for import cannot be used with a dump file set of specified mode. Transportable jobs are not compatible with other modes.

Action: Perform the import using a mode compatible with the export.

ORA-39062: error creating master process *string*
Cause: An attempt to create the listed master process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39064: unable to write to the log file
Cause: Errors were detecting while writing to the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39065: unexpected master process exception in *string*
Cause: An unhandled exception was detected internally within the master control process for the Data Pump job. This is an internal error. messages will detail the problems.

Action: If problem persists, contact Oracle Customer Support.

ORA-39067: Unable to close the log file.
Cause: Errors were detecting while closing the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39068: invalid master table data in row with PROCESS_ORDER=*string*
Cause: A corruption was detected in the master table in the specified row(s). Either the row wasn't found, it was missing columns or had illegal values in its columns.

Action: Rerun the job with an uncorrupted master table.

ORA-39070: Unable to open the log file.
Cause: Errors were detecting while opening the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39071: Value for *string* is badly formed.
Cause: The value of the user specified filter did not contain a legitimate SQL clause. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39076: cannot delete job *string* for user *string*
Cause: Unable to delete a job. Refer to the any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39077: unable to subscribe agent *string* to queue "*string*"
Cause: The Data Pump's communication layer was unable to attach one of its processes to the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39078: unable to dequeue message for agent *string* from queue "*string*"
Cause: The Data Pump's communication layer was unable to retrieve a message from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39079: unable to enqueue message *string*
Cause: The Data Pump's communication layer was unable to send the specified message on the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39080: failed to create queues "*string*" and "*string*" for Data Pump job
Cause: The Data Pump's communication layer was unable to create the status and control queues required for interprocess communication. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Support.

ORA-39081: failed to unsubscribe agent *string* from queue "*string*"
Cause: The Data Pump's communication layer was unable to unsubscribe a process from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39082: Object type *string* created with compilation warnings
Cause: The object in the SQL statement following this error was created with compilation errors. If this error occurred for a view, it is possible that the base table of the view was missing.

Action: This is a warning. The object may have to be recompiled before being used.

ORA-39083: Object type *string* failed to create with error:\n*string*\nFailing sql is:\n*string*
Cause: Examine original error code to determine actual cause

Action: Original error code will contain more information

ORA-39084: cannot detach job *string* for user *string*
Cause: Unable to detach a job from the session. Refer to any following error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39085: cannot update job *string* for user *string*
Cause: Unable to update the fixed table information for a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39086: cannot retrieve job information
Cause: Unable to retrieve fixed table information for a job. Refer to the secondary error messages that follow this one for clarification.

Action: Eliminate the problems indicated by the secondary errors.

ORA-39087: directory name *string* is invalid
Cause: A corresponding directory object does not exist.

Action: Correct the directory object parameter, or create a corresponding directory object with the CREATE DIRECTORY command.

ORA-39088: file name cannot contain a path specification
Cause: The name of a dump file, log file, or sql file contains a path specification.

Action: Use the name of a directory object to indicate where the file should be stored.

ORA-39090: Cannot add devices to file oriented job.
Cause: Attempt to add a device to a job that already contains more than one disk file.

Action: Only specify one file for jobs that contain sequential devices.

ORA-39091: unable to determine logical standby and streams status
Cause: An error occurred when determining if the Data Pump job needed to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39092: unable to set SCN metadata for object "*string*.*string*" of type *string*
Cause: An error occurred when applying a SCN to the specified object to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39093: FLASHBACK automatically enabled to preserve database integrity.
Cause: A Data Pump job was required to enable flashback support to specific SCNs in order to preserve the consistency of a logical standby or streams instantiation.

Action: None

ORA-39094: Parallel execution not supported in this database edition.
Cause: Parallel execution of Data Pump jobs is not supported for this database edition.

Action: Specify a parallelism of 1 for jobs not running on Enterprise Edition databases.

ORA-39095: Dump file space has been exhausted: Unable to allocate *string* bytes
Cause: The Export job ran out of dump file space before the job was completed.

Action: Reattach to the job and add additional dump files to the job restarting the job.

ORA-39096: invalid input value *string* for parameter *string*
Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-39097: Data Pump job encountered unexpected error *string*
Cause: An unexpected, potentially non-fatal error occurred while processing a Data Pump job.

Action: Contact Oracle Customer Support.

ORA-39098: Worker process received data objects while loading metadata. Invalid process order range is *string*..*string*
Cause: This is an internal error. Messages will detail the problem.

Action: If problem persists, contact Oracle Customer Support.

ORA-39099: cannot create index for "*string*" on master table *string*
Cause: One or more indexes couldn't be created on the master table. subsequent error messages describe the failure.

Action: Correct the condition that is preventing the indexes from being created.

ORA-39102: Timeout before master process *string* finished initialization. Master error:
Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39103: Timeout before worker process *string* finished initialization. Worker error:
Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about

the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39104: cannot call this function from a SQL parallel query slave process
Cause: Called a Data Pump process model function from a process which is a SQL parallel query slave process

Action: A SQL parallel query slave process cannot create a Data Pump master process. This is not supported. If this error occurs from a Data Pump client (for example, expdp or impdp), contact Oracle Customer Support and report the error.

ORA-39105: Master process *string* failed during startup. Master error:
Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39106: Worker process *string* failed during startup. Worker error:
Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39107: Master process *string* violated startup protocol. Master error:
Cause: The master process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39108: Worker process *string* violated startup protocol. Worker error:
Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39109: Unprivileged users may not operate upon other users' schemas
Cause: An unprivileged user attempted to reference another user's schema during a Data Pump operation. Because of this, no schemas were were selected for the job.

Action: Retry the operation under a username owning the schema.

ORA-39110: error deleting worker processes
Cause: An attempt to delete the worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39111: Dependent object type *string* skipped, base object type *string* already exists
Cause: During a Data Pump import job, a dependent object is being skipped because its base object already existed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters.

ORA-39112: Dependent object type *string* skipped, base object type *string* creation failed
Cause: During a Data Pump import job, a dependent object is being skipped because its base object creation failed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters

ORA-39113: Unable to determine database version
Cause: The Data Pump was unable to determine the compatibility level and version of the current database using SYS.DBMS_UTILITY.DB_VERSION.

Action: Make sure access to the DBMS_UTILITY package is granted to you. If this is a network job, be sure that access to the DBMS_UTILITY package is granted to you on the remote instance.

ORA-39114: Dump files are not supported for network jobs.
Cause: An attempt was made to add a dumpfile to an Import job that is using a network link to the source database.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39115: *string* is not supported over a network link
Cause: An attempt was made to use an option that is not supported over network links such as the PARTITION_LIST filter.

Action: Do not attempt to use Data Pump features on network jobs if they are not compatible with jobs over the network.

ORA-39116: invalid trigger operation on mutating table *string*.*string*
Cause: A Data Pump load operation failed because a trigger attempted to fire on the table while it was mutating.

Action: Disable trigger(s) on the specified table. Also see ORA-004091.

ORA-39117: Type needed to create table is not included in this operation. Failing sql is:\n*string*
Cause: A create table was attempted and a dependent type does not exist in the dumpfile or on the target database. Either the export or the import Data Pump job was a table mode job and types are not included in table mode jobs.

Action: Determine which type(s) are missing and create them on the target system and run the Data Pump import job again.

ORA-39119: worker process interrupt for delete worker processes call by master process
Cause: The master process that created this worker process called delete worker processes to abort the current operation.

Action: No action is necessary. This is an informational error message.

ORA-39120: Table *string* can't be truncated, data will be skipped. Failing error is:\n*string*
Cause: Table data was about to be loaded into a table that already existed and the table_exists_action parameter is truncate, but the table could not be truncated.

Action: Determine actual cause by looking at base error.

ORA-39121: Table *string* can't be replaced, data will be skipped. Failing error is:\n*string*
Cause: Table data was about to be loaded into a table that already existed and the table_exists_action parameter is replace, but the table could not be dropped.

Action: Determine actual cause by looking at base error.

ORA-39122: Unprivileged users may not perform *string* remappings.
Cause: A user attempted to remap objects during an import but lacked the IMPORT_FULL_DATABASE privilege.

Action: Retry the job from a schema that owns the IMPORT_FULL_DATABASE privilege.

ORA-39123: Data Pump transportable tablespace job aborted\n*string*
Cause: A DBMS_PLUGTS procedure failed and the Data Pump operation could not continue so it was aborted. The DBMS_PLUGTS failure listed describes the original error.

Action: Look at the DBMS_PLUGTS error to determine actual cause.

ORA-39124: dump file name "*string*" contains an invalid substitution variable
Cause: The substitution variable '%' must be followed by '%','u', or 'U'.

Action: Correct the substitution variable in the dump file name and re-enter the command.

ORA-39125: Worker unexpected fatal error in *string* while calling *string* [*string*]
Cause: An unhandled exception was detected internally within the worker process for the Data Pump job while calling the specified external routine. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39126: Worker unexpected fatal error in *string* [*string*] \n*string*
Cause: An unhandled exception was detected internally within the worker process for the Data Pump job. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39127: unexpected error from call to *string* \n*string*
Cause: The exception was raised by the function invocation, a procedural action extension of export.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39128: unexpected DbmsJava error *number* from statement *string*
Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39129: Object type *string* not imported. Name conflicts with the master table
Cause: The table being imported from the remote instance has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39130: Object type *string* not imported. Base object name conflicts with the master table
Cause: The object being imported from the remote instance is dependent on an object that has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39132: object type "*string*"."*string*" already exists with different hashcode
Cause: An object type could not be created because there was already a type with the same name but a different hashcode on the target system. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39133: object type "*string*"."*string*" already exists with different typeid
Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type is used by an existing table. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39134: Cannot include "*string*" tablespace as a Transportable Tablespace
Cause: The user attempt to specify the SYSAUX or SYSTEM tablespace as a member of the transportable tablespace list in the current job. These tablespaces may not be transported between databases.

Action: Specify different tablespaces to be transported.

ORA-39135: File "*string*" is already a member of this dump set
Cause: An attempt was made to add a new file to an export job but a file with the same name already exists in the dump set for the job.

Action: Reenter the new file information using a different file name.

ORA-39136: cannot specify an SCN on a transportable job
Cause: A target SCN was specified for a table in a transportable job by the streams or logical standy components which was not the defaulted SCN for the table.

Action: This is an internal error. Please report it to Oracle support.

ORA-39137: cannot specify a TABLE_EXISTS_ACTION of *string* for a job with no metadata
Cause: A job was defined with the TABLE_EXISTS_ACTION parameter set to REPLACE or SKIP, but without metadata. Without metadata, data could not be loaded for the requested table actions.

Action: Change the setting of the TABLE_EXISTS_ACTION parameter to APPEND or TRUNCATE or supply Metadata with the data.

ORA-39138: Insufficient privileges to load data not in your schema
Cause: An unprivileged user attempted to load data into a different schema.

Action: Use a privileged account if you must load data not in your schema

ORA-39139: Data Pump does not support XMLType objects in version *string*. *string* will be skipped.
Cause: Object had an XMLType column using either an object relational or binary storage format, which is unsupported by Data Pump in the target version.

Action: Use the original export and import utilities to move this object.

ORA-39140: dump file "*string*" belongs to job *string*
Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation, and all files must have been produced by the same export job. One of the files provided does not belong to the original dump file set. For instance, it was created by a different export job than the other files.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39141: dump file "*string*" is a duplicate of dump file "*string*"
Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation. One of the files provided to import was found to be a duplicate of another dump file in the set. This can occur if the files in the dump set were copied or renamed using operating system utilities and the same dump file was inadvertently copied more than once with different destination names.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39142: incompatible version number *string* in dump file "*string*"
Cause: A dump file was specified for an import operation whose version number is incompatible with the dump file version of the Data Pump product currently running on the system. Usually this message indicates that the dump file was produced by a newer version of the Data Pump export utility.

Action: Import this dump file using the Data Pump import utility with the same version as the export which created the file.

ORA-39143: dump file "*string*" may be an original export dump file
Cause: A dump file was specified for an import operation which appears to have been created using the original export utility. These dump files cannot be processed by the Data Pump import utility.

Action: Try using the original import utility to process this dump file.

ORA-39144: file name parameter must be specified and non-null
Cause: No file name was provided in an DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the file name parameter and reissue the API request.

ORA-39145: directory object parameter must be specified and non-null
Cause: No directory object was provided in either an DBMS_DATAPUMP.ADD_FILE API call or to the directory parameter used by the Data Pump command line clients.

Action: Correct the directory object parameter and retry the operation.

ORA-39146: schema "*string*" does not exist
Cause: The specified schema was referenced as the source of a REMAP_SCHEMA parameter, but did not exist in the dump file (for file-based import) or in the source database (for network import).

Action: Specify the correct name of the schema to be remapped.

ORA-39147: cannot migrate Data Pump queue table ownership to this instance
Cause: There are active Data Pump jobs running on another instance in a RAC. All concurrent, active Data Pump jobs must be run on the same instance.

Action: Start this job on the same instance where other active Data Pump jobs are running, or wait until they finish.

ORA-39148: unable to import data into pre-existing queue table *string*.
Table_exists_action of *string* being ignored for this table
Cause: A Data Pump import detected that a queue table that was to be imported already exists. Importing data into pre-existing queue tables is not supported.

Action: If the data from the dump file is desired, then drop the queue table and perform the import again, or use the import parameter table_exists_action=replace.

ORA-39149: cannot link privileged user to non-privileged user
Cause: A Data Pump job initiated be a user with EXPORT_FULL_DATABASE/ IMPORT_FULL_DATABASE roles specified a network link that did not correspond to a user with equivalent roles on the remote database.

Action: Specify a network link that maps users to identically privileged users in the remote database.

ORA-39150: bad flashback time
Cause: A flashback time was specified for the Data Pump job which either could not be parsed or else could not be translated into a system change number (SCN). This typically occurs when specifying a time far in the past.

Action: Specify an explicit SCN for the desired flashback rather than a time.

ORA-39154: Objects from foreign schemas have been removed from import
Cause: An non-privileged user attempted to import objects into a schema other than their own.

Action: Either perform the import from a privileged schema or else remap all schemas that were exported into the username running the import.

ORA-39155: error expanding dump file name "*string*"
Cause: Export was unable to expand the directory object and dump file name into a full file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39156: error parsing dump file name "*string*"
Cause: Export was unable to parse the dump file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39157: error appending extension to file "*string*"
Cause: Export or Import was unable to append the default extension to create the file name. The given file name could be too long or contain illegal characters. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39159: cannot call this function from a non-Data Pump process
Cause: Called a Data Pump process model function from a process which is not a Data Pump process.

Action: Refer to any other error messages for additional information. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39160: error on whats my name call
Cause: Attempt to get the Data Pump process name failed.

Action: Refer to any following error messages for additional information. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39161: Full database jobs require privileges
Cause: Either an attempt to perform a full database export without the EXP_FULL_DATABASE role or an attempt to perform a full database import over a network link without the IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39162: Transportable tablespace job require privileges
Cause: User attempted to perform a transportable tablespace job without being having the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39163: A sample size of *string* is invalid.
Cause: An attempt was made to do data sampling on a table with a value outside of the range of 0 - 100.

Action: Retry the filtering using a sampling number greater than 0 and less than 100.

ORA-39164: Partition *string* was not found.
Cause: If exporting or importing over the network, the user specified a partition name that was not found in the source database. For importing from files, the user specified a partition name not found in the dump file set.

Action: Retry the operation using the correct partition name.

ORA-39165: Schema *string* was not found.
Cause: If exporting or importing over the network, either the user specified a schema name that was not found in the source database or else the user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow them to access another schema. For importing from files, the user specified a schema name not found in the dump file set.

Action: Retry the operation using the correct schema name.

ORA-39166: Object *string* was not found or could not be exported or imported.
Cause: If exporting to files or importing over the network, one of the following occurred: - The object specified did not exist in the source database. - The user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow access to the object. - The VIEWS_AS_TABLES object contained a type that is not supported with the VIEWS_AS_TABLES parameter. If importing from files, the user specified an object name that was not found in the dump file set.

Action: Retry the operation using the correct object name, correct set of privileges, or a view that has only supported types.

ORA-39168: Object path *string* was not found.
Cause: If exporting or importing over the network, the user specified an object type path name that was not found in the source database. For importing from files, the user specified an object type path name not found in the dump file set.

Action: Retry the operation using the correct object type path name.

ORA-39169: Local version of *string* cannot work with remote version of *string*.
Cause: A Data Pump job specified a network link, but the version on the remote database cannot interoperate with the version on the local database.

Action: Do not specify network links between instance running different versions of the database.

ORA-39170: Schema expression *string* does not correspond to any schemas.
Cause: A schema expression or schema list was supplied for a Data Pump job that did not identify any schemas in the source database.

Action: Correct the schema specifications and retry the job.

ORA-39171: Job is experiencing a resumable wait.\n*string*
Cause: The Data Pump job is stalled with one or more of its sessions having a resumable wait. Resumable waits are typically caused by a non-expandable tablespace running out of space. The follow-on message describes the nature of the wait.

Action: Correct the condition causing the wait. This will typically involve adding datafiles to the tablespace that is full.

ORA-39172: Cannot remap transportable tablespace names with compatibility of *string*.
Cause: The user attempted to remap a tablespace name in a transportable tablespace job when the compatibility level was set below 10.1.

Action: Reset the compatibility level of the database to a more recent version.

ORA-39173: Encrypted data has been stored unencrypted in dump file set.
Cause: No encryption password was specified for an export job that involved data that was encrypted in the database.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39174: Encryption password must be supplied.
Cause: No encryption password was supplied to import a dump file set that was created using an encryption password.

Action: Specify the encryption password for the dump file set.

ORA-39175: Encryption password is not needed.
Cause: An encryption password was supplied to import a dump file set that was not created using an encryption password.

Action: No user action is required. This is merely a warning message.

ORA-39176: Encryption password is incorrect.
Cause: The wrong encryption password was supplied to import a dump file set.

Action: Resubmit the job using the correct encryption password for the dump file set.

ORA-39177: invalid compression value *string*
Cause: An invalid value was specified for compression.

Action: Correct the value and recreate the job.

ORA-39178: cannot perform estimate on metadata only jobs
Cause: An estimate was requested for a job by specifying the ESTIMATE or ESTIMATE_ONLY parameter. However, the job was also defined to have no data. These specifications conflict with each other.

Action: Remove one of the conflicting specifications for the job.

ORA-39179: unable to load table "*string*"."*string*" because of OID transform
Cause: The OID transform for the job was set to false and the identified table contained either VARRAYs with non-final types or unscoped REF columns. Both of these column types have embedded OIDs so they cannot be imported correctly when OIDs are not preserved.

Action: You must manually move the data with the specified tables when OIDs are not preserved.

ORA-39180: unable to encrypt ENCRYPTION_PASSWORD
Cause: The specified encryption password was unable to be encrypted for placement within the master table or decrypted when it was to be restored from the master table. Subsequent messages will describe the actual error that caused the encryption to fail.

Action: Fix the problems referenced by the subsequent messages. The most common reason for the encryption to fail is the lack of a security wallet.

ORA-39181: Only partial table data may be exported due to fine grain access control on *string*
Cause: An unprivileged user has tried to export a table that has fine grain access control. The table owner is subjected to access control and may not be able to export all rows in the table. Only the rows that can be seen by that user will be exported. In order to preserve integrity of the table, the user importing the table should have enough privilege to recreate the table with the security policies at import time.

Action: It is strongly recommended that the database administrator handle exporting of this table.

ORA-39182: internal error *string* occurred during compression phase *string*\n
Cause: An unexpected error occurred while compressing data buffers.

Action: Contact Oracle Customer Support.

ORA-39183: internal error *string* ocurred during decompression phase *string*\n
Cause: An unexpected error occurred while decompressing data buffers.

Action: Contact Oracle Customer Support.

ORA-39184: Transportable Data Pump jobs cannot exclude PLUGTS objects
Cause: A Transportable Data Pump job requires all PLUGTS% objects, but the user-supplied exclude filters were excluding these objects.

Action: Reenter command without excluding PLUGTS% objects.

ORA-39185: The transportable tablespace failure list is
Cause: Some of the tablespaces specified for this job could not be exported.

Action: See specific errors for each tablespace, correct the problem, and try again.

ORA-39186: No tablespaces in the specified list exist.
Cause: The tablespaces specified on the EXPORT command did not exist.

Action: Check the list of tablespaces and reenter command with correct set of tablespaces.

ORA-39187: The transportable set is not self-contained, violation list is
Cause: The tablespaces specified for this job did not satisfy the closure checking. The list of violations specified each closure violation.

Action: See specific errors for violation and correct the problem or change the tablespaces on the command line and try again.

ORA-39188: unable to encrypt dump file set
Cause: Data Pump could not create an encrypted dump file set. This message will be accompanied by other messages that give more details about why the encrypted dump file set could not be created. The most common reason for this message is that you are trying to create a dump file set that can be transparently decrypted, and the database external security device is not open.

Action: If the external security device is not open, then open it. If the external security device is not configured, then the only type of encrypted dump file set that you can create is a password-based dump file set.

ORA-39189: unable to decrypt dump file set
Cause: The dump file set could not be decrypted. The reason could be either that an invalid password was entered, or that, when using transparent decryption, the database external security device was not open.

Action: If password-based import was enabled for this dump file set, then supply the correct password. If transparent import was enabled for this dump file set, then ensure that the database external security device is open.

ORA-39190: internal error occurred during encryption phase *string*\n
Cause: An unexpected error occurred while encrypting data buffers.

Action: See the secondary error for more information and contact Oracle Customer Support.

ORA-39191: internal error ocurred during decryption phase *string*\n
Cause: An unexpected error occurred while decrypting data buffers.

Action: See the secondary error for more information and contact Oracle Customer Support.

ORA-39192: table mode jobs with transportable=always and partition filters only allow objects from one table
Cause: Multiple tables are not supported when specifying partitions while using transportable table mode.

Action: Retry the job specifying only one table.

ORA-39193: Table mode jobs do not allow the schema to be wild carded.
Cause: The table filter included a schema expression with the % wild card.

Action: Retry the job specifying actual schemas.

ORA-39194: Table mode jobs require the tables to be comma separated.
Cause: The string describing tables in a table mode job was not comma separated.

Action: Retry the job specifying the tables separated by commas.

ORA-39195: At least one schema in the TABLE_FILTER does not exist.
Cause: The TABLE_FITER specified contains a schema that does not exist.

Action: Retry the job specifying only schemas that exist.

ORA-39200: Link name "*string*" is invalid.
Cause: The name of the network link supplied for a Data Pump job was not usable. Secondary messages identify the problem.

Action: Rerun the job using a valid network link.

ORA-39201: Dump files are not supported for estimate only jobs.
Cause: An attempt was made to add a dumpfile to an Export job that only requested file estimates.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39202: Data cannot be filtered or selected in *string* jobs.
Cause: A data filter was supplied for the specified type of job, but is not supported in the specified job type. From the command line, data filters can be specified by the CONTENT, TABLES (partition specifications), SAMPLE and QUERY parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39203: Partition selection is not supported over a network link.
Cause: Specific partitions were selected for a job operating over a network link.

Action: Remove the partition specifications and rerun the job.

ORA-39204: No subsetting of tablespaces is allowed for transportable import.
Cause: A tablespace filter was applied to a transportable import job that was not performed over a network link. In this case, the tablespace may not be changed from its specification at export time.

Action: Rerun the job without specifying a tablespace filter.

ORA-39205: Transforms are not supported in transportable jobs.
Cause: A metadata transformation such as STORAGE or SEGMENT_ATTRIBUTES has been specified for a transportable Data Pump job.

Action: Rerun the job without specifying a transform.

ORA-39206: A parallel degree of *string* is invalid.
Cause: A bad numeric was supplied for specifying the parallelism to be used within a Data Pump job. The degree of parallelism must be an integer great than 0.

Action: The the degree specifying and retry the parallelism setting.

ORA-39207: Value *string* is invalid for parameter *string*.
Cause: A parameter for a Data Pump job was set with a NULL or invalid value.

Action: Refer to the documentation to identify the legal values for each parameter. Retry the operation with a valid value.

ORA-39208: Parameter *string* is invalid for *string* jobs.
Cause: The a parameter has been specified that is not supported for the specified type of Data Pump.

Action: Remove the parameter specification and retry the operation.

ORA-39209: Parameter *string* requires privileges.
Cause: Use of the specified privileges requires the user to have the IMP_FULL_DATABASE role for import jobs or the EXP_FULL_DATABASE role for export jobs.

Action: Remove the parameter specification and retry the operation.

ORA-39210: A PCTSPACE adjustment of *string* is invalid.
Cause: User specified a storage space transformation that was out of range. Values for PCTSPACE must be greater than zero.

Action: Retry the operation with a valid PCTSPACE value.

ORA-39211: unable to retrieve dumpfile information as specified
Cause: User specified an invalid or inaccessible file with the specified filename and directory object.

Action: Retry the operation with a valid directory object and filename.

ORA-39212: installation error: XSL stylesheets not loaded correctly
Cause: The XSL stylesheets used by the Data Pump Metadata API were not loaded correctly into the Oracle dictionary table "sys.metastylesheet." Either the stylesheets were not loaded at all, or they were not converted to the database character set.

Action: Connect AS SYSDBA and execute dbms_metadata_util.load_stylesheets to reload the stylesheets.

ORA-39213: Metadata processing is not available
Cause: The Data Pump could not use the Metadata API. Typically, this is caused by the XSL stylesheets not being set up properly.

Action: Connect AS SYSDBA and execute dbms_metadata_util.load_stylesheets to reload the stylesheets.

ORA-39214: Data Pump does not support external tables with encrypted columns. *string* will not be exported
Cause: The object is an external table with encrypted columns and this is unsupported with Data Pump.

Action: External table must be manually recreated on the target system.

ORA-39216: object type "*string*"."*string*" hashcode or version number mismatch
Cause: An object type in a transportable tablespace set could not be used because there was a type with the same name but a different hashcode (and type definition) or the same hashcode but different version numbers for the type on the target system. Tables in the transportable tablespace set that use this object type cannot be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39217: object type "*string*"."*string*" typeid mismatch
Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type or a dependent type is used by an existing table. Tables in the transportable tablespace set that use this object be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39218: type check on object type "*string*"."*string*" failed
Cause: The type check on a type failed. Therefore, the table create for the table which uses the type also fails.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39219: directory object name is too long
Cause: The directory object name provided to the Data Pump Job was invalid because its length was greater than 30 characters.

Action: Retry the operation with a valid directory object name.

ORA-39220: file name is too long
Cause: The file name provided to the Data Pump Job was invalid because its length was greater than 4000 characters.

Action: Retry the operation with a valid file name.

ORA-39221: Specifying data filters is invalid when dumpfiles do not contain table data.
Cause: A data filter was supplied for an import job, but the dumpfile does not contain any table data. The export command created a dumpfile with metadata only. No table data was included. From the command line, data filters can be specified by the CONTENT, SAMPLE and QUERY parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39222: Unable to create global temporary master table *string*
Cause: Data Pump tried to create a global temporary master table but could not. The errors that follow describe why the table could not be created.

Action: Examine and fix the problems described in the additional errors.

ORA-39223: Internal Data Pump error. Master table information for version *string* not found.
Cause: An unexpected error occurred while processing the job. The data in an internal table could not be found.

Action: Contact Oracle Support Services.

ORA-39224: *string* row(s) were rejected with the following error:\n*string*
Cause: These rows were not loaded due to constraint or index violations.

Action: Retry the operation when row data is fixed.

ORA-39228: Unable to construct a unique departitioned object name for *string string*.*string*:*string* when defaulted.
Cause: All (sub)partitions in the job were to be created as individual objects and the renaming was defaulted. The job will attempt to create unique object names, but the name creation algorithm was unable to find a unique object name for the specified (sub)partition.

Action: Specify a rename_table transform to use or delete some of the existing objects causing the name conflicts.

ORA-39230: Service name *string* is not available
Cause: The specified resource service name for the Data Pump job was not available.

Action: Pick a service name that the user is authorized to use.

ORA-39231: invalid data remap name: *string*
Cause: The specified type of data remapping was not supported.

Action: Only COLUMN_FUNCTION data remaps are supported. Retry the operation using a supported data remap name.

ORA-39232: invalid remap function: *string*
Cause: The specified package function for performing data remapping was not found.

Action: Either create the specified package function or else grant the user access to the function.

ORA-39233: invalid remap column name: *string*
Cause: The column name specified for the data remapping either does not exist in the specified table, is not a scalar column, or is not supported.

Action: Specify a scalar column name within the table to be remapped.

ORA-39234: Data cannot be remapped under the direct path access method.
Cause: Data remapping was requested on a job that requires the direct path access method. Data remapping can only be performed using the external table access method.

Action: Retry the job without specifying any access method.

ORA-39235: data remap *string* has already been specified
Cause: A data remap has already been specified for the indicated column. Only one data remap may be defined for a column.

Action: Remove one of the data remap specifications for the job.

ORA-39237: Failed to load XML document *string*. Compare process aborted.
Cause: An error occurred while performing XML difference parse.

Action: Resubmit XML compare request with valid document.

ORA-39238: XML node attribute differences are not supported.
Cause: MDAPI XML difference parsing did not support node attributes.

Action: Resubmit XML compare request with valid document.

ORA-39239: No differences found.
Cause: XML documents compared were identical.

Action: No action required.

ORA-39240: Error while processing difference document.
Cause: Error occurred in the MDAPI difference writer.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39242: Unable to export/import *string* due to table attributes.
Cause: See the Data Pump documentation for an explanation of what table attributes prevent an export or import from succeeding.

Action: Resolve conflicting table attributes.

ORA-39243: Import job requires 'TRANSPORT_DATAFILES' parameter.
Cause: The export job used 'TRANSPORTABLE=ALWAYS' and the import job requires TRANSPORT_DATAFILES to be specified.

Action: Specify the transport datafiles associated with this job.

ORA-39245: import job requires export dump file "*string*"
Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job. The import log file also lists the export names of the missing files.

ORA-39246: cannot locate master table within provided dump files
Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included. In particular, the dump file containing the export job's master table was not provided.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39251: Importing a SecureFile LOB with metadata into a scalar, column *string*, is not allowed.
Cause: An import of a SecureFile LOB with metadata into a scalar column was attempted.

Action: Change the scalar column to a SecureFile LOB.

ORA-39252: Importing a SecureFile LOB with metadata or archived SecureFile LOB into a BasicFile LOB is not allowed
Cause: An attempt was made to import a SecureFile LOB that contained metadata or was archived at the time of export into a BasicFile LOB.

Action: Perform the import into a different table, perform DBMS_LOB.ARCHIVE_GET on any archived SecureFile LOBs, and then use INSERT AS SELECT to migrate the SecureFile LOB data to the BasicFile LOB.

ORA-39253: Specified tables do not exist.
Cause: The tables specified for this export job did not exist.

Action: Check the specified table list and make sure the tables listed exist.

ORA-39254: Direct path load not possible into preexisting table with column that has a default value and is not being loaded or is default on null; table *string*, column *string*
Cause: The direct path access method could not be used to load into a preexisting table that has a column with a default value and that column is not being loaded into, or the column is default on null.

Action: Remove the ACCESS_METHOD parameter from the import command line.

ORA-39255: Failed to fetch PLUGTS_BLKs.
Cause: The Data Pump expected a PLUGTS_BLK object to be exported but none were.

Action: Contact Oracle Support Services.

ORA-39256: Transportable tablespace Data Pump jobs from read-only databases not supported.
Cause: The remote database was read-only and Data Pump export jobs using transportable tablespace over a network link require the remote database to be read/write.

Action: Use Data Pump without transportable tablespace or make the remote database read/write.

ORA-39258: Cannot rename cluster.
Cause: DBMS_METADATA_DIFF was comparing two clusters with different names. There is no SQL ALTER statement to rename a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39259: Cannot add column to cluster.
Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to add a column to a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39260: Cannot delete column from cluster.
Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to delete a column from a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39261: Cannot modify column in cluster.
Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to modify a column in a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39262: Cannot alter size for hash cluster.
Cause: DBMS_METADATA_DIFF was comparing two hash clusters with different sizes. There is no SQL ALTER statement to modify the size of a hash cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39263: Cannot alter PARALLEL INSTANCES.
Cause: DBMS_METADATA_DIFF was comparing two objects, both with PARALLEL but with different INSTANCES values. There is no SQL ALTER statement to modify PARALLEL INSTANCES.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39264: Cannot alter type of table: *string*
Cause: DBMS_METADATA_DIFF was comparing tables of different types: relational table, object table or XMLType table. There is no SQL ALTER statement to change a table's type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39265: Cannot alter object_type of object table: *string*
Cause: DBMS_METADATA_DIFF was comparing object tables based on different object types. There is no SQL ALTER statement to change an object table's object type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39266: Cannot add, remove, or modify partitioning attributes.
Cause: DBMS_METADATA_DIFF was comparing two tables with different partitioning attributes. There is no SQL ALTER statement to resolve these differences.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39267: Cannot remove default from table column.
Cause: DBMS_METADATA_DIFF was comparing two table columns, one with a default value, one without. There is no SQL ALTER syntax to remove a column default.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39268: Cannot alter a real column to make it virtual or vice versa.
Cause: DBMS_METADATA_DIFF was comparing two table columns, one virtual, one real. There is no SQL ALTER statement to make a virtual column real or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39269: Cannot alter a column of type LONG to anything other than LOB.
Cause: DBMS_METADATA_DIFF was comparing two table columns, the first of type LONG, the second of a data type other than LOB. There is no SQL ALTER statement to modify a long data type to anything other than a CLOB or NCLOB.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39270: Cannot alter a LOB column to another data type.
Cause: DBMS_METADATA_DIFF was comparing two table columns, the first of type CLOB, NCLOB or BLOB, the second of some other data type. There is no SQL ALTER statement to change the data type of a LOB column.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39271: Cannot alter substitutability of column: *string*
Cause: DBMS_METADATA_DIFF was comparing two table columns. This error may occur because the first column is substitutable and the second column is not, or because the first column is OF TYPE and the second column is substitutable.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39272: Cannot alter organization of nested table column: *string*
Cause: DBMS_METADATA_DIFF was comparing two nested table columns. One was a heap table, the other an index-organized table. There is no SQL ALTER statement to change the organization of a nested table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39273: Cannot alter storage type of XMLType column: *string*
Cause: DBMS_METADATA_DIFF was comparing two XMLType columns with different storage types (CLOB, BINARY, OBJECT RELATIONAL). There is no SQL ALTER statement to change the storage type of an XMLType column.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39274: Cannot alter physical organization of table.
Cause: DBMS_METADATA_DIFF was comparing two tables with different physical organizations (heap, index organized, external, or cluster). There is no SQL ALTER statement to change the physical organization of a table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39275: Cannot alter INITIAL storage option.
Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's INITIAL storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39276: Cannot alter MINEXTENTS storage option.
Cause: DBMS_METADATA_DIFF was comparing two tables with different MINEXTENTS storage options. There is no SQL ALTER statement to change a table's MINEXTENTS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39277: Cannot alter FREELIST GROUPS storage option.
Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's FREELIST GROUPS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39278: Cannot alter table with segments to segment creation deferred.
Cause: DBMS_METADATA_DIFF was comparing two tables, the first with allocated segments, the second with deferred segments. There is no SQL ALTER statement to change a table which already has segments to segment creation deferred.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39279: Cannot alter tablespace of overflow segment.
Cause: DBMS_METADATA_DIFF was comparing two index organized tables whose overflow segments have different tablespaces. There is no SQL ALTER statement to change an overflow segment's tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39280: Cannot drop overflow segment.
Cause: DBMS_METADATA_DIFF was comparing two index organized tables, the first with an overflow segment, the second without. There is no SQL ALTER statement to drop an overflow segment.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39281: Cannot alter COMPRESS in index-organized materialized view.
Cause: DBMS_METADATA_DIFF was comparing two index organized materialized views with different key compression values. There is no SQL ALTER statement to modify the key compression of an index organized materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39282: Cannot alter default tablespace of partitions in partitioned table.
Cause: DBMS_METADATA_DIFF was comparing two partitioned tables with different default tablespaces. There is no SQL ALTER statement to change the default tablespace of a partitioned table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39283: Cannot drop, split or merge hash partition: *string*
Cause: DBMS_METADATA_DIFF was comparing two tables or indexes partitioned or subpartitioned by hash, and a (sub)partition in the first object was not present in the second object. Partition maintenance operations such as drop, split or merge can only be performed on list or range (sub)partitioned objects.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39284: Cannot alter the list values of a list subpartition: *string*
Cause: DBMS_METADATA_DIFF was comparing two tables subpartitioned by list, one of which has a subpartition with the same name but a different values list as a subpartition in the other. There is no SQL ALTER statement to change the list values of a list subpartition.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39285: Cannot alter index key compression.
Cause: DBMS_METADATA_DIFF was comparing two indexes with different values of key compression. There is no SQL ALTER statement to change index key compression.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39286: Cannot convert between types of index.
Cause: DBMS_METADATA_DIFF was comparing two indexes of different types, for example, a table index, a domain index, a cluster index, a bitmap index or a bitmap join index There is no SQL ALTER statement to change the type of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39287: Cannot alter index column list.
Cause: DBMS_METADATA_DIFF was comparing two indexes with different column lists. There is no SQL ALTER statement to change the columns of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39288: Cannot alter index base table.
Cause: DBMS_METADATA_DIFF was comparing two table indexes defined on different tables. There is no SQL ALTER statement to change the base table of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39289: Cannot add or drop local index partition or subpartition: *string*
Cause: DBMS_METADATA_DIFF was comparing two locally partitioned indexes with different partitions or subpartitions. There is no SQL ALTER statement to add or drop a partition or subpartition of a locally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39290: Cannot drop a partition of a globally partitioned index.
Cause: DBMS_METADATA_DIFF was comparing two globally partitioned indexes and a partition in the first index does not exist in the second index. There is no SQL ALTER statement to drop a partition of a globally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39291: Cannot alter index storage option: *string*
Cause: DBMS_METADATA_DIFF was comparing two indexes with different values for the specified storage option. There is no SQL ALTER statement to change this storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39292: Cannot alter join table of bitmap join index.
Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join tables. There is no SQL ALTER statement to alter the join tables of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39293: Cannot alter join condition of bitmap join index.
Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join conditions. There is no SQL ALTER statement to alter the join condition of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39294: Cannot alter indextype of domain index.
Cause: DBMS_METADATA_DIFF was comparing two bitmap domain indexes with different indextypes. There is no SQL ALTER statement to alter the indextype of a domain index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39295: Cannot alter index base cluster.
Cause: DBMS_METADATA_DIFF was comparing two cluster indexes defined on different clusters. There is no SQL ALTER statement to change the base cluster of a cluster index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39296: Cannot alter index partitioning type or partitioning columns.
Cause: DBMS_METADATA_DIFF was comparing two indexes with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way an index is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39297: Cannot alter materialized view attribute: *string*
Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible attributes. There is no SQL ALTER statement to change this attribute of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39298: Cannot alter materialized view partitioning type or partitioning columns.
Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39299: Cannot alter materialized view physical organization.
Cause: DBMS_METADATA_DIFF was comparing two materialized views with different physical organizations: heap, index organized, etc. There is no SQL ALTER statement to change the index organization of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39300: Cannot alter materialized view log partitioning type or partitioning columns.
Cause: DBMS_METADATA_DIFF was comparing two materialized view logs with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view log is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39301: Cannot alter values recorded in materialized view log: *string*
Cause: DBMS_METADATA_DIFF was comparing two materialized view logs that are recording different values, and the set of values in the first materialized view log cannot be changed to that in the second materialized view log. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39302: Cannot alter tablespace of materialized view log.
Cause: DBMS_METADATA_DIFF was comparing two materialized view logs which have different tablespaces. There is no SQL ALTER statement to change the tablespace of a materialized view log.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39303: Cannot alter attribute of queue: *string*
Cause: DBMS_METADATA_DIFF was comparing two advanced queues with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39304: Cannot alter attribute of queue table: *string*
Cause: DBMS_METADATA_DIFF was comparing two AQ queue tabless with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39305: Cannot alter attribute of sequence: *string*
Cause: DBMS_METADATA_DIFF was comparing two sequences with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39306: Cannot alter attribute of trigger: *string*
Cause: DBMS_METADATA_DIFF was comparing two triggers with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39307: Cannot alter attribute of type: *string*
Cause: DBMS_METADATA_DIFF was comparing two types with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39308: Cannot alter attribute of view: *string*
Cause: DBMS_METADATA_DIFF was comparing two views with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39309: Cannot alter tablespace between bigfile and smallfile.
Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one bigfile, one smallfile. There is no SQL ALTER statement to change a tablespace from smallfile to bigfile or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39310: Cannot alter tablespace type.
Cause: DBMS_METADATA_DIFF was comparing two tablespaces of different types: permanent, temporary or undo. There is no SQL ALTER statement to change the type of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39311: Cannot alter tablespace blocksize.
Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different blocksizes. There is no SQL ALTER statement to change the blocksize of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39312: Cannot alter tablespace encryption.
Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one encrypted, one not. There is no SQL ALTER statement to change the encryption property of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39313: Cannot alter tablespace flashback mode.
Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one in flashback mode, one not. There is no SQL ALTER statement to alter the flashback mode of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39314: Cannot alter tablespace extent_management.
Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different extent management properties. There is no SQL ALTER statement to alter the extent management properties of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39315: Cannot drop the first data file from a permanent or undo tablespace.
Cause: DBMS_METADATA_DIFF was comparing two permanent or undo tablespaces. The first data file in the first tablespace is missing from the second tablespace. There is no SQL ALTER statement to drop the first data file from a permanent or undo tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39316: Cannot resize a data file in a smallfile tablespace.
Cause: DBMS_METADATA_DIFF was comparing two smallfile tablespaces. A data file in the first tablespace is of a different size from the corresponding data file in the second tablespace. There is no SQL ALTER statement to resize a data file in a smallfile tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39317: Cannot change the segment space management of a tablespace.
Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different segment space management. There is no SQL ALTER statement to change the segment space management of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39318: Cannot alter user name.
Cause: DBMS_METADATA_DIFF was comparing two users with different names. There is no SQL ALTER statement to change the name of a user.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39319: Cannot undo password expiration.
Cause: DBMS_METADATA_DIFF was comparing two users and the first user had an expired password. There is no SQL ALTER statement to undo the expiration of a user password.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39320: Column names do not match between export and import databases.
Cause: The column names of the table being imported did not match the column names of the preexisting table.

Action: Ensure the column names match between export and import database.

ORA-39321: Cannot alter functional index or virtual expression column: *string*
Cause: Altered column was referenced in a virtual column or functional index expression. There is no SQL ALTER statement to change a column which is referenced in one of these types of expressions.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39322: Cannot use transportable tablespace with TIMESTAMP WITH TIME ZONE columns and different time zone version.
Cause: The source database was at a different time zone version than the target database and there were tables in the dumpfile with TIMESTAMP WITH TIME ZONE columns.

Action: Convert the target database to the same timezone version as the source database or use Data Pump without transportable tablespace.

ORA-39323: cannot load data from external table dump file "*string*"
Cause: A dump file was specified for an import operation that had been created with external tables using the ORACLE_DATAPUMP access driver. This type of dump file cannot be processed using the Data Pump import utility.

Action: Access the data in this dump file with external tables using the ORACLE_DATAPUMP access driver.

ORA-39324: cannot load data from Data Pump dump file "*string*"
Cause: A dump file was specified for a load operation that had been created using the Data Pump. This type of dump file cannot be processed by external tables using the ORACLE_DATAPUMP access driver.

Action: Access the data in this dump file using the Data Pump.

ORA-39325: TABLE_EXISTS_ACTION cannot be applied to *string*.
Cause: An object was already in existence that uses a name in common with this table. The name collision could be the table name, a constraint, a LOB storage table, or something else in the table definition.

Action: Drop the existing object before running Data Pump.

ORA-39326: cannot load data into table, *string*, due to an unusable index
Cause: An unusable index existed on the table. This index prevented data from being loaded into the table associated with this index.

Action: Either drop the unusable index or make it valid before attempting the import operation.

ORA-39327: Oracle Database Vault data is being stored unencrypted in dump file set.
Cause: No encryption was specified for an export job that involved data from an Oracle Database Vault realm.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39328: encryption password is too long
Cause: The encryption password provided to the Data Pump job was invalid because its length was greater than the maximum allowed. When using the password to encrypt the dump file set, the maximum length is 1000 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39329: Tablespace *string* needs to be locally managed.
Cause: An attempt was made to run an Oracle Data Pump job with the TRANSPORTABLE=ALWAYS parameter. Tablespaces that contain data for EARLY_OPTIONS in an Oracle Data Pump job run with FULL=Y and TRANSPORTABLE=ALWAYS parameter need to be locally managed.

Action: Run the Oracle Data Pump job without the TRANSPORTABLE parameter set to ALWAYS.

ORA-39331: Wallet is not open on remote node.
Cause: The security module wallet was not open on the remote node.

Action: Open the wallet on the remote node.

ORA-39339: Table *string* was skipped due to transportable import and TSTZ issues resulting from time zone version mismatch.
Cause: The source database is at a different time zone version than the target database and this table contains TIMESTAMP WITH TIME ZONE data.

Action: Convert the target database to the same time zone version as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39340: unsupported object, *string* will be skipped.
Cause: Oracle Data Pump encountered an object type that it currently does not support.

Action: Manually move the object to the target database.

ORA-39341: Cannot convert an existing column into an identity column.
Cause: An attempt was made to convert an existing column into an identity column. There is no SQL ALTER statement that will convert an existing column into an identity column.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39342: Internal error - failed to import internal objects tagged with *string* due to *string*.
Cause: Oracle Data Pump encountered an internal tagged object that failed to import properly. All other objects with the same tag will be skipped.

Action: Contact Oracle Support Services.

ORA-39343: Object type *string* failed to create returning error:\n*string*\n
Cause: The object type could not be created. Examine the original error code to determine the actual cause.

Action: The original error code will contain more information.

ORA-39345: Warning: possible data loss in character set conversions
Cause: Oracle Data Pump displayed this message at the start of the import operation because it determined that the character set or the NCHAR character set used by the export database was different from that of the target database and also that the target database character set was not a superset of the export database character set.

Action: No specific user action is required.

ORA-39346: data loss in character set conversion for object *string*
Cause: Oracle Data Pump import converted a metadata object from the export database character set into the target database character set prior to processing the object. Some characters could not be converted to the target database character set and so the default replacement character was used.

Action: No specific user action is required. This type of data loss can occur if the target database character set is not a superset of the export database character set.

ORA-39347: Character data loss was detected during conversion, the row was rejected.
Cause: The row contained characters that did not exist in the destination character set.

Action: No specific user action is required. The destination character set must be a superset of the source character set to avoid data loss.

ORA-39352: Wrong number of TRANSPORT_DATAFILES specified: expected *string*, received *string*
Cause: The number of TRANSPORT_DATAFILES specified on the impdp command was not correct.

Action: Specify the correct TRANSPORT_DATAFILES for this transportable job.

ORA-39353: Data was not imported for *string*. Cannot locate the time zone version *string* file.
Cause: This table contains TIMESTAMP WITH TIME ZONE data and Oracle Data Pump needed to load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39357: \nWarning: Oracle Data Pump operations are not typically needed when connected to the root or seed of a container database.\n
Cause: The Oracle Data Pump client was attached to the root or seed container database.

Action: Continue if this is the desired connection string or attach to a pluggable database within the container database.

ORA-39358: Export dump file version *string* not compatible with target version *string*
Cause: The Oracle Data Pump export job version was newer than the target compatibility version.

Action: Upgrade the target database to a compatibility level of at least the export job version, or rerun the export job with a job version that is lower than or equal to the compatibility version of the target database.

ORA-39359: Source time zone version is *string* and target time zone version is *string*.
Cause: The time zone version of the source database is not the same as the time zone version of the target database.

Action: Tables containing TIMESTAMP WITH TIME ZONE data cannot be imported with transportable tablespace technology when time zone versions are different between the export and target databases. All affected tables will be reported during

the import job and will not be created. If any are reported, convert the target database to the same time zone version as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39360: Table *string* was skipped due to transportable import and TSLTZ issues resulting from time zone mismatch.
Cause: The time zone of the source database is different than the time zone of the target database and this table contains TIMESTAMP WITH LOCAL TIME ZONE data.

Action: Convert the target database to the same time zone as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39361: Source time zone is *string* and target time zone is *string*.
Cause: The time zone of the source database is different than the time zone of the target database.

Action: Tables containing TIMESTAMP WITH LOCAL TIME ZONE data cannot be imported with transportable tablespace technology when time zones are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39363: Type evolution could not be preserved for *string*
Cause: Trying to apply each version of the type during import resulted in compilation warnings. The type was successfully recreated to the latest version only.

Action: Export dump files as well as transportable tablespaces that contain earlier versions of this type cannot be imported on top of this type definition.

ORA-39364: encryption password is too long
Cause: The encryption password provided to the Oracle Data Pump job was invalid because its length was greater than the maximum allowed. When using the password to encrypt the dump file set, the maximum length is 128 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39366: disable table lock on *string*.*string* failed with:\n*string*\n
Cause: Examine the original error code to determine the actual cause.

Action: The original error code contains more information.

ORA-39367: Statistics are being skipped. Cannot locate the time zone version *string* file.
Cause: Importing statistics requires that the Oracle Data Pump load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39368: cannot alter partition varray column properties
Cause: DBMS_METADATA_DIFF was comparing two partitioned tables. There is no SQL ALTER statement to change varray column properties.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39369: some rows may not be exported for *string* due to block corruption
Cause: The corrupted data blocks were ignored when Oracle Data Pump was exporting the table.

Action: No action is required.

ORA-39370: remap value *string* is too long
Cause: The remap value provided to the Oracle Data Pump job was invalid because its length was greater than the maximum allowed.

Action: Retry the operation with a valid remap value.

ORA-39371: cannot specify partition in remap_table without departitioning
Cause: The 'remap_table' value specified a partition but the tables were not being departitioned.

Action: Either remove the partition name in the 'remap_table' parameter or add the 'partition_options=departition' parameter.

ORA-39372: \nWarning: Oracle Data Pump is exporting from a database that supports long identifiers to a version that does not support long identifiers.\n
Cause: The Oracle Data Pump job was exporting from a database version that has support for long identifiers and may have objects with long identifiers but the target version does not support long identifiers.

Action: Continue if this is the desired action but be aware that some objects may not be exported and some that are exported will not be able to be imported to the target databse.

ORA-39373: cannot export *string* to version *string* due to long identifiers
Cause: This object had long identifiers and could not be exported to the target version specified in the Oracle Data Pump command.

Action: If this is the desired action, then continue, but be aware that this object will not be included in the dump file. If this is not the desired action then change the version parameter to a value greater than or equal to 12.2.0.0.0.

ORA-39374: Statistics failed to export. Failing error is \n*string*
Cause: The statistics failed to export.

Action: Examine the original error code to determine the actual cause.

ORA-39375: Statistics failed to import. Failing error is \n*string*
Cause: The statistics failed to import.

Action: Examine the original error code to determine the actual cause.

ORA-39376: invalid data encountered (*string*)
Cause: Optional data validation detected invalid data while accessing external table data.

Action: See trace files for details of the problem.

ORA-39377: altering table read-only *string*.*string* failed with:\n*string*\n
Cause: Altering the table to read-only failed.

Action: Examine the original error code to determine the actual cause.

ORA-39378: Data Pump *string* import job conflicts with underscore parameter *string*
Cause: The mode used for import cannot be used with the underscore parameter.

Action: Unset the underscore parameter and retry the import.

ORA-39379: Logging for table *string* may not be restored.
Cause: The table was created with NO LOGGING specified and the restore to the original value failed.

Action: Verify the logging attributes on the table.

ORA-39380: Cannot alter tablespace with lost write protection.
Cause: DBMS_METADATA_DIFF was comparing two tablespaces. There is no SQL ALTER statement to change tablespace lost write protection.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39381: Cannot add datafile to bigfile tablespace.
Cause: DBMS_METADATA_DIFF was comparing two tablespaces. Datafile can not be added to a bigfile tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39382: There are *string* cursors left open in the *string* package.
Cause: This is an internal error. The identified package left some cursors opened.

Action: Contact Oracle Support Services.

ORA-39383: There is more data loss than reported for object type *string*.
Cause: The maximum number of replacement characters for each read operation prevented all objects within this object type that lost data from being found. There should be one or more messages preceding this one that indicate data loss for specific objects within the named object type. However, this message indicates that there may be more objects within the named object type that lost

Action: No specific user action is required.

ORA-39384: Warning: User *string* has been locked and the password expired.
Cause: Oracle Data Pump displayed this message while importing users because it determined that a user was created with a password version that is no longer supported. See the documentation for PASSWORD_VERSIONS in the system view DBA_USERS for more information.

Action: Connect AS SYSDBA and unlock the account and set a password for the user. This can be done by issuing an "ALTER USER *username* ACCOUNT UNLOCK;" command followed by an "ALTER USER *username* IDENTIFIED BY *password*;" command. See the documentation for the SQLNET.ORA parameter SQLNET.ALLOWED_LOGON_VERSION_SERVER which explains how to control which password versions will be created when the password for the user is reset.

ORA-39385: Data was not imported for *string*.
Cause: The Data Pump export job had an unreported problem while exporting the data for this table, partition, or subpartition.

Action: Retry the export command including the data for this table, partition, or subpartition.

ORA-39386: cannot load data into sharded table from sharded catalog for table *string*
Cause: Data pump import operation was trying to load table data into a sharded table from the sharded catalog database. Table data for sharded tables must be loaded into the sharded databases.

Action: Use the data pump to load the table data into the sharded database.

ORA-39387: cannot load metadata into a sharded database
Cause: Data pump import operation was trying to load metadata into a sharded database.

Action: Metadata is propagated to the sharded database from the sharded catalog.

ORA-39388: cannot use transportable tablespace to export from a sharded database
Cause: An attempt was made to export from a sharded database using transportable tablespace.

Action: Perform this operation without transportable tablespace.

ORA-39389: no form of transportable export is allowed from a sharded catalog
Cause: An attempt was made to export from a sharded catalog using a form of transportable Data Pump.

Action: Perform this operation without transportable data movement.

ORA-39390: cannot use Oracle Data Pump with a network link in a sharded environment
Cause: An attempt was made to perform an Oracle Data Pump operation over a network link with either the source or target database being sharded.

Action: Perform this operation without a network_link parameter.

ORA-39391: maximum number of Data Pump jobs (*string*) exceeded
Cause: The value of the MAX_DATAPUMP_JOBS_PER_PDB initialization parameter exceeded the allowed value.

Action: Retry the operation or increase the maximum allowed value of the MAX_DATAPUMP_JOBS_PER_PDB initialization parameter.

ORA-39392: Data Pump filter object *string* invalid length
Cause: The Data Pump filter contained an object name that was larger than 128 characters.

Action: Fix the object name in the filter and retry the Data Pump command.

ORA-39393: direct path operation in shard catalog not allowed on sharded table *string*
Cause: Direct path operations could not be performed on a sharded table from inside of the catalog database for a sharded table. The data for sharded tables lives in other shard databases.

Action: Use direct path operations directly on the shard databases.

ORA-39394: Cannot alter vector encoded attributes on a table column.
Cause: An attempt was made to change a column that was vector encoded with a SQL ALTER statement.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39395: Warning: object *string* requires password reset after import
Cause: During Data Pump Export or Import, fixed user or shared database link objects were exported and the enforcement of dictionary credentials was set to ENABLED.

Action: After running Data Pump Import, execute the ALTER DATABASE LINK statement for each link mentioned in the error message and reset the password for the link. Failure to reset the password for the link results in an ORA-28449 error when attempting to use the link.

ORA-39396: Warning: exporting encrypted data using transportable option without password
Cause: The encryption password was not specified for an export job that used the transportable option and included one or more encrypted tablespaces.

Action: No specific user action is required. However, note that the wallet on the source and target databases must be identical in order to import the dump file. Continue if this is the desired operation or add an encryption password to the DataPump export command.

ORA-39398: Cannot load data. Data Pump dump file "*string*" was created in TEST_MODE.
Cause: The Data Pump dump file was created using a value of TEST_MODE for the export TTS_CLOSURE_CHECK parameter. The Data Pump dump file was in an inconsistent state and could not be loaded.

Action: Re-create the Data Pump dump file and provide a value of FULL or ON or OFF for the export TTS_CLOSURE_CHECK parameter.

ORA-39399: Dump file set is unusable. TEST_MODE requested.
Cause: This is an informational message to indicate that the Data Pump dump file was created using a value of TEST_MODE for the export TTS_CLOSURE_CHECK parameter. The Data Pump dump file was in an inconsistent state and could not be processed by the Data Pump import utility.

Action: None

ORA-39400: invalid value *string* for parameter *string*
Cause: The string supplied for the parameter MAX_DATAPUMP_JOBS_PER_PDB or MAX_DATAPUMP_PARALLEL_PER_JOB was neither an integer nor was it the special value AUTO.

Action: Provide a proper value for this parameter.

ORA-39402: The log or SQL file cannot overwrite dump file "*string*".
Cause: The name and location of the Data Pump log or SQL file matched the name of an existing Data Pump, external table, or legacy dump file. This message may be seen before the Data Pump job has started or after the job has started, if wildcard dump files are being used.

Action: If this message is seen before the job has started, then retry the operation using a different name or directory object for the log or SQL file. Otherwise, the message is informational and no further action is required.

ORA-39403: object *string* "*string*" typeid mismatch
Cause: An object type in a transportable tablespace set already existed on the target system, but with a different typeid. The typeid could not be changed because either the type or a dependent type was used by an existing table. Tables in the transportable tablespace set that use this object could not be created. Further information can be found in the alert log.

Action: Drop the object type and dependent objects from the target system, if possible, and retry the operation.

ORA-39405: Oracle Data Pump does not support importing from a source database with TSTZ version *string* into a target database with TSTZ version *string*.
Cause: The source database was at a different time zone version than the target database and there were tables that contained TIMESTAMP WITH TIME ZONE (TSTZ) data.

Action: Convert the target database to the same time zone version or later as the source database or use Oracle Data Pump with conventional data movement to export then import this data.

ORA-39406: Job mode *string* is not permitted when running as SYSBACKUP.
Cause: A mode other than transportable, table, or tablepsace was specified for the job. When running a Data Pump export or import operation as SYSBACKUP, the mode is limited to transportable, table, and tablespace.

Action: No action is required.

ORA-39500: failed to notify CRS of a Startup/Shutdown event for database "*string*", instance "*string*" (ignored)
Cause: The instance was unable to obtain the context or information required to notify the CRS framework.

Action: None Required. The error is ignored.

ORA-39501: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)
Cause: The instance was unable to communicate with the CRS framework.

Action: None Required. The error is ignored.

ORA-39502: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)
Cause: The instance was unable to create an environment context.

Action: None Required. The error is ignored.

ORA-39503: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)
Cause: The instance was unable to populate the environment context.

Action: None Required. The error is ignored.

ORA-39504: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)
Cause: The instance was unable to find the location of the alert file.

Action: None Required. The error is ignored.

ORA-39510: CRS error performing *string* on *string* '*string*' on '*string*'\n*string*
Cause: Unable to perform action on associated CRS resource.

Action: See following error messages for additional information. Fix error and retry.

ORA-39511: Start of CRS resource for instance '%1!s' failed with error:[%2!s]\n%3!s
Cause: The Cluster Ready Services (CRS) detected an error during an attempt to start the indicated resource. The instance start operation was terminated. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, correct the indicated problems, and then retry the operation.

ORA-39512: Stop of CRS resource for instance '%1!s' failed with error:[%2!s]\n%3!s
Cause: The Cluster Ready Services (CRS) detected an error during an attempt to stop the indicated resource. The instance stop operation was terminated. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, correct the indicated problems, and then retry the operation.

ORA-39600: Queue keys needs to be a suffix of cluster key.
Cause: Attempt to specify queue key columns that don't form a suffix of the cluster key.

Action: Only specify queue key columns as a suffix of cluster key.

ORA-39601: Hash key is required.
Cause: Missing hash key in the cluster key specification.

Action: Specify one or more hash key columns.

ORA-39700: database must be opened with UPGRADE option
Cause: A normal database open was attempted, but the database has not been upgraded to the current server version.

Action: Use the UPGRADE option when opening the database to run catupgrd.sql (for database upgrade), or to run catalog.sql and catproc.sql (after initial database creation).

ORA-39701: database must be mounted EXCLUSIVE for UPGRADE or DOWNGRADE
Cause: The database was mounted for SHARED cluster access.

Action: Set the CLUSTER_DATABASE initialization parameter to FALSE and restart the server with the UPGRADE or DOWNGRADE option.

ORA-39702: database not open for UPGRADE or DOWNGRADE
Cause: An upgrade, downgrade, reload, or patch script was invoked when the database was not open for UPGRADE or DOWNGRADE.

Action: Use STARTUP UPGRADE to open the database for upgrade or to apply a patch set. Use STARTUP DOWNGRADE for running a downgrade script or the reload script.

ORA-39703: server version and script version do not match
Cause: An upgrade, downgrade, reload, or patch script was invoked, but the database instance version was not the version for which the script was intended.

Action: Check that the correct ORACLE_HOME and ORACLE_SID environment variables are set. Also check that the SQL script is being invoked from the correct ORACLE_HOME.

ORA-39704: permission to modify component registry entry denied
Cause: An attempt was made to modify an entry in the component registry, but the session user was not authorized; only the CONTROL or SCHEMA user for the component are authorized to modify the component registry entry.

Action: Connect as either the CONTROL or SCHEMA user for the component.

ORA-39705: component '*string*' not found in registry
Cause: No entry in the component registry was found for the specfied component.

Action: Check the spelling of the component ID and use the DBA_REGISTRY view to list the existing components.

ORA-39706: schema '*string*' not found
Cause: The schema name specified was not found in the database.

Action: Create the schema before loading the component.

ORA-39707: compatibile parameter *string* too high for downgrade to *string*
Cause: A downgrade was attempted, but the compatible initialization parameter value was greater than the downgrade release version.

Action: Once the compatible value has been raised, downgrade to earlier releases is not supported.

ORA-39708: component '*string*' not a *string* component
Cause: The component was not a component for the specified namespace.

Action: Either enter a valid component identifier for the namespace or set the session namespace to the correct component namespace.

ORA-39709: incomplete component downgrade; *string* downgrade aborted
Cause: One or more components did not have a status of DOWNGRADED.

Action: Correct the component problem and re-run the downgrade script.

ORA-39710: The database mode conflicts with the connection type.
Cause: An attempt was made to connect to a database when the database was open for upgrade or downgrade, but a conflicting type of connection was specified. Only the SYSDBA and SYSOPER types of administrative connection are allowed while the database is open in upgrade or downgrade mode.

Action: If you are not an administrative user, try to connect again after the database upgrade or downgrade is complete. If you are an administrative user, specify either the AS SYSDBA or the AS SYSOPER administrative connection type.

ORA-39711: critical patch number less than last installed CPU number
Cause: A Critical Patch Update (CPU) script was invoked that had a number that was less than the last CPU installed in the database.

Action: Check the DBA_REGISTRY_HISTORY view to identify the last CPU for the database, and install the most recent CPU.

ORA-39712: XE edition server cannot open database
Cause: An attempt was made to open a Standard Edition or Enterprise Edition database with the Express Edition of the server.

Action: Use the Express Edition server only with Express Edition databases.

ORA-39714: upgrade script utlmmig.sql failed
Cause: A normal database open was attempted, but the upgrade script utlmmig.sql failed to complete.

Action: Use the UPGRADE option when opening the database and then run utlmmig.sql.

ORA-39715: Downgrade script UTLMMIGDOWN.SQL failed.
Cause: A normal database open was attempted, but the downgrade script UTLMMIGDOWN.SQL failed to complete.

Action: Use the DOWNGRADE option when opening the database and then run UTLMMIGDOWN.SQL.

ORA-39726: unsupported add/drop column operation on compressed tables
Cause: An unsupported add/drop column operation for compressed table was attemped.

Action: When adding a column, do not specify a default value. DROP column is only supported in the form of SET UNUSED column (meta-data drop column).

ORA-39727: COMPATIBLE must be set to 10.0.0.0.0 or higher
Cause: An add/drop column operation for compressed table has been performed on the database. This requires COMPATIBLE to be set to 10.0.0.0.0 or higher during upgrade from 9.2 to a 10i or higher release.

Action: Set COMPATIBLE to 10.0.0.0.0 and retry the upgrade.

ORA-39751: partitioned table on both sides of PARTITIONED OUTER JOIN is not supported
Cause: An attempt was made to partition both sides of PARTITIONED OUTER JOIN.

Action: Specify partitioned table on one side of PARTITIONED OUTER JOIN only.

ORA-39752: redundant column in partitioning and join columns is not allowed
Cause: An attempt was made to specify redundant columns in partitioning and join columns for NATURAL or named column PARTITIONED OUTER JOIN.

Action: Do not specify redundant column in partitioning and join columns.

ORA-39753: unsupported use of subquery in PARTITIONED OUTER JOIN condition
Cause: An attempt was made to use subquery in PARTITIONED OUTER JOIN condition.

Action: Remove subquery from the join condition.

ORA-39754: FULL PARTITIONED OUTER JOIN is not supported
Cause: An attempt was made to use FULL PARTITIONED OUTER JOIN.

Action: Specify FULL PARTITIONED OUTER JOIN through UNION of LEFT and RIGHT PARITTION OUTER JOIN.

ORA-39755: cannot use PARTITIONED OUTER JOIN with a left correlation
Cause: An attempt was made to use a PARTITIONED OUTER JOIN where the right side is a lateral view with a left correlation to the left side and is partitioned.

Action: Rewrite the query without the left correlation.

ORA-39761: stream reset required before loading this stream again
Cause: An attempt was made to load a stream that was previously loaded but has not been reset yet.

Action: Reset the specified stream and convert column array data to it before attempting to load it again.

ORA-39762: streams must be loaded in conversion order
Cause: An attempt was made to load a stream out of conversion order.

Action: Load streams in the same order they were converted.

ORA-39763: stream must be completely loaded before it is reset
Cause: An attempt was made to reset a stream that contains converted column array data and hasn't been completely loaded yet.

Action: Before resetting a stream, load it until a status of OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA is returned.

ORA-39764: specified stream is not in the specified direct path context
Cause: A direct path operation was attempted using a stream that was not created in the specfied direct path context.

Action: Only use streams created in the specified direct path context.

ORA-39765: stream must be reset before used in a column array conversion
Cause: The stream was completely loaded, but has not been reset yet.

Action: Reset loaded streams after load returns OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA. The stream can then be used in a column array to stream conversion.

ORA-39766: invaid stream specified for column array conversion
Cause: A stream must be loaded and reset before used again in a column-array-to-stream conversion. This error is issued if another stream has subsequently been converted before the specified stream has been loaded, or if the latest load of this stream returned OCI_ERROR.

Action: Don't convert into a previous stream before it is loaded. Also, when load stream returns OCI_ERROR, the stream must be loaded again to insure any remaining information in the stream is loaded. The stream must be loaded even if the last or only row was in error. There may be error information in the stream that needs to be sent to the server.

ORA-39767: finish is not allowed when unloaded stream data exists
Cause: A direct path finish was attempted when at least one stream buffer has not been completely loaded.

Action: All streams must be loaded after a column array to stream conversion until load stream returns a status of OCI_SUCCESS or OCI_NO_DATA. The load can then be finished.

ORA-39768: only one direct path context top level column array is allowed
Cause: Attempt to create multiple top level column arrays in a direct path context, when only one is allowed.

Action: Create another direct path context if additional top level column arrays are required.

ORA-39769: finish is not allowed with an incompletely loaded last row
Cause: Part of a row has been loaded, but it is not complete.

Action: Finish loading the current row when load stream returns OCI_ERROR or OCI_NEED_DATA.

ORA-39771: stream must be loaded before its handle is freed
Cause: An attempt was made to free a stream handle after conversion but before the stream was loaded.

Action: Load the stream until OCI_SUCCESS, OCI_NEED_DATA or OCI_NO_DATA is returned before attempting to free the stream handle. If OCI_NEED_DATA is returned, another stream must be loaded to complete last row.

ORA-39772: column array reset disallowed after OCI_CONTINUE or OCI_NEED_DATA
Cause: An attempt was made to reset a column array when a row conversion is still in progress.

Action: Complete the current row before reseting the column array. To ignore the current row when conversion returned OCI_NEED_DATA, set the current column flag to OCI_DIRPATH_COL_ERROR. This should be followed by a conversion, which will undo and ignore the row. The column array(s) can then be reset.

ORA-39773: parse of metadata stream failed
Cause: An unexpected error occured while attempting to parse the metadata // stream for a table being loaded.

Action: Call Oracle support.

ORA-39774: parse of metadata stream failed with the following error:\n *string*
Cause: An unexpected error occured while parsing the metadata stream.

Action: See the secondary error for more information.

ORA-39775: direct path API commit not allowed due to previous fatal error
Cause: An attempt was made to commit a Direct Path context after a fatal error.

Action: Correct the error and retry.

ORA-39776: fatal Direct Path API error loading table *string*
Cause: A fatal error was detected loading the specified or previous table.

Action: Correct the error and retry.

ORA-39777: data saves are not allowed when loading lob columns
Cause: An attempt was made to save data when loading lob columns or columns stored as lobs (such as varrays and xml types).

Action: Do not attempt to do a data save or partial save when loading lob columns. A finish save is allowed.

ORA-39778: the parallel load option is not allowed when loading lob columns
Cause: An attempt was made to load lob columns using the attribute OCI_ATTR_DIRPATH_PARALLEL. This error will also be issued when loading any columns that are stored as lobs (such as varrays and xml types).

Action: Do not use the parallel attribute when loading lob columns.

ORA-39779: type "*string*"."*string*" not found or conversion to latest version is not possible
Cause: Unable to import table data using the specified type. The type was nonexistent in the database or the input type could not be converted to the existing type. The reasons why a conversion was not possible are: 1. The version of the type in the database was greater than the version of the type at export time because 1 or more attributes have been added or dropped from the type. 2. If the type existed in the database prior to the import operation, then its internal identifier may not match the internal identifier of the type from the export database. The identifiers must match for an import to succeed.

Action: Ensure the types in the database match those at export time.

ORA-39780: Direct path context operations are not allowed after the context is aborted or finished
Cause: The specified direct path context was aborted or finished.

Action: Do not pass a direct path context that has ended to any direct path functions.

ORA-39781: Direct path stream loads are not allowed after another context loading the same table has ended
Cause: Attempt to load a stream in one context after another loading the same table has ended.

Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.

ORA-39782: Direct path prepare is not allowed after another context loading the same table has ended
Cause: Direct path prepare called after a context loading the same table has ended.

Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.

ORA-39783: Invalid direct path transaction active
Cause: Direct path operations were not performed in the transaction started by the first OCIDirPathPrepare call.

Action: Ensure the correct transaction is active prior to calling Direct Path API operations.

ORA-39784: This direct path operation is not allowed while another is in progress
Cause: Another direct path operation was active.

Action: Complete any direct path operations in progress before attempting this operation.

ORA-39785: SQL expressions returning ADT objects are not allowed in direct path
Cause: The passed SQL expression returned a user-defined ADT which was not supported.

Action: Remove the SQL expression.

ORA-39786: Number of columns does not match between export and import databases
Cause: External tables could not import into a table with mismatched columns.

Action: Ensure the number of columns matches between export and import database.

ORA-39787: Column *string* subtype "*string*"."*string*" is not instantiable.
Cause: Subtype specified was not instantiable.

Action: Ensure all subtypes specified are instantiable.

ORA-39788: Subtype "*string*"."*string*" is specified multiple times for column *string*.
Cause: Subtype specified was not unique.

Action: Ensure all subtypes specified are unique.

ORA-39789: "*string*"."*string*" is not a valid type for column *string*.
Cause: Subtype specified was not a valid type for the column being loaded.

Action: Ensure all subtypes specified are valid types for the column being loaded.

ORA-39790: Attribute "*string*" specified multiple times for column *string*.
Cause: Attribute specified multiple times.

Action: Ensure all attributes specified are unique.

ORA-39791: Attribute "*string*" for column *string* is not in subtype "*string*"."*string*".
Cause: Attribute was not included in the subtype indicated.

Action: Ensure the attribute is included in the subtype indicated by the specified subtype index.

ORA-39792: Attribute "*string*" is not valid for subtypes(s) loaded into column *string*.
Cause: Attribute specified was not included in any subtypes specified for the column or the declared subtype of the column.

Action: Ensure the attribute is included in at least one of the subtypes loaded into the column.

ORA-39793: Attribute "*string*" is not unique within the hierarchy being loaded.
Cause: The attribute was defined in multiple lines of descent in the hierarchy being loaded.

Action: When describing the attribute, a subtype index must be specified to uniquely identify the attibute being loaded.

ORA-39794: No attributes loaded for subtype "*string*"."*string*".
Cause: None of the attributes loaded were included in the type shown.

Action: At least one attribute must be loaded for each subtype specified.

ORA-39795: Subtype index is not first attribute for object table or column, *string*.
Cause: The subtype index was not the first attribute when describing the atributes of an object column or object table with multiple subtypes.

Action: Describe the subtype index as the first attribute for this object column or object table.

ORA-39796: column array entry for *string* is not valid for the current subtype
Cause: This column was not part of the current subtype being loaded for this object column or table. Therefore, its entry must be null in the column array.

Action: Set the column array entry to null.

ORA-39797: The subtype index value is not valid.
Cause: The subtype index value in the column array was not valid for the object column or object table.

Action: Set a valid subtype index value in the column array for this table or column.

ORA-39798: The column array row offset *number* is out of range (max: *number*).
Cause: The specified row offset was too large for the column array.

Action: Ensure the row offset is in range.

ORA-39799: The column index *number* is out of range (max: *number*).
Cause: The specified column index was too large for the column array.

Action: Ensure the column index is in range.

ORA-39800: Database version *number* does not support the load of multiple subtypes.
Cause: Direct Path API support for loading multiple subtypes of an object table or column was only present in the Oracle 11 release and higher.

Action: Upgrade database to Oracle 11 or higher.

ORA-39801: Subtype "*string*"."*string*" is not a valid subtype for column *string*.
Cause: Subtype specified was not the declared type nor was it derived from the declared type.

Action: Ensure all subtypes specified are either the declared type or derived from the declared type.

ORA-39802: ADT object column *string* specified a SQL expression which is not allowed in direct path mode.
Cause: The ADT column reported in the error specified a SQL expression which returned the ADT. This is not supported.

Action: Remove the SQL expression.

ORA-39803: Data saves are not allowed on tables with partitioning referential constraints.
Cause: Data saves (and the sqlldr ROWS parameter) are not allowed when loading both the parent and child tables of a partitioning referential constraint.

Action: Do not attempt data saves when loading both the parent and child tables of a partitioning referential constraint.

ORA-39804: The load was aborted due to an error loading parent *string* while also loading child *string*.
Cause: An error occurred while loading the child and parent table of a partitioning referential constraint. The load was aborted to ensure the partitioning referential constraint was not violated.

Action: Fix the error that caused the load to abort and retry.

ORA-39805: Parallel loads are not allowed when loading child and parent.
Cause: A parallel load was requested when loading the child and parent of a partitioning referential constraint. This is not allowed.

Action: Remove the parallel option.

ORA-39806: The attempt to lock *string* parent table *string string string* failed.
Cause: While loading the child table of a partitioning referential constraint, the parent table must be locked in SHARE mode.

Action: Determine why the parent table could not be locked and retry.

ORA-39807: Partial data save on child *string* was ignored.
Cause: An attempt was made to partially save data when loading both the child and parent of a partitioning referential constraint or when loading a table with a domain index.

Action: Fix the error that caused the partial load and retry.

ORA-39808: The SINGLEROW option must be specified for parent table *string*.
Cause: The SINGLEROW option was not specified when loading both the parent and child table of a partitioning referential constraint.

Action: Ensure the SINGLEROW option is specified for the parent when loading the parent and child of a partitioning referential constraint.

ORA-39809: Data saves are not allowed on tables with domain indexes.
Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading a table with domain indexes.

Action: Do not attempt data saves when loading a table with domain indexes.

ORA-39810: Data saves are not allowed when NO_INDEX_ERRORS is specified.
Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading with the NO_INDEX_ERRORS option.

Action: Do not attempt data saves when loading a table with the NO_INDEX_ERRORS option.

ORA-39811: index *string.string* had the following error:
Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39812: index *string.string* partition *string* had the following error:
Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39813: index *string*.*string* had *string* partition errors:
Cause: A logical index error occurred on a partitioned index which affected one or more index partitions, which are listed below this message.

Action: Fix the error(s) and retry.

ORA-39814: The SKIP_INDEX_MAINTENANCE option is not allowed with NO_INDEX_ERRORS.
Cause: The SKIP_INDEX_MAINTENANCE option was used with the NO_INDEX_ERRORS option.

Action: Do not use SKIP_INDEX_MAINTENANCE with NO_INDEX_ERRORS.

ORA-39815: Direct Path Unload of an external table is not allowed.
Cause: An attempt was made to use Direct Path API Unload to unload an external table.

Action: Do not use Direct Path Unload to unload an external table.

ORA-39816: Direct Path Unload of tables with encrypted column(*string*.*string*) is not allowed.
Cause: An attempt was made to use Direct Path API Unload to unload a table with encrypted columns.

Action: Do not use Direct Path Unload to unload a table with encrypted columns.

ORA-39817: index *string*.*string* was ignored due to:
Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39818: index *string*.*string* partition *string* was ignored due to:
Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39819: The OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute cannot be set to TRUE in direct path parallel loads.
Cause: An attempt was made to set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute to TRUE in a direct path parallel load.

Action: Do not set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS to TRUE for direct path parallel loads.

ORA-39820: Zero length LONG piece detected for column *string* row *string*.
Cause: A zero length piece was detected for a LONG column.

Action: Do not use a length of zero when loading LONG columns.

ORA-39821: domain index on columnar data made unusable\n
Cause: An attempt was made to load a columnar table with a domain index using SQL*Loader direct part load

Action: n/a

ORA-39822: A new direct path operation is not allowed in the current transaction.
Cause: All previous direct path contexts ended and the current transaction was ready for a commit or abort of those changes.

Action: Commit or abort the current transaction, and start a new transaction for the next direct path context.

ORA-39823: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS is only allowed for load operations.
Cause: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS was set for a nonload operation.

Action: Use OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS for load operations only.

ORA-39824: The OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS attribute was set when no transaction was active.
Cause: There was no active transaction to use.

Action: Start a transaction or do not set the attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS to TRUE.

ORA-39825: Direct path load of view or synonym (*string*.*string*) with multiple dependencies not permitted.
Cause: An attempt was made to load a view or synonym which has more than a single dependency.

Action: A view or synonym being loaded by the direct path API must resolve to a single object.

ORA-39826: Direct path load of view or synonym (*string*.*string*) could not be resolved.
Cause: A synonym or view could not be translated.

Action: Verify that the view or synonym is valid.

ORA-39827: Direct path load of PL/SQL function not permitted.
Cause: An attempt was made to load a PL/SQL function with the direct path API.

Action: Remove PL/SQL function the direct path load.

ORA-39828: Constraint *string* was disabled because of index *string*.*string* error.
Cause: The index used for the constraint was set as unusable.

Action: Fix the error that caused the index to be set unusable.

ORA-39829: function-based index on columnar data made unusable\n
Cause: An attempt was made to load a columnar table with a function-based index using SQL*Loader direct path load.

Action: Rebuild the function-based index after the load completes.

ORA-39830: XML parsing failed \n*string*
Cause: XML parser returned an error while trying to parse the document.

Action: Fix the error that caused the document to be invalid.

ORA-39831: Direct path load failed, (*string*.*string*) is not a table.
Cause: Object being loaded did not resolve to a table.

Action: Verify that the view or table name is correct.

ORA-39832: Direct path unload was not allowed due to columns with default values.
Cause: Direct path unload was attempted on a table with columns that have default values.

Action: Do not attempt a direct path unload of a table with columns that have default values.

ORA-39833: Direct path parallel load was not allowed on a temporary table.
Cause: A direct path parallel load was attempted on a temporary table.

Action: Do not attempt a direct path parallel load on a temporary table.

ORA-39834: Direct path load or unload was not allowed on a remote table.
Cause: An attempt was made to specify a remote table in a direct path API load or unload.

Action: Do not specify a remote table in a direct path API load or unload.

ORA-39835: Direct path load partition memory exceeded. PGA use is *string*kb, PGA limit is: *string*kb
Cause: A direct path load ran out of process memory when loading multiple partitions.

Action: Use the PARTITION_MEMORY parameter to limit memory used when loading many partitions. Once this limit is reached, loading of some partition rows will be delayed until memory use falls below the limit. Use a value (kb) lower than the current program global area (PGA) limit included in this message and try the load again.

ORA-39836: Invalid direct path API server context detected
Cause: The data cartridge encountered an unexpected condition.

Action: Contact Oracle Support Services.

ORA-39837: Direct path loading does not support the DEFAULT value clause for column *string*.
Cause: Direct path loading could not support loading the default value for the data type of the indicated column.

Action: Use conventional path loading. Otherwise, use DEFAULTS=IGNORE, DEFAULTS=IGNORE_UNSUPPORTED_EVALUATE_ONCE or DEFAULTS=IGNORE_UNSUPPORTED_EVALUATE_EVERY_ROW.

ORA-39838: Direct path load of a specific partition with interval subpartitioning is not allowed.
Cause: An attempt was made to load a specific partition of a table that was interval subpartitioned. This is not supported by the Direct Path API.

Action: Load the entire table when the table is interval subpartitioned.

ORA-39839: Direct path default expression cache size (*string*) is too large.
Cause: An attempt was made to allocate a default expression cache that was too large.

Action: Use a smaller value for the default expression cache and retry.

ORA-39840: A data load operation has detected data stream format error *string*.
Cause: A dump file data stream format error was detected during a load operation.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39841: A data load operation detected a data stream format error (see next error), attempting to continue.
Cause: A dump file data stream format error was detected during a load operation. An attempt was made to continue the load from a point beyond the corruption.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39842: Data load operation was discontinued due to the previous data stream format error.
Cause: A dump file data stream format error was detected during a a load operation. The operation was aborted.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39843: Invalid direct path API server context detected
Cause: The data cartridge encountered an unexpected condition.

Action: Contact Oracle Support Services.

ORA-39844: Bad stream format detected: [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]
Cause: A dump file data stream format or initialization error was detected during a load or import operation.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39845: A data load operation detected a data stream format error, attempting to continue.
Cause: A dump file data stream format error was detected during a load operation. An attempt was made to continue the load from a point beyond the corruption.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

ORA-39846: The specified number format for column *string* was invalid.
Cause: The specified number format for the column was not valid.

Action: Specify a valid numeric format and try again.

ORA-39847: Value too large for column *string* (maximum: *string*)
Cause: An attempt was made to load a column with a value which is too large, possibly after conversion. The maximum value is in characters for character length semantics and bytes for byte length semantics.

Action: Ensure that the destination column is large enough to hold the maximum possibly converted result.

ORA-39861: auxiliary data file copy file for Pluggable Database *string*: "*string*"
Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-39862: RESETLOGS option only valid after a Pluggable Database incomplete recovery
Cause: The ALTER PLUGGABLE DATABASE OPEN RESETLOGS command was issued, but the Pluggable Database was not flashed back or point-in-time recovered.

Action: Retry the ALTER PLUGGABLE DATABASE OPEN command without specifying RESETLOGS.

ORA-39863: An earlier Pluggable Database incomplete recovery failed.
Cause: An earlier Pluggable Database flashback or point-in-time recovery failed.

Action: Retry the Pluggable Database flashback or incomplete recovery.

ORA-39864: Data file *string* on standby database must be restored and renamed, and standby database recovery must be restarted.
Cause: A missing data file was added on a standby database in response to a Pluggable Database (PDB) OPEN RESETLOGS command on the primary database. This data file must be restored and renamed on the standby database before standby database recovery can be restarted.

Action: Restore the missing data file and rename it on the standby database, then restart standby database recovery.

ORA-39865: cannot FLASHBACK beyond Pluggable Database resetlogs operation
Cause: An attempt was made to perform a FLASHBACK DATABASE beyond a Pluggable Database resetlogs system change number (SCN).

Action: Choose a FLASHBACK SCN that is more recent than the Pluggable Database resetlogs SCN.

ORA-39866: Data files for Pluggable Database *string* must be offline to flashback across special 12.1 PDB resetlogs.
Cause: An attempt was made to perform a FLASHBACK DATABASE beyond a Pluggable Database (PDB) resetlogs performed at 12.1 compatibility. Futhermore, the PDB resetlogs was performed after a flashback or point-in-time recovery (PITR) of the PDB to its parent database incarnation. This is not supported unless all data files in the PDB are offline.

Action: Take the data files for the Pluggable Database (PDB) offline before performing the FLASHBACK DATABASE command. To bring the PDB to the same past point in time as the container database (CDB), those data files can be restored from backups

and recovered to that same past point in time. This can be done in one of two ways: * Flashback the CDB and open the CDB with resetlogs. Restore the PDB later, and perform a complete PDB recovery. * Flashback the CDB first. Restore and recover the PDB to the same system change number (SCN). Open CDB with resetlogs.

ORA-39867: Clean PDB restore point '*string*' is on an orphan incarnation of the pluggable database.
Cause: The specified clean PDB restore point was on an orphan incarnation of the pluggable database. One cannot flashback a pluggable database to an orphan incarnation.

Action: Check the restore point.

ORA-39870: container database is not open in read/write mode
Cause: A command was attempted that requires the container database (CDB) to be open in read/write mode.

Action: Open the container database in read/write mode and try the command again.

ORA-39871: An earlier Pluggable Database resetlogs operation failed after making changes.
Cause: An earlier ALTER PLUGGABLE DATABASE OPEN RESETLOGS command failed after it made some changes.

Action: Perform another Pluggable Database point-in-time recovery before attempting to open the Pluggable Database with RESETLOGS.

ORA-39872: Data file *number* is in the middle of Pluggable Database resetlogs operation.
Cause: The data file was in the middle of a Pluggable Database resetlogs operation.

Action: Find the right file version or perform more media recovery. For additional information, see other errors.

ORA-39873: Restore all data files to a checkpoint SCN lower than *string*.
Cause: This error provides additional information for error 39874.

Action: Restore the data files as suggested and restart the recovery process.

ORA-39874: Pluggable Database *string* recovery halted
Cause: The Pluggable Database was recovered into an orphan branch.

Action: Restore all data files to a checkpoint system change number (SCN) lower than the branch point and restart the recovery process. Check the alert log for additional information.

ORA-39875: Data file *string* is in the middle of Pluggable Database resetlogs operation.
Cause: The data file is in the middle of a Pluggable Database (PDB) resetlogs operation.

Action: If possible, recover the data file further so that it is not in the middle of a PDB resetlogs operation. Another alternative is to perform PDB point-in-time recovery.

ORA-39876: cannot perform CDB OPEN RESETLOGS because data file *string* is in the middle of a PDB resetlogs operation
Cause: The data file mentioned was in the middle of a Pluggable Database (PDB) resetlogs operation.

Action: Recover the container database (CDB) to a different system change number (SCN) at which the data files are not in the middle of a PDB resetlogs operation. Alternatively, you can offline the problematic data file and let CDB OPEN RESETLOGS succeed. You may need to perform PDB point-in-time recovery later in order to open the PDB of the offlined data file.

ORA-39877: keyword ONLINE or OFFLINE expected
Cause: The ONLINE or OFFLINE keyword was not specified after the ALL keyword.

Action: Use the correct syntax.

ORA-39878: Only one Pluggable Database name can be specified.
Cause: Multiple Pluggable Database names were specified for the ALTER PLUGGABLE DATABASE OPEN RESETLOGS command.

Action: Specify only one Pluggable Database name.

ORA-39879: Pluggable Database *string* is in the middle of a Pluggable Database RESETLOGS operation
Cause: There was already an on-going Pluggable Database OPEN RESETLOGS operation for this Pluggable Database.

Action: If needed, retry after the Pluggable Database OPEN RESETLOGS operation completes.

ORA-39880: One or more pluggable databases were in the middle of a point-in-time recovery at this incomplete database recovery SCN.
Cause: In the past, one or more pluggable databases had an active pluggable database RESETLOGS operation as of this incomplete recovery SCN.

Action: Additional messages are logged in the alert log indicating all of the pluggable databases affected by this container database OPEN RESETLOGS operation. Recover the container database to a different system change number (SCN) at which none of the pluggable databases had an active RESETLOGS operation. To continue the container database OPEN RESETLOGS operation at the same SCN, offline all of the data files of the affected pluggable databases first and reissue the command. However, a new point-in-time recovery of the affected pluggable databases would be required before these databases can be opened again.

ORA-39881: Pluggable database *string* must be closed while recovering the physical standby across PDB RESETLOGS
Cause: The pluggable database (PDB) is open while the physical standby is recovering across a PDB RESETLOGS operation for the PDB.

Action: Close the PDB and restart physical standby recovery.

ORA-39882: cannot create clean pluggable database restore point for the specified pluggable database (con_id:*string*)
Cause: There were still outstanding transactions in the closed pluggable database.

Action: Retry the command after opening the pluggable database and closing all outstanding transactions. Alternatively, create a normal pluggable database restore point.

ORA-39883: Restore point *string* for pluggable database *string* is not a clean pluggable database restore point.
Cause: For a pluggable database using shared undo, there was an attempt to flashback pluggable database in SQL without a clean pluggable database restore point. The specified restore point was not a clean pluggable database restore point.

Action: Do one of the following: - Issue flashback pluggable database in RMAN. - Issue the SQL flashback pluggable database command to flashback to a clean pluggable database restore point. - Turn on local undo mode for the pluggable database. The SQL flashback pluggable database command can always be used to flashback a pluggable database using local undo.

ORA-39884: Flashback of PDB (con_id:*string*) cannot restore data file *string* which is currently used by PDB (con_id:*string*).
Cause: The data file required to flashback the specified pluggable database to the specified point in time could not be restored. The file number of the pluggable database data file was used by a different pluggable database.

Action: Flashback the pluggable database to a different point-in-time. Alternatively, drop the conflicting data file from the database first before you flashback the pluggable database. If neither option can be used, you can also flashback the entire consolidated database or restore and recover a copy of the consolidated database to the specified point-in-time. You can then extract the recovered data.

ORA-39885: flashback/PITR of a pluggable database before its creation is not allowed
Cause: The flashback/PITR System Change Number (SCN) or timestamp specified was less than the pluggable database creation SCN or timestamp. Flashback/PITR SCN or timestamp cannot be less than the pluggable database creation SCN or timestamp.

Action: Check the flashback/PITR SCN or timestamp and retry the command.

ORA-39886: With shared undo, one can only use an SQL command to flashback a pluggable database (PDB) to a clean PDB restore point.
Cause: The command issued did not specify a clean pluggable database restore point. For a pluggable database using shared undo, one can only use the SQL Flashback pluggable database command to flashback to a clean pluggable database restore point.

Action: Do one of the following: - Issue flashback pluggable database in RMAN. - Issue the SQL flashback pluggable database command to flashback to a clean pluggable database restore point. - Turn on local undo mode for the pluggable database. The SQL flashback pluggable database command can always be used to flashback a pluggable database using local undo.

ORA-39887: Cannot create restore points for SEED PDB
Cause: There was an attempt to create a restore point for SEED PDB.

Action: Create restore points in ROOT or for a different pluggable database.

ORA-39888: Guaranteed restore points exist for pluggable database *string*.
Cause: There was an attempt to drop or unplug a pluggable database when there were still guaranteed restore points for this pluggable database.

Action: Drop all the guaranteed restore points for the pluggable database before dropping the pluggable database.

ORA-39889: Specified System Change Number (SCN) or timestamp is in the middle of a previous PDB RESETLOGS operation.
Cause: The specified System Change Number (SCN) or timestamp is in the middle of a previous PDB RESETLOGS operation. More specifically, each PDB RESETLOGS operation may create a PDB incarnation as shown in v$pdb_incarnation. Any SCN between INCARNATION_SCN and END_RESETLOGS_SCN or any timestamp between INCARNATION_TIME and END_RESETLOGS_TIME as shown in v$pdb_incarnation is considered in the middle of the PDB RESETLOGS operation.

Action: Flashback the PDB to an SCN or timestamp that is not in the middle of a previous PDB RESETLOGS operation.

ORA-39890: Flashback or PITR of a pluggable database to a System Change Number (SCN) or timestamp before latest undo mode switch is not allowed.
Cause: An attempt was made to flashback/PITR a pluggable database (PDB) to a System Change Number (SCN) or timestamp that precedes the latest switch between shared and local undo.

Action: Flashback/PITR a pluggable database (PDB) to an SCN or timestamp that comes after the latest switch between shared and local undo.

ORA-39891: Clean PDB restore point cannot be created when CDB is in local undo mode.
Cause: There was an attempt to create a clean restore point when the CDB was in local undo mode. This is not supported. Clean PDB restore points are designed for CDB in shared undo mode. They are not useful for CDB in local undo mode.

Action: Do not use "clean" option when creating the restore point.

ORA-39892: PDB PITR/Flashback to a point in time on an orphan database incarnation is not allowed.
Cause: An attempt was made to flashback or point-in-time recovery (PITR) of a pluggable database (PDB) to a point in time that falls on an orphaned database incarnation.

Action: Flashback or PITR a pluggable database (PDB) to an earlier point in time that falls somewhere along the database direct ancestor path from the current database incarnation.

ORA-39893: PDB restore point could not be created
Cause: There was an attempt to create a restore point for a pdb that was still in the process of being created or was never opened before.

Action: Retry the operation after pdb creation is complete and opened once.

ORA-39894: PDB restore point could not be created
Cause: There was an attempt to create a restore point for a pdb when an application install or upgrade was going on.

Action: Retry the operation after application install or upgrade is complete.

ORA-39895: unable to flashback or PITR a pluggable database
Cause: The flashback or point-in-time recovery (PITR) system change number (SCN) or timestamp specified was less than the SCN or timestamp at which the pluggable database was first opened in read/write mode.

Action: Check the flashback or PITR SCN or timestamp and retry the command.

ORA-39896: INSTANCES clause and RESETLOGS keyword cannot be used together in ALTER PLUGGABLE DATABASE command
Cause: The INSTANCES clause was specified in the ALTER PLUGGABLE DATABASE OPEN RESETLOGS command.

Action: Specify either the INSTANCES clause or the RESETLOGS keyword in the command, but not both.

ORA-39897: A required flashback log has been reused during flashback of a pluggable database.
Cause: At least one required flashback log has been reused during flashback of a pluggable database.

Action: You can no longer flashback this pluggable database to the same point-in-time as specified because a required flashback log file has been reused. You may still be able to flashback this pluggable database to a more recent point-in-time. You can also recover the pluggable database to undo the effect of the failed flashback pluggable database operation.

ORA-39901: Partitioned table *string.string* is partially contained in the transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_TAB_PARTITIONS.

ORA-39902: Subpartitioned table *string.string* is partially contained in the transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table subpartitions by querying SYS.DBA_TAB_SUBPARTITIONS.

ORA-39903: IOT Partition *string.string* is partially contained in the transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_IND_PARTITIONS.

ORA-39904: Partitioned object *string.string* is partially contained in the transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Check partitions and overflow segments by querying SYS.DBA_IND_PARTITIONS and SYS.DBA_TAB_PARTITIONS.

ORA-39905: Table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39906: Constraint *string* between table *string*.*string* in tablespace *string* and table *string*.*string* in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39907: Index *string*.*string* in tablespace *string* points to table *string*.*string* in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39908: Index *string*.*string* in tablespace *string* enforces primary constraints *string* of table *string*.*string* in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39909: Index *string*.*string* in tablespace *string* points to table/cluster *string*.*string* in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39910: Partitioned Global index *string*.*string* in tablespace *string* points to partition *string* of table *string*.*string* in tablespace *string* outside of transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39911: Index *string*.*string* in tablespace *string* points to partition *string* of table *string*.*string* in tablespace *string* outside of transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39912: Partitioned index *string*.*string* in tablespace *string* points to table *string*.*string* in tablespace *string* outside of transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39913: *string* *string*.*string* in tablespace *string* not allowed in transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39914: Index *string*.*string* in tablespace *string* points to subpartition *string* of table *string*.*string* in tablespace *string* outside of transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39915: Partition *string* of table *string*.*string* in tablespace *string* points to LOB segment *string*.*string* in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39916: Subpartition *string* of table *string*.*string* in tablespace *string* points to LOB segment *string*.*string* in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39917: SYS owned object *string* in tablespace *string* not allowed in pluggable set
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39918: PLSQL Functional Index *string*.*string* in tablespace *string* not allowed in transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39919: Object *string*.*string* in tablespace *string* not contained within transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Check SYS.DBA_OBJECTS.

ORA-39920: Rollback segment *string* in tablespace *string* not allowed in transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39921: Default Partition (Table) Tablespace *string* for *string* not contained in transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39922: Default Partition (Index) Tablespace *string* for *string* not contained in transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39923: Default Composite Partition (Table) Tablespace *string* for *string* not contained in transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39924: Default Composite Partition (Index) Tablespace *string* for *string* not contained in transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39925: LOB segment *string*.*string* in tablespace *string* points to table *string*.*string* in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39926: Join index between table *string*.*string* in tablespace *string* and table *string*.*string* in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39927: Scoped REF constraint between table *string*.*string* in tablespace *string* and table *string*.*string* in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39928: *string string*.*string* in tablespace *string* contains evolved type data that have not been upgraded.
Cause: Transportable tablespace operation could not be performed because some tables depending on evolved types were not upgraded.

Action: Transportable tablespace operation can only be performed when all tables depending on evolved types have been upgraded. Perform ALTER TABLE <tab_name> UPGRADE for the table name listed in the message above

ORA-39929: Table *string*.*string* in tablespace *string* has encrypted columns which are not supported.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39930: Violation *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Contact Oracle Support Services.

ORA-39931: XML Schema *string* Owner: *string* not fully contained in the transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the associated elements and resolve self containment.

ORA-39932: Extensible Index *string*.*string* not fully contained in the transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the associated table and list of secondary objects and resolve self containment.

ORA-39933: Parent table *string*.*string* and its nested table columns are not fully contained in the transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the nested tables using view DBA_NESTED_TABLES and resolve self containment.

ORA-39934: Materialized view log *string*.*string* in tablespace *string* and master table *string*.*string* in tablespace *string* are not fully contained in the transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39935: Updatable materialized view log *string*.*string* in tablespace *string* and materialized view *string*.*string* in tablespace *string* are not fully contained in the transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39936: Token manager for the CSX tablespace *string* not fully contained in the transportable set.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Include the specified tablespace into the transportable set.

ORA-39937: Unsupported operation, default token tables used for binary XML data.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Copy default token tables into a new token table set using DBMS_CSX_ADMIN package.

ORA-39938: Operation not supported, tablespace *string* contains binary XML data.
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39939: More than one set of token tables are used in tablespace *string*.
Cause: Informational message to describe a failure during transportable containment checking.

Action: Remap tables in the specified tablespace to use same token tables.

ORA-39940: Child reference partitioned table *string*.*string* in tablespace *string* or parent table *string*.*string* in tablespace *string* is included but not both.
Cause: Informational message to describe a failure during transportable containment checking. Both parent and child reference partition tables must be included.

Action: Check reference partitioned tables.

ORA-39941: Partitioned table *string*.*string* in tablespace *string* has a partition that has an incomplete online move.
Cause: This is an informational message to describe a failure during transportable containment checking. Online moves need to be complete before transporting a tablespace.

Action: Use the DBMS_PART.CLEANUP_ONLINE_OP procedure to force the online move to complete.

ORA-39942: Subpartitioned table *string*.*string* in tablespace *string* has a subpartition that has an incomplete online move.
Cause: This is an informational message to describe a failure during transportable containment checking. Online moves need to be complete before transporting a tablespace.

Action: Use the DBMS_PART.CLEANUP_ONLINE_OP procedure to force the online move to complete.

ORA-39943: Global index *string*.*string* in tablespace *string* has orphaned entries.
Cause: This is an informational message to describe a failure during transportable containment checking. Orphaned entries need to be cleaned up before transporting a tablespace.

Action: Use DBMS_PART.CLEANUP_GIDX() to cleanup orphaned index entries.

ORA-39944: Global partitioned index *string*.*string* in tablespace *string* has orphaned entries.
Cause: This is an informational message to describe a failure during transportable containment checking. Orphaned entries need to be cleaned up before transporting a tablespace.

Action: Use DBMS_PART.CLEANUP_GIDX() to cleanup orphaned index entries.

ORA-39945: Token conflicting with existing tokens.
Cause: The binary XML tokens contained in the imported tablespace conflicted with the existing tokens.

Action: Use the dump file export or import instead of transportable tablespace.

ORA-39946: Nondefault token table encountered.
Cause: During transportable tablespace import, a nondefault token table was encountered.

Action: Use the dump file export or import instead of transportable tablespace.

ORA-39947: Table *string*.*string* in tablespace *string* has token tables in tablespace *string*.
Cause: The token tables for the table were in a tablespace which was not being exported.

Action: Include the specified tablespace into the transportable set.

ORA-39948: QNAMES or NAMESPACES tables for the import are in use.
Cause: The import needed xdb.XDB$IMPORT_NM_INFO and xdb.XDB$IMPORT_QN_INFO to be empty to avoid collisions or corruptions.

Action: This is an internal error. Contact Oracle Support Services.

ORA-39950: invalid parameter for PLSQL warnings flag
Cause: The user either entered invalid value for the PLSQL_WARNINGS flag or the value of the flag conflicts with other values.

Action: Enter correct values for the switch.

ORA-39951: incomplete values specified for PL/SQL warning settings
Cause: The user either did not enter the value for the settings or entered incomplete values.

Action: Enter correct syntax for the switch.

ORA-39952: only numbers can be specified as range values
Cause: The range values did not have numerical values only.

Action: Enter only numerical values.

ORA-39953: the range value specified is beyond allowed range
Cause: The range values were either too low or too high.

Action: Specify only the allowed range values.

ORA-39954: DEFERRED is required for this system parameter
Cause: The ALTER SYSTEM command for PLSQL_WARNINGS did not include the keyword, DEFERRED.

Action: Change the command to use the keyword, DEFERRED.

ORA-39955: invalid PL/SQL warning message number
Cause: The PL/SQL message number specified was not in a valid range.

Action: Specify PL/SQL warning message numbers within the valid range.

ORA-39956: duplicate setting for PL/SQL compiler parameter *string*
Cause: A PL/SQL compiler parameter was set more than once.

Action: Remove the duplicate PL/SQL compiler setting.

ORA-39957: invalid warning category
Cause: The category of the message was incorrect.

Action: Specify a vaild category

ORA-39958: invalid warning category qualifier
Cause: The category qualifier was incorrect.

Action: Specify a vaild category qualifier.

ORA-39959: invalid warning number (*string*)
Cause: The warning number was incorrect.

Action: Specify a vaild warning number.

ORA-39960: scope can only be SYSTEM or SESSION
Cause: The scope specified was not set.

Action: Specify a vaild scope, either SESSION or SYSTEM.

ORA-39961: message specified was not found
Cause: The message number specified was not set.

Action: specify the message number whise settings have been set in the given scope.

ORA-39962: invalid parameter for PLSQL_CCFLAGS
Cause: The value for the PLSQL_CCFLAGS parameter was not valid.

Action: Specify a vaild value for the PLSQL_CCFLAGS parameter.

ORA-39964: Specified value for _PLSQL_MAX_STACK_SIZE (*string*) is larger than available memory (*string*)
Cause: The value specified for the _PLSQL_MAX_STACK_SIZE parameter was larger than the amount of stack size available to the process.

Action: Specify a smaller value for the _PLSQL_MAX_STACK_SIZE parameter.

ORA-39965: Collection of records with PL/SQL type attributes are not allowed in this context.
Cause: The collection of records with attributes of PL/SQL types were not allowed as an argument to the TABLE operator.

Action: Use the collection of records whose attributes are of the types that SQL can understand.

ORA-39966: This form is allowed only in WITH clause context
Cause: Only an entry point number was specified for SYS_PLSQL_CPU, SYS_PLSQL_COUNT or SYS_PLSQL_IO costing operator. This is allowed only when these operators are applied to functions appearing in the WITH clause.

Action: Specify the required function, package, or type name. An optional schema name can also be specified.

ORA-39967: Cannot use this PL/SQL procedure while data files are being moved or rekeyed.
Cause: Some data files were being moved or rekeyed either on the primary or standby database.

Action: Check the status of data files and try this command again.

ORA-39968: Invalid value for parameter PLSCOPE_SETTINGS. Value must be from among 'IDENTIFIERS:[ALL|NONE|PLSQL|SQL|PUBLIC], STATEMENTS:[ALL|NONE]'.
Cause: The value for the PLSCOPE_SETTINGS parameter was not valid.

Action: Specify a vaild value for the PLSCOPE_SETTINGS parameter.

ORA-39969: Bind variable should be of a supported PL/SQL type
Cause: A variable of a wrong type was used in the DBMS_SQL.BIND_VARIABLE_PKG call. In the DBMS_SQL.BIND_VARIABLE_PKG call, the type of the variable should be declared in a package specification and should be either a record or one of the supported collection types.

Action: Use a bind variable whose type is one of the supported types for this operation and whose type is declared in a package specification.

ORA-39970: Bind calls are not allowed after cursor execution
Cause: A bind call was used after the cursor was executed. Binds can only be done after the cursor was parsed but before execution.

Action: Move the bind call before cursor execution.

ORA-39971: cannot use this PL/SQL procedure for this pluggable database when PATH_PREFIX information is not accessible
Cause: Some pluggable databases have specified PATH_PREFIX for security purposes, but the PL/SQL procedure was unable to check the PATH_PREFIX because the root was not open or for some other security reasons.

Action: Open the root or connect to the root directly and try this command again.

ORA-39973: collection type has invalid or duplicate named fields
Cause: The collection type had duplicate or invalid named fields.

Action: Consider using an alias in the SELECT list of the cursor type to avoid duplicate or invalid named fields.

ORA-39974: unsupported RECORD type operation
Cause: An attempt was made to use RECORD variable in MEMBER OF operation with target collection that was not null.

Action: Do not use this operation. For backward compatibility, no compile time error was given because no error is raised for null target collection.

90

ORA-40001 to ORA-40927

ORA-40001: value for *string* must be greater than zero
Cause: The input parameter in question has a value of zero or less.

Action: Provide a value greater than zero for the relevant parameter.

ORA-40002: wordsize must be *string* or greater
Cause: The input wordsize is less than the prescribed limit for the BLAST Match or Align algorithm.

Action: Provide a wordsize greater than or equal to the prescribed value.

ORA-40003: wordsize must be in the range *string* - *string* for BLAST-P
Cause: The input wordsize has a value out of the prescribed range.

Action: Provide a wordsize value within the prescribed range for BLAST-P.

ORA-40004: penalty must be negative for BLAST-N
Cause: The input value provided for penalty is zero or greater.

Action: Provide a negative penalty value.

ORA-40021: no column named *string* in training table *string*
Cause: The training table does not contain the specified column

Action: Provide a case-id/target column that exists in the training table

ORA-40022: null case ID column - cannot provide row diagnostics
Cause: The row diagnostics were enabled, but without a corresponding case or row identifier column in the build data.

Action: Provide a non-null case identifier column in the build data.

ORA-40023: sufficient memory could not be allocated given the number of attributes
Cause: Unable to allocate sufficient memory to create a model capable of producing confidence bounds on predictions because there were too many attributes or there were high cardinality categorical attributes, or both, in the build data.

Action: Reduce the number of attributes, especially high cardinality categoricals, or enable ridge regression.

ORA-40024: solution to least squares problem could not be found
Cause: Unable to find solution because the predictor covariance matrix was singular.

Action: Enable ridge regression or remove exact multicollinearities from the build data.

ORA-40025: reference class name not found in build data
Cause: The provided reference class name was not found in the build data.

Action: Provide an existing target value as the reference class name.

ORA-40026: reference class name not found in the weights table
Cause: The provided reference class name did not correspond to any of the entries in the weights table.

Action: Provide consistent specification for reference class name and weights table.

ORA-40027: Target attribute has more than two distinct values
Cause: Generalized Linear Models only support binary classification.

Action: Consolidate target values into two distinct categories.

ORA-40028: solution to least squares problem could not be found
Cause: Unable to find solution because the predictor build data were not properly scaled.

Action: Standardize the predictor build data by enabling auto prep.

ORA-40029: Specified diagnostics table name already exists
Cause: A diagnostics table name matching an existing table was specified.

Action: Choose a table name that does not match any existing user table.

ORA-40030: solution to least squares problem could not be found
Cause: Unable to find solution because the predictor covariance matrix was singular for the forced-in features.

Action: If there are forced-in features, remove them. If GLMS_FTR_ACCEPTANCE was set to GLMS_FTR_ACCEPTANCE_STRICT, reset it to GLMS_FTR_ACCEPTANCE_RELAXED and rebuild the model.

ORA-40031: too many forced-in features (maximum allowable 1000)
Cause: Too many forced-in features were specified or the features were high cardinality attributes, or both.

Action: Reduce the number of forced-in attributes.

ORA-40032: solution to least squares problem could not be found
Cause: Unable to find solution because the predictor covariance matrix was singular for the selected features.

Action: If GLMS_FTR_ACCEPTANCE was set to GLMS_FTR_ACCEPTANCE_STRICT, reset it to GLMS_FTR_ACCEPTANCE_RELAXED and rebuild the model.

ORA-40033: invalid covariance matrix
Cause: This was caused by one or more of the following: - Data rows were too few in number. - Mining attributes were too many. - Ridge regression was on.

Action: Modify the data or disable ridge regression to get a valid covariance matrix and full diagnostic statistics.

ORA-40034: FORCE_IN incompatible with the setting GLMS_FTR_SELECTION disabled
Cause: The setting GLMS_FTR_SELECTION which was disabled was incompatible with the specified FORCE_IN transformation.

Action: Either enable the setting GLMS_FTR_SELECTION, or respecify the FORCED_IN transformation to be compatible with the disabled GLMS_FTR_SELECTION setting.

ORA-40051: too few rows to estimate the specified model
Cause: The time series had fewer rows than the number of parameters in the model.

Action: Choose a simpler model type with fewer parameters.

ORA-40052: series contains large numbers; possible numerical instability
Cause: The time series contained numbers greater than 1 million.

Action: Scale the data.

ORA-40053: inappropriate data for multiplicative model
Cause: The time series was not strictly positive.

Action: Choose a model type that does not contain a multiplicative trend or seasonality.

ORA-40054: time series is constant
Cause: The time series was constant.

Action: Choose a model type that does not contain a multiplicative trend or seasonality.

ORA-40055: too few rows to estimate trend
Cause: The time series had too few rows to obtain an initial trend estimate.

Action: Choose a simple exponential model type.

ORA-40056: must provide a valid EXSM_INTERVAL setting
Cause: A valid value was not specified for the EXSM_INTERVAL setting. If the case ID column type is datetime, a valid EXSM_INTERVAL setting must be provided.

Action: Specify a valid EXSM_INTERVAL setting.

ORA-40057: must provide a valid case ID column
Cause: The case ID column was required to provide time labels, but a valid case ID column was not provided.

Action: Specify a valid case ID column name as input.

ORA-40058: seasonal effect not estimable for irregular time series
Cause: There was no consecutive one year period containing all existing seasons.

Action: Choose a model type with no seasonal effect.

ORA-40101: Data Mining System Error *string-string-string*
Cause: An internal system error occured during a data mining operation.

Action: Contact Oracle Support Services.

ORA-40102: invalid input *string* for data mining operation *string*
Cause: The input parameter is either null or invalid for the given operation.

Action: Provide a valid value. Check range for NUMBER parameters.

ORA-40103: invalid case-id column: *string*
Cause: The case-id column was invalid. If a case-id column is specified, it must be present in the input data source. The case-id column cannot be the same as the target column, and the column's data type is restricted to NUMBER, CHAR, and VARCHAR2 when building a GLM model with a diagnostics table.

Action: Change the schema of your input data to supply a case-id column of appropriate data type.

ORA-40104: invalid training data for model build
Cause: The training data provided in the reported table is unsuitable for build, either because it is empty, has unsuitable data, or the schema of the table does not match the input specifications.

Action: Inspect the training data and correct the contents/schema as appropriate.

ORA-40105: input data incompatible with model signature
Cause: The data provided for this post-build operation is in format different from that used for model build.

Action: Provide data whose attribute data types match the build data. Input data attributes must have the same data types as those described in the model signature for the model.

ORA-40106: positive target value not specified for computing Lift
Cause: Positive target value has not been specified for Lift.

Action: Provide a positive target value for the Lift operation.

ORA-40107: operation requires *string* option to be installed
Cause: The specified option has not been installed with the RDBMS.

Action: Install the reported option and retry the operation.

ORA-40108: input data contains too few distinct target (*string*) values
Cause: At least two distinct target values are required for Build.

Action: Provide counter-example target values in the input data.

ORA-40109: inconsistent logical data record
Cause: Repeated instances of a record identifier or repeated attribute(s) in a nested column.

Action: Remove or re-label repeated instances to resolve inconsistencies.

ORA-40110: Duplicate model tables found for table type *string*
Cause: Operation would result in duplicate model table types which is not supported.

Action: Remove the duplicate entry.

ORA-40111: no mining attributes found in build data
Cause: Could not build a model when only special or empty columns were present. Special columns include target, row weight, and case ID columns.

Action: Provide mining attribute data.

ORA-40112: insufficient number of valid data rows
Cause: Fewer than two valid data rows were found in the build data.

Action: Provide at least two valid build data rows. If the model is either a classification or regression model, then valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

ORA-40113: insufficient number of distinct target values
Cause: Less than two distinct target values were found in the build data.

Action: Provide the classification build data with valid rows containing at least two distinct target values. Valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

ORA-40114: weights table target values mismatched with build data
Cause: The entries in the weights table did not correspond to the target values in the build data.

Action: Verify the entries in the weights table.

ORA-40115: weights table schema is incorrect
Cause: The weights table did not have the required schema.

Action: Provide a weights table with schema: (target_value, weight), where the type of the first column corresponds to the type of the target column (CHAR, VARCHAR2 or NUMBER) and the type of the second column is NUMBER.

ORA-40116: NULL values found in weights table
Cause: The weights table had NULL entries.

Action: Replace or eliminate all NULL entries in the weights table.

ORA-40117: repeated target values found in weights table
Cause: The weights table had repeated target values.

Action: Remove the repeated target values from the weights table.

ORA-40118: insufficient number of target values in weights table
Cause: The weights table had less that 2 target values.

Action: Provide at least two target values in the weights table.

ORA-40119: nested columns incompatible with missing value treatment
Cause: delete_row missing value treatment is not supported for nested columns.

Action: Use 2D (non-nested) data representation or manually delete the rows with NULL values and disable the delete_row missing value treatment.

ORA-40120: invalid weight value in the weights table
Cause: Negative or zero weight values were found in the weights table.

Action: Ensure that weight values in the weights table are positive.

ORA-40121: force option not allowed for drop model in different schema
Cause: The force option was specified, but the model is in a different schema.

Action: If the force option is necessary, run the drop model from the owning schema. If the force option is not necessary, set the force parameter to FALSE.

ORA-40122: invalid data type for row weights column *string*.
Cause: Row weights column was not assigned one of the allowed data types.

Action: Choose a row weight column of type NUMBER or FLOAT.

ORA-40123: invalid row weights column *string*
Cause: Row weights column was the same as the target column.

Action: Choose a new row weights column.

ORA-40124: partition key column *string* missing from input
Cause: A partitioned model was referenced in the query, but the partition key column was not found in the input.

Action: Provide an input dataset containing the partition key column.

ORA-40125: partition *string* does not exist
Cause: The partition entered did not exist.

Action: Check the spelling of the partition and try again.

ORA-40126: model *string* is not partitioned
Cause: The model specified was not a partitioned model.

Action: Specify a model that is partitioned.

ORA-40127: invalid number of partition keys specified
Cause: The number of partition keys specified did not match the model.

Action: Specify key values for each partition.

ORA-40128: partition *string* exists for partition keys specified
Cause: A partition already existed for the partition keys specified.

Action: Specify unique key values for each partition.

ORA-40129: partition name *string* exists for this model
Cause: The partition name specified was not unique for this model.

Action: Specify a unique partition name.

ORA-40130: invalid partition name *string*
Cause: The partition name specified was not valid.

Action: Check the spelling of the partition name and try again.

ORA-40131: invalid data type for partition column *string*
Cause: The partition column did not have a supported data type.

Action: Choose a partition column of type NUMBER, CHAR, or VARCHAR2.

ORA-40132: partition not specified
Cause: A model partition was not specified. This function requires the specification of a model partition.

Action: Specify a model partition.

ORA-40133: invalid partition columns
Cause: The partition columns in the operation did not match those in the existing model.

Action: Specify the correct partitioning keys.

ORA-40135: cannot drop the only partition of a partitioned model
Cause: The specified partitioned model contained a single partition. An empty model is not supported.

Action: Drop the model, or add additional partition(s) then drop the desired partition.

ORA-40136: maximum number of partition columns exceeded
Cause: The maximum number of 16 partition columns was exceeded.

Action: Reduce the number of partition columns.

ORA-40137: maximum number of partitions exceeded
Cause: The maximum number of partitions per model was exceeded.

Action: Reduce the number of partitions.

ORA-40139: no partitions found in training data
Cause: There were no partitions found in the training data.

Action: Specify partitioning keys that have one or more distinct values in the training data.

ORA-40140: model could not be built
Cause: The training data did not allow the building of a meaningful model.

Action: Modify the training data to ensure that there are valid data rows, columns, or targets. If there is solver choice, ensure that the selected solver is appropriate for the training data.

ORA-40141: only zero norm rows were provided in the training data
Cause: All training data rows had zero norm.

Action: Modify the training data or enable automatic data preparation.

ORA-40142: partition mismatch for feature comparison
Cause: The partition key column values did not match for one or more scored rows.

Action: Modify the query to ensure that each scored row contains matching partition key column values.

ORA-40150: Model *string* function is not specified.
Cause: The required R function was not specified.

Action: Specify the required R function in the model setting table and build the R model.

ORA-40151: invalid output type from R SCORE, WEIGHT, or DETAILS function
Cause: The R SCORE, WEIGHT, or DETAILS function did not return the result in a data.frame containing either R numeric values for SCORE and WEIGHT function or R numeric or string values for DETAILS function.

Action: Modify the R function to return the result in a data.frame that contains values of valid types.

ORA-40152: Output data.frame mismatches the input for R SCORE or WEIGHT function.
Cause: The R SCORE or WEIGHT function returned a different number of rows than that of the input data.frame.

Action: Modify the R function to output the result for each row of the input data.frame.

ORA-40153: invalid value on attribute *string* for R model
Cause: The specified attribute was not a scalar numeric value or a single string.

Action: Set the specified attribute of the R model with a valid value.

ORA-40154: invalid type or value for R parameter specification
Cause: The R parameter was not a scalar numeric value or a single string.

Action: Modify the parameter specification to use either a scalar numeric value or a single string.

ORA-40155: R script *string* is not found.
Cause: The specified script was not found in the R script repository.

Action: Verify that the script exists in the R script repository or create it using the rqScriptCreate PL/SQL function.

ORA-40156: invalid or mismatched output specification for R model view
Cause: The R DETAILS function output format specfication did not use numeric or string value, or did not match the actual output from the R DETAILS function.

Action: Use scalar numeric and string to specify the R DETAILS function output format and match the actual output of the R function.

ORA-40157: R_HOME is not set on *string*.
Cause: The R_HOME was not set to the location where R was installed.

Action: Use sys.rqConfigSet to set the R_HOME to the correct value.

ORA-40158: invalid values on R memory control settings
Cause: The R memory control settings did not use positive values.

Action: Use sys.rqConfigSet to set R memory control with valid values.

ORA-40159: Parameter setting *string* is not specified for R model.
Cause: The expected setting was not on the model setting table.

Action: Set the expected setting on the model setting table.

ORA-40160: Mining function *string* requires attribute *string* on the R model.
Cause: The generated R model did not have the required attribute.

Action: Set the required attribute for the R model in the R BUILD function.

ORA-40161: Either attribute *string* or *string*, but not both, is required.
Cause: Conflict attributes were specified for the R model object.

Action: Set the required attribute only for the return R model object.

ORA-40162: mismatched results from *string* output data.frame
Cause: The R regression model prediction did not return an R data.frame with a single column of numerics for predicted value, or two additional columns containing the standard error of model fit and the degree of freedom were missing from the output when SQL function prediction_bounds was invoked.

Action: Modify the specified R function to return the results in the right format.

ORA-40163: some prediction results missing from *string* output
Cause: The R classification, clustering, or feature extraction model SCORE function did not return the prediction for each class, cluster, or feature respectively in the output R data.frame.

Action: Modify the R model SCORE function to return all predicted values in the output data.frame.

ORA-40164: contribution weights of some attributes missing from *string* output
Cause: The R model WEIGHT function did not return the contribution weight for each attribute of the data.

Action: Modify the R model WEIGHT function to return the contribution weights for all attributes.

ORA-40165: mismatched target class name from R model prediction *string*
Cause: The R classification model prediction did not have correct target class names assigned as the column names for the return data.frame.

Action: Modify the R classification model SCORE function to set the correct target class names on the return data.frame.

ORA-40166: invalid R name for input data.frame columns
Cause: The input data.frame column names contained special characters that are not supported by R.

Action: Modify the input data.frame column names and remove the unsupported characters from the column names.

ORA-40167: no valid data in input table
Cause: The specified input table contained no valid data to build R model.

Action: Insert valid data into the input table to build R model.

ORA-40170: Error out in R: *string*
Cause: The R function execution failed.

Action: Verify the specified R model function script.

ORA-40171: The algorithm cannot be dropped because there are models built on it.
Cause: An attempt was made to drop models built on this algorithm.

Action: Drop the model first.

ORA-40172: The algorithm registration does not follow the predefined JSON schema.
Cause: An attempt was made to register an algorithm that did not follow the predefined JavaScript Object Notation (JSON) schema.

Action: Check the predefined JSON schema and revise the algorithm format.

ORA-40173: The same algorithm name, mining function, and algorithm type combination already exits.
Cause: An attempt was made to register an algorithm with the same name, mining function and type combination.

Action: Use a different algorithm name for the same mining function and algorithm type.

ORA-40174: The algorithm that is used is not registered yet.
Cause: The specified algorithm did not exist.

Action: Register the algorithm first.

ORA-40175: Registered algorithm name and R script definition cannot be used simultaneously.
Cause: An attempt was made to use both registered algorithm name and R scripts definition.

Action: Keep either registered algorithm name or R script definition, but not both.

ORA-40176: The current user does not have privilege to register or drop an algorithm.
Cause: The privileges to register or drop an algorithm were not granted.

Action: Obtain the proper privileges before attempting to register or drop an algorithm.

ORA-40181: invalid transformation definition for column *string*
Cause: Transformation definition has duplicate or NULL columns.

Action: Provide a valid transformation definition specification.

ORA-40182: invalid column reference
Cause: Transformation expression has no column references or more than one reference or the reference is qualified.

Action: Provide a valid expression.

ORA-40183: invalid stack definition for attribute *string*
Cause: Stack definition expression or reverse expression has syntax errors or it does not match the transformation definition.

Action: Provide a valid expression.

ORA-40184: transformation definition does not match the data
Cause: Transformation definition specifies nested transformation for non-nested data or it removes all of the columns.

Action: Provide a valid data.

ORA-40201: invalid input parameter *string*
Cause: The input parameter was either null or invalid.

Action: Provide a valid value for the input parameter.

ORA-40202: column *string* does not exist in the input table *string*
Cause: The column was missing from the table.

Action: Correct the table schema and/or provide the correct column name.

ORA-40203: model *string* does not exist
Cause: The model did not exist.

Action: Supply a valid model name.

ORA-40204: model *string* already exists
Cause: A model by the same name exists.

Action: Provide a different, unique name for the model.

ORA-40205: invalid setting name *string*
Cause: The input setting name was invalid.

Action: Consult the documentation for the settings table and provide a valid setting name.

ORA-40206: invalid setting value for setting name *string*
Cause: The input value for the given setting name was invalid.

Action: Consult the documentation for the settings table and provide a valid setting value.

ORA-40207: duplicate or multiple function settings
Cause: The input settings table contained settings for multiple mining functions.

Action: Provide setting(s) for a single function in the settings table.

ORA-40208: duplicate or multiple algorithm settings for function *string*
Cause: The input settings table had duplicate or multiple algorithm settings for a mining function.

Action: Provide only one appropriate algorithm setting for the mining function.

ORA-40209: setting *string* is invalid for *string* function
Cause: The specified setting was not supported for the mining function supplied.

Action: Provide appropriate combination of function and algorithm settings.

ORA-40210: invalid score criterion type when cost matrix is specified
Cause: The score criterion type may not be 'PROBABILITY' when a cost matrix is specified.

Action: Set score criterion type to 'COST' or don't specify a cost matrix.

ORA-40211: algorithm name *string* is invalid
Cause: Algorithm name for the model was invalid or the operation was not valid for the algorithm.

Action: Check the algorithm name for the model and verify that the operation is valid.

ORA-40212: invalid target data type in input data for *string* function
Cause: Target data type was invalid.

Action: Classification and attribute importance functions accept CHAR, VARCHAR2, and NUMBER data type targets. VARCHAR2 data type targets longer than 4000 bytes are not supported. Regression and time series functions accept NUMBER, BINARY_DOUBLE, and BINARY_FLOAT data type targets only.

ORA-40213: contradictory values for settings: *string*, *string*
Cause: The settings values were not compatible.

Action: Check the documentation and change the setting value(s).

ORA-40214: duplicate setting: *string*
Cause: Duplicate setting in the settings table.

Action: Remove the duplicate setting from the settings table.

ORA-40215: model *string* is incompatible with current operation
Cause: The current operation was not supported for the mining function the model corresponds to.

Action: Provide the model name suitable for current operation.

ORA-40216: feature not supported
Cause: The feature was not supported in the API.

Action: Modify the code to avoid usage of the feature.

ORA-40217: priors table mismatched with training data
Cause: The entries in the priors table do not correspond to the targets in the training data.

Action: Verify the entries in the priors table.

ORA-40218: Both priors table and weights table are specified
Cause: Both a priors table and a weights table are specified for SVM model build.

Action: Priors table is the old (pre 11g) mechanism for specifying class weights, and class weights table is the new (and correct) way to specify class weights. Remove the priors table entry from the settings table (after transferring class weight settings, if appropriate). Going forward, priors table will be valid only for NB models. Use class weights for SVM.

ORA-40219: apply result table *string* is incompatible with current operation
Cause: The current operation was not allowed for the apply result table supplied.

Action: Ensure that the operation being performed is valid for the mining function used to build the model (using for which the apply result table was created).

ORA-40220: maximum number of attributes exceeded
Cause: The data had too many attributes.

Action: Reduce the dimensionality of the data.

ORA-40221: maximum target cardinality exceeded
Cause: The target cardinality of the training data was too high.

Action: Reduce the target cardinality.

ORA-40222: data mining model export failed, job name=*string*, error=*string*
Cause: The model export job failed.

Action: Check export job settings as required by DataPump.

ORA-40223: data mining model import failed, job name=*string*, error=*string*
Cause: The model import job failed.

Action: Check import job settings as required by DataPump.

ORA-40224: must specify a valid ID column name when setting *string* is provided
Cause: The training data is transactional. A valid ID column must be specified.

Action: Specify a valid ID column name as input.

ORA-40225: model is currently in use by another process
Cause: The model is currently in use by another process.

Action: Retry if necessary.

ORA-40226: model upgrade/downgrade must be performed by SYS
Cause: Upgrade/Downgrade routines are being invoked by a user with insufficient privilieges.

Action: Run the routines as SYS during migration.

ORA-40227: invalid transformation attribute
Cause: Transformation list provided to CREATE_MODEL has duplicate or NULL attributes. Case ID or target attribute has attribute_subname that is not NULL. Attribute provided to ALTER_REVERSE_EXPRESSION does not exist in the model.

Action: Remove NULLs and duplicates and fix case ID and target attributes or provide a valid attribute for a given model.

ORA-40228: scoring cost matrix already exists
Cause: The model already has a scoring cost matrix.

Action: To add a new scoring cost matrix the existing one should be removed first.

ORA-40229: scoring cost matrix not found
Cause: The model does not have a scoring cost matrix.

Action: To remove a scoring cost matrix the model should have one.

ORA-40230: invalid transformation expression
Cause: Expression has syntax or semantic errors.

Action: Provide a valid expression.

ORA-40231: transactional input incompatible with specified algorithm
Cause: Training data in transactional format is not accepted for model creation using the specified mining algorithm.

Action: Pivot the data into 2D tabular format, or provide the transactional input through a nested table column.

ORA-40232: transactional input - incompatible datatype for column *string*
Cause: The data type of the column in the input training data is not supported.

Action: Cast or change the type of the column to one of CHAR, VARCHAR, NUMBER or FLOAT

ORA-40233: transactional input - case id should be provided with id *string*
Cause: The training data is transactional by virtue of presence of a and item id - but does not have a case id specification.

Action: Specify a valid case id column name as input

ORA-40234: reverse expression incompatible with model cost matrix
Cause: A cost matrix existed for this model with actual and predicted values which were inconsistent with the values resulting from the specified reverse transformation.

Action: Either remove the cost matrix table and re-add it with the new actual and predicted values, or respecify the reverse transformation to be consistent with the existing cost matrix.

ORA-40235: invalid setting value for setting ASSO_AGGREGATES: *string*
Cause: The setting ASSO_AGGREGATES was not valid.

Action: Specify valid aggregates column names.

ORA-40236: maximum number of aggregates exceeded
Cause: The setting ASSO_AGGREGATES specified too many aggregates.

Action: Reduce the number of aggregates.

ORA-40237: duplicate case IDs in training table
Cause: The same value occurred more than once in the case ID column of the training table.

Action: Eliminate the duplicate case IDs in the training table.

ORA-40238: invalid linear algebra shared library *string*
Cause: The shared library containing platform-optimized linear algebra routines was not loaded.

Action: Verify that the shared library is correctly installed.

ORA-40251: no support vectors were found
Cause: The input data is non-predictive in nature, or one of the input settings is incorrect/incompatible with respect to the input data.

Action: Provide additional data or change model setting value.

ORA-40252: no target values were found
Cause: No target values were identified during load.

Action: Validate that the target is correctly specified.

ORA-40253: no target counter examples were found
Cause: One or more of the target classes have only positive examples.

Action: Provide counter examples or remove that target class.

ORA-40254: priors or weights cannot be specified for one-class models
Cause: Priors or weights were specified.

Action: Do not specify priors or weights for one-class models.

ORA-40255: specified priors or weights table has an incorrect schema
Cause: The priors or class weights table whose name is specified in in the settings does not have the prescribed schema. A priors table should have the schema (target_value, prior_probability) and a class weights table should have the schema (target_value, class_weight)

Action: Modify the schema of the input priors or class weights table to match the ones provided above (also in the documentation).

ORA-40261: input data for model build contains negative values
Cause: The input data contains negative values, which is not acceptable for a Non-negative Matrix Factorization model.

Action: Provide clean data for build without any negative values.

ORA-40262: NMF: number of features not between [1, *string*]
Cause: The number of requested features must be greater than 1, and less than the smaller of the number of attributes and the number of cases in the dataset.

Action: Specify the desired number of features within the acceptable range.

ORA-40263: no meaningful matrix factorization found
Cause: Input data was not significantly different from 0.

Action: Check your data for problems or add a positive constant to all the numeric attributes.

ORA-40264: number of mining attributes (*string*) exceeds maximum (*string*)
Cause: Input data was found to contain a number of mining attributes exeeding the maximum allowed.

Action: Check the input data for categorical fields with high cardinality.

ORA-40271: no statistically significant features were found
Cause: Input data inadequate in volume and/or quality to derive statistically significant predictors for building a data mining model.

Action: Provide a well-prepared training data set.

ORA-40272: apply rules prohibited for this model mode
Cause: Adaptive Bayes Network rules are only generated for SingleFeature ABN models

Action: Rebuild model in SingleFeature mode and then apply with rules.

ORA-40273: invalid model type *string* for Adaptive Bayes Network algorithm
Cause: The valid values for the abns_model_type settings are: abns_multi_feature, abns_single_feature, abns_naive_bayes.

Action: Use a valid value for the abns_model_type setting.

ORA-40274: the Adaptive Bayes Network algorithm is desupported
Cause: An attempt was made to score an Adaptive Bayes Network model.

Action: Drop the existing model and build a new model using a supported classification algorithm.

ORA-40281: invalid model name
Cause: A model name is invalid or does not exist.

Action: Check spelling. A valid model name must begin with a letter and may contain only alphanumeric characters and the special characters $, _, and #. The name must be less than or equal to 30 characters and cannot be a reserved word.

ORA-40282: invalid cost matrix
Cause: Cost matrix specification is invalid.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

ORA-40283: missing cost matrix
Cause: Cost matrix specification is missing.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

ORA-40284: model does not exist
Cause: The model entered does not exist.

Action: Check spelling.

ORA-40285: label not in the model
Cause: The user-specified label was not present in the model.

Action: Provide a valid label. The set of valid labels can be retrieved from a classification model by invoking PREDICTION_SET, from a clustering model by invoking CLUSTER_SET, and from a feature extraction model by invoking FEATURE_SET.

ORA-40286: remote operations not permitted on mining models
Cause: An attempt was made to perform queries or DML operations on remote tables using local mining models.

Action: Remove the reference to remote tables in the statement.

ORA-40287: invalid data for model - cosine distance out of bounds
Cause: The norm computed using attribute values from the incoming row for the cosine model is outside the range 0-1.

Action: Remove or correct the data in the offending row.

ORA-40289: duplicate attributes provided for data mining function
Cause: A duplicate, non-nested attribute was provided as input to the data mining function. A duplicate attribute is one which is present in the model signature, occurs more than once in the USING clause after tablename expansion, and is not a collection element in a nested table column.

Action: Eliminate the duplicate attribute(s).

ORA-40290: model incompatible with data mining function
Cause: The supplied model cannot be operated upon by the data mining function because the model is built for a mining function and/ or based on an algorithm that is incompatible with function.

Action: Provide the name of the model suitable for the function.

ORA-40291: model cost not available
Cause: The supplied model was assumed to have been built with a cost matrix specification, when in reality, it was not.

Action: Provide a model name that corresponds to a model that was built with an appropriate cost matrix specification.

ORA-40292: confidence level must be greater than 0 and less than 1
Cause: The specified value for confidence level is out of range.

Action: Specify a value for confidence level in the range 0 < level < 1

ORA-40293: input class is invalid for the specified predictive model
Cause: The specified model is either not a classification model, or does not have the input class label as one of its target values.

Action: Provide the correct target value (class label) or provide the appropriate classification model with the target attribute that has the specified class label as one of its values.

ORA-40294: model is corrupted
Cause: The model object was in an inconsistent state.

Action: Drop the corrupted model.

ORA-40295: model does not fit in system global area
Cause: The model was too large to fit in shared memory.

Action: No action is needed. The model is automatically loaded to program global area (PGA).

ORA-40301: invalid cost matrix specification
Cause: A valid cost matrix is not specified.

Action: Consult documentation for valid cost matrix specification.

ORA-40302: invalid classname *string* in cost matrix specification
Cause: Actual or predicted classname specified is not present in training data

Action: Provide valid classname(s) in cost matrix specification

ORA-40303: invalid prior probability specification
Cause: Valid prior probabilities not specified. Valid probabilities should be between 0 and 1.

Action: Consult documentation for valid prior probability specification.

ORA-40304: invalid classname *string* in prior probability specification
Cause: Actual or predicted classname specified is not present in training data.

Action: Provide valid classname(s) in prior probability specification.

ORA-40305: invalid impurity metric specified
Cause: Impurity metric specified is not valid. Examples of valid metrics are TREE_IMPURITY_GINI, TREE_IMPURITY_ENTROPY.

Action: Consult documentation for valid impurity metrics and specification.

ORA-40306: dm_nested types not supported by this algorithm
Cause: The training input to the CREATE_MODEL routine contained one or more columns of DM_NESTED type (DM_NESTED_NUMERICALS or DM_NESTED_CATEGORICALS). These columns are currently not supported by Orthogonal Partitioning Clustering (O-Cluster).

Action: Remove columns of these data types from the input data source.

ORA-40307: nested attribute combined name and value too long
Cause: The data that was presented to the decision tree algorithm was too long. The length is computed from the sum of the length of the nested attribute name and the length of the attribute value.

Action: Reduce the length of the attribute name or reduce the length of the categorical value (perhaps by recoding).

ORA-40308: RFOR_MTRY is greater than attribute count or negative or 0
Cause: The setting for RFOR_MTRY was either 0 or >= number of attributes. The default behavior in this scenario is to use all of the attributes for the model build.

Action: Consider a different value for RFOR_MTRY.

ORA-40309: The Random Forest sample size exceeds available memory.
Cause: The sample did not fit into available memory.

Action: No action needed. The sample size was adjusted automatically to fit into memory.

ORA-40321: invalid bin number, is zero or negative value
Cause: Input bin number has zero or negative values.

Action: Provide positive bin numbers starting from 1.

ORA-40322: bin number too large
Cause: Bin number is too large.

Action: Reprocess build data by choosing smaller bin numbers.

ORA-40323: Attribute *string* has too many distinct values (*string*)
Cause: Exceeded maximum number of distinct values allowed in an attribute.

Action: Bin numerical data with fewer than 1024 bins or recode categorical data with fewer than 1024 unique values.

ORA-40324: All rows contain the same data
Cause: All rows contained the same data and could not be clustered using k-Means with cosine distance metric.

Action: Use Euclidean distance metric.

ORA-40325: maximum number of clusters exceeded
Cause: The maximum number of clusters was exceeded.

Action: Reduce the number of clusters.

ORA-40326: no mining attributes after filtering
Cause: All mining attributes were filtered out.

Action: Disable attribute filtering.

ORA-40341: access violation on model storage object
Cause: An attempt was made to directly access/modify a schema object that stores model metadata and content.

Action: Perform all mining operations (create,drop,alter, and select using data mining functions) against named model objects. Contact your DBA or Oracle Support if you suspect that an orphaned schema object.

ORA-40342: model was not correctly upgraded
Cause: An attempt was made to use a model, but the model was not correctly upgraded to the current release. This is most likely caused by importing a model from an old release without upgrading it, but could also be caused by a failed database upgrade.

Action: Invoke the SYS.DMP_SYS.UPGRADE_MODELS() procedure.

ORA-40343: invalid version specified in UPGRADE_MODELS
Cause: An invalid version was specified when invoking the UPGRADE_MODELS procedure. Valid values for the version are 10.2.0, 11.0.0, 12.0.0, and NULL.

Action: Specify a valid version for UPGRADE_MODELS.

ORA-40350: One or more models exist that cannot be downgraded
Cause: There are data mining models in the database that were created in a release beyond the selected release for downgrade.

Action: Prior to downgrade, drop data mining models that cannot be downgraded to the selected release.

ORA-40361: only SELECT and ALTER are valid for mining models
Cause: An attempt was made to grant or revoke an invalid privilege on a mining model.

Action: Do not attempt to grant or revoke any privilege besides SELECT or ALTER on mining models.

ORA-40362: invalid object *string*.*string* specified in the statement
Cause: An attempt was made to grant a privilege on an invalid object.

Action: Ensure that the dependents of the object are valid before attempting to grant the privilege on the object.

ORA-40363: GRANT failed: user SYS always has SYSOPER and SYSDBA
Cause: An attempt was made to grant SYSOPER or SYSDBA privileges to SYS user. These administrative privileges cannot be granted to SYS, since SYS always has SYSOPER and SYSDBA privileges.

Action: Try granting administrative privilege to users other than SYS.

ORA-40364: Use of BECOME USER functionality is restricted.
Cause: This is an internal error message.

Action: Contact Oracle Support Services.

ORA-40365: The SYS user cannot be locked while the password file is in its current format.
Cause: An attempt was made to lock the SYS user account by executing the DDL statement ALTER USER SYS ACCOUNT LOCK while the password file was created in LEGACY or 12 format.

Action: The password file must be created in the 12.2 format to provide support for maintaining the ACCOUNT_STATUS of all administrative users including SYS.

ORA-40366: Administrative privilege cannot be granted to this user.
Cause: An attempt was made to grant administrative privilege to a user who has been created with NONE as its authentication type. Such grants are not allowed.

Action: Do not grant administrative privilege to user with NONE as its AUTHENTICATION_TYPE in DBA_USERS view.

ORA-40367: An Administrative user cannot be altered to have no authentication type.
Cause: An attempt was made to alter an administrative user to have no authentication type.

Action: Revoke administrative privilege from the user before attempting to alter the user.

ORA-40381: Invalid field specification for: *string*
Cause: The derived field was incorrectly defined.

Action: Ensure that the field is correctly defined in the PMML document.

ORA-40382: More than one linear regression equation in the model
Cause: More than one linear regression equation was in the model.

Action: Ensure that there is only one linear regression equation in the model.

ORA-40383: No model found in PMML document
Cause: There was no model found in the PMML document.

Action: Ensure that the PMML document contains a model section.

ORA-40384: Only one model allowed in PMML document
Cause: More than one model existed in the PMML document.

Action: PMML model import only supports one model per PMML document. Ensure that only one model exists in the PMML document.

ORA-40385: Target has more than two categories
Cause: The target contained more than two categories.

Action: PMML model import supports only binary logistic regression. Ensure that the target contains no more than two categories.

ORA-40386: NormContinuous must include at least two LinearNorm elements
Cause: NormContinuous included less than two LinearNorm elements.

Action: NormContinuous must include at least two LinearNorm elements. Ensure that at least two LinearNorm elements are included.

ORA-40387: Invalid interval for Discretize field: *string*
Cause: The intervals were incorrect.

Action: Ensure that that both margins are not missing.

ORA-40388: Unsupported feature in PMML document: *string*
Cause: The feature was not supported by Predictive Model Markup Language (PMML) model import.

Action: Ensure that you use the supported features.

ORA-40389: Unsupported PMML transformation: *string*
Cause: The transformation was not supported.

Action: Ensure that you use the supported transformations.

ORA-40390: PMML DerivedField must have a unique name specified: *string*
Cause: "The Predictive Model Markup Language (PMML) DerivedField did not reference another defined field and did not have a unique name."

Action: "Specify a unique name for each DerivedField."

ORA-40391: PMML DerivedField depends on a undefined field: *string*
Cause: A DerivedField referenced an undefined field.

Action: Ensure that the DerivedField references other defined fields.

ORA-40392: PMML regression equation references an undefined field: *string*
Cause: The Predictive Model Markup Language (PMML) Regression equation did not reference defined fields. PMML Regression equation may only reference defined fields.

Action: Ensure that all fields are defined.

ORA-40401: categorical attributes are not supported by this algorithm
Cause: The build data provided to the CREATE_MODEL routine contained one or more categorical attributes of types CHAR, VARCHAR2, or DM_NESTED_CATEGORICAL. These attributes are currently not supported for the SVD algorithm.

Action: Remove the categorical attributes from the build data.

ORA-40402: cannot output U matrix without a valid case identifier column
Cause: A U matrix was requested, but there was no case identifier column in the build data.

Action: Provide a non-null case identifier column in the build data.

ORA-40403: model does not have any valid features
Cause: All singular values in the SVD model were equal to zero. This can occur if the build data contains only zeros or all build columns have constant values and automatic data preparation is turned on.

Action: Inspect and modify the build data.

ORA-40404: approximate computation cannot be disabled for the build data
Cause: The build data had a very high number of attributes. An SVD model can be built only by enabling approximate computation.

Action: Enable approximate computation.

ORA-40405: Full SVD solvers cannot be used for the build data.
Cause: The build data had a very high number of attributes. A Singular Value Decomposition (SVD) model cannot be built using full SVD solvers.

Action: Select a truncated SVD solver.

ORA-40421: missing text policy name
Cause: Text policy name was missing.

Action: Provide a valid text policy name created using CTX_DDL.CREATE_POLICY().

ORA-40422: TEXT attribute types not supported by this algorithm
Cause: The training input to the CREATE_MODEL routine contained one or more attributes of TEXT type. These attributes are currently not supported by Orthogonal Partitioning Clustering (O-Cluster).

Action: Remove attributes of these types from the input data source.

ORA-40423: Extraction of tokens from text failed
Cause: Extraction of tokens from an attribute of TEXT type failed.

Action: Check text policy, policy owner, other settings for TEXT type, and computer resources.

ORA-40441: JSON syntax error
Cause: The provided JavaScript Object Notation (JSON) data had invalid syntax and could not be parsed.

Action: Provide JSON data with the correct syntax.

ORA-40442: JSON path expression syntax error ('*string*')*string*
Cause: The provided JavaScript Object Notation (JSON) path expression had an invalid syntax and could not be parsed.

Action: Provide JSON path expression with the correct syntax.

ORA-40443: unsupported JSON path expression
Cause: The provided JavaScript Object Notation (JSON) path expression contained unsupported features.

Action: Remove unsupported features from JSON path expression.

ORA-40444: JSON processing error
Cause: The requested JavaScript Object Notation (JSON) operation failed.

Action: Ensure that the JSON operation is invoked correctly.

ORA-40445: unsupported JSON operation
Cause: The requested JavaScript Object Notation (JSON) operation is not supported.

Action: None

ORA-40446: expecting keyword STREAM
Cause: The JavaScript Object Notation (JSON) operator expected the keyword STREAM.

Action: Add the keyword STREAM to the JSON operator.

ORA-40447: expecting PASSING clause
Cause: The JavaScript Object Notation (JSON) operator expected a PASSING clause.

Action: Add a PASSING caluse to the JSON operator.

ORA-40448: expecting RETURNING clause
Cause: The JavaScript Object Notation (JSON) operator expected a RETURNING clause.

Action: Add a RETURNING clause to the JSON operator.

ORA-40449: invalid data type for return value
Cause: The provided data type for the return value was invalid or unsupported.

Action: Provide a supported return value.

ORA-40450: invalid ON ERROR clause
Cause: The provided ON ERROR clause was invalid.

Action: Provide a valid ON ERROR clause.

ORA-40451: invalid default value provided
Cause: The provided default value was not allowed here.

Action: Provide a valid default value.

ORA-40452: default value not matching type defined in RETURNING clause
Cause: The provided default value did not match the type defined in the RETURNING clause.

Action: Ensure that the default value and RETURNING clause are of the same type.

ORA-40453: JSON operator syntax error
Cause: The provided JavaScript Object Notation (JSON) operator had invalid syntax.

Action: Provide JSON operator with correct syntax.

ORA-40454: path expression not a literal
Cause: The provided path expression was not a literal (a constant).

Action: Provide a constant path expression.

ORA-40455: default value not a literal
Cause: The provided default value was not a literal (a constant).

Action: Provide a constant default value.

ORA-40456: JSON_VALUE evaluated to non-scalar value
Cause: The provided JavaScript Object Notation (JSON) path expression selected a non-scalar value.

Action: Correct the JSON path expression or use JSON_QUERY.

ORA-40457: JSON path expression contained an invalid array index ('*string*')*string*
Cause: The provided JavaScript Object Notation (JSON) path expression contained an invalid array index.

Action: Provide a valid array index. The first element in the array has the index 0.

ORA-40458: JSON_EXISTS used outside predicate
Cause: The operator JSON_EXISTS was used outside of a predicate.

Action: Use JSON_EXISTS inside a predicate, for instance by embedding it inside a CASE expression.

ORA-40459: output value too large (actual: *string*, maximum: *string*)
Cause: The provided JavaScript Object Notation (JSON) operator generated a result which exceeds the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB/BLOB in the RETURNING clause.

ORA-40460: default value too large
Cause: The provided default value exceed the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or reduce the length of the default value.

ORA-40461: Unsupported character set
Cause: The provided JavaScript Object Notation (JSON) operator does not supported the current database character set.

Action: Chose a different database character set, for instance AL32UTF8, AL16UTF16, or a single byte character set.

ORA-40462: JSON_VALUE evaluated to no value
Cause: The provided JavaScript Object Notation (JSON) path expression did not select a value.

Action: Correct the JSON path expression.

ORA-40463: JSON path expression contained an invalid variable name
Cause: The provided JavaScript Object Notation (JSON) path expression contained a variable name that was not used in the PASSING clause.

Action: Ensure that the variable names in the path expression and PASSING clause match.

ORA-40464: JSON PASSING clause contained duplicate variable names
Cause: The provided JavaScript Object Notation (JSON) PASSING clause contained non-unique variable names.

Action: Rename the variables in the PASSING clause.

ORA-40465: JSON PASSING clause contained too many unnamed parameters
Cause: The provided JavaScript Object Notation (JSON) PASSING clause contained too many unnamed parameters.

Action: Assign names to the parameters provided in the PASSING clause.

ORA-40466: Invalid parameter in IS [NOT] JSON predicate
Cause: The IS [NOT] JSON predicate containes an invalid parameter.

Action: Remove or correct the parameter.

ORA-40467: JSON_TEXTCONTAINS() cannot be evaluated without a JSON-enabled context index
Cause: There was no JavaScript Object Notation (JSON)-enabled context index available.

Action: Create a JSON-enabled context index.

ORA-40468: first input parameter to JSON_TEXTCONTAINS() must be a column
Cause: The first input parameter to JSON_TEXTCONTAINS() was not a column.

Action: Pass a column to the first input parameter to JSON_TEXTCONTAINS().

ORA-40469: JSON path expression in JSON_TEXTCONTAINS() is invalid
Cause: A predicate or array position was used in JavaScript Object Notation (JSON) path expression, or the length of a JSON field name in the path expression exceeded the JSON search index token length limit.

Action: Neither use a predicate or array position in a JSON path expression nor a step with length longer than the JSON search index token length limit.

ORA-40470: JSON_VALUE evaluated to multiple values
Cause: The provided JavaScript Object Notation (JSON) path expression selected more than one value.

Action: Correct the JSON path expression or use JSON_QUERY.

ORA-40471: selected value not JSON array or object
Cause: The selected value was not a JavaScript Object Notation (JSON) value. (object or array)

Action: Use CAST AS ARRAY to return this value.

ORA-40472: invalid escape in JSON data
Cause: The provided JavaScript Object Notation (JSON) data had an invalid escape sequence.

Action: Provide JSON data with corrected escape sequence.

ORA-40473: duplicate key names in JSON object
Cause: The provided JavaScript Object Notation (JSON) data had duplicate key names in one object.

Action: Provide JSON data with unique key names in each JSON object.

ORA-40474: invalid UTF-8 byte sequence in JSON data
Cause: The provided JavaScript Object Notation (JSON) data had an invalid UTF-8 byte sequence.

Action: Provide JSON data with corrected UTF-8 byte sequence or escape the characters.

ORA-40475: JSON data nested too many levels
Cause: The provided JavaScript Object Notation (JSON) data had too many levels of nesting.

Action: Provide JSON data with fewer levels of nesting.

ORA-40476: JSON key too long
Cause: The provided JavaScript Object Notation (JSON) data had a key which exceeds the maximum length.

Action: Provide JSON data with shorter key names.

ORA-40477: internal JSON error
Cause: There was an internal error in the JavaScript Object Notation (JSON) processing layer.

Action: None

ORA-40478: output value too large (maximum: *string*)
Cause: The provided JavaScript Object Notation (JSON) operator generated a result which exceeds the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB or BLOB in the RETURNING clause.

ORA-40479: internal JSON serializer error
Cause: There was an internal error in the JavaScript Object Notation (JSON) serializer).

Action: None

ORA-40480: result cannot be returned without array wrapper
Cause: The JavaScript Object Notation (JSON) path expressions selected a value that can only be returned inside an array.

Action: Add WITH ARRAY WRAPPER to the JSON function.

ORA-40481: ASCII or PRETTY not supported for non-textual return data type
Cause: An attempt was made to pretty print or escape non-ASCII characters for a non-textual output of a JavaScript Object Notation (JSON) operation.

Action: Change return data type to VARCHAR2 or CLOB or remove the PRETTY or ASCII serialization option.

ORA-40482: JSON_TEXTCONTAINS() used outside predicate of WHERE clause
Cause: JSON_TEXTCONTAINS() was used outside of the predicate of a WHERE clause.

Action: Use JSON_TEXTCONTAINS() inside a preciate of a WHERE clause.

ORA-40483: incorrect search string to JSON_TEXTCONTAINS()
Cause: An incorrect search string to JSON_TEXTCONTAINS() was used.

Action: The search string to JSON_TEXTCONTAINS() needs to be a non-zero length compile time constant.

ORA-40484: invalid data type for JSON_TABLE column
Cause: A column in the provided JSON_TABLE had an unsupported data type.

Action: Provide a supported data type.

ORA-40485: keyword PRETTY not valid for this column
Cause: A JSON_TABLE column with JSON_VALUE semantics could not be pretty printed.

Action: Change column semantics to JSON_QUERY or remove the keyword PRETTY.

ORA-40486: array wrapper not valid for this column
Cause: A JSON_TABLE column with JSON_VALUE semantics could not have an array wrapper.

Action: Change column semantics to JSON_QUERY or remove the array wrapper.

ORA-40487: invalid usage of keyword EXISTS
Cause: A JSON_TABLE column with JSON_EXISTS semantics had invalid parameters.

Action: Remove the invalid keywords.

ORA-40488: invalid ON ERROR clause for column semantics
Cause: An ON ERROR clause was provided that was not valid for the selected column semantics.

Action: Change or remove the ON ERROR clause or change the column semantics.

ORA-40489: keyword ASCII not valid for this column
Cause: A JSON_TABLE column with JSON_VALUE semantics could not be pretty printed.

Action: Change column semantics to JSON_QUERY or remove keyword ASCII.

ORA-40490: COLUMNS clause required
Cause: The provided JSON_TABLE row source requires a COLUMNS clause.

Action: Provide a COLUMNS clause.

ORA-40491: invalid input data type for JSON_TABLE
Cause: The provided input to JSON_TABLE has an unsupported data type.

Action: Provide a (N)VARCHAR2, (N)CLOB, RAW, BLOB or BFILE input.

ORA-40492: invalid column definition in JSON_TABLE
Cause: A column definition inside JSON_TABLE was invalid.

Action: Correct the column definition.

ORA-40493: invalid option or parameter in JSON_TABLE
Cause: The provided JSON_TABLE definition contained one or more invalid options or parameters.

Action: Correct the JSON_TABLE definition.

ORA-40494: error during execution of JSON_TABLE
Cause: The provided JSON_TABLE definition could not be evaluated.

Action: Correct the JSON_TABLE definition.

ORA-40495: internal error in JSON_TABLE
Cause: The provided JSON_TABLE definition could not be evaluated.

Action: Contact Oracle Support Services.

ORA-40496: too many keys for JSON_OBJECTAGG
Cause: The number of rows in a JSON_OBJECTAGG aggregation group exceeded the maximum number of keys for a JSON Object.

Action: Reduce the number of rows in each group, or remove the WITH UNIQUE KEYS check.

ORA-40497: only one ordinality column permitted
Cause: The provided JSON_TABLE definition contained more than one ordinality column.

Action: Remove the ordinality column or columns from the JSON_TABLE definition.

ORA-40498: binary format requested for non-binary data type
Cause: The provided JSON format was binary but the input data type was not binary.

Action: Either change the format clause or use an input of binary data type.

ORA-40499: no format defined for binary data type
Cause: The provided JavaScript Object Notation (JSON) input was of binary type but a format was not defined.

Action: Define a format for binary input.

ORA-40501: cannot open an encrypted log file
Cause: An attempt was made to open a log file that has been encrypted for storage and management by the Oracle Availability Machine. Only the processes involved in shipping such a log to or from the Oracle Availability Machine can open the log.

Action: Allow the Oracle Availability Machine to manage the log file.

ORA-40504: file *string* created before last CREATE CONTROLFILE, could not proceed with recovery
Cause: An attempt at media recovery found that the data file already existed before the last CREATE CONTROLFILE statement was executed. The information needed for doing the media recovery was lost with the control file that existed when the data file was added to the database.

Action: Restore a more recent backup of the data file and retry the recovery.

ORA-40505: tablespace #*string* has been dropped
Cause: An attempt was made on the physical standby database to access the tablespace that was being dropped by Redo Apply. Note that the target tablespace was dropped on the primary database and the physical standby database was applying the redo that was generated at the primary database for the target tablespace drop.

Action: None

ORA-40507: The file header of data file *string* is corrupt. Automatic block repair is trying to fix the file header.
Cause: A corrupt data file header was encountered during a checkpoint.

Action: Run the query after the data file header is fixed by the automatic block repair.

ORA-40509: cursor compilation failed because *string*
Cause: Cursor compilation failed. Check the alert log for more details.

Action: Run the query again after fixing the condition that failed cursor compilation.

ORA-40510: This type of file cannot be renamed.
Cause: An attempt was made to rename a file for which renaming is not supported.

Action: Do not attempt to rename files of this type.

ORA-40511: Data file *string* is not accessible to recovery.
Cause: The data transfer cache was sent and rejected blocks for a file that was not accessible to the recovery. Either the file had not yet been added by the recovery or the file was offline.

Action: No action is required. If the recovery adds the file or the standby media recovery is restarted after bringing the file online, then the data blocks are fetched automatically.

ORA-40512: PDB recovery stopped at SCN %0!s, time %1!s, before reaching target time %2!s on an orphan database incarnation.
Cause: The target time was on an orphan database incarnation and the pluggable database (PDB) recovery could not proceed further.

Action: Examine if the current state of the pluggable database satisfies the requirement. If you indeed need the pluggable database to be recovered to the previously specified time, consider performing flashback or point-in-time recovery of the entire Container Database(CDB) to the target time.

ORA-40513: not supported on standby database
Cause: An attempt was made to reset the pluggable database (PDB) incarnation on the standby database.

Action: This is an informational message only.

ORA-40514: You may need to restore an older backup for recovery to orphan PDB incarnation
Cause: Oracle can not verify that the specified file is a correct file for this database. This may be because Oracle is recovering to an orphan PDB incarnation.

Action: Restore an older backup for this file. See alert log for additional details.

ORA-40551: internal BSON/JSON conversion error [*string*]
Cause: BSON/JSON conversion failed with internal error.

Action: Contact Oracle Support Services.

ORA-40552: invalid data type
Cause: The BSON/JSON converter was invoked with an invalid data type.

Action: Ensure that both the input and output is of data type BLOB.

ORA-40553: path expression with predicates not supported in this operation
Cause: A path expression with predicates was specified in a JavaScript Object Notation (JSON) operation that does not support predicates.

Action: Only JSON_EXISTS supports predicates.

ORA-40554: invalid input data type in PASSING clause
Cause: The specified PASSING clause had an unsupported data type.

Action: Use a supported data type in the PASSING clause.

ORA-40555: incorrect PASSING clause
Cause: The specified PASSING clause was invalid.

Action: Specify a valid passing clause.

ORA-40556: unsupported chaining of JSON_TABLE
Cause: The specified JSON_TABLES were chained.

Action: Use the NESTED PATH syntax for JSON_TABLE.

ORA-40557: cannot update a JSON value
Cause: An attempt was made to update a JavaScript Object Notation (JSON) value.

Action: Update the entire JSON object instead.

ORA-40558: Simple Oracle Document Access (SODA) requires that the Oracle Database compatible parameter is set to 12.0.0.0.0 or higher.
Cause: DBMS_SODA_ADMIN package was used when the database was operating at a compatible setting lower than 12.0.0.0.0.

Action: Upgrade the database compatible setting to 12.0.0.0.0 or higher to enable the desired new features.

ORA-40559: one or more JSON objects exist that cannot be downgraded.
Cause: There were JavaScript Object Notation (JSON) objects in the database that were created in a release beyond the selected release for downgrade.

Action: Prior to downgrade, drop the JSON objects that cannot be downgraded to the selected release.

ORA-40560: JSON_TABLE nested path expressions not disjunct
Cause: The JSON_TABLE expression contained two or more nested path expressions that (partially or fully) selected the same fields.

Action: Correct or combine the nested path expressions so that they become disjunct.

ORA-40561: invalid path in JSON_TABLE nested path clause
Cause: The JSON_TABLE expression contained a nested path clause with an invalid path expression.

Action: Correct or remove the nested path expression.

ORA-40562: Conversion from JSON to SDO_GEOMETRY failed.
Cause: The selected value could not be converted to a SDO_GEOMETRY object.

Action: Ensure that the path expression selects one valid JSON value.

ORA-40563: default value not allowed for object types.
Cause: The error handler specified a default value and the returned data type was an object type. These cannot be combined.

Action: Change either the return type or choose 'NULL ON ERROR' or 'ERROR ON ERROR' as error handler.

ORA-40564: Invalid JSON specification.
Cause: The provided specification was invalid.

Action: Correct the specification parameter.

ORA-40565: JSON path expression did not select a value.
Cause: The JavaScript Object Notation (JSON) path expression did not select a value.

Action: Correct the JSON path expression.

ORA-40566: JSON path expression selected a value of different data type.
Cause: The JavaScript Object Notation (JSON) path expression selected a data type value different than the requested data type.

Action: Use another 'get-method' to retrieve the value selected by the JSON path expression.

ORA-40567: JSON patch operation failed.
Cause: The JavaScript Object Notation (JSON) patch operation failed.

Action: Correct the specification parameter.

ORA-40568: Cannot modify read-only target.
Cause: An attempt to modify a JavaScript Object Notation (JSON) structure failed because the structure cannot be modified.

Action: None

ORA-40569: Unimplemented JSON feature.
Cause: An attempt was made to execute an unimplemented JavaScript Object Notation (JSON) feature.

Action: None

ORA-40570: JSON conversion failed.
Cause: A conversion between a JavaScript Object Notation (JSON) value and another type failed.

Action: Check the type definition or the selected JSON value.

ORA-40571: JSON key name not found.
Cause: A key with the specified name was not found in the JavaScript Object Notation (JSON) data.

Action: Correct the key name.

ORA-40572: Invalid JSON array position.
Cause: An attempt was made to access an item inside a JavaScript Object Notation (JSON) array with a position that is either out of bounds or invalid.

Action: Correct the position value.

ORA-40573: Invalid use of PL/SQL JSON object type.
Cause: An attempt was made to use a PL/SQL JavaScript Object Notation (JSON) object type in an invalid context.

Action: Use PL/SQL JSON object types only inside PL/SQL.

ORA-40574: JSON operation on redacted column *string* not allowed.
Cause: An attempt was made to use a JavaScript Object Notation (JSON) operation on a column which has a redaction policy.

Action: Drop the redaction policy. Re-create redaction policy on a new view over the column if needed.

ORA-40576: Invalid use of bind variable in SQL/JSON path.
Cause: An attempt was made to bind a non-runtime constant to a bind variable in SQL/JSON path.

Action: Bind either compile time constant or runtime SQL bind variable value to a bind variable for SQL/JSON path.

ORA-40577: invalid key name
Cause: The provided key name was not valid.

Action: Provide a valid key name.

ORA-40578: invalid or non-existent array position
Cause: The provided array position was not valid or non-existant.

Action: Provide a valid array position or use the 'append' function to add new items to the array.

ORA-40579: star expansion is not allowed
Cause: Either t.* or * was used in a context where it is not allowed.

Action: Explicitly specify the column names.

ORA-40580: STRICT or WITH UNIQUE KEYS not allowed for JSON type
Cause: An attempt was made to use IS JSON with the STRICT or UNIQUE KEYS option on a JSON type input. A JSON type instance is always STRICT and has unique keys.

Action: Apply the STRICT and UNIQUE KEYS options on a textual JSON value. Remove these options form the IS JSON operation if the input is a JSON type.

ORA-40581: package functions are unsupported below compatible *string*
Cause: The package was used with a database that was operating at a compatible setting lower than expected.

Action: Upgrade the database to a compatible setting that is the expected release or higher to enable the desired new features.

ORA-40582: cannot find a data guide-enabled context index
Cause: A data guide-enabled context index for the specified column in the specified table was not found.

Action: Ensure that the table and column exist, the column is a JavaScript Object Notation (JSON) column, and a data guide-enabled context index exists on the JSON column before invoking the procedure or function.

ORA-40583: view name or table name or JSON column name cannot be null
Cause: The view name or table name or JSON column name was null.

Action: Pass in a valid view name or table name or JavaScript Object Notation (JSON) column name to the function or procedure.

ORA-40584: JSON column *string* does not exist
Cause: The given table did not have a JavaScript Object Notation (JSON) column with the given name.

Action: Ensure that the table name and JSON column name are specified correctly.

ORA-40585: invalid frequency
Cause: The specified frequency was invalid.

Action: The range of frequency has to be 0 to 100.

ORA-40586: error occurred in the execution of *string*
Cause: A internal error occurred.

Action: This is an internal error. Contact Oracle Support Services.

ORA-40587: invalid JSON type
Cause: The specified JavaScript Object Notation (JSON) type was invalid.

Action: Ensure that the JSON type is specified correctly.

ORA-40588: invalid estimate percentage
Cause: The specified estimate percentage was invalid.

Action: The range of estimate percentage has to be 0.000001 to 100.

ORA-40589: path '*string*' does not exist
Cause: The specified path was not found.

Action: Ensure that the specified path exists.

ORA-40590: invalid format
Cause: The specified format was invalid.

Action: Ensure that the format is specified correctly.

ORA-40591: empty data guide on json column
Cause: No data has been inserted to the json column.

Action: Insert data or commit.

ORA-40592: name conflicts were found during execution of DBMS_JSON.ADD_VIRTUAL_COLUMNS: *string*
Cause: An attempt was made to create virtual columns using an annotated Javascript Object Notation (JSON) data guide with the name of a column that already exists.

Action: Change the preferred name of the virtual column in the annotated Javascript Object Notation (JSON) data guide.

ORA-40593: name conflicts were found during execution of DBMS_JSON.CREATE_VIEW: *string*
Cause: An attempt was made to create a view using an annotated Javascript Object Notation (JSON) data guide with the name of a column that already exists.

Action: Change the preferred name of the column in the annotated Javascript Object Notation (JSON) data guide.

ORA-40594: invalid data guide: *string*
Cause: The specified data guide was invalid.

Action: Ensure that the specified data guide follows data guide rules.

ORA-40595: Name input to JSON generation function cannot be null.
Cause: The name input given to the Javascript Object Notation (JSON) generation function was null.

Action: Ensure that the input has a valid value.

ORA-40596: error occurred in JSON processing *string*
Cause: An error occurred when evaluating the JavaScript Object Notation (JSON) operator.

Action: None

ORA-40597: JSON path expression syntax error ('*string*')*string*\nat position *string*
Cause: The specified JavaScript Object Notation (JSON) path expression had invalid syntax and could not be parsed.

Action: Specify JSON path expression with the correct syntax.

ORA-40598: JSON path expression contained an invalid array index ('*string*')*string*\nat position *string*
Cause: The specified JavaScript Object Notation (JSON) path expression contained an invalid array index.

Action: Specify a valid array index. The first element in the array has the index 0.

ORA-40599: IS JSON check constraint cannot be dropped.
Cause: IS JSON check constraint could not be dropped when there was a JSON search index created on the column.

Action: Drop the JSON search index first before dropping the IS JSON check constraint.

ORA-40600: JSON_EQUAL used outside predicate
Cause: The operator JSON_EQUAL was used outside of a predicate.

Action: Use JSON_EQUAL inside a predicate, for instance by embedding it inside a CASE expression.

ORA-40601: missing data for object type conversion
Cause: The input JavaScript Object Notation (JSON) data was missing data to match all of the attributes in the specified object type.

Action: The input JSON data must include the fields that are missing.

ORA-40602: extra data for object type conversion
Cause: The input JavaScript Object Notation (JSON) data had extra fields that did not match any attribute in the specified object type.

Action: The input JSON data should not include fields that do not match an attribute in the specified object type.

ORA-40603: type error mismatch for object type conversion
Cause: The input JavaScript Object Notation (JSON) data had fields that nominally matched an attribute in the specified object type, but had an incompatible data type.

Action: The input JSON data should not have fields that do not match the data type of an attribute with which they nominally match in the specified object type.

ORA-40604: exceeded maximum size for a JSON data type object
Cause: The maximum size permitted for a JavaScript Object Notation (JSON) data type object was exceeded.

Action: Ensure that the JSON data type object does not exceed the maximum size permitted.

ORA-40605: Invalid value for OCI_ATTR_SODA_FETCH_ARRAY_SIZE attribute.
Cause: An invalid value was specified for OCI_ATTR_SODA_FETCH_ARRAY_SIZE attribute.

Action: Use a non-zero value not exceeding MINSWORDMAXVAL for OCI_ATTR_SODA_FETCH_ARRAY_SIZE attribute.

ORA-40620: total length of key names in JSON object too long
Cause: The length of all the key names combined exceeded the maximum length permitted for a JavaScript Object Notation (JSON) object.

Action: Use fewer keys or shorter key names.

ORA-40621: Collection create mode *string* is not supported.
Cause: An invalid collection create mode was specified.

Action: Use a valid collection create mode.

ORA-40622: Creating a collection backed by view or package in "NEW" mode is not allowed.
Cause: Creating a collection backed by view or package in NEW mode was not allowed.

Action: Do not specify a view or package when creating the collection in NEW create mode, or specify a create mode that supports view or package-based collections.

ORA-40623: The table intended to back the collection does not exist.
Cause: The table intended to back the collection did not exist.

Action: Ensure that the table intended to back the collection exists.

ORA-40624: Columns of the mapped table backing the collection do not match collection metadata.
Cause: The columns of mapped table backing the collection did not match the collection metadata.

Action: Ensure that the columns of the table backing the collection match their description in collection metadata.

ORA-40625: The view intended to back the collection does not exist.
Cause: The view intended to back the collection did not exist.

Action: Ensure that the view intended to back the collection exists.

ORA-40626: The table or view underlying the collection cannot be dropped.
Cause: The table or the view underlying the collection could not be dropped. There could be uncommitted writes to the collection.

Action: Ensure that all writes to the collection are committed.

ORA-40627: Columns of the mapped view backing the collection do not match collection metadata.
Cause: The columns of mapped view backing the collection did not match the collection metadata.

Action: Ensure that the columns of the view backing the collection match their description in collection metadata.

ORA-40628: Projection specification is not valid JSON
Cause: Projection specification was not expressed in valid JSON.

Action: Ensure that projection specification is expressed in valid JSON.

ORA-40629: Patch specification is not valid JSON
Cause: Patch specification was not expressed in valid JSON.

Action: Ensure that patch specification is expressed in valid JSON.

ORA-40630: Versioning method '*string*' is not valid.
Cause: The specified versioning method was not valid.

Action: Specify a valid versioning method.

ORA-40631: The last-modified column index can only be set when the last-modified column name is set.
Cause: The last-modified column index was specified without setting the last-modified column name.

Action: Specify the last-modified column name if the last-modified column index is required.

ORA-40632: Key column length value cannot be less than 0.
Cause: The specified key column length value was less than 0.

Action: If the key column length value is specified, then ensure that it is greater than 0.

ORA-40633: When using GUID or UUID to assign character type key values, the key column length must be 32 bytes or greater.
Cause: The specified key column length for a GUID or UUID character type key value was less than 32 bytes.

Action: Ensure that the specified key column length for a GUID or UUID character type key value is 32 bytes or greater.'

ORA-40634: Key assignment method '*string*' is not valid.
Cause: The specified key assignment method was not valid.

Action: Specify a valid key assignment method.

ORA-40635: If the key assignment method is 'SEQUENCE', a key column sequence name must be specified.
Cause: The key assignment method 'SEQUENCE' was specified, but the key column sequence name was not set.

Action: If the key assignment method is 'SEQUENCE', ensure that the key column sequence name is set.

ORA-40636: Content column type '*string*' is not valid.
Cause: The specified content column type was not valid.

Action: Specify a valid content column type.

ORA-40637: Content column maximum length value cannot be less than 0.
Cause: The specified content column maximum length value was less than 0.

Action: Specify a content column maximum length value greater than 0.

ORA-40638: Content column validation mode '*string*' is not valid.
Cause: The specified content column validation mode was not valid.

Action: Specify a valid content column validation mode.

ORA-40639: Content column compress setting '*string*' is not valid.
Cause: The specified content column compress setting was not valid.

Action: Specify a valid content column compress setting.

ORA-40640: Content column LOB cache setting '*string*' is not valid (must be 'true' or 'false').
Cause: The specified content column LOB cache setting was not valid.

Action: 'Specify a valid content column LOB cache setting.

ORA-40641: Content column LOB encrypt setting '*string*' is not valid.
Cause: The specified content column LOB encrypt setting was not valid.

Action: Specify a valid content column LOB encrypt setting.

ORA-40642: The collection cannot have a media type column unless the content column type is BLOB.
Cause: The content column type was set to a type other than Binary Large Object (BLOB), and the media type column was requested.

Action: If the media type column is requested, set the content column type to BLOB.

ORA-40643: INITIAL storage clause parameter value cannot be less than 0.
Cause: The specified INITIAL storage clause parameter value was not valid.

Action: Specify a valid INITIAL storage clause parameter value.

ORA-40644: PCTINCREASE storage clause parameter value cannot be less than 0.
Cause: The specified PCTINCREASE storage clause parameter value was not valid.

Action: Specify a valid PCTINCREASE storage clause parameter value.

ORA-40645: If the key column sequence name was specified, the key column assignment method must be set to 'SEQUENCE'.
Cause: The key column sequence name was specified, but the key column assignment method was not 'SEQUENCE'.

Action: If the key column sequence name is specified, ensure that the key column assignment method is 'SEQUENCE'.

ORA-40646: SecureFile LOB settings cannot be used when the content column type is '*string*'.
Cause: SecureFile LOB settings were specified, but the content column was not of LOB type.

Action: If SecureFile LOB settings are specified, ensure that the content column is of LOB type.

ORA-40647: A non-zero content column maximum length cannot be set for LOB content types.
Cause: A non-zero content column maximum length was specified, but the content column was of a LOB type.

Action: If non-zero content column maximum length is specified, ensure that the content column is not of a LOB type.

ORA-40648: Versioning method other than 'NONE' can only be specified if version column name is specified.
Cause: Versioning method other than 'NONE' was specified, but the version column name was not specified.

Action: If a versioning method other than 'NONE' is specified, ensure that the version column name is set.

ORA-40649: Key column maximum length cannot be greater than 255 bytes.
Cause: A key column maximum length value greater than 255 bytes was specified.

Action: Ensure that the key column maximum length value is not greater than 255 bytes.

ORA-40650: The specified key column type cannot be used with a maximum length.
Cause: A key column type that does not support maximum length was specified.

Action: Ensure that if a key column maximum length is set, the key column type supports a maximum length setting.

ORA-40651: Key column type '*string*' is not valid.
Cause: The specified key column type was not valid.

Action: Specify a valid key column type.

ORA-40652: Read-only setting is not valid (must be 'true' or 'false').
Cause: The specified read-only setting was not valid.

Action: Specify a valid read-only setting.

ORA-40653: Spatial data type MDSYS.SDO_GEOMETRY not found.
Cause: The spatial data type MDSYS.SDO_GEOMETRY could not be found.

Action: Create data type MDSYS.SDO_GEOMETRY by installing Oracle Spatial and Graph or Oracle Locator.

ORA-40654: Input to JSON generation function has unsupported data type.
Cause: An input parameter to the JavaScript Object Notation (JSON) generation function had a data type that is not supported.

Action: Use the correct input or a conversion function to convert the input to a supported data type.

ORA-40655: no PASSING clause specified
Cause: The PASSING clause was not specified for the bind variables in the query.

Action: Add a PASSING clause to specify the values for bind variables.

ORA-40656: Variable in JSON path expression has no value in PASSING clause.
Cause: The JavaScript Object Notation (JSON) path expression contained a variable name that had no corresponding value in the external PASSING clause.

Action: Add a variable to the external PASSING clause and ensure that the names match.

ORA-40657: Variable in PASSING clause has no name.
Cause: The expression provided in the PASSING clause had no name.

Action: Name the expression in the PASSING clause.

ORA-40658: Collection name cannot be null for this operation.
Cause: An attempt was made to perform the operation without a name.

Action: Specify the collection name for the operation.

ORA-40659: Data type does not match the specification in the collection metadata.
Cause: An attempt was made to use an invalid data type.

Action: Use the data type that is specified in the collection descriptor.

ORA-40660: Content value cannot be null for instantiating a document.
Cause: An attempt was made to instantiate a document with a null content.

Action: Specify non-null content for instantiating the document.

ORA-40661: Key value cannot be null for this operation.
Cause: An attempt was made to perform an operation with a null key.

Action: Specify non-null key for the operation.

ORA-40662: Document cannot be null for this operation.
Cause: An attempt was made to perform an operation with a null document.

Action: Instantiate a document using the constructor before this operation.

ORA-40663: cannot modify a read-only collection
Cause: An attempt was made to modify a read-only collection.

Action: None

ORA-40664: cannot add additional IS JSON check constraint
Cause: An attempt was made to add an IS JSON check constraint to a column that already had an IS JSON check constraint.

Action: None

ORA-40665: A client-assigned key cannot be used for this operation.
Cause: An attempt was made to use a client-assigned key for this collection.

Action: Remove the client-assigned key from the document.

ORA-40666: Internal error '*string*' received from JSON processor
Cause: An internal error was received during a JSON operation.

Action: This is an internal error. Contact Oracle Support Services.

ORA-40667: Patch operation cannot destroy JSON_ELEMENT_T type.
Cause: An operation in the patch specification attempted to remove the top-most container (object or array) from the JSON_ELEMENT_T type.

Action: Modify the patch specification by either removing the operation that deletes the top-most container or by adding an operation that adds a new top-most container.

ORA-40668: collection metadata too long
Cause: The collection metadata which was passed was too long.

Action: Reduce the size of the collection metadata.

ORA-40669: Collection create failed: collection with same name but different metadata exists.
Cause: Creation of the collection failed because there was an existing collection with same name but different metadata.

Action: None

ORA-40670: Unable to complete collection create due to an interfering collection DDL operation.
Cause: Existing collection with the same name was encountered, but dropped from another process before its metadata could be checked.

Action: Retry creating the collection.

ORA-40671: Collection not found.
Cause: Collection was not found.

Action: None

ORA-40672: Specified key column max length of *string* bytes exceeds maximum allowed 255 bytes.
Cause: Key column max length specified in the supplied metadata exceeded maximum allowed length of 255 bytes.

Action: Ensure key column max length specified in the supplied metadata does not exceed 255 bytes.

ORA-40673: *string* argument cannot be NULL.
Cause: Supplied argument was NULL.

Action: Provide a valid argument.

ORA-40674: Length of *string* metadata value cannot exceed *string* bytes.
Cause: Length of the supplied metadata value exceeded allowed limit.

Action: Provide a valid metadata value.

ORA-40675: Metadata descriptor must be specified using valid JSON.
Cause: JSON supplied for the metadata descriptor was not valid.

Action: Supply valid JSON for the metadata descriptor.

ORA-40676: invalid Query-By-Example (QBE) filter specification\n*string*
Cause: The Query-By-Example (QBE) filter specification was invalid.

Action: Correct the filter specification.

ORA-40677: internal SODA error
Cause: There was an internal error in the Simple Oracle Document Access (SODA) processing layer.

Action: None

ORA-40678: The total number of keys specified using the attributes key, keys, and filter is *string*; exceeds the maximum allowed limit of *string*.
Cause: The number of keys exceeded allowed limit.

Action: Reduce the number of keys to below the maximum allowed limit

ORA-40679: Lob length of *string* bytes exceed maximum supported length of *string* bytes
Cause: The large object (LOB) content that was fetched exceeded the maximum supported length

Action: None

ORA-40680: invalid identifier used for path expression in JSON_TABLE
Cause: A double-quoted identifier used a path expression that was invalid.

Action: Use single quotes to specify the path expression.

ORA-40681: OCI_SODA_AS_STORED cannot be used if the content column type is CLOB or VARCHAR2
Cause: An attempt was made to use OCI_SODA_AS_STORED on a collection whose content column type was not BLOB.

Action: Use either the OCI_DEFAULT or OCI_SODA_AS_AL32UTF8 mode of execution.

ORA-40682: invalid combination of flags used
Cause: An attempt was made to use an invalid combination of flags.

Action: Use only one of the flags. (OCI_DEFAULT, OCI_AS_STORED or OCI_SODA_AS_AL32UTF8)

ORA-40683: Value '*string*' is not valid for field '*string*' (must be 'true' or 'false').
Cause: The specified setting was not valid.

Action: Specify a valid setting ('true' or 'false').

ORA-40684: maximum number of key names exceeded
Cause: An attempt was made to return a list of keys names for a JSON object that had more than 32767 keys.

Action: Reduce the number of keys in the JSON object to 32767 or less.

ORA-40685: UTF-32 encoding is not supported for JSON documents.
Cause: UTF-32 encoded content was specified for a document of type "applicaton/json".

Action: Use UTF-8 or UTF-16 encoding with JavaScript Object Notation (JSON) documents.

ORA-40686: For a JSON-only collection, media type of the input document must be 'application/json'.
Cause: An attempt was made to write a document with media type other than 'application/json' to a JSON-only collection.

Action: Provide a document with media type 'application/json'.

ORA-40687: CREATE_MODE parameter of CREATE_COLLECTION function is invalid.
Cause: Invalid value was supplied as CREATE_MODE parameter of CREATE_COLLECTION function.

Action: Supply MAP or DDL constant for the CREATE_MODE parameter of CREATE_COLLECTION function.

ORA-40688: date or time stamp string value does not conform to ISO 8601 format
Cause: An attempt was made to convert the date or time stamp string value that did not conform to ISO 8601 format.

Action: Supply a proper date or time stamp string value conforming to ISO 8601 format for conversion.

ORA-40689: Skip value cannot be set to null.
Cause: An attempt was made to set a null value for skip.

Action: Specify a non-null value for skip in the operation.

ORA-40690: Limit value cannot be set to null.
Cause: An attempt was made to set a null value for limit.

Action: Specify a non-null value for limit in the operation.

ORA-40691: The cursor for the operation has already been closed.
Cause: An attempt was made to use a cursor that has already been closed.

Action: Do not use the cursor that has already been closed or retry the operation after removing the close.

ORA-40692: Version value cannot be set to null.
Cause: An attempt was made to set a null value for version.

Action: Specify a non-null value for version in the operation.

ORA-40693: Filter value cannot be set to null.
Cause: An attempt was made to set a null value for filter.

Action: Specify a non-null value for filter in the operation.

ORA-40694: Query-by-example (QBE) with clauses other than $id, $textContains is not supported on heterogeneous collections.
Cause: An attempt was made use QBE on a heterogeneous collection with clauses other than $id, $textContains.

Action: Do not use QBE on heterogeneous collection with clauses other than $id, $textContains.

ORA-40695: The collection does not have version column.
Cause: An attempt was made to use version in the operation on a collection with no version column.

Action: Do not use version on a collection with no version column.

ORA-40696: invalid type for index property *string*: expected *string*
Cause: An invalid index property type was specified.

Action: Supply a valid type for the index property.

ORA-40697: invalid value specified for index property 'dataguide'
Cause: An invalid value for the index property 'dataguide' was specified.

Action: Supply a valid value for the 'dataguide' index property. Valid values are 'on' or 'off'.

ORA-40698: invalid value specified for index property 'search_on'
Cause: An invalid value for the index property 'search_on' was specified.

Action: Specify a valid value for the 'search_on' index property. Valid values are 'none', 'text', or 'text_value'.

ORA-40699: invalid value specified for index property 'order'
Cause: An invalid value for the index property 'order' was specified.

Action: Specify a valid value for the 'order' index property. Valid values are 'asc', 'desc', '-1', or '1'.

ORA-40700: missing *string* index property
Cause: A mandatory index property was missing.

Action: Specify the mandatory index property.

ORA-40701: null case ID column - cannot provide row importance
Cause: The row importance was enabled, but without a corresponding case or row identifier column in the build data.

Action: Provide a non-null case identifier column in the build data.

ORA-40711: incompatible index field properties *string* and *string*
Cause: Incompatible index field properties were specified.

Action: Specify compatible index field properties.

ORA-40712: Index property *string* cannot be specified without specifying the 'fields'.
Cause: An index property was specified without specifying the 'fields' property.

Action: Specify the properties of index fields.

ORA-40713: Index property 'lax' cannot be specified with 'scalarRequired'.
Cause: Index properties 'lax' and 'scalarRequired' were both specified.

Action: Specify either 'lax' or 'scalarRequired' but not both.

ORA-40714: data type *string* not recognized or acceptable for an index column
Cause: An invalid data type property was used.

Action: Specify a valid data type (for example, STRING, VARCHAR, VARCHAR2, NUMBER, DATE, or TIMESTAMP).

ORA-40715: Index property 'maxLength' cannot be specified with non-string data types.
Cause: Index property 'maxLength' was specified with a non-string data type.

Action: Remove the 'maxLength' index property if a non-string data type must be used.

ORA-40716: Text indexing is not supported on heterogeneous collections.
Cause: An attempt was made to create a text index on a heterogeneous collection.

Action: Do not create a text index on a heterogeneous collection.

ORA-40717: Functional indexing is not supported on heterogeneous collections.
Cause: An attempt was made to create a functional index on a heterogeneous collection.

Action: Do not create a functional index on a heterogeneous collection.

ORA-40718: Geospatial indexing is not supported on heterogeneous collections.
Cause: An attempt was made to create a geospatial index on a heterogeneous collection.

Action: Do not create a geospatial index on a heterogeneous collection.

ORA-40719: invalid index property *string*
Cause: An invalid index property was specified.

Action: Specify a valid index property.

ORA-40720: Text indexing is not supported on collections with key column of NVARCHAR2 data type.
Cause: An attempt was made to create a text index on a collection with a key column of NVARCHAR2 data type.

Action: Do not create an index on a collection that has a key column of NVARCHAR2 data type.

ORA-40721: Text indexing is not supported on collections with content column of NVARCHAR2 or NCLOB data type.
Cause: An attempt was made to create a text index on a collection with a content column of NVARCHAR2 or NCLOB data type.

Action: Do not create an index on a collection that has a content column of NVARCHAR2 or NCLOB data type.

ORA-40722: Text indexing is not supported on collections with encrypted content column.
Cause: An attempt was made to create a text index on a collection with an encrypted content column.

Action: Do not create an index on a collection with an encrypted content column.

ORA-40723: index specification cannot be null
Cause: An attempt was made to specify a null index specification.

Action: Specify a non-null index specification.

ORA-40724: array steps in the fields path is not supported
Cause: An attempt was made to use array steps in fields path.

Action: Do not use array steps in the fields path.

ORA-40725: path for the field in the index specification cannot be null
Cause: An attempt was made to specify a null value for the field's path in the index specification.

Action: Specify a non-null value for the field's path in the index specification.

ORA-40726: path for the field in the index specification is invalid
Cause: An attempt was made to specify an invalid path in the index specification.

Action: Specify a valid path for the field in the index specification.

ORA-40727: number of paths with string data type exceeds the maximum permissible limit of 16
Cause: Number of paths with string data type exceeds the maximum permissible limit of 16.

Action: Reduce the number of paths with string data type.

ORA-40728: missing dot separator in path *string* at position *string*.
Cause: A dot separator was missing in the path expression.

Action: Specify the missing dot step separator in the path expression.

ORA-40729: unclosed quote at end of path *string*
Cause: A quote that was not closed was detected at the end of the path.

Action: Specify the missing back quote at the end of the path expression.

ORA-40730: an invalid character detected in the escape string in the path *string* at position *string*
Cause: An attempt was made to use a path containing invalid charcters in the escape string.

Action: Specify a valid escape string in the path expression.

ORA-40731: invalid quoted step in the path *string* at position *string*
Cause: An attempt was made to use an invalid quoted step in the path.

Action: Specify a valid quoted step in the path expression.

ORA-40732: incomplete escape sequence in the path *string*
Cause: An attempt was made to use an incomplete escape sequence in the path.

Action: Specify an escape sequence that is complete in the path expression.

ORA-40733: An index with the specified name already exists in the schema.
Cause: An attempt was made to create an index with the same name as another index in the schema.

Action: Specify an index name that does not match the name of any indexes already existing in the schema.

ORA-40734: key for the document to replace must be specified using the key attribute
Cause: An attempt was made to replace a document without setting the key attribute.

Action: Set the key attribute for the replace operation.

ORA-40735: invalid type in RETURNING clause
Cause: An attempt was made to use an invalid data type in the RETURNING clause.

Action: Use a supported data type in the RETURNING clause.

ORA-40736: Query-By-Example (QBE) filter is not valid JSON\n*string*
Cause: QBE filter was not expressed in valid JSON.

Action: Ensure that the QBE filter is expressed in valid JSON.

ORA-40737: partitionColumn.path is missing
Cause: partitionColumn.name was specified, but partitionColumn.path was missing.

Action: Specify partitionColumn.path.

ORA-40738: partitionColumn.name is missing
Cause: One or a combination of partitionColumn.path, partitionColumn.maxLength, or partitionColumn.sqlType was specified, but partitionColumn.name was missing.

Action: Specify the partitionColumn.name value.

ORA-40739: Partition column type *string* is not valid.
Cause: The specified partition column type was not valid.

Action: Specify a valid partition column type.

ORA-40740: cannot use JSON format '*string*' with content columns of type '*string*'
Cause: An invalid combination of content column settings was specified.

Action: Specify a valid combination of content column settings.

ORA-40741: cannot use JSON format '*string*' with a heterogeneous collection
Cause: An invalid combination of heterogeneous collection settings was specified.

Action: Specify a valid combination of heterogeneous collection settings.

ORA-40742: Content column JSON format '*string*' is invalid.
Cause: An invalid JSON format was specified for the content column.

Action: Provide a valid JSON format content column setting.

ORA-40743: Partition column length value cannot be less than 0.
Cause: The specified partition column length value was less than 0.

Action: If the partition column length value is specified, then ensure that it is greater than 0.

ORA-40744: Specified partition column max length of *string* bytes exceeds maximum allowed *string* bytes.
Cause: Partition column max length specified in the supplied metadata exceeded the maximum allowed length.

Action: Ensure that the partition column max length specified in the supplied metadata does not exceed the maximum allowed length.

ORA-40745: The specified partition column type cannot be used with a maximum length.
Cause: A partition column type that does not support maximum length was specified.

Action: Ensure that, if a partition column maximum length is set, the partition column type supports a maximum length setting.

ORA-40746: keyColumn.path must be set with '*string*' key assignment method.
Cause: keyColumn.path was not set with the specified EXTRACT or INSERT key assignment method.

Action: Ensure that keyColumn.path is set when the key assignment method is EXTRACT or INSERT.

ORA-40747: The value *string* is not a valid key of type *string*.
Cause: The key value was not of a valid type.

Action: Ensure that the input for key is of a valid type.

ORA-40748: SKIP and LIMIT attributes cannot be used for count operation.
Cause: An attempt was made to use SKIP and LIMIT attributes in a count operation.

Action: Do not use SKIP or LIMIT attributes in a count operation.

ORA-40749: Index property *string* cannot be specified without specifying the fields or spatial properties.
Cause: An index property was specified without specifying the fields or spatial properties.

Action: Specify either the properties of the index fields or spatial.

ORA-40750: Column of LOB type cannot be used for sorting.
Cause: The specified sort condition included a LOB column.

Action: Ensure that the sort column data type is not a large object (LOB).

ORA-40751: Document flags are not the same in all the input documents.
Cause: The document flags were not the same in all the input documents supplied to the insert operation.

Action: Ensure that the document flags are the same in all the input documents supplied to the insert operation.

ORA-40752: Input document array length must be greater than 0.
Cause: The supplied input document array length was less than or equal to 0.

Action: Supply the input document array length that is greater than 0.

ORA-40753: The current user is not the owner of the index.
Cause: The current user was not the owner of the index. Only the owner of the index can perform the operation.

Action: Connect as the owner of the index and retry the operation. If you connect as the owner of the base table and get the error, then the owner of the index has to be the owner of the base table in order to perform the operation. Connect as the owner of the base table then create the index.

ORA-40754: Collection name cannot be null for this operation.
Cause: Collection name was null for the operation.

Action: Specify a non-null collection name.

ORA-40755: Index name cannot be null for this operation.
Cause: Index name was null for the operation.

Action: Specify a non-null index name.

ORA-40756: descendant step in the path expression is not supported
Cause: The specified path contained a descendant step.

Action: Do not use descendant step in the path expression.

ORA-40757: A dot (.) cannot appear as the first or last character of a path. To signify a zero-length field name, a pair of backquotes must be used before or after the dot.
Cause: A dot (.) was used as the first or last character of the path.

Action: Do not use a dot (.) as the first or last character of the path. To signify a zero-length field name, a pair of backquotes must be used before or after the dot.

ORA-40758: unquoted special character *string* used as step in the path *string* at position *string*
Cause: Special characters such as $, @ cannot be used as a path step by itself unless backquoted.

Action: Backquote the special character if used as a path step by itself.

ORA-40759: wildcard step in the path expression is not supported
Cause: The specified path contained a wildcard step.

Action: Do not use a wildcard step in the path expression.

ORA-40760: Index with the specified name did not exist on the collection.
Cause: Index with the specified name did not exist on the collection.

Action: Specify the name of the index that exists on the collection.

ORA-40761: OCI_SODA_AS_STORED cannot be used if the content column JSON format is not textual JSON.
Cause: An attempt was made to use OCI_SODA_AS_STORED on a Binary Large Object (BLOB) collection whose content column format was not textual JavaScript Object Notation (JSON).

Action: Use OCI_DEFAULT or OCI_SODA_AS_AL32UTF8.

ORA-40762: missing value in JSON_TRANSFORM (*string*)
Cause: An attempt was made to work with a value in JSON_TRANSFORM that was missing.

Action: Correct your path expression or change the ON MISSING clause in the JSON_TRANSFORM operation.

ORA-40763: existing value in JSON_TRANSFORM (*string*)
Cause: An attempt was made to work with a value in JSON_TRANSFORM that already existed.

Action: Correct your path expression or change the ON EXISTING clause in the JSON_TRANSFORM operation.

ORA-40764: invalid option in ON EXISTING clause
Cause: An option for the ON EXISTING clause was provided thatwas not legal for the given JSON_TRANSFORM operation.

Action: Specify a different option for ON EXISTING or omit the ON EXISTING clause to use the default option.

ORA-40765: invalid option in ON MISSING clause
Cause: An option for the ON MISSING clause was provided that was not legal for the given JSON_TRANSFORM operation.

Action: Specify a different option for ON MISSING or omit the ON MISSING clause to use the default option.

ORA-40766: error in JSON_TRANSFORM execution (*string*)
Cause: An operation was performed that raised this internal error.

Action: This is an internal error. Contact Oracle Support Services.

ORA-40767: field with this name already exists (*string*)
Cause: A RENAME operation was attempted to rename a field to a name that already existed in the same Javascript Object Notation (JSON) object.

Action: Choose another field name, remove the existing field, or choose the REPLACE ON EXISTING clause.

ORA-40768: field with this name does not exist (*string*)
Cause: A RENAME operation attempted to rename a field that did not exist.

Action: Check the field name or use the IGNORE ON MISSING clause.

ORA-40769: selected value not a JSON array
Cause: An attempt was made to execute a JSON_TRANSFORM array operation on a value that was not an array.

Action: Correct your path expression.

ORA-40770: removal of root value not allowed
Cause: An attempt was made to remove the topmost object, array or scalar value in the JavaScript Object Notation (JSON) data.

Action: Do not use path expression '$' in the REMOVE operation.

ORA-40771: JSON array subscript 'last' not permitted
Cause: An attempt was made to use the JavaScript Object Notation (JSON) array subscript 'last' with an operator that does not support 'last'.

Action: Replace 'last' with the actual subscript or use another operator.

ORA-40772: Truncation is not supported on a collection that is not table based.
Cause: An attempt was made to truncate a collection that was not table based.

Action: Ensure that the collection being truncated is table based.

ORA-40773: Input JSON document contents are not in the same encoding.
Cause: Encoding of JSON content in all input documents was not the same.

Action: Ensure that all JSON documents content are in the same encoding.

ORA-40774: Metadata component *string* has value *string* which differs from expected value *string*.
Cause: An attempt was made to use unsupported collection metadata value.

Action: Provide a supported collection metadata value.

ORA-40775: Only table-backed collections are supported.
Cause: An attempt was made to create a collection not backed by a table.

Action: Specify collection metadata appropriate for a collection backed by a table.

ORA-40776: SCN value for 'as of' operation cannot be set to null.
Cause: An attempt was made to set a null value for system change number (SCN).

Action: Specify a non-null value for the SCN in the operation.

ORA-40777: Timestamp value for 'as of' cannot be set to null.
Cause: An attempt was made to set a null value for the timestamp value.

Action: Specify a non-null value for the timestamp in the operation.

ORA-40778: SCN and timestamp attributes for SELECT and COUNT operations only.
Cause: An attempt was made to use system change number (SCN) and timestamp attributes in an 'as of' operation that was not SELECT or COUNT.

Action: Do not use SCN or timestamp attributes in operations other than SELECT and COUNT.

ORA-40779: Truncation is not supported with data type in RETURNING clause.
Cause: An attempt was made to use the TRUNCATE keyword with a non-textual data type in the RETURNING clause.

Action: Remove the TRUNCATE keyword or change the RETURNING clause to use a textual data type like VARCHAR2 or CLOB.

ORA-40780: JSON syntax error\n*string*
Cause: The provided JavaScript Object Notation (JSON) data had invalid syntax and could not be parsed.

Action: Provide JSON data with the correct syntax.

ORA-40781: buffer underflow during the execution of OCIJson function\n*string*
Cause: The operation on the OCIJson descriptor resulted in an underflow error.

Action: Supply a larger buffer for the operation to prevent underflow.

ORA-40782: invalid parameter value '*string*' specified for the OCIJson function call
Cause: The operation on the OCIJson descriptor resulted in an error due to invalid input.

Action: Supply valid input for the OCIJson descriptor function.

ORA-40783: invalid binary JSON data\n*string*
Cause: The provided binary JavaScript Object Notation (JSON) data was invalid.

Action: Supply valid binary JSON data.

ORA-40784: Error occurred while reading from the input stream.
Cause: An error occurred while reading from the input stream due to incorrect initialization.

Action: Ensure that the read input stream is valid and initialized correctly for read operation.

ORA-40785: Error occurred while writing to the output stream.
Cause: An error occurred while writing to the output stream due to incorrect initialization.

Action: Ensure that the write output stream is valid and initialized correctly for write operation.

ORA-40786: JSON_VALUE evaluated to non-Boolean value
Cause: The provided JavaScript Object Notation (JSON) path expression selected a non-Boolean value.

Action: Correct the JSON path expression or use JSON_QUERY.

ORA-40787: invalid input data type for JSON_TRANSFORM
Cause: The specified input to JSON_TRANSFORM has an unsupported data type.

Action: Provide an input value with a supported data type.

ORA-40788: JSON_TRANSFORM insert operation contains invalid path
Cause: An attempt was made to insert a value into a JSON object or array using a JavaScript Object Notation (JSON) path expression that can potentially select multiple positions inside the same array or multiple keys in the same object.

Action: Do not use the asterisk (*) wildcard or range specification in the JSON path expression of an 'insert' operation.

ORA-40789: JSON_TRANSFORM operation not supported
Cause: An attempt was made to invoke JSON_TRANSFORM with an unsupported operation or parameter.

Action: Correct the JSON_TRANSFORM expression.

ORA-40790: invalid null input value for JSON_TRANSFORM
Cause: The specified input to JSON_TRANSFORM had a SQL null value.

Action: Convert the input value to a JSON null.

ORA-40791: invalid option in ON NULL clause
Cause: An illegal option for the ON NULL clause was provided for the specified JSON_TRANSFORM operation.

Action: Specify a different option for ON NULL or omit the ON NULL clause to use the default option.

ORA-40792: invalid ON NULL clause
Cause: The provided ON NULL clause was invalid.

Action: Provide a valid ON NULL clause.

ORA-40793: invalid JSON descriptor detected: [*string*]
Cause: An invalid JavaScript Object Notation (JSON) descriptor was detected.

Action: Contact Oracle Support Services.

ORA-40794: Warning of a NULL or empty input.
Cause: The operation processed a NULL or empty input.

Action: An OCI return code of OCI_SUCCESS_WITH_INFO is returned.

ORA-40795: cannot perform a write operation on a JSON descriptor in a C callout if the PL/SQL argument type is IN
Cause: An attempt was made to perform a write operation on a JavaScript Object Notation (JSON) descriptor passed as an IN argument to a C callout.

Action: Use either IN/OUT or OUT type argument for JSON type in the C callout.

ORA-40796: invalid comparison operation involving JSON type value
Cause: An attempt was made to perform a comparison against a JavaScript Object Notation (JSON) type value.

Action: Add a JSON trailing type cast function to compare the JSON type value against a scalar value. Use JSON_EQUAL to compare two JSON type values.

ORA-40797: Error occurred during conversion of OCIJson descriptor to textual JSON\n*string*.
Cause: An error occurred during conversion of OCIJson descriptor to textual JSON.

Action: Ensure that the OCIJson descriptor was written to correctly without any errors.

ORA-40798: Boolean conversion not supported for data type
Cause: An attempt was made to use the Boolean number conversion with a data type that was not NUMBER.

Action: Change the data type in the RETURNING clause to NUMBER.

ORA-40799: cannot convert Boolean value to number
Cause: An attempt was made to convert a Boolean value that was selected by a JavaScript Object Notation (JSON path) expression having a number() or numberOnly() function to a number.

Action: Remove the number()/numberOnly() function from the JSON path expression.

ORA-40800: cannot create a JSON_VALUE functional index with predicates in the path expression
Cause: An attempt was made to create a JSON_VALUE functional index with predicates in the path expression.

Action: Do not include predicates in the path expression in a JSON_VALUE functional index.

ORA-40801: metadata descriptor cannot be null
Cause: An attempt was made to specify a null metadata descriptor.

Action: Specify a non-null metadata descriptor.

ORA-40802: Collection create mode *string* cannot be used if collection is backed by a view.
Cause: An invalid collection create mode was specified.

Action: Use a valid collection create mode.

ORA-40803: JSON_TRANSFORM operation called with NULL input
Cause: A JSON_TRANSFORM operation was called with an input value that was NULL and the operation had ERROR ON NULL handling specified.

Action: Ensure that the provided value is not NULL or remove the ERROR ON NULL option.

ORA-40804: Warning of an operation on an empty JavaScript Object Notation (JSON) descriptor.
Cause: The operation processed a JSON descriptor that was empty.

Action: An OCI return code of OCI_SUCCESS_WITH_INFO is returned.

ORA-40805: cannot add an IS JSON check constraint to a JSON type column
Cause: An attempt was made to add an IS JSON check constraint to a column of JSON type.

Action: None

ORA-40806: Warning of replacement characters in the converted textual JavaScript Object Notation (JSON) due to bad character data in the source.\n*string*
Cause: Conversion to textual JSON completed with replacement characters in the output.

Action: An OCI return code of OCI_SUCCESS_WITH_INFO is returned. Check if the source was encoded correctly.

ORA-40807: Validation value '*string*' cannot be specified with '*string*' content column type.
Cause: Content column type for which validation is not supported was used.

Action: Do not specify validation.

ORA-40808: Content column tablespace cannot be specified with '*string*' content column type.
Cause: Content column type for which content column tablespace is not supported was used.

Action: Do not specify content column tablespace.

ORA-40809: memOptimizeRead cannot be set to 'true' with '*string*' content column type.
Cause: Content column type for which memOptimizeRead is not supported was used.

Action: Do not specify memOptimizeRead, or set its value to 'false'.

ORA-40810: update of root value not allowed
Cause: An attempt was made to update the topmost object, array or scalar value in the JavaScript Object Notation (JSON) data.

Action: Do not use path expression '$' in a JSON_TRANSFORM SET operation.

ORA-40811: cannot perform piece-wise write operation on a LOB column with persistent binary JSON data
Cause: An attempt was made to update a piece on LOB column with persistent binary JSON data.

Action: Do not use DBMS_LOB write operations on a persistent LOB with persistent binary JSON data.

ORA-40812: cannot specify both WITH ARRAY WRAPPER and OMIT QUOTES
Cause: The clause 'OMIT QUOTES ON SCALAR STRING' conflicted with the clause 'WITH ARRAY WRAPPER'.

Action: Change 'OMIT' to 'KEEP', or use 'WITHOUT ARRAY WRAPPER'.

ORA-40813: cannot specify ASIS with KEEP QUOTES or OMIT QUOTES
Cause: The 'ASIS' clause could not be used together with 'OMIT QUOTES' or 'KEEP QUOTES'.

Action: Remove the 'ASIS' clause.

ORA-40814: selected value not a JSON object
Cause: An attempt was made to execute a JSON_TRANSFORM object operation on a value that was not an object.

Action: Correct your path expression.

ORA-40815: cannot create JSON array inside another array
Cause: An attempt was made to create a JSON array using the CREATE ON MISSING option to add this new array to another existing array. This was not possible as an array newly created by the CREATE ON MISSING option could only be added to an object.

Action: Correct your path expression to either add the new array to a JSON object or to append to the existing array.

ORA-40816: invalid JSON key name
Cause: An attempt was made to set or rename a key in a JSON object with a a name that was invalid.

Action: Correct the key name.

ORA-40817: Metadata field *string* is either invalid, or missing in the original collection metadata.
Cause: An invalid field, or a field missing in the original collection metadata, was specified in the interim collection metadata.

Action: Ensure that all interim collection metadata fields are valid and, if required, present in the original collection metadata.

ORA-40818: Metadata field *string* has a value *string* unsupported in online redefinition.
Cause: A field with a value unsupported in online redefinition was supplied in the interim collection metadata.

Action: Ensure that all interim collection metadata fields have values supported in online redefinition.

ORA-40819: Metadata field *string* cannot be specified when metadata field *string* has value *string*.
Cause: An invalid combination of fields was specified in the interim metadata.

Action: Ensure that only allowed combinations of fields are specified in the interim metadata.

ORA-40820: cannot set LOCK on the operation if SKIP or LIMIT attributes are set
Cause: An invalid combination of operation attributes was specified.

Action: Specify a valid combination of operation attributes.

ORA-40821: LOCK attribute cannot be set for *string* operation.
Cause: An attempt was made to set LOCK attribute in this operation.

Action: Do not set LOCK attribute in this operation.

ORA-40822: SecureFile LOB settings cannot be used when the content column stores binary JSON.
Cause: SecureFile LOB settings were specified for a binary JSON content column.

Action: Do not specify SecureFile LOB settings.

ORA-40823: Validation cannot be specified when the content column stores binary JSON.
Cause: Validation was specified for a binary JSON content column.

Action: Do not specify validation.

ORA-40824: Content column tablespace cannot be specified when the content column stores binary JSON.
Cause: Content column tablespace was specified for a binary JSON content column.

Action: Do not specify content column tablespace.

ORA-40825: memOptimizeRead cannot be set when the content column stores binary JSON.
Cause: memOptimizeRead was specified for a binary JSON content column.

Action: Do not specify memOptimizeRead.

ORA-40826: Collection create mode '*string*' is not supported on this cloud service.
Cause: An unsupported collection create mode was specified.

Action: Specify a supported collection create mode.

ORA-40827: keyColumn.path must not be set with '*string*' key assignment method.
Cause: keyColumn.path was set with a key assignment method that does not requre a key path.

Action: Ensure that keyColumn.path is set only with a key assignment method that requires it.

ORA-40828: keyColumn.sqlType must be set to '*string*' for the specified key column assignment method.
Cause: Key column SQL type incompatible with the specified key column assignement method was used.

Action: Ensure that appropriate key column SQL type is used.

ORA-40829: keyColumn.maxLength must be set to '*string*' for the specified key column assignment method.
Cause: Key column SQL type length incompatible with the specified key column assignement method was used.

Action: Ensure that appropriate key column SQL type length is used.

ORA-40830: ROWID not a valid JSON_TABLE column
Cause: An attempt was made to select a ROWID column from a JSON_TABLE.

Action: Use an ORDINALITY column instead of a ROWID column.

ORA-40831: CONS_VPD_AUTO is not applicable to online redefinition for SODA collections
Cause: An attempt was made to specify CONS_VPD_AUTO for redefining SODA collections.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL or CONS_VPD_NONE.

ORA-40832: Dependent *string* on *string* column is missing from the interim collection.
Cause: A required dependent was not defined on the interim collection.

Action: Define the required dependents or call procedure COPY_COLLECTION_DEPENDENTS to copy all of the dependents from the original collection.

ORA-40833: empty input to JSON operator
Cause: An empty input (e.g. an empty CLOB) was provided to a JSON operator that expected a non-empty input.

Action: Check and correct the input.

ORA-40834: invalid input to JSON parse/load function
Cause: An invalid value (e.g. a NULL CLOB) was provided as input to the JSON parse or load functions.

Action: Check and correct the input.

ORA-40835: invalid path '*string*'
Cause: Only a simple JavaScript Object Notation (JSON) path expression was allowed. Predicates, wildcard steps, descendant steps, array steps, or trailing functions were not allowed.

Action: Remove disallowed components from the path expression.

ORA-40836: invalid character in o:preferred_column_name '*string*'
Cause: Double quotation was not allowed in a column name.

Action: Check the Oracle identifier naming convention.

ORA-40837: invalid materialized view refresh mode
Cause: The specified materialized view refresh mode was invalid.

Action: Ensure that the refresh mode is specified correctly.

ORA-40838: Metadata specification must be an object.
Cause: The metadata specification root was an array or scalar. A metadata specification must be an object.

Action: Ensure that the metadata specification root is an object node.

ORA-40839: invalid field type in the metadata *string*, expected: *string*
Cause: The metadata specification contained a field with an incorrect type.

Action: Ensure that the metadata field type is correct.

ORA-40840: unsupported field *string* in the metadata
Cause: The metadata specification contained a field that is not supported.

Action: Do not use this field or try upgrading your client library to the supported version.

ORA-40841: invalid scalar type in the metadata field *string*, expected: *string*
Cause: The metadata specification contained a field with an incorrect scalar type.

Action: Ensure that the metadata field has the correct scalar type.

ORA-40842: unsupported value *string* in the metadata for the field *string*
Cause: The metadata specification contained a value that is not supported.

Action: Do not use this value.

ORA-40843: Multiple KEEP operations in JSON_TRANSFORM
Cause: A JSON_TRANSFORM expressions was provided that contained more than one KEEP operation.

Action: Use multiple path expressions in the same KEEP operations instead of multiple KEEP operations.

ORA-40844: cannot create a multivalue index having array step with position greater than zero in the path expression
Cause: An attempt was made to create a multivalue index that had an array step with a position greater than zero in the path expression.

Action: Do not include an array step with a position greater than zero in the path expression in a multivalue index.

ORA-40845: failed to create object (*string*)
Cause: An attempt to create an object failed because there was not enough memory.

Action: n/a

ORA-40846: Redefining to contentColumn.sqlType BLOB with jsonFormat OSON is not allowed if the original collection's contentColumn.sqlType is JSON.
Cause: An invalid request was made to redefine a collection with contentColumn.sqlType JSON to contentColumn.sqlType BLOB with jsonFormat OSON.

Action: Ensure that the requested redefinition can be supported.

ORA-40847: Redefining to contentColumn.sqlType BLOB with jsonFormat OSON is not allowed if the original collection has user-defined constraints.
Cause: An invalid request was made to redefine a collection with user-defined constraints to contentColumn.sqlType BLOB with jsonFormat OSON.

Action: Ensure that the requested redefinition can be supported.

ORA-40848: Metadata field *string* cannot be specified when metadata field *string* has value *string* and metadata field jsonFormat has value OSON.
Cause: An invalid combination of fields were specified in the interim metadata.

Action: Ensure that only allowed combinations of fields are specified in the interim metadata.

ORA-40849: Redefining to contentColumn.sqlType BLOB with jsonFormat OSON is not allowed if compatibility is 20 or above.
Cause: An invalid combination of fields were specified in the interim metadata.

Action: Redefine to contentColumn.sqlType JSON instead.

ORA-40850: cannot create a composite multivalue index on sibling arrays
Cause: An attempt was made to create a composite multivalue index on sibling arrays.

Action: Create separate multivalue indexes for sibling arrays instead of one composite multivalue index.

ORA-40851: cannot create a composite multivalue index with ordinality column that is not the last column in the index
Cause: An attempt was made to create a composite multivalue index with ordinality column that was not the last column in the index.

Action: Create a composite multi-value index with ordinality column as the last column in the index.

ORA-40852: SKIP and LIMIT attributes cannot be used for dataguide getter operation.
Cause: An attempt was made to use SKIP and LIMIT attributes for dataguide getter operation.

Action: Do not use SKIP or LIMIT attributes in dataguide getter operation.

ORA-40853: cannot create a multivalue index with JSON_TABLE without specifying ERROR ON ERROR and NULL ON EMPTY.
Cause: An attempt was made to create a multivalue index with JSON_TABLE without specifying ERROR ON ERROR and NULL ON EMPTY.

Action: Specify ERROR ON ERROR and NULL ON EMPTY when creating a multivalue index with JSON_TABLE.

ORA-40854: A multivalue index is defined on table *string*.\n
Cause: A direct load was specified for a table on which a multivalue index was defined.

Action: Take one of the following actions: - Drop the multivalue index that is defined on the table. - Do not use direct load. - Use the SKIP_INDEX_MAINTENANCE option. - Mark the multivalue index as unusable prior to loading.

ORA-40855: operation not allowed on SODA collection table "*string*"."*string*"
Cause: An attempt was made to alter or drop a SODA collection table.

Action: No action required.

ORA-40856: illegal hint for Simple Oracle Document Access (SODA)
Cause: A hint containing illegal characters was supplied to SODA operations.

Action: Ensure that the hint supplied does not contain "/*" or "*/".

ORA-40860: invalid combination of flags used
Cause: An attempt was made to use an invalid combination of flags.

Action: Use a combination of the flags defined in DBMS_JSON package.

ORA-40861: JSON System Error [*string*]
Cause: An internal system error occurred during a Java Script Object Notation (JSON) operation.

Action: Contact Oracle Support Services.

ORA-40862: contentColumn.jsonFormat cannot specified with a contentColumn.sqlType other than BLOB.
Cause: contentColumn.jsonFormat was specified with a contentColumn.sqlType other than BLOB.

Action: Ensure that contentColumn.jsonFormat is only specified with a contentColumn.sqlType of BLOB.

ORA-40863: contentColumn.jsonFormat can only be set to OSON.
Cause: contentColumn.jsonFormat was set to a value other than OSON.

Action: Ensure that contentColumn.jsonFormat is set to OSON.

ORA-40864: contentColumn.jsonFormat cannot be set with a media type column.
Cause: contetColumn.jsonFormat was set in conjunction with a media type column.

Action: Ensure that contentColumn.jsonFormat is not set in conjunction with a media type column.

ORA-40865: JSON DOM operation was attempted on container of incorrect type
Cause: An array operation was attempted on an object, or an object operation was attempted on an array.

Action: Ensure that the instance container is of the correct type for the desired operation.

ORA-40866: JSON DOM operation was attempted on a node of incorrect type
Cause: A scalar DOM operation was attempted on a node that was not a scalar value or that was a scalar of an incompatible data type.

Action: Enure that the instance value is a scalar of the correct type.

ORA-40867: Embedded key path cannot contain more than a single step.
Cause: Embedded key path with multiple steps or a descendant step has been encountered.

Action: Ensure the embedded key path contains a single step only.

ORA-40868: Embedded key path cannot contain an empty step.
Cause: Embedded key path contained an empty step, represented by two consecutive backquotes.

Action: Ensure the embedded key path does not contain an empty step.

ORA-40869: invalid value for SAMPLE percentage attribute.
Cause: An invalid value was specified for the SAMPLE percentage attribute.

Action: Use a value not exceeding 100 for the SAMPLE percentage attribute.

ORA-40870: invalid value for SAMPLE seed attribute.
Cause: An invalid value was specified for the SAMPLE seed attribute.

Action: Use a value between -1 and 4,294,967,295 for the SAMPLE seed attribute.

ORA-40871: SAMPLE attribute cannot be used for remove or replace operation.
Cause: An attempt was made to use the SAMPLE attribute for a remove or replace operation.

Action: Do not use the SAMPLE attribute in a remove or replace operation.

ORA-40900: filestore name invalid\n
Cause: The filestore name provided differs from the mount directory name.

Action: Use a filestore name that matches the mount directory name.

ORA-40901: mountpoint not specified\n
Cause: The mountpoint was not specified.

Action: Provide a valid mountpoint.

ORA-40902: backingfile name invalid\n
Cause: The backingfile name was not specified or already exists.

Action: Provide a valid backingfile name.

ORA-40903: filestore already mounted\n
Cause: A filestore with same name, backing file, or mountpoint was already mounted.

Action: Unmount or drop the filestore before mounting or creating it again, or specify different filestore name, backing file, and mountpoint.

ORA-40904: unable to dismount: filestore not mounted \n
Cause: The provided filestore was not mounted.

Action: Mount the filestore before attempting to dismount.

ORA-40905: filestore not specified\n
Cause: The filestore name was not specified.

Action: Provide a valid filestore name. to do: add integer values to error message

ORA-40906: resize value greater than available memory\n
Cause: The resize value was greater than the available memory size.

Action: Provide a smaller value to resize.

ORA-40907: resize value greater than maximum size provided\n
Cause: The resize value was greater than the maximum size provided during creation.

Action: Provide a value lower than the maximum size.

ORA-40908: unable to resize: filestore not mounted \n
Cause: The provided filestore was not mounted.

Action: Mount the filestore before attempting to resize.

ORA-40909: file handle not valid \n
Cause: The provided file handle did not exist or was stale.

Action: Check the target file and re-acquire file handle.

ORA-40911: filestore name too long
Cause: Filestore name exceeded 64 characters.

Action: Limit filestore name to maximum 64 ASCII characters.

ORA-40912: invalid filestore name
Cause: Filestore name contained invalid sequence of characters.

Action: Filestore name must begin with an alphabetic character. After that, it may be followed by zero or more alphanumeric and underscore characters. Specify a filestore name using acceptable characters.

ORA-40913: invalid blocksize
Cause: Value specified for BLOCKSIZE was incorrect.

Action: Value for BLOCKSIZE must be 512, 2048, 4096, 8192, 16382 or 32768.

ORA-40914: filestore size must not be zero
Cause: Filestore size was specified as zero.

Action: Specify a filestore size other than zero.

ORA-40915: blocksize must not be zero
Cause: BLOCKSIZE was specified as zero.

Action: Specify a valid blocksize.

ORA-40916: invalid backingfile name
Cause: BACKINGFILE name was not valid.

Action: Specify a valid file name.

ORA-40917: invalid mountpoint name
Cause: Specified MOUNTPOINT name was invalid.

Action: Specify a valid file name.

ORA-40920: filestore must be mounted
Cause: This operation required filestore to be mounted.

Action: Mount the filestore and retry the operation.

ORA-40921: resize value must not be zero
Cause: New size was specified as zero.

Action: Use a new size value other than zero.

ORA-40922: insufficient amount of available free space in the filestore
Cause: Used storage space in the filestore exceeded specified target size.

Action: RESIZE to a larger size, or delete existing files in the filestore to free up more space.

ORA-40923: filestore has content
Cause: Filestore was not empty.

Action: Use INCLUDING CONTENTS clause in DROP PMEM FILESTORE command or delete filestore contents first.

ORA-40924: operation is not allowed
Cause: This operation was not allowed because database was still mounted.

Action: Restart the instance in nomount mode and retry the operation.

ORA-40925: You need to restart the instance and reissue the command in order for this operation to succeed
Cause: This operation failed because the required OS resources could not be acquired.

Action: Restart the instance and reissue the command.

ORA-40926: invalid or missing maximum file size in MAXSIZE clause
Cause: UNLIMITED was not specified, or an invalid integer value was specified, for the MAXSIZE clause in the persistent memory (PMEM) filestore operation. The MAXSIZE value cannot be smaller than the SIZE value.

Action: Use the correct syntax.

ORA-40927: invalid file increment size in NEXT clause
Cause: A non-integer value was used for the NEXT clause in the persistent memory(PMEM) filestore operation.

Action: Use the correct syntax.

91
ORA-41001 to ORA-42908

ORA-41001: session id list not specified
Cause: An attempt to migrate was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

ORA-41002: destination instance not specified
Cause: An attempt to migrate was made, which failed because the destination instance specified was null.

Action: Check the destination instance , and try again with a valid value.

ORA-41003: client id not specified
Cause: An attempt to migrate was made, which failed because the client id specified was null.

Action: Check the client id, and try again with a valid value.

ORA-41004: percentage not specified
Cause: An attempt to migrate was made, which failed because the percentage specified was null.

Action: Check the percentage, and try again with a valid value.

ORA-41005: session id list not specified
Cause: An attempt to cancel migration was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

ORA-41006: session id not specified
Cause: An attempt to get migration status was made, which failed because the session id specified was null.

Action: Check the session id, and try again with a valid value.

ORA-41007: sid field is null
Cause: A session id instance passed into a dbms_tsm procedure or function had a null sid field.

Action: Check the session id, and try again with a valid value.

ORA-41008: serial# field is null
Cause: A session id instance passed into a dbms_tsm procedure or function had a null serial# field.

Action: Check the session id, and try again with a valid value.

ORA-41009: Session with session number *string*, serial number *string* does not exist
Cause: An attempt to migrate was made, which failed because of invalid session number and/or serial number.

Action: Check the session number and serial number and try again.

ORA-41010: No more memory to hold connection state information
Cause: An attempt to reference more connections than configured

Action: Check the connection information and try again.

ORA-41011: Operation failed for session id *string*, serial number *string*
Cause: An migration related operation failed because of contention between sessions.

Action: Check the additional error codes for more information, and retry operation later.

ORA-41012: Migration not allowed for session number *string*, serial number *string*
Cause: An attempt to migrate was made, which failed because the session specified cannot be migrated.

Action: Check the session number and serial number and try again.

ORA-41013: instance name not specified
Cause: An attempt to migrate was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

ORA-41014: Session number *string*, serial number *string* currently being migrated
Cause: An attempt to migrate was made, which failed because the session specified is currently being migrated.

Action: Check the session number and serial number and try again.

ORA-41015: destination connect string not specified
Cause: A migration attempt was made, which failed because the connect string specified was null.

Action: Check the connect string and try again.

ORA-41016: Session recreation failed
Cause: Session recreation failed at the destination instance.

Action: Check session state and try migration again

ORA-41017: Session prepare failed for session number *string*, serial number *string*
Cause: A migration attempt was made, which failed because session prepare failed.

Action: Retry migration again after checking all arguments.

ORA-41019: Session begin at the destination instance failed
Cause: Session begin failed at the destination instance because the shadow connection could not be established.

Action: Check the connect string and try beginning the session again.

ORA-41020: invalid value "*string*" specified for parameter "*string*"
Cause: An invalid value was specified for the the given parameter.

Action: Correct the value being specified for the parameter.

ORA-41021: OCI error during transparent session migration
Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

ORA-41022: instance name not specified
Cause: An attempt to recover after instance death was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

ORA-41023: death time not specified
Cause: An attempt to recover after instance death was made, which failed because the death time specified was null.

Action: Check the death time, and try again with a valid value.

ORA-41024: Cursor needs to be parsed again
Cause: An SQL operation failed because the cursor state was lost.

Action: Reissue all operations starting from parse.

ORA-41025: sid field *string* is invalid
Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid sid field.

Action: Check the session id, and try again with a valid value.

ORA-41026: serial# field *string* is invalid
Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid serial# field.

Action: Check the serial#, and try again with a valid value.

ORA-41027: Error status *string* during OCI operation at *string*
Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

ORA-41028: Session id not specified
Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41029: Destination session id not specified for sid *string* serial# *string*
Cause: An attempt to migrate was made, which failed during migration because the destination session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41030: Session id not specified
Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41031: Destination session key not specified for sid *string* serial# *string*
Cause: An attempt to migrate was made, which failed during migration because the destination session key specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41100: Oracle Cluster Registry operation failed with event *string*.
Cause: The Portable Clusterware/Oracle Cluster Registry stack returned an error.

Action: Check if the Portable Clusterware stack is properly brought up.

ORA-41101: The database: *string* has already been designated as Cluster Director.
Cause: An attempt was made to designate multiple databases as the Cluster Director.

Action: Undesignate the existing Cluster Director before Designating a new one.

ORA-41102: No database has currently been designated as Cluster Director.
Cause: An attempt was made to query/undesignate a Cluster Director when no database has been designated as Cluster Director.

Action: n/a

ORA-41103: Only the designated Cluster Director: *string* can undesignate itself.
Cause: An attempt was made to undesignate the current Cluster Director by a database that is not the Cluster Director.

Action: Login to the currently designated Cluster Director to perform the undesignation.

ORA-41104: The database: *string* is the Cluster Director.
Cause: An attempt was made to control the Cluster Director on a database that is not the Cluster Director.

Action: Log in to the currently designated Cluster Director to perform the control operation.

ORA-41105: The Cluster Director is not stopped.
Cause: An attempt was made to control the Cluster Director before the Cluster Director was stopped.

Action: Use dbms_cluster_director.stop to stop the Cluster Director and retry the control operation.

ORA-41106: invalid argument *string*: value is null
Cause: An attempt to read the scan hostname or port failed

Action: Verify pcw is running and scan is configured. Run grdcscan read_config to verify or grdcscan set_config host:port to set scan name and port.

ORA-41107: invalid argument: service *string* cannot be found
Cause: The program attempted to access a nonexistent or deleted service.

Action: Check to make sure the service has been properly created.

ORA-41108: Posting system alert with reason_id *string* failed with code [*string*] [*string*]
Cause: Internal Error: An attempt to post a system alert failed.

Action: If this condition repeats, please contact Oracle Support.

ORA-41109: Updating system alert with reason_id *string* failed; previous alert not found
Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from WRI$_ALERT_OUTSTANDING.

Action: Do not delete from WRI$_ALERT_OUTSTANDING. If this condition repeats, please contact Oracle Support.

ORA-41110: The Director has blocked this instance. Cannot start [*string*]
Cause: An attempt to start services on an instance that will be shutdown

Action: Start the services on another available instance

ORA-41201: Session state not capturable due to reason (*string*, *string*)
Cause: Session state capture was initiated when session state could not be captured.

Action: Check session state status and make sure session state can be captured.

ORA-41202: Session state capture or restore failed
Cause: Capture or restore operation failed.

Action: Check session state status and failure reason for details.

ORA-41203: Invalid session state operation
Cause: Invalid session state operation was issued.

Action: Check if session status was valid for the current operation.

ORA-41204: Session capture in progress
Cause: Session state capture was initiated and could not perform the requested operation.

Action: Wait for the current capture to complete or abort it.

ORA-41205: Invalid parameter for session state capture or restore
Cause: Invalid parameter was passed to session state capture or restore interface.

Action: Correct the invalid parameter(s).

ORA-41206: Session capture or restore internal error KPCSFR-*string*
Cause: Internal operation error was encountered.

Action: Turn on related trace for details and report it as a bug.

ORA-41207: Cannot restore session state due to reason (*string*, *string*)
Cause: Session state restore was initiated when session was not ready for state restore.

Action: Restore session state immediately after logging into a session or perform necessary operations to make the session ready for restore; for example, commit current transaction, or close BFiles.

ORA-41208: OCI error during session state capture and restore
Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

ORA-41209: OCI operation failed at *string* due to ORA-*string*
Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

ORA-41210: Failed to resolve session state directory object
Cause: Session state directory object passed to capture or restore was incorrect.

Action: Verify session state directory object and retry.

ORA-41211: Failed to insert capture or restore record
Cause: An error occurred while capture or restore record was being stored into the database.

Action: Check the error signaled and take corrective action.

ORA-41251: Failed to restore session state from a file (error code *number*)
Cause: Session state file may be corrupted.

Action: Ensure that the file is a session state file.

ORA-41252: Failed to switch to new session in SSCR
Cause: This is the generic internal error number for the SSCR exceptions. This indicates that the SSCR has encountered an exceptional condition.

Action: Report as a bug.

ORA-41253: Failed to access session state file
Cause: An error was encountered while reading from or writing to session state capture file.

Action: Check the error stack for the actual error number and turn on tracing if necessary.

ORA-41254: Invalid session state file: *string*
Cause: An invalid session state file was used in session state restore operation.

Action: Check if the session state file is a valid file created by session capture.

ORA-41255: Package not supported: *string*
Cause: The specified package is not supported.

Action: Do not call the package functions and procedures.

ORA-41300: File driver is not initialized
Cause: An attempt was made to operate on the uninitialized file driver.

Action: Initialize the file driver using the OCIServerAttach function.

ORA-41301: failed to write data to file
Cause: You may not have sufficient privileges or quotas for this action.

Action: Ensure that you have sufficient privileges and quotas for this action.

ORA-41302: failed to read data from file
Cause: The file may not exist or you do not have privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

ORA-41303: Received partial data from file
Cause: This is the generic internal error number for file driver exceptions. This indicated that file driver encountered an exception condition.

Action: Report as a bug.

ORA-41304: Failed to connect to file driver
Cause: The connect string may be incorrect.

Action: Ensure that the connect string is correct.

ORA-41305: Failed to open file
Cause: You may not have sufficient privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

ORA-41400: Bind character set (*string*) does not match database character set (*string*)
Cause: In this recursive OCI call, the bind character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to obtain bind data in database character set and do rebind in the current environment.

ORA-41401: Define character set (*string*) does not match database character set (*string*)
Cause: In this recursive OCI call, the define character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to do redefine in the current environment.

ORA-41402: SCNs not valid after failover; failover cannot continue
Cause: The Oracle server process failed and replay was initiated.

Action: Review your results to see if your last request completed successfully.

ORA-41403: failed over to older server; failover cannot continue (*string*, *string*, *string*)
Cause: Failover replay was enabled for a service in which some standby databases were older than the original server and could not replay work from the original server.

Action: Disable replay on the service, or upgrade your databases to compatible versions.

ORA-41404: invalid replay context
Cause: Application continuity protocol was violated.

Action: Contact Oracle Support Services.

ORA-41405: Failed over to older server; failover cannot continue (*string*, *string*).
Cause: Failover replay was enabled for a service in which some standby databases were older than the original server and could not replay work from the original server.

Action: Disable replay on the service, or upgrade your databases to compatible versions.

ORA-41407: SQL command not supported for replay; replay disabled
Cause: Application replay encountered a command that was not supported for replay, and so replay was disabled.

Action: Use a service without replay for this operation.

ORA-41408: embedded COMMIT in last call; failover cannot continue
Cause: The Oracle server process failed after committing a transaction but COMMIT was embedded in a stored procedure and it cannot be guaranteed that the stored procedure finished. Failover cannot continue.

Action: User may resubmit request.

ORA-41409: cannot replay committed transaction; failover cannot continue
Cause: The Oracle server process failed after committing a transaction in the current request. The transaction cannot be replayed, so the current request cannot be replayed and session state cannot be restored. Failover cannot continue.

Action: User may resubmit request.

ORA-41410: call committed a transaction and started a new transaction; failover cannot continue
Cause: The Oracle server process failed after committing a transaction in the current request. One call that committed a transaction, and thus cannot be replayed, also started a new transaction. Since that call cannot be replayed, the new transaction cannot be restored. Failover cannot continue.

Action: Resubmit, and consider restructuring application to not start a transaction in the same call after committing a transaction.

ORA-41411: too many round trips in request; replay disabled
Cause: The Oracle server process failed after executing a request with more than 65535 round trips, so replay of the request is not possible.

Action: Resubmit, and consider partitioning application calls into more requests with fewer round trips.

ORA-41412: results changed during replay; failover cannot continue
Cause: The Oracle server process failed and replay was initiated. However, results of the replay differed from the original execution. Failover cannot continue.

Action: User may resubmit request.

ORA-41413: too much data in call capture; replay disabled
Cause: The Oracle server process failed after executing a request with a complicated call whose capture had too much data, therefore, replaying of the request was not possible.

Action: Resubmit and partition the application calls into more requests with fewer round trips.

ORA-41414: could not allocate memory for call capture; replay disabled
Cause: The Oracle server process failed after executing a request with a memory allocation failure during capture, therefore, replaying of the request was not possible.

Action: Resubmit and partition the application calls into more requests with fewer round trips.

ORA-41415: duplicate or conflicting KEEP or NOKEEP specifications
Cause: Duplicate KEEP or NOKEEP was specified, or both KEEP and NOKEEP were specified.

Action: Remove the duplicate or conflicting specification.

ORA-41417: invalid use of DBMS_APP_CONT_PRVT: [*string*] [*string*] [mode=*string*] [*string*] [*string*] [*string*] [*string*] [*string*]
Cause: Application continuity protocol was violated.

Action: Contact Oracle Support Services.

ORA-41418: Replay context is corrupt. Reason: [*string*], [*string*], [*string*], [*string*]
Cause: The replay context was not valid.

Action: Check your network configuration and hardware.

ORA-41420: block size cannot be zero
Cause: The block size sent by remote server was zero.

Action: Specify a valid block size as documented in the Oracle Database Administration Guide when creating data files. If displayed as an error, this represents a DBMS_FILE_TRANSFER protocol violation which should be reported to Oracle Support Services.

ORA-41421: database request ended
Cause: The application ended its database request or released the connection to the connection pool, thereby disabling replay mode.

Action: Review your results to see if your last request completed successfully.

ORA-41422: unsupported use of an incoming database link connection from a background, JOBQ slave or PQ slave
Cause: A background, JOBQ slave or PQ slave attempted to use an incoming database link connection and such usage is not supported.

Action: Contact Oracle Support Services.

ORA-41424: initial session state mismatch during replay
Cause: The initial session state at replay did not match the state at the beginning of the request.

Action: Review this request to see if the request committed, and if not whether it is safe to resubmit.

ORA-41425: replay disabled for a global transaction that uses Two-Phase Commit (2PC) managed by external Transaction Processing Monitor (TPM)
Cause: The request was unable to replay because it was part of a Two-Phase Commit (2PC) transaction managed by the Transaction Processing Monitor (TPM).

Action: Two-Phase Commit (2PC) through the external Transaction Processing Monitor (TPM) is not supported for Application Continuity. Check whether the application can use local or one-phase transactions.

ORA-41426: could not determine session state information
Cause: Unable to obtain session state classification information.

Action: Check alert log for more details.

ORA-41427: client session environment missmatch at replay
Cause: The client session environment could not be restored to the original values.

Action: Check the setting of failover_restore on your service.

ORA-41428: initial session state could not be verified during replay
Cause: The client session environment could not be verified for a failover of the first statement in a series.

Action: Upgrade to a driver with full support for automatic Application Continuity.

ORA-41429: non-replayable side effect on failed connection
Cause: The application executed an operation with side effects, which disabled Application Continuity for this request.

Action: Review this request to see if the request committed, and if not whether it is safe to resubmit wth this side effect.

ORA-41430: connection test not found or is predefined
Cause: An attempt was made to enable or disable a connection test that did not exist or to delete a predefined connection test.

Action: Query the view DBA_CONNECTION_TESTS to see which connection tests exist and add the connection test, if needed. Predefined connection tests can be disabled but not deleted.

ORA-41431: Application Continuity does not support ISOLATION_LEVEL=SERIALIZABLE; failover cannot continue.
Cause: Application Continuity did not support ISOLATION_LEVEL=SERIALIZABLE.

Action: Consider using SELECT FOR UPDATE instead of serializable transactions.

ORA-41432: An open transaction is detected when attempting to start a request or at the end of a request.
Cause: It is illegal to have an open transaction when starting a new request or at the end of a request.

Action: Commit or rollback the open transaction in the previous request or in the callback for session setup or failover. It is illegal to have an open transaction at the end of a labeling or failover callback

ORA-41434: transaction replay disabled by unsupported value in call to *string*
Cause: The application passed to an Oracle Call Interface (OCI) function an argument value that was not supported with transactional failover.

Action: Manually recover the pending transaction. / Note: following reserved for special situations to aid diag

ORA-41435: transaction replay disabled by call to *string*
Cause: The application called an Oracle Call Interface (OCI) function that was not supported with transactional failover.

Action: Manually recover the pending transaction.

ORA-41437: session template could not be applied
Cause: The provided session template did not exist or was corrupt.

Action: Create a new session.

ORA-41438: cannot get service parameter (*string*)
Cause: Unable to get the value of the service attribute at session creation

Action: Check session has been created with the service set

ORA-41440: unsupported session template usage
Cause: An application attempted to apply a template produced by a newer server on a server that did not support session templates.

Action: Do not configure a service to use session templates if some of the databases providing the service do not support templates.

ORA-41444: new DRCP session no longer supports Transaction Guard
Cause: The initial session for this connection supported Transaction Guard, but a new session created for the latest request did not. The connection was aborted, to avoid potential misuse of Transaction Guard functionality.

Action: Ensure that Transaction Guard service settings are consistently configured.

ORA-41445: not able to read reset session state value
Cause: Reset Session State parameter has not been included in the service.

Action: Include a valid value for the Reset Session State parameter.

ORA-41446: Using Reset Session State without Transaction Guard is not allowed
Cause: Reset Session State is being enabled, but Transaction Guard is disabled.

Action: In order to use Reset Session State, Transaction Guard has to be enabled.

ORA-41448: could not verify commit status due to database mismatch (CDB root or non-CDB)
Cause: The application attempted to obtain the commit status of a transaction on a database logically different from where it was first started.

Action: Check the status of this transaction manually.

ORA-41449: could not verify commit status due to invalid recovery System Change Number (SCN)
Cause: The application attempted to obtain the commit status of a transaction on a database with SCN at which recovery could not be performed.

Action: Check the status of this transaction manually.

ORA-41450: could not verify commit status due to incomplete recovery information
Cause: The application attempted to obtain the commit status of a transaction on a database that was open read-only but with unspecified System Change Number (SCN). The actual SCN may be beyond the current, and recovery may yield erroneous results.

Action: Check the status of this transaction manually.

ORA-41451: Logical Transaction Identifier (LTXID) from too old a version of database
Cause: The application was passing in an old LTXID whose format the current database no longer supported.

Action: No action needed. The connection now has a current LTXID.

ORA-41452: Application Continuity is disabled due to lack of support by the client driver.
Cause: The client driver did not fully support Application Continuity.

Action: Upgrade to a driver with full support for Application Continuity.

ORA-41453: Application Continuity is disabled due to unsupported use of SESSION_STATE_CONSISTENCY by the client driver.
Cause: The client driver did not fully support the service attribute SESSION_STATE_CONSISTENCY.

Action: Set the service attribute SESSION_STATE_CONSISTENCY to DYNAMIC, or upgrade to a driver with full support of the SESSION_STATE_CONSISTENCY service attribute.

ORA-41454: Application Continuity could not be enabled because Transaction Guard was not enabled in the session.
Cause: Application Continuity was disabled by the server because Transaction Guard was disabled in the session.

Action: Upgrade to a client driver with full support for Application Continuity and ensure that all services used in the application are configured to enable Transaction Guard.

ORA-41455: Transparent Application Continuity is disabled due to lack of support by the client driver.
Cause: The client driver did not fully support Transparent Application Continuity.

Action: Use Application Continuity, or upgrade to a driver with full support for Transparent Application Continuity.

ORA-41456: Replay is disabled because the old client driver does not support Transparent Application Continuity.
Cause: The replay was disabled because the old client driver did not support Transparent Application Continuity.

Action: Upgrade your client to a version that fully supports Transparent Application Continuity.

ORA-41457: The client driver disabled replay.
Cause: The client driver encountered a call that it could not replay. Therefore, it disabled replay for that call.

Action: Take the necessary corrective action.

ORA-41458: A SELECT using AS OF could not execute at replay.
Cause: During replay of this SELECT statement, PL/SQL was encountered.

Action: Revise the SELECT statement to exclude PL/SQL in the FETCH.

ORA-41459: The request has committed and cannot reenable with FAILOVER_TYPE = TRANSACTION.
Cause: A commit completed in this request and there were subsequent calls after this commit.

Action: Use one commit per request, and also check that connections are being returned to the pool between requests. You could also use Transparent Application Continuity (FAILOVER_TYPE = AUTO).

ORA-41460: The request cannot reenable replay because of unrestorable session state with FAILOVER_TYPE = AUTO.
Cause: The session contained unrestorable session state.

Action: Consider using RESET_STATE = LEVEL1 or FAILOVER_TYPE = TRANSACTION.

ORA-41461: The request cannot reenable replay because of open cursors with FAILOVER_TYPE = AUTO.
Cause: There were open cursors that prevented Transparent Application Continuity from reenabling replay.

Action: Return cursors to the statement cache at the end of the request, so that a fetch cannot inadvertently leak to a later request. Use RESET_STATE = LEVEL1 to close cursors between the requests or use FAILOVER_TYPE = TRANSACTION.

ORA-41462: Application Continuity is not enabled.
Cause: A connection pool was not used with Application Continuity.

Action: Use a connection pool and return the connection to the pool or connect to a service that has FAILOVER_TYPE = AUTO.

ORA-41463: The application has request boundaries but Application Continuity is not enabled.
Cause: Possible causes are: - The replay driver was not used. - There was UNRESTORABLE session state in the login trigger or label. - A transaction processing monitor was in use with two-phase commit. - The client disabled replay.

Action: Use the replay driver or validate trigger checking for restorable state if using FAILOVER_TYPE = AUTO or check if the application is explicitly disabling replay or using Oracle XA Library.

ORA-41464: Application Continuity could not restore the original session.
Cause: The server process failed and the original session state could not be restored as part of the failover.

Action: Clear the session states before returning connections to the connection pool.

ORA-41465: Client driver does not support implicit request boundaries.
Cause: Application is using a client driver that doesn't fully support implicit request boundaries.

Action: Upgrade to a driver that fully supports implicit request boundaries.

ORA-41467: Application Continuity could not restore tagged session during failover.
Cause: At checkout, client received a previously tagged session. But that session experienced an outage and Application Continuity replay was attempted, but could not confirm restoration of the tagged state.

Action: One or more of the following: (1) use Transparent Application Continuity (2) register a Transparent Application Failover callback (3) do not use tags (4) resubmit failed work.

ORA-41601: invalid property for the rule class
Cause: An invalid property was specified for the rule class.

Action: Correct the rule class properties and try again.

ORA-41602: insufficient privileges
Cause: The user does not have required privileges on the object.

Action: Obtain the required privileges and try again.

ORA-41603: invalid privilege type
Cause: An attempt was made to grant an invalid privilege on a rule class.

Action: Correct the privilege name and try again.

ORA-41604: cannot revoke a privilege that was not granted
Cause: An attempt was made to revoke a privilege that was never granted.

Action: None

ORA-41605: schema extended name not allowed: *string*
Cause: An attempt was made to specify a schema extended name for an event structure, a rule class, or an action call-back procedure.

Action: Specify the object name with out a schema extension.

ORA-41606: rule class name already used by an existing object
Cause: An attempt was made to create a rule class with a name that is already used by an existing object.

Action: Specify a different name for the rule class and try again.

ORA-41607: rule class creation failed with *string*
Cause: rule class creation failed with a recursive error.

Action: Correct the rule class specification and try again.

ORA-41608: rule class does not exist
Cause: An attempt was made to access a rule class that does not exist or is not accessible.

Action: Correct the rule class name and try again.

ORA-41609: invalid name for the rule class
Cause: An invalid name was specified for the rule class.

Action: Correct the rule class name and try again.

ORA-41610: callback procedure name already used for an existing object
Cause: An attempt was made to create a callback procedure with a name that is already used for an existing object.

Action: Choose another name for the callback procedure.

ORA-41611: rule identifier "*string*" not unique in the rule class
Cause: An attempt was made to use a duplicate rule identifier.

Action: Choose a unique identifier for the rule and try again.

ORA-41612: scalar values expected for action preferences
Cause: Incorrect values were specified for the action preferences.

Action: Correct the action preferences values and try again.

ORA-41613: invalid action preference for rule class: *string*
Cause: An attempt was made to use an invalid action preference.

Action: Correct the input and try again.

ORA-41614: missing action preference value
Cause: Values for one or more action preferences were not specified.

Action: Specify values for all relevant action preferences.

ORA-41615: too many values in action preference list
Cause: Too many entries were specified in the action preference values list. The action preference values list should not have more entries than the action preference names list.

Action: Correct the input and try again.

ORA-41616: rule class's action callback procedure may have errors
Cause: The operation failed because the action callback procedure associated with the rule class has compilation errors.

Action: Recompile the action callback procedure and try the operation again.

ORA-41617: action preference name "*string*" collides with an event attribute name
Cause: An attempt was made to create an action preference with the same name as an attribute in the event structure.

Action: Choose a different name for action preference and try again.

ORA-41618: specified rule does not exist
Cause: Invalid rule identifier was used to operate on a rule definition.

Action: Use a valid rule identifier.

ORA-41619: rule manager feature currently not supported
Cause: An attempt was made to use a rule manager feature that is currently not supported.

Action: No action necessary. This is an informational message only.

ORA-41620: invalid ordering property for the rule class
Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

ORA-41621: error in ordering property :*string*
Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

ORA-41622: invalid primitive event object in rule class properties : *string*
Cause: In the rule class properties, the name used for one or the primitive event objects was not found in the corresponding composite event structure.

Action: Correct the name of the primitive event object in the rule class properties and try again.

ORA-41623: conflicting values for autocommit and duration properties
Cause: An attempt was made to create a rule class with autocommit enabled when the duration of events is set to TRANSACTION.

Action: Turn autocommit off or choose a different duration policy.

ORA-41624: invalid duration policy for primitive object in a composite event
Cause: An attempt was made to specify a SESSION or TRANSACTION duration policy for the primitive objects.

Action: Correct the rule class properties and try again.

ORA-41625: event structure *string* does not exist
Cause: The object type that represents the event structure was not created in the user's schema.

Action: Create the object type with the event structure's name and try again.

ORA-41626: invalid XML element "*string*" in rule class properties
Cause: An invalid XML element was used in the properties specification for the rule class.

Action: Use the correct (case-sensitive) tags in the properties.

ORA-41627: event structure object type in inconsistent state
Cause: The object type specified for the event structure was in an inconsistent state.

Action: Fix the object type and try again.

ORA-41628: invalid usage of "*string*" attribute in "*string*" element
Cause: An invalid or unsupported XML attribute was used in the rule class properties.

Action: Use the correct (case-sensitive) tags in the properties.

ORA-41629: event structure for simple events cannot be reused for composite events
Cause: An attempt was made to reuse an object type (event structure) for composite events when it is already configured for simple events.

Action: Drop the attribute set associated with the object and try again.

ORA-41630: invalid value for "*string*" attribute in the rule class properties
Cause: An invalid value was specified for an attribute in the rule class properties.

Action: Correct the value and try again.

ORA-41631: invalid text node or child element for "*string*" element in properties
Cause: An attempt was made to specify a child element or a text node in invalid position in the rule class properties specification.

Action: Correct the rule class properties and try again.

ORA-41632: invalid value for the "*string*" attribute
Cause: An attempt was made to assign an invalid value for an attribute in the rule class properties.

Action: See the documentation.

ORA-41633: specified rule class configuration not supported: "*string*"
Cause: An attempt was made to use an unsupported configuration for the rule class.

Action: Remove the specified tag in the properties and try again.

ORA-41634: invalid duration specification in rule properties: "*string*"
Cause: Invalid value was specified for the duration attribute in the rule class properties.

Action: Correct the value and try again.

ORA-41635: invalid unit of time used in duration specification
Cause: An attempt was made to use an invalid unit of time for the rule class's duration specification. Valid units are : minutes, hours, and days.

Action: Correct the duration specification and try again.

ORA-41636: invalid duration specification at the primitive event level
Cause: An attempt was made to specify a duration policy for the primitive events when the composite event was configured with TRANSACTION or SESSION duration policy.

Action: Correct the rule class properties and try again.

ORA-41637: missing primitive event name
Cause: The name attribute of the object element in the rule class properties was not specified. This is a required value.

Action: Specify the name of the primitive event and try again.

ORA-41638: invalid attribute for "*string*" element in rule condition
Cause: An attempt was made to specify an invalid attribute for an XML element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41639: invalid child node in "*string*" element
Cause: An attempt was made to specify an invalid child element or text node for an XML element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41640: invalid element "*string*" in the rule condition
Cause: An attempt was made to use an invalid element or a valid element in invalid position in the rule condition.

Action: Correct the rule condition and try again.

ORA-41641: invalid or empty rule condition
Cause: An attempt was made to specify an invalid or empty rule condition.

Action: Correct the input and try again.

ORA-41642: Missing "*string*" element in the rule condition
Cause: The rule condition was specified without a required element.

Action: Correct the rule condition and try again.

ORA-41643: invalid attribute for the "*string*" element in the rule condition
Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41644: invalid use of "*string*" attribute in rule condition
Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41645: duplicate tag "*string*" in rule condition
Cause: An attempt was made to specify the same XML tag in more than one positions within a single rule condition.

Action: Remove the duplicate reference to the tag and try again.

ORA-41646: missing "*string*" attribute for "*string*" element in the rule condition
Cause: One of the required attributes was not specified in the rule condition.

Action: Correct the rule condition and try again.

ORA-41647: negation not allowed in rule conditions with "any" semantics
Cause: An attempt was made to specify a "not" element within an "any" element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41648: invalid sequence of child elements in "*string*" element
Cause: An attempt was made to specify an invalid sequence of elements within a parent element.

Action: Correct the rule condition and try again.

ORA-41649: invalid rule condition for a rule class involving composite events
Cause: An attempt was made to add an invalid rule condition to a rule set defined for composite events.

Action: Correct the input and try again.

ORA-41650: invalid composite event structure
Cause: A composite event structure may only have attributes that are either table aliases or of an object type that is defined in the owner's schema.

Action: Ensure that the event structure has no scalar attributes and all the embedded types in it are defined in the owner's schema.

ORA-41651: Event structure object type has one or more dependent objects
Cause: An attempt was made to configure an object type that has one or more dependents as a event structure. The object type cannot be modified due to the dependent objects.

Action: Create a new object type for the event structure and try again.

ORA-41652: invalid value for the equal attribute in the rule condition
Cause: An invalid value is assigned to the equal attribute in the rule condition.

Action: Correct the input and try again.

ORA-41653: inconsistent value for the "count" attribute of the "any" element
Cause: The value specified for the "count" attribute of the "any" element is greater than or equal to the the number of primitive events appearing in the rule condition.

Action: Specify a smaller value for the "any" element's "count" attribute.

ORA-41654: insufficient number of primitive events for the use of "sequence"
Cause: An attempt was made to use "sequence" attribute when there is an insufficient number of primitive events in the rule conditions.

Action: Remove the sequence specification.

ORA-41655: rule condition construct not supported: *string*
Cause: An attempt was made to use a rule condition construct that is not supported in the current release.

Action: Modify the rule condition.

ORA-41656: insufficient number of child elements in "*string*" element.
Cause: An attempt was made to use fewer than two elements within an "and" or "notany" element.

Action: Specify at least two elements within the parent element.

ORA-41657: rule class internal objects cannot be dropped
Cause: An attempt was made to drop an internal object that is required for a rule class.

Action: Drop the rule class associated with this object.

ORA-41658: invalid value for the "count" attribute in the "any" element
Cause: An invalid value is assigned to the count attribute in the rule condition. The values should be a positive integer that is smaller than the number of object elements within the "any" element.

Action: Correct the input and try again.

ORA-41659: invalid primitive event "*string*" for the rule class
Cause: An attempt was made to use an invalid primitive event in a rule condition.

Action: Correct the input and try again.

ORA-41660: ordering property for the rule class is too long
Cause: An attempt was made to configure the rule class with an ordering property that is longer than 240 characters.

Action: Correct the input and try again.

ORA-41661: the system generated rule class package has errors
Cause: An attempt was made to use a rule class configuration that was not supported.

Action: File a bug.

ORA-41662: number of primitive events in the composite event exceeds maximum limit
Cause: An attempt was made to create a composite event structure with more than 32 primitive events.

Action: Use a composite event that consists of fewer primitive events.

ORA-41663: invalid use of "equal" or "sequence" attribute with a single event
Cause: An attempt was made to use "equal" or "sequence" attribute when the "count". attribute in a rule condition with "any" semantics is set to 1.

Action: Remove the "equal" and "sequence" specifications.

ORA-41664: invalid consumption policy for the primitive event
Cause: An attempt was made to use EXCLUSIVE consumption policy for a primitive event when the composite event is configured for RULE consumption policy.

Action: Correct the rule class properties and try again.

ORA-41665: conflicting values for duration, consumption, and autocommit policies
Cause: An attempt was made to use an EXCLUSIVE consumption policy with no autocommit and a duration other than TRANSACTION or SESSION.

Action: Modify the rule class properties and try again. Autocommit should be set to YES when the consumption policy is EXCLUSIVE.

ORA-41666: XML schema validation failed when validating against *string*
Cause: The user input has undefined element or attribute according to the provided XML schema definition.

Action: Correct the user inputs and try again.

ORA-41667: rule class results view name already used for an existing object
Cause: An attempt was made to use a duplicate name for the rule class results view.

Action: Use a different name for the rule class results view.

ORA-41668: invalid operation for the rule class
Cause: An attempt was made to use an invalid operation for the rule class.

Action: No action necessary. This is an informational message only.

ORA-41669: invalid list of primitive event identifiers
Cause: An attempt was made to pass an empty list of primitive event identifiers to the CONSUME_PRIM_EVENTS API.

Action: Correct the input and try again.

ORA-41670: duplicate or invalid event name in equal specification
Cause: An attempt was made to specify a duplicate or invalid primitive event for the rule class's equal property.

Action: Correct the input and try again.

ORA-41671: duplicate table names in the event structure with table aliases
Cause: The table used for an event structure has the same name as another table or a primitive event type in the event structure.

Action: Use an event structure with distinct table names for table aliases.

ORA-41672: invalid rowid passed in for "*string*" table
Cause: An attempt was made to pass a NULL or invalid rowid for a table in the event structure.

Action: Correct the input and try again.

ORA-41673: sequence attribute not allowed in rule conditions using table aliases
Cause: An attempt was made to use sequence attribute in a rule condition that is defined using table aliases. Sequence usage is not permitted for the lack of timestamp attribute.

Action: Correct the input and try again.

ORA-41674: dmlevents policy allowed only for event structures with table aliases
Cause: An attempt was made to use the dmlevents policy for an event structure with no table alias constructs.

Action: Correct the rule class properties and try again.

ORA-41675: schema for data tables does not match that of the rule class
Cause: An attempt was made to use the dmlevents policy for a rule class that refers to table residing in different schema. To use the dmlevents policy, the table associated with table aliases in the event structure and the rule class should exist in the same schema.

Action: Remove dmlevents specification from rule class properties.

ORA-41676: invalid use of dmlevents policy for primitive event
Cause: An attempt was made to use the dmlevents policy for a primitive event defined with more than one table alias attribute.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41677: DML event trigger creation failed with *string*
Cause: Triggers could not be created on the data table to track DML events.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41678: conflicting values for the autocommit and dmlevents policies
Cause: An attempt was made to use dmlevents policy in combination with autocommit set to YES. This combination is not allowed.

Action: Set autocommit to NO and try again.

ORA-41679: dmlevents specification only allowed with table alias attributes
Cause: An attempt was made to use the dmlevents policy for an event structure not containing any table alias attributes.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41680: Rules Manager background process *string* does not exist
Cause: An attempt was made to use a Scheduler process that does not exist.

Action: Execute EXFSYS.RLM$CREATE_SCHEDULER_JOBS procedure as a privileged user.

ORA-41681: clean up of expired events failed
Cause: The background process that cleans up the expired events failed for a rule class.

Action: Invoke EXFSYS.DBMS_RLMGR_UTL.CLEANUP_EVENTS API for the exact nature of the problem.

ORA-41682: invalid rule class package
Cause: An attempt was made to use a rule class package with invalid signature or permissions.

Action: Drop the rule class and recreate it.

ORA-41683: unable to lock a rule in the rule class
Cause: A rule matching the current event is locked by another session.

Action: Reissue the command after committing the other sessions.

ORA-41684: invalid value for the RLM$ENABLED column
Cause: An attempt was made to insert or update a value other than 'Y' or 'N' into the RLM$ENABLED column of a rule class table.

Action: Retry the DML statement with a value of 'Y' or 'N' for the RLM$ENABLED column.

ORA-41685: invalid window specification for the collection element
Cause: An invalid attribute value was specified for the "windowlen" or the "windowsize" attribute. The value specified for the "windowlen" attribute should be a number indicating the number of days or a fraction of a day. The value specified for the "windowsize" attribute should be an integer which indicates number of items in the collection. The maximum value allowed for the window specification is 64000.

Action: Correct the input and try again.

ORA-41686: use of "collection" invalid for the primitive event
Cause: An attempt was made to define a rule condition with "collection" element when the corresponding event was not configured for collections of events.

Action: Correct the rule condition and try again.

ORA-41687: attribute "*string*" not allowed in the "groupby" specification
Cause: The attributes listed in the "groupby" specification in a rule condition were not a subset of the attributes specified in the rule class properties.

Action: Correct the "groupby" specification for the rule condition and try again.

ORA-41688: invalid value for the "groupby" attribute
Cause: An invalid value was specified for the "groupby" attribute.

Action: Correct the input and try again.

ORA-41689: invalid collection specification in the rule condition
Cause: An attempt was made to insert a rule condition with invalid collection element specification.

Action: Correct the input and try again.

ORA-41690: maximum number of grouping expressions for a rule class exceeded
Cause: An attempt was made to specify more than 32 expressions for the "groupby" clause in rule class properties.

Action: Use fewer than 32 expressions for the "groupby" clause.

ORA-41691: invalid aggregate specification: *string*
Cause: The aggregate operation specified in the rule condition was invalid.

Action: Correct the input and try again.

ORA-41692: unsupported aggregate operator in the having/compute clause: *string*
Cause: An attempt was made to use an unsupported aggregate operator in the having or the compute clause in the rule condition.

Action: Correct the input and try again.

ORA-41693: invalid attribute or data type for an aggregate operator: *string*
Cause: An attempt was made to apply an aggregate operator on an invalid attribute or an attribute with invalid or unsupported data type in the aggregate operator. Only NUMBER and DATE attributes are allowed in the aggregate operators.

Action: Correct the input and try again.

ORA-41694: invalid equal specification around: *string*
Cause: An attempt was made to specify an invalid equal clause for a rule condition or the rule class properties.

Action: Correct the input and try again.

ORA-41695: equal specification should have a minimum of two elements
Cause: An attempt was made to specify fewer than two elements in the equal clause for a rule condition or the rule class properties.

Action: Correct the input and try again.

ORA-41696: invalid operator in the having clause: *string*
Cause: An attempt was made to use an invalid relational operator in the having clause of the rule condition.

Action: Correct the input and try again.

ORA-41697: attribute prefix missing in aggregate specification: *string*
Cause: An attempt was made to specify an aggregate predicate across multiple primitive event types with no attribute prefix.

Action: Correct the input and try again.

ORA-41698: invalid use of "*string*" attribute in aggregate predicate
Cause: An attempt was made to use an attribute where a literal is expected in the aggregate predicate in the rule condition.

Action: Correct the input and try again.

ORA-41699: maximum number of aggregate operations per rule condition exceeded
Cause: An attempt was made to specify more than 5 aggregate operations in a rule condition.

Action: Correct the input an try again.

ORA-41700: a conditions table already exists for the event structure
Cause: A table storing the primitive rule conditions was already assigned to the event structure.

Action: No action necessary. This is an informational message only.

ORA-41701: conditions table with a rule class association cannot be truncated or dropped
Cause: An attempt was made to truncate or drop a conditions table when one or more rule classes are associated to it through the event structure.

Action: Drop the rule class before truncating or dropping the conditions table.

ORA-41702: invalid conditions table
Cause: An attempt was made to use an invalid conditions table.

Action: Correct the input and try again.

ORA-41703: invalid child node in "object" element with "ref" attribute
Cause: An attempt was made to use both a condition and a "ref" attribute in the "object" element.

Action: Remove the "ref" attribute.

ORA-41704: invalid condition reference: "*string*"
Cause: An attempt was made to use a reference to a nonexistent conditions table or a condition.

Action: Ensure that the conditions table exists for the primitive event and the value specified for the "ref" attribute of the "object" element is valid.

ORA-41705: conditions table cannot be dropped with DROP TABLE command
Cause: An attempt was made to drop a conditions table with a DROP TABLE command.

Action: Use DBMS_RLMGR.DROP_CONDITIONS_TABLE instead.

ORA-41706: a condition referenced in rule conditions may not be deleted
Cause: An attempt was made to delete a condition when one or more rule conditions refer to it.

Action: Delete the rules before deleting the conditions.

ORA-41707: unsupported construct with collection events: "*string*"
Cause: An attempt was made to define a collection rule condition with unsupported constructs.

Action: Correct the input and try again.

ORA-41708: the identifier for the shared condition may not be modified
Cause: An attempt was made to update the identifier of a row stored in the conditions table.

Action: Insert a row with the new identifier instead.

ORA-41710: invalid use of aggregate operator for a noncollection event
Cause: An attempt was made to specify an aggregate operator on an event that is not identified as collection.

Action: Correct the input and try again.

ORA-41711: invalid attribute in the rule condition's having clause
Cause: An invalid attribute is used in the specification for the having clause of the rule condition.

Action: Correct the input and try again.

ORA-41712: missing groupby specification for the collection "*string*"
Cause: An attempt was made to use a collection element with no groupby specification in the rule condition.

Action: Correct the input and try again.

ORA-41713: invalid use of "windowlen" and "windowsize" attributes
Cause: An attempt was made to use the windowlen and windowsize attributes within the same collection element.

Action: Correct the input and try again.

ORA-41714: invalid use of window specification with SESSION/TRANSACTION duration
Cause: An attempt was made to use the windowlen or windowsize attributes when the events are configured for SESSION or TRANSACTION duration.

Action: Remove the window specification and try again.

ORA-41721: invalid use of DMLEVENTS and CNFEVENTS in rule class properties
Cause: An attempt was made to specify both the DMLEVENTS and CNFEVENTS for the same rule class.

Action: Remove either the DMLEVENTS or the CNFEVENTS specification.

ORA-41722: insufficient privileges for database change notification
Cause: An attempt was made to use CNFEVENTS property with insufficient privileges.

Action: Grant CHANGE NOTIFICATION privilege and EXECUTE privilege on DBMS_CHANGE_NOTIFICATION to the user and try again.

ORA-41800: too many maintenance plans with the notification id "*string*"
Cause: Multiple pluggable databases (PDBs) shared the same notification ID.

Action: Set DBMS_MAINTPLAN.PDBS attribute in plan parameter for the procedure.

ORA-41801: invalid PDB "*string*" for procedure *string*
Cause: The specified pluggable database (PDB) name was not found in the multitenant container database (CDB).

Action: Set the correct PDB name for the procedure.

ORA-41802: invalid JSON format as plan parameter
Cause: An incorrect JavaScript Object Notation (JSON) string was set as the plan parameter.

Action: Check the JSON format, correct the format and retry.

ORA-41803: value of plan parameter *string* is empty
Cause: The value of the required non-null parameter was empty.

Action: Check the value of the parameter to guarantee it is not NULL.

ORA-41804: plan parameter *string* not set
Cause: The indicated parameter was not set.

Action: Set the required parameter with a non-NULL value.

ORA-42000: invalid online redefinition column mapping for table "*string*"."*string*"
Cause: An attempt was made to change the logical structure of a materialized view log, queue table, or a partition by specifying a non-NULL column mapping during online redefinition.

Action: Pass a NULL column mapping parameter.

ORA-42002: partition "*string*" of table "*string*"."*string*" not being redefined
Cause: An attempt was made to redefine a partition which is not involved in this redefinition.

Action: Pass a valid partition name.

ORA-42003: partition must be specified for this redefinition
Cause: A partition was involved in this redefinition but was not specified.

Action: Specify the partition involved in this redefinition.

ORA-42004: redefinition not instantiated
Cause: An attempt was made to complete an instantiation-deferred redefinition without invoking dbms_redefinition.sync_interim_table.

Action: Invoke dbms_redefinition.sync_interm_table to instantiate this redefinition.

ORA-42005: invalid type of redefinition method
Cause: An unknown redefinition method was used.

Action: Use one of the supported redefinition methods: o dbms_redefinition.cons_use_pk o dbms_redefinition.cons_use_rowid

ORA-42006: dependent object registration not supported during a partition redefinition
Cause: An attempt was made to register dependent objects when redefining a partition.

Action: Do not invoke dbms_redefinition.register_dependent_object during a partition redefinition.

ORA-42007: dependent object unregistration not supported during a partition redefinition
Cause: An attempt was made to unregister dependent objects when redefining a partition.

Action: Do not invoke dbms_redefinition.unregister_dependent_object during a partition redefinition.

ORA-42008: error occurred while instantiating the redefinition
Cause: An error occurred while instantiating the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42009: error occurred while synchronizing the redefinition
Cause: An error occurred while synchronizing the online redefinition.

Action: Correct the error and continue the online redefinition.

ORA-42010: error occurred while synchronizing the redefinition
Cause: An error occurred while synchronizing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42011: error occurred while completing the redefinition
Cause: An error occurred while completing the online redefinition.

Action: Correct the error and continue the online redefinition.

ORA-42012: error occurred while completing the redefinition
Cause: An error occurred while completing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42013: interim table of an AQ IOT table should be an IOT table
Cause: An attempt was made to create a table that is not an index-organized table (IOT) as the interim table of an AQ IOT table (history, time management, or dequeue).

Action: Ensure that the interim table is created as an IOT table.

ORA-42014: online redefinition unable to lock AQ objects
Cause: An online redefinition of an AQ table was unable to lock all related AQ objects.

Action: Abort and retry the redefinition.

ORA-42015: online redefinition unable to log changes made to AQ tables
Cause: An online redefinition of an AQ table was unable to log changes made to AQ tables during the redefinition.

Action: Abort and retry the redefinition.

ORA-42016: shape of interim table does not match specified column mapping
Cause: The number of columns, or the type or the length semantics of a column, in the interim table did not match the specified column mapping.

Action: Ensure that the interim table matches the column mapping by either modifying the column mapping string or altering the interim table's column definition(s).

ORA-42017: interim table of an AQ table should not be an AQ table
Cause: An attempt was made to create an AQ table as an interim table of an online redefined AQ table.

Action: Ensure that the interim table is not created as an AQ table.

ORA-42018: partition cannot be redefined online because of index organization incompatibility
Cause: interim table is incompatible with partition being redefined because one or more of the following apply: - one is index-organized and the other is not - one has IOT overflow segment and the other does not - one has IOT mapping table and the other does not

Action: Ensure that the interim table is compatible with the partition being redefined.

ORA-42019: partition cannot be redefined online because of incompatible partitioning of interim table
Cause: both original and interim tables are partitioned, or original table is composite-partitioned but interim table is non-partitioned.

Action: Ensure that the interim table has compatible partitioning with the original table. For example, if the original table is partitioned, the interim table should be non-partitioned. If the original table is composite-partitioned, the interim table should be partitioned.

ORA-42020: partition cannot be redefined online because of unsupported type of interim table
Cause: An unsupported type of interim table was provided during the partition redefinition. Currently the following types of interim tables are not supported: - a nested table or has nested-table columns - an external table - part of cluster - contains LOB shared segments

Action: Do not use unsupported types of interim tables.

ORA-42021: partition cannot be redefined online because of incompatible row dependencies
Cause: original/interim table was created with row dependency and interim/original table was not.

Action: Ensure that both tables are created with same row dependency properties.

ORA-42022: partition cannot be redefined online because of presence of nested columns
Cause: An attempt was made to online redefine a partition with nested table columns.

Action: Do not attempt to online redefine a partition with nested table columns.

ORA-42023: compatibility of AQ table must be release 8.1.x or later
Cause: An attempt was made to perform online redefinition on an AQ table that was created with compatibility prior to release 8.1.x.

Action: Ensure that the AQ table is created with the COMPATIBLE parameter set to release 8.1.x or later before attempting online redefinition.

ORA-42024: interim table of an AQ table can not be a partitioned table
Cause: An attempt was made to use a partitioned table as an interim table.

Action: Ensure that the interim table is not a partitioned table.

ORA-42025: redefinition of CONS_USE_ROWID method cannot be used to redefine an AQ IOT table
Cause: An attempt was made to use method of DBMS_REDEFINITION.CONS_USE_ROWID to redefine an AQ IOT table.

Action: Ensure that method of DBMS_REDEFINITION.CONS_USE_PK is used to redefine an AQ IOT table.

ORA-42026: duplicated rows detected while instantiating the redefinition
Cause: Duplicated rows are detected during instantiation of the redefinition.

Action: Abort the redefinition, turn off the optimistic ascending SCN optimization, and restart the redefinition.

ORA-42027: cannot redefine an object online that is not a table
Cause: An attempt was made to redefine an object online that is not a table.

Action: Ensure that the object being redefined online is a table.

ORA-42028: materialized view log "*string*"."*string*" does not exist
Cause: An attempt was made to register a nonexistent materialized view log as a dependent object.

Action: Invoke DBMS_REDEFINITION.REGISTER_DEPENDENT_OBJECT on a valid materialized view log.

ORA-42029: cannot online redefine table "*string*"."*string*" at this time
Cause: An attempt was made to redefine a table which is incompatible with another ongoing redefinition.

Action: Do not perform the redefinition operation on this table or wait until the incompatible ongoing redefinition has completed.

ORA-42030: cannot online redefine table "*string*"."*string*" with commit SCN-based MV log
Cause: An attempt was made to redefine a table which had a commit SCN-based materialzed view log defined on it.

Action: Do not attempt to online redefine a table that has a commit SCN-based materialzed view log defined on it.

ORA-42031: interim table cannot have a commit SCN-based MV log defined on it
Cause: An attempt was made to use an interim table which had a commit SCN-based materialzed view log defined on it.

Action: Ensure that the interim table does not have a commit SCN-based materialzed view log defined on it.

ORA-42032: cannot online redefine table "*string*"."*string*" with Flashback Data Archive enabled
Cause: An attempt was made to redefine a table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table that has Flashback Data Archive enabled.

ORA-42033: interim table "*string*"."*string*" cannot have Flashback Data Archive enabled
Cause: An attempt was made to redefine a table with an interim table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table with an interim table which has Flashback Data Archive enabled.

ORA-42034: cannot online redefine table "*string*"."*string*" which is a CDC table
Cause: An attempt was made to redefine a table which is a CDC table.

Action: Do not attempt to online redefine a table that is a CDC table.

ORA-42035: cannot online redefine IOT table "*string*"."*string*" with CONS_USE_ROWID
Cause: An attempt was made to redefine an IOT table with CONS_USE_ROWID.

Action: Do not attempt to online redefine an IOT table with CONS_USE_ROWID.

ORA-42036: cannot online redefine temporary table "*string*"."*string*"
Cause: An attempt was made to redefine a temporary table.

Action: Do not attempt to online redefine a temporary table.

ORA-42037: cannot online redefine table "*string*"."*string*" with IOT overflow segment
Cause: An attempt was made to redefine a table with IOT overflow segment.

Action: Do not attempt to online redefine a table with IOT overflow segment.

ORA-42038: cannot online redefine table "*string*"."*string*" with a CDC log defined on it
Cause: An attempt was made to redefine a table with a CDC log defined on it.

Action: Do not attempt to online redefine a table with a CDC log defined on it.

ORA-42039: cannot online redefine table "*string*"."*string*" with FGA enabled
Cause: An attempt was made to redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

Action: Do not attempt to online redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

ORA-42040: cannot online redefine table "*string*"."*string*" with column of binary XML type
Cause: An attempt was made to redefine a table with a column of binary XML type.

Action: Do not attempt to online redefine a table with a column of binary XML type.

ORA-42041: cannot online redefine table "*string*"."*string*" with nested table columns
Cause: An attempt was made to redefine a table with nested table columns.

Action: Do not attempt to online redefine a table with nested table columns.

ORA-42042: time out in acquiring DML lock during online redefinition
Cause: During FINISH_REDEF_TABLE procedure, the elapsed time waiting to acquire a table or partition DML lock on the original table exceeds the timeout the user specified.

Action: Rerun FINISH_REDEF_TABLE procedure to continue the process.

ORA-42043: CONS_VPD_AUTO is only applicable to null column mapping
Cause: An attempt was made to specify CONS_VPD_AUTO for non-null column mapping other than null column mapping. CONS_VPD_AUTO can only be specified for null column mapping.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42044: cannot redefine table with non-null VPD policy predicate against the table owner or redefinition invoker
Cause: Virtual Private Database (VPD) policies with non-null predicate against the table owner or redefinition invoker existed on the original table.

Action: Drop the VPD policies with non-null predicate against the table owner or redefinition invoker. Restart online redefinition.

ORA-42045: COPY_VPD_OPT cannot be set to CONS_VPD_NONE with VPD policies on table "*string*"."*string*".
Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_NONE. COPY_VPD_OPT cannot be set to CONS_VPD_NONE with Virtual Private Database (VPD) policies on the original table.

Action: Set COPY_VPD_OPT to CONS_VPD_AUTO or CONS_VPD_MANUAL.

ORA-42046: COPY_VPD_OPT cannot be set to *string* with VPD policies on interim table "*string*"."*string*".
Cause: An attempt was made to set the COPY_VPD_OPT value to either CONS_VPD_NONE or CONS_VPD_AUTO. Cannot set the COPY_VPD_OPT value to CONS_VPD_NONE or CONS_VPD_AUTO with Virtual Private Database (VPD) policies on the interim table.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42047: The specified value for COPY_VPD_OPT is invalid.
Cause: An unknown COPY_VPD_OPT value was used.

Action: Use one of the supported COPY_VPD_OPT values: o DBMS_REDEFINITION.CONS_VPD_NONE o DBMS_REDEFINITION.CONS_VPD_AUTO o DBMS_REDEFINITION.CONS_VPD_MANUAL

ORA-42048: Automatic copying of VPD policies with application context is not supported in online redefinition.
Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_AUTO for Virtual Private Database (VPD) policies with application context. Automatic copying of VPD policies with application context is not supported in online redefinition.

Action: Drop VPD policies with application context or set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42049: cannot online redefine multiple tables and multiple partitions
Cause: An online redefinition procedure was passed multiple original tables and multiple partitions to redefine.

Action: Do not attempt to online redefine multiple tables at the same time as multiple partitions.

ORA-42050: COPY_VPD_OPT cannot be set to CONS_VPD_MANUAL when redefining a partition.
Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_MANUAL. COPY_VPD_OPT cannot be set to CONS_VPD_MANUAL when redefining a partition.

Action: Set COPY_VPD_OPT to CONS_VPD_NONE or CONS_VPD_AUTO.

ORA-42051: duplicate partition names in partition name list
Cause: An online redefinition procedure was passed a partition name list containing duplicates.

Action: Ensure that all names in the partition name list are unique.

ORA-42052: interim table cannot have materialized view or zonemap defined on it
Cause: An attempt was made to redefine a table with an interim table on which a materialized view or zonemap was defined.

Action: Remove all materialized views and zonemaps defined on the interim table and retry online redefinition, or do not attempt online redefinition.

ORA-42053: cannot online redefine table "*string*"."*string*" with OLS/XDS enabled
Cause: An attempt was made to redefine a table with Oracle Label Security (OLS) or Extensible Data Security (XDS) enabled.

Action: Do not attempt to online redefine a table with Oracle Label Security (OLS) or Extensible Data Security (XDS) enabled.

ORA-42054: cannot online redefine table "*string*"."*string*" with UXI XML index
Cause: An attempt was made to redefine a table with XML indexes having an Unstructured XMLIndex (UXI) component.

Action: Do not attempt to online redefine a table with XML indexes having an Unstructured XMLIndex (UXI) component.

ORA-42056: interim table cannot be a system-partitioned table
Cause: An attempt was made to redefine a table with an interim table that was a system-partitioned table.

Action: Use an interim table whose partition type is supported.

ORA-42057: cannot use lock free finish redef for current redefinition
Cause: An attempt was made to enable lock free finish redef for current redefinition, but lock free was not feasible.

Action: Refer to the documentation for restrictions.

ORA-42058: unsupported UPDATE statement
Cause: The UPDATE statement passed to DBMS_REDEFINITION.EXECUTE_UPDATE was not supported.

Action: Refer to the documentation for restrictions and supported types.

ORA-42059: cannot update a table with a DML trigger on UPDATE
Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with a trigger on UPDATE, which is not supported.

Action: Drop the DML trigger.

ORA-42060: cannot update a table with a nested table column
Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with a nested table column, which is not supported.

Action: Refer to the documentation for restrictions.

ORA-42061: cannot update a typed table or a table with an ADT column
Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a typed table or a table with an ADT column, which is not supported.

Action: Refer to the documentation for restrictions.

ORA-42062: cannot update a table with a partition extended name
Cause: An attempt was made to pass an UPDATE statement with a partition extended name to the DBMS_REDEFINITION.EXECUTE_UPDATE method, which is not supported.

Action: Refer to the documentation for restrictions.

ORA-42064: invalid UPDATE statement *string*
Cause: An attempt was made to pass an invalid UPDATE statement to the DBMS_REDEFINITION.EXECUTE_UPDATE method.

Action: Pass a valid UPDATE statement to the DBMS_REDEFINITION.EXECUTE_UPDATE method.

ORA-42065: REDEF_TABLE() does not support redefining AQ table
Cause: An attempt was made to redefine an Advanced Queueing (AQ) table with the REDEF_TABLE() procedure.

Action: Do not attempt to redefine an AQ table using REDEF_TABLE().

ORA-42066: illegal redefinition for a clustered table
Cause: An attempt was made to redefine a clustered table to modify the tablespace or compression type with the REDEF_TABLE() procedure.

Action: Do not attempt to specify a new tablespace or compression type.

ORA-42067: invalid column mapping with invisible columns on original or interim table
Cause: There was an invalid column mapping with invisible columns on the original or interim table.

Action: Invisible columns in the column mapping string must be invisible on both the original and interim table.

ORA-42068: rollback unsupported with COPY_VPD_OPT option
Cause: ENABLE_ROLLBACK and COPY_VPD_OPT were both set to TRUE.

Action: Either unset ENABLE_ROLLBACK or COPY_VPD_OPT.

ORA-42069: rollback unsupported
Cause: Tables in the redefinition are either an object, advanced queue or index-organized table.

Action: Currently ROLLBACK is unsupported on such tables.

ORA-42070: wrong usage of DBMS_REDEFINITION.ROLLBACK
Cause: ENABLE_ROLLBACK was not set to TRUE during START_REDEF_TABLE.

Action: Restart START_REDEF_TABLE with ENABLE_ROLLBACK set to TRUE and then use ROLLBACK.

ORA-42071: rollback unsupported with NO-DML lock option
Cause: ENABLE_ROLLBACK was set to TRUE along with DML_LOCK_TIMEOUT set to -1.

Action: Either unset ENABLE_ROLLBACK or DML_LOCK_TIMEOUT.

ORA-42072: REDEF_TABLE() does not support a table with LONG column.
Cause: An attempt was made to redefine a table that has a LONG column with the REDEF_TABLE() procedure.

Action: Do not attempt to redefine a table with LONG column using REDEF_TABLE().

ORA-42073: cannot online redefine external table or fixed table
Cause: An attempt was made to redefine an external table or a fixed table.

Action: Do not attempt to online redefine an external table or a fixed table.

ORA-42074: Cannot update a table with VPD policy
Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with Virtual Private Database (VPD) policy.

Action: Refer to the documentation for restrictions.

ORA-42075: wrong usage of parameter, DISABLE_ROLLBACK in FINISH_REDEF_TABLE
Cause: ENABLE_ROLLBACK was not set to TRUE during START_REDEF_TABLE.

Action: Rerun FINISH_REDEF_TABLE with DISABLE_ROLLBACK set to FALSE.

ORA-42076: DBMS_REDEFINITION does not support a table on single table hash clusters.
Cause: An attempt was made to use DBMS_REDEFINITION on a table on single table hash clusters.

Action: Do not attempt to use DBMS_REDEFINITION to operate on a table that is on single table hash clusters.

ORA-42077: unsupported column type found in VPD protected object
Cause: An attempt was made with Oracle Virtual Private Database (VPD) policy to enforce column security on a column with unsupported operator type.

Action: Refer to the documentation for restrictions.

ORA-42078: DBMS_REDEFINITION does not support a clustered table without cluster index or with virtual cluster index
Cause: An attempt was made to use the DBMS_REDEFINITION package on a clustered table without a cluster index or with a virtual cluster index.

Action: Create a regular cluster index and rerun the DBMS_REDEFINITION procedure.

ORA-42079: wrong usage of DBMS_REDEFINITION.FINISH_REDEF_TABLE
Cause: Rollback was initiated as part of the previous call to FINISH_REDEF_TABLE.

Action: Use ROLLBACK or ABORT_ROLLBACK to end redefinition.

ORA-42080: wrong usage of DBMS_REDEFINITION.ABORT_ROLLBACK
Cause: ABORT_ROLLBACK was called without starting the rollback operation.

Action: Use ABORT_REDEF_TABLE instead of ABORT_ROLLBACK.

ORA-42081: wrong usage of DBMS_REDEFINITION.ABORT_REDEF_TABLE
Cause: ABORT_REDEF_TABLE was called when ROLLBACK was active.

Action: Use ABORT_ROLLBACK instead of ABORT_REDEF_TABLE.

ORA-42082: cannot update a table with a hidden column
Cause: An UPDATE statement passed to the DBMS_REDEFINITION.EXECUTE_UPDATE method attempted to update a table with a hidden column, which is not supported.

Action: Refer to the documentation for restrictions.

ORA-42083: cannot online redefine table "*string*"."*string*" with staging log
Cause: An attempt was made to redefine a table that had a staging log.

Action: Do not attempt to online redefine a table that has a staging log.

ORA-42084: cannot online redefine table that has inconsistent sharing with interim table
Cause: An attempt was made to redefine a table that had inconsistent sharing with an interim table.

Action: Do not attempt to online redefine a table that has inconsistent sharing with an interim table, ensure that there is consistent sharing.

ORA-42086: cannot enable ROLLBACK on a table with row movement enabled
Cause: An attempt was made to enable ROLLBACK on a table with row movement enabled in the redefinition.

Action: Currently, ROLLBACK is unsupported on such tables.

ORA-42087: cannot enable ROLLBACK on a nested table
Cause: An attempt was made to enable ROLLBACK on a nested table.

Action: Currently, ROLLBACK is unsupported on such tables.

ORA-42088: cannot enable ROLLBACK on a clustered table
Cause: An attempt was made to enable ROLLBACK on a clustered table.

Action: Currently, ROLLBACK is unsupported on such tables.

ORA-42089: ROLLBACK unsupported with specified column mapping string
Cause: The specified column mapping string included an identity column.

Action: ROLLBACK is unsupported with column mapping string.

ORA-42090: cannot use EXECUTE_UPDATE when the statement contains ROWID
Cause: An attempt was made to use EXECUTE_UPDATE when the update statement contained ROWID.

Action: Execute the update statement directly.

ORA-42091: shape of interim table does not match original table
Cause: An attempt was made to online redef a table when either the original table or the interim table did not have ROW ARCHIVAL.

Action: Remove ROW ARCHIVAL from the tables or add it to both tables.

ORA-42092: cannot online redefine table "*string*"."*string*" with automatic CDR enabled
Cause: An attempt was made to redefine a table with automatic Oracle GoldenGate conflict detection and resolution (CDR) enabled.

Action: Do not attempt to online redefine a table with automatic CDR enabled.

ORA-42093: cannot online redefine table "*string*"."*string*" which is a delete tombstone table
Cause: An attempt was made to redefine a delete tombstone table.

Action: Do not attempt to online redefine a delete tombstone table.

ORA-42287: cannot rename user on whose type a table depends
Cause: An attempt was made to rename a user whose schema contained a type on which some table depends. The operation may not proceed as it would render the table invalid causing loss of data.

Action: Drop table(s) dependent on types belonging to the schema of the user being renamed.

ORA-42288: may not create a schema synonym for the specified schema
Cause: An attempt was made to create a schema synonym for one of the reserved schemas (such as SYS or SYSTEM.)

Action: Schema synonyms for this schema may not be created.

ORA-42289: may not rename specified user
Cause: An attempt was made to rename one of the following: - reserved user (such as SYS or SYSTEM) - an administrative user - a common user - a locked user account

Action: This user may not be renamed.

ORA-42290: specified schema does not exist
Cause: An attempt was made to create a schema synonym for a schema which did not exist.

Action: Correct the input and try again.

ORA-42291: schema synonym '*string*' does not exist
Cause: The named schema synonym did not exist.

Action: Verify you are using the correct schema synonym name.

ORA-42292: RENAME TO already specified
Cause: The RENAME TO clause was specified twice.

Action: Use only one RENAME TO clause.

ORA-42293: user name conflicts with another user, role or schema synonym name
Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different user name.

ORA-42294: role name conflicts with another user, role or schema synonym name
Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different role name.

ORA-42295: schema synonym name conflicts with another user, role or schema synonym name
Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different schema synonym name or use CREATE OR REPLACE SCHEMA SYNONYM.

ORA-42296: user, role or schema synonym '*string*' does not exist
Cause: There was no user, role, or schema synonym by that name.

Action: Respecify the name.

ORA-42297: cannot drop a schema synonym for a schema of a user who is currently connected
Cause: An attempt was made to drop a schema synonym for a schema of a user who was logged on.

Action: Make sure user is logged off, then repeat command.

ORA-42298: cannot rename a user that is currently connected
Cause: An attempt was made to rename a user that was logged on.

Action: Make sure user is logged off, then repeat command.

ORA-42300: an Editioning view is already defined on this table
Cause: An attempt was made to create an Editioning view on a table on which another Editioning view is already defined in the same Edition. This violates a restriction that at most one Editioning view may be associated with any base table in a given Edition.

Action: Create the new view as a regular view or, if the view being created is really intended to be an Editioning view associated with this table, drop the existing Editioning view before creating the new one.

ORA-42301: definition of an Editioning view may not refer to a synonym
Cause: An attempt was made to create an Editioning view referring to a synonym, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a synonym.

ORA-42302: definition of an Editioning view may not refer to remote tables
Cause: An attempt was made to create an Editioning view referring to remote tables, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a remote table.

ORA-42303: duplicate column reference in a definition of an Editioning view
Cause: An attempt was made create an Editioning view referencing the same column of a base table more than once, which is not supported.

Action: Do not create an Editioning view if you have multiple columns referring to the same column of the base table.

ORA-42304: base table and the Editioning view must belong to the same schema
Cause: An attempt was made to create an Editioning view in a schema different from that of the base table.

Action: Create an Editioning view in the same schema as the base table.

ORA-42305: only an Editioning view may replace an Editioning view
Cause: An attempt was made to replace an Editioning view with a view which is not an Editioning view or vice versa.

Action: Ensure that either both or neither of the views involved are Editioning views.

ORA-42306: a CrossEdition trigger may not be created on an Editioning view
Cause: An attempt was made to create a CrossEdition trigger on an Editioning view, which is not supported.

Action: Instead of creating a CrossEdition trigger on an Editioning view, create it on the Editioning view's underlying table.

ORA-42307: columns of an Editioning view may only refer to base table columns
Cause: An attempt was made to define an Editioning view containing a column referring to an entity other than a base table column (for example, a PL/SQL function without a parameter), which is not supported.

Action: Ensure that every column of an Editioning view refers to a column of a base table.

ORA-42308: view *string*.*string* is already in read-only mode
Cause: An attempt was made to set a read-only table in read-only mode.

Action: This DDL can only be executed on a read/write view.

ORA-42309: view *string*.*string* is already in read/write mode
Cause: An attempt was made to set a read/write view in read/write mode.

Action: This DDL can only be executed on a read-only view.

ORA-42310: Implementation restriction: this operation is only permitted on Editioning views
Cause: The view being altered was not an Editioning view. In this release, an ALTER VIEW READ ONLY, or ALTER VIEW READ WRITE operation is only permitted on Editioning views.

Action: Ensure that the view is an Editioning view.

ORA-42311: This operation is not permitted on Editioning views with compilation errors
Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which have compilation errors.

Action: Resolve the compilation errors.

ORA-42313: This operation is not supported on Editioning views marked invalid
Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which are marked invalid.

Action: Recompile the Editioning view to ensure that it is valid.

ORA-42314: editioning view cannot be owned by a non-editioned user
Cause: An attempt was made to create an editioning view in a schema where views were not editionable.

Action: Enable editions for the user for views and then create the editioning view.

ORA-42399: cannot perform a DML operation on a read-only view
Cause: An attempt was made to insert, delete, or update row(s) of a view created with read-only option. DML operations on such views are explicitly prohibited.

Action: Perform the desired DML operation on the view's underlying base table or issue ALTER VIEW ... READ WRITE command to make the view updatable.

ORA-42800: The specified attribute association ("*string*", "*string*") is already attached to existing shared context-sensitive policies with the specified policy function *string*.*string*.
Cause: An attempt was made to add an attribute association which was already attached to shared context-sensitive policies with the specified policy function. All shared context-sensitive policies with a common policy function need to have the same set of attribute associations. Attribute associations of an existing shared context-sensitive policy which is using the specified policy function will be automatically added to the new policy.

Action: Retry the operation without specifying the attribute association.

ORA-42801: Value is not set for context attribute ("*string*", "*string*") which is associated with the Row Level Security (RLS) policy "*string*".
Cause: The value was not set for every attribute association of the shared context-sensitive policy. The value must be set for every attribute association of the shared context-sensitive policy.

Action: Set the value for the context attribute and retry the operation.

ORA-42802: Could not read attribute associations from an existing shared context-sensitive policy which is using the specified policy function.
Cause: An existing shared context-sensitive policy using the specified policy function was dropped from another session.

Action: Re-issue the command.

ORA-42803: Cannot use bind variable in VERSIONS clause when the object has a Row-Level Security (RLS) policy defined on it.
Cause: The object being accessed had a Row-Level Security (RLS) policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without the use of bind variable in the VERSIONS clause.

ORA-42804: The operation can disclose rows protected by VPD policy.
Cause: The object being accessed had a Virtual Private Database (VPD) policy defined on it and the DML which is executed could disclose rows protected by the VPD policy.

Action: Define VPD policy with the specific statement type.

ORA-42805: The number of VPD policies on an object exceed the maximum number that is allowed.
Cause: A maximum of 255 Virtual Private Database (VPD) policies that can be enforced on an object was exceeded.

Action: Drop an existing policy before creating a new policy.

ORA-42900: OLS policy creation not allowed in application root.
Cause: Oracle Label Security (OLS) policy creation was attempted in application root.

Action: Switch to an application pluggable database to create an OLS policy.

ORA-42901: Cannot apply OLS policy on common or application objects.
Cause: An attempt was made to enforce Oracle Label Security (OLS) policy on common or application objects.

Action: Apply OLS policy on local objects only.

ORA-42902: cannot use virtual column as OLS policy column
Cause: An attempt was made to use the virtual column as an Oracle Label Security (OLS) policy column.

Action: Use another column or update the user table.

ORA-42903: Cannot assign OLS authorizations to common or application users.
Cause: An attempt was made to assign Oracle Label Security (OLS) authorizations to common or application users.

Action: Assign OLS authorizations to local users only.

ORA-42904: full table access is restricted by Oracle Label Security
Cause: The user did not have permission to bypass reads for Oracle Label Security policies.

Action: Grant appropriate privileges, or change the policy configurations.

ORA-42905: Oracle Label Security is not supported for an external table.
Cause: An attempt was made to enforce Oracle Label Security (OLS) policy to external tables.

Action: OLS is not supported for external tables.

ORA-42906: Cannot assign a non-existing OLS data label as row label.
Cause: An attempt was made to assign a non-existing Oracle Label Security (OLS) data label as a row label in an OLS-OID configuration.

Action: Ensure that the row label is a valid data label.

ORA-42907: cannot apply OLS policy with labeling function.
Cause: An attempt was made to enforce Oracle Label Security (OLS) policy with labeling function when Oracle Database Vault operations control was enabled.

Action: Apply OLS policy without the labeling function.

ORA-42908: cannot be executed by an Oracle Real Application Security user
Cause: An attempt was made to execute Oracle Label Security (OLS) API by an Oracle Real Application Security (RAS) user.

Action: Execute as a database user with necessary privileges and roles.

92

ORA-43750 to ORA-45920

ORA-43750: invalid or illegal combination of COMMIT WRITE options
Cause: invalid or illegal combination of options provided to COMMIT WRITE SQL statement.

Action: Provide a valid combination of options for COMMIT WRITE statement

ORA-43751: invalid value for parameter *string*
Cause: invalid or illegal value provided for parameter.

Action: Provide a valid value for the parameter

ORA-43807: indexes on ORA_ROWSCN not allowed
Cause: An attempt was made to create an index that refers to the ORA_ROWSCN pseudo-column, either directly or in an expression.

Action: Do not use ORA_ROWSCN to define an index on a table.

ORA-43814: DROP INDEX is invalid for hash cluster index
Cause: An attempt was made to drop an index defined on a hash cluster. Hash cluster indexes cannot be dropped.

Action: Do not attempt to drop an index defined on a hash cluster.

ORA-43850: Advanced Compression Option parameter is required to be enabled
Cause: An Advanced Compression Option (ACO) feature was specified without enabling the ACO parameter.

Action: Set or Update the ACO parameter (enable_option_advanced_compression) to TRUE.

ORA-43852: SECUREFILE and BASICFILE cannot be used together
Cause: SECUREFILE and BASICFILE were both specified.

Action: Modify the SQL statement to specifiy only one of SECUREFILE or BASICFILE.

ORA-43856: Unsupported LOB type for SECUREFILE LOB operation
Cause: A LOB that is not a SECUREFILE was used in a SQL statement or in a call where a SECUREFILE LOB was expected.

Action: Convert the LOB to a SECUREFILE LOB or do not use this keyword or call.

ORA-43857: Parameter Error
Cause: Attempt to modify a LOB with an invalid parameter.

Action: Fix paramters and retry the operation.

ORA-43859: CONTENTTYPE string too long
Cause: Length of CONTENTTYPE string exceeded the defined maximum.

Action: Modify length of CONTENTTYPE string and retry operation.

ORA-43862: CONTENTTYPE buffer length incorrect
Cause: Length of CONTENTTYPE buffer less than defined constant.

Action: Modify length of CONTENTTYPE buffer and retry operation.

ORA-43878: LOB feature unsupported below compatible setting 11.2.0
Cause: An 11.2 LOB feature was specified when the database was operating at a compatible setting lower than "11.2.0".

Action: Upgrade the database compatible setting to "11.2.0" or higher to enable the desired new features.

ORA-43883: SECUREFILE LOBs delta update invalid operation
Cause: Invalid delta update operation was issued on LOB. This includes operation beyond LOB length; move operation with destination offset inside move interval.

Action: Check operation parameters for validity.

ORA-43907: This argument must be a literal or bind variable.
Cause: An attempt was made to provide an argument that was not a literal or bind variable.

Action: Provide an argument that is either a literal or bind variable.

ORA-43908: invalid output data type
Cause: An invalid output data type was provided. The valid output data types for VALIDATE_CONVERSION operator and the operators supporting DEFAULT ON CONVERSION ERROR syntax are: NUMBER, BINARY_FLOAT, BINARY_DOUBLE, DATE, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL DAY TO SECOND, INTERVAL YEAR TO MONTH.

Action: Provide a valid output data type.

ORA-43909: invalid input data type
Cause: An invalid input data type was provided for Validate_Conversion operator. For the NUMBER, BINARY_FLOAT and BINARY_DOUBLE output data types, the input data types can be: - NUMBER - BINARY_FLOAT - BINARY_DOUBLE - CHAR - VARCHAR2 - NCHAR - NVARCHAR2 For the DATE, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL DAY TO SECOND, and INTERVAL YEAR TO MONTH output data types, the input data types can be: - CHAR - VARCHAR2 - NCHAR - NVARCHAR2

Action: Provide a valid input data type.

ORA-43910: precision is not supported by Validate_Conversion operator
Cause: Precision was provided for the following data types: NUMBER, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL YEAR TO MONTH, INTERVAL DAY TO SECOND.

Action: Do not specify precision for following data types: NUMBER, TIMESTAMP, TIMESTAMP WITH TIME ZONE, INTERVAL YEAR TO MONTH, INTERVAL DAY TO SECOND.

ORA-43911: cannot specify collation for non-character columns
Cause: COLLATE was specified for a non-character column.

Action: Remove the COLLATE keyword.

ORA-43912: invalid collation specified for a CLOB or NCLOB value
Cause: A character LOB column or expression was declared as having a collation other than USING_NLS_COMP or the determined collation for a collation-sensitive operator or function operating on character LOB values was not USING_NLS_COMP. Character LOB values support only the USING_NLS_COMP collation.

Action: Correct the collation declarations to make sure the USING_NLS_COMP collation is applied to the character LOB values.

ORA-43913: unable to derive collation for the result: conflicting collations
Cause: Arguments to the operator or function (operation) that have the lowest coercibility level and are relevant for derivation of the collation for the result of this operation had conflicting collations.

Action: Check the collation derivation rules in the Oracle Database documentation and apply the COLLATE operator as appropriate to remove the existing conflict.

ORA-43914: unable to determine collation: arguments have undefined collation
Cause: Arguments to the operator, function, or condition (operation) that are relevant for determining the collation to be used by this operation had undefined collations.

Action: Check the collation determination rules in the Oracle Database documentation and apply the COLLATE operator as appropriate to assign a collation explicitly.

ORA-43915: unable to determine collation: arguments have conflicting collations
Cause: Arguments to the operator, function, or condition (operation) that have the lowest coercibility level and are relevant for determining the collation to be used by this operation had different collations.

Action: Check the collation determination rules in the Oracle Database documentation and apply the COLLATE operator as appropriate to remove the existing conflict.

ORA-43916: unable to determine collation for the column
Cause: An attempt was made to create a virtual character column in a table, a character column in a table based on a query (CREATE TABLE AS SELECT), or a character column in the key of a functional index. The expression on which the column definition was based did not have a derived collation to be used for the column, because of a collation conflict in one of its operators. In case of a virtual column, no collation was provided for the column through the data type declaration, either.

Action: Check the collation derivation rules in the Oracle Database documentation and apply the COLLATE operator in the defining expression as appropriate to resolve collation conflicts. If defining a virtual column, alternatively, specify a data type for the column to let the column inherit the collation from the table default, or specify the collation explicitly with the data type.

ORA-43917: invalid collation for a primary key column of the index-organized table
Cause: An attempt was made to specify an invalid collation for the primary key column of an index-organized table.

Action: Use one of the supported collations for the primary key column of the index-organized table: BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, or USING_NLS_SORT_VAR1_CS.

ORA-43918: This argument must be a literal
Cause: An attempt was made to provide an argument that was not a literal.

Action: Provide a literal argument.

ORA-43919: Nested aggregates are not supported for pivot operation.
Cause: Nested aggregates were specified in the pivot operator. This operation is not supported.

Action: Remove the nested aggregates from the pivot operation.

ORA-43920: DEFAULT ON NULL is not supported for object type or REF columns
Cause: DEFAULT ON NULL was specified on a object type or REF column. These types are not supported.

Action: Remove the ON NULL keyword for this column.

ORA-43921: invalid collation for cluster column
Cause: An attempt was made to create an index cluster in which one of the key columns had an unsupported declared collation or an attempt was made to create a hash cluster in which a key column with SORT clause had an unsupported declared collation. Only the collations BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, and USING_NLS_SORT_VAR1_CS are supported for character columns in index clusters and for sorted character columns of hash clusters.

Action: Use one of the supported collations for the offending column.

ORA-43922: Collation of the column cannot be modified.
Cause: An attempt was made to modify the declared collation of a column that either: o belonged to a foreign key o belonged to a primary or unique key and that key was referenced by some foreign key o corresponded to a cluster key column o was referenced by a defining expression of a virtual column o was referenced by a defining expression of a functional index o corresponded to an attribute of a user-defined type or an object table o belonged to the container table of a materialized view o was referenced by a join condition of a bitmap join index The declared collation of such columns cannot be modified.

Action: Use one of the following as appropriate: o Drop the offending constraint, virtual column, or index, modify the collation of the column, and re-create the dropped element. o If possible, modify the type attribute instead of the column. o If possible, modify the derived collation of the corresponding materialized view column (for example, with the COLLATE operator) and re-create the materialized view to re-create its container table with the new column collation. o Save the tables of a cluster, re-create the cluster using the new collation, and restore the saved tables into the cluster.

ORA-43923: The column cannot be modified to the specified collation.
Cause: An attempt was made to modify the declared collation of a column that belonged to a primary or unique key, or a standard index key, or a partitioning key, and the new collation was from a different group than the old collation, where the groups are defined as follows: Group 1: BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, and USING_NLS_SORT_VAR1_CS Group 2: BINARY_CI, USING_NLS_SORT_CI, and

USING_NLS_SORT_VAR1_CI Group 3: BINARY_AI, USING_NLS_SORT_AI, and USING_NLS_SORT_VAR1_AI

Action: When modifying the column collation, specify a new collation that is in the same group as the current column collation. If there is no current collation, because you changed the column data type at the same time and the old data type is not a character data type, then select a collation from Group 1 as the new collation.

ORA-43924: unable to modify collation of an Oracle-maintained database object
Cause: An attempt was made to modify the collation of an Oracle-maintained database object. Modifications of Oracle-maintained database objects are generally not permitted.

Action: Do not modify Oracle-maintained database objects unless explicitly instructed to do so by Oracle Support Services.

ORA-43925: A character column in the index definition has an unsupported collation.
Cause: An attempt was made to create a bitmap join index or a domain index with a key or join condition that contained a character column with a declared collation other than BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, or USING_NLS_SORT_VAR1_CS. Only these listed collations are supported by this type of the index.

Action: Use one of the supported collations for the key column or join condition.

ORA-43926: Cannot use the specified collation with some of the dependent objects.
Cause: An attempt was made to change the collation of a character column to a collation that is not supported in a key of a bitmap join index, a domain index key to which the column belongs. Only the collations BINARY, USING_NLS_COMP, USING_NLS_SORT, USING_NLS_SORT_CS, USING_NLS_SORT_VAR1, and USING_NLS_SORT_VAR1_CS are supported in these keys.

Action: Use one of the supported collations for the key column.

ORA-43927: Cannot specify default collation for object tables.
Cause: An attempt was made to explicitly state the default collation setting for an object table. However, default collations do not apply to object tables because all columns of an object table inherit collations from the attributes of the base type of the table.

Action: The operation is not allowed.

ORA-43928: Conversion error handling is not allowed here.
Cause: An attempt was made to use the default value, in case of a conversion failure, by specifying the DEFAULT *argument* ON CONVERSION ERROR statement to a conversion operator. This feature is not allowed for current operation.

Action: Remove DEFAULT *argument* ON CONVERSION ERROR from the conversion operator and try again.

ORA-43929: Collation cannot be specified if parameter MAX_STRING_SIZE=STANDARD is set.
Cause: The COLLATE or DEFAULT COLLATION clause was specified in a DDL statement or the DEFAULT_COLLATION parameter was specified in an ALTER SESSION statement, but the value of the initialization parameter MAX_STRING_SIZE was STANDARD. The data-bound collation feature is disabled if the value of this parameter is STANDARD.

Action: Set MAX_STRING_SIZE to EXTENDED by following the procedure documented in the Oracle Database Reference.

ORA-43930: A query issued from a pre-12.2 database references a column with an unsupported collation.
Cause: A table or view column with a declared collation other than USING_NLS_COMP was referenced in a distributed query that originated in an Oracle Database with the release number lower than 12.2. Such references are not allowed.

Action: In the remote database that reported this error, create a view corresponding to the subquery that was executed in that database and make sure that all columns of this view have the collation USING_NLS_COMP. Use the COLLATE operator if necessary. In the original query, replace the subquery with a reference to the view.

ORA-43931: DEFAULT COLLATION may not be combined with other operations
Cause: An ALTER TABLE statement attempted to combine DEFAULT COLLATION with some other operation, which is not allowed.

Action: Ensure that DEFAULT COLLATION is the only operation specified in an ALTER TABLE statement.

ORA-43932: DROP IDENTITY cannot be combined with other operations
Cause: An ALTER TABLE statement attempted to combine DROP IDENTITY with some other operation, which is not allowed.

Action: Ensure that DROP IDENTITY is the only operation specified in an ALTER TABLE statement.

ORA-43933: Collation must be specified.
Cause: Collation was not specified in a context where it was required.

Action: Specify the required collation.

ORA-44001: invalid schema
Cause: The schema for the given schema name did not exist.

Action: Provide a valid schema name.

ORA-44002: invalid object name
Cause: The input parameter string was not a qualified SQL identifier of an existing SQL object.

Action: Make sure the string matches an existing SQL object that is accessible by the current schema.

ORA-44003: invalid SQL name
Cause: The input parameter string was not a valid simple SQL name.

Action: Check with the DBMS_ASSERT spec to verify that the parameter string is a valid simple SQL name.

ORA-44004: invalid qualified SQL name
Cause: The input parameter string was not a valid qualified SQL name.

Action: Check with the DBMS_ASSERT spec to verify that the parameter string is a valid qualified SQL name.

ORA-44021: DBMS_SESSION.SET_CURRENT_SCHEMA_DEFERRED failed due to change of PDB.
Cause: Set schema failed because an attempt was made to change the pluggable database (PDB) before the set schema took effect.

Action: Do not change the PDB before the set schema takes effect.

ORA-44101: invalid priority
Cause: The priority level given by the user was invalid.

Action: See UTL_MAIL for valid priority values and change the priority parameter accordingly.

ORA-44102: unknown or unsupported algorithm
Cause: An unknown or unsupported authentication or compression algorithm was encountered.

Action: Check the authentication or compression algorithm. Use one that is supported by Oracle.

ORA-44203: timeout waiting for lock on cursor
Cause: A timeout occured while waiting for a cursor to be compiled. This is usually caused by the SQL parse requiring access to system resources which are locked by concurrently executing sessions.

Action: Investigate possible causes of resource contention. If neccessary, contact support for additional information on how to diagnose this problem.

ORA-44204: library cache object *string*.*string* found in an in-flux state
Cause: The pseudo-cursor depends on a table which was found to be obsolete due to metadata invalidation of the library cache object.

Action: Contact Oracle Support Services for additional information.

ORA-44301: NULL service name is not permitted
Cause: The service name argument was found to be NULL.

Action: Provide a non-NULL service name.

ORA-44302: NULL network name is not permitted
Cause: The network name argument was found to be NULL.

Action: Provide a non-NULL network name.

ORA-44303: service name exists
Cause: This service name was already in existence.

Action: Provide a new unique service name.

ORA-44304: service *string* does not exist
Cause: The specified service was not in existence.

Action: Provide a valid service name.

ORA-44305: service *string* is running
Cause: The specified service was running.

Action: This message is informational only.

ORA-44306: service name exceeds maximum length of *string*
Cause: The service name was too long.

Action: Use a shorter service name.

ORA-44307: network name too long
Cause: The network name, excluding the domain, was too long.

Action: Use a shorter network name.

ORA-44310: maximum number of services exceeded
Cause: The maximum number of services has been reached.

Action: None

ORA-44311: service *string* not running
Cause: The specified service was not running.

Action: This message is informational only.

ORA-44312: database closed
Cause: The database was closed.

Action: Open the database and retry the operation.

ORA-44313: instance name invalid
Cause: The instance name argument was not valid.

Action: Provide a valid instance name.

ORA-44314: network name already exists
Cause: The network name was already in existence.

Action: Use an alternate network name.

ORA-44315: all service attributes null
Cause: All attributes specified were null.

Action: At least one attribute must be non-null.

ORA-44316: invalid argument
Cause: Invalid argument supplied.

Action: Supply a valid argument.

ORA-44317: database open read-only
Cause: The database is open read-only.

Action: Close the database and reopen it read/write before trying again.

ORA-44318: exceeded maximum SERVICE_NAMES length
Cause: The total length of all running service network names exceeded the maximum allowable length.

Action: Stop another service to start this one.

ORA-44319: Cannot delete AQ service
Cause: Specified AQ service belonged to a queue.

Action: Delete the queue.

ORA-44320: cannot modify global service
Cause: Could not modify the global service because of insufficient privileges or you were trying to modify the global service attribute.

Action: Use global service management to modify a global service.

ORA-44321: cannot read command line from trace file *string*
Cause: Trace file could not be read.

Action: Make sure trace file exists and contains valid raw trace data.

ORA-44322: invalid file name '*string*'
Cause: A NULL or zero length file name was specified.

Action: Correct the file name to be a nonzero length string.

ORA-44323: negative *count* '*string*' to *string* option
Cause: The given count was a nonpositive number.

Action: Provide a positive count number.

ORA-44324: no *count* argument to *string* option
Cause: Count number was missing for the option.

Action: Provide a count number to the option.

ORA-44325: no entry points found in trace file *string*
Cause: The given trace symbol was not found.

Action: None

ORA-44326: no *symbol* argument to *string* option
Cause: *symbol* argument to -[un]trace option was missing.

Action: Provide *symbol* argument to -[un]trace option.

ORA-44327: no *filename* argument to *string* option
Cause: *filename* argument to the option was missing.

Action: Provide *filename* argument to the option.

ORA-44328: unsupported version number: *string*
Cause: Version of the trace file was not supported.

Action: Provide supported version of trace file.

ORA-44329: length of full path name too long
Cause: The full path name provided was too long.

Action: Use a shorter directory path, file name or both.

ORA-44403: invalid value specified for flag parameter
Cause: Mutually exclusive values were specified for the flag parameter.

Action: Internal error. Contact Oracle Support Services.

ORA-44404: upicui2 client function requires Oracle server of 10.2 or higher
Cause: A 10.2 or higher client is being used with an older Oracle server.

Action: Use an Oracle server with the same version as the client.

ORA-44411: Invalid ACL: START_DATE cannot be larger than END_DATE for all ACE
Cause: The END_DATE was smaller than the START_DATE in one of the ACE's in this ACL.

Action: Set all END_DATE to be larger than or equal to the START_DATE in each of the ACE's in this ACL.

ORA-44412: Invalid ACL: Cyclic ACL inheritance is not allowed
Cause: A cycle was formed by ACL inheritance.

Action: Check the ACL inheritance and break the cycle by removing some ACL inheritance.GG function exceeds system limits.

ORA-44413: Invalid ACL: Security class of parent ACL must be an ancestor of security class of child ACL
Cause: Security class of parent ACL was not an ancestor of security class of child ACL

Action: Change the security class of parent ACL to be an ancestor of security class of child ACL.

ORA-44414: Invalid ACL: Parent ACL '*string*' does not exist
Cause: The path to the parent ACL was not a valid resource.

Action: Change the parent ACL of this resource or create the parent ACL at the specified location.

ORA-44415: Invalid ACL: Undefined privileges
Cause: An undefined privilege was found in an ACE in the ACL.

Action: Make sure the privilege is defined in the security class as specified in the ACL.

ORA-44416: Invalid ACL: Unresolved principal '*string*'
Cause: An unresolved principal is found in an ACE in the ACL.

Action: Make sure the principal is a valid user or role in the system.

ORA-44417: Invalid ACL: Invalid ACLID
Cause: The specified ACLID did not point to a valid ACL document.

Action: Make sure the ACLID points to a valid ACL document.

ORA-44418: Invalid ACL: *string*
Cause: The specified ACL did not meet the validation requirements of the constraining ACL.

Action: Ensure ACL meets the validation requirements of the constraining ACL.

ORA-44421: cannot DISALLOW NONSCHEMA without a SCHEMA clause
Cause: If no SCHEMA clause (explicit schema or ANYSCHEMA) was specified, nonschema data cannot be disallowed.

Action: Remove DISALLOW NONSCHEMA or add some SCHEMA clause.

ORA-44422: nonschema XML disallowed for this column
Cause: An attempt was made to insert nonschema based XML documents in a binary XML column that disallows nonschema data.

Action: Insert only schema-based documents or alter the column to ALLOW NONSCHEMA data.

ORA-44423: XML Schema registered for BINARY cannot be used for CLOB/OBJ-REL
Cause: An attempt was made to use a XML Schema registered for binary usage as part of a CLOB or OBJ-REL clause.

Action: Specify a schema registered for CLOB or OBJ-REL use. Else specify BINARY XML storage for column.

ORA-44424: BINARY XML storage requires XML Schema registered for BINARY usage
Cause: An attempt was made to specify BINARY XML storage using an XML schema not registered for BINARY.

Action: Specify a schema registered for BINARY usage. Else specify CLOB or OBJ-REL storage for column.

ORA-44425: XML DB needs to be installed for creating an XMLType table or column
Cause: An attempt was made to create an XMLType table or column with out XML DB installed.

Action: Install XML DB.

ORA-44501: QMEL: Too much concurrency.
Cause: Too much concurrency

Action: Transient error, try again.

ORA-44502: QMEL: Lock not found.
Cause: Lock not found

Action: Check arguments

ORA-44503: QMEL: Lock Denied.
Cause: Lock denied

Action: None

ORA-44504: Resource Locked by Implicit Lock
Cause: The resource is locked by an implicit lock

Action: Implicit locks are normally caused by NFS locks. Refer to XDB Protocol guide for removing/obtaining information about implicit locks.

ORA-44505: QMEL: Invalid arguments.
Cause: Arguments to QMEL are not correct.

Action: None

ORA-44607: Archive logging must be enabled.
Cause: Archive logging was not enabled.

Action: Enable archive logging on the database.

ORA-44608: Supplemental logging settings cannot be modified in Oracle Database Express Edition.
Cause: An attempt was made to modify supplemental logging settings using Oracle Database Express Edition.

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) to enable supplemental logging and logical replication.

ORA-44609: CONTINOUS_MINE is desupported for use with DBMS_LOGMNR.START_LOGMNR.
Cause: An attempt was made to use DBMS_LOGMNR.START_LOGMNR with CONTINOUS_MINE as an option.

Action: Reissue START_LOGMNR without the CONTINUOUS_MINE option specified.

ORA-44610: DBMS_LOGSTDBY extended data type support is desupported.
Cause: An attempt was made to use one of the DBMS_LOGSTDBY extended data type support procedures.

Action: DBMS_LOGSTDBY extended data type support is desupported and cannot be used.

ORA-44611: Only one LogMiner adhoc session is allowed in Oracle Cloud Autonomous Database.
Cause: A second LogMiner adhoc session is being attempted in Oracle Cloud Autonomous Database.

Action: Try again after the existing LogMiner adhoc session has ended.

ORA-44700: Language '*string*' is not a valid language for a translation
Cause: Invalid language.

Action: The language must conform to IETF RFC 3066.

ORA-44701: Language not found for translation
Cause: The document had multiple translations and one of them did not have the xml:lang attribute.

Action: All translations must have the xml:lang attribute when multiple translations are present.

ORA-44702: Multiple translations found for language '*string*'
Cause: The document had multiple translations for a language.

Action: The document must contain only one translation per language for every translated element.

ORA-44703: Multiple source language translations found
Cause: The document had multiple source language translations.

Action: The document must contain only one source language translation for every translated element.

ORA-44704: XPath '*string*' does not uniquely identify a translated element
Cause: The given XPath pointed to multiple translated elements.

Action: The given XPath must uniquely identify a translated element.

ORA-44705: Must have xdb:maxOccurs='1' for translated elements
Cause: The value of xdb:maxOccurs was not '1' for a translated element.

Action: The value of xdb:maxOccurs must be '1' for a translated element.

ORA-44706: Must have xsd:maxOccurs='unbounded' for translated elements
Cause: The value of xsd:maxOccurs was not 'unbounded' for a translated element.

Action: The value of xsd:maxOccurs must be 'unbounded' for a translated element.

ORA-44707: No source language translation found
Cause: The document had no source language translation for a translated element.

Action: The document must contain exactly one source language translation for every translated element.

ORA-44708: Translations not supported for object relational storage
Cause: The storage type of the schema was object relational.

Action: Register the schema with storage type as clob or binary xml.

ORA-44709: Invalid schema definition for translated element
Cause: The schema definition for a translated element was invalid.

Action: A translated element must be a complex type with simple content which is a restriction or extension of xs:string.

ORA-44710: Malformed XLIFF document: *string*
Cause: The XLIFF document was malformed.

Action: Fix the error and try again.

ORA-44711: XPath refers to an untranslatable element
Cause: XPath pointed to an untranslatable element.

Action: XPath for this operation must refer to a translatable element.

ORA-44712: Invalid XPath in XLIFF document used for merging
Cause: XPath within trans-unit/id attribute was invalid.

Action: XPath within trans-unit/id attribute must point to a set of translations, not to a particular translation.

ORA-44713: XPath does not select all translations
Cause: XPath did not select all translations for a particular element.

Action: XPath must point to a set of translations, not to a particular translation.

ORA-44717: First 7 positions (0-6) in the XDB repository is reserved for fusion security
Cause: An attempt was made to add or add a resource to the XDB repository at a position reserved for fusion security.

Action: Give a position other than 0 to 6.

ORA-44718: Port conflict in XDB Configuration file
Cause: A port number specified in the XDB Configuration file conflicts with a port number used in the XDB Configuration file of the same non-consolidated database or the same Pluggable Database or a different Pluggable Database of the same consolidated database or the root container of the same consolidated database.

Action: Specify a different port number.

ORA-44730: XML Index *string* is not usable at the moment
Cause: The async XML Index could not be used since ORACLE is not open for query.

Action: Try the same query again when ORACLE is open for query, or use NO_XMLINDEX_REWRITE hint.

ORA-44731: Path *string* cannot be removed from the repository XML Index
Cause: The repository XML Index indexed one of the parent folders of the resource identified by given path.

Action: Try removing the parent folder from the repository XML Index.

ORA-44732: Path *string* cannot be removed from the repository XML Index
Cause: The repository XML Index did not index the resource identified by given path.

Action: Try removing a resource that is indexed by the repository XML Index.

ORA-44733: The repository XML Index cannot be dropped directly
Cause: DROP INDEX could not be used on the repository XML Index.

Action: Try using DBMS_XDB_ADMIN.DROPREPOSITORYXMLINDEX.

ORA-44734: Predicate Index on nodes with similar children not allowed
Cause: There was at least one node in the document with multiple similar children which was used in Predicate Indexing.

Action: Try removing Predicate Index on nodes with multiple similar children.

ORA-44735: Too many predicates
Cause: Number of predicates were more than limit.

Action: Try reducing number of predicates.

ORA-44736: Group name already existed
Cause: The group name specified already exists.

Action: Try a different group name.

ORA-44737: Parameter *string* did not exist.
Cause: The parameter name specified did not exist.

Action: Check the parameter name.

ORA-44738: Group *string* did not exist.
Cause: The group name specified did not exist.

Action: Check the group name.

ORA-44739: Cannot drop the last group.
Cause: An attempt was made to drop the last group in the index.

Action: Use the DROP INDEX statement instead.

ORA-44740: Parameter *string* is already registered.
Cause: The parameter name specified was already registered.

Action: Either drop the existing parameter or use a different parameter name.

ORA-44741: Cannot drop a group whose tables are shared by other group(s).
Cause: An attempt was made to drop a group whose tables are shared by other group(s).

Action: First drop group(s) with shared table(s) from this group.

ORA-44742: Cannot alter columns of a table that is shared by other group(s).
Cause: An attempt was made to add columns to, modify columns of, or drop columns from a table shared by other group(s).

Action: First drop group(s) with shared table(s) from this group and then proceed with this operation.

ORA-44743: Cannot alter columns of a dependent shared table.
Cause: An attempt was made to add columns to, modify columns of, or drop columns from a dependent shared table. One can only add columns to, modify columns of, or drop columns from the original shared table.

Action: Use the group name of the original shared table while executing this operation.

ORA-44744: Cannot have more than one drop, add or modify operations in an ALTER INDEX statement.
Cause: An attempt was made to have more than one add, modify, or drop column or group operations in the ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

ORA-44745: Cannot add or drop columns to or from multiple tables.
Cause: An attempt was made to add or drop columns to or from multiple tables in a single ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

ORA-44746: Missing XMLTABLE in GROUP clause.
Cause: An attempt was made to create or add a group without XMLTABLE.

Action: Add required XMLTABLE clause to the GROUP clause.

ORA-44747: An XMLIndex with a structured component cannot be specified with ASYNC.
Cause: An attempt was made to specify ASYNC parameter for an XMLIndex with a structured component.

Action: Use valid parameters for XMLIndex with a structured component.

ORA-44748: Invalid name for GROUP.
Cause: An attempt was made to create a GROUP with invalid name.

Action: Use a valid name for the GROUP.

ORA-44749: Missing PATH for the COLUMN.
Cause: An attempt was made to create a COLUMN without PATH.

Action: Specify PATH for the COLUMN definition.

ORA-44750: Cannot create secondary index on unstructured component of XMLIndex.
Cause: An attempt was made to create a secondary index on the unstructured component of an XMLIndex when the XMLIndex does not have an unstructured component.

Action: Alter XMLIndex to add an unstructured component.

ORA-44751: XML schema enumeration index is out of range
Cause: The enumeration item corresponding to the enumeration index could not be found in the XML schema.

Action: If the XML schema has been evolved, try restarting the client that performed the evolution.

ORA-44752: New element '*string*' in complex type '*string*' has the same qualified name as another element
Cause: The new element that was added to a complex type by in-place XML schema evolution had the same qualified name as another element in the same complex type or in one of its ancestor complex types.

Action: Try adding an element with a different qualified name.

ORA-44753: Change to minOccurs attribute of element '*string*' is illegal
Cause: The value of attribute minOccurs on an element could not be increased by in-place XML schema evolution.

Action: Do not increase the value of attribute minOccurs.

ORA-44754: Change to maxOccurs attribute of element '*string*' is illegal
Cause: The value of attribute maxOccurs on an element could not be decreased by in-place XML schema evolution.

Action: Do not decrease the value of attribute maxOccurs.

ORA-44755: Change to complexType property of element '*string*' is illegal
Cause: The complexType property on an element could not be changed by in-place XML schema evolution.

Action: Do not change the complexType property.

ORA-44756: Change to SQLType attribute of element '*string*' is illegal
Cause: The SQLType property on an element in a binary XML schema could not be changed by in-place XML schema evolution.

Action: Do not change the SQLType property.

ORA-44771: Invalid name for a container database.
Cause: The service operation failed.

Action: Check the name of the container database.

ORA-44772: Cluster Ready Services (CRS) operation failed
Cause: The CRS operation failed.

Action: Check the trace file and the CRS daemon log file for details.

ORA-44773: Cannot perform requested service operation.
Cause: The consolidated database was not open. The operation was not performed.

Action: Open the consolidated database.

ORA-44774: Pluggable database attribute cannot be changed.
Cause: The attempted operation was invalid for a consolidated database.

Action: PDB attribute of a service cannot be changed.

ORA-44775: Pluggable database service cannot be created.
Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44776: Pluggable database service cannot be deleted.
Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44777: Pluggable database service cannot be started.
Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44778: Invalid value for service attribute retention_time.
Cause: The attempted operation failed.

Action: The value for the service attribute 'retention_time' must be greater than the value of the service attribute 'replay_initiation_timeout'.

ORA-44779: Invalid value for service attribute replay_initiation_timeout.
Cause: The attempted operation failed.

Action: The value for the service attribute 'replay_initiation_timeout' must be greater than the value of the service attribute 'failover_delay'.

ORA-44780: Invalid value for service attribute commit_outcome.
Cause: The attempted operation failed.

Action: The value for the service attribute 'commit_outcome' cannot be disabled if the service attribute 'failover_type' has the value 'transaction'.

ORA-44781: Invalid value for service attribute aq_ha_notifications.
Cause: The attempted operation failed.

Action: The value for the service attribute 'aq_ha_notifications' cannot be disabled if the service attribute 'failover_type' has the value 'transaction'.

ORA-44782: Cluster Ready Services (CRS) service operation failed - reason: *string*.
Cause: The attempted CRS service operation failed.

Action: Check the trace file for details.

ORA-44783: The maximum number of runtime load balancing services exceeded.
Cause: The number of runtime load balancing services reached the maximum allowed.

Action: None

ORA-44784: Service cannot be deleted.
Cause: The attempted service operation failed.

Action: Internal services and the database service cannot be deleted.

ORA-44785: Service attribute commit_outcome cannot be specified for the database or Pluggable Database service.
Cause: The attempted service operation failed.

Action: None

ORA-44786: Service operation cannot be completed.
Cause: The service was not imported successfully while plugging in the pluggable database or the service is defined in a different pluggable database.

Action: Connect to the correct pluggable database and re-execute the service operation.

ORA-44787: Service cannot be switched into.
Cause: The service did not exist in the new pluggable database or the service was not started in the pluggable database.

Action: Use a valid service name for the pluggable database or start the service in the pluggable database first.

ORA-44789: Service cannot be switched into.
Cause: One of the verification checks failed.

Action: Check the previous error message.

ORA-44790: exceeded maximum GUID length
Cause: The total length of a globally unique identifier (GUID) exceeded 16 characters.

Action: Specify a GUID with the correct length.

ORA-44791: Drain timeout or stop option cannot be specified for a different database instance.
Cause: Drain timeout and stop option could not be used for remote operations.

Action: Connect to the correct database instance to use drain timeout or stop option.

ORA-44792: cannot initialize Oracle Call Interface (OCI) environment
Cause: There was not enough memory available.

Action: Configure the Oracle database with more memory.

ORA-44793: cannot stop internal services
Cause: The user tried to stop an internal service.

Action: None

ORA-44800: Number of classifiers cannot be NULL
Cause: The num_classifiers argument was found to be NULL.

Action: Provide a non-NULL num_classifiers.

ORA-44801: NULL classifier list not permitted
Cause: The wlm_classifiers argument was found to be NULL.

Action: Provide a non-NULL wlm_classifiers.

ORA-44802: No new plan (classifier list) has been submitted
Cause: No new plan was created before submission.

Action: Create a new plan, followed by adding classifier & PC lists.

ORA-44803: Plan is in transition (about to be activated)
Cause: New plan was attempted to be created before activating the current plan.

Action: Completely submit the current plan and activate it.

ORA-44804: Plan is not created yet
Cause: A new plan was not created before submitting the Classifier and Performance Class lists.

Action: Call dbms_wlm.create_plan first to create the plan.

ORA-44805: No classifier is present
Cause: The classifier list contained no classifiers.

Action: Check the syntax of the classifier list.

ORA-44806: Extra classifiers are present in list
Cause: More classifiers were present in the list than specified.

Action: Only include the number of classifiers less than or equal to num_classifiers mentioned in dbms_wlm.create_plan.

ORA-44807: Peformance Class name is too large
Cause: The Performance Class name was larger than 32 bytes.

Action: Rename the Performance Class to fit within 32 bytes.

ORA-44808: Work Request Class name is too large
Cause: The Work Request Class name was larger than 32 bytes.

Action: Rename the Work Request Class to fit within 32 bytes.

ORA-44809: No expression is present for classifier
Cause: This classifiers contained no expression. It should contain one more more expressions.

Action: Check syntax in the classifier list.

ORA-44810: No parameter is present for expression
Cause: This expression contained no paramaters or attribute values. It should contain one or more attribute values. Attributes can be SERVICE_NAME, MODULE, ACTION, PROGRAM or USER.

Action: Check syntax in the classifier list.

ORA-44811: Service name is too large
Cause: The service name mentioned in the parameter list was too large.

Action: Check the service name.

ORA-44812: Module name is too large
Cause: The module name mentioned in the parameter list was too large.

Action: Check the module name.

ORA-44813: Action name is too large
Cause: The action name mentioned in the parameter list was too large.

Action: Check the action name.

ORA-44814: Program name is too large
Cause: The program name mentioned in the parameter list was too large.

Action: Check the program name.

ORA-44815: User name is too large
Cause: The user name mentioned in the parameter list was too large.

Action: Check the user name.

ORA-44816: Number of Performance Classes is less than specified
Cause: The number of Performance Classes submitted were less than what was specified.

Action: Submit the full list of Performance Classes.

ORA-44817: Classifier list is too large
Cause: The length of the classifier list was greater than 4000 bytes.

Action: Break the list into two lists before submission.

ORA-44818: General failure
Cause: There was an unknown failure.

Action: Contact Oracle Support Services.

ORA-44819: Execution of this WLM function is denied
Cause: Either a WLM plan was being loaded from another instance, or the strict order of the PL/SQL calls for loading WLM plan was not followed.

Action: Check if another session is also concurrently trying to load a WLM plan. If that is not true, check the order in which you are making these PL/SQL calls to load your WLM plan.

ORA-44820: Number of Work Request Classes is less than specified
Cause: The number of Work Request Classes submitted were less than what was specified.

Action: Submit the full list of Work Request Classes.

ORA-44821: Number of classifiers is too large
Cause: A very large number (> 1024) of classifiers were requested.

Action: Submit a smaller (< 1024) number of classifiers.

ORA-44822: QoS Resource Manager plan does not exist in database "*string*"
Cause: QoS Resource Manager plan did not exist in this database.

Action: Rerun CATPROC.SQL to create the plan.

ORA-44823: The QoS Resource Manager plan is not in use
Cause: The QoS Resource Manager plan was not in use.

Action: Correct the setting of the current Resource Manager plan and try again.

ORA-44824: Resource Manager is disabled
Cause: Resource Manager was turned off.

Action: Reenable the Resource Manager and retry the operation.

ORA-44825: Classifier plan does not match across instances
Cause: Classifier plan was not the same across instances.

Action: Resubmit the classifier plan and try again.

ORA-44826: Number of Performance Classes is more than what was specified.
Cause: The number of Performance Classes submitted were more than what was specified.

Action: Submit only the specified number of Performance Classes.

ORA-44827: Number of Performance Classes is too large
Cause: A large number (>= 50) of Performance Classes were requested.

Action: Submit a smaller (< 50) number of Performance Classes.

ORA-44850: attempt to set a bad status *string* [*string*]
Cause: There was an internal Global Service Manager (GSM) error.

Action: Contact Oracle Support Services.

ORA-44851: "*string*" is not a valid name for a database
Cause: The specified database name was not valid.

Action: Provide a valid database name.

ORA-44852: maximum number of regions exceeded
Cause: The maximum number of regions was exceeded.

Action: Check the catalog to see if you can remove unused regions.

ORA-44853: maximum number of valid nodes for VNCR exceeded
Cause: The maximum number of nodes for valid node checking for registration (VNCR) was exceeded.

Action: Check the catalog to see if you can remove unused nodes.

ORA-44854: catalog has already been created
Cause: This database already contained the cloud catalog.

Action: Make sure that the specified database name is correct and, if yes, delete and re-create the catalog.

ORA-44855: cloud name is not valid
Cause: The specified cloud name contained invalid characters or was too long.

Action: Provide a valid (or shorter) cloud name.

ORA-44856: catalog service name is not valid
Cause: There was an internal Global Service Manager (GSM) error.

Action: Contact Oracle Support Services.

ORA-44857: cloud "*string*" does not exist
Cause: The specified cloud name did not match the one found in the catalog.

Action: Provide a valid cloud name.

ORA-44858: cannot remove catalog
Cause: The catalog contained one or more database or Global Service Manager (GSM) objects.

Action: Remove the database and GSM objects from the catalog.

ORA-44859: GSM "*string*" is already defined in the catalog
Cause: The specified Global Service Manager (GSM) was already in existence in the catalog.

Action: Check the specified object name.

ORA-44860: Region "*string*" was not found in the catalog.
Cause: The specified region was not found in the catalog.

Action: Check the specified object name.

ORA-44861: invalid use of REMOVE VNCR command
Cause: A valid node and group name were specified in the same command.

Action: Provide either a valid node or group name.

ORA-44862: region name and buddy region name cannot be the same
Cause: A region was specified as buddy for itself.

Action: Provide a valid buddy region name.

ORA-44863: region "*string*" is the last region and cannot be removed
Cause: The last region could not be removed from the cloud catalog.

Action: No action is required.

ORA-44864: cannot remove region because it is still being used by a GSM
Cause: The region contained databases or Global Service Manager (GSM).

Action: Remove the database and GSM objects from the region first.

ORA-44865: cannot remove GDS pool because it is still being used by a database or service
Cause: The Global Data Services (GDS) pool contained databases or services.

Action: Remove the databases and services from the GDS pool.

ORA-44866: pool "*string*" can only contain databases that belong to a Data Guard broker configuration
Cause: An attempt was made to add a database that does not belong to a Data Guard broker configuration to a Data Guard broker pool.

Action: None

ORA-44867: GDS pool already contains database "*string*"
Cause: The database or service was already in the Global Data Services (GDS) pool.

Action: None

ORA-44868: pool "*string*" is a pool that contains a Data Guard broker configuration; Databases that do not belong to a broker configuration cannot be added to this pool.
Cause: An attempt was made to add a database to a pool that contains a Data Guard broker configuration.

Action: None

ORA-44869: cannot build net service name with "*string*\ because it is too long
Cause: The automatically created network service name was too long.

Action: Use a shorter network domain name.

ORA-44870: The "role" property is only supported for pools that contain a Data Guard broker configuration.
Cause: ROLE was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44871: This operation cannot be performed on PREFERRED_ALL service "*string*".
Cause: The service was created with the PREFERRED_ALL option.

Action: Do not perform this operation on a PREFERRED_ALL service.

ORA-44872: The same name "*string*" cannot be used for both source and target databases.
Cause: The source and target parameters of MOVE SERVICE were the same.

Action: Check the parameters and try again.

ORA-44873: database "*string*" already offers the service
Cause: An attempt was made to add a service to a database that already offered the service.

Action: No action is required.

ORA-44874: service "*string*" not offerered by database "*string*"
Cause: An attempt was made to start or stop a service on a database that does not offer the service.

Action: None

ORA-44875: database-related service parameters exceed the maximum allowed parameter length (1024 bytes)
Cause: The specified database-related service parameters were not valid.

Action: Check the parameters and try again.

ORA-44876: service *string* is running
Cause: The specified service was running.

Action: This message is informational only.

ORA-44877: service "*string*" is not enabled on database "*string*"
Cause: The service could not be started on the database because it was disabled.

Action: Enable the service.

ORA-44878: The database current lag is too high for the service "*string*".
Cause: The service could not be started on the standby database because the database current lag exceeds the service lag.

Action: The standby current lag needs to be reduced.

ORA-44879: A region name has not been provided.
Cause: An attempt was made to add a new Global Service Manager (GSM) without providing a region. When there is more than one existing region, a region name must be provided.

Action: Check the syntax and rerun the command.

ORA-44880: catalog has not yet been created
Cause: An attempt was made to modify the catalog, but it does not yet exist.

Action: Create the catalog before trying to modify it.

ORA-44881: GDS pool is not empty
Cause: An attempt was made to add broker configuration to a Global Data Services (GDS) pool that already contained a database. This is not allowed.

Action: Either remove all databases from the Global Data Services (GDS) pool or create a new GDS pool.

ORA-44882: The name "*string*" is not valid for a GDS pool.
Cause: The name of the specified Global Data Services (GDS) pool was not valid.

Action: Check the name and try again.

ORA-44883: The name "*string*" is not valid for a region.
Cause: The name of the specified region was not valid.

Action: Check the name and try again.

ORA-44884: The name "*string*" is not valid for a service.
Cause: The name of the specified service was not valid.

Action: Check the name and try again.

ORA-44885: invalid VNCR name *string*
Cause: The name specified for the valid node checking for registration (VNCR) was not valid.

Action: Check the name and try again.

ORA-44886: The name "*string*" is not valid for a VNCR group.
Cause: The name specified for the valid node checking for registration (VNCR) group was not valid.

Action: Check the name and try again.

ORA-44887: The name "*string*" is not valid for a GSM.
Cause: The name of the specified Global Service Manager (GSM) was not valid.

Action: n/a

ORA-44888: The name "*string*" is not valid for a GSM user.
Cause: The name of the specified Global Service Manager (GSM) was not valid.

Action: Check the name and try again.

ORA-44889: Region "*string*" is already defined in the catalog.
Cause: The specified region was already in existence in the catalog.

Action: Check the specified region name.

ORA-44890: GDS pool "*string*" is already defined in the catalog.
Cause: The specified Global Data Services (GDS) pool was already in existence in the catalog.

Action: Check the specified pool name.

ORA-44891: GSM "*string*" was not found in the catalog
Cause: The specified region was not found in the catalog.

Action: Check the specified region name.

ORA-44892: GDS pool "*string*" was not found in the catalog.
Cause: The specified Global Data Services (GDS) pool was not found in the catalog.

Action: Check the specified pool name.

ORA-44893: Database "*string*" was not found in pool "*string*".
Cause: The specified database was not found in the pool.

Action: Check the specified database name.

ORA-44894: Service "*string*" was not found in the catalog.
Cause: The specified service was not found in the catalog.

Action: Check the specified service name.

ORA-44895: cannot remove region because it is still being used by a database
Cause: The region contained databases.

Action: Remove the database objects from the region.

ORA-44896: GDS pool already contains service "*string*"
Cause: The service was already in the Global Data Services (GDS) pool.

Action: None

ORA-44897: The "lag" property is only supported for pools that contain a Data Guard broker configuration.
Cause: LAG was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44898: The "failover_primary" property is only supported for pools that contain a Data Guard broker configuration.
Cause: FAILOVER_PRIMARY was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44899: VNCR name "*string*" is already defined in the catalog.
Cause: The specified valid node checking for registration (VNCR) name was already in existence in the catalog.

Action: Check the specified VNCR name.

ORA-44900: Identifier "*string*" is too long.
Cause: The specified identifier exceeded the maximum allowed length.

Action: Use a shorter identifier name

ORA-44901: Unable to resolve symbolic link "*string*"
Cause: The system is unable to resolve the specified symbolic link.

Action: Check the definition of the symbolic link to ensure that this refers to a valid resource.

ORA-44902: Too many steps in resolving symbolic link "*string*"
Cause: This error is raised when the system is unable to fully resolve a path with symbolic links within a reasonable number of steps. It could be due to cycles in definitions of symbolic links or very long chains of symbolic links to symbolic links.

Action: Remove any cycles in symbolic link definitions. If there are no cycles, reduce the length of chains of symbolic links to symbolic links.

ORA-44903: Cannot create hard link to specified resource
Cause: The system cannot create a hard link to the specified resource.

Action: Check the configuration parameter(s) to verify the restrictions on creating hard links to folder or non-folder resources.

ORA-44904: target path in document link exceeds maximum length
Cause: Target path length exceeds the maximum which can be stored to disk.

Action: Reduce target path to smaller length

ORA-44905: extended link type not supported
Cause: XLink type attribute is extended.

Action: Remove extended link, or replace with simple link.

ORA-44906: unable to resolve target in document link
Cause: target path does not resolve to valid resource.

Action: check validity of target path.

ORA-44907: can not delete with incoming hard document links
Cause: there is a hard document link with this resource as the target.

Action: query DOCUMENT_LINKS view to see which resource has a hard link to this resource. Change the document link in the source resource accordingly.

ORA-44908: found a loop in XInclude elements while expanding *string*
Cause: There is a loop in XInclude elements within the document.

Action: Remove the loop in XInclude elements.

ORA-44909: href attribute is required within XInclude element
Cause: The href attribute is missing within XInclude element.

Action: Add the href attribute.

ORA-44910: xpointer not supported within XInclude element
Cause: The xpointer attribute is specified within XInclude element.

Action: Remove the xpointer attribute.

ORA-44911: exceeded maximum depth of nested xinclude expansion
Cause: The depth of nested xinclude expansion has exceeded system limit.

Action: Reduce the depth of nested xinclude expansion.

ORA-44912: invalid or unsupported xpath expression *string*
Cause: The specified xpath is either invalid or unsupported in this context.

Action: Change the xpath expression.

ORA-44913: error while processing XInclude *string*
Cause: There was an error while processing the specified XInclude.

Action: Ensure that the XInclude attributes are correct.

ORA-44914: schema XPointer exceeds maximum length
Cause: The XPointer was too long with the schema URL and element name.

Action: Use a shorter name.

ORA-44915: cannot rename virtual folders
Cause: Renaming virtual folders was not supported.

Action: Create a new virtual folder instead.

ORA-44916: cannot recursively delete virtual folders
Cause: Recursive deletion of virtual folders was not supported.

Action: Delete components of the virtual folder first.

ORA-44917: Resources cannot point to resources.
Cause: A REF was being set to point to the resource table."

Action: This is not supported.

ORA-44918: The source of a copy cannot be an ancestor of the destination.
Cause: The destination of a copy was an ancestor of the source.

Action: Correct the source and destination of the copy.

ORA-44919: cannot overwrite existing resource
Cause: Overwriting an existing resource was prohibited.

Action: Specify a new destination or indicate that overwrite is permitted.

ORA-44920: The source and destination of a copy or move cannot be the same.
Cause: A copy or move was attempted with the same source and destination.

Action: Use the correct source and destination.

ORA-44921: The XPath returns none or more than one node.
Cause: The XPath did not map to a single node.

Action: Specify a path that maps to a single node.

ORA-44922: The XPath expression must evaluate to a scalar type.
Cause: The XPath did not map to a scalar type.

Action: Specify a path that maps to a scalar type.

ORA-45001: SecureFile archive implicit not allowed
Cause: A SecureFile was archived and implicit retrieval was not allowed.

Action: Retrieve the SecureFile with a Get operation.

ORA-45002: Content ID not found in the DBFS HS
Cause: The content ID was invalid or was already deleted.

Action: No action required.

ORA-45003: DBFS HS: Invalid checksum, potential data corruption
Cause: Potential data corruption.

Action: No action required.

ORA-45004: DBFS HS SBT Error
Cause: Error related to SBT Tape library.

Action: Refer to error log for more details.

ORA-45005: DBFS HS invalid store
Cause: Error related to DBFS HS Store.

Action: Check that the store name and store parameters are valid values.

ORA-45400: operation not permitted on current database
Cause: An operation was not permitted to start because the database role is not supported.

Action: Attempt the operation on the primary database. If the primary database has recently switched to a logical standby database, and an error has occurred, reexecute the DBMS_ROLLING.SWITCHOVER procedure on the former primary database until successful completion of the operation.

ORA-45401: upgrade plan is already active
Cause: An upgrade plan was already active.

Action: The existing plan must first be destroyed by calling DBMS_ROLLING.DESTROY_PLAN.

ORA-45402: LOG_ARCHIVE_CONFIG must contain the DG_CONFIG attribute
Cause: The DG_CONFIG attribute was missing from the LOG_ARCHIVE_CONFIG parameter.

Action: Configure this parameter with the DG_CONFIG attribute before performing DBMS_ROLLING operations.

ORA-45403: database *string* must be specified in DG_CONFIG
Cause: The specified database was not found in the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

Action: Add the specified database to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

ORA-45404: target version is incompatible
Cause: The configured target software version was incompatible with a DBMS_ROLLING administered upgrade.

Action: Use alternative upgrade methods.

ORA-45405: A rolling upgrade operation is already in progress.
Cause: A DBMS_ROLLING operation was already in progress. Only one operation is permitted at a time.

Action: Wait for the operation to complete, or query the PID column of DBA_ROLLING_STATUS view to identify the active process.

ORA-45406: operation completed with warnings
Cause: An operation succeeded but warnings were generated.

Action: Consult the DBA_ROLLING_EVENTS view for the list of warnings.

ORA-45407: operation encountered a query error
Cause: An internal database query failed.

Action: Consult the DBA_ROLLING_EVENTS and DBA_ROLLING_PLAN views to identify the error code and instruction that caused the failure.

ORA-45408: parameter name is unknown
Cause: The specified parameter could not be modified because the parameter name was not recognized.

Action: Verify that the parameter is among the available parameters listed in DBA_ROLLING_PARAMETERS view.

ORA-45409: parameter value is invalid or out of bounds
Cause: The specified parameter could not be modified because its value was invalid or out of bounds.

Action: Consult the DBA_ROLLING_PARAMETERS view to obtain the valid range of values for the associated parameter.

ORA-45410: parameter may not be modified
Cause: The specified parameter could not be modified.

Action: Internal parameters may not be modified through the DBMS_ROLLING.SET_PARAMETER procedure. If the parameter is a user parameter, the parameter is no longer meaningful at the current phase of the upgrade.

ORA-45411: operation requires additional arguments
Cause: An operation has failed because one or more arguments were not supplied.

Action: Retry the operation with all required arguments.

ORA-45412: parameter scope argument is unknown
Cause: An operation has failed because the database unique name provided in the scope argument was not known.

Action: Verify that the database unique name exists in the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

ORA-45413: parameter has no default value
Cause: The specified parameter could not be reverted back to its default value because the default value did not exist.

Action: The parameter must be set to an explicit value.

ORA-45414: could not connect to a remote database
Cause: Connections to one or more databases failed.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the involved databases and the specific error codes.

ORA-45415: instruction execution failure
Cause: A rolling upgrade operation has halted due to the failure of one or more required upgrade instructions.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the active instructions and their associated error codes.

ORA-45416: operation cannot start until plan rebuild
Cause: An operation was not permitted to start due to recent parameter modifications which required a rebuild of the upgrade plan.

Action: Call the DBMS_ROLLING.BUILD procedure to rebuild the upgrade plan.

ORA-45417: operation not permitted since current phase was not *string*
Cause: An operation was not permitted to start because the upgrade was in a different phase.

Action: Call the DBMS_ROLLING procedure associated with the current phase.

ORA-45418: database is not running the higher version RDBMS
Cause: A rolling upgrade instruction has failed because a database was not running the correct target RDBMS version.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending databases and restart them on the higher version binaries.

ORA-45419: DB_UNIQUE_NAME parameter must be specified
Cause: The DB_UNIQUE_NAME parameter was not configured.

Action: Configure the DB_UNIQUE_NAME parameter.

ORA-45420: return TNS service was not found
Cause: An instruction failed because a Transparent Network Substrate (TNS) service name for return communication was not found on a remote database.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database or databases.

ORA-45421: database type is not supported by rolling upgrade
Cause: One or more databases specified in the DG_CONFIG attribute was incompatible with a DBMS_ROLLING administered upgrade.

Action: Disable the databases from the upgrade configuration by setting their associated INVOLVEMENT parameters to a value of NONE, and rebuild the upgrade plan.

ORA-45422: operation requires existing plan
Cause: An operation was not permitted to start because it required an active plan.

Action: Configure an upgrade plan by calling the DBMS_ROLLING.INIT_PLAN procedure.

ORA-45423: target database has mismatched DB_UNIQUE_NAME
Cause: A specified DB_UNIQUE_NAME attribute in a LOG_ARCHIVE_DEST_n parameter did not match the DB_UNIQUE_NAME at the target database.

Action: Ensure the DB_UNIQUE_NAME attribute and associated Transparent Network Substrate (TNS) service name or associated connect string has been configured properly.

ORA-45424: initialization parameter file has unexpected value
Cause: An instruction failed due to an initialization parameter file at a remote database that was found to be invalid.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database.

ORA-45425: operation halted due to required user interaction
Cause: A rolling upgrade operation stopped because interaction is required.

Action: Consult the DBA_ROLLING_EVENTS view to identify the actions required.

ORA-45426: managed recovery process was not running
Cause: An operation failed due to the inactive managed recovery process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Restart the managed recovery process or resolve any errors that would prevent the managed recovery process from remaining active.

ORA-45427: logical standby Redo Apply process was not running
Cause: An operation failed due to the inactive logical standby Redo Apply process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Restart the logical standby Redo Apply process or resolve any errors that would prevent the logical standby Redo Apply process from remaining active.

ORA-45428: database was not in expected database role
Cause: An instruction failed due to a database operating in a database role which was not expected.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. If the role change is due to a failover, the FAILOVER parameter must be set and the upgrade plan must be rebuilt before resuming the rolling upgrade.

ORA-45429: database was set to an invalid Data Guard protection mode
Cause: An instruction failed due to a database operating at a data protection mode that was not expected.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database. Set the data protection mode accordingly based on the requirement as described in the instruction.

ORA-45430: flashback database was not enabled
Cause: An instruction failed due to a database that was found to not have Flashback Database enabled.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database. Configure the database with adequate storage to support guaranteed restore points and enable Flashback Database.

ORA-45431: database was mounted or open in an invalid mode
Cause: An instruction failed due to a database that was mounted or open in an invalid mode.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database and the expected mode. Restart the database in the expected mode.

ORA-45432: future primary database is not a physical standby database
Cause: An operation was not permitted because the future primary database is not a physical standby database.

Action: Specify a physical standby database as the future primary database.

ORA-45433: failover was detected on an unsupported database
Cause: An operation was not permitted because a failover was detected on a database which does not permit continuation of the rolling upgrade.

Action: Consult the DBA_ROLLING_EVENTS view to identify the unsupported database and abort the rolling upgrade.

ORA-45434: multiple failovers of the same type detected
Cause: An operation was not permitted because multiple failovers were detected on standby databases which protect a common target.

Action: Consult the DBA_ROLLING_EVENTS view to identify the offending databases. Remove the unwanted databases from the configuration and rebuild the upgrade plan.

ORA-45435: managed recovery process was running
Cause: An operation failed due to an active managed recovery process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and stop the managed recovery process.

ORA-45436: logical standby Redo Apply process was running
Cause: An operation failed due to an active Redo Apply process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and stop the Redo Apply process.

ORA-45437: database upgrade progress is inconsistent
Cause: An operation failed due to the discovery of the catalog upgrade progress on a database that was different from the progress value saved in the plan state.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and remove the database from the configuration.

ORA-45438: database is not in mounted mode
Cause: An operation failed due to the discovery of a database which was not in mounted mode.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. If the database was opened, restart the database in mounted mode.

ORA-45439: database is not in open read/write mode
Cause: An operation failed due to the discovery of a database which was not in open read/write mode.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Open the database in read/write mode.

ORA-45440: server parameter file has not been configured
Cause: An operation failed due to the discovery of a database which was not configured with a server parameter file that could be modified.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Ensure the database has been configured with a server parameter file, and that the parameter file can be modified.

ORA-45441: no databases eligible for rollback
Cause: A rollback operation could not start because the databases have not created the guaranteed restore point needed for rollback.

Action: A rollback is not necessary. The rolling operation can be cancelled by calling DBMS_ROLLING.DESTROY_PLAN.

ORA-45442: rollback is not permitted after a role change
Cause: A rollback operation was not permitted due to a prior role change event such as a switchover or failover.

Action: Reconfigure the Data Guard configuration manually.

ORA-45443: cannot quiesce replicated PL/SQL procedures
Cause: An operation failed because there were other processes executing long running replicated PL/SQL procedures.

Action: Increase the value of DICTIONARY_PLS_WAIT_TIMEOUT and retry the failed operation.

ORA-45486: database update progress is inconsistent
Cause: An operation failed due to the discovery of the update progress on a database that was different from the progress value saved in the plan state.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and remove the database from the configuration.

ORA-45500: Cannot remove a database from a pool that contains a broker configuration.
Cause: An attempt was made to remove a database from a pool that contained a broker configuration.

Action: If the broker configuration has changed, use the SYNC command in gsmctl to synchronize the pool

ORA-45501: The maximum number of global service managers for this region has been exceeded.
Cause: A new Global Service Manager (GSM) was added to a region that already contained the maximum number of GSMs.

Action: The maximum has been reached. Do not attempt to add anymore GSMs.

ORA-45502: Insufficient privileges to perform this operation.
Cause: A Global Service Manager (GSM) command was executed by a non-privileged user.

Action: Either connect as a privileged user, or ask your GSM administrator to add you as a pool or GSM administrator.

ORA-45503: This database is already in cloud *string*.
Cause: An attempt was made to add a database to a cloud when it was already in another cloud.

Action: A database can only be in one cloud. Remove it from the other cloud first.

ORA-45504: Cannot relocate a preferred_all service.
Cause: The command 'relocate service' is not supported for preferred_all services.

Action: Do no attempt to relocate a preferred_all service.

ORA-45505: The maximum number of services has been reached.
Cause: The hard limit for the number of global services has been reached.

Action: No more global services can be added without first removing a service.

ORA-45506: The maximum number of GDS pools has been reached.
Cause: The hard limit for the number of Global Data Services (GDS) pools has been reached.

Action: No more Global Data Services (GDS) pools can be added without first removing a pool.

ORA-45507: Region *string* does not have a buddy region.
Cause: The specified region did not have a buddy.

Action: This message is informational only. Consider using 'modify region' to add a buddy for this region.

ORA-45508: Database *string* does not have an assigned region.
Cause: The specified database did not have an assigned region.

Action: Use 'modify database' to assign a region to this database.

ORA-45509: Database *string* has an invalid status "*string*".
Cause: The specified database had an invalid status.

Action: Check that the account "gsmuser" has been enabled by the remote DBA, that you used the correct password for "gsmuser" when running "add database", and that there is an existing valid node check for registration (VNCR) entry for this database host.

ORA-45510: There is an outstanding GSM request for change number *string* created at *string*. GSM has failed to apply this request *string* times.
Cause: A change request originating from a gdsctl command was not applied after several minutes.

Action: Verify that the Global Service Manager (GSM) server is able to connect to all databases in the framework to apply the change.

ORA-45511: Service *string* does not have a preferred database.
Cause: The specified service did not have a preferred database. This can happen if the database was removed from the pool.

Action: Use 'modify service' to provide a preferred database for this service.

ORA-45512: Service *string* is a local only service which has an available database in region *string*, but does not have a preferred database in the same region.
Cause: The specified service did not have a preferred database in a region in which it had an available database.

Action: Use 'modify service' to provide a preferred database in this region for this service, or remove the available database in this region.

ORA-45513: Database *string* has no global services defined for it.
Cause: A database was added to the global data services framework, but no global services have been defined for it, or they have all been removed.

Action: This is an informational message. Consider defining a service for this database, or removing the database from the framework.

ORA-45514: Region *string* does not contain any databases.
Cause: A region was added to the global data services framework, but no databases were added to this region, or they have all been removed.

Action: This is an informational message. Consider adding a database to this region or removing the region.

ORA-45515: Region *string* does not contain any GSMs.
Cause: A region was added to the global data services framework, but no global services manager servers were defined for this region, or they have all been removed.

Action: This is a warning message. You are advised to define a GSM in this region for high availability.

ORA-45516: GDS pool *string* does not contain any databases.
Cause: The specified Global Data Services (GDS) pool did not contain any databases.

Action: This is an informational message. Consider adding databases to this pool or removing the pool from the global data services framework.

ORA-45517: GDS pool *string* does not contain any global services.
Cause: The specified Global Data Services (GDS) pool did not contain any global services.

Action: This is an informational message. Consider adding services to this pool or removing the pool from the global data services framework.

ORA-45518: Service *string* will not be started on logical/snapshot standby.
Cause: The specified service will not be started on a logical/snapshot standby.

Action: This is a warning message. Consider re-defining lag parameter to "any", if the service needs to be started on a logical/snapshot standby.

ORA-45519: Database pool *string* is empty; this operation cannot be performed on an empty pool.
Cause: The database pool does not contain any databases. Therefore this operation will have no effect.

Action: This is a warning message. Do not perform this operation on an empty database pool.

ORA-45520: A service with locality ANYWHERE cannot set region failover.
Cause: Service attributes ANYWHERE and REGION_FAILOVER are incompatible.

Action: Do not attempt to set REGION_FAILOVER on a service with locality ANYWHERE.

ORA-45521: A service with a primary role cannot set FAILOVER_PRIMARY.
Cause: A service with a primary role cannot set FAILOVER_PRIMARY.

Action: Do not attempt to set FAILOVER_PRIMARY on a service that has a primary role.

ORA-45522: LOCAL_ONLY service *string* cannot be relocated to a database in another region.
Cause: The specified service is LOCAL_ONLY and cannot be relocated to a database in a different region.

Action: Do not relocate a LOCAL_ONLY service to a database in another region.

ORA-45523: Warning: service *string* is already stopped.
Cause: The service was stopped already.

Action: None; this is only a warning message.

ORA-45524: must explicitly specify Global Data Services pool name because there could be multiple candidates
Cause: An attempt to have a default Global Data Services pool when multiple pools already coexist in the domain failed.

Action: Do not omit '-gdspool gdspool_name_list' when multiple pools exist

ORA-45525: A value of TRANSACTION was provided for the service parameter '-failovertype', but bad or nonexistent value was specified for service parameter '-retention'.
Cause: The command specified a value of TRANSACTION for the service parameter '-failovertype', and either did not provide a value for the parameter '-retention', or provided a value that was less than or equal to the value provided for the parameter '-replay_init_time'.

Action: If a service is created with a value of TRANSACTION for the parameter '-failovertype', then a value must be provided for the parameter '-retention', and that value must be greater than the value provided for the parameter '-replay_init_time'.

ORA-45526: A value of TRANSACTION was provided for the service parameter '-failovertype', but a bad or nonexistent value was specified for service parameter '-replay_init_time'.
Cause: The command specified a value of TRANSACTION for the service parameter '-failovertype', and either did not provide a value for the parameter '-replay_init_time', or provided a value that was less than or equal to the value provided for the parameter '-failoverdelay'.

Action: If a service is created with a value of TRANSACTION for the parameter '-failovertype', then a value must be provided for the parameter '-replay_init_time', and that value must be greater than the value provided for the parameter '-failoverdelay'.

ORA-45527: Database compatibility level was too low for use with Global Data Services (GDS).
Cause: The major database compatibility level is below 12. The Global Data Services (GDS) feature requires that the database compatibility level of all participating databases be at 12 or above.

Action: In order to use this database for Global Data Services (GDS), an upgrade must be completed so that its major compatibility level is at 12 or above.

ORA-45528: Service *string* has not been globally started.
Cause: An attempt was made to start the service in a specific database without first starting it globally.

Action: Start the service globally by using 'start service' command without specifying the '-database' parameter.

ORA-45529: Database has not been configured to use an SPFILE.
Cause: The database was not configured to use an SPFILE. This is required before it can be used within a Global Data Services (GDS) framework.

Action: Reconfigure the database to use an SPFILE and attempt the action again.

ORA-45530: A local service with the same name already exists.
Cause: An attempt was made to create a global service with the same name as an existing local service.

Action: Use a different service name or delete the existing local service.

ORA-45531: This database is already in another Global Data Services (GDS) framework.
Cause: An attempt was made to create a Global Data Services (GDS) catalog on a database that was already in another GDS framework.

Action: Remove this database from the other framework before using it as a Global Data Services (GDS) catalog.

ORA-45532: This database is already a catalog for another Global Data Services (GDS) framework.
Cause: An attempt was made add a database to a Global Data Services (GDS) framework, but it was already a catalog database for another framework.

Action: Do not attempt to to add a Global Data Services (GDS) catalog to another GDS framework.

ORA-45533: Service *string* is already being modified from another GDSCTL session.
Cause: The specified service was already in the process of being modified.

Action: Wait until any other service modifications have completed. If this problem persists, contact Oracle Support Services.

ORA-45534: There is a running GSM (Global Service Manager) connected to the catalog.
Cause: This command could not be executed while there were running GSM (Global Service Manager) servers connected to the catalog.

Action: Shut down all GSM servers before running this command.

ORA-45535: Catalog version cannot be determined.
Cause: The version of the GDS (Global Data Services) catalog could not be determined.

Action: Contact Oracle Support Services.

ORA-45536: This version of GDSCTL is not compatible with the GDS (Global Data Services) catalog.
Cause: The version of GDSCTL being used was not compatible with the current GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade GDSCTL or the GDS catalog.

ORA-45537: This version of GSM (Global Service Manager) is not compatible with the GDS (Global Data Services) catalog.
Cause: The version of GSM being used was not compatible with the current GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade GSM or the GDS catalog.

ORA-45538: The database version is not compatible with the GDS (Global Data Services) catalog.
Cause: The version of the database being added was not compatible with the GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade the database or the GDS catalog.

ORA-45539: Database *string* has already been added to another pool.
Cause: An attempt was made to add a database to a pool, but this database has already been added to another pool.

Action: Do not attempt to add a database to two different pools.

ORA-45540: Call to SRVCTL failed with status *string*, errors: *string*.
Cause: An attempt to call the SRVCTL command line failed with the specified errors.

Action: Refer to the Oracle Real Application Clusters (Oracle RAC) documentation and resolve the problems reported by SRVCTL.

ORA-45541: Parameters "-serverpool" and "-cardinality" are invalid for administrator-managed Oracle RAC databases.
Cause: The service command stipulated -serverpool or -cardinality but this database was an administrator-managed Oracle RAC database, which does not recognize these parameters.

Action: Do not use -serverpool or -cardinality on administrator-managed Oracle RAC databases.

ORA-45542: Parameters "-serverpool", "-cardinality", and "-instances" are invalid for non-Oracle RAC databases.
Cause: The service command stipulated -serverpool, -cardinality, or -instances but this database was a non-Oracle RAC database, which does not recognize these parameters.

Action: Do not use -serverpool, -cardinality, or -instances on non-Oracle RAC databases.

ORA-45543: Parameter "-instances" is invalid for policy-managed Oracle RAC databases.
Cause: The service command stipulated -instances, but this database was a policy-managed Oracle RAC database, which does not recognize this parameter.

Action: Do not use -instances on policy-managed Oracle RAC databases.

ORA-45544: An invalid weight string was provided for manual override of runtime load balancing.
Cause: The string provided by GDSCTL to override runtime load balancing with manual region weights was badly formed.

Action: Retry the command. If the problem persists, contact Oracle Support Services.

ORA-45545: cannot delete all remaining instances
Cause: This command would delete all remaining instances from the service, leaving the service in an invalid state.

Action: Do not provide an instance list that would delete all instances.

ORA-45546: cannot create process to run SRVCTL with system error *string*
Cause: There was a problem creating a new process to run SRVCTL from the command line.

Action: Check the Oracle alert log on the Oracle database server machine and rectify the problem on the server.

ORA-45547: A call to SRVCTL failed with error *string* because of bad parameters.
Cause: The command-line execution of SRVCTL failed because of bad parameters.

Action: Check the database server traces and contact Oracle Support Services.

ORA-45548: The catalog database can be downgraded, downgrading a catalog database after making changes is not advised.
Cause: This is a warning message only. This command required catalog changes and the 'compatible' database parameter indicated that the database could be downgraded. Downgrading a catlog database after making catalog changes is not advised and may cause data loss in the catalog.

Action: Make your database upgrade permanent by updating the 'compatible' database parameter before using GDSCTL commands that will alter the catalog.

ORA-45549: Catalog changes are not possible without a running GSM at the current version.
Cause: This command required catalog changes, which are not allowed unless there is at least one Global Service Manager (GSM) server running at the current version.

Action: Start a GSM server that is running the current version of the software. If there are none, upgrade at least one exitsing GSM or add a new one at the current version.

ORA-45550: service does not exist
Cause: An attempt was made to start a service that did not exist on the target database.

Action: None. This error was caught by the Global Service Manager (GSM), and the service was created automatically.

ORA-45551: Instance *string* was not in the instance list for this database.
Cause: An attempt was made to delete an instance from this database but the instance was not in the existing instance list.

Action: None. This is a warning only. No action was taken for the named instance.

ORA-45552: None of the provided instances were in the instance list for this database.
Cause: The provided instance list did not contain any valid instances, or the existing instance list for the catalog was empty.

Action: Check the list of instances and run the command again if necesary.

ORA-45553: Service *string* does not have any instances defined for database\\(s\\) *string*.
Cause: An attempt was made to start a service on an administrator-managed Oracle RAC database, but there were no instances defined for the service on that database.

Action: Define instances for the service on all of the listed databases before attempting to start the service.

ORA-45554: There are no services that can start on database *string*.
Cause: An attempt was made to start all services for a given database but there were no services that could start.

Action: None. This is a warning message indicating that no action was taken for this command.

ORA-45555: The target database is not in the preferred or available list for this service.
Cause: The new database name provided was not in the list of preferred or available databases for the service.

Action: Either add the new database to the service or relocate the service to another database.

ORA-45556: A database name or service name was not provided.
Cause: A disable service request did not provide either a database name or a service name.

Action: Provide either a service name or a database name on the request.

ORA-45557: The database pool *string* does not contain a broker configuration.
Cause: An attempt was made to remove a broker configuration from a database pool that does not contain one.

Action: Rerun the command using a different database pool.

ORA-45558: There are no database pools in this catalog.
Cause: The catalog did not have any database pools defined.

Action: Create at least one database pool before running any other commands.

ORA-45559: Global service manager (GSM) *string* did not provide a version.
Cause: The GSM did not provide a version when attempting to connect to the catalog.

Action: This version of GSM is too old to connect to the catalog. Upgrade the GSM installation.

ORA-45560: Database *string* must contain at least one preferred instance.
Cause: The MODIFY command did not add any preferred instances or removed all existing preferred instances from this database.

Action: Provide at least one preferred instance, or do not attempt to remove all existing preferred instances.

ORA-45561: region name is required
Cause: A region name was not provided and was required because there were multiple regions in the catalog.

Action: Provide the region name on the command line.

ORA-45562: The Global Data Services catalog must be created in a root container.
Cause: The CREATE CATALOG command could not be executed on a container other than the root container.

Action: Use the root container to create the Global Data Services catalog.

ORA-45563: The pool database cannot be a pluggable database.
Cause: The ADD DATABASE command could not add a pluggable database.

Action: Provide the consolidated database name instead.

ORA-45564: pool "*string*" contains a sharded root configuration; only preferred_all services are allowed
Cause: An attempt was made to add non-uniform service to a pool that contains a sharded root.

Action: None

ORA-45565: pool "*string*" contains a sharded root configuration; databases cannot be added to this pool
Cause: An attempt was made to add a database to a pool that contains a sharded root.

Action: None

ORA-45566: pool "*string*" contains a sharded root configuration
Cause: An attempt was made to work with a generic pool that was not a sharded root.

Action: None

ORA-45567: pool "*string*" is not a shard
Cause: An attempt was made to work with a generic pool that was not a shard.

Action: None

ORA-45568: database link to catalog is invalid
Cause: An attempt to use a database link from a pool database to a catalog failed.

Action: Check the network connectivity and master global service manager (GSM) endpoint.

ORA-45570: The *string* is not empty and cannot be removed.
Cause: The shardspace or shardgroup was not empty and contained at least one shardgroup or shard.

Action: Delete all shards or shardgroups before calling the procedure again.

ORA-45572: Remote shard conversion job *string* failed with error: *string*
Cause: The remote scheduler job to convert a shard from seed has failed.

Action: Read the error and resolve the problem described, then restart the job using the "deploy" command in GDSCTL.

ORA-45573: shard open mode is *string*, it should be READ WRITE
Cause: The shard was opened in the incorrect mode for Oracle Data Guard broker setup.

Action: If the open mode was "MOUNTED", then check that the shard has been correctly converted from a shard seed. If the shard was already a converted primary shard, then open it in the correct mode and rerun "deploy" from GDSCTL.

ORA-45574: shard has role *string*, it should be PRIMARY
Cause: The shard did not have the correct role for Oracle Data Guard broker setup.

Action: Ensure the shard is placed in a shardgroup that will automatically assign the correct role to it.

ORA-45575: Deployment has terminated due to previous errors.
Cause: Due to previous errors deployment could not continue.

Action: Resolve the issues described in all of the displayed errors and rerun "deploy" from GDSCTL.

ORA-45576: Shard *string* requires conversion from seed, but the remote scheduler is not configured.
Cause: The remote scheduler agent is required to convert the shard from a seed, but it has not been configured.

Action: Configure the remote scheduler and rerun "\deploy" from GDSCTL.

ORA-45577: cannot convert standby shards to primary shard *string* because the DBID is unknown
Cause: A primary shard was added to the catalog but the DBID was not discovered, and none of the standby shards could be converted.

Action: Remove the primary shard from the catalog and re-add it so that the database identifier (DBID) can be discovered.

ORA-45578: No credential for scheduler jobs.
Cause: Credential could not be created or retrieved.

Action: Specify -osaccount and -ospassword in "add shard", or use "add credential" command to add credential.

ORA-45579: There are converted physical standby shards for intended primary seed shard *string*.
Cause: The primary shard was still an unconverted seed, but it had converted standby shards. Standby shards cannot be converted before their primary shard.

Action: Either remove the converted standby shards or remove the primary shard, convert it manually, and re-add it.

ORA-45580: invalid value specified for input parameter *string*
Cause: The specified parameter was set to an invalid value.

Action: Verify the parameter value and retry operation.

ORA-45581: cannot mix sharded and non-sharded pools in the same catalog
Cause: At attempt was made to create a sharded and a non-sharded database pool in the same catalog.

Action: Create a separate catalog for each database pool type.

ORA-45582: The chunk *string* was not found or has been moved to another shard.
Cause: The client application specified a chunk name associated with the current user call that was not found on the current shard.

Action: Invalidate the connection pool routing table for this shard.

ORA-45583: chunk *string* does not contain the specified key
Cause: The chunk, specified by the client application, was split or never contained the specified key.

Action: Invalidate the pool routing table for the given chunk. The client should ask the listener to route to the specified key.

ORA-45584: The shard object to be removed does not exist.
Cause: The shardspace or shardgroup that you intended to remove did not exist in catalog.

Action: Do not attempt to remove the shard object again.

ORA-45585: Chunk move failure: target shard is unavailable: "*string*"
Cause: The chunk move failed. The source shard could not connect to the target.

Action: Check the availability of the target shard and network configuration.

ORA-45586: Chunk move failure: target shard is in invalid state: "*string*"
Cause: The chunk move failed. The target shard was improperly configured.

Action: Call the GDSCTL VALIDATE SHARD command for more details.

ORA-45587: Chunk move failure: target standby is unavailable; connection string: "*string*"
Cause: The chunk move failed. The source shard could not connect to the target standby shard.

Action: Check the availability of the target standby shard and broker configuration.

ORA-45588: Chunk move failure: unable to read tablespace information "*string*"
Cause: Shard metadata inconsistency was detected.

Action: Call the GDSCTL VALIDATE SHARD command for more details.

ORA-45589: Chunk move failure: DB_FILE_CREATE_DEST value is not valid
Cause: Shard configuration inconsistency was detected.

Action: Set the DB_FILE_CREATE_DEST initialization parameter to a valid existing folder.

ORA-45590: Chunk move failure: backup cannot be created for tablespace "*string*"
Cause: Shard configuration inconsistency was detected.

Action: Set the DB_FILE_CREATE_DEST initialization parameter to a valid existing folder.

ORA-45591: Chunk move failure: data file copy error. Destination: "*string*"
Cause: There was a database management system (DBMS) file transfer error.

Action: Check the alert log for details.

ORA-45592: Chunk move failure: RPC error on: "*string*"
Cause: There was a database management system (DBMS) file transfer error.

Action: Check the alert log for details.

ORA-45593: Chunk move failure: file delete error on source shard
Cause: The backup file could not be deleted from the file system.

Action: Check the operating system log for details.

ORA-45594: Chunk move failure: cannot put chunk into read-only state
Cause: There was an internal error which prevented a chunk state change.

Action: Check the alert log for details.

ORA-45595: Chunk move failure: export metadata error
Cause: There was an internal error which prevented the metadata export.

Action: Check the alert log for details.

ORA-45596: cannot remove region because it contains a shardgroup
Cause: The region was not empty because it contained at least one shardgroup.

Action: Remove all shardgroups from the region and retry the operation.

ORA-45598: Shard *string* is in converted state *string*, it should be either "PRIMARY" or "PHYSICAL STANDBY".
Cause: The shard was in an invalid or unsupported state for use with sharding.

Action: Rebuild the shard using Oracle Database Configuration Assistant (DBCA) or reapply an RMAN backup to bring the shard to a supported state.

ORA-45599: Shard *string* is in converted state *string*, but does not have a valid DBID.
Cause: The discovered database identifier (DBID) for the shard was invalid, but the shard was already converted from a shard seed.

Action: Check the DBID for the shard and report this issue to Oracle Support Services.

ORA-45600: Transparent Sensitive Data Protection (TSDP) internal error
Cause: There was an unexpected error during TSDP operation.

Action: Retry the command. If the problem persists, contact Oracle Support Services.

ORA-45601: Invalid data has been found and discarded. Valid data has been imported.
Cause: The names of invalid or nonexistent database objects were found in the XML input.

Action: Check the trace files for the names of the invalid objects found in the XML input.

ORA-45602: Schema *string* does not exist.
Cause: The schema specified did not exist.

Action: Specify a valid schema.

ORA-45603: Schema *string* does not contain table *string*.
Cause: The table specified did not exist in the schema.

Action: Specify a valid table.

ORA-45604: Column *string*.*string* does not exist in schema *string*.
Cause: The column specified did not exist.

Action: Specify a valid column.

ORA-45605: invalid sensitive type *string*
Cause: A sensitive type that was associated with one or more sensitve columns did not exist.

Action: Ensure the valid sensitive type is mentioned. If it is a new sensitive type, include the definition in the XML input.

ORA-45606: There was no sensitive column matching the given criteria.
Cause: There was no sensitive column matching the schema, table and column input.

Action: Ensure the valid column is mentioned.

ORA-45607: Column *string*.*string* in schema *string* has already been identified as sensitive.
Cause: The column was already identified as sensitive.

Action: Remove the column from the list of sensitive columns to be imported.

ORA-45608: There are no sensitive columns for source *string*.
Cause: No sensitive columns were found for the given source.

Action: Specify the valid source.

ORA-45609: Sensitive type *string* already exists.
Cause: The sensitive type already existed in the database.

Action: Specify a different name for the sensitive type.

ORA-45610: Sensitive type *string* does not exist.
Cause: The sensitive type did not exist in the database.

Action: Specify the valid sensitive type.

ORA-45611: cannot drop sensitive type *string*
Cause: The sensitive type that is associated with one or more columns could not be dropped.

Action: Ensure the sensitive type is not associated with any column before dropping it.

ORA-45612: A Transparent Sensitive Data Protection (TSDP) policy with name *string* already exists.
Cause: A TSDP policy with the same name was found.

Action: Specify a different name for the policy.

ORA-45613: invalid Oracle security feature
Cause: The Oracle security feature specified was not supported by Transparent Sensitive Data Protection.

Action: Specify a valid security feature.

ORA-45614: invalid Transparent Sensitive Data Protection (TSDP) policy *string*
Cause: The TSDP policy specified did not exist.

Action: Specify a valid policy.

ORA-45615: One or more sensitive column types already exist.
Cause: Importing the list of sensitive columns succeeded. However, one or more sensitive column types already existed in the database and were not imported again. The corresponding column is associated with the existing type.

Action: Check the trace files for details regarding which sensitive column types were not imported.

ORA-45616: Column *string*.*string* in schema *string* is not identified as sensitive.
Cause: An attempt was made to alter a column that was not identified as sensitive.

Action: Specify a valid column.

ORA-45617: Policy *string* is not associated with sensitive column type *string*.
Cause: The given policy was not associated with the sensitive column type.

Action: Specify the valid combination of policy and sensitive column type.

ORA-45618: policy enforcement failure on one or more columns
Cause: Policy enforcement on one or more columns encountered errors.

Action: Check the alert log or trace files for more details.

ORA-45619: Policy *string* is not enabled on column *string*.
Cause: The given policy was not enabled on the column.

Action: Specify a valid policy.

ORA-45620: Policy *string* is already associated with sensitive column type *string*.
Cause: The given policy was associated with the sensitive column type.

Action: Specify the valid policy and sensitive column type.

ORA-45621: Disabling of a policy on one or more columns failed.
Cause: Errors were encountered while disabling one or more policies.

Action: Check the alert log for more details.

ORA-45622: warnings generated during policy enforcement
Cause: The cause of this error could be one or more of the following: - The policy that was associated with the sensitive column type of a column was not enabled on the column because no subpolicy matched the column properties. - There was no policy associated with the sensitive column type of a sensitive column. - A conflicting redaction policy was enabled on the table.

Action: Check the alert log for more details.

ORA-45623: There is no policy associated with the sensitive column type.
Cause: There was no policy associated with the sensitive column type of a column.

Action: Check the alert log for more details.

ORA-45624: reenabling protection failed before import
Cause: Importing the list of sensitive columns failed because there was a problem in disabling protection on the columns. A subsequent attempt to reenable protection on the columns also failed.

Action: Check the alert log for more details.

ORA-45625: reenabling protection failed after import
Cause: Importing the list of sensitive columns succeeded. A subsequent attempt to reenable protection on the columns failed.

Action: Check the alert log for more details.

ORA-45626: Dropping of one or more columns from the list failed.
Cause: Disabling protection on the column failed.

Action: Check the trace files for more details.

ORA-45627: There are no sensitive columns of sensitive column type *string*.
Cause: There was no column for the given sensitive column type.

Action: Specify a valid sensitive column type.

ORA-45628: no policy associated with sensitive column type *string*
Cause: There was no policy associated with the sensitive column type.

Action: Specify a valid sensitive column type.

ORA-45629: policy *string* is enabled on one or more columns
Cause: A Transparent Sensitive Data Protection policy that was enabled on a column could not be altered or dropped.

Action: Disable the policy before altering or dropping the policy.

ORA-45630: Policy *string* is associated with one or more sensitive types.
Cause: A Transparent Sensitive Data Protection policy that was associated with a sensitive column type could not be dropped.

Action: Disassociate the policy from the sensitive column type before dropping the policy.

ORA-45631: Policy *string* does not have the given condition.
Cause: The given condition was not found for the policy.

Action: Specify the valid condition for the policy.

ORA-45632: default policy *string* cannot be altered
Cause: The default policy for Transparent Sensitive Data Protection could not be altered.

Action: Specify the valid policy to be altered.

ORA-45633: default policy *string* cannot be dropped
Cause: The default policy for Transparent Sensitive Data Protection could not be dropped.

Action: Specify the valid policy to be dropped.

ORA-45634: The security feature does not contain parameter *string*.
Cause: An invalid parameter was found for the given security feature.

Action: Verify the parameters input to the policy.

ORA-45635: invalid parameter found: *string*
Cause: An invalid parameter was found for the given security feature.

Action: Verify the parameters input to the policy.

ORA-45636: Input parameter for '*string*' is not valid.
Cause: Invalid input was given for the parameter.

Action: Enter valid input.

ORA-45637: invalid condition given for policy condition
Cause: The given condition was invalid.

Action: Enter a valid value for the condition.

ORA-45638: Policy *string* is enabled on one or more columns of sensitive type *string*.
Cause: A Transparent Sensitive Data Protection policy that was enabled on one or more columns of a particular sensitive type could not be disassociated from the sensitive type.

Action: Ensure the policy is not enabled on a column of the given sensitive type.

ORA-45639: discovery result cannot be imported
Cause: One or more columns from the XML input were already identified as sensitive by a different source.

Action: Check the trace file for a list of sensitive columns that were already identified as sensitive.

ORA-45640: Columns from SYS schema cannot be marked as sensitive.
Cause: A column in a SYS-owned table was being marked as sensitive.

Action: Ensure the column being marked as sensitive does not belong to SYS schema.

ORA-45641: cannot specify SEC_RELEVANT_COLS parameter
Cause: The SEC_RELEVANT_COLS parameter was specified while configuring a Transparent Sensitive Data Protection (TSDP) policy. SEC_RELEVANT_COLS_OPT parameter can be specified to indicate that TSDP should input the sensitive column as input to SEC_RELEVANT_COLS parameter at the time of enabling protection.

Action: Use the SEC_RELEVANT_COLS_OPT parameter to configure the security relevant column.

ORA-45642: transparent sensitive data protection (TSDP) operation not supported
Cause: An attempt was made to perform the TSDP operation from inside the application install or patch begin-end block.

Action: Perform the TSDP operation outside the application install or patch begin-end block.

ORA-45643: specified column cannot be marked as sensitive.
Cause: An attempt was made to mark one of the virtual or hidden columns as sensitive.

Action: Retry the operation by removing the virtual or hidden column.

ORA-45900: data file number *string* already included as *string*
Cause: RMAN attempted to use the specified data file number, but this data file number was already in use by a different container database.

Action: Resolve the conflict and retry the command.

ORA-45902: cannot rename data file '*string*' - file was instantly restored.
Cause: During ALTER DATABASE RENAME or RMAN command SWITCH, the rename was specified for an instantly restored file.

Action: Rename the file that was not instantly restored or wait until the repopulation work is complete and the retry the command.

ORA-45903: catalog instantly restored data file copy *string* is not supported
Cause: This data file copy was instantly restored. Cataloging such file is not supported.

Action: Do not request to catalog instantly restored data file copy.

ORA-45904: instant restore of data file copy *string* is not supported
Cause: An attempt was made to restore a data file copy in instant restore mode. This is not supported.

Action: Do not restore a data file copy in instant restore mode.

ORA-45905: deleting or restoring instantly restored data file *string* is not supported
Cause: This data file was instantly restored with the full option. A background process was repopulating the data file. An attempt to take the data file out of the process failed. Deleting or restoring such files is not supported.

Action: Retry the command later.

ORA-45906: moving instantly restored data file *string* is not supported
Cause: This data file was instantly restored. Moving such file is not supported.

Action: Do not request to move instantly restored data file.

ORA-45907: instant restore of data file *string* failed
Cause: During an instant restore, it was not possible to initialize the destination data file. There might be other messages on the error stack or alert log or trace file that indicate the specific reason for the failure. One common reason for this message is that the instant restore feature is disabled in this database.

Action: Check the other messages. If the situation cannot be resolved, then request a regular (not instant) restore.

ORA-45908: cannot create a control file record for data file number *string*
Cause: This data file was instantly restored. An attempt was made to create a record in the control file for the data file. Unless the database is mounted, this command cannot be completed.

Action: Mount the database and retry the command.

ORA-45909: restore, recover or block media recovery may be in progress
Cause: A backup or copy was attempted while restore, recover or block media recovery was in progress. This error should be preceded by another error indicating file access enqueue problem for a file specified in a backup, copy or restore operation.

Action: Let restore, recover or block media recovery finish before starting a backup or copy operation.

ORA-45910: cannot look up the rewrapped key for tablespace *string*
Cause: During transport, an encrypted tablespace could not find its rewrapped key as part of an RMAN cross-platform command.

Action: Connect to the respective pluggable database and check if the master table is created.

ORA-45911: cannot restore as encrypted/decrypted on database with compatibility below 12.2
Cause: Restore with encryption and decryption is only supported on 12.2 compatible databases and above.

Action: Upgrade database or restore without encryption/decryption.

ORA-45912: cannot restore as encrypted or decrypted from backup piece having compatibility of Oracle Database earlier than release 11g release 2 (11.2)
Cause: An attempt was made to restore with encryption and decryption for backups with compatibility less or equal to Oracle Database 11g release 2 (11.2).

Action: Create a backup of Oracle Database 11g release 2 (11.2) database or, restore without encryption or decryption.

ORA-45913: cannot backup file *string* because it belongs to dropped PDB
Cause: The indicated file was not included in the backup because it belongs to a dropped pluggable database (PDB).

Action: Do not request to backup dropped PDB files.

ORA-45914: cannot backup a mounted control file of type backup
Cause: An attempt was made to backup a control file when the mounted control file at that time was a backup control file. This is not allowed.

Action: Mount a current control file and retry the operation.

ORA-45915: physical block size %0!s does not match logical block size %1!s
Cause: The physical block size and logical block size of the backup piece did not match.

Action: Ensure that the physical block size size and logical block size match before copying the backup piece.

ORA-45916: must use backup control file that has dropped PDB with GUID *string*
Cause: Some restored files belonged to the dropped pluggable database (PDB) with respect to the current control file.

Action: Restore and mount a backup control file that has the dropped PDB.

ORA-45917: nonexistent backup piece or data file "*string*" in the current container
Cause: An attempt was made to access a backup piece or data file. This attempt failed because the specified file is not known to the current container.

Action: Specify the name of an existing file that can be accessed by the current container. Check the relevant V$ table for a list of possible files.

ORA-45918: data file *string* is offline: incremental-start SCN is too recent
Cause: The incremental-start system change number (SCN) which was specified when starting an incremental data file backup is greater than the data file checkpoint SCN, which could cause some blocks to be missed.

Action: Specify a smaller incremental-start SCN.

ORA-45919: no key present in wallet
Cause: An attempt was made to restore a backup as encrypted. This attempt failed because the current wallet did not contain an encryption key with which to encrypt the data.

Action: Create an encryption key in the wallet and retry the command.

ORA-45920: multiple keys present in wallet
Cause: An attempt was made to restore a backup as encrypted. This attempt failed because the current wallet contained more than one encryption key.

Action: Specify with which key to encrypt by using the USING KEY clause of RESTORE AS ENCRYPT.

93
ORA-46000 to ORA-46988

ORA-46000: invalid option to apply XS Data Security
Cause: The input value was not a valid option to apply XS Data Security.

Action: Use a valid option to apply XS Data Security.

ORA-46001: argument *string* is not valid for XS Data Security policies
Cause: An illegal argument value was used with DBMS_RLS to apply XS Data Security.

Action: Use the XS_DATA_SECURITY API to apply XS Data Security.

ORA-46003: Column "*string*" is not valid in data security policy for "*string*"
Cause: An invalid column was specified in the data security policy.

Action: Correct the column name in the policy.

ORA-46004: XS Data Security policy is not applied on *string.string*
Cause: A table without an XS Data Security policy applied was specified.

Action: Specify a table with one XS Data Security policy applied.

ORA-46005: multiple XS Data Security policies applied on *string.string*
Cause: A table with more than one XS Data Security policy applied was specified.

Action: Specify a table with one XS Data Security policy applied.

ORA-46006: cannot mix VPD column and XS column constraint policies
Cause: The object was protected by both VPD (Virtual Private Database) column security and XS column constraint policies.

Action: Disable or drop either the VPD or XS column policies.

ORA-46007: no XS Data Security policy associated with *string.string*
Cause: A table not associated with an XS Data Security policy was specified.

Action: Specify a table associated with an XS Data Security policy.

ORA-46008: multiple XS Data Security policies associated with *string.string*
Cause: A table associated with more than one XS Data Security policy was specified.

Action: Specify a table associated with one XS Data Security policy.

ORA-46019: User-built Static ACL Materialized View does not exist
Cause: A non-existing user-built Static ACL Materialized View was specified

Action: Create a user-built Static ACL Materialized View with the specified name or use system-built Static ACL views

ORA-46020: User-built Static ACL Materialized View has invalid schema
Cause: A user-built Static ACL Materialized View was specified but with an incorrect schema

Action: Create a user-built Static ACL Materialized View with at least the required columns with correct names and types

ORA-46021: Invalid refresh mode specified for Static ACL Materialized View
Cause: The refresh mode specified for the Materialized View supporting static ACLs is invalid.

Action: Specify either "ON DEMAND" or "ON COMMIT" for parameter refresh_mode

ORA-46022: Invalid name specified for user-built Static ACL Materialized View
Cause: The name specified for the Static ACL Materialized View (ACLMV) is reserved for system-built ACLMVs.

Action: Rename the user-built Static ACL Materialized View

ORA-46023: Application Session affinity is not the same as when the cursor was parsed.
Cause: The security context was changed and was different from the time the cursor was parsed.

Action: Make sure the security context is the same as when the cursor was parsed.

ORA-46024: The policy schema differs from the object schema for Static ACL Materialized View based XDS policy.
Cause: The specified object schema was different from the policy schema.

Action: Make sure the object and the policy have the same schema.

ORA-46025: no static rule specified in applied policy
Cause: The policy applied on the table did not contain any static rules.

Action: Ensure the applied policy has at least one static rule.

ORA-46026: creation of static ACL materialized view (MV) failed
Cause: Creation of the static access control list (ACL) materialized view (MV) failed.

Action: Check the trace file for detailed error information.

ORA-46050: Oracle Real Application Security internal error.
Cause: There was an Oracle Database Real Application Security internal error.

Action: None

ORA-46051: invalid application user specified
Cause: An invalid application user was specified.

Action: Check the user name and execute the function or procedure again.

ORA-46052: invalid session ID specified
Cause: An invalid XS Security session ID was specified.

Action: Check the session ID and execute the function or procedure again.

ORA-46053: invalid cookie specified
Cause: An invalid XS Security session cookie was specified.

Action: Check the session cookie and execute the function or procedure again.

ORA-46054: invalid namespace specified
Cause: An invalid XS session application namespace or system-defined namespace was specified. Certain operations are not allowed on the system-defined namespace.

Action: Check the namespace and execute the function or procedure again.

ORA-46055: invalid role specified
Cause: An invalid application role was specified.

Action: Check the role and execute the function or procedure again.

ORA-46056: invalid namespace or attribute specified
Cause: An invalid XS Security application namespace or attribute was specified.

Action: Check the namespace and attribute, and execute the function or procedure again.

ORA-46057: namespace already exists
Cause: The specified XS Security application namespace was already in existence.

Action: Execute the function or procedure with a different namespace.

ORA-46058: attribute *string* is invalid
Cause: An invalid XS Security application namespace attribute was specified.

Action: Check the attribute and execute the function or procedure.

ORA-46059: Invalid ACL identifier specified
Cause: The specified ACL identifier is invalid.

Action: Check the ACL identifier, and execute the function or procedure again with a valid ACL ID.

ORA-46060: user name not specified
Cause: An application user was not specified.

Action: Execute the function or procedure with a user name.

ORA-46061: session ID not specified
Cause: XS Security session ID was not specified.

Action: Execute the function or procedure with a session ID.

ORA-46062: Namespace not specified
Cause: XS Security application namespace was not specified.

Action: Execute the function or procedure with a namespace.

ORA-46063: not attached to XS Security session
Cause: There was no attachment to an XS Security session.

Action: Attach to an XS Security session and execute the function or procedure.

ORA-46064: attribute name not specified
Cause: XS Security application namespace attribute name was not specified.

Action: Execute the function or procedure with an attribute name.

ORA-46065: attribute value not specified
Cause: XS Security application namespace attribute value was not specified.

Action: Execute the function or procedure with an attribute value.

ORA-46066: inactivity timeout not specified
Cause: XS Security session inactivity timeout was not specified.

Action: Execute the function or procedure with an inactivity timeout value.

ORA-46067: cookie not specified
Cause: XS Security session cookie was not specified.

Action: Execute the function or procedure with a cookie value.

ORA-46068: role not specified
Cause: XS Security role was not specified.

Action: Execute the function or procedure with a Role value.

ORA-46069: operation disallowed in an application session
Cause: Operations were blocked when an application session was attached.

Action: Try the operation later after the application session is detached.

ORA-46070: insufficient privileges
Cause: An attempt was made to execute an XS Security session function or procedure without the appropriate privilege.

Action: Ask the administrator to perform the operation or to grant the appropriate privilege.

ORA-46071: Error occured in event handler *string*
Cause: An error or exception was returned by the error handling function invoked as part of the current operation.

Action: Check the trace files to identify the source of the error in the event handling function. Attempt the operation again after the error has been resolved. Also, abort attach session since the changes made to the session by the event handler might not have been recorded because of the error.

ORA-46072: Column width too small
Cause: The size of the column or variable used to store the output of this function or procedure is too small.

Action: Increase the size of the column or variable and try again.

ORA-46073: cookie already in use by another session
Cause: The specified XS Security session cookie was used by another XS Security session.

Action: Execute the function or procedure with a different cookie.

ORA-46074: session ID mismatch
Cause: The specified session ID does not match the attached session ID.

Action: Execute the function or procedure without a session ID or with a matching attached session.

ORA-46075: already attached to an application user session
Cause: The current database session is already attached to an application user session.

Action: Detach from the current application user session before attaching to the new application user session.

ORA-46076: The specified name length not within valid range.
Cause: The length of the name was shorter or longer than allowed limits.

Action: Try again with a new name with a length less than the maximum or or more than the minimum allowed.

ORA-46077: Length of value too large
Cause: The specified attribute value is too large.

Action: Execute the function or procedure again with a smaller attribute value.

ORA-46078: Invalid event type specified
Cause: The event type specified is invalid.

Action: Reattempt the operation with an invalid event type.

ORA-46079: invalid external principal specified
Cause: An XS Security principal already existed with same name.

Action: Specify another external principal and try again.

ORA-46080: User status is currently inactive
Cause: User was marked inactive.

Action: Change status in enterprise directory to active and try again.

ORA-46081: User's password has expired
Cause: User password was expired.

Action: Change the user's password and update status to active.

ORA-46082: User's account was locked
Cause: The user's account is locked.

Action: Update user's status to Active in Enterprise Directory and try again.

ORA-46083: Cannot update the GUID of the principal
Cause: The GUID of the principal existed or the external source was not set.

Action: None

ORA-46084: cannot update or delete system-seeded XS objects.
Cause: An attempt was made to update or delete system-seeded XS objects.

Action: Do not attempt to update or delete system-seeded XS objects.

ORA-46085: Cannot add a proxy user when there was no proxy roles.
Cause: An attempt was made to add a proxy user to a target user when proxy roles did not exist.

Action: Verify the proxy roles and try again.

ORA-46086: Cannot detach from a direct-login XS session
Cause: An attempt was made to detach from an XS session created by a direct password login.

Action: To detach and destroy the XS session, logout of the DB session.

ORA-46087: Switching users not allowed for a proxy session
Cause: An attempt was made to switch users within a proxy session.

Action: Switch back to original user and try again.

ORA-46088: operation disallowed in application session
Cause: The specified operation was not allowed in an application session.

Action: None

ORA-46089: Unsupported verifier type
Cause: This verifier was not currently supported.

Action: Execute again with a different verifier type.

ORA-46090: Requested event handler not registered for the event
Cause: An attempt was made to update or delete nonregistered event handler.

Action: Please verify event handler name.

ORA-46091: Requested event handler already registered for the event
Cause: An attempt was made to re-register an event handler.

Action: Please verify event handler name.

ORA-46092: Requested event handler does not exist
Cause: An attempt was made to register a nonexistent event handler.

Action: Please verify event handler name or create the event handler.

ORA-46093: Cannot destroy a direct-login XS session
Cause: An attempt was made to destroy an XS session created by a direct password login.

Action: To destroy the XS session, logout of the DB session.

ORA-46094: XS user not effective
Cause: An attempt was made to create an XS session by a user that is not effective.

Action: To create the XS session, contact the administrator to check the effective dates on the user.

ORA-46095: Invalid error code supplied
Cause: An error code with an illegal value was supplied.

Action: Use an error code from the range of valid values.

ORA-46096: An attribute in a namespace cannot have both default value and first read event set.
Cause: Both default value and first read were specfied in namespace template.

Action: Specify either default value or first read for the attribute in the namespace, but not both.

ORA-46097: The *string* did not exist in the *string*.
Cause: An attempt was made to delete an XS artifact which was not in existence within the scope.

Action: Check if the XS artifact was created or referenced within the scope.

ORA-46098: The *string* already exists in the *string*.
Cause: An attempt was made to create or refer to an XS artifact which was already in existence within the scope.

Action: Check if the XS artifact name is unique within the scope.

ORA-46099: Feature unsupported or not implemented
Cause: This feature was not supported or implemented.

Action: None

ORA-46100: XS session operations are disallowed during the execution of a definer's rights program unit.
Cause: An attempt was made to do an XS session operation that could modify the current security context inside a definer's rights program unit.

Action: Change the program unit to invoker's rights.

ORA-46101: Circular definition for aggregate privilege *string* in security class *string*
Cause: Definition of an aggregate privilege contained itself.

Action: Fix the aggregate privilege definition.

ORA-46102: Privilege *string* aggregated in security class *string* is not found
Cause: Definition of an aggregate privilege contained a privilege that is not defined in this or parent security classes.

Action: Fix the aggregate privilege definition.

ORA-46103: Circular definition for security class *string*
Cause: Security class definition inherited from itself through circular definition.

Action: Fix the security class definition.

ORA-46104: Security class *string* cannot inherit from base security classes
Cause: Definition of a security class specified an internal base security class as a parent security class.

Action: Remove the internal base security class from the "inherits-from" list.

ORA-46105: unable to load security class *string*
Cause: The specified security class did not exist.

Action: Create the security class.

ORA-46106: Missing parent security class for security class *string*
Cause: The specified security class did not have any parent security class.

Action: Add a parent security class using "inherits-from" tag.

ORA-46107: Privilege *string* not found in the associated security classes
Cause: The specified privilege did not exist in the security classes that were associated with the ACLs.

Action: Use a security class that contains the specified privilege.

ORA-46108: Invalid security class targetNamespace or name.
Cause: The security class targetNamespace attribute was either null or was longer than 4000 characters. Or, the security class name attribute was either null or was longer than 1024 characters.

Action: Provide valid targetNamespace and name attributes.

ORA-46109: Duplicate definition for privilege *string* in security class *string*.
Cause: The privilege name in the security class was previously defined in another security class.

Action: Provide a unique name for the privilege.

ORA-46111: Security Class *string* specified in the ACL *string* does not exist.
Cause: An invalid security class was specified in the ACL.

Action: Specify a valid security class.

ORA-46112: Duplicate security class name *string* under targetnamespace *string*
Cause: The security class name under the targetnamespce was also used for another security class.

Action: Provide a unique name for the security class.

ORA-46114: ACL name *string* not found.
Cause: An invalid ACL name was used as one of the operator parameters.

Action: Specify a valid ACL name.

ORA-46115: error raised during evaluation of a data realm
Cause: During SQL execution, evaluation of a data realm failed with an error.

Action: Find the cause of the error from the error stack.

ORA-46116: The ACL *string* is referenced by a namespace template.
Cause: An attempt was made to delete an access control list (ACL) which was referenced by a namespace template.

Action: Delete the namespace template first if the ACL needs to be deleted.

ORA-46117: The ACL *string* is set on a user or dynamic role.
Cause: An attempt was made to delete an access control list (ACL) that was set on a user or dynamic role.

Action: Set the ACL on the user or dynamic role to NULL, or delete the user or dynamic role if the ACL needs to be deleted.

ORA-46118: ACL *string* schema must be SYS.
Cause: An attempt was made to use an access control list (ACL) whose schema was not SYS.

Action: Check and use an ACL whose schema is SYS.

ORA-46119: ACL must not be NULL.
Cause: An attempt was made to specify a NULL value for an access control list (ACL).

Action: Remove the NULL parameter, or specify an existing ACL.

ORA-46200: Attribute cannot be deleted. The attribute is seeded from the template.
Cause: An attempt was made to delete an attribute that was seeded from the template from which this namespace was created.

Action: Attempt to delete only custom attributes.

ORA-46201: Attribute *string* already exists in namespace *string*.
Cause: An attempt was made to create an attribute that already exists within the given namespace.

Action: Make sure the attribute name is unique within the namespace.

ORA-46202: handler specified in the namespace template does not exist
Cause: An attempt was made to create a namespace template with an invalid handler function.

Action: Specify a valid handler function in the template.

ORA-46203: handler is not specified in the namespace template
Cause: An attempt was made to create a template or a custom attribute with events specified. However, a handler function was not specified in the template.

Action: Specify a valid handler function in the template.

ORA-46204: Multiple UID or GUID specified for the resource.
Cause: An attempt was made to create a resource with multiple UIDs or GUIDs specified in the document.

Action: Provide, at most, one UID or GUID for the resource in the document.

ORA-46205: User with empty GUID cannot create session.
Cause: An attempt was made by an user with an empty GUID to create a session.

Action: Update the GUID for the user.

ORA-46206: Negative inactivity timeout value not allowed.
Cause: An attempt was made to set the inactivity timeout time to a negative value.

Action: Specify a non-negative inactivity timeout value.

ORA-46207: During global callback execution, *string* is not allowed.
Cause: An attempt was made to execute a disallowed session operation during global callback execution.

Action: Remove the invalid session operation from callback function.

ORA-46208: Circular callback call caused by *string*
Cause: Circular callback call caused an infinite chain of callback function executions.

Action: Check the event handling functions to identify the source of the circular callback call. Attempt the operation again after the error has been resolved.

ORA-46209: User switch is disallowed for administrative operation.
Cause: An attempt was made to switch user with administrative operation.

Action: Attach the application session to a database session first.

ORA-46210: Source user is not anonymous in user assignment operation.
Cause: An attempt was made to assign user to a named user.

Action: Change source user to the anonymous user first.

ORA-46211: XS entity name length not within valid range.
Cause: An attempt was made to create an XS entity with a name length less than the minimum or more than the maximum allowed.

Action: Ensure the name length is in the valid range (between 1 and 128).

ORA-46212: XS entity with this name already exists.
Cause: An attempt was made to create an XS entity with a name that already belongs to another entity.

Action: Use a different name and try again.

ORA-46213: An unexpected constraint violation occurred during creation of an XS entity.
Cause: An attempt was made to create an XS entity resulting in an unexpected constraint violation.

Action: Check with the DBA or security administrator for resolution.

ORA-46214: Deletion of the XS entity is not allowed while dependencies exist.
Cause: An attempt was made to delete an XS entity with dependent entities in the system.

Action: Remove the dependencies and try again.

ORA-46215: XS entity by the name *string* did not exist.
Cause: A reference was made to an XS entity that did not exist.

Action: Review the entity reference and try again.

ORA-46216: XS entities are not related.
Cause: An attempt was made to remove a relation that did not exist.

Action: Review the entity reference and try again.

ORA-46217: Operation is not allowed.
Cause: An unexpected operation was performed.

Action: Check with the DBA or security administrator for resolution.

ORA-46218: Unauthorized proxy user
Cause: The current user was not an authorized proxy user of the client user during a switching user operation.

Action: Add the current user as a proxy user of the client user.

ORA-46219: Role version numbers mismatch in server and mid-tier.
Cause: There was another mid-tier attached to the server session with a different set of roles.

Action: Reattach the session supplying the current set of roles.

ORA-46220: database is in readable standby mode; changes will not be saved
Cause: An attempt was made to change an application session in readable standby mode.

Action: None

ORA-46221: cannot modify an application user that is currently connected
Cause: An attempt was made to modify an application user that is currently logged on.

Action: Make sure the application user is logged off, then repeat the command.

ORA-46222: Real Application principal name *string* conflicts with another user or role name.
Cause: There was already a user or role with that name.

Action: Specify a different user or role name.

ORA-46230: XS administrative operation failed.
Cause: An unexpected error occurred during the requested XS administrative operation.

Action: None

ORA-46231: Granted role is not a regular role.
Cause: A nonregular role was granted to a principal.

Action: Grant a regular role to a principal.

ORA-46232: Circular grant for role
Cause: The role was granted from itself through circular operation.

Action: Fix the role grant operation.

ORA-46233: Circular definition for ACL *string*
Cause: The ACL was inherited from itself through circular definition.

Action: Fix the ACL definition.

ORA-46235: Policy parameter *string* did not exist.
Cause: The policy parameter did not exist.

Action: Review the parameter definition and try again.

ORA-46236: Invalid policy parameter type
Cause: Invalid parameter type was specified.

Action: Use the correct parameter type.

ORA-46237: Mid-tier cache synchronization failed
Cause: An unexpected error occurred during mid-tier cache synchronization.

Action: None

ORA-46238: Database user or role '*string*' does not exist
Cause: An invalid database user or role was specified as the principal name.

Action: Make sure the database principal is a valid database user or role.

ORA-46239: Key manager not initialized.
Cause: A request to sign the message could not be processed because the key manager was not initialized.

Action: Reinitialize the key manager and resubmit the request.

ORA-46240: Application proxy user is already configured with a schema.
Cause: An attempt was made to add a schema to an application proxy user that already was configured with a schema.

Action: Remove the schema configuration of the application proxy user and try again.

ORA-46241: Application proxy user is not configured with the schema.
Cause: An attempt was made to remove a schema from an application proxy user that was not configured.

Action: None

ORA-46242: Granting a role to XSGUEST is not allowed.
Cause: An attempt was made to grant a role to the XSGUEST seeded user.

Action: None

ORA-46243: The dispatcher's session does not exist.
Cause: The dispatcher's session timed out due to inactivity.

Action: Increase the inactivity timeout for the dispatcher's session.

ORA-46244: The request is not signed by the dispatcher.
Cause: A request was made without the dispatcher's signature. The server is configured to accept requests signed by the dispatcher only.

Action: Ask the administrator to configure the mid-tier allowing the dispatcher signature. Or, ask the administrator to configure the server to not be in dispather-only mode.

ORA-46245: Invalid session or namespace request
Cause: The request message was corrupt.

Action: Check with the DBA or security administrator for resolution.

ORA-46246: session operation failed
Cause: An attempt was made to either update an XS Data Security session which did not exist, or to create an XS Data Security session which already existed, or to attach a direct-login XS Data Security session.

Action: None

ORA-46247: detach completed; session changes are not saved
Cause: The XS Data Security session is detached successfully, but session changes are not saved due to updating an XS Data Security session which did not exist.

Action: None

ORA-46248: This type of database link is not supported.
Cause: An attempt was made to use an unsupported database link type in an XS Data Security session.

Action: Use a supported database link type.

ORA-46250: Invalid value for argument '*string*'
Cause: Input value was not valid for the procedure.

Action: Use a valid option.

ORA-46251: Value for argument '*string*' out of range
Cause: Input value was out of range.

Action: Use a value within allowed range.

ORA-46252: Cannot complete the operation, overlapping job already exists
Cause: Cleanup job already existed which spanned the given audit trail type.

Action: Drop the existing job.

ORA-46253: Cannot complete the operation, overlapping property already exists
Cause: The property already exists which spans the given audit trail type.

Action: Clear the existing property.

ORA-46254: '*string*' already exists
Cause: The value being set already existed.

Action: Delete the existing entry.

ORA-46255: Incorrect job name specified
Cause: The job did not exist or was not created by DBMS_AUDIT_MGMT package.

Action: Create the job using DBMS_AUDIT_MGMT package.

ORA-46256: Internal error: Audit Table not partitioned
Cause: Invalid operation on a non partitioned table.

Action: Contact Oracle Support Services.

ORA-46257: Property '*string*' cannot be cleared
Cause: The property could not be cleared.

Action: None. The property can only be set or reset.

ORA-46258: Cleanup not initialized for the audit trail
Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was not called for the erroring audit trail.

Action: Invoke the procedure, DBMS_AUDIT_MGMT.INIT_CLEANUP.

ORA-46260: Error during audit trail cleanup
Cause: The audit trail cleanup operation could not be completed.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-46261: Error during audit trail cleanup, internal error
Cause: The audit trail cleanup could not be completed because of an internal error.

Action: Contact Oracle Support Services.

ORA-46262: Audit table(s) cannot be moved to '*string*' tablespace
Cause: The tablespace was either unavailable or did not have enough space to accomodate the audit table being moved.

Action: Make sure that the tablespace is online and has enough space for the audit tables being moved.

ORA-46263: The audit trail is already initialized for cleanup
Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was already invoked for the audit trail type.

Action: None

ORA-46264: Error during DBMS_AUDIT_MGMT operation
Cause: Could not complete the DBMS_AUDIT_MGMT operation.

Action: Check the PL/SQL error stack and trace files for a possible error. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

ORA-46265: Subset of audit trail is already initialized
Cause: Audit Trail was initialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.DEINIT_CLEANUP to deinitialize conflicting audit trail types.

ORA-46266: Missing value for argument '*string*' in Oracle RAC enabled database
Cause: The DBMS_AUDIT_MGMT API was executed in an Oracle RAC enabled database and AUDIT_TRAIL_TYPE was one of AUDIT_TRAIL_OS or AUDIT_TRAIL_XML. But, Oracle RAC instance number for which DBMS_AUDIT_MGMT API was run, was not supplied.

Action: Input a valid Oracle RAC instance number for which the configuration must be done.

ORA-46267: Insufficient space in '*string*' tablespace, cannot complete operation
Cause: Could not complete the operation because the DBMS_AUDIT_MGMT API involved movement of one or more audit tables and there was not enough space in the destination tablespace.

Action: Turn on tracing using DBMS_AUDIT_MGMT.SET_DEBUG_LEVEL to find the amount of space required. Then, allocate that space in the destination tablespace,

even if destination tablespace datafile has AUTOEXTEND option turned on. And then, retry the operation.

ORA-46268: Conflicting operation on audit table(s)
Cause: Audit tables were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: INIT_CLEANUP, DEINIT_CLEANUP, SET_AUDIT_TRAIL_LOCATION and MOVE_DBAUDIT_TABLES.

Action: Wait until the execution of one of the API's completes and try executing the API again.

ORA-46269: Conflicting operation on audit files
Cause: Audit files were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the CLEAN_AUDIT_TRAIL API with itself can cause the conflict.

Action: Wait until the execution of one of the API's complete and try executing the API again.

ORA-46271: Error during DBMS_AUDIT_MGMT operation; database I/O suspended
Cause: An I/O attempt occurred during DBMS_AUDIT_MGMT operation and the database I/O was suspended.

Action: Retry the operation after resuming database I/O suspension. If database I/O is not suspended, contact Oracle Support Services.

ORA-46272: Subset of audit trail is already deinitialized
Cause: Audit trail was deinitialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.INIT_CLEANUP to initialize conflicting audit trail types.

ORA-46273: DBMS_AUDIT_MGMT operation failed in one of the PDB
Cause: The executed DBMS_AUDIT_MGMT operation failed in one of the PDB.

Action: Check the trace files for the PDB information where the operation failed. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

ORA-46274: Error during DBMS_AUDIT_MGMT operation; tablespace '*string*' not available
Cause: The tablespace associated with Unified Audit Trail is either invalid or is offline.

Action: Check if the tablespace is valid and make sure the tablespace is online and writable.

ORA-46275: Conflicting operations on '*string*' table
Cause: Audit trail table was being operated by more than one API from different sessions. The simultaneous execution of DBMS_AUDIT_MGMT.INIT_CLEANUP or DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_LOCATION with SA_SYSDBA.CREATE_POLICY or SA_SYSDBA.DROP_POLICY can cause the conflict.

Action: Wait for the completion of the conflicting SA_SYSDBA procedure and try executing the DBMS_AUDIT_MGMT API again.

ORA-46276: DBMS_AUDIT_MGMT operation on unified audit trail failed
Cause: Audit records were not generated in the unified audit trail.

Action: Generate audit records in the unified audit trail and retry the operation.

ORA-46277: Conflicting operation on unified audit trail
Cause: Unified audit trail is being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: FLUSH_UNIFIED_AUDIT_TRAIL, LOAD_UNIFIED_AUDIT_FILES, CLEAN_AUDIT_TRAIL, and SET_AUDIT_TRAIL_LOCATION.

Action: Wait until the execution of one of the API's complete and try executing the API again.

ORA-46278: Conflicting operation using DBMS_AUDIT_MGMT routines
Cause: One of the following API's was concurrently executed with itself or with another API in separate sessions causing a conflict: - SET_LAST_ARCHIVE_TIMESTAMP - CLEAR_LAST_ARCHIVE_TIMESTAMP - CLEAN_AUDIT_TRAIL - SET_AUDIT_TRAIL_PROPERTY - CLEAR_AUDIT_TRAIL_PROPERTY.

Action: Wait until the execution of one of the API's completes and try executing the API again.

ORA-46279: Input value for argument '*string*' exceeds the maximum length.
Cause: The identifier name generated after concatenating with 'AMGTDP' exceeded 30 or 128 bytes.

Action: Specify a value which does not exceed the maximum length after concatenation. 46340 - 46500 Use for Auditing

ORA-46340: Command cannot have both BY *user-list* and IN SESSION *session-information* clauses together
Cause: BY *user-list* clause was supplied with IN SESSION *session-information* clause in the command.

Action: Use either BY *user-list* or IN SESSION *session-information* clause.

ORA-46341: ALL STATEMENTS option cannot be supplied with BY SESSION clause
Cause: An attempt was made to use ALL STATEMENTS audit option with BY SESSION clause. ALL STATEMENTS audit option can be configured with BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION.

ORA-46342: NOAUDIT command cannot be executed with IN SESSION clause
Cause: An attempt was made to use IN SESSION *session-information* clause in NOAUDIT command.

Action: None

ORA-46343: Cannot drop AUDSYS user
Cause: An attempt was made to drop the AUDSYS user that hosts the audit trail.

Action: None

ORA-46350: Audit policy *string* already applied with the BY clause.
Cause: An attempt was made to apply audit policy with the EXCEPT clause which was already applied with the BY clause.

Action: Remove audit policy using the NOAUDIT command.

ORA-46351: Audit policy *string* already applied with the EXCEPT clause.
Cause: An attempt was made to apply audit policy with the BY clause which was already applied with the EXCEPT clause.

Action: Remove audit policy using the NOAUDIT command.

ORA-46352: NOAUDIT command with the EXCEPT clause is not allowed.
Cause: An attempt was made to remove audit policy using NOAUDIT command with the EXCEPT clause.

Action: Remove audit policy selectively using NOAUDIT command with the BY clause.

ORA-46353: missing or invalid audit policy name.
Cause: A valid audit policy name was expected.

Action: Specify a valid audit policy name.

ORA-46354: missing or invalid audit context or attribute name.
Cause: A valid context or attribute name was expected.

Action: Specify a valid context attribute name.

ORA-46355: missing or invalid privilege audit option.
Cause: Creating or altering the audit policy was attempted with an invalid system privilege audit option.

Action: Use a valid system privilege audit option.

ORA-46356: missing or invalid action audit option.
Cause: Creating or altering the audit policy was attempted with an invalid action audit option.

Action: Use a valid action audit option.

ORA-46357: Audit policy *string* not found.
Cause: The specified audit policy object did not exist in the database.

Action: Use the correct audit policy name and try again.

ORA-46358: Audit policy *string* already exists.
Cause: The specified audit policy object already existed in the database.

Action: Use a different name and try again.

ORA-46359: Invalid auditing option for *string*.
Cause: Creating or altering the audit policy was attempted with an invalid audit option for the object.

Action: Use a valid audit option for the object.

ORA-46360: Same auditing option cannot be both added and dropped in audit policy.
Cause: Altering the audit policy was attempted for adding and dropping the same auditing option in the audit policy.

Action: Choose either to add or drop the audit option.

ORA-46361: Audit policy cannot be dropped as it is currently enabled.
Cause: An attempt was made to drop the audit policy which is currently enabled.

Action: Disable the audit policy before dropping.

ORA-46362: Could not translate variable ORACLE_BASE.
Cause: An attempt to obtain the value for ORACLE_BASE failed.

Action: Make sure the variable is set.

ORA-46363: Audit directory '*string*' not found.
Cause: Could not find the specified audit directory.

Action: Make sure the audit directory is created.

ORA-46364: Audit directory '*string*' could not be created.
Cause: Could not create the specified audit directory.

Action: Make sure the Oracle process has permissions to create the audit directory.

ORA-46365: Audit file '*string*' could not be created.
Cause: Could not create the specified audit file.

Action: Make sure the Oracle process has permissions to create the audit files in the audit directory.

ORA-46366: File '*string*' is not a recognized Oracle audit file.
Cause: The file found in Oracle audit directory was not a valid Oracle audit file.

Action: Remove the file from the audit directory and try the action again.

ORA-46367: Database is not opened for write; cannot complete operation.
Cause: An operation requiring the database to be open in read/write mode was attempted.

Action: Open the database in read/write mode.

ORA-46368: Audit policy does not have a simple rule condition.
Cause: Creating or altering the audit policy was attempted with a complex audit condition.

Action: Use a simple rule expression for audit policy condition.

ORA-46369: An error occurred while evaluating audit policy condition.
Cause: Check the error stack for detailed error information.

Action: Fix the errors in the error stack and retry the operation.

ORA-46370: cannot connect as AUDSYS user
Cause: An attempt was made to connect to the database as AUDSYS user.

Action: Do not connect to the database as AUDSYS user.

ORA-46372: audit file '*string*' not found
Cause: An operation was attempted on the audit file which was not available in the audit directory.

Action: Make sure the file exists in the $ORACLE_BASE/audit/$ORACLE_SID directory.

ORA-46373: Audit policy '*string*' must have at least one audit option.
Cause: An attempt was made to create, alter or enable the empty audit policy.

Action: Use at least one audit option in the audit policy.

ORA-46374: error during AUDIT or NOAUDIT of audit policy in an Oracle RAC enabled database
Cause: The operation could not be completed on one or more Oracle RAC instances.

Action: Check the trace file for more information. Ensure every instance in Oracle RAC is operational and retry the operation.

ORA-46376: FGA policy owner '*string*' is not available
Cause: An attempt to import Fine-Grained Audit (FGA) policy failed because the specified FGA policy owner has not been imported.

Action: Perform the import of the specified user schema and retry the operation.

ORA-46377: Auditing cannot be configured on the specified system privilege.
Cause: An attempt was made to configure auditing on the system privilege which is not supported by the audit facility.

Action: None

ORA-46378: Cannot use bind variable in VERSIONS clause when the object has FGA policy defined on it.
Cause: The object being accessed had a fine-grained audit (FGA) policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without the use of a bind variable in the VERSIONS clause.

ORA-46379: generation of audit session ID failed with error '*number*'
Cause: An error was encountered while generating the audit session ID.

Action: Retry the operation and, if the error persists, contact Oracle Support Services.

ORA-46380: invalid usage of EXCEPT clause
Cause: Use of the EXCEPT clause and the USERS WITH GRANTED ROLES clause in the same AUDIT and NOAUDIT statements was not a valid combination

Action: Do not use the EXCEPT clause here.

ORA-46381: audit configuration using global roles is not supported
Cause: A global role was found in the enablement list.

Action: Remove the global role from the enablement list and retry the operation.

ORA-46382: must disable unified audit policy on this role first
Cause: The role being altered to IDENTIFIED GLOBALLY has unified audit policy enabled on users to whom it is directly granted. Audit configuration using global role is not supported.

Action: Use NOAUDIT POLICY command to disable the unified audit policy on users to whom this role is directly granted.

ORA-46383: incorrect order of unified audit options
Cause: The order in which audit options were mentioned was incorrect.

Action: Make sure privilege audit options are followed by action audit options which in turn should be followed by role audit options.

ORA-46384: incorrect order of unified audit policy clause
Cause: The order in which ADD, DROP or CONDITION clauses were mentioned was incorrect.

Action: Make sure the ADD clause is followed by the DROP clause which in turn should be followed by the CONDITION clause.

ORA-46385: DML and DDL operations are not allowed on table "*string*"."*string*".
Cause: A DML or DDL operation was attempted on a unified auditing internal table.

Action: No action required. Only Oracle is allowed to perform such operations on a unified auditing internal table.

ORA-46386: error during TRANSFER_UNIFIED_AUDIT_RECORDS operation
Cause: Either the database was not open in the read/write mode, or the transfer of the unified audit records was already in progress.

Action: Open the database in read/write mode and rerun the TRANSFER_UNIFIED_AUDIT_RECORDS operation after the ongoing transfer process finishes.

ORA-46387: Cannot perform this operation on unified audit internal table
Cause: An attempt was made to perform an operation that is not allowed on a non-partitioned unified audit internal table.

Action: No action required. This operation can only be performed on partitioned unified audit internal table.

ORA-46388: unified audit files space usage in container is too high
Cause: Space usage by unified audit files in the current container has exceeded the value of MAX_AUDIT_STORAGE for the container.

Action: Create some space by deleting the old audit records using DBMS_AUDIT_MGMT.CLEAN_AUDIT_TRAIL or open the container in the read/write mode and execute DBMS_AUDIT_MGMT.LOAD_UNIFIED_AUDIT_FILES.

ORA-46389: cannot alter or drop Oracle predefined policies
Cause: An attempt was made to alter or drop an Oracle predefined policy.

Action: None

ORA-46390: incorrect tablespace type used
Cause: An attempt was made to use a tablespace which is of type TEMPORARY, UNDO or LOST WRITE PROTECTION.

Action: Check the tablespace type and reissue the command.

ORA-46391: cannot load audit files to the ASM disk group
Cause: A disk group was not configured for auditing.

Action: Execute DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_LOCATION to provide a disk group for storing audit files.

ORA-46500: User is not a common user.
Cause: An attempt was made to apply the common audit configuration to a local user. Common audit configuration can be applied only to common users.

Action: Specify a common user.

ORA-46501: Object is not a common object.
Cause: Object audit option for the common audit policy was specified on a local object. A common audit policy can have object audit options on common objects only.

Action: Specify a common object.

ORA-46503: not connected to a pluggable database
Cause: An attempt was made to create a local audit policy or configuration while not connected to a pluggable database. Local audit policy or configuration can be created only when connected to a pluggable database.

Action: Connect or switch session to a pluggable database to create local audit policy or configuration.

ORA-46504: AUDIT command cannot specify ON *object* and CONTAINER clauses together.
Cause: An attempt was made to specify the CONTAINER clause with the AUDIT command while configuring object auditing. The CONTAINER clause is not supported for object auditing using the SQL AUDIT command.

Action: Do not specify the CONTAINER clause while configuring object auditing using SQL AUDIT command.

ORA-46505: Role is not a common role.
Cause: An attempt was made to apply the common audit configuration to a local role. Common audit configuration can be applied to common roles only.

Action: Specify a common role.

ORA-46506: FGA handler schema is not common user.
Cause: An attempt was made to create fine-grained Audit (FGA) policy on common object and associated handler schema is not common user.

Action: Specify FGA handler schema as common userappropriately.

ORA-46507: FGA object name is not a common object.
Cause: An attempt was made to create common fine-grained Audit (FGA) policy on a local object. A common FGA policy can only be configured on common object.

Action: Specify a common object.

ORA-46508: not connected to root container
Cause: An attempt was made to create a Fine-Grained Auditing (FGA) policy on an object-linked common object from within a pluggable database (PDB).

Action: Connect to the root and create FGA policies on object-linked common objects.

ORA-46600: invalid ADMINISTER KEY MANAGEMENT command

ORA-46601: missing KEYSTORE, ENCRYPTION, KEY, or TAG keyword

ORA-46602: missing OPEN or CLOSE keyword

ORA-46603: invalid ADMINISTER KEY MANAGEMENT CREATE command

ORA-46604: invalid or missing keystore file name
Cause: The required keystore file name was invalid or missing.

Action: Specify a valid keystore file name.

ORA-46605: master key identifier is invalid or missing

ORA-46606: tag is invalid or missing

ORA-46607: client secret is invalid or missing

ORA-46608: client identifier is invalid or missing

ORA-46609: export or import secret is invalid or missing

ORA-46610: expecting SELECT query that returns the master key identifiers

ORA-46612: import file name is invalid or missing

ORA-46614: export file name is invalid or missing

ORA-46615: missing WITH or CONTAINER keyword

ORA-46616: master key is invalid or missing

ORA-46617: master key identifier is invalid or missing

ORA-46620: backup for the keystore cannot be taken
Cause: Either the specified backup location was not an ASM path name when the configured keystore location was an ASM path or the specified backup location was an ASM path name when the configured keystore location was not an ASM path.

Action: Either specify an ASM path name for the backup location if the keystore location is an ASM path or specify a non-ASM path name for the backup location if the keystore location is not an ASM path.

ORA-46621: no backup identifier specified
Cause: Backup identifier was not specified.

Action: Provide a valid backup identifier.

ORA-46622: location of the backed up keystore is incorrect
Cause: Keystore location where the backup was to be created was incorrect.

Action: Provide a valid location to backup the keystore.

ORA-46623: cannot create the keystore file name
Cause: Keystore name could not be formed possibly due to the incorrectly specified keystore location.

Action: Verify the location to where the keystore can be backed up.

ORA-46624: cannot find the source keystore
Cause: The source keystore for which the backup was requested was not found.

Action: Verify that the source keystore exists and try again.

ORA-46625: backup keystore already exists
Cause: A backup of the keystore of the same name already existed in the given location.

Action: Change the location of the backup keystore or the backup identifier of the backup keystore and try again.

ORA-46626: cannot create a backup of the keystore
Cause: The backup of the keystore could not be created.

Action: Check the trace file for more information and try again.

ORA-46627: keystore password mismatch
Cause: The keystore password specified did not match that of the keystore that was open.

Action: Specify the correct keystore password.

ORA-46628: cannot alter the software keystore password
Cause: An attempt was made to alter the software keystore password.

Action: Check the viability of the keystore and replace the keystore from the backup if required and try to alter the keystore password.

ORA-46629: keystore was not open after the alter keystore operation
Cause: The keystore password was changed. However, the keystore was closed during this operation.

Action: Reopen the keystore with the new password.

ORA-46630: keystore cannot be created at the specified location
Cause: The keystore could not be created at the specified location because a keystore of the same type already existed.

Action: Specify a different location to create the keystore. If no keystore exists and the operation is failing, check the trace file and try again.

ORA-46631: keystore needs to be backed up
Cause: The keystore was not backed up. For this operation to proceed, the keystore must be backed up.

Action: Backup the keystore and try again.

ORA-46632: password-based keystore does not exist
Cause: Password-based keystore was missing for this operation. Auto login keystore can be created from a password-based keystore only.

Action: Specify a location where the password-based keystore exists.

ORA-46633: creation of a password-based keystore failed
Cause: Password-based keystore could not be created at the specified location due to either incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, create permissions on the specified location, or specify a different location and try again.

ORA-46634: creation of a local auto login keystore failed
Cause: The local auto login keystore could not be created at the specified location due to the incorrect password specified for the password-based keystore or due to incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, specify the correct password for the password-based keystore, create permissions on the specified location, or specify a different location and try again.

ORA-46635: creation of an auto login keystore failed
Cause: The auto login keystore could not be created at the specified location due to the incorrect password specified for the password-based keystore or due to incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, specify the correct password for the password-based keystore, create permissions on the specified location, or specify a different location and try again.

ORA-46636: cannot add second keystore to the target keystore
Cause: The second keystore could not be added to the target keystore.

Action: Check trace files for more information. Delete the target keystore and try merging the two keystores again.

ORA-46637: cannot add first keystore to the target keystore
Cause: The first keystore could not be added to the target keystore.

Action: Check trace files for more information. Delete the target keystore and try merging the two keystores again.

ORA-46638: merging of the two keystores failed
Cause: The two keystores could not be merged.

Action: Check trace files for more information. If the target keystore is corrupted, replace it from the backup and try merging the two keystores again.

ORA-46639: backup of keystore failed during migration
Cause: Keystore location was not configured correctly in the sqlnet.ora file.

Action: Keystore location is missing or not correct in the sqlnet.ora file. Specify the correct keystore location for migration and backup.

ORA-46640: incorrect file name for exporting keys
Cause: The file name of the file to which keys from the keystore will be written was incorrect or invalid.

Action: Verify the file name. Ensure that both the full path and the file name are provided.

ORA-46641: incorrect file name for importing keys
Cause: The file name of the file from which the keys will be read and saved in the keystore was incorrect or invalid.

Action: Verify the file name. Ensure that both the full path and the file name are provided.

ORA-46642: key export destination file already exists
Cause: The file name specified as the export destination for keys exported from the keystore was already in existence.

Action: Specify a different file name that does not exist.

ORA-46643: file from which keys are to be imported does not exist
Cause: The specified file from which the keys are to be imported into the keystore did not exist.

Action: Specify the name of a file that contains keys exported from the keystore.

ORA-46644: creation or open of file to store the exported keys failed
Cause: Creation or opening of the file specified as the key export destination, where the keys exported from the keystore were to be written, failed.

Action: Verify that the file name is valid and that the Oracle process has sufficient privilege to create, open and write to the file.

ORA-46645: open of file from which keys are to be imported failed
Cause: The file specified as the key import source, from which the keys were to be imported into the keystore, could not be opened.

Action: Verify that the file name is valid and that the Oracle process has sufficient privilege to read the file.

ORA-46646: file from which keys are to be imported is invalid or lacks needed file permission
Cause: The file specified as the key import source, from which the keys were to be imported, was not a valid file or does not have the needed file access permission.

Action: Specify a valid file, containing keys which were previously exported from the keystore. Also, ensure that the file has read and write access permission.

ORA-46647: specified protection differs from that specified in the file
Cause: The file specified as the key import source, from which the keys are to be imported, had different protection from what was specified in the SQL command.

Action: Provide a valid protection option, ensuring that it is the same protection option that was in the file from which the keys are to be imported.

ORA-46648: cannot commit the keys to the keystore
Cause: The operation of writing the keys to the keystore failed.

Action: Verify that the keystore is not corrupt. Copy the keystore from the backup if it is corrupt. Retry the command.

ORA-46649: master key with the specified identifier does not exist
Cause: Master key with the specified identifier does not exist in the keystore.

Action: Specify a valid master key identifier for the SQL command and retry the command.

ORA-46650: cannot retrieve information for a master key identifier
Cause: The master key or the master key information associated with a specified master key identifier did not exist.

Action: Check the contents of the trace file to identify the faulty master key identifier. Either fix or drop the faulty master key, then retry the command.

ORA-46651: cannot create a master key
Cause: Master key creation failed.

Action: Check the trace file for errors and retry the command.

ORA-46652: cannot create tag for the master key
Cause: Creation of the tag for the specified master key failed.

Action: Check the contents of the trace file for errors and retry the command.

ORA-46653: cannot retrieve master key information
Cause: Retrieval of the master key information for the specified master key identifier failed.

Action: Check the contents of the trace file for errors and retry the command.

ORA-46654: cannot add the imported keys to the keystore
Cause: The operation of writing the imported keys to the keystore failed.

Action: Check the contents of the trace file for more information on the cause of the failure and retry the command.

ORA-46655: no valid keys in the file from which keys are to be imported
Cause: The specified keystore, from which keys are to be imported, did not contain any valid keys.

Action: None

ORA-46656: operation not valid for container database
Cause: The specified operation was not supported for the container database.

Action: None

ORA-46657: the source keystores are the same
Cause: The specified source keystores to be merged were the same. There is no need to merge these keystores.

Action: Check the locations and types of the specified keystores. Specify the correct path and types for the source keystores, if necessary.

ORA-46658: keystore not open in the container
Cause: The keystore was not open in the container.

Action: Open the keystore in the container.

ORA-46659: master keys for the given PDB not found
Cause: The master keys for the specified pluggable database (PDB) could not be retrieved.

Action: Check if the master keys were generated for the specified PDB and retry the command.

ORA-46660: the source and target keystores are the same
Cause: The specified source and target keystores to be merged were the same. There is no need to merge these keystores.

Action: Check the locations and types of the specified keystores. Specify the correct path and types for the source and target keystores, if necessary.

ORA-46661: keystore not open in root container
Cause: The root container keystore was not open.

Action: Open the root container keystore.

ORA-46662: master keys not created for all PDBs
Cause: Creation of the master key failed for one or more pluggable databases (PDBs).

Action: Check the trace files for errors. Create the keys in PDBs where the operation failed or retry the command.

ORA-46663: master keys not created for all PDBs for REKEY
Cause: Creation of the master key failed for one or more pluggable databases (PDBs) and as such REKEY failed for these PDBs.

Action: Check the trace files for errors. REKEY the keys in PDBs where the master keys could not be created or retry the command.

ORA-46664: master keys not created for any PDBs during REKEY
Cause: Creation of the master key failed for all pluggable databases (PDBs).

Action: Check the contents of the trace file for more information on the cause of the failure and retry the command.

ORA-46665: master keys not activated for all PDBs during REKEY
Cause: Activation of the master key failed for one or more pluggable databases (PDBs) and as such REKEY failed for these PDBs.

Action: Check the trace files for errors. Activate the keys in PDBs where the master keys were created but not activated or retry the command.

ORA-46666: master keys not created or activated for all PDBs during REKEY
Cause: Creation of the master key failed for one or more pluggable databases (PDBs). Further, activation of one or more created master keys also failed for some PDBs and as such REKEY failed on these PDBs.

Action: Check the trace files for errors. REKEY the PDBs where the master keys could not be created. Activate the keys in PDBs where the master keys were created but not activated or retry the command.

ORA-46667: client not found in the keystore
Cause: An entry with the given client name was not found in the keystore.

Action: Add the secret for the given client to the keystore, if required.

ORA-46668: client already exists in the keystore
Cause: An entry with the given client name was already in existence in the keystore.

Action: Delete or update the entry with the client name.

ORA-46669: the target keystore does not exist
Cause: The location specified for the target keystore did not contain a valid keystore, or target keystore did not have valid file permissions.

Action: Specify a different location for the target keystore where it exists. Also, check the file permissions of the target keystore.

ORA-46670: client secret keystore operation failed
Cause: The client secret keystore add, update or delete operation failed.

Action: Open the keystore and retry the client secret keystore operation.

ORA-46671: master key not set in root container
Cause: Master key was not set in the root container.

Action: Set the Master key in the root container.

ORA-46672: backup keystore file name could not be stored
Cause: The file name of the keystore backup could not be recorded in props$.

Action: Open the keystore and retry the backup operation.

ORA-46673: write to the export file failed
Cause: Oracle was unable to write an entry to the export file.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46674: read from the export file failed
Cause: Oracle was unable to read an entry from the export file.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46675: write of keys for export failed
Cause: Oracle was unable to write an entry for export.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46676: read of keys for import failed
Cause: Oracle was unable to read an entry for import.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46677: specified backup identifier exceeds maximum length
Cause: The backup identifier within the ASM file name of the keystore exceeded the maximum length of 12 characters.

Action: Specify a backup identifier that does not exceed the limit.

ORA-46678: cannot encrypt an identity column created with GENERATED BY DEFAULT or GENERATED ALWAYS
Cause: An attempt was made to encrypt an identity column created with GENERATED BY DEFAULT or GENERATED ALWAYS keywords.

Action: An identity column created with the GENERATED BY DEFAULT or GENERATED ALWAYS keywords cannot be encrypted.

ORA-46679: missing or invalid master key encryption algorithm
Cause: An encryption algorithm for the master key was missing or invalid in the user command.

Action: Specify a valid algorithm: 'AES256', 'ARIA256', 'SEED128', or 'GOST256'.

ORA-46680: master keys of the container database must be exported
Cause: The master keys of the container database were not exported.

Action: Export the master keys of the container database before unplugging the container database.

ORA-46681: reverse migration failed for PDB
Cause: Reverse migration failed for one or more pluggable databases (PDB).

Action: Check the trace files for errors. Retry the command.

ORA-46683: addition of master key string not supported with CONTAINER=ALL
Cause: An attempt was made to add a master key with the same master key identifier to more than one container database. A user specified master key string with a master key identifier can be added to a single container only.

Action: Retry the operation without CONTAINER=ALL clause.

ORA-46684: master key identifier exists in the keystore
Cause: An attempt was made to add a master key with a master key identifier that was already present in the keystore.

Action: Specify a different value for the master key identifier in the master key string.

ORA-46685: invalid master key identifier or master key value
Cause: The master key identifier or master key value was invalid. To be valid, the values supplied for both the master key identifier and the master key value must be hex-encoded and must have the following properties: - For a master key value to be valid, its length must be a valid key length for the specified encryption algorithm. - For a master key identifier to be

valid, it must have a length of 16 bytes. - For a master key identifier to be valid, it must have a non-zero value.

Action: Specify a correct value for the master key identifier or master key in the master key string.

ORA-46686: missing or invalid master key string
Cause: The master key string was missing or invalid.

Action: Specify the correct master key string.

ORA-46687: operation not supported for HSM
Cause: The specified operation is not supported with Hardware Security Module (HSM).

Action: Check the trace file for more details.

ORA-46688: cannot move a master key
Cause: The master key could not be moved out of the keystore.

Action: Check whether the specified master key identifiers are valid, and if they are found in the V$ENCRYPTION_KEYS view. Container keys can be moved from the CDB$ROOT only when the container is unplugged and dropped from the CDB. Check the trace file for additional errors if needed. Retry the command.

ORA-46689: specified master key identifier does not exist in the keystore
Cause: An attempt was made to move a master key that did not exist in the keystore.

Action: Check if the master key identifier exists in the keystore by querying the V$ENCRYPTION_KEYS view.

ORA-46690: could not create wallet
Cause: The new wallet used to store the keys to be moved could not be created. The cause could be the lack of permission to write to the directory for the Oracle user or the directory did not exist.

Action: Check the permissions for the Oracle user on the directory or check if the directory exists.

ORA-46691: The value of the KEYSTORE_CONFIGURATION attribute is invalid.
Cause: An attempt was made to set or use an invalid value for the KEYSTORE_CONFIGURATION attribute of the TDE_CONFIGURATION instance initialization parameter.

Action: Use a valid value for the KEYSTORE_CONFIGURATION attribute of the TDE_CONFIGURATION instance initialization parameter. When using WALLET_ROOT, set the TDE_CONFIGURATION instance initialization parameter correctly in both the root and in the pluggable database. A value must be provided for the TDE_CONFIGURATION instance initialization parameter if a value is provided for the WALLET_ROOT instance initialization parameter, in order to fully specify the keystore configuration of the CDB$ROOT and of the pluggable database (either both parameters must be present, or both must be absent). For an ADMINISTER KEY MANAGEMENT ISOLATE KEYSTORE operation, the KEYSTORE_CONFIGURATION attribute of the CDB$ROOT must have the value FILE. For an ADMINISTER KEY MANAGEMENT ISOLATE KEYSTORE operation, if a value for the KEYSTORE_CONFIGURATION attribute is set in the pluggable

database, it must have the value FILE. If the TDE_CONFIGURATION instance initialization parameter is not set in the pluggable database, the isolation operation automatically sets its KEYSTORE_CONFIGURATION attribute to FILE.

ORA-46692: cannot close wallet
Cause: An attempt was made to close the wallet when it was in use.

Action: Close the wallet in any pluggable database that is configured with an isolated wallet. Alternatively, use the FORCE KEYSTORE CLOSE clause of the ADMINISTER KEY MANAGEMENT command.

ORA-46693: The WALLET_ROOT location is missing or invalid.
Cause: An attempt was made to perform a keystore operation when the instance initialization parameter WALLET_ROOT was missing or invalid.

Action: Start the database after setting the WALLET_ROOT instance initialization parameter to the directory where all of the wallets are stored.

ORA-46694: The keys are already in the root keystore.
Cause: An attempt was made to unite an isolated keystore with the root keystore, but the keys of the isolated keystore were already present in the root keystore.

Action: No action is required. Check the value of the TDE_CONFIGURATION instance initialization parameter of your system and ensure that you are issuing the ADMINISTER KEY MANAGEMENT UNITE KEYSTORE command in the correct pluggable database.

ORA-46695: The value of the TDE_CONFIGURATION instance initialization parameter is invalid.
Cause: An attempt was made to set or use an invalid value for the TDE_CONFIGURATION instance initialization parameter.

Action: Use a valid value for the TDE_CONFIGURATION instance initialization parameter. The KEYSTORE_CONFIGURATION attribute must be present and must have a valid value. During recovery, the CONTAINER attribute can also be specified and its value must be a valid container name. The CONTAINER attribute can only be be specified when the TDE_CONFIGURATION instance initialization parameter is modified in the CDB$ROOT, not when it is modified in a pluggable database.

ORA-46696: A master key is required by another pluggable database.
Cause: An attempt was made to isolate a master key when it was still required by another pluggable database. Another pluggable database might still require the master key if the pluggable databases were clones of each other.

Action: Before attempting to isolate the keys of a pluggable database, perform an ADMINISTER KEY MANAGEMENT SET KEY command on each pluggable database that requires the master key, in order to remove any dependency on the master key being isolated. Alternately, include the FORCE clause and issue the ADMINISTER KEY MANAGEMENT FORCE ISOLATE KEYSTORE command, which causes the master keys of the pluggable database to be copied to the isolated keystore rather than moved to it, so that the keys remain available to any pluggable database that requires them.

ORA-46697: Keystore password required.
Cause: The keystore password clause was not provided for this SQL command.

Action: Retry the command with a keystore password clause.

ORA-46698: CDB$ROOT is not open.
Cause: CDB$ROOT was not open.

Action: Open the CDB$ROOT and retry the command.

ORA-46699: cannot create a keystore
Cause: A keystore could not be created. A combination of the following conditions prevented the operation: 1. The pluggable database was not open in read/write mode. Note that the pluggable database needs to be open in read/write mode for the KEYSTORE_MODE configuration of the pluggable database to be automatically changed to ISOLATED during the ADMINISTER KEY MANAGEMENT CREATE KEYSTORE command. 2. The KEYSTORE_MODE configuration of the pluggable database was UNITED (rather than ISOLATED).

Action: Open the pluggable database in read/write mode or configure the pluggable database as ISOLATED, and retry the ADMINISTER KEY MANAGEMENT CREATE KEYSTORE command.

ORA-46700: failed to copy or move wallet
Cause: An attempt was made to either copy or move the isolated wallet of the pluggable database (PDB) that was plugged.

Action: Ensure that the source wallet location and the file specified in XML exist on disk and are accessible from this database. Also, ensure that WALLET_ROOT is set and the directory specified in WALLET_ROOT exists on the disk.

ORA-46701: failed to delete source wallet
Cause: An attempt was made to delete the source wallet file during the pluggable database (PDB) plug with MOVE clause.

Action: Ensure that the source wallet file and the directory allow deletion of the wallet.

ORA-46704: wallet status is 'OPEN' for PDB, cannot create the password-based keystore
Cause: Password based keystore could not be created for the PDB, because the PDB's current wallet status is 'OPEN'.

Action: Close the PDB's wallet and try again.

ORA-46705: key is set for the PDB, cannot create the password-based keystore
Cause: Password based keystore could not be created for the PDB, because the PDB was using a key from the PDB's current keystore.

Action: Use "Administer Key Management Isolate Keystore" command to create a password based keystore so that the PDB's keys are automatically moved to the new keystore.

ORA-46900: unsupported proxy authentication
Cause: A proxy authentication was attempted using an administrative privilege.

Action: Authenticate without any administrative privilege if proxy authentication is desired.

ORA-46951: unsupported format for password file '*string*'
Cause: An attempt was made to use the Oracle password file which is not in legacy or in release 12.1 or higher format. The password file is either not present or may have become corrupt.

Action: Re-create the password file and grant the administrative privileges to users appropriately.

ORA-46952: standby database format mismatch for password file '*string*'
Cause: An attempt was made to apply password file changes made on the primary database to the password file of the standby database, but there was a password file format mismatch which prevented the operation.

Action: Re-create the password file on the standby database using the same password file format as that of the primary database. Ensure that the password file format used on the standby database matches that of the primary database.

ORA-46953: The password file is not in the 12.2 format.
Cause: An attempt was made to perform one of the following operations, but none of these operations are allowed while the password file is in LEGACY or in release 12.1 format. - Attempting to grant an administrative privilege to an external user (a user created as IDENTIFIED EXTERNALLY). - Attempting to change the authentication type of an administrative-privileged user from PASSWORD to EXTERNAL. - When a common user has an administrative privilege granted in a pluggable database (PDB) but no longer exists in the CDB$ROOT container, attempting to create this common user again in the root as IDENTIFIED EXTERNALLY.

Action: Create the password file in 12.2 format or migrate the existing password file to 12.2 format, then retry the operation.

ORA-46981: Access to service *string* from *string* was denied.
Cause: Access to this service from this location was not allowed.

Action: Contact Oracle Support Services.

ORA-46987: Access control propagation failed (error=*number*).
Cause: The executed DBMS_SFW_ACL_ADMIN operation failed.

Action: Retry the operation.

ORA-46988: Access control propagation timed out.
Cause: The executed DBMS_SFW_ACL_ADMIN operation timed out.

Action: Retry the operation.

94

ORA-47000 to ORA-47999

ORA-47000: Factor Type *string* already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47001: Factor Type *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47002: error creating Factor Type *string*, *string*
Cause: An unexpected error occurred creating the factor type

Action: Please review the definition and retry the operation

ORA-47003: error deleting Factor Type *string*, *string*
Cause: An unexpected error occurred deleting the factor type

Action: Please review the definition and retry the operation

ORA-47004: error updating Factor Type *string*, *string*
Cause: An unexpected error occurred updating the factor type

Action: Please review the definition and retry the operation

ORA-47005: error renaming Factor Type *string*, *string*
Cause: An unexpected error occurred renaming the factor type

Action: Please review the definition and retry the operation

ORA-47020: Factor *string* already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47021: Factor *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47022: error creating Factor *string*, *string*
Cause: An unexpected error occurred creating the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47023: error deleting Factor *string*, *string*
Cause: An unexpected error occurred deleting the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47024: error updating Factor *string*, *string*
Cause: An unexpected error occurred updating the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47025: Factor Link already exists for *string* and *string*
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47026: error creating Factor Link for *string* and *string*, *string*
Cause: An unexpected error occurred creating the factor link

Action: Please review the definition for accuracy and retry the operation

ORA-47027: Factor Link does not exist for *string* and *string*
Cause: The factor link referenced does not exist

Action: Please review the definition for accuracy and retry the operation

ORA-47028: error deleting Factor Link for *string* and *string*, *string*
Cause: An unexpected error occurred deleting the factor link

Action: Please review the definition for accuracy and retry the operation

ORA-47029: Factor type *string* is used by one or more factors.
Cause: The specified factor type was used by existing factor(s).

Action: Remove the dependent factors and retry the operation.

ORA-47030: Factor *string* is referred by one or more factor links.
Cause: The specified factor was referred by existing factor link(s).

Action: Remove the dependent factor links and retry the operation.

ORA-47031: Factor *string* is used by one or more policy factors.
Cause: The specified factor was used by existing policy factor(s).

Action: Remove the dependent policy factors and retry the operation.

ORA-47032: Factor *string* is referred by one or more identities.
Cause: The specified factor was referred by existing identities.

Action: Remove the dependent identities and retry the operation.

ORA-47033: Factor link for *string* and *string* is referred by one or more identity maps.
Cause: The specified factor link was referred by existing identity maps.

Action: Remove the dependent identity maps and retry the operation.

ORA-47034: cannot rename default factor *string*
Cause: An attempt was made to rename a default factor. Default factors cannot be renamed.

Action: No action required.

ORA-47040: Identity *string* for Factor *string* already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47041: Identity *string* for Factor *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47042: error creating Identity *string* for Factor *string*, *string*
Cause: An unexpected error occurred creating the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47043: error deleting Identity *string* for Factor *string*, *string*
Cause: An unexpected error occurred deleting the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47044: error updating Identity *string* for Factor *string*, *string*
Cause: An unexpected error occurred updating the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47045: Identity *string* for Factor *string* is used by one or more identity maps.
Cause: The specified identity was used by exiting identity map(s).

Action: Remove the dependent identity maps and retry the operation.

ORA-47046: Identity *string* for Factor *string* is referred by one or more policy labels.
Cause: The specified identity was used by exiting policy label(s).

Action: Remove the dependent policy labels and retry the operation.

ORA-47060: Identity map for Identity *string*.*string*, Factor Link *string*, *string* already defined for operation *string* on *string*
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47061: Identity map for Identity *string*.*string*, Factor Link *string*, *string* not found for operation *string* on *string*
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47062: error creating Identity map for Identity *string*.*string*, Factor Link *string*, *string* already defined for operation *string* on *string*
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47063: error deleting Identity map for Identity *string*.*string*, Factor Link *string*, *string* already defined for operation *string* on *string*
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47080: code *string* already defined in group *string*
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47081: code *string* not found in group *string*
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47100: Command rule *string* already defined for *string*.*string*.
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47101: Command rule *string* not found for *string*.*string*.
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47102: error creating command rule *string* for *string*.*string*, *string*
Cause: An unexpected error occurred creating the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47103: error deleting command rule *string* for *string*.*string*, *string*
Cause: An unexpected error occurred deleting the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47104: error updating command rule *string* for *string*.*string*, *string*
Cause: An unexpected error occurred updating the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47105: invalid object owner *string* for command *string*
Cause: The object owner is invalid for this command

Action: Choose an object owner other than SYS or a wildcard for this command

ORA-47106: Command rule *string* already defined for clause *string* with clause parameter *string*.
Cause: The object with this name exists already.

Action: Choose a unique object name and retry the operation.

ORA-47107: Command rule *string* not found for clause *string* with clause parameter *string*.
Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47108: Command rule *string* does not support clause level protection.
Cause: Oracle Database Vault did not support clause level protection for this command rule.

Action: Choose a valid command rule that supports clause level protection.

ORA-47109: Command rule *string* for clause *string* with parameter *string* does not support event level protection.
Cause: Oracle Database Vault did not support event level protection for this command rule.

Action: Choose a valid command rule that supports clause level protection.

ORA-47110: cannot create command rules for *string*.*string*
Cause: When ALLOW COMMON OPERATION was set to TRUE, a smaller scope user was not allowed to create command rules on a larger scope user's object.

Action: When ALLOW COMMON OPERATION is TRUE, do not create command rules on a larger scope user's object.

ORA-47120: Document *string* already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47121: Document *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47140: Factor expression *string* already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47141: Factor expression *string* not found
Cause: The object being requested does not exists

Action: Choose an object name that exists and retry the operation

ORA-47160: Factor link *string* already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47161: Factor link *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47180: Integration Policy for OLS Policy *string* is already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47181: Integration Policy for OLS Policy *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47182: Label algorithm *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47183: error creating Integration Policy for OLS Policy *string*, *string*
Cause: An unexpected error occurred creating the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47184: error updating Integration Policy for OLS Policy *string*, *string*
Cause: An unexpected error occurred updating the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47185: error deleting Integration Policy for OLS Policy *string*, *string*
Cause: An unexpected error occurred deleting the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47200: Integration Policy Factor already defined for Factor *string* and Policy *string*
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47201: Integration Policy Factor not found for Factor *string* and Policy *string*
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47202: error creating Integration Policy Factor for factor *string* and policy *string*, *string*
Cause: An unexpected error occurred creating the integration policy factor

Action: Please review the definition for accuracy and retry the operation

ORA-47203: error deleting Integration Policy Factor for factor *string* and policy *string*, *string*
Cause: An unexpected error occurred deleting the integration policy factor

Action: Please review the definition for accuracy and retry the operation

ORA-47220: Label *string* for Identity *string.string* under OLS Policy *string* already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47221: Label *string* for Identity *string.string* under OLS Policy *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47222: error creating Label *string* for Identity *string.string* under OLS Policy *string*, *string*
Cause: An unexpected error occurred creating the identity label

Action: Please review the definition for accuracy and retry the operation

ORA-47223: error deleting Label *string* for Identity *string*.*string* under OLS Policy *string*, *string*
Cause: An unexpected error occurred deleting the identity label

Action: Please review the definition for accuracy and retry the operation

ORA-47240: Realm *string* already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47241: Realm *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47242: error creating Realm *string*, *string*
Cause: An unexpected error occurred creating the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47243: error deleting Realm *string*, *string*
Cause: An unexpected error occurred deleting the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47244: error updating Realm *string*, *string*
Cause: An unexpected error occurred updating the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47245: error renaming Realm *string*, *string*
Cause: An unexpected error occurred renaming the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47246: cannot change default realm *string* to mandatory realm
Cause: An attempt was made to change the realm type of this default realm to mandatory realm.

Action: No action required.

ORA-47247: cannot rename default realm *string*
Cause: An attempt was made to rename a default realm. Default realms cannot be renamed.

Action: No action required.

ORA-47260: Realm authorization to *string* for realm *string* already defined.
Cause: The object with this name exists already.

Action: Choose a unique object name and retry the operation.

ORA-47261: Realm authorization to *string* with *string* scope for realm *string* not found.
Cause: The object being requested does not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47262: error creating realm authorization to *string* for realm *string*, *string*
Cause: An unexpected error occurred creating the realm authorization.

Action: Review the definition for accuracy and retry the operation.

ORA-47263: error deleting realm authorization to *string* for realm *string*, *string*
Cause: An unexpected error occurred deleting the realm authorization.

Action: Review the definition for accuracy and retry the operation.

ORA-47264: error updating realm authorization to *string* for realm *string*, *string*
Cause: An unexpected error occurred updating the realm authorization.

Action: Review the definition for accuracy and retry the operation.

ORA-47265: The *string* scope realm authorization is not allowed in realm *string*.
Cause: The realm authorization scope was greater than the realm scope.

Action: Modify the realm authorization scope or add the realm authorization to a realm with proper scope.

ORA-47280: Realm Object *string*,*string*.*string* already defined in Realm *string*
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47281: Realm Object *string*,*string*.*string* not found in Realm *string*
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47282: error adding Realm Object *string*,*string*.*string* to Realm *string*, *string*
Cause: An unexpected error occurred creating the realm object

Action: Please review the definition for accuracy and retry the operation

ORA-47283: error deleting Realm Object *string*,*string*.*string* from Realm *string*, *string*
Cause: An unexpected error occurred deleting the realm object

Action: Please review the definition for accuracy and retry the operation

ORA-47284: error adding Realm Object *string*.*string*. *string* is not a valid object type
Cause: The specified object type is not valid.

Action: Enter a valid object type for the specified object name, or enter "%" and all objects with the specified name and the specified owner will be added to the realm.

ORA-47285: Object is not a common object.
Cause: The object was neither a metadata link nor an object link object.

Action: Enter a metadata link object or an object link object or enter "%" and all objects with the specified owner will be added to the realm.

ORA-47286: cannot add *string*, *string*.*string* to a realm
Cause: When ALLOW COMMON OPERATION was set to TRUE, a smaller scope user was not allowed to add a larger scope user's object or a larger scope role to a realm.

Action: When ALLOW COMMON OPERATION is TRUE, do not add a larger scope user's object or a larger scope role to a realm.

ORA-47290: error creating VPD policy for Realm *string*, *string*
Cause: An unexpected error occurred creating the VPD policy

Action: Please review the definition for accuracy and retry the operation

ORA-47300: Role already *string* defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47301: Role *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47302: error creating Role *string*, *string*
Cause: An unexpected error occurred creating the role

Action: Please review the definition for accuracy and retry the operation

ORA-47303: error deleting Role *string*, *string*
Cause: An unexpected error occurred deleting the role

Action: Please review the definition for accuracy and retry the operation

ORA-47304: error updating Role *string*, *string*
Cause: An unexpected error occurred updating the role

Action: Please review the definition for accuracy and retry the operation

ORA-47305: Rule Set violation on *string* (*string*)
Cause: An operation that was attempted failed due to a rule set violation

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47320: Rule *string* already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47321: Rule *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47322: error creating Rule *string*, *string*
Cause: An unexpected error occurred creating the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47323: error deleting Rule *string*, *string*
Cause: An unexpected error occurred deleting the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47324: error updating Rule *string*, *string*
Cause: An unexpected error occurred updating the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47325: Rule *string* is used by one or more rule sets.
Cause: The specified rule was used by existing rule set(s).

Action: Remove the dependent rule sets and retry the operation.

ORA-47326: The common rule expression contains local object(s).
Cause: Local object(s) were used in the common rule expression.

Action: Use common object(s) when creating or updating a common rule expression.

ORA-47327: The scope of the Rule and the Rule Set are different.
Cause: The scope of the Rule and the Rule Set were different.

Action: Use Rule and Rule Set of the same scope.

ORA-47328: cannot rename default rule *string*
Cause: An attempt was made to rename a default rule. Default rules cannot be renamed.

Action: No action required.

ORA-47340: Rule Set *string* already defined
Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47341: Rule Set *string* not found
Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47342: error creating Rule Set *string*, *string*
Cause: An unexpected error occurred creating the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47343: error deleting Rule Set *string*, *string*
Cause: An unexpected error occurred deleting the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47344: error updating Rule Set *string*, *string*
Cause: An unexpected error occurred updating the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47345: Rule set *string* is used by one or more realm authorizations.
Cause: The specified rule set was used by existing realm authorization(s).

Action: Remove the dependent realm authorizations and retry the operation.

ORA-47346: Rule set *string* is used by one or more command rules.
Cause: The specified rule set was used by existing command rule(s).

Action: Remove the dependent command rules and retry the operation.

ORA-47347: Rule set *string* is used by one or more secure application roles.
Cause: The specified rule set was used by existing secure application role(s).

Action: Remove the dependent secure application roles and retry the operation.

ORA-47348: Rule set *string* is used by one or more factors.
Cause: The specified rule set was used by existing factor(s).

Action: Remove the dependent factors and retry the operation.

ORA-47349: error occurred when executing the rule set handler
Cause: Either there was a syntax error on the rule set handler or DVSYS did not have sufficient privilege to execute the rule set handler.

Action: Fix the syntax error on the rule set handler or grant execute privilege on the rule set handler to DVSYS.

ORA-47350: cannot rename default rule set *string*
Cause: An attempt was made to rename a default rule set. Default rule sets cannot be renamed.

Action: No action required.

ORA-47360: rule *string* already added to rule set *string*
Cause: The object with this name existed already.

Action: Choose a unique object name and retry the operation.

ORA-47361: rule *string* not associated to rule set *string*
Cause: The rule specified was not associated to the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47362: error adding rule *string* to rule set *string*, *string*
Cause: An unexpected error occurred while adding the rule to the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47363: error deleting rule *string* from rule set *string*, *string*
Cause: An unexpected error occurred while deleting the rule from the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47381: Oracle Label Security (OLS) Policy *string* not found
Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47382: Oracle Label Security (OLS) Policy Label *string* not found for policy *string*
Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47383: error capturing the session state information
Cause: An internal error occurred capture the session state

Action: Please retry the operation if possible

ORA-47390: failed to audit event, *string*
Cause: An internal error auditing the operation

Action: Please retry the operation if possible

ORA-47391: attempt to set Factor *string* violates Rule Set *string*
Cause: An attempt to set the factor violated the associated rule set

Action: Please check to ensure you have the ability to set the factor

ORA-47392: Factor *string* cannot be set
Cause: The attempt to set the factor is not allowed

Action: This factor cannot be set so there is no corrective action

ORA-47393: Factor *string* value not allowed
Cause: The value being assigned to the factor is not allowed

Action: This factor cannot be set to this value so there is no corrective action

ORA-47394: Factor assignment rule set not defined
Cause: The rule set being associated to the factor does not exist

Action: Please review the definition for accuracy and retry the operation

ORA-47395: error returned by Factor *string* evaluation expression *string*
Cause: The factor retrieval method resulted in an error

Action: Please review the retrieval method definition for accuracy and correct it as required

ORA-47396: error returned by Factor *string* validation expression *string*
Cause: The factor retrieval method resulted in an invalid value based on its validation method

Action: Please review the factor definition and correct it as required

ORA-47397: incorrect identified by value for Factor *string*
Cause: The factor identified by value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47398: multiple identities defined for Factor *string*
Cause: The factor has duplicate identities defined

Action: Please review the factor definition and correct it as required

ORA-47399: incorrect labeled by value for Factor *string*
Cause: The factor labeled by value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47400: Command Rule violation for *string* on *string*
Cause: An operation that was attempted failed due to a command rule violation

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47401: Realm violation for *string* on *string*.*string*
Cause: An operation that was attempted failed due to a realm protection

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47402: incorrect evaluation options value for Factor *string*
Cause: The factor evaluations options value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47403: NULL returned by Factor *string* evaluation expression *string*
Cause: The factor evaluated to a NULL value

Action: Please review the factor definition and correct it as required

ORA-47404: NULL trust level for Factor *string*
Cause: The factor has a NULL trust level

Action: Please review the factor definition and correct it as required

ORA-47405: negative trust level for Factor *string*
Cause: The factor has a negative trust level

Action: Please review the factor definition and correct it as required

ORA-47406: ALWAYS AUDIT option set for Factor *string*
Cause: The factor audit option is set to always audit

Action: No action required

ORA-47407: ALWAYS AUDIT option set for Rule Set *string*
Cause: The rule set audit option is set to always audit

Action: No action required

ORA-47408: Realm violation for the EXECUTE command
Cause: A realm violation has occurred for a realm-protected stored procedure.

Action: In order to invoke the realm-protected procedure, you must have GRANT privileges to execute the procedure, or you must be authorized to operate in the procedure's realm.

ORA-47409: Command Rule violation for the EXECUTE command
Cause: A command rule violation occurred when trying to perform the EXECUTE command for a stored procedure protected by a command rule.

Action: Ask the Database Vault administrator to perform the operation or remove the command rule for the protected stored procedure.

ORA-47410: Realm violation for *string* on *string*
Cause: An operation that was attempted failed with insufficient privileges due to an attempt to violate a Database Vault Realm security policy which is currently enabled and enforced.

Action: Ensure you have sufficient privileges for this operation and retry the operation.

ORA-47411: Cannot use *string* due to Oracle Database Vault policy.
Cause: An operation that was attempted failed because Database Vault policy currently prevents the related feature from being used.

Action: Ask the Database Vault administrator to allow the feature to be used.

ORA-47412: The DVSYS and DVF users are not allowed to switch containers.
Cause: An attempt was made to switch containers while connecting as DVSYS or DVF, which is not allowed.

Action: Connect as a different user and try again.

ORA-47413: Cannot connect due to Oracle Database Vault policy.
Cause: An attempt to connect to DVSYS or DVF accounts failed because the Database Vault administrator had disabled the account.

Action: Ask the Database Vault administrator to enable the account.

ORA-47420: Database Vault policy *string* already defined
Cause: The policy with this name already existed.

Action: Choose a unique policy name and retry the operation.

ORA-47421: Database Vault policy *string* not found
Cause: The policy being requested did not exist.

Action: Choose a policy name that exists and retry the operation.

ORA-47422: The object already belongs to a Database Vault policy.
Cause: An attempt was made to add a realm or command rule to more than one Database Vault policy.

Action: Make sure the realm or command rule does not belong to any Database Vault policy and retry the operation.

ORA-47423: The object does not belong to Database Vault policy *string*.
Cause: An attempt was made to delete a realm or command rule from a Database Vault policy that did not contain it.

Action: Choose the Database Vault policy that contains the realm or command rule and retry the operation.

ORA-47424: The user *string* already owns Database Vault policy *string*.
Cause: An attempt was made to add a user as policy owner to a Database Vault policy that the user already owned.

Action: Choose a user who does not own the policy and retry the operation.

ORA-47425: The user *string* does not own Database Vault policy *string*.
Cause: An attempt was made to delete a user as policy owner from a Database Vault policy that the user did not own.

Action: Choose a user who owns the policy and retry the operation.

ORA-47426: The object or its parent object belongs to a Database Vault policy.
Cause: An attempt was made to modify an object that either belongs to a Database Vault policy or has a parent object that belongs to a Database Vault policy.

Action: Choose a different object or change the related policy state to the PARTIAL mode.

ORA-47427: The *string* scope realm *string* cannot be added to policy *string*.
Cause: The realm scope did not match the policy scope.

Action: Add the realm to a policy with the same scope.

ORA-47428: The *string* scope command rule cannot be added to policy *string*.
Cause: The command rule scope did not match the policy scope.

Action: Add the command rule to a policy with the same scope.

ORA-47429: The common scope command rule cannot be created on local objects.
Cause: An attempt was made to create a common scope command rule on a local object.

Action: Make sure the object is of common scope before creating a common scope command rule protecting it.

ORA-47430: Nested tables cannot be added to Oracle Database Vault realms and command rules.
Cause: An attempt was made to add a nested table to a realm or command rule.

Action: Protect the base table of the nested table in order to automatically protect the nested table.

ORA-47431: cannot rename default policy *string*
Cause: An attempt was made to rename a default policy. Default policy cannot be renamed.

Action: No action required.

ORA-47500: Database Vault cannot be configured.
Cause: The Database Vault configuration failed because some Database Vault objects were missing.

Action: Run the dvremov.sql script to remove Database Vault and then reinstall Database Vault.

ORA-47501: Database Vault has already been configured.
Cause: An attempt was made to run this procedure more than once. This procedure can be run successfully only once.

Action: If you are attempting to grant the DV_OWNER or DV_ACCTMGR roles, do so manually.

ORA-47502: Database Vault is not yet configured.
Cause: The Database Vault configuration procedure dvsys.configure_dv() had not been run.

Action: Run dvsys.configure_dv() before attempting to enable or disable Database Vault enforcement.

ORA-47503: Database Vault is not enabled in CDB$ROOT or application root.
Cause: Database Vault was not enabled in CDB$ROOT or application root for this operation.

Action: Enable Database Vault in CDB$ROOT or application root and retry the operation.

ORA-47504: Common audit policies for component Oracle Database Vault not supported.
Cause: Audit policies for Oracle Database Vault realms, factors and rule sets could not be common audit policies.

Action: If creating audit policies for Oracle Database Vault objects in CDB$ROOT, include the clause 'container=current'.

ORA-47505: Oracle Database Vault strict mode cannot be enabled in PDB.
Cause: "An attempt was made to enable Oracle Database Vault strict mode in a pluggable database (PDB). Strict mode can only be enabled in CDB$ROOT or application root.

Action: Enable Oracle Database Vault strict mode in CDB$ROOT or application root.

ORA-47506: Oracle Database Vault or Oracle Database Vault application protection is not enabled in CDB$ROOT.
Cause: Oracle Database Vault or Oracle Database Vault application protection was not enabled in CDB$ROOT for this operation.

Action: Enable Oracle Database Vault or Oracle Database Vault application protection in CDB$ROOT and retry the operation.

ORA-47800: Oracle Data Pump authorization for Oracle Database Vault to *string* to execute action *string* already exists.
Cause: Oracle Data Pump authorization for Oracle Database Vault to execute the specified action was already granted to the specified grantee.

Action: Choose a different grantee or action and retry the operation.

ORA-47801: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* to execute action *string* already exists.
Cause: Oracle Data Pump authorization for Oracle Database Vault on the specified schema to execute the specified action was already granted to the specified grantee.

Action: Choose a different grantee, schema or action and retry the operation.

ORA-47802: Oracle Data Pump authorization for Oracle Database Vault to *string* to execute action *string* is not found.
Cause: Oracle Data Pump authorization for Oracle Database Vault to execute the specified action was not granted to the specified grantee.

Action: Choose a different grantee or action and retry the operation.

ORA-47803: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* to execute action *string* is not found.
Cause: Oracle Data Pump authorization for Oracle Database Vault on the specified schema to execute the specified action was not granted to the specified grantee.

Action: Choose a different grantee, schema or action and retry the operation.

ORA-47804: Oracle Database Vault application protection exception for *string* already exists.
Cause: Oracle Database Vault application protection exception was already granted to the specified user.

Action: Choose a different user and retry the operation.

ORA-47805: Oracle Database Vault application protection exception for *string* does not exist.
Cause: Oracle Database Vault application protection exception did not exist for the specified user.

Action: Choose a different user and retry the operation.

ORA-47806: Oracle Database Vault application protection exception for *string*.*string* already exists.
Cause: Oracle Database Vault application protection exception was already granted to the specified package.

Action: Choose a different package and retry the operation.

ORA-47807: Oracle Database Vault application protection exception for *string*.*string* does not exist.
Cause: Oracle Database Vault application protection exception did not exist for the specified package.

Action: Choose a different package and retry the operation.

ORA-47808: Oracle Database Vault application protection exception cannot be added to package *string*.*string*.
Cause: Oracle Database Vault application protection exception was not added for a definer rights package.

Action: Choose a different package and retry the operation.

ORA-47901: OLS policy not specified
Cause: An OLS policy name is required for this operation

Action: Specify a policy name and retry the operation

ORA-47902: OLS policy label not specified
Cause: An OLS policy label is required for this operation

Action: Specify a policy label and retry the operation

ORA-47903: OLS policy label *string* not found for policy *string*
Cause: The policy label being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47904: OLS session label does not exist
Cause: The policy label specified does not exist

Action: Choose a valid policy label and retry the operation

ORA-47905: OLS policy label *string* is not allowed for policy *string*
Cause: The policy label specified is not valid for this policy

Action: Choose a valid policy label for this policy and retry the operation

ORA-47906: OLS policy label not specified for identity *string*.*string* under policy *string*
Cause: The policy label is required for this operation

Action: Choose a valid policy label for this policy and retry the operation

ORA-47907: Database Vault associated OLS policy *string* not fully configured
Cause: The Oracle Label Security (OLS) policy was associated with Database Vault. But either the policy was not configured with a factor or the current factor identity was not assigned a label.

Action: Based on the cause, either configure a factor with the OLS policy using DVSYS.DBMS_MACADM.ADD_POLICY_FACTOR procedure and assign labels to factor identities using DVSYS.DBMS_MACADM.CREATE_POLICY_LABEL procedure or remove Database Vault association using DVSYS.DBMS_MACADM.DELETE_MAC_POLICY_CASCADE procedure.

ORA-47910: failure to add language *string*
Cause: An error occurred while adding a language to Oracle Database Vault.

Action: Review the trace file and identify the cause.

ORA-47920: Authorization failed for user *string* to perform this operation
Cause: The operation attempted is not allowed for this user

Action: Please ensure you have privileges to perform this operation

ORA-47921: error adding host *string* to domain *string*, *string*
Cause: An error occurred adding the host specified to the domain specified

Action: Please review the host and domain definition and correct it as required

ORA-47922: error removing host *string* to domain *string*, *string*
Cause: An error occurred removing the host specified to the domain specified

Action: Please review the host and domain definition and correct it as required

ORA-47930: Privilege capture *string* already exists.
Cause: A privilege capture with the given name was already in existence.

Action: Choose another capture name or drop the existing privilege capture.

ORA-47931: Privilege capture *string* does not exist.
Cause: The given privilege capture did not exist.

Action: Choose another privilege capture.

ORA-47932: Privilege capture *string* is still enabled.
Cause: The given privilege capture was still enabled.

Action: Choose another capture or disable the given privilege capture.

ORA-47933: Privilege capture *string* is already enabled.
Cause: The given privilege capture was already enabled.

Action: Choose another privilege capture.

ORA-47934: Two privilege captures are already enabled.
Cause: The maximum number of two privilege captures were enabled."

Action: Disable one of the enabled privilege captures.

ORA-47935: Another privilege capture is enabled.
Cause: Another capture of the same type or another nondatabase-wide capture was enabled.

Action: Disable the enabled privilege capture.

ORA-47936: Privilege capture *string* is already disabled.
Cause: The given privilege capture was already disabled.

Action: Choose another capture.

ORA-47937: Input *string* does not match the given privilege capture type.
Cause: The given input did not match the given privilege capture type.

Action: Change the input or the privilege capture type.

ORA-47938: GENERATE_RESULT is already running for privilege capture *string*.
Cause: DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT was already running for the given privilege capture.

Action: Wait and retry later or choose another privilege capture.

ORA-47939: Capture context namespace or attribute does not exist or is invalid.
Cause: Context namespace or attribute used in the capture condition did not exist or was invalid.

Action: Create the namespace or set the attribute or recreate a privilege capture with a valid namespace and attribute.

ORA-47940: cannot create a capture condition for a SYS user
Cause: An attempt was made to create a capture with the condition set as a SYS user which is not allowed.

Action: You can create capture conditions only for non-SYS users.

ORA-47941: Privilege capture *string* has not been enabled with run name *string*.
Cause: The given privilege capture has not been run with run name %s.

Action: Enable the given privilege capture with the given run name.

ORA-47942: Privilege capture *string* had been enabled with run name *string*.
Cause: The given privilege capture had been run with the given run name.

Action: Enable the given privilege capture with a new run name.

ORA-47943: Privilege capture *string* is enabled with run name *string*.
Cause: The given privilege capture is running with the given run name.

Action: Disable the given privilege capture.

ORA-47944: Privilege capture *string* has not been enabled.
Cause: The given privilege capture has not been enabled.

Action: Enable the given privilege capture.

ORA-47945: duplicate roles *string* in capture condition
Cause: An attempt was made to specify duplicate roles in a capture condition.

Action: Specify only unique roles and retry the operation.

ORA-47950: no value defined for required parameter *string*
Cause: The operation requires a value for this parameter

Action: Please specify the missing parameter and retry the operation

ORA-47951: invalid input value or length for parameter '*string*'
Cause: The value specified for this parameter is invalid or too large

Action: Please specify the a valid parameter and retry the operation

ORA-47952: Oracle Data Pump authorization for Oracle Database Vault to *string* already exists
Cause: Oracle Data Pump authorization for Oracle Database Vault was already granted to the given grantee.

Action: Choose a different grantee and retry the operation.

ORA-47953: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* already exists
Cause: Oracle Data Pump authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47954: Oracle Data Pump authorization for Oracle Database Vault to *string* on object *string*.*string* already exists
Cause: Oracle Data Pump authorization for Oracle Database Vault on the given object was already granted to the given grantee.

Action: Choose a different grantee or a different object and retry the operation.

ORA-47955: Oracle Data Pump authorization for Oracle Database Vault to *string* is not found
Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user.

Action: Choose a user who has Oracle Data Pump authorization for Oracle Database Vault and retry the operation.

ORA-47956: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* is not found
Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47957: Oracle Data Pump authorization for Oracle Database Vault to *string* on object *string*.*string* is not found
Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user on the given object.

Action: Choose a different user or object and retry the operation.

ORA-47958: Running EXP with direct path option is disallowed when Oracle Database Vault is enabled.
Cause: While Oracle Database Vault was enabled, an attempt was made to run EXP with the 'direct=y' option.

Action: Change the option to 'direct=n' or disable Oracle Database Vault and retry the operation.

ORA-47959: Oracle transportable tablespace authorization for Oracle Database Vault to *string* on tablespace *string* already exists.
Cause: Oracle transportable tablespace authorization for Oracle Database Vault on the given tablespace was already granted to the given grantee.

Action: Choose a different grantee or tablespace and retry the operation.

ORA-47960: Oracle transportable tablespace authorization for Oracle Database Vault to *string* on tablespace *string* is not found.
Cause: Oracle transportable tablespace authorization for Oracle Database Vault was not granted to the given user on the given tablespace.

Action: Choose a different user or tablespace and retry the operation.

ORA-47961: Oracle Scheduler Job authorization for Oracle Database Vault to *string* already exists
Cause: Oracle Scheduler Job authorization for Oracle Database Vault was already granted to the given grantee.

Action: Choose a different grantee and retry the operation.

ORA-47962: Oracle Scheduler Job authorization for Oracle Database Vault to *string* on schema *string* already exists
Cause: Oracle Scheduler Job authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47963: Oracle Scheduler Job authorization for Oracle Database Vault to *string* is not found
Cause: Oracle Scheduler Job authorization for Oracle Database Vault was not granted to the given user.

Action: Choose a user who has Oracle Scheduler Job authorization for Oracle Database Vault and retry the operation.

ORA-47964: Oracle Scheduler job authorization for Oracle Database Vault to *string* on schema *string* is not found
Cause: Oracle Scheduler job authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47965: DEBUG_CONNECT authorization for Oracle Database Vault to %0!s on schema %1!s already exists.
Cause: DEBUG_CONNECT authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47966: DEBUG_CONNECT authorization for Oracle Database Vault to %0!s on schema %1!s is not found.
Cause: DEBUG_CONNECT authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47967: DBCAPTURE authorization for Oracle Database Vault to *string* already exists.
Cause: DBCAPTURE authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47968: DBCAPTURE authorization for Oracle Database Vault to *string* is not found.
Cause: DBCAPTURE authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has DBCAPTURE authorization for Oracle Database Vault and retry the operation.

ORA-47969: DBREPLAY authorization for Oracle Database Vault to *string* already exists.
Cause: DBREPLAY authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47970: DBREPLAY authorization for Oracle Database Vault to *string* is not found.
Cause: DBREPLAY authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has DBREPLAY authorization for Oracle Database Vault and retry the operation.

ORA-47971: Oracle proxy authorization for Oracle Database Vault to *string* on schema *string* already exists
Cause: Oracle proxy authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47972: Oracle proxy authorization for Oracle Database Vault to *string* on schema *string* is not found.
Cause: Oracle proxy authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47973: Oracle DDL authorization for Oracle Database Vault to *string* on schema *string* already exists.
Cause: Oracle DDL authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47974: Oracle DDL authorization for Oracle Database Vault to *string* on schema *string* is not found.
Cause: Oracle DDL authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47975: PREPROCESSOR authorization for Oracle Database Vault to *string* already exists
Cause: PREPROCESSOR authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47976: PREPROCESSOR authorization for Oracle Database Vault to *string* is not found
Cause: PREPROCESSOR authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has PREPROCESSOR authorization for Oracle Database Vault and retry the operation.

ORA-47977: Maintenance authorization*string* for Oracle Database Vault to *stringstring* already exists.
Cause: Maintenance authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose different parameters and retry the operation.

ORA-47978: Maintenance authorization*string* for Oracle Database Vault to *stringstring* on schema *string* already exists.
Cause: Maintenance authorization for Oracle Database Vault on the specified schema was already granted to the specified grantee.

Action: Choose different parameters and retry the operation.

ORA-47979: Maintenance authorization*string* for Oracle Database Vault to *string* on object *string*.*string* already exists.
Cause: Maintenance authorization for Oracle Database Vault on the specified schema was already granted to the specified grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47980: Maintenance authorization*string* for Oracle Database Vault to *stringstring* is not found.
Cause: Maintenance authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose different parameters and retry the operation.

ORA-47981: Maintenance authorization*string* for Oracle Database Vault to *stringstring* on schema *string* is not found.
Cause: Maintenance authorization for Oracle Database Vault was not granted to the specified user on the specified schema.

Action: Choose a different user or schema and retry the operation.

ORA-47982: Maintenance authorization*string* for Oracle Database Vault to *string* on object *string*.*string* is not found.
Cause: Maintenance authorization for Oracle Database Vault was not granted to the specified user on the specified object.

Action: Choose a different user or object and retry the operation.

ORA-47983: Diagnostic authorization for Oracle Database Vault to *string* already exists.
Cause: Diagnostic authorization for Oracle Database Vault was already granted to the specified grantee.

Action: Choose a different grantee and retry the operation.

ORA-47984: Diagnostic authorization for Oracle Database Vault to *string* is not found.
Cause: Diagnostic authorization for Oracle Database Vault was not granted to the specified user.

Action: Choose a user who has diagnostic authorization for Oracle Database Vault and retry the operation.

ORA-47985: password same as or similar to user
Cause: The password specified similar to the user account name and therefore insecure

Action: Please specify the more complex password and retry the operation

ORA-47986: password length must be 8 characters or more
Cause: The password specified is too short and therefore insecure

Action: Please specify a password with more characters and retry the operation

ORA-47987: password is too simple
Cause: The password specified can be guessed based on dictionary terms and therefore insecure

Action: Please specify a password that is not based on dictionary terms and retry the operation

ORA-47988: password should contain at least one numeric and one alphabetic character
Cause: The password does not contain at least one numeric and one alphabetic character

Action: Please specify a password with at least one numeric and one alphabetic character and retry the operation

ORA-47989: password should differ by at least 3 characters
Cause: The password specified does not differ from the previous one by more than 3 characters

Action: Please specify a password that differs from the previous one by more than 3 characters and retry the operation

ORA-47990: Function *string* has already been added to Oracle Database Vault index functions list.
Cause: The function specified had already been added to Oracle Database Vault index functions list.

Action: Choose a different function and retry the operation.

ORA-47991: Function *string* is not found in Oracle Database Vault index functions list.
Cause: The function specified was not found in Oracle Database Vault index functions list.

Action: Choose a different function and retry the operation.

ORA-47992: Function *string* is not an Oracle built-in operator.
Cause: The function specified was not provided as a built-in operator by Oracle.

Action: Choose a different function and retry the operation.

ORA-47993: cannot run dvremov.sql on the multitenant container database (CDB).
Cause: The Database Vault removal script was not supported on a multitenant container database (CDB).

Action: None

ORA-47994: Database Vault removal script must be run as SYS
Cause: The Database Vault removal script was not run as SYS.

Action: Run the Database Vault removal script as SYS.

ORA-47995: Database Vault must be linked off and disabled before removal
Cause: Database Vault was not linked off and disabled.

Action: Link Database Vault off and execute DBMS_MACADM.DISABLE_DV_CHECK as DV_OWNER.

ORA-47996: The RECYCLEBIN is turned on
Cause: The RECYCLEBIN was turned on.

Action: Turn off the RECYCLEBIN and then execute Database Vault Removal script.

ORA-47997: Database Vault protected schema does not exist
Cause: The Database Vault DVSYS protected schema did not exist.

Action: Contact Oracle Support Services for instructions.

ORA-47999: internal Database Vault error: *string*\n Error: *string*
Cause: An internal Database Vault framework error occurred.

Action: Contact Oracle Customer Support.

95

ORA-48001 to ORA-51705

ORA-48001: internal error code, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]
Cause: This is the generic internal error number for program exceptions. This indicated that a process encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

ORA-48002: thread terminated by fatal error
Cause: The thread was in an unrecoverable state.

Action: Examine the thread trace file for more information.

ORA-48003: out of process memory when trying to allocate *string* bytes (*string*,*string*)
Cause: Operating system process private memory was exhausted.

Action: n/a

ORA-48004: unable to allocate *string* bytes of shared memory ("*string*","*string*","*string*","*string*")
Cause: More shared memory is needed than was allocated in the shared pool.

Action: Reduce your use of shared memory or increase the amount of available shared memory.

ORA-48006: user requested cancel of current operation

ORA-48007: name is already used by an existing product type
Cause: An attempt was made to define a product type with the same name as an already defined product type.

Action: Use the already existing product type with the specified name, or use a different name for the product type.

ORA-48008: id is already used by an existing product type
Cause: An attempt was made to define a product type with the same id as an already defined product type.

Action: Choose a different name for the product type.

ORA-48100: error encountered when attempting to open a file
Cause: There was an error encountered when attempting to open a file with the ADR file interface.

Action: Check that the specified directory name, file name, and open options are valid.

ORA-48101: error encountered when attempting to read a file [*string*] [*string*] [*string*]
Cause: There was an error encountered when attempting to read a file with the ADR file interface.

Action: Check the specified arguments to the read interface.

ORA-48102: encountered the end-of-file when reading the file
Cause: The ADR file interface encountered the end-of-file when reading the file.

Action: Handle the end of file condition.

ORA-48103: error encountered when attempting to write a file [*string*] [*string*] [*string*]
Cause: There was an error encountered when attempting to write a file with the ADR file interface.

Action: Check the specified arguments to the write interface.

ORA-48104: read mismatch on blocks requested and returned, [*string*], [*string*]
Cause: There was a mismatch between the number of blocks requested for reading and the number of blocks actually returned.

Action: Check the file to make sure there are no partial blocks.

ORA-48105: write mismatch on blocks requested and returned, [*string*], [*string*]
Cause: There was a mismatch between the number of blocks requested for writing and the number of blocks actually written.

Action: Check that there is enough space left on the device to write the requested number of blocks.

ORA-48106: error initializing the ADR *string* object
Cause: There was an error encountered during the initialization of one of the ADR file objects.

Action: Check the validity of the specified directory name and file name.

ORA-48107: invalid Bfile input, [*string*]
Cause: An invalid Bfile was passed into the routine to convert the bfile into a file handle.

Action: Verify the contents of the specified Bfile.

ORA-48108: invalid value given for the diagnostic_dest init.ora parameter
Cause: The value given for the diagnostic_dest directory is not a valid directory. Either the directory does not exist or the process does not have read/write privileges on the directory.

Action: Use a value for diagnostic_dest that is a valid directory with the proper read and write privileges.

ORA-48109: invalid lock mode for file descriptor, [*string*]
Cause: The lock mode associated with the file descriptor was invalid in the context of the routine.

Action: Verify that a file is not trying to obtain multiple locks and that the file is holding a lock when attempting to release the lock.

ORA-48110: error encountered while attempting to get a file lock [*string*] [*string*]
Cause: There was an error encountered while trying to get a file lock.

Action: Check the state of the file and operating system.

ORA-48111: error encountered while attempting to release a file lock [*string*]
Cause: There was an error encountered while trying to release a file lock.

Action: Check the state of the file and operating system.

ORA-48112: invalid flags for open file, *string*
Cause: Invalid flags were passed in to the open file routine.

Action: Check to see if the flags are a valid combination.

ORA-48113: unable to write to stream file because of out of space condition
Cause: The system is unable to write the requested number of bytes to a stream file. This is due to an out of space condition. The additional information shows how many bytes were not written.

Action: Check that there is enough space left on the device to write the requested number of bytes.

ORA-48114: error encountered when attempting to close a file
Cause: There was an error encountered when attempting to close a file with the ADR file interface.

Action: Check the validity of the file descriptor.

ORA-48115: error encountered while seeking a file position
Cause: There was an error encountered while seeking a position in a file.

Action: Check that the requested file position falls within the file boundaries.

ORA-48116: error encountered when attempting to create a directory [*string*]
Cause: There was an error encountered when attempting to create a directory.

Action: Check the directory name.

ORA-48117: error encountered when attempting to remove a directory [*string*]
Cause: There was an error encountered when attempting to remove a directory.

Action: Check the directory name.

ORA-48118: error encountered with list directory [*string*]
Cause: There was an error with listing the elements of a directory.

Action: Check the state of the operating system.

ORA-48119: error encountered when attempting to remove a file [*string*] [*string*]
Cause: There was an error encountered when attempting to remove a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48120: error encountered when attempting to retrieve the file size [*string*] [*string*]
Cause: There was an error encountered when attempting to retrieve the file size with the ADR file interface.

Action: Check the directory name and file name.

ORA-48121: error with opening the ADR stream file [*string*] [*string*]
Cause: An error was encountered when attempting to open an ADR stream file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

ORA-48122: error with opening the ADR block file [*string*] [*string*]
Cause: An error was encountered when attempting to open an ADR block file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

ORA-48123: error encountered when attempting to flush a file
Cause: There was an error encountered when attempting to flush a file with the ADR file interface.

Action: Check the state of the file.

ORA-48124: device full encountered during write to a file
Cause: The device full error was encountered during the write to a file.

Action: Check the amount of free space on the device.

ORA-48125: illegal identifier length, argn:*string*, len:*string*, lim:*string*
Cause: An input identifier was passed in that has a length that is greater than the max length.

Action: Make sure the input identifier has a length that is less than the max length.

ORA-48126: attempting to create a file that already exists
Cause: The client attempted to create a file that already exists.

Action: Either remove the file or check if it is okay if the file already exists.

ORA-48127: attempting to open a file that does not exist
Cause: An attempt was made to open a file that does not exist.

Action: Either create the file or check why the file does not exist.

ORA-48128: opening of a symbolic link is disallowed
Cause: An error was encountered when attempting to open a file that is a symbolic link. Users are not allowed to open symbolic links.

Action: Check the specified file name.

ORA-48129: invalid input for the full path specification
Cause: Input was incorrectly specified for the full path specification, or the default extension may have been incorrectly specified. Or an empty string was passed in for the full path.

Action: Check that the full path string is non-NULL. If you want to specify a relative path from ADR Home for the full path specification, then use '<ADR_HOME>' instead of the actual path to ADR Home. For ADR Base, use '<ADR_BASE>'.

ORA-48130: invalid lock parameters for get file lock [*string*]
Cause: Invalid lock parameters passed in for the get file lock routine. The user must pass in file as the lock type. Or, there is a lock mode mismatch. Exclusive locks are not allowed in read-only mode, and shared locks are not allowed in write-only mode.

Action: Check that correct lock type is specified and that the correct lock mode is requested for the file given its open flags.

ORA-48131: error encountered when attempting to tell the file position
Cause: An error was encountered when attempting to tell the file position using the ADR file interface.

Action: Check the directory and file name of the file along with the open state.

ORA-48132: requested file lock is busy, [*string*] [*string*]
Cause: The requested file lock is busy because another process is holding the file lock.

Action: Try to get the file lock again at a later time.

ORA-48133: file descriptor has already been opened [*string*] [*string*]
Cause: The specified file descriptor has already been opened.

Action: Do not open a file that has previously been opened, or check your code to make sure you are cleaning up a file descriptor that is being reused correctly.

ORA-48134: invalid file descriptor state for operation, *string*, *string*, *string*
Cause: The state of the file descriptor was invalid for the requested operation. An example is that a file was opened for read, but a write operation to the file was requested.

Action: Check the state of the file descriptor and make sure it matches the operation.

ORA-48135: uninitialized file descriptor
Cause: The specified file descriptor is uninitialized.

Action: Make sure the file descriptor is initialized before passing it into the routine.

ORA-48136: directory already exists [*string*]
Cause: Operation failed because the specified directory already exists.

Action: Remove the directory or ignore this error.

ORA-48137: uninitialized file handle
Cause: The specified file handle is uninitialized.

Action: Make sure the file handle is initialized before passing it into the routine.

ORA-48138: invalid directory name input for client address
Cause: An invalid directory name was specified as part of the address path specification.

Action: Check that the directory name is non-NULL and that the directory name length does not exceed the maximum length.

ORA-48139: invalid input to ADR initialization routine
Cause: There was an invalid input to the ADR initialization routine.

Action: Check the length of the ADR base, product ID, and instance ID input arguments.

ORA-48140: the specified ADR Base directory does not exist [*string*]
Cause: The specified ADR Base Directory does not exist.

Action: Check that the specified ADR Base Directory is a valid path name and that the directory exists.

ORA-48141: error creating directory during ADR initialization [*string*]
Cause: Error encountered when creating a directory during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system.

ORA-48142: invalid permissions input for change permissions
Cause: Invalid permissions passed into change permissions routine.

Action: Check the value of the permissions input.

ORA-48143: error changing permissions for a file
Cause: Error encountered while changing the permissions for a file

Action: Check the specified directory and file and the state of the operating system.

ORA-48144: error encountered while performing standard file I/O
Cause: Error encountered while performing standard file I/O

Action: Check the validity of standard in, out, and error.

ORA-48145: invalid seek location, [*string*], [*string*]
Cause: Invalid seek location specified for routine.

Action: Check the validity of specified seek location.

ORA-48146: missing read, write, or exec permission on directory during ADR initialization [*string*] [*string*]
Cause: Error encountered when checking if the process has read, write, and exec privileges on directories needed by the ADR subsystem. This error occurs during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system. Ensure that the user has the proper permissions on the ADR directories.

ORA-48147: invalid home location specification for ADR, [*string*], [*string*], [*string*]
Cause: Invalid read or write home location specification for ADR.

Action: An invalid home was specified for the ADR Read or Write Home location.

ORA-48148: error encountered when attempting to move a file
Cause: There was an error encountered when attempting to move a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48149: error encountered when attempting to copy a file
Cause: There was an error encountered when attempting to copy a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48150: error encountered with set current working directory
Cause: There was an error with setting the current working directory.

Action: Check the path used, or the state of the operating system.

ORA-48151: error getting operating system time for a file
Cause: Error encountered while getting the operating system time for a file.

Action: Check the specified directory and file and the state of the operating system.

ORA-48152: lock table is full
Cause: Lock table is full - too many locks granted

Action: Try again later

ORA-48153: error encountered when getting ADR base directory default
Cause: There was an error encountered when attempting to get the ADR base directory default value.

Action: Check your environment to see if the $ORACLE_BASE and $ORACLE_HOME environment variables are set.

ORA-48154: reached end of file for alert log
Cause: The end of file was reached for reading the Alert Log. There are no more messages to read in the Alert Log.

Action: Do not read from the Alert Log

ORA-48155: error encountered when read alert log [*string*]
Cause: There was an error encountered when attempting to read a message from the Alert Log.

Action: Check the error message and the contents of the alert message.

ORA-48156: Alert log purge has occurred - retry operation
Cause: The purge of the alert log has occurred.

Action: Retry the operation.

ORA-48157: null input to ADR initialization
Cause: There was an null input to the ADR initialization routine.

Action: Check the ADR base, product ID, and instance ID input arguments.

ORA-48158: invalid input for ADR base directory
Cause: An invalid input was passed in for the ADR base directory name. The ADR base directory name is either NULL or too long of a string.

Action: Check the ADR base directory input argument.

ORA-48159: invalid input for ADR product type
Cause: An invalid input was passed in for the ADR product type. The ADR product type is out of bounds.

Action: Check the ADR product type input argument.

ORA-48160: invalid input for ADR product id
Cause: An invalid input was passed in for the ADR product id. The ADR product id is either NULL or too long of a string.

Action: Check the ADR product id input argument.

ORA-48161: invalid input for ADR instance id
Cause: An invalid input was passed in for the ADR instance id. The ADR instance id is either NULL or too long of a string.

Action: Check the ADR instance id input argument.

ORA-48162: string buffer too small to hold input, [*string*], [*string*], [*string*]
Cause: The string buffer is too small to copy an input string into.

Action: Check the size of the string buffer and the input string. Look in the argument for the location in the code where the error occurs.

ORA-48163: error concatenating directory onto path, [*string*], [*string*], [*string*]
Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

ORA-48164: error concatenating file onto path, [*string*], [*string*], [*string*]
Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

ORA-48165: user missing read, write, or exec permission on specified ADR Base directory [*string*]
Cause: The specified ADR Base Directory does not have the correct permissions.

Action: Check the read, write, and exec permissions on the specified ADR Base Directory

ORA-48166: error with opening ADR block file because file does not exist [*string*] [*string*]
Cause: An error was encountered with opening an ADR block file because the file does not exist.

Action: Check the existence of the ADR Block File.

ORA-48167: invalid argument for checking ADR initialization
Cause: Invalid arguments were specified for the routine to check ADR initialization.

Action: Check the inputs to the ADR initialization routine.

ORA-48168: the ADR sub-system is not initialized
Cause: The ADR subsystem has not been initialized. The requested operation cannot be performed.

Action: Check the usage of the call to the ADR services. The ADR sub-system must be initialized for the call to work.

ORA-48169: incorrect arguments to ADR deferred initialization
Cause: There are incorrect arguments to the ADR deferred initialization.

Action: Check the input arguments. It could be possible that the product is not set up for deferred initialization.

ORA-48170: unable to lock file - already in use
Cause: the file is locked by another process, indicating that it is currently in use by another process

Action: determine which process legitimately owns this file.

ORA-48171: unable to get share lock - file not readable
Cause: share lock request was made on a file not open for read access.

Action: file must be open read-only or read-write to get a share lock.

ORA-48172: unable to find a valid ADR base
Cause: Unable to find a valid ADR base. We tried the ORACLE_BASE, ORACLE_HOME, home, and tmp directories, but none of the directories exist for read/write access.

Action: Check the validity of the ORACLE_BASE, ORACLE_HOME, home, and tmp directories.

ORA-48173: error checking directory existence during ADR initialization [*string*]
Cause: Error encountered when checking directory existence during the initialization of the ADR subsystem. Either the diag or product type directory does not exist underneath the ADR base.

Action: The directory in the error message must exist in order for ADR initialization to succeed. Make sure the directories exist.

ORA-48174: error encountered with get current working directory
Cause: There was an error with getting the current working directory.

Action: Check the state of the operating system or the size of the path buffer.

ORA-48175: the path name must not contain the string '..'.
Cause: The specified path name contains '..'.

Action: Correct the path name and retry the operation.

ORA-48176: error translating a path name into its full path name
Cause: An error was encountered when translating a path name into its full path name.

Action: Check the inputted path name to make sure it is a valid relative path.

ORA-48177: file name with full path information [*string*] not allowed
Cause: Input was incorrectly specified for the file name. The inputted file name is greater than the maximum length, or the file name has path information. In this case, the file name should not have any path information. The path information should be specified in a separate argument.

Action: Check that the string for the file name is not too long and does not have path information.

ORA-48178: error encountered while reading an ADR block file during ADR initialization [*string*]
Cause: An error was encountered while reading an ADR block file during the initialization of the ADR subsystem.

Action: Check the state of the file system.

ORA-48179: OS file synchronization failure
Cause: OS command to synchronize the changes to a file with the operating system failed.

Action: Check the state of the file system and the amount of free space left on your device.

ORA-48180: OS open system call failure
Cause: OS open system call failed. The system failed to open or create a file in the requested mode.

Action: Check the OS error code

ORA-48181: OS write system call failure
Cause: OS write system call failed. The system failed to write to a file.

Action: Check the OS error code

ORA-48182: OS read system call failure
Cause: OS read system call failed. The system failed to read to a file.

Action: Check the OS error code

ORA-48183: OS close system call failure
Cause: OS close system call failed. The system failed to close a file.

Action: Check the OS error code

ORA-48184: OS seek system call failure
Cause: OS seek system call failed. The system failed to seek to a position in a file.

Action: Check the OS error code

ORA-48185: OS file size system call failure
Cause: OS file size call failed. The system failed to retrieve the file size for a file.

Action: Check the OS error code

ORA-48186: OS check file exists system call failure
Cause: OS check file exists system call failed. The system failed to perform the check file exists command for a file.

Action: Check the OS error code

ORA-48187: specified directory does not exist
Cause: The specified directory does not exist.

Action: Check the directory name.

ORA-48188: user missing read, write, or exec permission on specified directory
Cause: The user does not have valid permissions on the specified directory. The user is missing either the read, write, or execute permission.

Action: Check the permissions of the specified directory.

ORA-48189: OS command to create directory failed
Cause: The OS command to create a directory failed.

Action: Check the error number associated with the create directory failure.

ORA-48190: OS unlink system call failure
Cause: OS unlink system call failed. The system failed to perform unlink on the specified file.

Action: Check the OS error code

ORA-48191: user missing read or write permission on specified file
Cause: The user does not have valid permissions on the specified file. The user is missing either the read or write permission.

Action: Check the permissions of the specified file.

ORA-48192: OS command to move a file failed
Cause: The OS command to move a file failed.

Action: Check the error number associated with the move file.

ORA-48193: OS command to open a directory failed
Cause: The OS command to open a directory failed.

Action: Check the OS error associated with the open directory failure.

ORA-48194: OS command to close a directory failed
Cause: The OS command to close a directory failed.

Action: Check the OS error associated with the close directory failure.

ORA-48195: OS command to remove a directory failed
Cause: The OS command to remove a directory failed.

Action: Check the OS error associated with the remove directory failure.

ORA-48196: OS command to release advisory lock failed
Cause: The OS command to release the advisory lock failed

Action: Check the OS error associated with the release advisory lock failure.

ORA-48197: OS command to get the file status failed
Cause: The OS command to get the file status failed. This could be because the file is not open or file descriptor is invalid.

Action: Check the OS error associated with the get file status failure.

ORA-48198: OS command to change the file permissions failed
Cause: The OS command to change the file permissions failed.

Action: Check the OS error associated with the failure.

ORA-48199: OS command to copy a file failed
Cause: The OS command to copy a file failed.

Action: Check the error number associated with the copy file.

ORA-48200: Illegal Input Argument [*string*]
Cause: An illegal argument was passed in.

Action: Fix the call.

ORA-48201: Field Length Exceeds Maximum [*string*] [*string*] [*string*]
Cause: An illegal field length was used.

Action: Fix the call.

ORA-48202: Illegal Identifier [*string*] [*string*]
Cause: Illegal identifier specified.

Action: Use a valid identifier.

ORA-48203: Illegal Data Type [*string*]
Cause: Illegal data type specified.

Action: Use a valid data type.

ORA-48204: Illegal Identifier Length [*string*] [*string*] [*string*]
Cause: The input identifier is too long.

Action: Specify a shorter identifier.

ORA-48205: Record Length too Big [*string*] [*string*] [*string*]
Cause: The sum of the maximum lengths of all fields exceeds the maximum record length that is supported.

Action: Remove or shorten some of the fields.

ORA-48206: Illegal Number of Fields [*string*] [*string*] [*string*]
Cause: The number of fields specified exceeds the supported maximum.

Action: Remove some of the fields in the relation.

ORA-48207: Illegal Field Name [*string*]
Cause: The field name is invalid.

Action: Specify a valid field name.

ORA-48208: Duplicate Field Names [*string*]
Cause: The list of fields specified contains a duplicate field.

Action: Remove the duplicate field.

ORA-48209: Relation Already Exists
Cause: The relation already exists.

Action: Remove the relation.

ORA-48210: Relation Not Found
Cause: The relation was not found.

Action: Either specify a valid relation name or create one with that name.

ORA-48211: Illegal Access Mode [*string*] [*string*]
Cause: The supplied access mode is not recognized.

Action: Supply a valid mode.

ORA-48212: Open Record Access Not Done
Cause: The open record access call was not performed.

Action: The open record access call is required before attempting this call.

ORA-48213: Incorrect Access Mode for Operation [*string*] [*string*]
Cause: The relation was opened in a mode not compatible with the attempted operation being done.

Action: Reopen the relation in the correct mode.

ORA-48214: Sequence Overflow [*string*] [*string*] [*string*]
Cause: The sequence number will exceed the system maximum.

Action: Reset the sequence number.

ORA-48215: Sequence Invalid Operation [*string*] [*string*]
Cause: The specified sequence operation is not valid.

Action: Specify a valid operation.

ORA-48216: Field Len Exceeds Max Field Length [*string*] [*string*] [*string*] [*string*]
Cause: The field length specified exceeds the defined maximum for the field.

Action: Supply a smaller field length.

ORA-48217: Out of Space on Device
Cause: The storage subsystem is out of space.

Action: Add more space to the storage subsystem.

ORA-48218: Duplicate Key Name [*string*] [*string*]
Cause: The key name already exists.

Action: Specify a different key name.

ORA-48219: Key Name Doesn't Match Any Existing Key
Cause: The key name provided doesn't match an existing key.

Action: Specify a key name that exists.

ORA-48220: Too Many Keys Defined [*string*] [*string*]
Cause: A key is trying to be created that exceeds the maximum number of keys supported.

Action: Drop another key.

ORA-48221: Key Exceeds Maximum Allowed Length [*string*] [*string*] [*string*]
Cause: The sum of the lengths of the fields in the key exceeds the maximum length supported.

Action: Remove one or more fields from the key.

ORA-48222: Predicates/Order By Not Allowed
Cause: A predicate or order by can not be added after fetch has started.

Action: Put the predicate or order by call before the first fetch.

ORA-48223: Interrupt Requested - Fetch Aborted - Return Code [*string*] [*string*]
Cause: User interrupt has occurred.

Action: None

ORA-48224: DDL has occurred since parse - reparse [*string*] [*string*] [*string*]
Cause: Another session has performed a DDL (i.e. add field, create key, drop key) that prevents this session from being to continue.

Action: Call open record access again.

ORA-48225: No More Space in Order By Buffer
Cause: The order by buffer size is not sufficient for the number of rows.

Action: Increase the order by buffer size specified.

ORA-48226: No Fetch in Progress
Cause: An attempt to perform update or delete has occurred without a fetch.

Action: You must first perform a fetch.

ORA-48227: Invalid Relation File - [*string*] [*string*] [*string*] [*string*]
Cause: The AMS file is invalid or corrupt.

Action: Do a repair relation

ORA-48228: Missing Define Call [*string*]
Cause: A call to define was not performed before doing a fetch.

Action: Call the define service before fetch.

ORA-48229: Invalid Relation Handle Provided [*string*] [*string*]
Cause: An invalid or corrupt relation handle was used.

Action: Possible memory corruption.

ORA-48230: Expression arguments must match types
Cause: Incorrect type semantics for fields in the predicate.

Action: Correct the predicate.

ORA-48231: Predicate syntax error
Cause: A syntax error exists in the predicate string.

Action: Correct the predicate.

ORA-48232: Debug command syntax error [*string*]
Cause: An invalid debug command has been specified.

Action: Correct the debug command.

ORA-48233: Invalid Field Handle [*string*] [*string*] [*string*]
Cause: The field handle is invalid.

Action: Possible memory corruption.

ORA-48238: Invalid Surrogate Length Specified [*string*] [*string*]
Cause: An invalid length during create field was specified

Action: Specify a correct length

ORA-48239: Invalid Predicate Handle Provided [*string*] [*string*]
Cause: An invalid or corrupt relation handle was used.

Action: Possible memory corruption.

ORA-48240: Field is NOT NULL but NULL value supplied
Cause: A field [%s] declared to not allow nulls contains a null value.

Action: Specify a correct value

ORA-48242: Fields that are NOT NULL can not use surrogates
Cause: NOT NULL fields can not have surrogates specified.

Action: Either remove the constraint or the surrogate.

ORA-48243: Additional Fields must be declared nulls allowed
Cause: A field can not be added to a relation that is defined NOT NULL

Action: Do not specify NOT NULL

ORA-48244: Purge for Retention can't be called while in an Query
Cause: A query is already running - purge for retention can't be invoked

Action: Fix call sequence

ORA-48245: Attempt to Update/Delete when at EOF
Cause: The fetch operation is positioned at EOF - can not update/delete

Action: Do not call update/delete after fetch has returned EOF

ORA-48246: Illegal Operation on External Relation
Cause: An illegal call was made using an external relation

Action: Do not perform the API Call

ORA-48247: Predicate Conversion Error *string*
Cause: A time conversion failed

Action: Fix the input

ORA-48248: Function *string* type check error; ityp = *string* typ = *string* arg = *string*
Cause: Invalid inputs to the specified function

Action: Change the inputs

ORA-48251: Failed to open relation due to following error
Cause: See error below in the error stack

Action: See error below in the error stack

ORA-48252: Relation does not require migration
Cause: Relation on disk is compatible with the current code

Action: Don't run the migration services

ORA-48258: AMS Corrupt Page Found - Rebuild Relation
Cause: A corrupted page has been found.

Action: Do a rebuild of the relation

ORA-48259: AMS Relation not Created Correctly
Cause: Create relation failed

Action: Recreate the relation

ORA-48260: Function *string* not found
Cause: A reference to a function that is not valid was found

Action: Fix the function name

ORA-48262: Sequence references not allowed in predicates
Cause: References to currval or nextval not allowed

Action: Remove these references

ORA-48263: Currval not set yet - use nextval
Cause: References to currval can't occur until a nextval is done

Action: Remove the reference

ORA-48265: Incorrect number of arguments (*string*) provided - expected (*string*)
Cause: Number of arguments to function is incorrect

Action: Specify the correct number of arguments

ORA-48291: Field name *string* can't be unique resolved
Cause: Field name appears in more than one relation

Action: Prefix the field name with the relation name

ORA-48292: Can't use outer join syntax mixed with inner join syntax
Cause: The join condition was specified using both inner and outer join elements"

Action: Specify the join condition correctly

ORA-48293: Outer join syntax not allowed without a join
Cause: Using outer join syntax in the predicate without doing a join

Action: Fix the predicate

ORA-48300: Incident Record Already Exists
Cause: trying to create an incident that already exists

Action: retry operation with new incident ID

ORA-48301: An Invalid Incident ID was specified
Cause: the specified incident ID was invalid

Action: retry operation with correct incident ID

ORA-48302: Incident Directory does not exist
Cause: the incident directory was not found

Action: retry operation with a different incident ID

ORA-48303: Exceeded max Incident Sequence Value
Cause: the maximum supported incident sequence value was exceeded

Action: reset incident sequence and retry operation

ORA-48304: incident staging file not found
Cause: the incident staging file is missing

Action: retry with a different incident ID

ORA-48305: incident ID range is too large
Cause: the maximum incident sequence value was exceeded

Action: retry operation with a smaller range

ORA-48309: illegal incident state transition, [*string*] to [*string*]
Cause: the incident cannot be moved to the new state

Action: retry operation with a valid incident status

ORA-48310: Incident *string* staging file not found
Cause: the incident staging file does not exist

Action: retry operation with a valid incident ID

ORA-48311: Invalid field name [*string*]
Cause: the specified field name is invalid

Action: retry operation with a valid field name

ORA-48312: Sweep incident *string* staging file failed
Cause: the sweep action of incident staging file failed

Action: check the incident ID and retry

ORA-48313: Updates not allowed on ADR relation [*string*] of Version=*string*
Cause: Update operations not supported on this version of ADR relation

Action: check ADR version and retry

ORA-48314: Invalid ADR Control parameter [*string*]
Cause: the specified control parameter is invalid

Action: check parameter and reissue command

ORA-48315: ADR unavailable
Cause: the ADR directory is not available

Action: enable ADR and retry operation

ORA-48316: relation [*string*] unavailable or cannot be created
Cause: the ADR relation is not available

Action: check ADR directory and retry operation

ORA-48317: ADR Relation [*string*] of version=*string* is obsolete
Cause: the version of ADR relation is too old and not supported

Action: check the ADR version and retry

ORA-48318: ADR Relation [*string*] of version=*string* cannot be supported
Cause: the version of ADR relation is too new and cannot be supported

Action: need to use a newer release to access the ADR

ORA-48319: Update operation on ADR relation [*string*] not allowed
Cause: updates to foreign ADR relation cannot be supported

Action: verify ADR location and reissue command

ORA-48320: Too many incidents to report
Cause: the result set of incidents is too large to handle

Action: use a predicate to reduce the number of incidents and retry

ORA-48321: ADR Relation [*string*] not found
Cause: the required ADR relation is missing, ADR may be corrupted

Action: check ADR directory and retry

ORA-48322: Relation [*string*] of ADR V[*string*] incompatible with V[*string*] tool
Cause: the tool version is incompatible with the ADR version

Action: use another version of tool and retry

ORA-48323: Specified pathname [*string*] must be inside current ADR home
Cause: A file outside of ADR home was not allowed for this type of file.

Action: Check the file name and retry.

ORA-48324: Incompatible staging file encountered
Cause: sweep incident failed because staging file is incompatible

Action: check the incident ID and version of ADR and retry

ORA-48339: view [*string*] does not exist
Cause: view has not been created

Action: verify view name and reissue command

ORA-48340: operation not supported on view [*string*]
Cause: unsupported (dml) operation on views

Action: verify relation name and reissue command

ORA-48341: Field [*string*] not a grouping field
Cause: the field name specified is not a grouping field

Action: verify field names and groupby clause and reissue command

ORA-48342: Field [*string*] cannot be mixed with *string* fields
Cause: the specified field is incompatible with other grouping fields

Action: verify this and other field names and reissue command

ORA-48343: invalid field [*string*] reference in *string* clause
Cause: the specified field in the specified clause is invalid

Action: verify this field name and reissue command

ORA-48344: Invalid Name [*string*] specified
Cause: Either the name refers to an existing object or violates the reserved namespace rules.

Action: Pick another name

ORA-48345: Timeout encountered during operation
Cause: The attempted operation conflicted with another operation that was already being executed.

Action: Retry operation at a later time.

ORA-48400: ADRCI initialization failed
Cause: The ADR Base directory does not exist

Action: Either create an ADR Base directory or point to an existing one

ORA-48401: SET command requires arguments
Cause: No arguments are input for the SET command

Action: Input the arguments

ORA-48402: Variable is not defined
Cause: No substitution value is input.

Action: Input the substitution value following after the variable name.

ORA-48403: DEFINE or UNDEFINE command has no arguments
Cause: DEFINE and UNDEFINE command need users to input the substitution variable name.

Action: Input the variable name after the keyword DEFINE or UNDEFINE

ORA-48404: RUN or @ command has no arguments
Cause: RUN and @ commands need users to input script filename

Action: Input script filename after RUN and @ commands

ORA-48405: The option in the command is invalid
Cause: The option is not allowed in the command

Action: Check the command syntax

ORA-48406: ECHO or TERMOUT status must be set to ON or OFF
Cause: the status of ECHO and TERMOUT commands must be ON or OFF

Action: input ON or OFF

ORA-48407: DESCRIBE and QUERY commands need at least relation name argument
Cause: This is no relation name is input as argument

Action: Need users to input at least the relation name

ORA-48408: The incident number exceeds the maximum number [*string*]
Cause: The input incident number exceeds the maximum number

Action: Input fewer incidents

ORA-48409: The ADR homes exceed the maximum number [*string*]
Cause: The input ADR homes number exceeds the maximum number

Action: Input shorter ADR home string

ORA-48410: The trace path exceeds the maximum number [*string*]
Cause: The input trace path exceeds the maximum number

Action: Input less trace path

ORA-48411: The trace files exceed the maximum number [*string*]
Cause: The input trace file path number exceeds the maximum number

Action: Input less trace file path

ORA-48412: The parameters exceed the maximum number [*string*]
Cause: The input parameter number exceeds the maximum number

Action: Input fewer parameters

ORA-48413: The number of orderby fields exceeds maximum number [*string*]
Cause: The orderby field number exceeds the maximum number

Action: Input fewer fields

ORA-48414: The string in the execution option exceeds maximum length [*string*]
Cause: The string length is too long

Action: Divide the commands into two sets or use adrci scripts.

ORA-48415: Syntax error found in string [*string*] at column [*string*]
Cause: Parsing error found in the user input string

Action: Validate the input string

ORA-48419: Illegal arguments
Cause: The input argument is illegal

Action: Check the input arguments and make sure it is not null

ORA-48421: Predicate string in the command must be single or double quoted
Cause: The predicate string is not single or double quoted

Action: Put single or double quotes around the predicate string

ORA-48422: Invalid relation field type [*string*]

ORA-48423: IMPORT command must have a filename
Cause: File name is missing from the command

Action: Input the import file name after the IMPORT keyword

ORA-48424: SHOW TRACE command needs argument
Cause: SHOW TRACE command needs arguments

Action: Input arguments

ORA-48426: The initialization filename is too long
Cause: The initialization filename length exceeds the maximum length

Action: This is really an internal setting parameter of the ADRCI, report it as a bug. Alternatively move the initialization file to the current working directory

ORA-48427: Unknown command

ORA-48428: Input command string exceeds max length [*string*]
Cause: The current command string is too long and exceeds the limit

Action: Input less characters

ORA-48429: Variable name [*string*] is an invalid identifier
Cause: The substitution variable name is not a valid identifier

Action: Input the valid identifier defined by ADRCI

ORA-48430: Cannot read the parameter

ORA-48431: Must specify at least one ADR home path
Cause: The command syntax requires at least one ADR home path to be input

Action: Check the command syntax and input the home path

ORA-48432: The ADR home path [*string*] is not valid
Cause: The adr home user inputs is not valid, which may due to the path does not exist.

Action: Check if the input home path exists

ORA-48433: Unknown help topic
Cause: The input topic is unknown

Action: Check if the topic is valid

ORA-48434: No DDE commands are input
Cause: No DDE commands are input

Action: Input a DDE command

ORA-48435: Input a trace file
Cause: Show trace expects a trace file

Action: Input a trace file

ORA-48436: File [*string*] does not exist
Cause: the file does not exist

Action: Validate the trace file name

ORA-48437: No IPS commands are input
Cause: No IPS commands are input

Action: Input a IPS command

ORA-48438: [*string*] is not a valid number
Cause: The input number is not valid

Action: Check the input number

ORA-48439: The input path name exceeds the maximum length [*string*]
Cause: The input path name is too long

Action: Report as a bug to change the limit

ORA-48440: Variable [*string*] is already defined
Cause: The variable name is defined previously

Action: Use another variable name

ORA-48441: The function parameter number exceeds the maximum number [*string*]
Cause: The function parameter number exceeds the maximum number

Action: Report it as bug to change the maximum number

ORA-48442: The number of control parameters exceeds the maximum allowed [*string*].
Cause: The control parameters exceeded the maximum number allowed.

Action: Check the parameters. If the parameters are correct, contact Oracle Support Services.

ORA-48443: Trace Record type appears in the middle of the path
Cause: The trace record cannot be in the middle of the path

Action: Validate the input

ORA-48444: The single "." and "*" cannot appear in the middle of the path
Cause: The single "." and "*" appears in the middle of the path

Action: Validate the input

ORA-48445: Path expression only supports one bucket dump type
Cause: The path expression only supports one bucket dump"

Action: Change the path expression syntax

ORA-48446: The command needs path input
Cause: No path is input as a parameter

Action: Input the path

ORA-48447: The input path [*string*] does not contain any ADR homes
Cause: The input path does not contain ADR homes

Action: Validate the path

ORA-48448: This command does not support multiple ADR homes
Cause: There are multiple homes in the current adr setting.

Action: Use command SET HOMEPATH to set a single home

ORA-48449: Tail alert can only apply to single ADR home
Cause: There are multiple homes in the current setting

Action: Use command SET HOMEPATH to set a single home

ORA-48450: Syntax:\n

ORA-48451: adrci [-help] [-script script_filename]\n\n

ORA-48452: Options Description (Default)\n

ORA-48453: ----------\n

ORA-48454: script script file name (None) \n

ORA-48455: help help on the command options (None) \n

ORA-48456: ----------\n

ORA-48457: ADRCI core dumped
Cause: It is adrci internal error.

Action: Report to Oracle

ORA-48458: "show incident" failed due to the following errors
Cause: There could be a bug or users do not have the access permission

Action: Report to Oracle if the errors are not due to ADR permission settings

ORA-48459: "describe" command only supports one ADR home path
Cause: Multiple ADR home paths in the command

Action: put one ADR home path

ORA-48460: The home path [*string*] is not valid
Cause: The input home path is not valid home path

Action: Verify the homepath

ORA-48461: "describe" failed due to the following errors
Cause: Underlying code failed

Action: If it is not due to permission issue, report to Oracle

ORA-48462: Fatal error encountered in [*string*]
Cause: Fatal error encountered

Action: Report to Oracle

ORA-48463: The value buffer reached the maximum length [*string*]
Cause: The value buffer is full

Action: Report to Oracle

ORA-48464: The predicate buffer reached the maximum length [*string*]
Cause: The predicate buffer is too small

Action: Report to Oracle

ORA-48465: The specified type [*string*] is undefined
Cause: The purge type specified is undefined

Action: Check the type name

ORA-48466: Internal failure, the report context is not initialized
Cause: Internal problem failure.

Action: Report to Oracle

ORA-48467: "*string*" for the keyword "*string*" is not a valid number
Cause: The keyword value is not a valid number

Action: Check the value

ORA-48468: "*string*" is not a valid keyword
Cause: The keyword is not defined for the command

Action: Check the available keywords

ORA-48469: Keyword "*string*" cannot be duplicated
Cause: The command can only allow one key with the name

Action: Remove one keyword name from the command

ORA-48470: Unknown "*string*" command
Cause: The command is not valid

Action: Use help manual to check the command syntax

ORA-48472: Invalid product name
Cause: The product name provided does not exist

Action: Specify a product name, see HELP SHOW BASE

ORA-48473: Internal failure, unknown return code [*string*]
Cause: Internal program failure

Action: Report to Oracle

ORA-48474: Syntax error specifying product, must not be NULL
Cause: The product clause is being used, but no product name is provided

Action: Supply the product name

ORA-48475: [*string*] is not a valid timestamp
Cause: The input timestamp string is not in valid format

Action: None

ORA-48476: Cannot write the results out to a file, please check if \nthe environment variable TMPDIR is set or the current directory is \nnot writable
Cause: The current path may not be writable

Action: If the current path is writable, report to Oracle

ORA-48477: The input path does not contain any valid ADR homes
Cause: The input path does not contain any valid ADR homes

Action: Check the path if it is valid

ORA-48478: No alert messages are created
Cause: No alert messages are created

Action: No action

ORA-48479: No HM runs are created
Cause: There is no hm runs

Action: No action

ORA-48480: No incidents are created
Cause: There is no incident

Action: No action

ORA-48481: Report is not available
Cause: The requested report does not exist"

Action: Check the report ID

ORA-48482: Report is not generated
Cause: The requested report is not ready to be generated

Action: Check the report ID

ORA-48483: Spooling failed, it may be because the spool file cannot be created due to a permission issue
Cause: The spooling filename may not be valid or the file cannot be created

Action: Check the permissions of the target directory and verify the filename

ORA-48484: Run script failed, it may be because the script file does not exist
Cause: The script file may not exist

Action: Check if the script file exist

ORA-48485: The file exceeds the maximum length [*string*]
Cause: The filename is too long

Action: Report to Oracle

ORA-48486: The file [*string*] exceeds the maximum length [*string*]
Cause: The filename is too long

Action: Report to Oracle

ORA-48487: The internal predicate string exceeds the maximum length [*string*]
Cause: The predicate string exceeds the maximum length

Action: Report to Oracle

ORA-48488: The predicate string exceeds the maximum length [*string*]
Cause: The input predicate string exceeds the maximum length

Action: Report to Oracle

ORA-48489: The input exceeds the maximum length [*string*]
Cause: The input exceeds the maximum length

Action: Report to Oracle

ORA-48490: The field number exceeds the maximum number [*string*]
Cause: The input field number exceeds the maximum number

Action: Input less field names

ORA-48491: The program name is too long, exceeds the maximum length [*string*]
Cause: the program name length exceeds the maximum length setting

Action: Report to Oracle

ORA-48492: The report component name is not defined
Cause: the report component name does not exist

Action: Check the component name to ensure it is registered

ORA-48493: Sweep command needs parameters
Cause: sweep command needs parameter

Action: Check the syntax of the command

ORA-48494: ADR home is not set, the corresponding operation cannot be done
Cause: The adr home is not set in the current adrci session

Action: Set the adr home using the adrci command "set base" and "set homepath"

ORA-48495: Interrupt requested
Cause: User requested to interrupt the current action

Action: No action is needed

ORA-48496: "*string*" is a mandatory keyword for the command
Cause: The keyword is not specified for the command

Action: Input the keyword

ORA-48497: "*string*" is an invalid product type
Cause: The product type is not registered

Action: Check the product type

ORA-48499: The value of the keyword "*string*" exceeds the maximum length *string*
Cause: The keyword value is too long

Action: Check the limit and input again

ORA-48500: File Write Error [*string*] [*string*]
Cause: Number of bytes written differs from number requested. Possibly due to out of disk space.

Action: Ensure sufficient disk space.

ORA-48501: File Read Error [*string*] [*string*]
Cause: Number of bytes read differs from number requested. Possibly due due to corrupted file.

Action: Recreate the file.

ORA-48502: Invalid Command Line - Missing Required Elements
Cause: Missing required command line arguments.

Action: Review the help message and supply the required arguments.

ORA-48503: Invalid Parameter Specified
Cause: Invalid input parameter supplied.

Action: Review the help message and correct the invalid input parameter.

ORA-48504: Relation Parameter Must be Specified
Cause: Relation parameter must be specified during ADR export.

Action: Supply the relation parameter.

ORA-48505: File Parameter Must be Specified
Cause: File parameter must be specified during ADR import.

Action: Supply the file parameter.

ORA-48506: Existing Relation at different version than export [*string*] [*string*]
Cause: Attempting to import into an existing relation and the schema version of that relation differs from the schema of the relation that was exported.

Action: Drop the existing relation if you still wish to import the relation.

ORA-48507: Predicate Not Allowed during Import
Cause: The predicate option is not allowed during ADR import.

Action: Remove the predicate argument.

ORA-48508: Export File Version [*string*] Can Not be Used by Import [*string*]
Cause: The version of the export file is not able to be read by this version of ADR import.

Action: Rerun the export using the current version of ADR export.

ORA-48509: Error occurred during operation. See the following errors
Cause: An underlying error has occurred.

Action: Review and correct the underlying error.

ORA-48510: Can not export an in memory relation
Cause: In memory relations can not be exported.

Action: Pick a different relation.

ORA-48600: HM run with name [*string*] already exists
Cause: The specified run name already existed.

Action: Specify different run name and re-run the check

ORA-48615: Parameter [*string*] value not specified
Cause: Run was invoked without specifying the parameter and its value

Action: Specify the needed parameter and its value

ORA-48617: Parameter [*string*] value [*string*] length exceeds the maximum limit [*string*]

ORA-48618: Invalid HM run name specified
Cause: An invalid Health Monitor (HM) run name was specified.

Action: Specify a HM run name using only alphanumeric and underscore characters.

ORA-48800: "*string*" for the keyword "*string*" is not in the right format of timestamp
Cause: The value format is not right

Action: Check the format ADRCI supports

ORA-48801: The option "*string*" is duplicated
Cause: The option has been specified more than once

Action: Check the input

ORA-48802: The options "%0!s" and "%1!s" are mutually exclusive.
Cause: An attempt was made to specify the two options together.

Action: Specify only one of the options.

ORA-48803: The keyword "*string*" is not defined for this command
Cause: The keyword is invalid

Action: Check the valid keywords for the command

ORA-48804: The command needs at least one file input
Cause: No files are specified to view

Action: Input the files

ORA-48805: BEGIN BACKUP issued already - must do an END BACKUP first
Cause: A begin backup was already issued.

Action: Issue END BACKUP

ORA-48806: Unknown Function Reference (*string*)
Cause: The function reference is not a valid function

Action: Change the reference

ORA-48807: The SET subcommand requires at least one additional parameter
Cause: An argument was not specified for the SET subcommand.

Action: Specify additional arguments or precede the command with help.

ORA-48808: malformed SET CONTROL command - see "HELP SET CONTROL"
Cause: Improper syntax was specified for the SET CONTROL command.

Action: Specify additional arguments or use the HELP SET CONTROL command for more information.

ORA-48809: The number of estimate parameters exceeds the maximum allowed [*string*].
Cause: The estimate parameters exceeded the maximum number allowed.

Action: Check the parameters. If the parameters are correct, contact Oracle Support Services.

ORA-48810: malformed ESTIMATE command - see "HELP ESTIMATE"
Cause: Improper syntax was specified for the ESTIMATE command.

Action: Specify additional arguments or use the HELP ESTIMATE command for more information.

ORA-48900: Illegal Input Argument [*string*]
Cause: The input argument is invalid

Action: Check the input parameter

ORA-48902: Empty component specification

ORA-48903: String [*string*] is not a valid library name

ORA-48904: String [*string*] is not a valid component name

ORA-48905: String [*string*] is not a valid operation name

ORA-48906: Parser context is not valid
Cause: The parser context is not initialized

Action: Call the initialization routine first before using the context

ORA-48907: The end of file is reached
Cause: The end of file is reached

Action: Handle the end of file

ORA-48908: No trace files are found
Cause: This is no file in the navigator context, either it is done with parsing, or no file is pushed

Action: Check if the file is added to the context

ORA-48909: Scan context is not initialized
Cause: The scan context is not initialized

Action: call the initialization routine of the scan context

ORA-48912: The specified trace filename is too long
Cause: The resulting trace filename length exceeds the maximum length

Action: Use a smaller trace filename suffix or move ADR higher in the directory hierarchy

ORA-48913: Writing into trace file failed, file size limit [*string*] reached
Cause: An attempt was made to write into a trace file that exceeds the trace's file size limit

Action: increase the trace's file size limit.

ORA-48914: File position is not in right format
Cause: The file position format is not right

Action: Check if the file format string is the right one

ORA-48928: The predicate exceeds the max limit *string*
Cause: The predicate is too long, exceeds the max limit

Action: Use a shorter predicate

ORA-48929: The trace record size exceeded the max size that can be read [*string*]
Cause: A trace record is too large to be read by the ADR viewer

Action: Report to Oracle

ORA-48930: Cannot allocate memory for processing traces
Cause: A memory allocation request failed

Action: Report to Oracle

ORA-48934: invalid input for the file name identifier
Cause: An invalid input was given for the file name identifier. The file name is not allowed to have slashes ('', '/') and is not allowed to refer to the parent directory using the '..' characters.

Action: Check the file name and provide a valid input.

ORA-48936: The number of relations exceeds maximum number [*string*]
Cause: Too many relations listed

Action: Reduce the number

ORA-48937: Feature (*string*) currently not allowed for SELECT
Cause: Feature is not allowed

Action: Remove feature

ORA-48938: View select column count differs from select alias list
Cause: The view alias list has a different number of fields than the select list"

Action: Change the alias list or view select statement

ORA-48939: Select * not allowed in a CREATE VIEW
Cause: * is currently not allowed for a create view select list

Action: List the fields explicitly

ORA-49315: Invalid incident type specified [*string*]
Cause: The specified incident type is not defined in this ADR.

Action: Specify an available incident type.

ORA-49316: required environment variable not set [*string*]
Cause: The required environment variable was not set.

Action: Set the required environment variable.

ORA-49317: Action cannot be run in read-only database instance.
Cause: The database was not opened in read/write mode.

Action: Open the database in read/write mode.

ORA-49318: action cannot be run, database not available
Cause: The action could not connect to the database.

Action: Open the database.

ORA-49320: database error when executing action [*string*]
Cause: A database error occurred while executing the action.

Action: Review the database error.

ORA-49404: No such package [*string*]
Cause: The specified package does not exist.

Action: Specify an existing package.

ORA-49405: Cannot change package name [*string*] [*string*]
Cause: Attempted to change package name after package generation.

Action: Use current name, or create a new package with the desired name.

ORA-49406: Undefined configuration parameter specified [*string*]
Cause: The specified configuration parameter was not found in ADR.

Action: Specify an existing parameter. Re-populate parameters if necessary.

ORA-49407: No unpacking history in this home
Cause: No packages were unpacked into this home.

Action: Verify the current home. Unpack a package if necessary.

ORA-49408: Invalid home specified [*string*]
Cause: An invalid ADR_HOME was specified.

Action: Verify that the directory exists, and has the correct structure.

ORA-49409: Incremental package provided when complete expected
Cause: No packages were unpacked into this home.

Action: Provide a complete package, or use FORCE option.

ORA-49410: Not an IPS package
Cause: The specified file was not an IPS package.

Action: Verify that the file is a valid zip file with expected contents.

ORA-49412: Package ID does not match existing ID [*string*] [*string*]
Cause: The package ID in package file did not match previously unpacked packages.

Action: Use the correct location for unpacking the package.

ORA-49413: Package name does not match existing name [*string*] [*string*]
Cause: The package name in package file did not match previously unpacked packages.

Action: Use the correct location for unpacking the package.

ORA-49414: Package sequence later than expected [*string*] [*string*]
Cause: The package sequence in package file was later than expected.

Action: Apply packages in correct order, or use FORCE option.

ORA-49415: Package sequence earlier than expected [*string*] [*string*]
Cause: The package sequence in package file was earlier than expected.

Action: Apply packages in correct order, or use FORCE option.

ORA-49416: Earlier package sequence applied with FORCE option [*string*] [*string*]
Cause: An earlier package sequence was applied using the FORCE option.

Action: Apply a complete sequence which is later than any already applied, or use FORCE option to apply an incremental package.

ORA-49417: Cannot modify already generated package
Cause: Attempted to change package attributes after package generation.

Action: Create a new package with the desired name.

ORA-49418: Invalid package name specified
Cause: An invalid Incident Packaging Service (IPS) package name was specified.

Action: Specify a package name using only alphanumeric and underscore characters.

ORA-49420: Package too large [*string*] [*string*]
Cause: The package is too large.

Action: Remove some files or incidents from the package, or try using incremental mode.

ORA-49421: Maximum number of package files generated [*string*]
Cause: The command generated the maximum number of package files.

Action: Remove some files or incidents from the package, or use incremental mode to generate additional files.

ORA-49423: File outside ADR not allowed
Cause: The specified file is not within the ADR directory structure.

Action: Specify a file inside ADR.

ORA-49424: Directory outside ADR not allowed
Cause: The specified directory is not within the ADR directory structure.

Action: Specify a directory inside ADR.

ORA-49425: File inside ADR not allowed
Cause: The specified file is within the ADR directory structure.

Action: Specify a file outside ADR.

ORA-49426: Directory inside ADR not allowed
Cause: The specified directory is within the ADR directory structure.

Action: Specify a directory outside ADR.

ORA-49427: No such file or file not accessible [*string*]
Cause: The specified file does not exist or cannot be accessed.

Action: Create the file or verify file permissions.

ORA-49428: No such directory or directory not accessible [*string*]
Cause: The specified directory does not exist or cannot be accessed.

Action: Create the directory or verify directory permissions.

ORA-49429: File already exists and OVERWRITE option not specified [*string*]
Cause: The client attempted to create a file that already exists.

Action: Either remove the file or use the OVERWRITE option.

ORA-49430: No such problem [*string*]
Cause: The specified problem does not exist.

Action: Specify a problem that exists in this repository.

ORA-49431: No such incident [*string*]
Cause: The specified incident does not exist.

Action: Specify an incident that exists in this repository.

ORA-49432: Problem not part of package [*string*]
Cause: The specified problem is not included in the package.

Action: Specify a problem that is included in the package.

ORA-49433: Incident not part of package [*string*]
Cause: The specified incident is not included in the package.

Action: Specify an incident that is included in the package.

ORA-49434: Invalid date format
Cause: An invalid format was used to specify a date

Action: Specify the date in a supported format.

ORA-49435: Flood-controlled incident not allowed here [*string*]
Cause: A flood-controlled incident cannot be included in a package

Action: Specify an incident that is not flood-controlled

ORA-49436: Date conversion error [*string*]
Cause: An invalid format was used to specify a date

Action: Specify the date in a supported format.

ORA-49440: Warnings while unpacking package, details in file *string*
Cause: There were some non-fatal errors when unpacking a package

Action: Review the specified unpacking log file

ORA-49441: Warnings while finalizing package, details in file *string*
Cause: There were some non-fatal errors when finalizing a package

Action: Review the specified finalize log file

ORA-49450: Non-zero return code from archiving utility [*string*] [*string*]
Cause: The archiving utility (zip/unzip) returned a warning or error.

Action: Verify that the file and directory exist and are readable, and that the file is a valid zip file.

ORA-49451: Archive file structure error [*string*] [*string*]
Cause: The archiving utility (zip/unzip) returned an error indicating that the archive file structure is incorrect.

Action: Verify that the file was transferred correctly and that the file is a valid zip file.

ORA-49452: Archiving utility out of memory [*string*] [*string*]
Cause: The archiving utility (zip/unzip) returned an error indicating that it was unable to allocate enough memory.

Action: Check for operating system limitations on process memory usage.

ORA-49453: Invalid command invoking archiving utility [*string*] [*string*]
Cause: The archiving utility (zip/unzip) was invoked with an invalid command line, or with invalid options.

Action: Verify that there are no operating system settings affecting the behavior of the archiving utility..

ORA-49454: Archive is missing or empty [*string*] [*string*]
Cause: The specified archive does not exist, or is empty.

Action: Check if the specified archive exists.

ORA-49455: Archive I/O failed [*string*] [*string*]
Cause: An attempt to create, write to or read from an archive failed.

Action: Verify that operating system I/O operations are working correctly.

ORA-49456: Operation failed due to insufficient disk space [*string*] [*string*]
Cause: An operation on an archive failed due to insufficient disk space.

Action: Verify that there is sufficient disk space. Check for operating system quotas or other restrictions.

ORA-49601: syntax error: found "*string*": expecting one of: "*string*" etc..
Cause: Syntax error discovered when processing event specification

Action: Enter correct event specification

ORA-49701: Parameter '*string*' is NULL.
Cause: NULL was passed to a function that requires a non-NULL parameter.

Action: Pass a valid non-NULL parameter.

ORA-49702: unable to allocate '*string*' bytes of external procedure call memory
Cause: An attempt to allocate memory in a C external procedure failed due to insufficient memory.

Action: Try the operation again.

ORA-49703: invalid ADR service name
Cause: A NULL or undefined Automatic Diagnostic Repository (ADR) service name was specified.

Action: Specify a valid ADR service name.

ORA-49704: invalid incident ID
Cause: A NULL or nonpositive incident ID was specified.

Action: Specify a valid ADR incident ID.

ORA-49800: ADR block file [*string*] could not be opened using direct I/O
Cause: An error was encountered when attempting to open an Automatic Diagnostic Repository (ADR) block file using O_DIRECT. The system automatically retries the open without using O_DIRECT.

Action: No action is required.

ORA-49802: missing read, write, or execute permission on specified ADR home directory [*string*]
Cause: The specified Automatic Diagnostic Repository (ADR) home directory did not have the correct permissions.

Action: Check the read, write, and execute permissions on the specified ADR home directory.

ORA-49803: Purge not possible due to incompatible schema version.
Cause: The Automatic Diagnostic Repository (ADR) found on disk was different from the version in the library.

Action: Start the product to migrate automatically or use the ADRCI utility command MIGRATE SCHEMA.

ORA-49804: cannot modify ADR PDB parameter *string*
Cause: An attempt was made to alter the Automatic Diagnostic Repository (ADR) pluggable database (PDB) - only parameters from a non-consolidated database or root container of a consolidated database.

Action: ADR PDB parameters cannot be altered from non-consolidated database or root container of a consolidated database. Switch to a PDB to perform the operation.

ORA-49900: cannot modify parameter *string*
Cause: An attempt was made to alter the parameter from a non-consolidated database or pluggable database.

Action: The parameter can only be altered in the root container of a consolidated database.

ORA-51001: check [*string*] not found in HM catalog
Cause: checker name might have been misspelled

Action: retry running check with proper checker name

ORA-51003: run parameters not formatted correctly
Cause: Run parameters were given in a wrong format

Action: Correct the run params text and try again

ORA-51004: Check doesn't take any input params
Cause: run params were passed to the check, which doesn't take any inputs

Action: don't pass any run params and try again

ORA-51006: unexpected delimiter ';' in the run params text
Cause: run params were not properly formatted.

Action: correct the run params format and try again

ORA-51007: parameter [*string*] not registered with this check
Cause: Wrong inputs were given to this check.

Action: correct the run params and try the check again

ORA-51008: parameter [*string*] value is not a proper number
Cause: the given parameter value is a not a proper number

Action: correct the run params and try again

ORA-51025: check name should be non NULL value
Cause: NULL value was passed for check name

Action: give a proper check name and retry again

ORA-51035: invalid timeout value
Cause: User specified an invalid timeout value

Action: n/a

ORA-51036: check [*string*] can only be executed in database instance
Cause: An attempt was made to run database-specific check in ASM environment

Action: Don't run the check in ASM environment

ORA-51037: check [*string*] can only be executed in ASM instance
Cause: An attempt was made to run ASM-specific check in a database environment

Action: Don't run the check in database environment

ORA-51102: cannot change priority of a critical failure *string*
Cause: An attempt was made to change priority of a failure with CRITICAL priority.

Action: No action is required.

ORA-51103: cannot change priority of a closed failure *string*
Cause: An attempt was made to change priority of a closed failure.

Action: No action is required.

ORA-51105: cannot change priority of a failure to CRITICAL
Cause: An attempt was made to change priority of a failure to CRITICAL.

Action: No action is required.

ORA-51106: check failed to complete due to an error. See error below
Cause: While executing the check, an unexpected error occurred.

Action: Check the errors below and try rerunning the check.

ORA-51107: failures are changing too rapidly - retry command
Cause: Failures were added or closed during a Data Recovery Advisor command.

Action: Retry the command.

ORA-51108: unable to access diagnostic repository - retry command
Cause: A lock or timeout error occurred when trying to read failure or repair data from the Automatic Diagnostic Repository.

Action: Retry the command.

ORA-51109: repair script file is too large
Cause: Data Recovery Advisor generated a repair script file that was too large.

Action: Retry the command with fewer failures selected.

ORA-51110: buffer size [*string*] is too small - [*string*] is needed
Cause: An internal buffer was too small.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51111: failure revalidation timed out
Cause: Data Recovery Manager was unable to revalidate all failures before timing out.

Action: Increase timeout and retry the command.

ORA-51190: Internal error [*string*], [*string*] from DBMS_IR
Cause: An unexpected error occurred while executing a routine in the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51191: Too many files opened
Cause: Data Recovery Advisor attempted to open too many files using the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51192: File not open
Cause: Data Recovery Advisor attempted to read or write from a file that was not open.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51193: invalid parameter value
Cause: An invalid parameter value was supplied in a call to the DBMS_IR package.

Action: Fix the parameter value and retry the call.

ORA-51303: illegal check mask value specified
Cause: An illegal check mask value was specified.

Action: Specify one of the following legal values: COLUMN_CHECKS, ROW_CHECKS, REFERENTIAL_CHECKS, or ALL.

ORA-51316: No check meta-data found on specified table *string*
Cause: No check meta-data was found for the object

Action: Table may not exist or no checks currently defined for the table

ORA-51700: Invalid file URL
Cause: A URL with invalid syntax was provided, either directly to the function or through an XML IMPORT or INCLUDE.

Action: Check the URL.

ORA-51701: Invalid file URL or path prefix
Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL.

ORA-51702: Could not find file at URL provided
Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

ORA-51703: Missing *body* tag from HTML
Cause: An HTML document was passed to the function missing its *body* tag.

Action: Check the HTML source.

ORA-51704: Error *string* received from XPath engine
Cause: An error was received from the XPath library during an XPath operation.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

ORA-51705: XML *string* error: *string* "*string*"
Cause: An error was received from an underlying XDK API and is being resignalled.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

96

ORA-54000 to ORA-54056

ORA-54000: Virtual column feature not yet implemented
Cause: Feature has not been implemented.

Action: Feature is being implemented.

ORA-54001: *string*: invalid identifier specified for virtual column expression
Cause: Column expression referenced a column that does not exist in the table.

Action: Rewrite column expression to reference only scalar columns in the table.

ORA-54002: only pure functions can be specified in a virtual column expression
Cause: Column expression contained a function whose evaluation is non-deterministic.

Action: Rewrite column expression to reference only pure functions.

ORA-54003: specified data type is not supported for a virtual column
Cause: Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression column with a supported scalar data type.

ORA-54004: resultant data type of virtual column is not supported
Cause: The data type of the underlying expression is not supported. Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression of virtual column to return a supported scalar data type.

ORA-54005: keyword VIRTUAL cannot be specified here
Cause: The keyword VIRTUAL was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54006: keyword VISIBLE cannot be specified here
Cause: The keyword VISIBLE was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54007: keyword HIDDEN cannot be specified here
Cause: The keyword HIDDEN was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54008: expression column is not supported for an index organized table
Cause: Attempt to create/alter an index organized table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54009: expression column is not supported for an external table
Cause: Attempt to create/alter an external table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54010: expression column is not supported for a temporary table
Cause: Attempt to create/alter a temporary table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54011: expression column is not supported for a clustered table
Cause: Attempt to create/alter a clustered table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54012: virtual column is referenced in a column expression
Cause: This virtual column was referenced in an expression of another virtual column

Action: Ensure the column expression definition for any virtual column does not refer to any virtual column

ORA-54013: INSERT operation disallowed on virtual columns
Cause: Attempted to insert values into a virtual column

Action: Re-issue the statment without providing values for a virtual column

ORA-54014: Resulting table from a CTAS operation contains virtual column(s)
Cause: Table being created by a CTAS operation contains a virtual column definition

Action: Remove the virtual column definition from the table being created

ORA-54015: Duplicate column expression was specified
Cause: Expression of the virtual column being added/created conflicts with an existing/previously specified functional index expression or virtual column expression

Action: Change the expression of the virtual column os there are no duplicate expressions

ORA-54016: Invalid column expression was specified
Cause: Virtual column expression is not a valid arithmetic expression. it probably refers to another column in the table

Action: Change the expression of the virtual column

ORA-54017: UPDATE operation disallowed on virtual columns
Cause: Attempted to update values of a virtual column

Action: Re-issue the statment without setting values for the virtual column

ORA-54018: A virtual column exists for this expression
Cause: Specified index expression matches an existing virtual column"

Action: Re-issue the statment by replacing the index expression with the matching virtual column

ORA-54019: Virtual column expression cannot be changed because it is a partitioning column
Cause: Attempted to modify the expression of a virtual column that was also a partitioning column.

Action: This is not supported.

ORA-54020: Virtual column expression cannot be changed because it is a subpartitioning column
Cause: Attempted to modify the expression of a virtual column that was also a subpartitioning column.

Action: This is not supported.

ORA-54021: Cannot use PL/SQL expressions in partitioning or subpartitioning columns
Cause: Attempted to partition a table on a virtual column that contained PL/SQL expressions.

Action: This is not supported.

ORA-54022: Virtual column expression cannot be changed because an index is defined on column
Cause: Attempted to change the expression of a virtual column that was indexed.

Action: Alter index unsable. Change expression and then rebuild index.

ORA-54023: Virtual column expression cannot be changed because a constraint is defined on column
Cause: Attempted to change the expression of a virtual column that had a constraint defined on it.

Action: Drop constraint and then change expression.

ORA-54024: expression column is not supported for an organization cube table
Cause: Attempted to create or alter an organization cube table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54025: Virtual column cannot have a default value
Cause: Attempted to alter a virtual column to have a default value.

Action: This is not valid, change the DDL.

ORA-54026: Real column cannot have an expression
Cause: Attempted to alter a real column to have an expression.

Action: This is not valid, change the DDL.

ORA-54027: cannot modify data-type of virtual column
Cause: Attempted to change the data-type of virtual column without modifying the underlying expression

Action: change the underlying expression to be compatible with the data-type change

ORA-54028: cannot change the HIDDEN/VISIBLE property of a virtual column
Cause: Attempted to change the HIDDEN/VIRTUAL property of a virtual column

Action: re-issue the DDL without the virtual column property change

ORA-54029: Virtual column cannot be updated in trigger body
Cause: Attempted to change the value of virtual column in a trigger body"

Action: This is not valid, change the trigger definition.

ORA-54030: datatype mismatch between virtual column and expression
Cause: virtual column expression was changed after column was created"

Action: change the underlying expression to return datatype that conforms to the virtual column

ORA-54031: column to be dropped or modified is used in a virtual column expression
Cause: Attempted to drop or modify a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be dropped.

ORA-54032: column to be renamed is used in a virtual column expression
Cause: Attempted to rename a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be renamed.

ORA-54033: column to be modified is used in a virtual column expression
Cause: Attempted to modify the data type of a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be modified.

ORA-54034: virtual columns not allowed in functional index expressions
Cause: An attempt was made to create a functional index with an expression defined on one or more virtual columns.

Action: Specify the index expression using only regular columns.

ORA-54035: keyword HIDDEN cannot be specified here
Cause: Attempted to specify HIDDEN key word for a virtual column

Action: This is not supported.

ORA-54036: cannot define referential constraint with ON DELETE SET NULL clause on virtual column
Cause: Attempted to specify ON DELETE SET NULL clause for a referential integrity constraint on a virtual column.

Action: Reissue the statement without specifying ON DELETE SET NULL clause.

ORA-54037: table must have at least 1 column that is not virtual
Cause: An attempt was made to create a table with only virtual columns.

Action: Include at least 1 column that is not virtual in the table being created.

ORA-54038: Virtual column cannot be encrypted
Cause: An attempt was made to create or alter a virtual column to have encryption.

Action: Encryption is unnecessary for a virtual column as the data is not stored on disk.

ORA-54039: table must have at least one column that is not invisible
Cause: An attempt was made to create or alter a table to have only invisible columns.

Action: Include at least one column that is not invisible in the table being created or altered.

ORA-54040: Visibility of a system-generated column cannot be changed.
Cause: An attempt was made to alter the visibility of a system-generated column.

Action: This is not supported.

ORA-54041: Visibility of an abstract data type column cannot be changed.
Cause: An attempt was made to alter the visibility of an abstract data type column.

Action: Specify the column visibility change with a supported data type.

ORA-54042: Invisible column is not supported on this type of table.
Cause: An attempt was made to create or alter the visibility of a column on an unsupported table type. Invisible columns are only supported for heap and index-organized tables (IOT).

Action: These columns are not supported, change the DDL.

ORA-54043: Including column of an IOT cannot be an invisible column.
Cause: An attempt was made to alter the visibility of the included column of an index-organized table (IOT).

Action: This is not supported.

ORA-54044: Visibility of a column having a column-level object privilege cannot be changed.
Cause: An attempt was made to alter the visibility of a column with a column-level object privilege.

Action: Revoke the column-level object privilege before making the column invisible.

ORA-54045: An invisible column cannot be granted a column-level object privilege.
Cause: An attempt was made to grant a column-level object privilege to an invisible column.

Action: Modify the column to make it visible and then grant the column-level object privilege.

ORA-54046: Column visibility modifications cannot be combined with any other modified column DDL option.
Cause: An attempt was made to combine the modification of the visibility of a column with other modified column property changes.

Action: Separate column visibility modifications into a standalone DDL.

ORA-54047: virtual columns not allowed for XMLType tables with object-relational storage
Cause: An attempt was made to create an object-relational XMLType table with virtual columns.

Action: Do not create virtual columns for XMLType tables with object-relational storage . This feature is not available.

ORA-54048: Column expression modifications cannot be combined with any other column DDL operation.
Cause: An attempt was made to combine the modification of the expression of a column with other column operations.

Action: Separate column expression modifications into a standalone DDL.

ORA-54049: expression edition column is not supported for an external table
Cause: An attempt was made to create or alter an external table with an edition expression column.

Action: These columns are not supported; change the DDL.

ORA-54050: Unsupported type or attribute on redacted column.
Cause: An attempt was made to alter a column with a redaction policy, so as to give that column an unsupported type or attribute. Virtual columns are not supported by data redaction. Columns with the INVISIBLE attribute are not supported by data redaction (this applies to both user-specified hidden columns and system-generated hidden columns). Vector encoded columns are not supported by data redaction.

Action: Specify the name of a non-redacted column, or use the DROP_POLICY PL/SQL procedure in the DBMS_REDACT package to remove the redaction policy from the column before altering it. Look in the REDACTION_POLICIES and REDACTION_COLUMNS catalog views for a list of all redaction policies and redacted columns.

ORA-54051: System-generated virtual column cannot be a primary key.
Cause: An attempt was made to specify a system-generated virtual column * as a primary key.

Action: None

ORA-54052: System-generated functional index virtual column cannot be renamed.
Cause: An attempt was made to rename a system-generated functional index virtual column.

Action: None

ORA-54053: The visibility of a column from a table owned by a SYS user cannot be changed.
Cause: An attempt was made to alter the visibility of a column from a table owned by SYS user.

Action: Execute the DDL on a table not owned by a SYS user.

ORA-54054: System-generated virtual column or guard column cannot be in a constraint.
Cause: An attempt was made to add a constraint containing the system generated virtual column or guard column.

Action: None

ORA-54055: In-Memory virtual column expression cannot refer to a system-generated or hidden column.
Cause: An attempt was made to create a virtual column expression on a system-generated or hidden column.

Action: Avoid creating a virtual column expression on a system-generated or hidden column.

ORA-54056: unsupported operation on sensitive column
Cause: An attempt was made to either alter the visibility of a sensitive column or change the sensitive column to vector encode.

Action: Specify the name of a non-sensitive column, or use the DROP_SENSITIVE_COLUMN PL/SQL procedure in the DBMS_TSDP_MANAGE package to remove the sensitivity of the column before altering it.

97

ORA-54500 to ORA-56978

ORA-54500: invalid combination of elements
Cause: The geometry did not start from the correct level in the hierarchy.

Action: Correct the hierarchy in the geometry.

ORA-54501: no holes expected
Cause: The geometry contained one or more unexpected holes.

Action: Remove any holes in the geometry.

ORA-54502: solid not closed
Cause: The solid geometry was not closed i.e., faces of solid are not 2-manifold due to incorrectly defined, oriented, or traversed line segment because each edge of a solid must be traversed exactly twice, once in one direction and once in the reverse direction.

Action: Correct the orientation of the edges of the neighboring polygons.

ORA-54503: incorrect solid orientation
Cause: The orientation of the solid was not correct.

Action: Correct the orientation or specification of the outer or inner solid geometry according to the geometry rules for such a solid.

ORA-54504: multiple outer geometries
Cause: The geometry contained more than one outer geometry.

Action: Remove all but one of the outer geometries.

ORA-54505: ring does not lie on a plane
Cause: The ring was not flat.

Action: Make sure all of the vertices of the ring are on the same plane.

ORA-54506: compound curve not supported for 3-D geometries
Cause: The 3-D geometry contained one or more compound curves, which are not supported for 3-D geometries.

Action: Remove all compound curves from the geometry.

ORA-54507: duplicate points in multipoint geometry
Cause: The multipoint geometry had two points that either had identical coordinates or were the same point considering the geometry tolerance.

Action: Make sure all points are different, considering the tolerance.

ORA-54508: overlapping surfaces in a multisolid geometry
Cause: The multisolid geometry contained one or more fully or partially overlapping surfaces.

Action: Ensure that the multisolid geometry contains no overlapping areas.

ORA-54509: solid not attached to composite solid
Cause: To connect solids in a composite solid geometry, at least one of the faces of a solid must be shared (fully or partially) with only another solid. However, at least one of the faces in this composite solid was not shared by exactly two solids only.

Action: Ensure that at least one face in a composite solid is shared by exactly two solids.

ORA-54510: no outer geometry expected
Cause: An outer geometry was found when only inner geometries were expected.

Action: Remove all outer geometries.

ORA-54511: edges of inner and outer solids intersect
Cause: An inner solid had a common edge with outer solid.

Action: Ensure that edges of inner and outer solids do not intersect.

ORA-54512: a vertex of an inner solid is outside corresponding outer solid
Cause: A solid geometry contained an inner solid with at least one vertex outside its corresponding outer solid.

Action: Ensure that all vertices of inner solids are not outside their corresponding outer solid.

ORA-54513: inner solid surface overlaps outer solid surface
Cause: One or more faces of an inner solid surface either fully or partially overlapped an outer solid surface.

Action: Ensure that inner and outer surfaces have no shared (fully or partially overlapping) faces.

ORA-54514: overlapping areas in multipolygon
Cause: A multipolygon geometry contained one or more common (shared, fully or partially overlapped) polygons.

Action: Ensure that no polygons in a multipolygon overlap.

ORA-54515: outer rings in a composite surface intersect
Cause: Outer rings, either on the same plane or different planes, in a composite surface intersected.

Action: Ensure that outer rings do not intersect. They can share edges.

ORA-54516: adjacent outer rings of composite surface cannot be on same plane
Cause: The conditional flag was set, and a composite surface had at least two outer rings sharing a common edge on the same plane.

Action: Change those outer rings into one larger outer ring.

ORA-54517: outer ring is on the same plane and overlaps another outer ring
Cause: An outer ring in a composite surface shared a common area with another outer ring.

Action: Ensure that no outer rings fully or partially overlap.

ORA-54518: shared edge of composite surface not oriented correctly
Cause: A shared edge (one shared by two polygons) in a composite surface was not correctly oriented. Each shared edge must be oriented in one direction with respect to its first polygon and then in the reverse direction with respect to its second polygon.

Action: Reverse one of the directions of the shared edge with respect to its polygons.

ORA-54519: polygon (surface) not attached to composite surface
Cause: Not all polygons of a surface had a common (fully or partially shared) edge.

Action: Ensure that each polygon is attached to the composite surface by one of its edges.

ORA-54520: inner ring not on the same plane as its outer ring
Cause: An inner ring was not on the same plane as its outer ring.

Action: Ensure that each inner ring is on the same plane as its outer ring.

ORA-54521: inner ring is not inside or is touching outer ring more than once
Cause: An inner ring either was not inside its outer ring or touched its outer ring more than once.

Action: Ensure that the inner ring is inside its outer ring and does not touch the outer ring more than once. If an inner ring touches its outer ring more than once, then the outer ring is no longer a topologically simple or singly connected polygon (ring).

ORA-54522: inner rings of same outer ring cannot intersect or share boundary
Cause: Two inner rings of the same outer ring intersected or shared a boundary.

Action: Ensure that line segments of an inner ring do not intersect or fully or partially coincide with line segments of another inner ring sharing the same outer ring.

ORA-54523: inner rings of same outer ring cannot touch more than once
Cause: Two inner rings of the same outer ring touched more than once.

Action: Ensure that inner rings of the same outer ring touch at no more than one point.

ORA-54524: inner ring cannot be inside another inner ring of same outer ring
Cause: An inner ring was inside another ring of the same outer ring.

Action: Ensure that no inner ring is inside another inner ring of the same outer ring.

ORA-54525: incorrect box volume due to wrong ordinates
Cause: The rectangular box in shortcut format did not have its first x,y,z coordinates either all greater or less than its second x,y,z coordinates.

Action: Make sure that the first x,y,z coordinates are either all greater or all less than the second x,y,z coordinates.

ORA-54526: multi or composite geometry must be decomposed before extraction
Cause: The extraction could not be performed because the multi or composite geometry must first be decomposed into simple geometries (with or without inner geometries). The multi or composite geometry had a gtype of GTYPE_MULTISOLID, GTYPE_MULTISURFACE, GTYPE_MULTICURVE, GTYPE_MULTIPOINT, or GTYPE_COLLECTION, or the geometry was a line string.

Action: Use the MULTICOMP_TOSIMPLE parameter to element extractor to decompose the multi or composite geometry to a simple geometry.

ORA-54527: operation not permitted on a simple geometry
Cause: A MULTICOMP_TOSIMPLE parameter to element extractor was attempted on a geometry that is already simple.

Action: Do not use the MULTICOMP_TOSIMPLE parameter to element extractor on simple geometries.

ORA-54528: inner composite surfaces or surfaces with inner ring(s) expected
Cause: An INNER_OUTER parameter to element extractor was attempted on a surface that was not simple or composite.

Action: Ensure that the etype of the geometry for the INNER_OUTER parameter to element extractor is ETYPE_SURFACE or ETYPE_COMPOSITESURFACE.

ORA-54529: geometry should have multi-level hierarchy (like triangle)
Cause: The geometry did not have the multi-level hierarchy required for this operation. For example, if the parameter to element extractor (hierarchy level) is not LOWER_LEVEL, but the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, an extract operation is not allowed, because a simple solid can only be decomposed into lower level geometries, such as composite surfaces.

Action: Ensure that the geometry has the appropriate hierarchy. For example, if the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, the parameter to element extractor (hierarchy level) should be LOWER_LEVEL.

ORA-54530: invalid etype for element at element offset
Cause: An invalid etype was encountered.

Action: Correct the etype of the geometry.

ORA-54531: invalid orientation for element at element offset
Cause: The orientation of the current geometry was not valid.

Action: Reverse the orientation of the geometry.

ORA-54532: incomplete composite surface
Cause: The end of composite surface was reached before all necessary surfaces were defined.

Action: Add more surfaces to match the geometry definition, or reduce the specified number of surfaces.

ORA-54533: invalid etype in composite surface of solid
Cause: The etype of the composite surface of a solid was not valid.

Action: Ensure that the etype is orient*1000+ETYPE_SOLID, where orient is 1 for outer solid and 2 for inner solid.

ORA-54534: incorrect box surface due to wrong specification
Cause: The elemInfo definition was not correct for the surface of the axis aligned box.

Action: Change the interpretation to 3 in the elemInfo definition.

ORA-54535: incorrect box surface because it is on arbitrary plane
Cause: The axis aligned box surface was not on the yz, xz, or xy plane.

Action: Ensure that the first and fourth coordinates, or the second and fifth coordinates, or the third and sixth coordinates are the same. This means that the surface is on the yz, xz or xy plane, respectively.

ORA-54536: axis aligned box surface not defined properly
Cause: The inner geometry etype did not start with 2, or the outer geometry etype did not start with 1, or both occurred.

Action: Use the correct etype for the inner and outer geometries.

ORA-54537: incorrect box surface due to wrong orientation
Cause: The rectangular surface in shortcut format did not have its first x,y,z coordinates all greater than or equal to or all less than or equal to its second x,y,z coordinates.

Action: Ensure that the first x,y,z coordinates are either all greater than or equal to or all less than or equal to the second x,y,z coordinates.

ORA-54538: unexpected gtype
Cause: The gtype of the geometry was not GTYPE_SOLID, GTYPE_SURFACE, GTYPE_CURVE or GTYPE_POINT.

Action: Correct the elemInfo array to fix any invalid gtype and etypes that violate the geometry hierarchy.

ORA-54539: cannot process the geometry(s) for this operation
Cause: The geometry had errors in it.

Action: Validate the geometry or geometries to ensure that each is valid.

ORA-54540: at least one element must be a surface or solid
Cause: One of the geometries had holes, and the geometries were neither (A) simple, composite, or multisurfaces, or (B) simple, composite, or multisolids. (Surfaces and solids are the only geometries that can have holes. Points and curves cannot have holes.)

Action: Ensure that each geometry having holes is a surface or solid (simple, composite, or multi).

ORA-54545: holes incorrectly defined
Cause: The holes were defined with incorrect etype.

Action: Ensure that the etype is correct in the definition of the inner geometry.

ORA-54546: volume of solid cannot be 0 or less
Cause: The solid geometry having one outer and multiple inner geometries had a negative or zero volume.

Action: Correct the orientation or specification of the outer solid geometry to obey outer geometry rules so that the outer geometry has a positive volume. Additionally, correct the orientation or specification of inner solid geometries to obey inner geometry rules so that each inner geometry has a negative volume.

ORA-54547: wrong input for COUNT_SHARED_EDGES
Cause: The COUNT_SHARED_EDGES parameter value was not 1 or 2.

Action: Ensure that the COUNT_SHARED_EDGES parameter value is either 1 or 2.

ORA-54548: input geometry gtype must be GTYPE_POLYGON for extrusion
Cause: The input geometry gtype was not GTYPE_POLYGON.

Action: Ensure that the gtype of the input polygon is GTYPE_POLYGON.

ORA-54549: input geometry has incorrect elemInfo
Cause: The input 2-D polygon did not have only one outer ring.

Action: Ensure that the input 2-D polygon has only one outer ring.

ORA-54550: input 2-D polygon not valid
Cause: The 2-D polygon violated the rules for polygons and rings.

Action: Correct the polygon definition.

ORA-54551: grdHeight and/or Height array sizes incorrect
Cause: The sizes of grdHeight and Height arrays were not equal to half the size of input 2-D polygon's ordinates array. As a result, each point in the 2-D polygon could not be extruded from the grdHeight entry to the Height entry.

Action: Ensure that the sizes of the grdHeight and Height arrays are half that of input 2-D polygon ordinates array.

ORA-54552: height entries must be >= to ground height entries
Cause: In the definition of a solid, the height values were less than the ground height.

Action: Ensure that that height values are greater than or equal to ground height values.

ORA-54553: incorrect geometry for appending
Cause: The geometry could not be appended to a homogeneous collection (for example, multi-geometry) or to a heterogeneous geometry (for example, collection). In other words, the gtype of the geometry to be appended was neither GYTPE_COLLECTION or GTYPE_MULTI-X (where X is point, curve, surface, or solid).

Action: Ensure that the geometries involved in the append operation have appropriate gtypes.

ORA-54554: arcs are not supported as defined
Cause: An arc was defined in a geometry type in which arcs are not supported. Arcs are supported for 2-D (circle) polygons, 2-D compound polygons, 2-D single arc, and 2-D compound (composite) curves only.

Action: Remove or simplify the arcs.

ORA-54555: invalid geometry dimension
Cause: The geometry did not have three dimensions.

Action: Ensure that geometry has three dimensions.

ORA-54556: operation is not supported for 3-D geometry
Cause: A 3-D geometry was passed into an operation that supports only 2-D geometries.

Action: Check the Spatial documentation for operations that are supported and not supported on 3-D geometries.

ORA-54557: incomplete composite solid
Cause: The end of composite solid was reached before all necessary solids were defined.

Action: Add more solids to match the geometry definition, or reduce the specified number of solids.

ORA-54558: 3D SRID is not found for the corresponding 2D SRID
Cause: In extruding a 2D polygon into a 3D geometry, the SRID conversion function did not find an equivalent 3D SRID of the 2D SRID.

Action: Specify a 2D SRID that has a 3D equivalent

ORA-54559: query element and source geometry cannot be the same
Cause: A query element geometry and a source geometry were the same, which prevented a label pointing query element in the source geometry from being output.

Action: Redefine the query element or the source geometry so that a label can be output.

ORA-54560: query element cannot be a collection or multitype geometry
Cause: A query element was a collection geometry or a multitype geometry. Such geometries are not permitted in a query element because they are at the top of the geometry hierarchy. A query element must be part of the source geometry.

Action: Redefine the query element or the source geometry so that a label can be output.

ORA-54601: CREATE_PC: invalid parameters for creation of Point Cloud
Cause: An invalid or unknown parameter was specified in the creation of Point Cloud.

Action: Check for valid set of parameters.

ORA-54602: CREATE_PC: input points table *string* does not exist
Cause: The specified table for loading points into a Point Cloud did not exist.

Action: Create the points table with appropriate columns, and then create the Point Cloud.

ORA-54603: CREATE_PC: specified total dimensionality cannot exceed 8
Cause: The specified total dimensionality for the Point Cloud exceeded the maximum limit of 8.

Action: Create the Point Cloud with fewer dimensions. You can store the rest in the output points table.

ORA-54604: CREATE_PC: input points table should not be empty
Cause: The input points table had no data.

Action: Insert data into the input points table and then create the Point Cloud.

ORA-54605: CREATE_PC: scratch-tables/views (*string*) exist and need to be dropped
Cause: Transient tables/views from a previous CREATE_PC operation were still in existence.

Action: Delete the invalid Point Cloud from the base table (for cleanup of scratch tables), and initialize and create the Point Cloud again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as the parameter.

ORA-54607: CREATE_PC: error fetching data from input points table
Cause: An internal read error occurred during Point Cloud creation.

Action: Contact Oracle Support Services with the error number reported.

ORA-54608: CREATE_PC: error writing Point Cloud LOB
Cause: An internal LOB write error occurred during Point Cloud creation. The cause might be lack of table space.

Action: Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.

ORA-54609: CREATE_PC: input extent cannot be null
Cause: The extent of the Point Cloud was null.

Action: Specify an extent for the Point Cloud that is not null.

ORA-54610: CREATE_PC: input extent cannot be more than 2-D for geodetic data
Cause: The extent of the Point Cloud was more than 2-D for geodetic data.

Action: Change the extent to 2-D (longitude, latitude).

ORA-54611: INIT: either invalid basetable/schema or they do not exist
Cause: The base table or schema, or both, were invalid strings; or the base table and schema combination did not exist.

Action: Ensure that the specified base table exists in the specified schema before performing the initialization operation.

ORA-54613: INIT: internal error creating DML trigger
Cause: The necessary privileges to create the trigger were not granted.

Action: Grant the necessary privileges to create the trigger. If necessary, contact Oracle Support Services for help with privileges for trigger creation.

ORA-54614: INIT: block table name has to be unique
Cause: The specified block table name was not unique. For example, it might have been used for another block table.

Action: Specify a different block table name.

ORA-54616: INIT: internal error [*number*, *string*]
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54617: CLIP_PC: invalid Point Cloud; extent is empty
Cause: The input Point Cloud for the CLIP_PC operation was invalid.

Action: Specify a point cloud that was created using the CREATE_PC procedure.

ORA-54618: CLIP_PC: SRIDs of query and Point Cloud are incompatible
Cause: The Point Cloud and the query geometry had incompatible SRID values.

Action: Change the query SRID to be compatible with that of the Point Cloud.

ORA-54619: CLIP_PC: query and BLKID parameters cannot both be null
Cause: Both the query and BLKID parameters were null in the call to the CLIP_PC operation.

Action: Either specify a query geometry that is not null, or specify a BLKID for use as a query.

ORA-54620: CLIP_PC: internal error [*number*, *string*]
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54621: TO_GEOMETRY: TOTAL_DIMENSIONALITY not same as in INIT operation
Cause: The specified TOTAL_DIMENSIONALITY was invalid.

Action: Ensure that the TOTAL_DIMENSIONALITY matches that specified in the call to the initialization operation.

ORA-54622: TO_GEOMETRY: internal error [*number*, *string*]
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54623: CREATE_PC: internal error [*number*, *string*]
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54640: PARTITION_TABLE utility: invalid input parameters [*number*, *string*]
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54641: PARTITION_TABLE utility: scratch tables exist with oidstr = *string*
Cause: Scratch tables/views could not be created because they already existed.

Action: Use SDO_UTIL.DROP_WORK_TABLES with the specified oidstr parameter to clean up the scratch tables.

ORA-54642: PARTITION_TABLE utility: invalid SORT_DIMENSION specified
Cause: An invalid string was specified for the SORT_DIMENSION.

Action: Specify the SORT_DIMENSION as 'BEST_DIM', 'DIMENSION_1', 'DIMENSION_2', or 'DIMENSION_3'.

ORA-54643: PARTITION_TABLE utility: invalid WORKTABLESPACE parameter
Cause: An invalid string was specified for the WORKTABLESPACE parameter.

Action: Specify an existing valid tablespace for WORKTABLESPACE (to hold the scratch tables).

ORA-54644: PARTITION_TABLE utility: error in reading input, output tables
Cause: The names for the input/output tables were invalid, or the tables did not exist or did not have the right structure.

Action: Check the Spatial documentation for PARTITION_TABLE.

ORA-54651: CREATE_TIN: invalid parameters specified in creation of TIN
Cause: An invalid or unknown parameter was specified in the creation of the TIN.

Action: Check the Spatial documentation for CREATE_TIN.

ORA-54652: CREATE_TIN: input points table *string* does not exist
Cause: The specified table for loading points into a TIN did not exist.

Action: Create the points table with appropriate columns, and then create the TIN.

ORA-54653: CREATE_TIN: specified total dimensionality cannot exceed 8
Cause: The specified total dimensionality for the TIN exceeded the maximum limit of 8.

Action: Create the TIN with fewer dimensions. You can store the rest in the output points table.

ORA-54654: CREATE_TIN: input points table should not be empty
Cause: The input points table had no data.

Action: Insert data into the input points table, and then create the TIN.

ORA-54655: CREATE_TIN: scratch tables/views(*string*) exist and need to be dropped
Cause: Transient tables from previous CREATE_TIN operation still existed.

Action: Delete the invalid TIN from the base table (for cleanup of scratch tables), and initialize and create the TIN again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as its parameter.

ORA-54656: CREATE_TIN: error fetching data from input points table
Cause: An internal read error occurred during TIN creation.

Action: Contact Oracle Support Services with the error number reported.

ORA-54657: CREATE_TIN: error writing TIN LOB
Cause: An internal LOB write error occurred during TIN creation. The cause might be lack of table space.

Action: Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.

ORA-54658: CREATE_TIN: input extent cannot be null
Cause: The extent of the TIN was null.

Action: Specify an extent for the TIN that is not null.

ORA-54659: CREATE_TIN: input extent has to be 2-D for geodetic data
Cause: The extent of the TIN was more than 2-D for geodetic data.

Action: Change the extent to 2-D (longitude, latitude).

ORA-54660: CLIP_TIN: invalid Point Cloud; extent is empty
Cause: The input TIN for the CLIP_TIN operation was invalid.

Action: Specify a TIN that was created using the CREATE_TIN operation.

ORA-54661: CLIP_TIN: SRIDs of query and TIN are incompatible
Cause: The TIN and the query geometry had incompatible SRID values.

Action: Change the query geometry SRID to be compatible with that of TIN.

ORA-54662: CLIP_TIN: query and blkid parameters cannot both be null
Cause: Both the query and blkid parameters were null in the call to the CLIP_TIN operation.

Action: Either specify a query geometry that is not null, or specify a blkid for use as a query.

ORA-54663: CLIP_TIN: internal error [*number*, *string*]
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54664: TO_GEOMETRY: internal error [*number*, *string*]
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54665: CREATE_TIN: internal error [*number*, *string*]
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54666: query gtype is a superset of the source geometry
Cause: A query element geometry was at a higher level in the geometry hierarchy than the source geometry.

Action: Try replacing the source geometry with the query geometry.

ORA-54667: query element cannot be matched to an element in source geometry (*string*)
Cause: A query element geometry was not a part of the source geometry.

Action: Redefine the query element or the source geometry.

ORA-54668: a 2D SRID cannot be used with a 3D geometry
Cause: A 2D SRID was used with a 3D geometry.

Action: Replace the 2D SRID with an appropriate 3D SRID.

ORA-55150: Spatial Web Services operation failed: *string*
Cause: There was an error in the Spatial Web Services operation or the parameters.

Action: Check the error message and take the appropriate action or contact Oracle Support Services.

ORA-55151: WCS is not enabled.
Cause: Web Coverage Service (WCS) metadata tables were not found.

Action: Ensure that WCS is enabled in the proper schema.

ORA-55152: WCS temporary tables do not exist.
Cause: The Web Coverage Service (WCS) operation required temporary tables, but these tables did not exist.

Action: Ensure that the WCS temporary tables exist in the schema of the coverage, and that the WCS schema has privileges to create, update, and delete rows in the WCS temporary tables.

ORA-55153: WCS publish coverage failed: *string*
Cause: Web Coverage Service (WCS) parameter values were invalid, the user had insufficient privileges, or the coverage was already published.

Action: Ensure that all parameter values are not null, the WCS schema has privileges to access the coverage, and the coverage is not already published. The schema of the coverage must grant access privileges to the WCS schema.

ORA-55154: Request to grant or revoke privileges failed: *string*
Cause: Parameters were invalid or privileges were insufficient.

Action: Check the error message to ensure that the parameters are valid and the user has sufficient privileges.

ORA-55160: MDSYS.SDO_XSD_TABLE does not exist or the specified XSD ID is incorrect.
Cause: The XML schema could not be found.

Action: Ensure that Oracle Spatial is installed properly, and check the XSD_ID column of the SDO_XSD_TABLE table and the USER_SDO_CSW_SERVICE_INFO view.

ORA-55161: CSW user table: *string*
Cause: Either the Catalog Services for the Web (CSW) user table, the SRID parameter, the metadata ID, or the XML schema definition (XSD) type was incorrect.

Action: Check the error message and take the appropriate action on the CSW user table name, SRID, metadata ID, XSD, or XML column.

ORA-55162: The XQFT index cannot be dropped or created for the CSW user table.
Cause: The XQuery Full Text (XQFT) index could not be dropped or created for the Catalog Services for the Web (CSW) user table.

Action: Ensure that the user table is ready for dropping or building an XQFT index.

ORA-55163: CSW server-side error: *string*
Cause: A Catalog Services for the Web (CSW) server-side error occurred.

Action: Ensure that the CSW metadata is correct and the CSW user table is properly defined.

ORA-55164: CSW client-side error: *string*
Cause: A Catalog Services for the Web (CSW) client-side error occurred.

Action: Ensure that the CSW record types are properly published, and that the sdows.ear file and WebLogic Server (WLS) are properly configured.

ORA-55200: Java exception from tag data translation java stack
Cause: Java exceptions.

Action: Turn on java output by calling dbms_java.set_output(OUTPUT_SIZE); Set java logging level by calling MGD_ID_UTL.setJavaLoggingLevel('INFO'); Analyze java logging messages.

ORA-55201: Tag data translation category not found
Cause: No matching category ID could be found.

Action: Make sure the input category name, category version or category ID is correct.

ORA-55202: Tag data translation scheme not found
Cause: No matching scheme could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55203: Tag data translation level not found
Cause: No matching level could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55204: Tag data translation option not found
Cause: No matching option could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55205: Tag data translation field validation failed
Cause: Invalid field value.

Action: Make sure the field value of the input data is within the range specified in the tag data translation XML.

ORA-55206: Tag data translation field not found
Cause: Invalid input field.

Action: Make sure the spellings of the input fields are correct.

ORA-55207: Tag data translation rule evaluation failure
Cause: Error occurred when idcode translator tried to evaluate the rule specified in the tag data translation XML.

Action: Java proxy must be set in order to evaluate manager look up rules. Call MGD_ID_UTL.setProxy(PROXY_HOST, PROXY_PORT) to enable java proxy.

ORA-55208: Too many matching levels were found for the input data
Cause: Necessary field values were missing.

Action: Add additional field value pairs that are necessary to determine a unique matching level.

ORA-55300: model *string* does not exist
Cause: The specified model could not be found.

Action: Make sure that the model has been created.

ORA-55301: rulebase *string* does not exist
Cause: The specified rulebase could not be found.

Action: Make sure that the rulebase has been created.

ORA-55302: insufficient privileges *string*
Cause: Sufficient privileges were not granted.

Action: Ask the database administrator to grant the appropriate privileges.

ORA-55303: SDO_RDF_TRIPLE_S constructor failed: *string*
Cause: SDO_RDF_TRIPLE_S constructor failed.

Action: Check the stack trace for additional information.

ORA-55304: specified reuse-bNode model-id *string* != target model-id *string*
Cause: The reuse-bNode model-id specified for the SDO_RDF_TRIPLE_S constructor was neither 0 nor the model-id of the target model.

Action: Make sure that the reuse-bNode model is either 0 or the model-id of the target model.

ORA-55305: reification constructor functions not supported
Cause: Unsupported reification constructor functions were used.

Action: Insert each triple in the reification quad individually. See documentation for more information.

ORA-55306: internal error: invalid *string*: value_name=*string* value_type=*string*
Cause: The value type of this component of the RDF triple was invalid.

Action: This is an internal error. Contact Oracle Support Services.

ORA-55307: invalid value type for lexical value: *string*
Cause: The value type of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table, then this may be an internal error. Contact Oracle Support Services.

ORA-55308: invalid time zone *string* for lexical value *string*
Cause: The time zone of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table then this may be an internal error. Contact Oracle Support Services.

ORA-55309: hash collision resolution failed for lexical value *string*
Cause: Attempts to resolve hash collision exceeded the maximum retry count.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55310: parse failed for the *string* lexical value: *string*
Cause: Attempts to insert the specified lexical value failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55311: invalid value type *string* for long lexical value *string*
Cause: The value type of this long (length > 4000) lexical value was invalid.

Action: Make sure that the long value has a valid value type.

ORA-55312: parse failed for triple: id-form: *string string string*
Cause: Attempts to insert triple failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55313: SDO_RDF_TRIPLE_S constructor failed to process triple containing bNode
Cause: The SDO_RDF_TRIPLE_S constructor without bNode reuse option was invalid for triple containing bNode.

Action: Use SDO_RDF_TRIPLE_S constructor that allows bNode reuse.

ORA-55314: invalid temporary table name (*string*) for use with batch load
Cause: Specified temporary table name was not valid.

Action: See documentation for rules for temporary table name validity.

ORA-55315: batch load attempt failed: *string*
Cause: The batch load operation failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55316: model *string* does not match model *string* for table and column
Cause: This column of the table was not associated with the specified model.

Action: Make sure to use the correct target model.

ORA-55317: model *string* already exists
Cause: A model with the specified name was already present.

Action: Choose a different model name, or delete the existing model and create a new model with the specified name.

ORA-55318: column *string* in table *string* already contains data
Cause: At model creation time, the table column contained data.

Action: Ensure that the table column does not contain data before model creation.

ORA-55319: model *string* create attempt failed: *string*
Cause: The attempt to create the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55320: model *string* drop attempt failed: *string*
Cause: The attempt to drop the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55321: network already exists
Cause: Attempt to create the network failed because the network already existed.

Action: If necessary, drop the network before trying to recreate the network.

ORA-55322: model(s) exist
Cause: An attempt was made to drop a network that contained one or more models.

Action: Drop all the model(s) and then retry the operation.

ORA-55323: rulebase(s) exist
Cause: An attempt was made to drop a network that contained one or more rulebases.

Action: Drop all the rulebase(s) and then retry the operation.

ORA-55324: no rulebases specified
Cause: Rulebases for the operation were not specified.

Action: Specify at least one rulebase.

ORA-55325: rulebase or rules index *string* already exists *string*
Cause: A rulebase or rules index with the specified name already existed.

Action: Choose a different name, or delete the existing rulebase or rules index.

ORA-55326: rules index (*string*) create attempt failed: *string*
Cause: The attempt to create the specified rules index did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55327: rule *string* yields a triple with a literal subject or predicate
Cause: The specified rule created an invalid triple containing a literal in the subject or predicate position.

Action: Check and modify the rule to avoid creation of invalid triple.

ORA-55328: literal value *string* insert attempt failed
Cause: The attempt to create the specified literal value failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55329: same model *string* specified more than once in the list of models
Cause: The specified model occurred more than once in the list of models.

Action: Eliminate duplicate occurrences of the model in the list of models.

ORA-55330: rulebase or rules index *string* is busy
Cause: The specified rulebase or rules index was busy and could not be used.

Action: Retry your operation later.

ORA-55331: user owns RDF objects
Cause: The user could not be dropped because it owns RDF objects.

Action: Drop the RDF objects and then retry.

ORA-55332: virtual model cannot be used in this context
Cause: A virtual model was used as input instead of a model.

Action: Use a model as input.

ORA-55333: virtual model *string* does not exist
Cause: The specified virtual model could not be found.

Action: Make sure that the virtual model has been created.

ORA-55334: virtual model name *string* is invalid
Cause: The specified virtual model name was not valid.

Action: Check Oracle documentation for valid virtual model names.

ORA-55335: at least one model must be specified
Cause: An empty list of models was specified as the set of models for a virtual model.

Action: Make sure at least one model appears in the set of models used to create a virtual model.

ORA-55336: insufficient privileges for using one or more of the models and rules indexes
Cause: An attempt was made to create a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or to grant the required privileges.

ORA-55337: a virtual model or rules index with the name *string* already exists
Cause: A virtual model or rules index with the specified name was already present.

Action: Choose a different virtual model name.

ORA-55338: a model with the name *string* already exists
Cause: A model with the specified name was already present.

Action: Choose a different virtual model name.

ORA-55339: a virtual model already exists for the specified model-rulebase combination
Cause: A virtual model with identical components was already present.

Action: Choose a different set of components for the new virtual model.

ORA-55340: rules index does not exist for the specified model-rulebase combination
Cause: A rules index did not exist for the specified sets of models and rulebases.

Action: Make sure a rules index is created for the specified sets of models and rulebases.

ORA-55341: label index out-of-range
Cause: An attempt was made to use an out-of-range index for retrieving the label.

Action: Correct the input and try again.

ORA-55342: not a defined label in the policy
Cause: An attempt was made to use an undefined label.

Action: Correct the input and try again.

ORA-55343: invalid dependent component for custom label generator
Cause: An attempt was made to specify an invalid dependent component for the label generator.

Action: Correct the input and try again.

ORA-55344: invalid label generator implementation or use
Cause: An attempt was made to use an invalid label generator to generate labels for inferred data.

Action: Correct the input and try again.

ORA-55345: invalid use of label generator with no OLS policy
Cause: An attempt was made to use a label generator when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

ORA-55346: invalid label generation option with user rules
Cause: An attempt was made to specify an invalid label generation option for entailment involving user rules.

Action: Correct the input and try again.

ORA-55347: missing proof for the specified label generation option
Cause: The chosen label generation option required proof, which was missing for the entailment.

Action: Correct the input and try again.

ORA-55348: label generator error: RDF data not enabled for *string*
Cause: An invalid label generator option was chosen for entailment.

Action: Correct the input and try again.

ORA-55349: OLS not installed or in an invalid state
Cause: Oracle Label Security (OLS) support for Resource Definition Framework (RDF) was not installed.

Action: Consult Oracle documentation to install the Oracle Label Security (OLS) support.

ORA-55350: RDF-OLS table option *string* not supported
Cause: An attempt was made to use an unsupported Oracle Label Security (OLS) option for Resource Definition Framework (RDF) data.

Action: Correct the input and try again.

ORA-55351: RDF secure access option not supported or is invalid
Cause: An attempt was made to use an unsupported secure access option for Resource Definition Framework (RDF).

Action: Correct the input and try again.

ORA-55352: insufficient privileges for policy administration
Cause: The necessary privileges needed to administer Oracle Label Security (OLS) or Oracle Virtual Private Database (VPD) policies for Resource Definition Framework (RDF) data were not specified.

Action: None

ORA-55353: invalid column name for label column *string*
Cause: An attempt was made to use an invalid column to maintain labels for Resource Definition Framework (RDF) data.

Action: Use CTXT2 as the label column.

ORA-55354: Policy *string* does not exist or is inaccessible
Cause: An attempt was made to use a nonexistent policy.

Action: Correct the input and try again.

ORA-55355: RDF network does not exist
Cause: An attempt was made to perform an operation that required Resource Definition Framework (RDF) network to be present.

Action: Create the Resource Definition Framework (RDF) network.

ORA-55356: OLS not enabled for RDF data
Cause: An attempt was made to perform an RDF-OLS-specific operation when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

ORA-55357: insufficient privileges for the current operation
Cause: An attempt was made to perform a Resource Definition Framework (RDF) secure access operation with restricted privileges.

Action: See Oracle documentation.

ORA-55358: model "*string*" is not empty
Cause: An attempt was made to reset Oracle Label Security (OLS) labels for a model with some data.

Action: None

ORA-55359: unauthorized operation with policy *string* - *string*
Cause: An attempt was made to perform an unauthorized DML operation on OLS-enabled Resource Definition Framework (RDF) repository.

Action: None

ORA-55360: invalid value for resource position - *string*
Cause: An invalid value was specified for the resource position while setting labels.

Action: Correct the input and try again.

ORA-55361: duplicate specification for the namespace found
Cause: An attempt was made to use a namespace map that contained one or more duplicate specifications.

Action: Correct the input and try again.

ORA-55362: RDF VPD policy may not be created in the SYS schema
Cause: An attempt was made to create an Oracle Virtual Private Database (VPD) policy in the SYS schema.

Action: None

ORA-55363: context *string* does not exist
Cause: An attempt was made to specify a nonexistent context for the Oracle Virtual Private Database (VPD) policy.

Action: Create the context using CREATE CONTEXT command.

ORA-55364: invalid operation type *string* for VPD policy
Cause: An attempt was made to specify an invalid operation for the application of Oracle Virtual Private Database (VPD) policy.

Action: Specify ALL, QUERY, or DML for operation type.

ORA-55365: invalid metadata for VPD policy
Cause: An attempt was made to define invalid metadata elements for the Oracle Virtual Private Database (VPD) policy.

Action: See Oracle documentation for valid set of metadata elements.

ORA-55366: unknown namespace prefix "*string*"
Cause: An attempt was made to make use of an undefined namespace prefix in Oracle Virtual Private Database (VPD) metadata.

Action: Correct the input and try again.

ORA-55367: invalid maintenance operation for VPD metadata
Cause: An attempt was made to perform an invalid maintenance operation on Oracle Virtual Private Database (VPD) metadata.

Action: Specify ADD or DELETE for VPD metadata maintenance.

ORA-55368: empty match or apply pattern not allowed in a VPD constraint
Cause: An attempt was made to specify an empty match or apply pattern for a Oracle Virtual Private Database (VPD) constraint.

Action: Correct the input and try again.

ORA-55369: invalid identifier specified for the constraint group
Cause: An invalid SQL identifier was specified for the constraint group.

Action: Correct the input and try again.

ORA-55370: input parameter not a zero or positive integer
Cause: The input parameter was not zero or a positive integer.

Action: Change the input parameter to zero or a positive integer.

ORA-55371: RDF rules index '*string*' exists for different model-rulebase combination
Cause: A rules index with the specified name has already been built for a different model-rulebase combination.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

ORA-55372: entailment (rules index) '*string*' already exists
Cause: The entailed graph (rules index) already exists.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

ORA-55373: inference internal error: *string*
Cause: An unexpected internal error condition occurred.

Action: Check the error message and the stack trace.

ORA-55374: query constants not in the database; no rows selected
Cause: URIs or literals used in the query did not exist in the database.

Action: Check the query, and ensure that the URIs or literals do exist.

ORA-55375: cannot drop table '*string*' because this table owns RDF objects
Cause: A table containing RDF data could not be dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then drop the table.

ORA-55376: cannot alter or drop column '*string*' because this column owns RDF objects
Cause: A table column containing RDF data could not be altered or dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then alter or drop the column.

ORA-55377: number of triples less than 1 or null error indication marker
Cause: An internal error occurred during validation. The number of triples was less than 1 or the error indication marker was null.

Action: Check the input parameters, and ensure that the number of triples is 1 or greater and that the error indication marker is not null; or contact Oracle Support Services.

ORA-55378: invalid error code
Cause: An invalid error code was passed in during validation.

Action: Specify a valid error code.

ORA-55379: too many triples
Cause: An internal error occurred during validation. Too many triples were passed in.

Action: Specify a valid number of triples for the operation, or contact Oracle Support Services.

ORA-55430: query pattern is null
Cause: The query pattern specified in the SEM_MATCH query was null.

Action: Modify the query pattern to be non-null.

ORA-55441: insufficient privileges to drop virtual model *string*
Cause: An attempt was made to drop a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or grant the required privileges.

ORA-55442: a virtual model cannot be used with other models in a SEM_MATCH query
Cause: The set of models used as input to a SEM_MATCH query contained a virtual model.

Action: Create a new virtual model with contents that are equivalent to the specified SEM_MATCH model set and query the new virtual model.

ORA-55443: a virtual model cannot be used with a rulebase in a SEM_MATCH query
Cause: A rulebase was specified in conjunction with a virtual model as input to a SEM_MATCH query.

Action: Create a new virtual model that expands the specified virtual model to include the specified rulebase and query the new virtual model.

ORA-55450: continually refreshed workspaces not supported with RDF
Cause: An attempt was made to use continually refreshed workspaces with Resource Definition Framework (RDF) data.

Action: None

ORA-55451: multi-parent workspaces not supported with RDF
Cause: An attempt was made to use multi-parent workspaces with Resource Definition Framework (RDF) data.

Action: None

ORA-55452: batch mode not allowed with version-enabled models
Cause: An attempt was made to batch load data into a version- enabled Resource Definition Framework (RDF) model. This is not supported.

Action: None

ORA-55453: OLS/VPD-enabled indexes must be created with CREATE_ENTAILMENT API
Cause: An attempt was made to create entailment for OLS/VPD-enabled models using unsupported API.

Action: Correct the input and try again.

ORA-55454: version-enabled indexes must be created with CREATE_ENTAILMENT API
Cause: An attempt was made to create entailment for version- enabled models using unsupported API.

Action: Correct the input and try again.

ORA-55455: rules index status not recognized (*string*)
Cause: The specified rules index status was not recognized.

Action: Ensure that the rules index status is VALID, INCOMPLETE, or INVALID, and retry the operation.

ORA-55456: no valid rules index for this model-rulebase combination
Cause: A valid rules index did not exist for specified combination of models and rulebases.

Action: Create a rules index for the specified models and rulebases combination, or use a combination of models and rulebases for which a rules index exists, and retry the operation. Also ensure that the rules index status matches the status for the rules index specified in the query.

ORA-55457: predicate not found in model
Cause: The predicate value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use a predicate value that exists in the model and retry the operation.

ORA-55458: object not found in model
Cause: The object value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use an object value that exists in the model and retry the operation.

ORA-55459: invalid parameter string
Cause: The parameter string used in the creation of an index of type SEM_INDEXTYPE had invalid or malformed parameters.

Action: See the documentation for information on how to write a valid parameter string.

ORA-55460: incorrect usage of semantic operators
Cause: There was a syntax error in the call to the SEM_RELATED operator

Action: See the documentation for information on how to use the SEM_RELATED operator. Check that the value returned by SEM_RELATED is compared to 1 or 0.

ORA-55461: no distance information available
Cause: Distance information was not generated during rules index creation.

Action: Retry query without the SEM_DISTANCE operator and/or without specifying bounds in the SEM_RELATED operator. See the documentation for information on when distance information is generated.

ORA-55462: internal error
Cause: An internal error occurred during a semantic operator query or during the creation of an index of type SEM_INDEXTYPE.

Action: Contact Oracle Support Services.

ORA-55463: missing privileges for MDSYS schema for OLS-enabled entailment
Cause: An attempt was made to run entailment with insufficient privileges for MDSYS schema.

Action: Grant EXEMPT ACCESS POLICY to MDSYS.

ORA-55464: model "*string*" does not exist
Cause: An attempt was made to use a nonexistent Resource Definition Framework (RDF) model.

Action: Correct the input and try again.

ORA-55465: resource position *string* not secured with OLS policy
Cause: An attempt was made to associate labels with resource positions that were not secured with Oracle Label Security (OLS).

Action: Correct the input and try again.

ORA-55466: one or more triples have incompatible sensitivity label
Cause: An attempt was made to reset a label for a resource that participated in triples with incompatible label.

Action: Correct the input and try again.

ORA-55467: model-specific label for the resource is incompatible
Cause: An attempt was made to set a global label for a resource when an incompatible model-specific label already existed.

Action: Correct the input and try again.

ORA-55468: rule base "*string*" does not exist or is not accessible
Cause: An attempt was made to specify a rule base that did not exist.

Action: Correct the input and try again.

ORA-55469: rule "*string*" does not exist or is not accessible
Cause: An attempt was made to set a label for a rule that did not exist.

Action: Correct the input and try again.

ORA-55470: OLS may not be applied with one or more models VPD-enabled
Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is VPD-enabled.

Action: Oracle Label Security (OLS) and Oracle Virtual Private Database (VPD) may not be used simultaneously.

ORA-55471: OLS may not be applied to version-enabled RDF repository
Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is version-enabled.

Action: Oracle Label Security (OLS) may not be enabled when one or more models is version-enabled.

ORA-55472: Secure access policy already assigned to RDF data
Cause: An attempt was made to assign an Oracle Label Security (OLS) policy to Resource Definition Framework (RDF) data when some other policy was already in effect.

Action: None

ORA-55473: RDF model participating in a virtual model may not be version-enabled
Cause: An attempt was made to version-enable a Resource Definition Framework (RDF) model which participated in a virtual model.

Action: None

ORA-55474: internal error: [*string*],[*string*],[*string*]
Cause: There was an internal error with Resource Definition Framework (RDF) OLS/VPS support.

Action: Contact Oracle Support Services.

ORA-55475: policy with a matching name already exists
Cause: An attempt was made to specify a duplicate Oracle Virtual Private Database (VPD) policy name.

Action: Correct the input and try again.

ORA-55476: policy "*string*" does not exist
Cause: An attempt was made to use a nonexistent Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55477: policy with dependent models may not be dropped
Cause: An attempt was made to drop an Oracle Virtual Private Database (VPD) policy with dependent models.

Action: Remove the VPD policy from the models and try again.

ORA-55478: application table with multiple RDF models not suitable for VPD
Cause: An attempt was made to VPD-enable a model which shared the application table with another model.

Action: None

ORA-55479: a policy already assigned to the RDF model
Cause: An attempt was made to assign Oracle Virtual Private Database (VPD) policy to a model with a VPD policy already in effect.

Action: None

ORA-55480: model participating in a virtual model may not be VPD-enabled
Cause: An attempt was made to VPD-enable a model that participated in a virtual model.

Action: None

ORA-55481: VPD policy may not be applied for OLS-enabled RDF repository
Cause: An attempt was made to VPD-enable a model with an Oracle Label Security (OLS) policy already in effect.

Action: OLS and VPD may not be used simultaneously.

ORA-55482: VPD may not be applied to version-enabled RDF repository
Cause: An attempt was made to VPD-enable a version-enabled Resource Definition Framework (RDF) repository. This is not supported.

Action: None

ORA-55483: policy "*string*" not assigned to the model
Cause: An attempt was made to remove an Oracle Virtual Private Database (VPD) policy that was never assigned to the model.

Action: None

ORA-55484: circular dependency not allowed in RDF metadata
Cause: An attempt was made to define metadata elements that had a circular dependency for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55485: metadata may not be directly assigned to an equivalent property
Cause: An attempt was made to assign metadata directly to a property that was declared to be an equivalent of another.

Action: None

ORA-55486: metadata exists for the equivalent property
Cause: An attempt was made to make a property equivalent of another when some metadata already existed for this property.

Action: None

ORA-55487: VPD constraints exist for the equivalent property
Cause: An attempt was made to make a property equivalent of another when some Oracle Virtual Private Database (VPD) constraints already existed for this property.

Action: Correct the input and try again.

ORA-55488: metadata definition already exists for the policy
Cause: An attempt was made to add a duplicate metadata definition for an Oracle Virtual Private Database (VPD) policy.

Action: None

ORA-55489: conflicting metadata definition exists for the policy
Cause: An attempt was made to define conflicting metadata definitions for an Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55490: VPD constraint may not be assigned to an equivalent property
Cause: An attempt was made to assign an Oracle Virtual Private Database (VPD) constraint to a property declared to be an equivalent of another.

Action: Assign the VPD constraint to the property that is the target of the equivalent property.

ORA-55491: VPD policy constraint with matching name already exists
Cause: An attempt was made to specify a duplicate name for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55492: error creating VPD policy constraint: *string*
Cause: The Oracle Virtual Private Database (VPD) constraint had errors.

Action: See Oracle documentation.

ORA-55493: specified VPD policy constraint does not exist
Cause: An attempt was made to operate on an Oracle Virtual Private Database (VPD) constraint that did not exist.

Action: None

ORA-55494: input model set may only have a unique VPD policy
Cause: An attempt was made to execute a multi-model query where the models, as a set, did not have a unique Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55495: application table with multiple models may not be version-enabled
Cause: An attempt was made to version-enable an application table associated with multiple Resource Definition Framework (RDF) models.

Action: Correct the input and try again.

ORA-55496: unsupported versioning configuration (History/Valid time) for RDF data
Cause: An attempt was made to use an unsupported configuration for Resource Definition Framework (RDF) versioning.

Action: Correct the input and try again.

ORA-55497: RDF repository with an OLS policy may not be version-enabled
Cause: An attempt was made to version-enable a model with Oracle Label Security (OLS) policy.

Action: Versioning is not supported for OLS-enabled Resource Definition Framework (RDF) repository.

ORA-55498: VPD-enabled RDF model may not be version-enabled
Cause: An attempt was made to version-enable a model with an Oracle Virtual Private Database (VPD) policy in effect.

Action: Versioning of VPD-enabled Resource Definition Framework (RDF) models is not supported.

ORA-55500: Event to be used for different trace levels
Cause: None.

Action: Change level for desired tracing in Flashback Transaction Backout.

ORA-55501: Backing out live transaction
Cause: Flashback Transaction Backout was requested on a transaction that has not committed yet.

Action: Commit the transaction before using this feature.

ORA-55502: Specified input transaction by name has no SCN hint
Cause: The specified transaction names for Flashback Transaction Backout was missing an SCN hint.

Action: Provide an SCN hint, and guarantee that the named transactions start before the given SCN.

ORA-55503: Mining finished without seeing specified transactions
Cause: The SCN hit passed was not good. The SCN hit may have come after the start of any of the input transactions.

Action: Give a lesser and more conservative SCN hint, with greater probability of having seen the start of a transaction.

ORA-55504: Transaction conflicts in NOCASCADE mode
Cause: Transactions other than the ones specified conflicts with the specified transactions.

Action: Try using other options like NONCONFLICT_ONLY or CASCADE or NOCASCADE_FORCE.

ORA-55505: DDL done on an interesting object after mining start SCN
Cause: The Flashback Transaction Backout process encountered an interesting object which had its last DDL operation done on it after the mining start time. An interesting object is one that has been modified by either the specified transactions or any of their dependents.

Action: Specify transactions that have committed after the last DDL done on all the objects they touched.

ORA-55506: Transaction performed unsupported change
Cause: A transaction in the dependency DAG performed some action that cannot be backed out. You can back out a transaction, only if undo has been logged for all of its operations. Note some operations do not log undo, such as Insert Direct Load and LOB changes. If you encounter a transaction that has performed any of these operations, you cannot back it out.

Action: The specified transaction cannot be backed out.

ORA-55507: Encountered mining error during Flashback Transaction Backout. function:*string*
Cause: Mining error.

Action: None

ORA-55508: Invalid input to Flashback Transaction Backout
Cause: Null varrays passed or invalid input specified

Action: Specify properly formed varrays and valid options

ORA-55509: Creation of dependencies could not finish
Cause: One or more input transaction or any of its dependents are not committed or have been aborted after more than 1 minute of calling the backout function.

Action: Commit all the active transactions associated with this table and try again.

ORA-55510: Mining could not start
Cause: Mining could not start for the following reasons. 1. A logminer session was processing 2. The database was not mounted or not opened for read and write 3. Minimum supplemental logging was not enabled 4. Archiving was not enabled

Action: Fix the mentioned problems and try again. Note that if you enable supplemental logging now, you will not be able to remove a transaction that has committed without supplemental logging.

ORA-55511: Flashback Transaction experienced error in executing undo SQL
Cause: There was a constraint violation exception when executing in NOCASCADE_FORCE mode. Users could also get this error if appropriate supplemental logging is not enabled causing constraint dependencies to go unnoticed.

Action: Either use CASCADE or NONCONFLICT_ONLY options or add appropriate level for supplemental logging.

ORA-55512: Backing out PDML or XA-RAC transaction
Cause: One of the transactions in the dependency graph was a PDML transaction or a local transaction which is a branch of a global XA transaction, spanning multiple RAC instances. Currently flashback transaction does not support this type of transaction.

Action: None

ORA-55513: Backing out an AQ transaction
Cause: One of the transactions in the dependency graph touched an AQ table. As AQ externalizes database information, these transactions are not backed out, as the entire effects of the transaction cannot be seen from inside the database.

Action: None

ORA-55514: Backing out a DDL transaction
Cause: One of the transactions in the dependency graph is a DDL transaction and could not be backed out.

Action: None

ORA-55515: Mining sees input transaction changes without seeing transaction start
Cause: The start SCN provided was higher than the transaction start but below the transaction commit. The result was only partial changes for the given transaction.

Action: Please provide a lower scn hint to flashback transaction.

ORA-55516: Event to dump the LCR's seen by flashback transaction backout to trace file
Cause: None.

Action: Set it to 0 for real flashback transaction. If this is set, flashback transaction will not proceed.

ORA-55517: Internal use
Cause: None.

Action: None

ORA-55518: Mining across reset logs
Cause: Flashback Transaction Backout cannot work with missing changes. This error is thrown if we walk across a reset-logs branch, where we might have missed changes.

Action: If the user knows that the transaction happened in the current reset logs branch, then the SCN-hint is possibly incorrect. Provide an SCN in the current reset log branch.

ORA-55519: Supplemental logging not available for mining SCN range
Cause: Flashback Transaction cannot work if there are regions in the mining range where supplemental logging is not enabled.

Action: If you have provided a SCN/time hint which is approximate and far beyond the specified transaction start time, then readjust the SCN hint and try again. If the system has figured out the transaction start time or you are sure of the range, then the specified transaction cannot be backed out.

ORA-55520: Log record in compatibility lower than 11.0
Cause: The logical change record shows that the compatibility of the mined redo is lower than version 11.0. Flashback transaction works only on redo versions 11.0 and above.

Action: Advance the compatibility and try to back out transactions that have occurred after the compatibility increase.

ORA-55521: Transaction layer temp undo- miscellaneous debug event

ORA-55522: failed to extend temporary undo segment number *string*
Cause: A failure occurred when trying to extend the temporary undo segment.

Action: This is normally followed by another error message that caused the failure. Check the size of default the temporary tablespace.

ORA-55523: Transaction layer parallel transaction- miscellaneous debug event

ORA-55524: Too many recursive autonomous transactions for temporary undo
Cause: An attempt was made to issue too many recursive autonomous transactions causing the temporary undo segment to be out of slots.

Action: Reconnect to establish a new session and do not use deep nesting of autonomous transactions.

ORA-55525: cannot generate temporary undo in a distributed transaction
Cause: An attempt was made to generate temporary undo in a distributed transaction.

Action: Do not change temporary objects in a distributed transaction.

ORA-55526: temporary tablespace to store temporary undo not available
Cause: An attempt was made to generate temporary undo without adding temporary tablespace in the database.

Action: Add temporary tablespace prior to enabling temporary undo.

ORA-55527: Diagnostic event for external SCN-comparing errors

ORA-55528: maximum number of RECO sessions reached
Cause: To mitigate a potential denial-of-service (DoS) attack via the recoverer process (RECO), the creation of a new RECO session has been prevented, because the maximum number of RECO sessions has been reached.

Action: If there is a legitimate requirement for additional concurrent RECO sessions, adjust the values for the RECO parameters to allow more RECO sessions.

ORA-55529: value *string* of *string* is outside the valid range of 2 to 32765
Cause: An attempt was made to set the parameter to an invalid value.

Action: Specify a value between 2 and 32765, inclusive.

ORA-55550: Event to be used for testing ktubu extensions
Cause: None.

Action: None

ORA-55551: Trigger 4136 corruption

ORA-55552: Trigger 4137 corruption

ORA-55553: Trigger 4139 corruption

ORA-55554: Trigger 4140 corruption

ORA-55555: Trigger 4152 corruption

ORA-55556: Trigger 4143 corruption

ORA-55557: Trigger 4144 corruption
Cause: Above events used for testing corruption path

Action: None

ORA-55558: *string* is not a corrupted transaction
Cause: the given transaction is not in the corrupt list v$corrupt_xid_list

Action: check v$corrupt_xid_list

ORA-55559: Test proactive txn health check

ORA-55560: Test reactive txn health check

ORA-55561: Test 25027 corruption

ORA-55562: Not able to get TX enqueue, cannot force commit *string*

ORA-55563: *number* is not a valid undo segment number
Cause: the given usn is not a valid one

Action: check undo$

ORA-55564: *string* is not a valid transaction id
Cause: the given txn is not a valid one

Action: check txn id

ORA-55565: *string* is not a valid undo segment number
Cause: the given usn is not a valid one

Action: check undo$

ORA-55566: SQL statement issued when the database was not open for queries
Cause: Tried to access SMON time zone information when database was not open for queries.

Action: Reissue the SQL statement after the database is open for queries.

ORA-55567: The _highthreshold_undoretention value should be at least *string* based on the current undo retention settings.
Cause: The _highthreshold_undoretention value was not greater than or equal to the UNDO_RETENTION setting and the low threshold value used for tuning undo retention.

Action: Reissue the SQL statement with a higher value.

ORA-55568: The maximum query length (mql) value should be atmost *string* based on the current _highthreshold_undoretention setting.
Cause: The maximum query length (mql in minutes) was not less than or equal to half the _highthreshold_undoretention parameter setting.

Action: Reissue the SQL statement with a lower value for mql or increase the value of _highthreshold_undoretention parameter.

ORA-55569: The UNDO_RETENTION parameter value should be atmost *string*, the _highthreshold_undoretention setting.
Cause: The UNDO_RETENTION parameter value was not less than or equal to the _highthreshold_undoretention parameter setting.

Action: Reissue the SQL statement with a lower value for UNDO_RETENTION parameter or increase the value of _highthreshold_undoretention parameter.

ORA-55570: transaction layer debug trace event

ORA-55571: Oracle Flashback Transaction Query is not supported in a consolidated Oracle database running in shared undo mode.
Cause: The consolidated database was in shared undo mode and Oracle Flashback Transaction Query could not mine undo records across pluggable databases.

Action: The consolidated database must be switched to local undo mode.

ORA-55600: The table "*string*"."*string*" is already enabled for Flashback Archive
Cause: The specified table is already enabled for Flashback Archive.

Action: No action required.

ORA-55601: The table "*string*"."*string*" cannot be enabled for Flashback Archive
Cause: An attempt is made to enable Flashback Archive for a table which should never be enabled for Flashback Archive.

Action: Check the table name.

ORA-55602: The table "*string*"."*string*" is not enabled for Flashback Archive
Cause: An attempt was made to perform Flashback Archive operation on a table on which Flashback Archive is not enabled.

Action: Check the table name.

ORA-55603: invalid flashback archive or valid time period command
Cause: An invalid flashback archive or valid time period command was specified.

Action: Check the SQL statement.

ORA-55604: Incorrect tablespace is specified
Cause: An incorrect tablespace is specified for the Flashback Archive.

Action: Check the SQL statement and verify the possible causes, 1, the tablespace that was already used by the Flashback Archive. 2, the tablespace was not used by the Flashback Archive. 3, the tablespace block size is less than 8K. 4, the tablespace is a lost write tablespace

ORA-55605: Incorrect Flashback Archive is specified
Cause: An attempt was made to operate on a Flashback Archive that does not exist, or to create a Flashback Archive that already exists.

Action: Check the SQL statement.

ORA-55606: Event to modify archiver sleep time in seconds
Cause: 30 seconds is recommended as the archiver sleep time for tests.

Action: The default archiver sleep time is 300 seconds

ORA-55607: Event to enable debugging of archiver
Cause: The purpose of this event is for debugging.

Action: Attach to process specified.

ORA-55608: Default Flashback Archive does not exist
Cause: The default Flashback Archive did not exist.

Action: Create the default Flashback Archive first.

ORA-55609: Attempt to create duplicate default Flashback Archive
Cause: An attempt was made to create a default Flashback Archive while one already exists.

Action: No action required.

ORA-55610: Invalid DDL statement on history-tracked table
Cause: An attempt was made to perform certain DDL statement that is disallowed on tables that are enabled for Flashback Archive.

Action: No action required.

ORA-55611: No privilege to manage default Flashback Archive
Cause: An attempt was made to create, alter, or drop the default Flashback Archive.

Action: No action required.

ORA-55612: No privilege to manage Flashback Archive
Cause: An attempt was made to create, alter, or drop a Flashback Archive.

Action: No action required.

ORA-55613: Invalid Flashback Archive quota size
Cause: An attempt was made to specify invalid Flashback Archive quota size.

Action: Specify size in MB, GB, TB, PB, or EB.

ORA-55614: AUM needed for transactions on tracked tables
Cause: An attempt was made to execute DML on a tracked table without enabling Auto Undo Management.

Action: Disable tracking on the table or enable Auto Undo Management.

ORA-55615: Event to test archiver scheduled internal tasks
Cause: The purpose of this event is for testing.

Action: No action required.

ORA-55616: Transaction table needs Flashback Archiver processing
Cause: Too many transaction table slots were being taken by transactions on tracked tables.

Action: Wait for some amount of time before doing tracked transactions.

ORA-55617: Flashback Archive "*string*" runs out of space and tracking on "*string*" is suspended
Cause: Flashback archive tablespace quota is running out.

Action: Add tablespace or increase tablespace quota for the flashback archive.

ORA-55618: Insufficient privilege to grant Flashback Archive privilege
Cause: An attempt was made to grant Flashback Archive privilege.

Action: No action required.

ORA-55619: Invalid privilege to grant on Flashback Archive
Cause: An attempt was made to grant invalid privilege on a Flashback Archive object.

Action: Specify valid privilege.

ORA-55620: No privilege to use Flashback Archive
Cause: An attempt was made to enable Flashback Archive on a table without such privileges.

Action: No action required.

ORA-55621: User quota on tablespace "*string*" is not enough for Flashback Archive
Cause: An attempt was made to create or alter a Flashback Archive quota which is larger than the user's quota.

Action: No action required.

ORA-55622: DML, ALTER and CREATE UNIQUE INDEX operations are not allowed on table "*string*"."*string*"
Cause: An attempt was made to write to or alter or create unique index on a Flashback Archive internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Flashback Archive internal tables.

ORA-55623: Flashback Archive "*string*" is blocking and tracking on all tables is suspended
Cause: Flashback archive tablespace has run out of space.

Action: Add tablespace or increase tablespace quota for the flashback archive.

ORA-55624: The table "*string*"."*string*" cannot be enabled for Flashback Archive at this point
Cause: An attempt was made to enable Flashback Archive again on a table which was just disabled.

Action: Try again later.

ORA-55625: Cannot grant Flashback Archive privilege to a role
Cause: An attempt was made to grant or revoke Flashback Archive privilege to a role.

Action: No action required.

ORA-55626: Cannot remove the Flashback Archive's primary tablespace
Cause: An attempt was made to remove the primary tablespace of the Flashback Archive.

Action: No action required.

ORA-55627: Flashback Archive tablespace must be ASSM tablespace
Cause: An attempt was made to add a tablespace that was not an ASSM tablespace.

Action: Add tablespace that is created with segment space management auto.

ORA-55628: Flashback Archive supports Oracle 11g or higher
Cause: An attempt was made to created a Flashback Archive with incorrect compatible mode or without auto undo management.

Action: Use compatible mode equal to 11.0 or higher, and use auto undo management.

ORA-55629: Event to test Flashback Archiver internal management tasks
Cause: The purpose of this event is for testing.

Action: No action required.

ORA-55630: Flashback data archive cannot be enabled on a nested table, temporary table, external table, hybrid-partitioned table, materialized view, advanced queuing table, clustered table, analytic workspace table, or non-table object.
Cause: An attempt was made to enable flashback data archive on an object which is not supported by flashback data archive.

Action: Do not use the FLASHBACK ARCHIVE clause for this object.

ORA-55631: Table has columns with data types that are not supported by Flashback Data Archive
Cause: An attempt was made to add a column of data type that is not supported by Flashback Data Archive. Or, the table on which Flashback Data Archive is being enabled contains column(s) with data types not supported by Flashback Data Archive.

Action: Do not use FLASHBACK ARCHIVE clause for this object. If adding column, do not use LONG or Nested Table column data type.

ORA-55632: Tablespace has Flashback Archive tables
Cause: An attempt was made to remove a tablespace that has Flashback Archive tables.

Action: No action required.

ORA-55633: Cannot do DDL on Flashback Data Archive enabled table
Cause: An attempt was made to do DDL on tracked tables while one DDL is runnning.

Action: Retry the DDL at a later time.

ORA-55634: Unable to disassociate or re-associate Flashback Data Archive table "*string*"."*string*"
Cause: Either an incorrect table name was used or an exclusive lock on the table could not be acquired.

Action: Check the table name and release locks on the table.

ORA-55635: Flashback Data Archive enabled table "*string*"."*string*" is disassociated
Cause: An attempt was made to perform operation on a Flashback Data Archive enabled table that is currently disassociated for DDL.

Action: Retry the operation at a later time.

ORA-55636: Flashback Data Archive enabled table "*string*"."*string*" has different definition from its history table
Cause: The Flashback Data Archive enabled table has different table definition from its history table.

Action: Fix the table definition.

ORA-55637: Flashback Data Archive enabled table "*string*"."*string*" is not in the correct compliance mode for this operation
Cause: An attempt was made to perform disassociation operation on a Flashback Data Archive enabled table that is in compliance mode. Or, DDL are not supported on tables in noncompliance mode.

Action: Disable compliance mode before retrying the disassociation operation.

ORA-55638: DDL operations on Flashback Data Archive-enabled table are not allowed at this point
Cause: Flashback Data Archive could not acquire resources to complete the operation on Oracle RAC.

Action: Retry the DDL at a later time.

ORA-55639: Flashback Data Archive internal SQL error
Cause: Flashback Data Archive encountered internal SQL error.

Action: No action required.

ORA-55640: Insufficient privilege to perform the Flashback Data Archive operation
Cause: An attempt was made to disassociate tables enabled for Flashback Data Archive without the required privilege.

Action: No action required.

ORA-55641: Cannot drop tablespace used by Flashback Data Archive
Cause: An attempt was made to drop a Flashback Data Archive tablespace.

Action: Remove the tablespace from Flashback Data Archive before retrying the operation.

ORA-55642: Table has column names that are reserved by Flashback Data Archive
Cause: The table on which Flashback Data Archive is being enabled contains column(s) with names that are reserved by Flashback Data Archive.

Action: Rename column name before retry.

ORA-55643: cannot combine Flashback Data Archive operation with other operations
Cause: An attempt was made to combine the Flashback Data Archive operation with other ALTER TABLE operations.

Action: Ensure that Flashback Data Archive is the sole operation specified in ALTER TABLE statement.

ORA-55644: event to enable system column ORA_XID testing
Cause: The purpose of this event was for testing.

Action: No action required.

ORA-55645: Valid time period cannot be enabled on a nested table, temporary table, external table, materialized view, AQ table, clustered table, or non-table object.
Cause: An attempt was made to enable a valid time period on an object which is not supported by valid time period.

Action: Do not use a valid time period for this object.

ORA-55646: application already enabled for flashback archive
Cause: An attempt was made to enable flashback archive on an application for a second time.

Action: No need to enable flashback archive on this application.

ORA-55647: application not previously enabled for flashback archive
Cause: An attempt was made to disable flashback archive on an application that has not been enabled for flashback archive.

Action: No need to disable flashback archive on this application.

ORA-55648: table already added to application
Cause: An attempt was made to add a table to an application for a second time.

Action: Do not add a table to an application more than once.

ORA-55649: table not previously added to application
Cause: An attempt was made to remove a table that has not been added to an application.

Action: No need to remove table from application.

ORA-55650: application not registered for flashback archive
Cause: An attempt was made to access an application that has not been registered for flashback archive.

Action: Register the application before accessing it.

ORA-55651: application already registered for flashback archive
Cause: An attempt was made to register an application for flashback archive for a second time.

Action: No need to register this application for flashback archive.

ORA-55652: application already locked down
Cause: An attempt was made to lock down an application for a second time.

Action: No need to lock down this application.

ORA-55653: application not previously locked down
Cause: An attempt was made to unlock an application that was not previously locked down.

Action: No need to unlock this application.

ORA-55654: too many columns in the base table
Cause: An attempt was made to enable flashback archive on a base table with so many columns that the history table has no room for metadata columns.

Action: Have fewer columns in the base table.

ORA-55655: Flashback archive is being used by an application.
Cause: An attempt was made to drop the flashback archive, however, it was still being used by an application.

Action: Check the SYS_FBA_APP table to see which application is using the flashback archive. Drop the application before dropping the flashback archive.

ORA-55710: Unable to alter system parameter GLOBAL_TXN_PROCESSES at this time
Cause: The system was in the process of adjusting the number of global transaction background processes.

Action: Retry the operation at a later time.

ORA-55711: Unable to bind clusterwide global transactions to compatible undo
Cause: Undo tablespace was not onlined for automatic undo management.

Action: Create undo tablespace if it has not been created.

ORA-55712: XA transactions on RAC are not supported with GLOBAL_TXN_PROCESSES set to 0
Cause: The initialization parameter GLOBAL_TXN_PROCESSES was set to 0.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to a value greater than 0.

ORA-55713: GLOBAL_TXN_PROCESSES cannot be set to 0 at runtime
Cause: An attempt was made to set initialization parameter GLOBAL_TXN_PROCESSES to 0 at runtime.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to 0 before starting RAC instance to disable GTX background processes. Note that XA transactions are not supported on RAC database when GTX background processes are disabled.

ORA-55714: savepoint '*string*' disabled with interleaved changes across Oracle RAC instances
Cause: After the savepoints were established, interleaved changes were made across Oracle RAC instances within the clusterwide global transaction.

Action: Do not make interleaved changes across Oracle RAC instances after savepoints are established.

ORA-55715: The current transaction cannot become distributed.
Cause: The current local transaction was already bound to an undo segment that was not compatible with clusterwide global transactions.

Action: Ensure that you set UNDO_MANAGEMENT to AUTO and that an undo tablespace is created and configured for the instance.

ORA-55800: NLS errors while processing Oracle number
Cause: Error occurred when trying to convert Oracle number to an integer.

Action: Check the input parameters.

ORA-55801: Event to control CR activity
Cause: The bit values that we consider. 0x1: Remove fix for bug 3514835 which could potentially throw more 8177 errors We have conservatively blocked some serializability errors, where there could potentially be a dependency between a service transaction in an index and forward going transaction.

Action: Set event 55801 to 1 to disable the bug fix, thereby reducing 8177 error, although it might cause some internal errors instead.

ORA-55804: Savepoint encounterned internal error, abort transaction
Cause: Internal I/O error. The transaction is in unsafe state. any attempt to commit the transaction will abort the transaction.

Action: Moving forward in transaction is unsafe. Abort or rollback the transaction

ORA-55805: The transaction has been forcefully aborted
Cause: Either error ORA-55804 or ORA-55806 caused this transaction to abort.

Action: None, redo the transaction.

ORA-55806: SecureFile LOBs direct write internal error, abort transaction
Cause: This was an internal asynchronous I/O error. The transaction was in an unsafe state. An attempt to commit the transaction aborted the transaction.

Action: Moving forward with this transaction is unsafe. Abort or rollback the transaction. Contact Oracle Support Services.

ORA-55903: Secure file log feature unimplemented: *string*
Cause: This feature has not been implemented yet.

Action: None

ORA-55904: Secure file log name too big
Cause: The specified log name was bigger than the maximum identifier supported in Oracle.

Action: Use a smaller log name.

ORA-55905: Secure file log *string* exists with same name
Cause: Create operation was attempted on an existing secure file log.

Action: Destroy the log with the specified name and retry.

ORA-55906: Secure file log [id: *string* name: *string*] does not exist
Cause: An open operation for read or write was attempted on a nonexistent log.

Action: Create the log and retry.

ORA-55907: Tablespace *string* does not exist for secure file log
Cause: The specified tablespace to keep the swap space for the secure file log does not exist.

Action: Retry with a different tablespace or create one with the specified name.

ORA-55908: Tablespace *string* does not support secure files
Cause: Specified tablespace to keep secure file logs did not support secure files.

Action: Provide a tablespace that supports secure files, or remove secure file options in the create statement.

ORA-55909: Create mode invalid: *string*
Cause: The mode to create the log was not supported, or there was a discrepancy between the in-memory log creation and the persistent definition already present.

Action: Retry by correcting the problem.

ORA-55910: Swap table *string* does not exist
Cause: The dictionary-provided swap name did not exist. This could be caused by an external dropping of the swap table without going through the secure file log API's. This means that all of the persistent part of the log was lost.

Action: Destroy the specified log and recreate from start.

ORA-55911: Log with id: *string* is being destroyed
Cause: A write, read or open operation was being tried on a log that was in the process of being destroyed.

Action: None

ORA-55912: Invalid thread Id provided to write to a threaded log
Cause: A valid thread Id was not provided in order to write to a threaded log. Thread Ids are used to partially order messages to the log from different writing processes.

Action: Provide a logical thread Id or use a nonthreaded log.

ORA-55913: Valid thread Id provided to a nonthreaded log
Cause: A valid logical thread Id was provided for a nonthreaded log. A partial order will not be maintained in a nonthreaded log and messages could be output in random order.

Action: Provide a null thread-id for a non-threaded log, or create a threaded log to do what is required.

ORA-55914: An invalid descriptor was passed to a log operation. Reason: *string*
Cause: An invalid or uninitialized descriptor was found while doing a secure file log read or write.

Action: Provide a properly initialized descriptor created by log open.

ORA-55915: Invalid option: *string*
Cause: An invalid option was passed for a log operation.

Action: Check the cause and retry.

ORA-55916: Message too long
Cause: The log is opened with split messages across buffers set to false. However, the message size is bigger than what can be fit in one buffer.

Action: Write the message in smaller segments or allow split messages while creating the log.

ORA-55917: Table flush I/O failed for log ID: *string* bucket ID: *string*
Cause: Table flush I/O failed. The most common cause for this could be out-of-space errors in the tablespace.

Action: Resolve the underlying problem and retry.

ORA-55918: Required buffer size too big
Cause: The buffer size was greater than 16K. Secure file logging supports buffer sizes of 4K, 8K and 16K. The only reason a large buffer size is required is if split message is set to false, and the potential message is large.

Action: Request a smaller buffer size, or try to use smaller message segments.

ORA-55919: destroying, purging or partitioning log while writers or readers have open descriptors
Cause: The method to destroy, purge or partition log was called and requested to wait for open descriptors. After waiting for 5 minutes, an error is returned if writers or readers still exist.

Action: Close all open descriptors or call destroylog, purgelog or createpartition with the option of not waiting for open descriptors.

ORA-55920: Buffer sequence is too low
Cause: The buffer sequence was too low or rows were removed from the swap table.

Action: Try to read from a higher sequence. Note, that the data in buffer with this sequence has been lost.

ORA-55921: Start point provided is incorrect.
Cause: The provided start point, from which to begin reading, was incorrect.

Action: Provide a minimum SCN, timestamp or sequence or specify that reading should begin with the oldest data available.

ORA-55922: PL/SQL API error: *string*
Cause: PL/SQL callbacks had a problem

Action: Consider the problem string and act appropriately

ORA-55923: PL/SQL maximum number of array elements exceeded
Cause: Number of elements in an array write exceeded the maximum limit 100 message segments in one write.

Action: Try a write buffered with multi-segment write or reduce the element count in the array write.

ORA-55924: PL/SQL encountered a NULL element in the array
Cause: A null element was encountered during an array write.

Action: Provide non-null VARCHAR2 or RAW elements as an array element.

ORA-55925: write end called without proper write start
Cause: An attempt was made to end write without a corresponding start write.

Action: Write starts and ends must be called in the right order for writing piecewise or use a write whole option which does not need an explicit start or end.

ORA-55926: Closing log descriptor before calling write end
Cause: An attempt was made to close the log descriptor before the corresponding write end.

Action: Write end should be called before closing the log write descriptor

ORA-55927: No tablespace found for the log
Cause: No suitable tablespace was found for the log.

Action: Provide a tablespace and retry log creation.

ORA-55928: Duplicate tablespace being added
Cause: The tablespace being added for the named log already existed in the list of tablespaces available for this log.

Action: The user should provide a different tablespace for addition to the list of available tablespaces for the named log.

ORA-55929: Creating new partition when current partition is empty
Cause: An attempt was made to create a new partition for the named log when the current partition is empty.

Action: Do not attempt to create a new partition when the current partition is still empty.

ORA-55930: Version of log, identified by (logname, instanceid), does not exist
Cause: Version of log, identified by (logname, instanceid), did not exist.

Action: Provide the correct (logname, instanceid) input.

ORA-55931: The highest partition of log, identified by (logname, instanceid), does not exist
Cause: The highest partition of log, identified by (logname, instanceid), did not exist.

Action: Provide the correct (logname, instanceid) input.

ORA-55932: No SGA memory available for buffers
Cause: An attempt was made to create a secure file log with no available memory for buffers.

Action: Set SECUREFILE_LOG_SHARED_POOL_SIZE to allocate adequate memory.

ORA-55933: invalid log owner provided
Cause: The user provided did not own the secure file log under consideration.

Action: Provide the correct owner of the secure file log.

ORA-55934: invalid user ID provided
Cause: The specified user ID did not exist in the database.

Action: Provide a valid database user ID.

ORA-55935: invalid user name provided
Cause: The specified user name did not exist in the database.

Action: Provide a valid database user name.

ORA-55936: user ID mismatch
Cause: The user ID provided did not own the secure file log under consideration.

Action: Provide the correct owner of the secure file log.

ORA-55937: storage already associated with the secure file log
Cause: An attempt was made to associate storage with a secure file log which already has storage.

Action: Do not attempt to associate storage with a secure file log which already has associated storage.

ORA-55938: no flush callback associated with the secure file log
Cause: Flush callback was not associated with the secure file log under consideration.

Action: The secure file log needs to be re-created with valid flush callback.

ORA-55939: database is not open for attempted operation
Cause: The attempted operation failed because the database is not yet open.

Action: Resubmit the operation when the database opens.

ORA-55940: An error occurred during execution of ktliIngestExternData.
Cause: An error occurred during execution of ktliIngestExternData.

Action: See the message associated with the error for remedial action.

ORA-55941: DML and DDL operations are not allowed on table "*string*"."*string*"
Cause: A DML or DDL operation was attempted on a Common Logging Infrastructure internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Common Logging Infrastructure internal tables.

ORA-55942: read not started for read descriptor of the secure file log
Cause: An attempt was made to get a readsavepoint before ktliRead successfully returned a message, using the secure file log descriptor under consideration.

Action: Execute a ktliRead, which returns a message using the secure file log descriptor, before attempting to get a readsavepoint.

ORA-55943: unsupported verison in readsavepoint of the secure file log
Cause: An attempt was made to open a secure file log with a readsavepoint which had unsupported version.

Action: Contact Oracle Support Services.

ORA-55944: External flush I/O failed for log ID: *string* bucket ID: *string*
Cause: External flush I/O failed.

Action: Resolve the underlying problem and retry.

ORA-55945: tablespace name not specified
Cause: The tablespace needed to keep the swap space for the secure file log has not been provided by the user.

Action: Retry the operation with the appropriate tablespace name.

ORA-55946: operation failed due to CrossInstanceCall failure - *string string*
Cause: The operation failed due to a CrossInstanceCall failure. Check the trace files on remote instances for the underlying problem.

Action: Resolve the underlying problem and retry.

ORA-55947: message too long
Cause: The message length was greater than what the Secure file log supports.

Action: Provide the message with a length that the Secure file log supports and retry the operation.

ORA-55948: flush threshold is invalid
Cause: The flush threshold specified for the secure file log is invalid.

Action: The flush threshold for secure file log must be an integer greater than or equal to 1 and less than or equal to 100.

ORA-55949: swap table of secure file log (*string*, *string*) does not exist
Cause: The swap table of secure file log did not exist. This could be caused by an external dropping of the swap table without going through the secure file log API's. This means that all of the persistent parts of the log were lost.

Action: Destroy the specified log and re-create it from the start.

ORA-55950: storage not associated with the secure file log [name: *string*]
Cause: An attempt was made to import data from an external source into a secure file log which is not associated with tablespace storage.

Action: Associate tablespace storage with a secure file log before importing data from an external source.

ORA-55951: previous async I/O on this LOB had an error
Cause: A previous buffered operation had an I/O error.

Action: The following error in the stack describes the problem.

ORA-56500: DRCP: Pool not found
Cause: The pool name passed was either null or an invalid pool name.

Action: Input a valid pool name.

ORA-56501: DRCP: Pool startup failed
Cause: The connection pool failed to start up.

Action: Check logs for details.

ORA-56502: DRCP: Pool is inactive
Cause: The operation is only supported on an active pool.

Action: Start the pool.

ORA-56503: DRCP: Pool is active
Cause: The operation is only supported on an inactive pool.

Action: Shutdown the pool.

ORA-56504: DRCP: Invalid pool configuration parameter name
Cause: The configuration paramter name is null or invalid input.

Action: Input a valid configuration parameter name.

ORA-56505: DRCP: Invalid pool configuration parameter value
Cause: The configuration paramter value is null or invalid input.

Action: Input a valid configuration parameter value.

ORA-56506: DRCP: Pool shutdown failed
Cause: Connection pool failed to shutdown.

Action: Check logs for details.

ORA-56507: DRCP: Pool alter configuration failed
Cause: Connection pool failed to configure pool.

Action: Check logs for details.

ORA-56508: DRCP: Pool startup failed
Cause: Connection Broker failed to startup the pool.

Action: Check logs for details.

ORA-56509: DRCP: Pool shutdown failed
Cause: Connection Broker failed to shutdown the pool.

Action: Check logs for details.

ORA-56510: DRCP: Pool alter configuration failed
Cause: Connection Broker failed to configure the pool.

Action: Check logs for details. For the NUM_CBROK and MAXCONN_CBROK values, if the initialization parameter CONNECTION_BROKERS contains a (TYPE=POOLED) entry, then use the parameter instead to update these values.

ORA-56511: DRCP: Cross instance synchronization failed
Cause: Publish message to all RAC instances failed.

Action: Check logs for details.

ORA-56512: DRCP: Failed to synchronize RAC instances [*string*]
Cause: Some of the RAC instances were not synchronized.

Action: Perform the same operations on all the failed instances.

ORA-56513: DRCP: Cannot perform requested operation using pooled connection
Cause: This operation was not supported using connections from a pool.

Action: Use a regular connection to perform this operation.

ORA-56514: DRCP: invalid value for maximum number of connections to Connection broker
Cause: The value passed exceeded the maximum allowed.

Action: No action required. The maximum number of connections was automatically set to the maximum allowed value.

ORA-56515: DRCP: Operation not allowed from a Pluggable Database
Cause: The operation was not allowed in Database Resident Connection Pooling when connected to a Pluggable Database.

Action: Connect to the root database and retry the same operation.

ORA-56600: DRCP: Illegal call [*string*]
Cause: An illegal OCI function call was issued.

Action: Check the documentation for Database Resident Connection Pool (DRCP) usage.

ORA-56601: DRCP: Illegal connection class
Cause: Wrong value for connection class was given.

Action: Check the documentation for Database Resident connection pool usage.

ORA-56602: DRCP: Illegal purity
Cause: Wrong value for purity was provided.

Action: Check the documentation for Database Resident connection pool usage.

ORA-56603: DRCP: Internal error
Cause: Malformed input values.

Action: Input well-formed values.

ORA-56604: DRCP: Length[*string*] for *string* exceeded the MAX allowed
Cause: Length exceeded MAX for the value.

Action: Use a value within the MAX allowed.

ORA-56605: DRCP: Session switching and migration not allowed
Cause: Application tried to switch or migrate session across connections.

Action: This usage is irrelevant in the Database Resident connection pooling context and is not supported. Release existing session.

ORA-56606: DRCP: Client version does not support the feature
Cause: The client version is lower than 11g.

Action: Upgrade to a higher client version or turn off (SERVER=POOLED) in the connect string.

ORA-56607: DRCP: Connection is already authenticated
Cause: Attempt to reauthenticate the connection which is authenticated.

Action: Logoff the connection before reauthenticating.

ORA-56608: DRCP: Server Group feature is not supported
Cause: Server Group attribute was set on the server handle, connected to a Database Resident connection pool.

Action: Do not set Server Group attribute on server handles while using Database Resident connection pool.

ORA-56609: Usage not supported with DRCP
Cause: This usage was not supported on a DRCP connection.

Action: Use a dedicated connection to perform this task.

ORA-56610: Multi-property fix up callback error
Cause: The multi-property fix up callback encountered an error or was not able to fix up all the properties.

Action: Correct the multi-property fix up callback.

ORA-56611: DRCP: Timeout while waiting for a server
Cause: The value of SERVER_WAIT_TIMEOUT was reached while waiting for a server.

Action: Check the Database Resident Connection Pool (DRCP) to see why servers are not being freed in a timely manner.

ORA-56612: PL/SQL fix up callback only supported with multi-property tagging
Cause: PL/SQL fix up callback was specified without multi-property tagging.

Action: Either remove the PL/SQL fix up callback or use multi-property tagging.

ORA-56613: DRCP: invalid length of attribute passed
Cause: The length of one or more of the following attributes passed was not correct when using Database Resident Connection Pooling (DRCP): user name, proxy user name, connection class, edition, and tag.

Action: Check the length of each of the attributes.

ORA-56700: plan *string* is a subplan and SUB_PLAN attribute cannot be modified
Cause: An attempt was made to modify the SUB_PLAN attribute of the specified plan.

Action: Do not attempt to modify the SUB_PLAN attribute.

ORA-56701: INTERNAL_USE attribute of consumer group *string* cannot be modified
Cause: An attempt was made to modify the INTERNAL_USE attribute of the specified consumer group.

Action: Do not attempt to modify the INTERNAL_USE attribute.

ORA-56702: consumer group *string* is for internal use only and cannot be a switch target
Cause: An attempt was made to specify an INTERNAL_USE consumer group as a switch target.

Action: Do not attempt to switch to INTERNAL_USE consumer groups.

ORA-56703: VKTM process died unexpectedly
Cause: An explicit kill or internal error caused the death of VKTM background process.

Action: Restart the instance.

ORA-56704: EXPLICIT consumer group mapping priority must be set to 1
Cause: An attempt was made to set the EXPLICIT mapping priority to a value other than 1.

Action: Set the mapping priorities to unique integers within the documented range with the EXPLICT priority set to 1.

ORA-56705: I/O calibration already in progress
Cause: An attempt was made to run a second instance of I/O Calibration

Action: Wait until the first I/O calibration run is complete; then, retry the operation.

ORA-56706: The specified Resource Manager plan is a subplan and cannot be set as a top-level plan
Cause: An attempt was made to set a subplan as a top-level plan.

Action: Do not attempt to set subplans as top-level plans.

ORA-56707: INTERNAL_QUIESCE plan cannot be specified as a top-level Resource Manager plan
Cause: An attempt was made to specify INTERNAL_QUIESCE as a top-level Resource Manager plan.

Action: Do not attempt to set INTERNAL_QUIESCE as a Resource Manager plan.

ORA-56708: Could not find any datafiles with asynchronous i/o capability
Cause: There are no datafiles which are asynchronous I/O capable.

Action: Make sure asynchronous i/o is permitted to datafiles.

ORA-56709: timed_statistics set to FALSE
Cause: timed_statistics parameter in database is set to FALSE. Needs to be enabled for calibration.

Action: set timed_statistics=TRUE in init.ora or "alter system set timed_statistics=TRUE"

ORA-56710: DBRM process died unexpectedly
Cause: An explicit kill or internal error caused the death of the DBRM background process.

Action: Restart the instance.

ORA-56711: *string* is an invalid *string* argument
Cause: The named argument is invalid.

Action: Specify a valid argument for this procedure.

ORA-56713: insufficient Resource Manager privileges
Cause: An attempt was made to execute administration procedures from the DBMS_RESOURCE_MANAGER package without the appropriate privilege. The procedure requires the Resource Manager system privilege.

Action: Ask the database administrator to grant the Resource Manager system privilege to the user.

ORA-56714: Plan name *string* exceeds the maximum length allowed
Cause: Plan name is greater than 30 characters long.

Action: Do not exceed 30 characters when naming a resource plan.

ORA-56715: *string* resource plan contains a reserved word
Cause: The specified plan name is prefixed with a reserved prefix such as FORCE or SCHED.

Action: Do not prefix resource plan name with FORCE or SCHED.

ORA-56716: Category *string* does not exist
Cause: A non-existent category was specified as an argument to a procedure in the package, DBMS_RESOURCE_MANAGER.

Action: Specify an existing category name or create a new category with this name.

ORA-56717: switch directives are set without a corresponding SWITCH_GROUP
Cause: The plan directive contained a switch directive (SWITCH_TIME, SWITCH_IO_REQS, or SWITCH_IO_MEGABYTES) without a SWITCH_GROUP.

Action: Specify a SWITCH_GROUP parameter in the plan directive.

ORA-56718: Timeout occurred while setting resource plan
Cause: A timeout occurred while waiting for one or more RAC instances to set the resource plan.

Action: Since the resource plan may have actually been set successfully, first check the current resource plan for each instance by querying gv$rsrc_plan. If the resource plan was not successfully set on all instances, then retry the operation.

ORA-56719: Error spawning or communicating with calibration slave
Cause: An error occurred in calibration slave process - Calibration process aborted.

Action: Review trace files for errors.

ORA-56720: I/O data limit exceeded - call aborted
Cause: The Resource Manager SWITCH_IO_MEGABYTES limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56721: I/O data limit exceeded - session terminated
Cause: The Resource Manager SWITCH_IO_MEGABYTES limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56722: I/O request limit exceeded - call aborted
Cause: The Resource Manager SWITCH_IO_REQS limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56723: I/O request limit exceeded - session terminated
Cause: The Resource Manager SWITCH_IO_REQS limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56724: ksfd calibration tracing

ORA-56725: Could not spawn additional calibration slaves
Cause: An error occurred when spawning calibration slave process - Calibration process aborted.

Action: Check OS resources required for spawning processes

ORA-56726: Category *string* is referred to by a consumer group and cannot be deleted
Cause: An attempt was made to delete a category that is referred to by a consumer group.

Action: Modify or remove all consumer groups that use this category and then retry.

ORA-56727: Orion (*string*) must be invoked using its full, absolute path
Cause: Orion is spawning a child process and cannot determine the location of the executable.

Action: Use the full, absolute path for Orion.

ORA-56728: SQL blocks cannot be nested
Cause: An attempt was made to start an SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() while already inside an SQL block.

Action: Close the existing SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() or remove this call.

ORA-56729: Failed to bind the database instance to processor group *string*
Cause: Binding the database instance to the processor group specified by the PROCESSOR_GROUP_NAME parameter failed.

Action: Set the PROCESSOR_GROUP_NAME to a valid, configured processor group and restart the database instance.

ORA-56730: pluggable database plan *string* may not specify parameter *string*
Cause: Resource plans inside a pluggable database attempted to use the following parameters: MGMT_P2, MGMT_P3, MGMT_P4, MGMT_P5, MGMT_P6, MGMT_P7, MGMT_P8

Action: Remove these parameters and try again.

ORA-56731: pluggable database plan *string* may not use subplans
Cause: An attempt was made to set a resource plan that contains subplans. Subplans are not supported in pluggable databases (PDBs).

Action: Specify a valid PDB resource plan or modify the specified plan to remove the subplan directives.

ORA-56732: value *string* for *string* is outside valid range of 0 to 4294967295
Cause: An invalid value was specified for a plan directive parameter.

Action: Specify a value between 0 and 4294967295, inclusive.

ORA-56733: logical I/O limit exceeded - call aborted
Cause: The Resource Manager SWITCH_IO_LOGICAL limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56734: logical I/O limit exceeded - session terminated
Cause: The Resource Manager SWITCH_IO_LOGICAL limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56735: elapsed time limit exceeded - call aborted
Cause: The Resource Manager SWITCH_ELAPSED_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56736: elapsed time limit exceeded - session terminated
Cause: The Resource Manager SWITCH_ELAPSED_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56737: SWITCH_GROUP is set without a corresponding switch directive
Cause: The plan directive specified a value for SWITCH_GROUP without specifying one of the following switch directives: - SWITCH_TIME - SWITCH_IO_REQS - SWITCH_IO_MEGABYTES - SWITCH_ELAPSED_TIME - SWITCH_IO_LOGICAL

Action: Specify a switch directive or remove SWITCH_GROUP directive.

ORA-56738: CDB resource plan *string* has more than *string* profile directives.
Cause: An attempt was made to create or update the specified multitenant container database (CDB) resource plan to use more than the supported number of profile directives.

Action: Remove the directives for profiles that are not active on this database.

ORA-56739: cannot modify max_iops or max_mbps parameter
Cause: An attempt was made to alter the Resource Manager max_iops or max_mbps parameter in a non-consolidated database.

Action: max_iops and max_mbps are pluggable database (PDB) only parameters and cannot be altered in non-consolidated databases. The max_iops and max_mbps parameters can only be altered from a PDB.

ORA-56740: Resource plan *string* does not contain mandatory group *string*.
Cause: An attempt was made to create or set a resource manager plan that does not contain a consumer group mandated by the administrator. The specified plan has too many plan directives for the system to automatically add the mandatory consumer group.

Action: Modify the plan to contain the mandatory consumer group, or reduce the number of plan directives so that the system can automatically add the mandatory consumer group.

ORA-56741: The specified plan uses multilevel management directives and cannot be set in a pluggable database.
Cause: An attempt was made to set a resource plan that contains multilevel management directives: MGMT_P2, MGMT_P3, MGMT_P4, MGMT_5, MGMT_P6, MGMT_P7, or MGMT_P8. Multilevel management directives are not supported in pluggable databases (PDBs).

Action: Specify a valid PDB resource plan or modify the specified plan to be a single level plan, using only the MGMT_P1 or SHARES directives.

ORA-56742: cannot modify max_iops or max_mbps parameter on Oracle Exadata
Cause: An attempt was made to alter the Resource Manager max_iops or max_mbps parameter on an Oracle Exadata system.

Action: The max_iops and max_mbps parameters cannot be altered on Oracle Exadata systems. Use Oracle Exadata I/O Resource Manager to manage I/Os on Oracle Exadata.

ORA-56743: memory_min (*string*) cannot exceed memory_limit (*string*) in the CDB plan '*string*' for the pluggable database '*string*'
Cause: An attempt was made to create a multitenant container database (CDB) plan directive where memory_min was greater than memory_limit.

Action: Change the CDB plan directive so that memory_min is less than memory_limit.

ORA-56744: memory_min (*string*) cannot exceed memory_limit (*string*) in the CDB plan '*string*' for the profile '*string*'
Cause: An attempt was made to create a multitenant container database (CDB) plan directive where memory_min was greater than memory_limit.

Action: Change the CDB plan directive so that memory_min is less than memory_limit.

ORA-56745: invalid value *string* for parameter *string*; must be smaller than parameter *string*
Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56746: invalid value *string* for parameter *string*; must be smaller than *string*%% of parameter *string*
Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56747: invalid value *string* for parameter *string*; must be smaller than parameter *string* of the root container
Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56748: invalid value *string* for parameter *string*; must be smaller than *string*%% of parameter *string* of the root container
Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56749: invalid value *string* for parameter *string*; must be larger than parameter *string*
Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56750: invalid value *string* for parameter *string*; must be larger than *string*%% of parameter *string*
Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56751: PQ_TIMEOUT_ACTION is set without a corresponding PARALLEL_QUEUE_TIMEOUT directive
Cause: The plan directive specified a value for PQ_TIMEOUT_ACTION without specifying a PARALLEL_QUEUE_TIMEOUT directive.

Action: Specify a PARALLEL_QUEUE_TIMEOUT directive or remove the PQ_TIMEOUT_ACTION directive.

ORA-56752: Oracle Database Express Edition (XE) memory parameter invalid or not specified
Cause: An invalid parameter or a value more than the maximum memory allowed was specified

Action: Use the allowed parameter or reduce the memory size, upgrade to the Standard or Enterprise edition.

ORA-56753: Calibration failed because Exadata files are not sufficiently populated.
Cause: On Oracle Exadata, the calibration run was terminated because the data files did not have a sufficient percentage of populated blocks.

Action: Re-run calibration after data is loaded in the data files.

ORA-56754: invalid value %0!s for parameter %1!s; must be larger than the current resource usage %2!s
Cause: This parameter cannot be set to a value that is lower than the current resource usage.

Action: Choose a value as indicated by the message.

ORA-56800: DSKM process died unexpectedly
Cause: An explicit kill or internal error caused the death of the DSKM background process.

Action: Restart the instance.

ORA-56840: LIBCELL API error in Master Diskmon
Cause: A LIBCELL operation in Master Diskmon failed.

Action: Look in the $ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log file for additional error information.

ORA-56841: Master Diskmon cannot connect to a CELL
Cause: A LIBCELL operation from Master Diskmon failed to create a network connection to the target CELL.

Action: Look in the $ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log file for additional error information.

ORA-56842: LIBCELL operation network error in Master Diskmon
Cause: A LIBCELL operation in Master Diskmon failed because of a network error.

Action: Look in the $ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log file for additional error information.

ORA-56843: LIBCELL SKGXP error in Master Diskmon
Cause: A LIBCELL operation from Master Diskmon failed because of an SKGXP network layer error.

Action: Look in the $ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log file for additional error information.

ORA-56864: Master Diskmon "*stringstring*" operation cannot complete because of a LIBCELL network error
Cause: A LIBCELL operation between Master Diskmon and a CELL failed because of a network error.

Action: Look in the $ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log file for additional error information.

ORA-56865: Invalid IP address in CELLINIT.ORA
Cause: One or more of the specified IP addresses in CELLINIT.ORA is not valid.

Action: Check that all IP addresses in CELLINIT.ORA are valid.

ORA-56866: No IP parameter
Cause: No IP address is set in CELLINIT.ORA.

Action: Check that one or more valid IP addresses are set in CELLINIT.ORA.

ORA-56867: Cannot connect to Master Diskmon on pipe "*string*"
Cause: Master Diskmon was not running or the listening pipe was deleted.

Action: Look at the $ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log, $ORA_CRS_HOME/log/*hostname*/hasmsgs.log

and $ORA_CRS_HOME/log/*hostname*/alert*hostname*.log for additional error information.

ORA-56868: Duplicate IP address in CELLINIT.ORA
Cause: One or more of the specified IP addresses in CELLINIT.ORA was repeated.

Action: Check that all IP addresses in CELLINIT.ORA are unique.

ORA-56870: Attempt to register dead cell with Master Diskmon
Cause: An attempt was made by a process to register a cell that is known to be down.

Action: None

ORA-56900: bind variable is not supported inside pivot|unpivot operation
Cause: Attempted to use bind variables inside pivot|unpivot operation.

Action: This is not supported.

ORA-56901: non-constant expression is not allowed for pivot|unpivot values
Cause: Attempted to use non-constant expression for pivot|unpivot values.

Action: Use constants for pivot|unpivot values.

ORA-56902: expect aggregate function inside pivot operation
Cause: Attempted to use non-aggregate expression inside pivot operation.

Action: Use aggregate function.

ORA-56903: sys_op_pivot function is not allowed here
Cause: invalid use of sys_op_pivot function.

Action: Remove sys_op_pivot function.

ORA-56904: pivot value must have datatype that is convertible to pivot column
Cause: Datatype of pivot value is not convertible to the datatype of pivot column.

Action: Check and correct pivot value.

ORA-56905: pivot|unpivot operations are not supported on lateral views
Cause: An attempt was made to do a pivot or unpivot operation on a lateral view.

Action: This is not supported.

ORA-56906: pivot column or pivot value is too large
Cause: Either the combined column size for multicolumn pivot was too large or a multicolumn pivot value was too large.

Action: This is not supported.

ORA-56920: a prepare or upgrade window or an on-demand or datapump-job loading of a secondary time zone data file is in an active state
Cause: A prepare or upgrade window was started or an on-demand or datapump-job loading of a secondary time zone data file was done.

Action: Make sure there is no active prepare or upgrade window and no active on-demand or datapump-job loading of a secondary time zone data file.

ORA-56921: invalid time zone version
Cause: Invalid time zone version passed.

Action: Check and correct the time zone version.

ORA-56922: Starting a prepare window failed
Cause: Error(s) occurred when starting a prepare window.

Action: Check alert or trace file for error(s).

ORA-56923: database properties related to time zone version are not set up properly
Cause: There were no database properties related to time zone version in dictionary table sys.props$.

Action: Contact Oracle Support Services.

ORA-56924: prepare window does not exist
Cause: There was no active prepare window.

Action: None

ORA-56925: Ending a prepare window failed
Cause: Error(s) occurred when ending a prepare window.

Action: Check alert or trace file for error(s).

ORA-56926: database must be in UPGRADE mode in order to start an upgrade window
Cause: Database was not in UPGRADE mode.

Action: Restart database in UPGRADE mode.

ORA-56927: Starting an upgrade window failed
Cause: Error(s) occurred when starting an upgrade window.

Action: Check alert or trace file for error(s).

ORA-56928: upgrade window does not exist
Cause: There was no active upgrade window.

Action: None

ORA-56929: Ending an upgrade window failed
Cause: Ending an upgrade window failed or there were tables containing TSTZ data which have not been upgraded.

Action: Check alert or trace file for error(s) or complete upgrading of tables containing TSTZ data.

ORA-56930: database must be restarted before performing upgrade of user tables
Cause: Database was not restarted after starting an upgrade window.

Action: Restart database.

ORA-56931: inconsistent DST patching state found
Cause: DST patching was in an inconsistent state.

Action: Contact Oracle Support Services.

ORA-56932: "*string*"."*string*" does not exist
Cause: Specified table name was invalid.

Action: Check the existence of the specified table name.

ORA-56933: Table creation failed
Cause: Error(s) occurred when creating the table.

Action: Check the error.

ORA-56934: database property DST_UPGRADE_STATE for datapump job is in an inconsistent state
Cause: Database property DST_UPRGRADE_STATE was not recorded correctly.

Action: Check the alert file.

ORA-56935: existing datapump jobs are using a different version of time zone data file
Cause: An attempt was made from a datapump job to request a different version of time zone data file from the one used by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

ORA-56936: datapump jobs are utilizing secondary time zone data file
Cause: An on-demand loading of secondary time zone data file was requested when there was a secondary time zone data file already loaded in the database utilized by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

ORA-56937: failed to load the secondary time zone data file
Cause: Attempt to load the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

ORA-56938: no secondary time zone data file being loaded by on-demand or a datapump job
Cause: There was no secondary timezone data file being loaded by on-demand or a datapump job.

Action: None

ORA-56939: failed to unload the secondary time zone data file
Cause: Attempt to unload the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

ORA-56950: Invalid value for incident identifier
Cause: Invalid incident identifier argument passed.

Action: Check and correct the identifier

ORA-56951: value of *string* is null in *string* constructor
Cause: The attribute value was null.

Action: Specify a non-null value.

ORA-56952: reference plan resolves to *string* plans
Cause: The reference plan resolved to multiple plans.

Action: Specify a unique reference plan.

ORA-56953: statement_id and plan_id cannot both be null in PLAN_TABLE_OBJECT
Cause: Both statement_id and plan_id attributes were null in PLAN_TABLE_OBJECT.

Action: Specify a non-null value for statement_id or plan_id or both.

ORA-56955: quarantined plan used
Cause: A quarantined plan was used for this statement.

Action: Increase the Oracle Database Resource Manager limits or use a new plan.

ORA-56971: Invalid set of export options
Cause: The options specified are inconsistent

Action: Check and a consistent set of option parameters

ORA-56972: referenced file not found
Cause: One of the file specified in the test case package is mising

Action: rebuild the SQL test case or make sure that all the referenced files are readable and located in the same directory as the SQL test case manifest.

ORA-56973: import options do not match export options
Cause: The import options specified do not match the export options

Action: Check that import is being invoked with the same values for options like export environment, export data and export metadata

ORA-56974: Invalid set of import options
Cause: The import options specified are inconsistent

Action: Check that import options are consistent and have valid values

ORA-56975: invalid SQL_ID
Cause: The SQL_ID specified was incorrect.

Action: Cross check SYS.V$SQL for the existence of SQL_ID.

ORA-56976: invalid export options: *string*
Cause: One or more export options were inconsistent.

Action: Check that export options are consistent and have valid values.

ORA-56977: invalid import options: *string*
Cause: One or more import options were inconsistent.

Action: Check that import options are consistent and have valid values.

ORA-56978: TCB root directory does not exist
Cause: The root directory for Test Case Builder (TCB) does not exist.

Action: Create the TCB root directory or specify any other directory during export of SQL Test Case.

98

ORA-57000 to ORA-59850

ORA-57000: TimesTen IMDB error: *string*
Cause: An error occurred during a TimesTen operation.

Action: Look up the error code in the TimesTen error documentation to diagnose.

ORA-57005: TimesTen Grid transient transaction failure: *string*
Cause: A transaction failed because a TimesTen Grid element was temporarily unreachable.

Action: Roll back the transaction and immediately retry.

ORA-57006: TimesTen Grid transaction failure: *string*
Cause: A transaction failed because a TimesTen Grid element was temporarily unreachable.

Action: Roll back the transaction, wait for the element to recover, and retry the transaction. Element recovery may require administrator action.

ORA-57007: TimesTen Grid transient statement failure: *string*
Cause: A statement failed because a TimesTen Grid element was temporarily unreachable.

Action: Immediately retry the current statement.

ORA-57008: TimesTen Grid statement failure: *string*
Cause: A TimesTen Grid element is temporarily unavailable.

Action: Wait for the element to recover and retry the current statement. Element recovery may require administrator action.

ORA-59000: not all rebalance phases were run
Cause: The previous rebalance for the group did not run all of the phases.

Action: See GV$ASM_OPERATION for more details. Run all rebalance phases using the ALTER DISKGROUP REBALANCE command.

ORA-59001: Disk '*string*' must be online before disk '*string*'.
Cause: An attempt was made to online a disk that contains old copies of the data present in another offline disk.

Action: Online the disks in the correct order. FORCE option may be used to override this check.

ORA-59002: Disk revalidation failed for ASM disk group '*string*' on instance *string* due to ORA-*string*.
Cause: The disk revalidation failure could be due to various reasons. Signaling ORA-15020 during discovery was a probable one. See the alert log for more details.

Action: Ensure that the disks in operation are visible to all the nodes in the cluster before issuing a retry.

ORA-59003: database is not prepared for split.
Cause: Split was issued on a database which is either not prepared or did not complete the last time.

Action: Prepare the database before issuing split on it or drop the existing mirror copy and then retry the split mirror operations.

ORA-59004: No rebalance is running for group *string*.
Cause: An attempt was made to modify the property of a rebalance that was not running.

Action: Issue the ALTER DISKGROUP REBALANCE command without the MODIFY keyword to schedule another rebalance.

ORA-59005: Oracle ASM IOServer functionality is not supported on this platform.
Cause: This platform did not support ASM IOServer functionality.

Action: Refer to the documentation for the list of platforms that support Oracle ASM IOServer functionality and consider moving to one of those platforms.

ORA-59006: connection request from stale database instance is rejected.
Cause: The database instance was attempting to fail over from a stale IOServer cluster.

Action: Restart the database instance to initiate a new connection.

ORA-59007: cannot find a usable network from the client
Cause: The database instance was not using any of the configured ASM networks.

Action: Check the ASM network configuration in the database instance.

ORA-59008: All configured ASM networks are unusable.
Cause: All configured ASM networks encountered an error. ASM IOServer was unable to proceed.

Action: Check the status of the configured ASM network interfaces. Restart the ASM IOServer instance after the interfaces become operational.

ORA-59009: ASM IOServer instance is not ready to accept clients.
Cause: ASM IOServer instance was not ready to accept clients.

Action: Execute 'alter system enable client access' for ASM IOServer instance to accept clients.

ORA-59010: cannot SHUTDOWN ASM IOServer instance with connected client *string*.
Cause: A SHUTDOWN command was issued to an ASM IOServer instance that had one or more connected clients.

Action: Stop all clients that are using this ASM IOServer instance and retry the SHUTDOWN command. Alternatively, use the SHUTDOWN ABORT command to force disconnection with all the clients.

ORA-59011: operation failure for group *string* because too many disks are offline
Cause: Too many disks were offline in the disk group.

Action: Ensure that the disks are online and retry the operation.

ORA-59012: Disk %0!s uses an invalid physical sector size (%1!s).
Cause: The disk used a physical sector size value that is not standard or is not currently supported.

Action: The disk cannot be used for an ASM disk group.

ORA-59013: Disk %0!s uses an invalid logical sector size (%1!s).
Cause: The disk used a logical sector size value that is not standard or is not currently supported.

Action: The disk cannot be used for an ASM disk group.

ORA-59014: file %0!s in disk group %1!s was not prepared for split
Cause: The specified file was not prepared for split.

Action: Check the accompanying error messages for more information about the reason for the failure.

ORA-59015: Oracle ASM scrubbing is disabled.
Cause: An attempt was made to perform Oracle ASM scrubbing but it was disabled.

Action: Enable Oracle ASM scrubbing.

ORA-59016: Disk group *string* cannot be mounted due to invalid symbols
Cause: A mount operation was attempted for a disk group that contains invalid characters in its name. Starting in version 12.2.0.2.0, disk group names should only contain alphanumeric characters and the underscore character.

Action: Use the 'renamedg' tool to change the disk group name to a valid name. Afterwards, change the names of the disks by mounting the disk group in restricted mode and using the ASM SQL command 'ALTER DISKGROUP name RENAME DISKS ALL'.

ORA-59017: Oracle ASM scrubbing is stopping a previous operation.
Cause: The system cannot accept new scrubbing operations if a previous one is being stopped.

Action: Wait until the previous Oracle ASM scrubbing operation stops completely before initiating a new one.

ORA-59018: Oracle ASM scrubbing requires an Allocation Unit size of at least 1 MB.
Cause: The operation was not executed because the Allocation Unit was less than 1 MB.

Action: Run the operation on a disk group with an Allocation Unit of at least 1 MB.

ORA-59019: cannot start SCRB process
Cause: The ASM Scrubbing Master (SCRB) process failed during startup.

Action: Review the alert log to find out the reason behind the process startup failure.

ORA-59020: dropping mirror copy '%0!s' in disk group '%1!s' is already in progress
Cause: The drop mirror copy was already issued on the specified file group.

Action: Wait for the previous drop mirror copy to complete. Check the ASM alert log or check that the corresponding file group is deleted using the V$ASM_FILEGROUP view.

ORA-59021: drop of child file '%0!s' in disk group '%1!s' is not allowed
Cause: The operation failed because child file deletion was attempted.

Action: Child files can be deleted collectively only as part of drop mirror copy operation.

ORA-59022: dropping mirror copy '%0!s' in disk group '%1!s' failed as prepare is not complete
Cause: Prepare of mirror copy has not completed

Action: Wait for the prepare mirror copy to complete. Check the ASM alert log or check that the split status of the file group using the V$ASM_FILEGROUP view.

ORA-59023: command requires attribute '%0!s' to be set to '%1!s'
Cause: The disk group was still running the necessary background operations preventing the attribute *name* from setting to value *value*, which is a prerequisite for the command.

Action: Confirm that all disks in the disk group are online, and wait until the attribute is set to the proper value. The attribute may not get set to the proper value if any of the disks in the disk group are offline. This may take a while.

ORA-59024: dropping mirror copy '%0!s' in disk group '%1!s' failed as the file split is complete
Cause: Split of mirror copy has completed.

Action: None

ORA-59025: creation of mirror copy for database '%0!s' failed
Cause: Another mirror copy for the database existed when the operation was attempted or failure occurred when communicating with ASM instance.

Action: If a mirror copy exists with PREPARED state, then either create another database using the existing mirror copy or drop the existing mirror copy. If a mirror copy exists in FAILED state, then drop the mirror copy. Thereafter, retry the operation.

ORA-59026: dropping file group '%0!s' in disk group '%1!s' failed as the file group has prepared mirror copies
Cause: Dropping a file group with prepared mirror copies is not allowed.

Action: Drop all the prepared mirror copies and try again.

ORA-59027: file group redundancy cannot be modified when there is a mirror copy
Cause: A mirror copy for the database existed or the disk group was still running the necessary background operations preventing the file group redundancy change.

Action: Create another database using the existing mirror copy or drop the existing mirror copy and wait for the rebalance operations to complete. Then retry the operation.

ORA-59028: rebalance did not complete after the last mirror split operation on database '%0!s'
Cause: Rebalance after the last mirror split operation was either still running or not scheduled yet.

Action: If a rebalance is already running allow it to complete, otherwise issue a new one.

ORA-59029: All ASM disks in %0!s are already online or being brought online.
Cause: An attempt was made to bring disks online that were either already online or were being brought online.

Action: Check the status of the disks before changing the ONLINE statement to exclude the disks in the failure group or disk group.

ORA-59030: disk group '%0!s' containing file group '%1!s' has too many offline disks
Cause: A mirror split operation failed because the disk group containing the files had insufficient number of online disks. This could prevent some files in the target database from being opened. The operation failed early to give the administrator a chance to fix the errors.

Action: Ensure that the disk group has the required number of disks online and then retry the command.

ORA-59031: operation cannot be run concurrently with other mirror split operations on mirror copy '%0!s' in disk group '%1!s'
Cause: Another conflicting Mirror Split operation was already running.

Action: Retry after the conflicting Mirror Split operation has finished.

ORA-59032: rebalance did not complete after the last mirror split or change redundancy operation
Cause: The rebalance operation after the last mirror split operation or change redundancy was either still running or not scheduled yet.

Action: If a rebalance is already running, then allow it to complete; otherwise, issue the rebalance operation.

ORA-59033: failed to start Oracle ASM instance because it was unable to open SPFILE '%0!s'
Cause: An attempt to start the Oracle ASM instance failed because the ASM server parameter file (SPFILE) could not be opened. The SPFILE was configured in the indicated disk group. One or more of the disks in the disk group were inaccessible. This was likely due to the remote node or nodes being inactive.

Action: Issue the 'olsnodes' command to retrieve the list of nodes in the cluster. Start up all the remote nodes in the cluster that were previously inactive. Issue the 'crsctl start cluster' command on this node and verify that the Oracle ASM instance is active.

ORA-59035: HARDCHECK error during I/O
Cause: A Hardware Assisted Resilient Data (HARD) check error was encountered by ASM Rebalance (ARB) process during I/O operations; Oracle ASM cannot disable HARD check automatically due to offline disks.

Action: Look for the corresponding ORA-59051 error in the alert log that shows the file number that has HARD check error. Evaluate if those files were unused or abandoned. If unused or abandoned, delete them. Bring all disks in the disk group online to allow Oracle ASM to disable HARD check automatically so that ARB process will not be interrupted.

ORA-59036: Offline disks prevent data reconstruction from parity redundancy.
Cause: An attempt to reconstruct data from parity redundancy failed because some disks in the disk group were offline.

Action: Bring all disks in the disk group online to make data reconstruction from parity redundancy feasible.

ORA-59037: dropping mirror copy '%0!s' in disk group '%1!s' failed
Cause: An attempt was made to drop a mirror copy that did not exist.

Action: Check V$ASM_DBCLONE_INFO for list of valid mirrors. Ensure that the specified mirror copy exists and retry the operation.

ORA-59038: Too many mirror copies found
Cause: An attempt was made to create a mirror copy of the database that already has the maximum number of mirror copies.

Action: Drop or split an existing mirror copy and retry operation.

ORA-59039: Oracle ASM scrubbing is already running.
Cause: An attempt was made to issue an ASM scrubbing operation when there was another scrubbing operation still running.

Action: Wait for the running operation to finish and try again. Or, stop the running operation with ALTER DISKGROUP *DG* SCRUB STOP.

ORA-59040: ASM file property has changed.
Cause: An attempt was made to issue an ASM scrubbing operation and there was a file that changed one property.

Action: Wait for the ASM scrubbing operation to retry the operation automatically.

ORA-59041: database '%0!s' has data files in multiple disk groups
Cause: A mirror split operation was issued on a database whose data files were located in multiple disk groups.

Action: Ensure that all the data files are located on the same disk group either by moving all the data files to a single disk group or by dropping the data files of other disk groups. And, then retry the operation.

ORA-59042: creation of database from '%0!s' using mirror copy '%1!s' in disk group '%2!s' failed
Cause: An attempt was made to create a database from a mirror copy that did not exist.

Action: Connect to the database and check V$ASM_DBCLONE_INFO for list of valid mirrors. Ensure that the specified mirror copy is created and then retry the operation.

ORA-59044: Single parity redundancy files in group '%0!s' could not be relocated.
Cause: An attempt was made to relocate single parity redundancy files for balance or to restore redundancy in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

ORA-59045: Double parity redundancy files in group '%0!s' could not be relocated.
Cause: An attempt was made to relocate double parity redundancy files for balance or to restore redundancy in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

ORA-59046: Allocation or relocation of a parity redundancy file in group '%0!s' failed.
Cause: An attempt was made to allocate or relocate a parity redundancy file in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

ORA-59047: Allocation or relocation of a mirrored file in group '%0!s' failed.
Cause: An attempt was made to allocate or relocate a mirrored file in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

ORA-59048: Redundancy could not be restored in group '%0!s'.
Cause: An attempt to restore redundancy during rebalance failed for some user data or ASM metadata due to the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state. If this is an Oracle appliance, also add back all the missing disks.

ORA-59051: HARD check error in file '+%0!s.%1!s.%2!s' in disk group '%3!s'
Cause: A Hardware Assisted Resilient Data (HARD) check error was encountered by ASM Rebalance (ARB) process during I/O operations.

Action: The error point to a file that has encountered HARD check errors. Check the alert log and evaluate if these files were unused or abandoned. If unused or abandoned, delete them. Otherwise, use Oracle ASM scrubbing to repair them.

ORA-59058: Uninitialized or abandoned file '*string*' encountered during I/O.
Cause: A Hardware Assisted Resilient Data (HARD) check error was encountered by ASM Rebalance (ARB) process during I/O operations because of the extent sets in uninitialized or abandoned files.

Action: Check the reported file. If it is no longer in use, remove the file. If it is uninitialized or being initialized, wait until the file is fully initialized. Otherwise, use DBVerify to check the integrity of the file.

ORA-59064: Oracle ASM disk %0!s in disk group %1!s is being offlined.
Cause: The Oracle Automatic Storage Management (Oracle ASM) disk was marked to be taken offline or was being offlined and therefore it could not be accessed.

Action: Retry the operation after the disk is dropped or brought online.

ORA-59065: Oracle ASM disk is still onlining.
Cause: A write request failed because all redundant copies of a block were either unavailable or on an Oracle Automatic Storage Management (Oracle ASM) disk that was being onlined.

Action: Wait for the disk online to complete. Then, retry the operation.

ORA-59300: missing or invalid site name
Cause: The command did not specify a valid site name.

Action: Specify a valid site name.

ORA-59301: incorrect SITE token usage
Cause: Site names were provided for some disks in the SQL statement and missing for others.

Action: Either specify site names for all of the disks or none in the SQL statement and retry the operation.

ORA-59302: The attribute *string* must be *string* or higher.
Cause: An attempt was made to set an attribute to a version that was lower than the minimum supported.

Action: Set the attribute to at least the minimum supported version. Alternatively lower the minimum supported version and try again.

ORA-59303: The attribute *string* (*string*) of the diskgroup being mounted should be *string* or higher.
Cause: An attempt was made to mount a diskgroup whose compatibility was lower than the minimum supported.

Action: Advance the diskgroup compatibility by mounting it in restricted mode OR lower the minimum supported compatibility and try again.

ORA-59304: external and global users are not supported for ASM
Cause: A user type not supported by ASM was supplied.

Action: Check the Oracle ASM documentation that external and global users are not supported for ASM.

ORA-59305: The disk group being mounted is incompatible with this software version.
Cause: An attempt was made to mount a disk group using a software version that is incompatible with the disk group.

Action: Contact Oracle Support Services.

ORA-59306: The parameter '*string*' is invalid.
Cause: The value of the parameter was invalid.

Action: Provide a valid value of the parameter.

ORA-59307: The disk group redundancy is not external.
Cause: An attempt was made to rename the disk fail group in a disk group whose redundancy type was not external.

Action: Specify a disk group whose redundancy type is external.

ORA-59308: The disk '*string*' cannot be assigned to a site because the disk group '*string*' contains Cluster Synchronization Services voting files.
Cause: An attempt to assign a site to a disk failed because the disk group contained Cluster Synchronization Services (CSS) voting files.

Action: Move the CSS voting files to a different disk group using the command 'crsctl replace votedisk' and retry the operation.

ORA-59309: Failure group name '*string*' is already used by an existing ASM disk.
Cause: The specified failure group name was already used in this diskgroup.

Action: Specify a different failure group name.

ORA-59311: The specified ASM instance '*string*' does not exist.
Cause: The specified ASM instance did not exist or was terminated.

Action: Specify a valid ASM instance name.

ORA-59312: Disk '*string*' cannot be assigned to a site because it is an Oracle Exadata disk.
Cause: An attempt to assign a site to an Oracle Exadata disk failed because the operation is not allowed in Oracle Exadata.

Action: Run the command 'cellcli -e alter cell siteName' to update the cell site information.

ORA-59313: All mirrors of the block are lost, likely due to multiple storage failures.
Cause: There were multiple failures in the storage subsystem. All redundant copies of the block were lost and Oracle wrote the hexadecimal value BADFDA7A into the block location of the lost block to signify that the block data could not be recovered from a redundant copy.

Action: Check the system logs and storage logs to identify the failure that led to the lost block.

ORA-59314: file type not supported for the operation
Cause: The operation did not support files of the given type.

Action: Retry the operation with a file of supported type.

ORA-59315: Parity is not supported for file '%0!s' with type '%1!s'.
Cause: The given file type did not support the creation of parity files.

Action: Retry creating the parity files with a supported file type.

ORA-59316: ASM software is incompatible with disk group *string* due to missing patch *string*
Cause: The ASM software was not compatible with the disk group.

Action: Action: Apply the missing patch and retry the operation.

ORA-59317: client %0!s software is incompatible with disk group %1!s due to missing patch %2!s
Cause: The client software was not compatible with the disk group.

Action: Apply the missing patch on corresponding client software and retry the operation.

ORA-59318: ASM software is incompatible with disk group *string* COMPATIBLE.ASM *string*
Cause: The ASM software did not support the attribute value for COMPATIBLE.ASM.

Action: Check alert log to identify the missing patches, apply the patches, and retry the operation. Or, advance COMPATIBLE.ASM to a version that is supported by this software.

ORA-59319: database software is incompatible with disk group *string* COMPATIBLE.RDBMS *string*
Cause: The specified value for COMPATIBLE.RDBMS was not compatible with one or more clients.

Action: Check the ASM alert log for information about the clients and missing patches, apply the patches on the corresponding database software, and retry the operation.

ORA-59320: client %0!s software is incompatible with disk group %1!s patch %2!s
Cause: The client software was not compatible with the specified patch.

Action: Apply the missing patch on corresponding client software and retry the operation.

ORA-59321: ASM software is incompatible with disk group *string* patch *string*
Cause: The ASM software did not support enabling the specified patch.

Action: Apply the missing patch and retry the operation.

ORA-59322: database software is incompatible with disk group *string* patch *string*
Cause: The specified patch was not compatible with one or more clients.

Action: Check the ASM alert log for information about the clients and missing patches, apply the patches on corresponding database software, and retry the operation.

ORA-59323: cannot alter exclusive instance mode with more than once instance running
Cause: There was at least one other running ASM instance.

Action: Ensure that there is only one ASM instance when running the command.

ORA-59324: cannot alter exclusive instance mode outside of rolling migration or rolling patch
Cause: ASM cluster was not in rolling migration or rolling patch.

Action: ASM cluster needs to be in rolling migration or rolling patch.

ORA-59325: cannot start multiple ASM instances under exclusive mode
Cause: There was at least one other running ASM instance, and the ASM cluster was in exclusive mode.

Action: Ensure that the ASM cluster is not in exclusive mode when trying to bring up another ASM instance.

ORA-59326: ASM rolling mode exit prevented by *string*
Cause: One or more instances were blocking the rolling mode exit.

Action: Terminate the operation or wait until the reported operation is complete before attempting to take the cluster out of rolling mode.

ORA-59327: Dropping more fail groups is not allowed with disk group redundancy.
Cause: There was an attempt to drop at least one fail group, resulting in a fail group count below the recommended number.

Action: Use the FORCE option when trying to drop fail groups. Check the trace files of the Oracle ASM instance for more information.

ORA-59328: Offlining more failure groups is not allowed with disk group redundancy.
Cause: There was an attempt to offline at least one failure group resulting in a reduced number of online failure groups which is required to maintain the quorum consensus.

Action: Increase the number of online failure groups by onlining any offline failure groups or add enough quorum or regular failure groups.

ORA-59329: parity requires at least %0!s failure groups; found only %1!s
Cause: An attempt to set the redundancy specification of a file group to a parity protection scheme failed because of insufficient failure groups.

Action: Add enough failure groups to the disk group and then retry setting the file group redundancy.

ORA-59330: Disk zones are deprecated for disk groups that use virtually allocated allocation metadata.
Cause: Disk zones are no longer supported for disk groups that use virtually allocated allocation metadata.

Action: Do not attempt to create or modify a file with file attributes that are related to disk zones.

ORA-59331: slow or hung relocations during rebalance of group *number*
Cause: The I/O devices were slow or were not responsive.

Action: Rebalance has restarted to address this issue, so no immediate action is needed. If rebalance keeps hitting this error, check the conditions of storage devices.

ORA-59500: unable to create member cluster '*string*' in the absence of at least one disk group with the ACCESS_CONTROL.ENABLED attribute set to TRUE
Cause: An attempt was made to configure a member cluster when there was no mounted disk group with the ACCESS_CONTROL.ENABLED attribute set to TRUE.

Action: Set the ACCESS_CONTROL.ENABLED attribute to TRUE on an existing mounted disk group, mount a disk group that already has the ACCESS_CONTROL.ENABLED attribute set to TRUE, or create a disk group with the ACCESS_CONTROL.ENABLED attribute set to TRUE. Retry the operation.

ORA-59501: failed to register database with IOServer instance
Cause: The database instance failed to register with a valid IOServer instance.

Action: Check the alert log to identify the underlying reason for the failure and take the suggested corrective action.

ORA-59502: relocate client to *string* is already in progress
Cause: Another relocate client command was in progress.

Action: Retry the command after the initial relocate client command completes.

ORA-59503: client '*string*' not allowed to reconnect
Cause: The client in Standard mode tried to reconnect to an ASM instance that did not support Flex mode.

Action: Check the ASM instance configurations within the cluster to match the client mode.

ORA-59504: rejecting a request originating from site '*string*' to OFFLINE a disk '*string*' configured in site '*string*'
Cause: The request to OFFLINE a disk was rejected by the ASM instance because the request was issued from a site that was different from the site in which the disk was configured.

Action: Retry the request from the site in which the disk is configured.

ORA-59505: instance '*string*' shutting down on site '*string*' due to rejected OFFLINE request
Cause: The instance terminated because the storage was inaccessible from the site requesting the disk OFFLINE.

Action: Issue the command 'crsctl query cluster sites <site_name>' to retrieve the status of the indicated site. Address the storage accessibility issues if the indicated site is in a QUARANTINED state. Issue the command 'crsctl modify cluster site <site_name> -s rejuvenate' to set the status to ONLINE after the storage access has been restored.

ORA-59506: database process in a network read for too long
Cause: A process on database instance connected to an ASM instance was in a SQL*Net read for too long. Possible reasons include failure of the node on which ASM instance was running or the communication channel disruption. This was detected by the Fence Monitor Process (FENC) or the ASM Background Process (ASMB) and the call was interrupted.

Action: Usually none, as the database instance fails over to another available ASM instance. If the problem keeps recurring, contact Oracle Support Services.

ORA-59507: mismatch of parameter '%0!s' between database and ASM instance '%1!s'
Cause: The value for the parameter was different in the database instance and in the ASM instance to which it was connected.

Action: Set the parameter to the same value in both the instances.

ORA-59508: invalid GUID '*string*' specified
Cause: The operation was rejected because the supplied Globally Unique Identifier (GUID) was syntactically invalid.

Action: Retry the command specifying the Globally Unique Identifier (GUID) as a text string of 32 hexadecimal digits (0-f) without a hyphen (-) character or the hexadecimal literal prefix (0x). Refer to the command inline help or product documentation for more information.

ORA-59509: failed to create member cluster '%0!s' because the specified GUID '%1!s' is already configured
Cause: An attempt to add the indicated member cluster with the indicated Globally Unique Identifier (GUID) was rejected because a member cluster with that GUID was already defined.

Action: Execute the command 'asmcmd lscc' to list the existing member clusters and cluster GUIDs. Retry the original command with a cluster GUID that has not already been configured.

ORA-59510: unable to modify member cluster '*string*'
Cause: An attempt to modify the member cluster failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information about the reason for the failure, as well as check the accompanying error messages.

ORA-59511: member cluster '%0!s' already configured with disk access mode '%1!s'
Cause: An attempt to modify the member cluster failed because it was already configured with the specified disk access mode.

Action: No action is required.

ORA-59512: The specified Oracle IOServer instance '%0!s' does not exist.
Cause: The specified Oracle IOServer instance did not exist or was terminated.

Action: Issue the 'srvctl status ioserver' command to list the active Oracle IOServer instances. Specify a valid Oracle IOServer instance name and retry the command.

ORA-59513: rejecting a request to relocate the client to *string*
Cause: The request to relocate a client was rejected because either the client or the ASM instance with the client connection was not running in Flex Mode.

Action: Check the configuration of both instances.

ORA-59514: The command is not supported on a storage server.
Cause: An attempt was made to run a command that was not supported on a storage server.

Action: Rerun the command on a member cluster.

ORA-59515: The service name was missing from the command for relocation.
Cause: The command for relocation was specified without the service name which is an invalid format.

Action: Specify a valid Oracle service name and instance name and retry the command: ALTER SYSTEM RELOCATE CLIENT TO <service_name/target_id>

ORA-59516: Could not connect to an IOS instance.
Cause: The instance failed to perform the specified operation because it could not locate a required IOS instance.

Action: Start the required IOS instance before starting the database instance.

ORA-59517: The command is not supported on an ACC.
Cause: An attempt was made to run a command that was not supported on ACC (ASM Client Cluster).

Action: No action is required.

ORA-59518: Client instance %0!s is already connected to this ASM instance.
Cause: A connection already existed from an ASM Background (ASMB) process to this ASM instance and was still active.

Action: None. Other ASMB processes from the client instance renew the disk groups. If the problem keeps recurring, contact Oracle Support Services.

ORA-59521: Existing client instance %0!s is connected to this ASM instance.
Cause: A connection already existed from the same client instance to this ASM instance, but with a different version.

Action: Ensure that no other client instances with the same instance, database, and cluster name exist in the cluster.

ORA-59523: Client instance name '%0!s' is too long.
Cause: The specified client instance name was longer than accepted.

Action: Ensure that the instance name is maximum of 30 characters long. Check the INSTANCE_NAME parameter and ORACLE_SID parameters.

ORA-59600: file *string* has too many mirror copies; *string* needed, *string* allowed
Cause: The specified file had too many mirror copies when the requested change was applied.

Action: Retry the command using a lower redundancy scheme, or reduce the existing redundancy level (if preparing a mirror split), or wait for the BALANCE phase of the rebalance operation to complete.

ORA-59601: file group redundancy cannot be modified when associated with a volume
Cause: An attempt was made to modify the redundancy of a file group which was associated with an ASM volume and contained at least one file.

Action: Drop the ASM volume associated with the file group and retry the operation.

ORA-59602: Moving ASM internal files to a file group is not allowed.
Cause: An attempt was made to execute an ALTER DISKGROUP MOVE FILE TO FILEGROUP statement on a metadata file used by ASM to manage the disk group.

Action: This action is not allowed.

ORA-59603: operation requires all disks in disk group *string* to be online
Cause: An attempt was made to modify the redundancy of a file group when some disks were offline.

Action: Drop the offline disks and wait for the rebalance operations to complete, or online the offline disks and wait for the online to complete. Then retry the operation.

ORA-59604: offline disks encountered during rebalance of disk group '*string*'
Cause: Rebalance was run in the presence of offline disks.

Action: Bring the offline disks online.

ORA-59605: file '*string*' not available; file group '*string*' has too many disks offline
Cause: A file identify operation failed because the file group specified was no longer available.

Action: Verify that all disks in this disk group are online or dropped and retry the command.

ORA-59606: cannot change redundancy of individual file types in file groups associated with a volume
Cause: An attempt was made to modify the redundancy of one or more file types in a file group associated with an ASM volume.

Action: Change the redundancy of the entire file group and not that of individual file types.

ORA-59607: COMPATIBLE.CLIENT is a read-only property by default
Cause: An attempt was made to modify the COMPATIBLE.CLIENT property of a file group without the FORCE option. COMPATIBLE.CLIENT property cannot be downgraded under any circumstances so caution should be exercised when manually modifying this property.

Action: Use the FORCE option to override this check.

ORA-59608: FORCE option cannot be used for file group property '*string*'
Cause: An attempt was made to use the FORCE option on a property that does not allow it.

Action: Remove the FORCE option and try again.

ORA-59609: cannot move a file that has prepared mirror copies
Cause: An attempt was made to move a file that has a prepared mirror copy.

Action: Create another database using the existing mirror copy or drop the existing mirror copy and wait for the rebalance operations to complete. Then, retry the operation.

ORA-59610: database version *string* is incompatible with file group '*string*'
Cause: The COMPATIBLE parameter for the Relational Database Management System (RDBMS) instance was lower than the value of the compatible.client property for the file group.

Action: Update the COMPATIBLE parameter for the RDBMS instance to a version greater than or equal to the compatible.client version.

ORA-59611: parity requires RDBMS compatibility of %0!s or higher
Cause: An attempt was made to create or open a file or to modify the redundancy of a file group for a database with a software version that did not support parity protection.

Action: Advance RDBMS compatibility to or above the required version.

ORA-59612: File group '%0!s' is not a template file group.
Cause: The file group specified in the 'FROM TEMPLATE' clause was not of TEMPLATE client type.

Action: Use a file group of template client type to inherit its properties to a new file group.

ORA-59700: Failgroup *string* already belongs to site *string*
Cause: An attempt was made to add the specified failgroup to more than one site.

Action: Retry the operation providing the correct failgroup name and the site name while specifying the disk.

ORA-59701: Incorrect number of data sites *string* specified. Maximum allowed: *string*.
Cause: An attempt was made to create an extended redundancy disk group with an invalid number of sites.

Action: Retry the operation specifying valid number of sites in the disk group.

ORA-59702: Incorrect number of quorum sites *string* specified. Maximum allowed: *string*.
Cause: An attempt was made to create an extended redundancy disk group with an invalid number of sites.

Action: Retry the operation specifying valid number of sites in the disk group.

ORA-59703: Inconsistent site information in disk '*string*'
Cause: The site information stored in the disk header did not match disk group information.

Action: Drop the disk from the disk group or provide a site name that matches the site stored in the disk header.

ORA-59704: command requires at least *string* data sites and *string* quorum sites, discovered *string* data sites and *string* quorum sites
Cause: An insufficient number of sites were specified and discovered when creating an extended redundancy disk group.

Action: Check that the command specifies the required number of data sites and quorum sites, and that all of the specified disks are discovered by ASM. A query of the V$ASM_DISK fixed view shows the disks discovered by ASM.

ORA-59705: Dropping a site is not allowed.
Cause: An attempt was made to drop a site.

Action: Set the disks of the given site offline with 'ALTER DISKGROUP *dg* OFFLINE DISK *disk*' command.

ORA-59706: The specified allocation unit size '*string*' is less than the minimum required for extended disk groups.
Cause: Extended disk groups required the allocation unit size to be at least 4M.

Action: Change the allocation unit size to at least 4M and retry.

ORA-59707: Site "*string*" does not exist in disk group "*string*".
Cause: The specified name did not match the site of any disks in the disk group. This usually indicates that the site name was specified incorrectly.

Action: Check the site name.

ORA-59708: Cluster site operation failed with error *string*.\n*string*
Cause: This is an internal error.

Action: Check the accompanying error messages. Contact Oracle Support Services.

ORA-59709: No site identified for the disk *string*
Cause: The disk did not belong to any site.

Action: Specify the site information in the SQL command. In the case of an ASM appliance, cellcli command can also be used to record the site information for the disk. For non-appliance, asmcmd can be used.

ORA-59710: site information mismatch between disk group *string* and disk *string*
Cause: The site information of the specified disk did not match with the existing disks in the disk group.

Action: If the site information is associated with the existing disks in the disk group, then specify the site information for the new disk. If the site information is not associated with the existing disks in the disk group, then do not specify the site information for the new disk.

ORA-59711: The site identified by GUID '*string*' does not exist.
Cause: An attempt to retrieve a site failed because there wasn't a configured site using the indicated Globally Unique Identifier.

Action: Add the indicated site using the command 'crsctl add cluster site *site* -guid *guid*'. Retry the original command. If retrying does not work, contact Oracle Support Services.

ORA-59712: The site identified by site name '*string*' does not exist.
Cause: An attempt to retrieve a site failed because there wasn't a configured site using the indicated site name.

Action: Add the indicated site using the command 'crsctl add cluster site *site*'. Retry the original command. If retrying does not work, contact Oracle Support Services.

ORA-59713: The site name '*string*' does not exist in the disk group '*string*'.
Cause: An attempt was made to add a disk with a new site name to a disk group, which is not allowed.

Action: Change the site name to an existing one in the disk group and retry.

ORA-59714: invalid site name '*string*' specified.
Cause: An invalid site name was supplied.

Action: Specify a site name which is at least one character but no more than 15 characters in length. The cluster name must be alphanumeric, it cannot begin with a numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

ORA-59715: missing site information in disk group '*string*'
Cause: The site information was not present in all the disks of the disk group.

Action: Specify sites for the disks using the 'asmcmd rename' command or using SQLPLUS and retry the operation.

ORA-59716: dropping all disks of the quorum site is not allowed
Cause: Dropping of the specified disks resulted in the loss of the quorum site. If only a subset of disks in the quorum site are specfied, then check the state of other disks in the V$ASM_DISK view.

Action: Modify the command to retain at least one disk in the quroum site and retry the operation.

ORA-59717: rebalance could not complete due to an unavailable site in disk group '*string*'
Cause: At least one of the sites had each disk in either dropping or forcing state.

Action: Undrop the dropping disks or add disks to the site.

ORA-59718: One or more disks are identified with a foreign site GUID '*string*'.
Cause: The indicated site GUID was not associated with any of the configured sites.

Action: Execute the command 'crsctl query cluster site -all' to list the existing sites. Associate the indicated site GUID with a site using 'crsctl modify cluster site *site* -addguid *guid*' and retry the operation.

ORA-59719: disk group '*string*' mounted but contains foreign site GUIDs
Cause: An attempt was made to mount a disk group with foreign site GUIDs.

Action: This is a warning. Examine the accompanying error messages for details.

ORA-59720: data sites in disk group *string* have a different number of fail groups.
Cause: An attempt was made to create a disk group with a different number of fail groups at each data site.

Action: Ensure that the data sites have an equal number of fail groups and try again.

ORA-59800: active use of disk '*string*' precludes its label clear
Cause: A LABEL CLEAR command specified a disk that was in use.

Action: Dismount the disk group that is using this disk and retry the the LABEL CLEAR command. Query the V$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSOF to list active clients.

ORA-59801: ASM Filter Driver is not configured in the system.
Cause: An ASM Filter Driver command was run without either an ASM Filter Driver library present or kernel driver loaded.

Action: Execute the command ASMCMD AFD_STATE to find the status of an ASM Filter Driver.

ORA-59850: all disks in disk group '*string*' need to be online
Cause: One or more disks in the disk group were offline.

Action: Online the disks that are offline.

99
ORA-60001 to ORA-65535

ORA-60001: adding (*string*) blocks to save undo segment in tablespace *string* with MAXSIZE (*string*)
Cause: Save undo for the offline tablespace at segment MAXSIZE.

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied.

ORA-60002: adding (*string*) blocks to temporary segment in tablespace *string* with MAXSIZE (*string*)
Cause: Extending a temporary segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60003: adding (*string*) blocks to table *string*.*string* partition *string* with MAXSIZE (*string*)
Cause: Extending a table partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60004: adding (*string*) blocks to table *string*.*string* with MAXSIZE (*string*)
Cause: Extending a table violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60005: adding (*string*) blocks to cluster *string*.*string* with MAXSIZE (*string*)
Cause: Extending a cluster violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60006: adding (*string*) blocks to index *string*.*string* partition *string* with MAXSIZE (*string*)
Cause: Extending an index partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60007: adding (*string*) blocks to index *string*.*string* subpartition *string* with MAXSIZE (*string*)
Cause: Extending an index subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60008: adding (*string*) blocks to index *string*.*string* with MAXSIZE (*string*)
Cause: Extending an index violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60009: adding (*string*) blocks to LOB segment *string*.*string* partition *string* with MAXSIZE (*string*)
Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60010: adding (*string*) blocks to LOB segment *string*.*string* with MAXSIZE (*string*)
Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60011: adding (*string*) blocks to lob segment *string*.*string* subpartition *string* with MAXSIZE (*string*)
Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60012: adding (*string*) blocks to table *string*.*string* subpartition *string* with MAXSIZE (*string*)
Cause: Extending a table subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60013: invalid MAXSIZE storage option value
Cause: Invalid value was specified for MAXSIZE storage clause.

Action: Correct the value and retry command.

ORA-60014: invalid MAXSIZE storage option value
Cause: Minimum of 1M should have been specified against the MAXSIZE storage clause.

Action: Correct the value and retry command.

ORA-60015: invalid RETENTION storage option value
Cause: Value of MIN retention should have been nonzero.

Action: Correct the value and retry command.

ORA-60016: Operation not supported on SECUREFILE segment
Cause: The operation to ALTER FREELIST/RETENTION was not supported on SECUREFILE segment.

Action: Check the LOB type and reissue the statement.

ORA-60018: adding *string* blocks to rollback segment *string* with MAXSIZE (*string*)
Cause: Extending a rollback segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60019: Creating initial extent of size *string* in tablespace of extent size *string*
Cause: Creation of SECUREFILE segment failed due to small tablespace extent size.

Action: Create tablespace with larger extent size and reissue command.

ORA-60025: Event for temp segment cleanup used for temp lobs
Cause: Temp LOB segments used for temporary LOBs are deleted only on session exit which may lead to large amounts of memory being held across multiple sessions.

Action: Setting this event will cause temporary LOB segments to be freed when there are no active temporary LOBs in the session. Setting this event will have a significant performance impact as it can cause temporary lob segments to be allocated and deleted many times during a session rather than once per session. Use this event only when temporary LOB segment memory use is an issue.

ORA-60072: adding (*string*) blocks to heat map segment with MAXSIZE (*string*)
Cause: Extending the heat map segment violated the MAXSIZE limit.

Action: Increase the MAXSIZE limit.

ORA-60073: Heat map segment cannot be created
Cause: SYSAUX tablespace has uniform extent allocation and the extent size is not a multiple of megabyte.

Action: Re-create SYSAUX tablespace with autoallocate extent management policy or use the uniform extent size which is a multiple of megabyte.

ORA-60082: incorrect tablespace specified
Cause: Clear free space operation was used on the temporary, undo, or SYSTEM tablespace, which is not supported.

Action: None

ORA-60083: feature not supported with the current compatibility setting
Cause: Clear free space operation requires database compatibility with release 12.2.0.2 or later.

Action: None

ORA-60084: inmemory_xmem_size specified is less than a minimum of (*string*) bytes
Cause: inmemory_xmem_size was less than the minimum expected by the system.

Action: Issue the command after changing the value for the inmemory_xmem_size parameter.

ORA-60100: dropping temporary tablespace with tablespace ID number (tsn) *string* is blocked due to sort segments
Cause: The temporary tablespace had sort segments in use.

Action: Wait for sort segments to complete or terminate sort session and then retry dropping the temporary tablespace.

ORA-60500: invalid refresh SCN *string* specified
Cause: An attempt was made to refresh the pluggable database to a system change number (SCN) that was less than or equal to the last refreshSCN.

Action: Reissue the statement with a valid SCN number.

ORA-60501: insufficient disk space
Cause: There was insufficient disk space at the specified location.

Action: Free some disk space.

ORA-60518: cannot enable per PDB supplemental logging without local undo enabled
Cause: Local undo mode was disabled.

Action: Enable local undo mode before enabling per pluggable database (PDB) supplemental logging.

ORA-62001: value for parameter cannot contain a comma
Cause: Parameter value contained a comma.

Action: Remove the comma from the parameter value.

ORA-62002: circular dependency error while evaluating expression *string* for parameter *string*
Cause: One or more of the parameters used in the expression value was dependent on the parameter being set.

Action: Identify the parameter dependency or provide an absolute value for the parameter.

ORA-62003: parameter set completed with errors in (*string*) pluggable database(s)
Cause: Parameter value was invalid or illegal for one or more pluggable databases.

Action: Check alert log for error(s).

ORA-62007: Encountered a value of unsupported type or size for XPath (*string*)
Cause: Encountered a value of unsupported type in a SQL/XML DML operator. SQL/XML operators, such as UPDATEXML, expect value operands of type VARCHAR2 and XMLTYPE. XML DML replication is not supported for SQL/XML DML operators with values of unsupported types or very large values of supported types.

Action: Rewrite the UPDATE statement using XQuery update or set event 19027 level 1 to dump XML Document as against XMLDiff in redo log.

ORA-62008: Cannot rewrite a newer version of XML redo diff (encountered: *string*, supported: *string*)
Cause: Encountered a newer version of XML redo diff that is not supported.

Action: Use RDBMS version that supports rewrite of given version of XML redo diff.

ORA-62009: cannot encode an invalid XML character 0x*string* in supplemental log
Cause: An attribute was being populated or updated with characters which are not valid for XML and therefore could not be supplementally logged.

Action: Store the desired value in a RAW or BLOB attribute.

ORA-62035: KEY VECTOR duplication failed
Cause: Parallel query failed to duplicate KEY VECTOR across Oracle RAC instances.

Action: Increase the size of the System Global Area (SGA) memory.

ORA-62036: out of memory for KEY VECTOR
Cause: A query undergoing vector transform ran out of memory in an unrecoverable way. This may indicate that poor statistics caused vector transform to be used for an unsuitable query.

Action: Gather statistics for the pertinent tables. If the problem persists, vector transform can be disabled using hint or parameter.

ORA-62081: duplicate or conflicting VECTOR ENCODE or NO VECTOR ENCODE specifications
Cause: The specifications were either a duplicate of each other or were conflicting.

Action: Remove the duplicate specification.

ORA-62082: VECTOR ENCODE only valid for Oracle number column
Cause: VECTOR ENCODE was specified on a column that is not an Oracle number.

Action: Remove the VECTOR ENCODE clause.

ORA-62083: operation not allowed for system hidden virtual column
Cause: The system hidden virtual columns could not be dropped or modified directly.

Action: Avoid dropping or modifying system hidden virtual columns.

ORA-62085: invalid value while deserializing
Cause: The value being deserialized was invalid.

Action: Avoid deserializing such values.

ORA-62131: MEMOPTIMIZE FOR WRITE feature cannot be enabled on IOTs.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on index-organized tables (IOT).

Action: None

ORA-62132: MEMOPTIMIZE FOR WRITE feature cannot be enabled on TEMPORARY TABLE.
Cause: An attempt was made to CREATE TEMPORARY TABLE with MEMOPTIMIZE FOR WRITE feature.

Action: None

ORA-62133: MEMOPTIMIZE FOR READ feature is not supported on ADG.
Cause: An attempt was made to populate data into hash index when in Active Data Guard mode.

Action: None

ORA-62134: MEMOPTIMIZE FOR READ feature cannot be used on table with ROW MOVEMENT enabled.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with row movement enabled.

Action: None

ORA-62135: Specified schema name is invalid.
Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure with an invalid schema name.

Action: Use a valid schema name for the table.

ORA-62136: Specified table name is invalid.
Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure with an invalid table name.

Action: Use a valid table name.

ORA-62137: Specified schema and table names are either non-existent or MEMOPTIMIZE FOR READ is not enabled on the table.
Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure with invalid information. Either the specified schema and table names are non-existent or MEMOPTIMIZE FOR READ feature is not enabled on the table.

Action: Enable MEMOPTIMIZE FOR READ feature on the table and invoke the procedure with correct schema and table names.

ORA-62138: MEMOPTIMIZE memory area does not exist.
Cause: An attempt was made to use the DBMS_MEMOPTIMIZE package without creating the MEMOPTIMIZE memory area.

Action: Restart the instance with appropriate value for MEMOPTIMIZE memory area parameter.

ORA-62139: MEMOPTIMIZE_WRITE hint disallowed for this operation
Cause: MEMOPTIMIZE_WRITE hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-62141: MEMOPTIMIZE FOR READ feature cannot be used with COMPRESS option
Cause: An attempt was made to use the COMPRESS option with MEMOPTIMIZE FOR READ feature.

Action: None

ORA-62142: MEMOPTIMIZE FOR READ feature requires NOT DEFERRABLE PRIMARY KEY constraint on the table
Cause: An attempt was made to use MEMOPTIMIZE FOR READ on a table that did not have the PRIMARY KEY constraint or the PRIMARY KEY constraint is DEFERRABLE.

Action: None

ORA-62143: MEMOPTIMIZE FOR WRITE feature not allowed on table with trigger.
Cause: An attempt was made to set the MEMOPTIMIZE FOR WRITE attribute on a table with trigger.

Action: None

ORA-62144: MEMOPTIMIZE FOR WRITE feature not allowed on table with foreign key constraint.
Cause: An attempt was made to set the MEMOPTIMIZE FOR WRITE attribute on a table with foreign key constraint.

Action: None

ORA-62145: MEMOPTIMIZE FOR WRITE feature not allowed on segment with deferred storage.
Cause: An attempt was made to set the MEMOPTIMIZE FOR WRITE attribute on a table with deferred storage.

Action: None

ORA-62146: MEMOPTIMIZE FOR WRITE feature cannot be used with COMPRESS option.
Cause: An attempt was made to use the COMPRESS option with MEMOPTIMIZE FOR WRITE feature.

Action: None

ORA-62147: MEMOPTIMIZE FOR READ operations are not allowed at PARTITION or SUBPARTITION levels.
Cause: An attempt was made to use MEMOPTIMIZE FOR READ option on a PARTITION table or SUBPARTITION table level.

Action: None

ORA-62148: MEMOPTIMIZE FOR READ feature cannot be enabled on IOTs.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on index-organized tables (IOT).

Action: None

ORA-62149: MEMOPTIMIZE FOR READ feature cannot be enabled on table with VIRTUAL COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with VIRTUAL COLUMNS.

Action: None

ORA-62150: MEMOPTIMIZE FOR READ feature cannot be enabled on table with INVISIBLE COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with INVISIBLE COLUMNS.

Action: None

ORA-62151: The MEMOPTIMIZE FOR READ feature cannot be enabled on a table with specified partitioning type.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with an unsupported partitioning type.

Action: None

ORA-62152: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with LOBs.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with LOB columns.

Action: None

ORA-62153: BLOCK SIZE is not equal to DB_BLOCK_SIZE setting.
Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure on a tablespace whose BLOCK SIZE was not equal to DB_BLOCK_SIZE.

Action: Use a default BLOCK SIZE.

ORA-62154: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with VIRTUAL COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with VIRTUAL COLUMNS.

Action: None

ORA-62155: MEMOPTIMIZE FOR READ feature cannot be enabled on table with LOBs.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with LOB columns.

Action: None

ORA-62156: MEMOPTIMIZE FOR READ feature not allowed on segment with deferred storage
Cause: An attempt was made to set the MEMOPTIMIZE FOR READ attribute on a table with deferred storage.

Action: None

ORA-62157: MEMOPTIMIZE FOR READ clause needs to be specified only once.
Cause: An attempt was made to use MEMOPTIMIZE FOR READ clause more than once.

Action: None

ORA-62158: MEMOPTIMIZE FOR WRITE clause needs to be specified only once.
Cause: An attempt was made to use MEMOPTIMIZE FOR WRITE clause more than once.

Action: None

ORA-62159: MEMOPTIMIZE FOR READ cannot be enabled by CREATE PARTITIONED TABLE.
Cause: An attempt was made to CREATE PARTITIONED table with MEMOPTIMIZE FOR READ enabled.

Action: Use ALTER TABLE to enable MEMOPTIMIZE FOR READ for a partitioned table.

ORA-62160: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with INVISIBLE COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with INVISIBLE COLUMNS.

Action: None

ORA-62161: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with default valued COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with COLUMNS with default values.

Action: None

ORA-62162: MEMOPTIMIZE FOR WRITE operations are not allowed at PARTITION or SUBPARTITION levels.
Cause: An attempt was made to use MEMOPTIMIZE FOR WRITE option on a PARTITION table or SUBPARTITION table level.

Action: None

ORA-62164: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with ENCRYPTED COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with ENCRYPTED COLUMNS.

Action: None

ORA-62165: MEMOPTIMIZE FOR WRITE cannot be enabled on table with specified partitioning type.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with an unsupported partitioning type.

Action: None

ORA-62166: MEMOPTIMIZE FOR WRITE cannot be enabled by CREATE PARTITIONED TABLE.
Cause: An attempt was made to CREATE PARTITIONED table with MEMOPTIMIZE FOR WRITE enabled.

Action: Use ALTER TABLE to enable MEMOPTIMIZE FOR WRITE for a partitioned table.

ORA-62167: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with COLLATED COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with COLLATED COLUMNS.

Action: None

ORA-62168: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with UNUSED COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with UNUSED COLUMNS.

Action: None

ORA-62169: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with OID COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with OID COLUMNS.

Action: None

ORA-62170: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with unsupported COLUMN type.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with unsupported COLUMN type.

Action: None

ORA-62171: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with XML COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with XML COLUMNS.

Action: None

ORA-62172: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table in encrypted tablespace.
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table in encrypted tablespace.

Action: None

ORA-62173: MEMOPTIMIZE FOR WRITE feature cannot be enabled on materialized view log
Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a materialized view log.

Action: None

ORA-62174: MEMOPTIMIZE FOR READ feature cannot be enabled on table with ENCRYPT COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with encrypted columns.

Action: None

ORA-62175: MEMOPTIMIZE FOR READ feature cannot be enabled on table with XML COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with XML COLUMNS.

Action: None

ORA-62176: MEMOPTIMIZE FOR READ feature cannot be enabled on table with UNUSED COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with UNUSED COLUMNS.

Action: None

ORA-62177: MEMOPTIMIZE FOR READ feature cannot be enabled on table with unsupported COLUMN type.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with unsupported COLUMN type.

Action: None

ORA-62178: MEMOPTIMIZE FOR READ feature cannot be enabled on table with COLLATED COLUMNS.
Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with COLLATED COLUMNS.

Action: None

ORA-62179: MEMOPTIMIZE FOR READ feature cannot be enabled on TEMPORARY TABLE.
Cause: An attempt was made to CREATE TEMPORARY TABLE with MEMOPTIMIZE FOR READ feature.

Action: None

ORA-62180: MEMOPTIMIZE FOR WRITE unsupported DDL.
Cause: Unsupported DDL on MEMOPTIMIZE FOR WRITE table.

Action: None

ORA-62181: The MEMOPTIMIZE FOR READ feature is not supported on this table.
Cause: An attempt was made to enable the MEMOPTIMIZE FOR READ feature on an unsupported table.

Action: None

ORA-62182: external partitions not supported with MEMOPTIMIZE FOR WRITE
Cause: An attempt was made to use external partition with a MEMOPTIMIZE FOR WRITE table.

Action: None

ORA-62183: out of memory for MEMOPTIMIZE area
Cause: MEMOPTIMIZE memory area was full and did not have any free buffers.

Action: Restart the instance with an appropriate value for MEMOPTIMIZE memory area parameter.

ORA-62184: bitmap index not supported with MEMOPTIMIZE FOR WRITE
Cause: An attempt was made to use a bitmap index with a MEMOPTIMIZE FOR WRITE table.

Action: None

ORA-62185: materialized view log cannot be created on a MEMOPTIMIZE FOR WRITE table
Cause: An attempt was made to create a materialized view log on a MEMOPTIMIZE FOR WRITE table.

Action: None

ORA-62186: online index build or rebuild not supported with MEMOPTIMIZE FOR WRITE
Cause: An attempt was made to build an index online with a MEMOPTIMIZE FOR WRITE table.

Action: None

ORA-62187: timeout occurred while waiting for lock to flush object *string* data object *string*
Cause: While waiting to lock a memoptimize flush object, a timeout occurred .

Action: Retry the operation later.

ORA-62231: DESC is missing in ORDER BY clause within APPROX_RANK.
Cause: The DESC keyword was not specified in the ORDER BY clause within the APPROX_RANK function.

Action: Add the DESC keyword.

ORA-62232: Invalid expression used in ORDER BY clause within APPROX_RANK.
Cause: An invalid expression was used in the ORDER BY clause within the APPROX_RANK function.

Action: Use the supported approximate aggregate function in the ORDER BY clause.

ORA-62233: Multiple expressions were used in the ORDER BY clause within the APPROX_RANK function.
Cause: Multiple expressions are used in ORDER BY clause within APPROX_RANK.

Action: Order by a single expression within APPROX_RANK function.

ORA-62234: The APPROX_RANK functions used different PARTITION BY keys.
Cause: APPROX_RANK functions use different PARTITION BY keys.

Action: Use the same PARTITION BY keys across APPROX_RANK functions.

ORA-62235: PARTITION BY key in APPROX_RANK is not a subset of GROUP BY key.
Cause: The PARTITION BY key in the APPROX_RANK function was not a subset of the key in the GROUP BY clause.

Action: Use a subset of the key in the GROUP BY clause in the PARTITION BY key within the APPROX_RANK function.

ORA-62236: Missing GROUP BY clause when approximate top functions are used.
Cause: The GROUP BY clause was missing when the approximate top functions were used.

Action: Add the GROUP BY clause.

ORA-62237: Missing HAVING clause when approximate top functions are used.
Cause: The HAVING clause was missing when the approximate top functions were used.

Action: Add the HAVING clause.

ORA-62238: Mixed approximate top functions with window functions or non approximate top functions.
Cause: An attempt was made to use window functions or aggregates that were not approximate top functions along with approximate top functions.

Action: Remove the window functions or non approximate top functions.

ORA-62239: More than one expression appears in GROUP BY clause but not in PARTITION BY clause.
Cause: An attempt was made to involve more than one columns as the top N key.

Action: Remove the extra expression(s) from GROUP BY clause, or add extra expression(s) to PARTITION BY part in HAVING clause

ORA-62240: Missing one or more corresponding APPROX_RANK clause in HAVING list when approximate top functions are used.
Cause: One or more corresponding APPROX_RANK clauses were missing when approximate top functions were used.

Action: Add the APPROX_RANK clause in HAVING list for each approximate top N function that appears in SELECT or ORDER BY clause

ORA-62242: HAVING clause can only contain AND predicates when approximate top functions are used.
Cause: the HAVING clause contained predicates other than AND when approximate top functions were used.

Action: Only use the AND predicate with the HAVING clause.

ORA-62243: Each predicate in HAVING clause must be in the format of 'APPROX_RANK(PARTITION BY ... ORDER BY ... DESC) <(=) n' when approximate top functions are used.
Cause: Illegal predicates were used in the HAVING clause when approximate top functions were used.

Action: Correct the format to 'APPROX_RANK (PARTITION BY ? ORDER BY ? DESC) <(=) n'.

ORA-62244: GROUPING SETS, CUBE and ROLLUP cannot be applied to approximate functions.
Cause: An attempt was made to use GROUPING SETS, CUBE or ROLLUP over the approximate functions.

Action: Remove any GROUPING SETS, CUBE or ROLLUP when using approximate functions.

ORA-62245: Negative value has been passed to APPROX_SUM function.
Cause: An attempt was made to pass a negative value to the APPROX_SUM function.

Action: Only pass expressions that have non-negative value to APPROX_SUM.

ORA-62246: The subqueries that contain approximate top functions must be unnested.
Cause: An attempt was made to execute subqueries that contain approximate top functions without unnesting.

Action: Remove the hint or the parameters that are preventing subquery unnesting.

ORA-62251: The Nest handle is invalid.
Cause: The Nest handle was not valid.

Action: None

ORA-62252: The Nest open failed.
Cause: The Nest open failed.

Action: None

ORA-62253: The Nest is already opened.
Cause: An attempt was made to open a Nest that was already opened.

Action: None

ORA-62254: The Nest lookup failed.
Cause: The Nest lookup for a given pluggable database (PDB) failed.

Action: None

ORA-62255: A Child Nest is present.
Cause: An attempt to delete a Nest that had a dependent child Nest failed.

Action: None

ORA-62256: failure to delete a Nest that is not created
Cause: An attempt to delete a Nest that was not created failed.

Action: None

ORA-62257: The Nest is already created.
Cause: An attempt was made to create a Nest that was already created.

Action: None

ORA-62258: The Nest creation failed.
Cause: The Nest creation failed with an operating system operation.

Action: None

ORA-62259: failure to open a Nest that was not created
Cause: An attempt to open the Nest before it was created failed.

Action: None

ORA-62260: The Nest open failed.
Cause: The Nest open failed with an operating system operation.

Action: None

ORA-62261: failure to update a Nest that is not opened
Cause: An attempt to update a Nest that was not opened failed.

Action: None

ORA-62262: The Nest update failed.
Cause: The Nest update failed with an operating system operation.

Action: None

ORA-62263: failure to close a Nest that is not opened
Cause: An attempt to close a Nest that was not open failed.

Action: None

ORA-62264: The Nest close failed.
Cause: The Nest close failed with an operating system operation.

Action: None

ORA-62265: The Nest delete failed.
Cause: The Nest delete failed with an operating system operation.

Action: None

ORA-62266: dedicated broker not enabled
Cause: Nest connections require an enabled dedicated broker. The dedicated broker was not enabled in the current instance.

Action: Enable the dedicated broker.

ORA-62267: invalid Nest parameter
Cause: An invalid value or length for the Nest parameter was specified.

Action: None

ORA-62268: The Nest creation failed due to reaching the maximum depth.
Cause: The child Nest could not be created due to reaching the maximum depth.

Action: None

ORA-62269: no PDB nest found for specified PDB
Cause: A pluggable database (PDB) nest was not found for the specified PDB.

Action: Check the connection broker and listener settings.

ORA-62270: connection outside PDB nest
Cause: The current pluggable database (PDB) connection was outside of the PDB nest.

Action: Check the connection broker and listener settings.

ORA-62346: Extent allocation failed
Cause: PGA extent allocation in unified memory failed

Action: None

ORA-62350: invalid extent ownership
Cause: The current process did not own the extent.

Action: None

ORA-62500: function is not allowed outside of MATCH_RECOGNIZE clause
Cause: The function was specified outside of the MATCH_RECOGNIZE clause. This function is only allowed in the MATCH_RECOGNIZE clause.

Action: Rewrite the SQL statement.

ORA-62501: invalid value specified for bounded quantifier in MATCH_RECOGNIZE clause
Cause: The specified lower bound or upper bound value was greater than UB4MAXVAL. The lower bound value must be non-negative. The upper bound value must be strictly positive. The upper bound value must be greater than or equal to the lower bound value.

Action: Choose an appropriate value and retry the operation.

ORA-62502: invalid variable name
Cause: The specified variable name was invalid. Variable names are not allowed to be "^", "$", or "*".

Action: Choose an appropriate variable name and retry the operation.

ORA-62503: illegal variable definition
Cause: The specified variable definition was invalid. Variables defined in the DEFINE clause must be in the PATTERN clause. Variables defined in the SUBSET clause cannot be in the PATTERN clause. Variables cannot be defined twice either in the SUBSET clause or the DEFINE clause.

Action: Choose an appropriate variable and retry the operation.

ORA-62504: illegal variable reference
Cause: The referenced variable was invalid. Variables referenced in the SUBSET clause must be in the PATTERN clause. Variables referenced in the DEFINE clause, the MEASURES clause, and the AFTER MATCH SKIP TO must be in the PATTERN clause or defined in the SUBSET clause.

Action: Choose an appropriate variable and retry the operation.

ORA-62505: expression needs to be aliased
Cause: The expression was not aliased. MEASURES clause items have to be aliased.

Action: Choose an appropriate variable and retry the operation.

ORA-62506: illegal nesting of operators in MATCH_RECOGNIZE clause
Cause: An attempt was made to nest aggregates/FIRST/LAST/PREV/NEXT. Aggregates/FIRST/LAST/PREV/NEXT cannot be nested. The only exception allowed is PREV/NEXT(FIRST/LAST()).

Action: Modify the query and retry the operation.

ORA-62507: illegal use of MATCH_NUMBER or CLASSIFIER in MATCH_RECOGNIZE clause
Cause: An attempt was made to use MATCH_NUMBER or CLASSIFIER in the MATCH_RECOGNIZE clause. CLASSIFIER and MATCH_NUMBER can only be used in the MEASURES clause. CLASSIFIER can only be used if the query is ALL ROWS PER MATCH. CLASSIFIER and MATCH_NUMBER cannot be used inside aggregates/FIRST/LAST/PREV/NEXT.

Action: Modify the query and retry the operation.

ORA-62508: illegal use of aggregates or navigation operators in MATCH_RECOGNIZE clause
Cause: An attempt was made to define aggregates/FIRST/LAST/PREV/NEXT over multiple variables. Aggregates/FIRST/LAST/PREV/NEXT cannot be defined over multiple variables.

Action: Modify the query and retry the operation.

ORA-62509: illegal use of RUNNING or FINAL in MATCH_RECOGNIZE clause
Cause: An attempt was made to use RUNNING or FINAL in MATCH_RECOGNIZE. RUNNING or FINAL can only be used on aggregate/FIRST/LAST. FINAL aggregate/FIRST/LAST is not allowed in the DEFINE clause.

Action: Modify the query and retry the operation.

ORA-62510: Correlated subqueries are not allowed in MATCH_RECOGNIZE clause.
Cause: An attempt was made to use correlated subqueries in the MATCH_RECOGNIZE clause. Correlated subqueries are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62511: Correlation variables are not allowed in MATCH_RECOGNIZE clause.
Cause: An attempt was made to use correlation variables in the MATCH_RECOGNIZE clause. Correlation variables are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62512: This aggregate is not yet supported in MATCH_RECOGNIZE clause.
Cause: An unsupported aggregate was specified in the MATCH_RECOGNIZE clause. Only COUNT, SUM, AVG, MIN, and MAX are currently supported in the MATCH_RECOGNIZE clause. Distinct aggregates are currently not supported in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62513: Quantified subpatterns that can have empty matches are not yet supported.
Cause: There were empty matches for the quantified subpattern in the PATTERN clause. Quantified subpatterns are currently required to match one or more rows.

Action: Modify the query and retry the operation.

ORA-62514: AFTER MATCH SKIP TO variable is not bounded in the match found.
Cause: AFTER MATCH SKIP TO variable was not bound in the match found due to pattern operators such as |, *, ?, and so on.

Action: Modify the query and retry the operation.

ORA-62515: Exclusion syntax cannot be used with WITH UNMATCHED ROWS.
Cause: An attempt was made to use exclusion syntax with WITH UNMATCHED ROWS. Exclusion syntax {- -} cannot be used with WITH UNMATCHED ROWS.

Action: Modify the query and retry the operation.

ORA-62516: The PARTITION BY, ORDER BY, or MEASURES clause is too large for MATCH_RECOGNIZE.
Cause: The number of items in PARTITION BY, ORDER BY, or MEASURES clause exceeded the maximum allowed. There cannot be more than UB2MAXVAL elements in PARTITION BY, ORDER BY, or MEASURES clause.

Action: Modify the query and retry the operation.

ORA-62517: Next match starts at the same point last match started.
Cause: AFTER MATCH SKIP TO option repositioned the next match at the start of the previous one resulting in an infinite loop.

Action: Modify the query and retry the operation.

ORA-62518: MATCH_RECOGNIZE pattern is too large.
Cause: MATCH_RECOGNIZE pattern was too large. More than UB2MAXVAL elements in alternation, concatenation, or permute, or more than UB4MAXVAL states in the state machine are currently not supported. Permute with more than 7 elements or bounded quantifier bound greater than 200 are also currently not supported.

Action: Modify the query and retry the operation.

ORA-62519: Subquery inside MATCH_RECOGNIZE cannot contain MATCH_RECOGNIZE.
Cause: An attempt was made to use a subquery containing a MATCH_RECOGNIZE clause inside a MATCH_RECOGNIZE clause. Subqueries containing MATCH_RECOGNIZE clauses are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62520: illegal offset for MATCH_RECOGNIZE navigation operators
Cause: An attempt was made to use something other than a constant or a bind variable as the offset for MATCH_RECOGNIZE navigation operators FIRST, LAST, PREV, or NEXT. Offset for MATCH_RECOGNIZE navigation operators have to be constants or bind variables.

Action: Modify the query and retry the operation.

ORA-62521: MATCH_RECOGNIZE is not supported on lateral views
Cause: An attempt was made to use MATCH_RECOGNIZE on a lateral view, which is not supported.

Action: Modify the query and retry the operation.

ORA-62550: Invalid SQL ROW LIMITING expression was specified.
Cause: The SQL ROW LIMITING expression contained components other than literals, binds, correlation variables, or subqueries.

Action: Modify the SQL ROW LIMITING expression and retry the operation.

ORA-62555: Invalid use of PARTITION BY or ORDER BY clause.
Cause: Either the PARTITION BY or ORDER BY was specified on more than one argument of a POLYMORPHIC TABLE FUNCTION.

Action: Check the SQL statement and rewrite if necessary.

ORA-62556: Incorrect use of COLUMNS operator.
Cause: COLUMNS function was used outside a POLYMORPHIC TABLE FUNCTION.

Action: Check the SQL statement and rewrite if necessary.

ORA-62557: Invalid use of POLYMORPHIC TABLE FUNCTION.
Cause: POLYMORPHIC TABLE FUNCTION was specified inside RECURSIVE WITH clause.

Action: Check the SQL statement and rewrite if necessary.

ORA-62558: Unsupported data types (*string*) for polymorphic table function
Cause: Non-scalar data types were used in polymorphic table function. Only scalar data types are supported.

Action: Use only scalar data types in polymorphic table function.

ORA-62559: Data types mismatch (*string*<==>*string*) for polymorphic table function
Cause: Data types for the source and target did not match for polymorphic table function. In Get_Col and Put_Col APIs, both the type of the collection element and the type of the polymorphic table function column must match.

Action: Ensure the collection element type matches the column type of the polymorphic table function

ORA-62560: Duplicate column name (*string*)
Cause: The new column name already existed as a passthrough column in the polymorphic table function.

Action: Use a different column name that is unambiguous.

ORA-62561: Invalid column ID (*string*) in Get_Col or Put_Col
Cause: The column number specified in the Get_Col or Put_Col API for polymorphic table functions was incorrect.

Action: Use a column ID that is valid for this polymorphic table function.

ORA-62562: The API *string* can be called only during execution time of a polymorphic table function.
Cause: This API was called in a context other than the execution time context of a polymorphic table function. This API is not supported in this context.

Action: Use this call only during the execution context of a polymorphic table function.

ORA-62563: typecode not set for a new column in the polymorphic table function
Cause: The type of this new column was not set.

Action: Set the typecode and other needed metadata during the describe phase of the polymorphic table function.

ORA-62564: This new column name (*string*) already exists.
Cause: This new column name was already created during the describe phase and therefore it is a duplicate column name.

Action: Ensure that the new column names are unique for this polymorphic table function.

ORA-62565: The *string* method failed with error(s). *string*
Cause: This method of polymorphic table function had error(s) during SQL compilation.

Action: Look at the errors and resolve them.

ORA-62566: One of the new column names is a zero-length identifier.
Cause: A zero-length identifier was used as a new column name that was created during the describe phase.

Action: Specify valid identifiers for new column names.

ORA-62567: One of the new column names is too long.
Cause: An identifier with more than 128 bytes was used for one of the new column names that was created during the describe phase.

Action: Specify at most 128 bytes for new column names.

ORA-62568: invalid use of PARTITION BY or ORDER BY clause
Cause: Either the PARTITION BY or the ORDER BY clause was specified on an argument of a non-table semantic POLYMORPHIC TABLE FUNCTION.

Action: Remove the PARTITION BY or the ORDER BY clause.

ORA-62569: nested polymorphic table function is disallowed
Cause: A polymorphic table function was specified as an argument of a table function.

Action: Modify the query so that there is no nested polymorphic table function.

ORA-62570: new column name (*string*) is invalid
Cause: The new column name was invalid. It should be valid Oracle identifier and should not be an Oracle reserved word.

Action: Use a different column name that is a valid Oracle identifier and that is not an Oracle reserved word.

ORA-62571: new column (*string*) has length (*string*) that is greater than the maximum allowed length (*string*)
Cause: The length specified for a new column for the polymorphic table function was greater than the maximum allowed length.

Action: Specify a new column length that is less than or equal to the maximum allowed length.

ORA-62572: object views are not supported with polymorphic table functions
Cause: An object view was being created with polymorphic table function in the select query.

Action: Do not use object views with polymorphic table function.

ORA-62573: new column (*string*) is not allowed with describe only polymorphic table function
Cause: The new column name was created in describe only polymorphic table function.

Action: Do not create a new column when no execution methods like OPEN, FETCH_ROWS or CLOSE are specified.

ORA-62574: row replication flag was not set
Cause: A row replication API was called, but the Describe method set ROW_REPLICATION to FALSE (default).

Action: Change the value of ROW_REPLICATION to TRUE in the Describe method.

ORA-62575: more than one parameter of TABLE type is not allowed
Cause: An attempt was made to use more than one argument with TABLE or DBMS_TF.TABLE_T as the type specification.

Action: Do not specify more than one TABLE as the type specification

ORA-62576: target size(*string*) is smaller than source size(*string*) for column(*string*) in *string*
Cause: When reading a column from database or writing a column to the database, destination buffer should not be smaller than the source.

Action: Change the size of destination buffer.

ORA-62577: character set IDs do no match *string*
Cause: When reading a column from the database or writing a column to the database, character set did not match.

Action: Ensure that the collection and table column character sets are identical.

ORA-62578: cursor expressions are not allowed with polymorphic table functions
Cause: A cursor expression was used as an argument to polymorphic table function.

Action: Instead of using the CURSOR expression, use the REF CURSOR bind parameter.

ORA-62600: Invalid value is passed to a bitmap operator.
Cause: An attempt was made to pass an invalid value to a bitmap operator.

Action: Pass only expressions that have integer values to BITMAP_BUCKET_NUMBER and BITMAP_BIT_POSITION and provide only positive integer values for BITMAP_CONSTRUCT_AGG.

ORA-62601: invalid size value for BITMAP_BUCKET_NUMBER or BITMAP_BIT_POSITION operator
Cause: An attempt was made to pass an invalid size value for a BITMAP_BUCKET_NUMBER or BITMAP_BIT_POSITION operator.

Action: Pass only positive values that are less than 32 GB for the size argument of BITMAP_BUCKET_NUMBER and BITMAP_BIT_POSITION operators.

ORA-62602: The bitmap size exceeds maximum size of its SQL data type.
Cause: An attempt was made to construct a bitmap larger than its maximum SQL type size.

Action: Call BITMAP_CONSTRUCT_AGG with input BITMAP_BIT_POSITION and a smaller or the default bucket size argument.

ORA-62603: The input is not a valid bitmap produced by BITMAP COUNT DISTINCT operators.
Cause: An attempt was made to pass a bitmap that was not produced by one of the BITMAP COUNT DISTINCT operators.

Action: Pass only bitmaps constructed by using BITMAP_CONSTRUCT_AGG or BITMAP_OR_AGG to the BITMAP COUNT DISTINCT related operators.

ORA-62611: operation disallowed; cluster cannot be created in Oracle Autonomous Database Cloud
Cause: Cluster feature is not supported in Oracle Autonomous Database Cloud.

Action: Use heap-organized tables to store data in Oracle Autonomous Database Cloud.

ORA-62612: operation disallowed; column with ROWID type cannot be created in Oracle Autonomous Database Cloud
Cause: An attempt was made to create a table with ROWID column type. By default, Oracle Autonomous Database Cloud runs with ROW MOVEMENT enabled. Hence, ROWIDs stored

in ROWID column may not be valid if rows are moved by automated maintenance operations, such as table shrink.

Action: Set ATP_ALLOW_ROWID_COLUMN_TYPE=TRUE and disable row movement of the tables that are referenced by the ROWID column.

ORA-63000: operation disallowed: data file *string* is being moved
Cause: The specified data file was being moved.

Action: Wait for the move operation to complete and retry the command.

ORA-63001: file error during move operation
Cause: The move operation encountered an error for the moved data file. The error might be caused by file going offline or by an I/O error. See alert or trace files in all instances for further information.

Action: Retry the move command.

ORA-63002: a data file copy that is not current
Cause: An obsolete copy of a data file left from a data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Pass a valid file or perform a media recovery on the file.

ORA-63003: a half-done data file copy
Cause: A half-done copy of a data file created from a previous data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Check file headers and pass only valid files.

ORA-63004: Database names in file headers are inconsistent: *string* and *string*.
Cause: Differring database names were found in database file headers.

Action: Check that correct and valid data files are used.

ORA-63005: Header validation failed for *string* File ('*string*').
Cause: Oracle server failed to read or write to the specified file because the file has an SCN value which is too high for this release.

Action: Contact Oracle Support Services.

ORA-63995: fractured block detected in control file: (block *string*, # blocks *string*)
Cause: A fractured block or checksum error was detected on reading the control file under no-enqueue control file transaction. The reason could be a stalled concurrent block update.

Action: Retry the operation later.

ORA-63996: A local temporary file remote call failed
Cause: An operating system error or network error occurred when making a remote call to another instance during a local temporary space DDL operation.

Action: Remedy the operating system or network errors mentioned in the error stack and then retry the operation.

ORA-63997: file size refresh failed
Cause: An operating system error or device error occurred when retrieving the file's size.

Action: Remedy the operating system or device errors mentioned in the error stack and then perform crash recovery.

ORA-63998: undo tablespace file suffered media failure
Cause: An undo tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-63999: data file suffered media failure
Cause: A data file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-64000: specified path already exists
Cause: The pathname of a new item specified in a DBFS API operation already exists.

Action: Specify a valid, new pathname for the operation.

ORA-64001: invalid parent directory in specified path
Cause: The pathname of an item specified in a DBFS API operation has one or more invalid parent components.

Action: Specify a valid pathname with valid parent components for the operation.

ORA-64002: specified path is invalid
Cause: The pathname of an item specified in a DBFS API operation is invalid.

Action: Specify a valid pathname for the operation.

ORA-64003: an unsupported operation was invoked
Cause: The current DBFS API operation is unsupported by a provider.

Action: Use the provider feature set to invoke only supported operations.

ORA-64004: an invalid combination of arguments was specified
Cause: The current DBFS API operation specifies an invalid combination of arguments for the specified pathname(s) and operation.

Action: Specify a valid combination of pathname(s) and arguments.

ORA-64005: access control checks failed
Cause: The current DBFS API operation failed access control checks for the pathname(s) being accessed.

Action: Specify valid pathname(s) and principal for the operation, or take store-specific actions to enable access.

ORA-64006: lock conflict in current operation
Cause: A DBFS API locking operation could not be completed due to conflicts in the locking protocol.

Action: Follow the proper lock/unlock protocol according to the provider feature set.

ORA-64007: invalid store specified
Cause: The current operation specifies an invalid store name.

Action: Specify a valid store name for the operation.

ORA-64008: invalid mount-point specified
Cause: The current operation specifies an invalid mount-point.

Action: Specify a valid mount-point for the operation.

ORA-64009: invalid provider specified
Cause: The current operation refers to an invalid or incomplete or non-conformant store provider package.

Action: Specify a valid, complete, and conformant (per "dbms_dbfs_content_spi") store provider package.

ORA-64010: cannot modify store via read-only mount
Cause: The current operation attempts to modify a store via a read-only mount (or specifies a read-only store).

Action: Specify a valid modifiable store/mount for the operation.

ORA-64011: cross store operation
Cause: The current operation attempts to span 2 or more different stores and cannot be implemented entirely by the DBFS API.

Action: Split the operation, at the application-level, into multiple sub-operations to implement the same overall functionality.

ORA-64012: specified path is a directory
Cause: The current operation specifies a path that is a directory element, when a non-directory element is expected.

Action: Specify a path of the proper type for the operation.

ORA-64013: specified path is not a directory
Cause: The current operation specifies a path that is not a directory element, when a directory element is expected.

Action: Specify a path of the proper type for the operation.

ORA-64014: directory not empty
Cause: The current operation specifies a directory element that is not empty as required.

Action: Specify an empty directory element.

ORA-64101: Cannot alter both a structured and an unstructured component of an XMLIndex in the same ALTER INDEX statement.
Cause: An attempt was made to alter the unstructured component and structured component of an XMLIndex at the same time.

Action: Use separate ALTER INDEX statements to change an unstructured component and a structured component of an XMLIndex.

ORA-64102: Cannot create an XMLIndex with a structured component on a CLOB column within the object-relational storage model.
Cause: An attempt was made to create an XMLIndex with a structured component on a CLOB column within the object-relational storage model.

Action: Only unstructured XML indexes can be created on a CLOB column within the object-relational storage model.

ORA-64103: Cannot create an XMLIndex on an object-relational XML type table or column.
Cause: An attempt was made to create an XMLIndex on an XML type table or column that uses the object-relational storage model.

Action: The object-relational storage model does not support an XMLIndex.

ORA-64104: Column name already used by internal column of the structured component of the XMLIndex.
Cause: An attempt was made to use a column name already in use by an internal column of the structured component of the XMLIndex.

Action: Chose another column name.

ORA-64105: Cannot create domain index on XMLIndex internal tables.
Cause: An attempt was made to create a domain index on an internal table of an XMLIndex.

Action: Create the domain index on the base table.

ORA-64106: Incorrect use of comma(,) punctuation in COLUMN definitions.
Cause: An attempt was made to define COLUMNS with incorrect use of comma punctuation.

Action: Properly separate COLUMN definitions with comma punctuation.

ORA-64107: The XMLIndex has been successfully altered but the metadata could not be updated.
Cause: An internal error occured when updating the index metadata. The dbms_metadata.get_ddl function may return improper metadata.

Action: contact Oracle Support Services.

ORA-64108: Cannot truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.
Cause: An attempt was made to truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64109: XMLIndex: problems encountered during the dropping of statistics
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64110: XMLIndex: problems encountered during the gathering of statistics
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64111: XMLIndex: problems encountered during EXPORT
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64112: XMLIndex: problems encountered during IMPORT
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64113: XMLIndex: XDB.XDB$XIDX_IMP_T still has bad data for "*string*"."*string*"
Cause: See associated error message.

Action: Ask the DBA to delete all the rows that belong to the given schema_name.index_name from the system table XDB.XDB$XIDX_IMP_T."

ORA-64114: XMLIndex: reserved for EXPORT or IMPORT

ORA-64115: XMLIndex Exchange Partition: the table has no XMLIndex
Cause: The non-partitioned table had no XMLIndex.

Action: None

ORA-64116: XMLIndex Exchange Partition: incompatible XPath subsets
Cause: The XMLIndexes on the two tables had different path subsets.

Action: Correct the error and retry the command.

ORA-64117: XMLIndex Exchange Partition: incompatible modes for asynchronous DML
Cause: The XMLIndexes on the two tables had different deferred DML modes.

Action: Correct the error and retry the command.

ORA-64118: XMLIndex Exchange Partition: incompatible unstructured components
Cause: One of the XMLIndexes had no unstructured component.

Action: Correct the error and retry the command.

ORA-64119: XMLIndex Exchange Partition: incompatible structured components
Cause: One of the XMLIndexes had no structured component.

Action: Correct the error and retry the command.

ORA-64120: XMLIndex Exchange Partition: incompatible structured components
Cause: The XMLIndexes had different structured components.

Action: Correct the error and retry the command.

ORA-64121: XMLIndex DDL: failure of the internal "*string*"
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64122: XMLIndex DDL: failure of the recursive "*string*"
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64123: XMLIndex DDL: failure of a recursive DDL
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64124: XMLIndex: failure during the setting of an event
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64125: XMLIndex: failure during the resetting of an event
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64126: XMLIndex Table Function: failure at the start of the function
Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64127: XMLIndex Table Function: failure at the beginning of the function
Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64128: XMLIndex Table Function: failure during the function evaluation
Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64129: XMLIndex Table Function: failure at the end of the function
Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64130: XMLIndex: invalid namespace mapping "*string*"
Cause: Namespace mapping was invalid. The syntax is XMLNS="string".

Action: Check the namespace string, correct the error and retry command.

ORA-64131: XMLIndex Metadata: failure during the looking up of the dictionary
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64132: XMLIndex Metadata: failure during the updating of the dictionary
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64133: XMLIndex DML: failure of the internal "*string*"
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64134: XMLIndex DML: failure of the recursive "*string*"
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64135: XMLIndex DML: failure of a recursive DML
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64136: XMLIndex Asynchronous DML: synchronization failure
Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64137: Cannot drop an XMLIndex whose internal table has been indexed using Oracle Text.
Cause: An attempt was made to drop an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64138: Cannot drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.
Cause: An attempt was made to drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64139: The type of VIRTUAL column is not XMLTYPE
Cause: An attempt was made to create an XML index with VIRTUAL column not of XMLTYPE.

Action: Specify the type of VIRTUAL column to be XMLTYPE.

ORA-64140: missing chaining XMLTABLE for VIRTUAL column in the index
Cause: An attempt was made to create an XML index with VIRTUAL column but without required chaining XMLTABLE.

Action: Specify a chaining XMLTABLE after VIRTUAL column.

ORA-64141: Can only have a single XMLType column when a table is shared.
Cause: An attempt was made to create a shared table with more than one columns.

Action: Specify a correct shared table definition with only one XMLType column.

ORA-64142: Shared tables must have same semantics for truncation.
Cause: An attempt was made to create shared tables with inconsistent semantics for truncation. Either all shared tables should have or should not have (TRUNCATE) keyword.

Action: Be consistent with (TRUNCATE) keyword while defining shared tables.

ORA-64143: Can only share an existing XMLIndex table with an XMLTYPE column.
Cause: An attempt was made to share a table without an XMLTYPE column.

Action: Drop the group containing the XMLIndex table without an XMLTYPE column and re-create the group with new definition.

ORA-64144: Shared tables must have equivalent paths.
Cause: An attempt was made to share a table with different paths.

Action: Specify a correct shared table definition with appropriate paths.

ORA-64145: This XMLIndex rewrite failed
Cause: One of the rewrites being tried by XMLIndex engine failed.

Action: None. This error is for understanding the trace file of XMLIndex rewrite.

ORA-64146: Nonblocking alter XMLIndex error
Cause: Internal error.

Action: None

ORA-64147: Invalid use of NONBLOCKING COMPLETE or ABORT.
Cause: NONBLOCKING COMPLETE or ABORT is only allowed for XMLIndex that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: None

ORA-64148: Cannot complete nonblocking alter index operation.
Cause: NONBLOCKING COMPLETE is only allowed for XMLIndex that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN and there are no pending rows left.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work.

ORA-64149: Invalid alter XMLIndex operation.
Cause: An attemp was made to alter an XMLIndex that is already being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN. Only NONBLOCKING COMPLETE or ABORT alter index operations are allowed. Also, NONBLOCKING operation is not allowed with alter index rebuild.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work and then execute NONBLOCKING COMPLETE to successfully finish existing NONBLOCKING operation. Execute NONBLOCKING ABORT to cancle existing NONBLOCKING operation.

ORA-64151: Invalid use of DBMS_XMLINDEX.PROCESS_PENDING.
Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that was not modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: None

ORA-64152: There are no pending rows to process.
Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that does not have any pending rows to process.

Action: Execute NONBLOCKING COMPLETE operation to complete the nonblocking alter index.

ORA-64153: Cannot create XMLIndex for data stored in a CLOB column within the object-relational storage model.
Cause: An attempt was made to create an XMLIndex on an XML CLOB column stored with object-relational storage.

Action: Change the XML column storage to binary XML.

ORA-64154: XMLIndex cannot be created on an autolist partitioned table.
Cause: An attempt was made to create an XMLIndex on a table that had an autolist partition.

Action: None

ORA-64155: XMLIndex with unstructured component cannot be created on an interval partitioned table.
Cause: There was an attempt to create an Unstructured XMLIndex (UXI) component on a table with interval partitioning.

Action: Create an XMLIndex with a structured component.

ORA-64201: unregistered LOB value encountered
Cause: The LOB value associated with the input locator did not exist in client-side reference tables.

Action: This is an internal error. Contact Oracle Support Services.

ORA-64202: remote temporary or abstract LOB locator is encountered
Cause: Local database encountered a temporary or abstract LOB created on a remote database. Remote access to temporary or abstract LOB is not supported.

Action: Avoid remote queries that return a temporary or abstract LOB.

ORA-64203: Destination buffer too small to hold CLOB data after character set conversion.
Cause: An attempt was made to convert CLOB to CHAR, where the LOB size was bigger than the buffer limit for CHAR types or the CHAR buffer was not big enough to hold all data after character set conversion.

Action: Do one of the following: * Make the LOB smaller before performing the conversion. for example, by using SUBSTR on CLOB * Use DBMS_LOB.SUBSTR to convert CLOB to CHAR.

ORA-64204: encountered partial multibyte character
Cause: The requested operation could not complete because a partial multibyte character was found at the end of the input.

Action: Ensure that the input buffer ends with a complete multibyte character and retry the operation.

ORA-64205: Cannot use other triggering events along with LOGICAL LOB UPDATE event
Cause: An attempt was made to use other triggering events (such as INSERT, DELETE and UPDATE) with the LOGICAL LOB UPDATE event.

Action: Create multiple triggers instead of sharing a trigger for multiple events.

ORA-64206: Cannot create INSTEAD OF LOGICAL LOB UPDATE trigger
Cause: INSTEAD OF LOGICAL LOB UPDATE trigger was not allowed.

Action: None

ORA-64207: Invalid LOGICAL LOB UPDATE trigger definition
Cause: The LOGICAL LOB UPDATE trigger could not be created on a non-LOB column of a table. The column name has to be specified while creating the trigger. Only one column name can be specified while creating the trigger.

Action: Specify LOGICAL LOB UPDATE trigger with a valid definition.

ORA-64208: FOR EACH ROW clause is required for before or after LOGICAL LOB UPDATE triggers
Cause: An attempt was made to create a before or after LOGICAL LOB UPDATE trigger without a FOR EACH ROW clause.

Action: Specify a FOR EACH ROW clause for a before/after LOGICAL LOB UPDATE trigger.

ORA-64209: WHEN clause is not allowed for LOGICAL LOB UPDATE triggers
Cause: WHEN clause was specified for a LOGICAL LOB UPDATE trigger.

Action: Remove the WHEN clause when creating a LOGICAL LOB UPDATE trigger.

ORA-64210: Cannot reference a trigger of a different type
Cause: The LOGICAL LOB UPDATE trigger did not follow other LOGICAL LOB UPDATE triggers. Non-LOGICAL LOB UPDATE triggers cannot follow LOGICAL LOB UPDATE triggers.

Action: None

ORA-64211: Cannot access other columns within a LOGICAL LOB UPDATE trigger body
Cause: An attempt was made to access an invalid column. A LOGICAL LOB UPDATE trigger can only access ROWID column and the column for which it was specified. Access to other columns is not allowed.

Action: Remove references to other columns within a LOGICAL LOB UPDATE trigger body.

ORA-64212: Cannot create a LOGICAL LOB UPDATE trigger on a view
Cause: A LOGICAL LOB UPDATE trigger could not be created on view.

Action: None

ORA-64213: Cannot create a compound LOGICAL LOB UPDATE trigger with statement level actions
Cause: A compound LOGICAL LOB UPDATE trigger could not contain statement level actions.

Action: None

ORA-64214: Cannot create a crossedition LOGICAL LOB UPDATE trigger
Cause: Crossedition LOGICAL LOB UPDATE triggers were not supported.

Action: None

ORA-64215: PL/SQL subprogram '*string*' for internal use only
Cause: An attempt was made to use a subprogram that is for internal Oracle development use only.

Action: Do not use this unsupported subprogram. Refer to Oracle documentation for available subprograms.

ORA-64219: invalid LOB locator encountered
Cause: The LOB locator sent from client to server was invalid.

Action: Pass a valid LOB locator that was either returned by the database or initialized as an empty locator.

ORA-64220: Large object (LOB) signature cannot always be supported for clients earlier than Oracle Database 19c release.
Cause: LOB signature cannot always be supported for clients earlier than Oracle Database 19c release. For example, this could happen when the buffer size allocated for the locator at client side is not big enough to hold the locator with signature.

Action: Contact Oracle Support Services.

ORA-64300: Invalid compression level specified
Cause: The specified archive compression level value was invalid. Valid values are LOW or HIGH.

Action: Choose a valid level and retry the operation.

ORA-64307: Exadata Hybrid Columnar Compression is not supported for tablespaces on this storage type
Cause: An attempt was made to use Exadata Hybrid Columnar Compression on unsupported storage.

Action: Create this table in a tablespace residing on Oracle Exadata, Oracle's Sun ZFS or Pillar Axiom storage or use a different compression type.

ORA-64308: hybrid columnar compressed table cannot have column with LONG data type
Cause: One of the following was attempted: - Create a hybrid columnar compressed table with a LONG data type. - Alter an existing table with a LONG data type to be hybrid columnar compressed. - Add a LONG data type column to a hybrid columnar compressed table.

Action: LONG data types are not supported with hybrid columnar compressed tables. Create table without LONG column or change table to not be hybrid columnar compressed. If adding a column, do not use LONG data type. If modifying attributes of a column to change data type to LONG, the table cannot be hybrid columnar compressed.

ORA-64309: Hybrid Columnar Compression with row-level locking is not supported for tablespaces on this storage type.
Cause: An attempt was made to use Hybrid Columnar Compression with row-level locking on an unsupported storage type.

Action: Create this table in a tablespace residing on Oracle Exadata storage or use a different compression type.

ORA-64310: could not get compression analysis lock
Cause: An operation could not obtain the compression analysis lock in a reasonable amount of time.

Action: Retry the operation.

ORA-64350: only one INMEMORY clause may be specified
Cause: INMEMORY was specified more than once.

Action: Specify each desired INMEMORY clause option only once.

ORA-64364: In-memory column store on Oracle RAC is only supported on Oracle-engineered systems.
Cause: An attempt was made to use the in-memory column store feature with Oracle RAC on an unsupported system.

Action: Disable Oracle RAC before attempting to use the in-memory column store in this environment or use an Oracle-engineered system.

ORA-64367: In-memory column store FastStart tablespace is offline.
Cause: The FastStart feature was enabled but its tablespace was offline.

Action: Disable FastStart or bring the FastStart tablespace online.

ORA-64368: In-memory FastStart is only supported on Oracle-engineered systems.
Cause: An attempt was made to use the in-memory column store FastStart feature on an unsupported system.

Action: Use FastStart on an Oracle-engineered system.

ORA-64369: In-memory FastStart Oracle Call Interface (OCI) error *string*
Cause: An OCI error occurred when enabling or disabling FastStart.

Action: Mannually correct the problem.

ORA-64370: INMEMORY clause with DISTRIBUTE BY PARTITION specified for a table that is not partitioned.
Cause: DISTRIBUTE BY PARTITION was specified for a table that is not partitioned.

Action: None

ORA-64371: INMEMORY clause with DISTRIBUTE BY SUBPARTITION specified for a table that is not composite.
Cause: DISTRIBUTE BY SUBPARTITION was specified for a table that is not composite.

Action: None

ORA-64372: INMEMORY clause with DISTRIBUTE BY SUBPARTITION specified for a table that is not partitioned.
Cause: DISTRIBUTE BY SUBPARTITION was specified for a table that is not partitioned.

Action: None

ORA-64373: Unable to get FastStart Admin Enqueue in mode *string*
Cause: An attempt was made to do FastStart administrative tasks while FastStart is in use.

Action: Temporarily disable faststart.

ORA-64374: Action cannot be performed when FastStart is not enabled.
Cause: An attempt was made to execute a FastStart related action when FastStart was not enabled.

Action: Enable FastStart and retry.

ORA-64375: FastStart is already enabled
Cause: FastStart is already enabled.

Action: None

ORA-64376: FastStart is already enabled on this tablespace
Cause: This tablespace is already assigned to FastStart or some FastStart internal objects already exists on this tablespace.

Action: Rerun DBMS_INMEMORY.ENABLE_FASTSTART after running DBNS_INMEMORY.DISABLE_FASTSTART

ORA-64377: Action cannot be performed when database is in read-only mode
Cause: An attempt make changes to FastStart objects on a read-only database.

Action: Mount the the database in writtable mode and retry.

ORA-64378: Action cannot be performed on the tablespace assigned to FastStart while the feature is enabled
Cause: An attempt to make FastStart tablespace offline when the feature is enabled.

Action: Disable the feature and retry.

ORA-64379: Action cannot be performed on the tablespace assigned to FastStart while the feature is enabled
Cause: An attempt drop FastStart tablespace when the feature is enabled.

Action: Disable the feature and retry.

ORA-64380: FastStart cannot be enabled or migrated to a non-ASSM tablespace.
Cause: An attempt was made to enable or migrate FastStart to a non-automatic segment space management (ASSM) tablespace.

Action: Enable or migrate FastStart to an ASSM tablespace.

ORA-64381: Unable to aquire the tablespace enqueue for the given FastStart operation.
Cause: The given tablespace was locked by another operation.

Action: Try again later.

ORA-64382: FastStart checkpoint has already started.
Cause: An attempt was made to initiate a checkpoint when one was already started.

Action: Wait for the previous checkpoint to finish.

ORA-64383: FastStart *string* was incomplete.
Cause: The previous FastStart administrative procedure was incomplete.

Action: Run the procedure again or disable the feature.

ORA-64384: invalid FastStart catalog version detected
Cause: The version number of the FastStart catalog was invalid or too old.

Action: Rebuild the FastStart catalog.

ORA-64386: *string* not supported for proxy PDB
Cause: An attempt was made to use FastStart in the case of a proxy pluggable database (PDB).

Action: None

ORA-64387: inmemory_size cannot be modified
Cause: An attempt was made to modify inmemory_size parameter when database was not opened, was read-only, or was being migrated.

Action: Issue the command after opening the database in read/write mode.

ORA-64388: inmemory_size specified is less than a minimum of (*string*) bytes
Cause: inmemory_size was less than the minimum expected by the system.

Action: Issue the command after changing the value for the inmemory_size parameter.

ORA-64389: The FastStart tablespace has insufficient space to migrate
Cause: An attempt was made to migrate FastStart to a tablespace which did not have sufficient space.

Action: Add space to the tablespace that is migrated.

ORA-64390: FastStart not supported for *string*
Cause: An attempt was made to use FastStart along with the feature that is not supported.

Action: None

ORA-64393: In-Memory Expressions capture window is already OPEN
Cause: An attempt was made to open an In-Memory Expressions capture window with another capture window already in the OPEN state.

Action: Close the In-Memory Expressions capture window that is currently in the OPEN state.

ORA-64394: In-Memory Expressions capture window is not OPEN
Cause: An attempt was made to CLOSE an In-Memory Expressions capture window before opening it first.

Action: Open an In-Memory Expressions capture window before attempting a CLOSE operation.

ORA-64395: error encountered while changing the state of In-Memory Expressions capture window
Cause: An internal error was encountered in the In-Memory Expressions procedure.

Action: Contact Oracle Support Services.

ORA-64396: Resize of In-Memory Xmem area is not supported.
Cause: Resize of In-Memory Xmem area was not supported on non multitenant container database (CDB) and root pluggable database (PDB).

Action: None

ORA-64397: The new Xmem area size %0!s M is larger than configured Xmem area size %1!s M.
Cause: The specified In-Memory area size was larger than the configured In-Memory XMem area size.

Action: Check the new Xmem area size and reissue the command.

ORA-64398: invalid INMEMORY_SIZE value for cloud configuration, it must be zero
Cause: A nonzero value was specified for the INMEMORY_SIZE initialization parameter for a non-Oracle cloud.

Action: Remove the INMEMORY_SIZE initialization parameter or set the value to zero.

ORA-64399: In-Memory population or repopulation cannot be run for this segment.
Cause: Either the segment requested for In-Memeory did not exist, or a population or repopulation task was already in progress for this segment, or this segment was not In-Memory enabled.

Action: Ensure that the segment exists, and it is In-Memory enabled, and no population or repopulation tasks are active for the segment.

ORA-64401: This manageability package is only supported on Oracle RDBMS versions 10.2, 11.1, and 11.2.
Cause: Package installation invoked on database version that was not 10.2, 11.1 or 11.2..

Action: Use Oracle databaseversion 10.2, 11.1, or 11.2.

ORA-64402: Invalid input. XMLSchema is null.
Cause: XMLSchema was not provided to the procedure or function call..

Action: Provide an XMLSchema.

ORA-64403: Input cannot be null
Cause: An input parameter was null.

Action: Provide input paramter.

ORA-64404: Input string exceeds the maximum size
Cause: An input string was provided whose length exceeded the maximum size allowed. This size is 30 bytes for clients prior to Oracle Database 12c Release 2 (12.2) and 128 bytes otherwise.

Action: Provide a shorter input string.

ORA-64405: No matching elements found. Zero annotations were applied.
Cause: The parameters provided to annotate the XMLSchema did not match any entities in the XMLSchema.

Action: Correct the parameters.

ORA-64406: No matching elements found. Zero annotations were removed.
Cause: The parameters provided to annotate the XMLSchema did not match any entities in the XMLSchema.

Action: Correct the parameters.

ORA-64407: Annotation maps to multiple elements.
Cause: The parameters provided to annotate the XMLSchema matched to multiple entities in the XMLSchema.

Action: .

ORA-64408: Name for collection table too long.
Cause: The name for the collection table exceeded 25 characters.

Action: Reduce the length of the name of the collection table.

ORA-64409: XPath could not be mapped to exactly one table.
Cause: XPath could not be mapped to existing table.

Action: Check input parameters.

ORA-64410: Invalid XPath.
Cause: The XPath string provided to the procedure was not valid.

Action: Check XPath string.

ORA-64411: Invalid collection table specified by XPath.
Cause: An invalid collection table was specified by the XPath string.

Action: Check XPath string.

ORA-64412: Procedure called on XML table with BINARY storage model.
Cause: The procedure renameCollectionTable did not work on binary storage model.

Action: .

ORA-64413: Cannot disable constraints/indexes for non-global schemas owned by other users or a non schema based table/column.
Cause: An attempt was made to disable constraints or indexes for non-global schemas owned by other users or a non schema based table/column.

Action: Use an OR schema based table/column or change users to disable constraints or indexes.

ORA-64414: Cannot enable constraints/indexes for non-global schemas owned by other users or a non schema based table/column.
Cause: An attempt was made to enable constraints or indexes for schemas owned by other users or for a non schema based table/column.

Action: Use an OR schema based table/column or change users to enable constraints or indexes.

ORA-64415: Error in namespace declaration.
Cause: The namespace declaration was invalid.

Action: Correct namespace declaration.

ORA-64416: Table does not exist.
Cause: The tab_name parameter provided the name of a table that did not exist..

Action: Correct the tab_name parameter.

ORA-64417: Column does not exist in table.
Cause: The col_name parameter provided the name of a column that did not exist in the given table.

Action: Correct the col_name parameter.

ORA-64418: Column not of XMLType.
Cause: The col_name parameter provided the name of a column that was not an XMLType column.

Action: Correct the col_name parameter.

ORA-64419: Name for collection table already exists.
Cause: The name for the collection table could not be used because it already exists.

Action: Use another name for collection table.

ORA-64420: Table not of XMLType.
Cause: The table_name parameter provided the name of a table that was not an XMLType table.

Action: Correct the table_name parameter or provide the name of an XMLType column in the table.

ORA-64477: Multiple token tables are not supported.
Cause: An attempt was made to create a new token table. If encountered during an import, a critical patch was possibly missing on the export database.

Action: Use the default token table. If encountered during an import, apply the appropriate patch on the export database and try the export and import again.

ORA-64479: element '*string*' is missing '*string*' annotation; schema cannot be registered by common users
Cause: A common user tried to register a schema with missing type name annotations. All type names from the schema and its dependencies should be annotated.

Action: Ensure that the schema being registered and its dependencies have all the element type names annotated.

ORA-64480: element '*string*' is missing default table name annotation; schema cannot be registered by common users
Cause: A common user tried to register a schema with missing default table name annotations. All table names from the schema and its dependencies should be annotated.

Action: Make sure the schema being registered and its dependencies have all the default table names annotated.

ORA-64481: invalid tablespace name
Cause: The tablespace name did not have a closing double quotation mark.

Action: Ensure that the last character is also a double quotation mark.

ORA-64482: Moving XDB to *string* is not allowed.
Cause: An attempt was made to move XDB to a system tablespace.

Action: Ensure that the target tablespace is not a system tablespace.

ORA-64483: New tablespace *string* is smaller than the current tablespace *string*.
Cause: The new tablespace was smaller than the current tablespace.

Action: Ensure that the new tablespace is larger than the current tablespsace.

ORA-64484: New tablespace *string* is not ASSM.
Cause: The new tablespace was not Automatic Segment Space Management (ASSM).

Action: Ensure that the new tablespace is ASSM.

ORA-64485: invalid pathname
Cause: An invalid resource handle or path name was passed.

Action: Pass a valid path name.

ORA-64486: The internal table is empty.
Cause: The internal input table containing the schemas was empty.

Action: Insert schemas to be moved into the internal table and invoke procedure.

ORA-64487: XML schema *string* exists for user *string*
Cause: The XML schema existed for the user.

Action: Ensure that the XML schema is a new one.

ORA-64488: cannot migrate inherited type *string*
Cause: The inherited type could not be migrated.

Action: Ensure that it is not inherited by any other type.

ORA-64489: cannot migrate XML schema *string*
Cause: The XML schema could not be migrated.

Action: Ensure that the XML schema can be migrated.

ORA-64490: cannot migrate owner from *string* to *string* for XML schema *string*
Cause: The owner could not be migrated for the XML schema.

Action: Ensure that the XML schema can be migrated.

ORA-64491: cannot grant XML schemas to public
Cause: The XML schema could not be granted to public.

Action: Ensure that the XML schema can be granted to public.

ORA-64492: The level up the hierarchy must be greater than 0.
Cause: The level up the hierarchy was less than 1.

Action: Ensure that the level up the hierarchy is greater than 0.

ORA-64493: The resource type is unknown.
Cause: The resource type was not recognized.

Action: Ensure that the resource is valid.

ORA-64494: Substitution group is not supported when maintainDOM is not set.
Cause: maintainDOM was not set to TRUE.

Action: Ensure that maintainDOM is set to TRUE.

ORA-64495: XQuery data model has to be allowed.
Cause: XQuery data model is not allowed.

Action: Ensure that XQuery data model is allowed.

ORA-64496: Position predicate on out-of-line table is not supported when maintainDOM is set to FALSE.
Cause: An attempt was made to use position predicate on an out-of-line table when maintainDOM was set to FALSE.

Action: Ensure that maintainDOM is set to TRUE.

ORA-64497: File access not over XDB repository is not allowed on server side.
Cause: For security reasons, ftp and http access over XDB repository is not allowed on server side.

Action: Have file access over XDB repository only or do not specify file access.

ORA-64498: FTP and HTTP access over XDB repository is not allowed on server side
Cause: For security reasons, ftp and http access over XDB repository is not allowed on server side.

Action: Do not specify FTP or HTTP access over XDB repository.

ORA-64499: ORADB operations not allowed on client-side.
Cause: ORADB client access was a security issue.

Action: Do not specify ORADB operation on client-side.

ORA-64500: invalid PL/SQL XML parser handle
Cause: The PL/SQL XML parser handle was invalid.

Action: Ensure that the PL/SQL XML parser handle is valid.

ORA-64501: invalid PL/SQL XSL processor handle
Cause: The PL/SQL XSL processor handle was invalid.

Action: Ensure that the PL/SQL XSL processor handle is valid.

ORA-64502: invalid PL/SQL XSL stylesheet handle
Cause: The PL/SQL XSL stylesheet handle was invalid.

Action: Ensure that the PL/SQL XSL stylesheet handle is valid.

ORA-64503: invalid PL/SQL DOM handle
Cause: The PL/SQL DOM handle was invalid.

Action: Ensure that the PL/SQL DOM handle is valid.

ORA-64504: invalid PL/SQL DOM *string* handle
Cause: The named PL/SQL DOM handle was invalid.

Action: Ensure that the named PL/SQL DOM handle is valid.

ORA-64505: NULL or invalid *string* argument specified
Cause: The named argument was either invalid or was specified as a NULL.

Action: Specify a non-null, valid argument.

ORA-64506: procedure or function not supported
Cause: The PL/SQL procedure or function was not supported.

Action: Modify the code to avoid usage of the PL/SQL procedure or function.

ORA-64507: ACL path is not valid.
Cause: ACL path was not valid.

Action: Ensure the ACL path is valid.

ORA-64508: XSLT parameter is not valid.
Cause: XSLT parameter was not valid.

Action: Ensure the XSLT parameter is valid.

ORA-64509: Mismatch between complexType and SQLType "*string*".
Cause: The attributes referenced in schema definition differ from the attributes referenced by SQLType.

Action: Ensure that the SQLName annotation references all the existing attributes in SQLType.

ORA-64510: Attribute "*string*" from type "*string*" is not referenced in schema definition.
Cause: At least one attribute, from an existing type, was not referenced in the schema definition.

Action: Ensure that all attributes are referenced in the schema definition.

ORA-64511: Type "*string*" is not defined in schema namespace "*string*".
Cause: The specified type was not defined for the given schema component.

Action: Specify a valid type name.

ORA-64600: duplicate or conflicting SCALE or EXTEND specifications
Cause: The specifications were either a duplicate of each other or were conflicting.

Action: Remove the duplicate or conflicting specification.

ORA-64601: duplicate RESTART specified
Cause: The specified RESTART was a duplicate.

Action: Remove the duplicate specification.

ORA-64602: CREATE SEQUENCE cannot have a RESTART clause
Cause: The RESTART clause was specified in the CREATE SEQUENCE statement.

Action: Remove the RESTART clause.

ORA-64603: NEXTVAL cannot be instantiated for *string*. Widen the sequence by *string* digits or alter sequence with SCALE EXTEND.
Cause: The NOEXTEND constraint was specified for the scalable sequence and the generated value was wider than the sequence maximum value.

Action: Widen the sequence maximum value or remove the NOEXTEND constraint.

ORA-64604: One or more Sharded Sequence objects exist that cannot be downgraded.
Cause: There were Sharded Sequence objects in the database that were created in a release later than the selected release for downgrade.

Action: Prior to downgrade, drop the Sharded Sequence objects that cannot be downgraded to the selected release.

ORA-64620: duplicate user tablespace specification
Cause: An attempt was made to create more than one user tablespace during database creation.

Action: Modify the command to contain only one user tablespace.

ORA-64621: SQL statement length (*string*) exceeds maximum allowed length (*string*)
Cause: An attempt was made to issue a SQL statement that exceeded the maximum allowed length of a statement.

Action: Modify the SQL statement or the views to which it refers to fit within the maximum length or split the SQL statement.

ORA-64625: bind variables not allowed in the string returned from SQL macro
Cause: The string returned from the SQL macro contained bind variables.

Action: Modify the SQL macro definition so that it does not return a string containing bind variables. Instead, use bind variables as parameters to SQL macro.

ORA-64626: invalid SQL text returned from SQL macro: *string*
Cause: The string returned from the SQL macro was invalid.

Action: Modify the SQL macro definition.

ORA-64627: cycle detected in SQL macro expansion
Cause: A SQL macro expansion had a reference to an earlier SQL macro.

Action: Modify the SQL macro definition.

ORA-64628: scalar SQL macro cannot appear in FROM clause of a SQL statement
Cause: The scalar SQL macro was called in the FROM clause of a SQL query.

Action: Use scalar SQL macro in places where scalar expressions can appear in a a SQL statement.

ORA-64629: table SQL macro can only appear in FROM clause of a SQL statement
Cause: The table SQL macro was called from outside of a FROM clause of a SQL query.

Action: Use the table SQL macro only in the FROM clause of a SQL query.

ORA-64630: unsupported use of SQL macro: *string*

ORA-64632: SQL macro are not supported with *string*
Cause: The SQL macro was not supported with this feature.

Action: Do not use the SQL macro with this feature.

ORA-64633: SQL macro cannot be used remotely
Cause: A SQL macro was referenced remotely (for example, through a database link).

Action: Use a SQL macro locally in the database in which it is defined.

ORA-64634: SQL macro length(*string*) was too big
Cause: SQL Macro created was too big for current memory configuration. Note: Length comprise of user returned string and internally generated SQL fragment.

Action: Create a SQL Macro that can fit in memory.

ORA-64670: failure to create persistent memory region
Cause: An attempt to create a persistent memory region failed.

Action: Check the alert file for more information.

ORA-64671: failure to delete persistent memory region
Cause: An attempt to delete a persistent memory region failed.

Action: Check the alert file for more information.

ORA-64672: failure to attach to a persistent memory region
Cause: A process failed to attach to a persistent memory region.

Action: Check the alert file for more information.

ORA-64673: failure to detach from a persistent memory region
Cause: A process failed to detach from a persistent memory region.

Action: Check the alert file for more information.

ORA-64674: failure to allocate persistent memory region
Cause: System did not have %llu bytes of available persistent memory.

Action: Allocate the required amount of persistent memory on the system.

ORA-64675: failure to open a persistent memory region
Cause: The system-wide limit on number of open files has been reached.

Action: Increase the system open file descriptors limit.

ORA-64676: internal error occurred
Cause: An internal error occurred while doing an operation on persistent memory.

Action: Contact Oracle Support Services.

ORA-64677: failure to query system state
Cause: An attempt to query system state failed.

Action: Check the alert file for more information.

ORA-64678: enables XGA tracing
Cause: Tracing was enabled while doing an operation on XGA memory.

Action: Set this event only under the supervision of Oracle Support Services.

ORA-64700: Recovery Appliance is shutting down
Cause: The Recovery Appliance was in the process of shutting down. This message is recorded in the incident log for the Recovery Appliance. When the shutdown completes, the incident is marked as FIXED.

Action: Wait for the Recovery Appliance to complete its shutdown.

ORA-64701: storage location *string* can no longer honor its reservations.
Cause: The specified storage location did not contain enough space to fulfill the reservations of all of the databases assigned to it. This error will be seen if a storage location lost part of its disk space and was in the process of being repaired.

Action: Either shrink the reservations for the databases contained within the storage location or add additional disk space to the storage location.

ORA-64702: error repairing container files for storage location *string*:\n*string*
Cause: An error was returned while trying to rebuild or repair the container files used to store data from protected databases.

Action: The subsequent error will identify the error that needs to be addressed before the Recovery Appliance can be repaired.

ORA-64703: resource error detected
Cause: A task needed to be interrupted because it detected a resource limitation such as insufficient temporary table space or a snapshot being too old. It will be retried once the contention for the resource decreases. The secondary messages will identify the resource that has been exhausted.

Action: If this error occurs rarely, no user action is required. If the condition becomes persistent, the Recovery Appliance administrator should increase the resource that is exhausted.

ORA-64705: no destination in "*string*" at column *string*
Cause: The storage destination contained a syntax error.

Action: Correct the syntax error and retry the operation.

ORA-64708: more than one polling_location in "*string*" at column *string*
Cause: More than one polling_location was specified. Only one polling_location is allowed.

Action: Specify only one polling destination directory and retry the operation.

ORA-64709: ASM polling_location is not supported in "*string*" at column *string*
Cause: The polling_location specified an ASM-based location. Only non-ASM-based polling_locations are supported.

Action: Specify one non-ASM polling destination and retry the operation.

ORA-64711: storage destination do not reference an ASM diskgroup
Cause: The storage destination referenced a non-ASM storage location. Only ASM-based storage destinations are allowed. The operation has been rolled back.

Action: Correct the syntax error and retry the operation.

ORA-64713: requested size *string* for *string* was too small; already using *string*
Cause: The size requested for the storage destination was smaller than its current size.

Action: Increase the requested size and retry the operation.

ORA-64714: requested size *string* for *string* was larger than total available space *string*
Cause: The size requested for the storage destination was larger than its current used space plus its currect free space.

Action: Decrease the requested size and retry the operation.

ORA-64715: redundancy type "*string*" for diskgroup *string* is invalid
Cause: The redundancy type for the specified diskgroup was not one of {NORMAL | HIGH | EXTERN}.

Action: Correct the redundancy type of the diskgroup and retry the operation.

ORA-64716: storage location *string* allocation size *string* does not equal diskgroup *string* allocation size *string*
Cause: The minimum allocation size of the specified storage location was not the same as the specified diskgroup allocation unit size.

Action: Specify a different diskgroup or a different storage location and retry the operation.

ORA-64717: network chunk size *string* is not a multiple of diskgroup *string* allocation size *string*
Cause: The configured network chunk size was not a multiple of the specified diskgroup allocation unit size.

Action: Specify a different diskgroup or reconfigure the network chunk size and retry the operation.

ORA-64718: diskgroup *string* allocation size *string* is not a power of two
Cause: The diskgroup allocation unit size was not a power of two.

Action: Specify a different diskgroup and retry the operation.

ORA-64719: diskgroup *string* allocation size *string* is less than two megabytes *string*
Cause: The diskgroup allocation unit size was less than two megabytes.

Action: Specify a different diskgroup and retry the operation.

ORA-64720: no containers were created for storage location *string*
Cause: No storage was allocated and initialized for the specified storage location.

Action: Specify a different diskgroup for the storage location, increase the size of the diskgroup, or reduce the size of the storage location and retry the operation.

ORA-64721: reserved space *string* is less than the minimum reservation *string*
Cause: No storage was allocated and initialized for the specified storage location.

Action: Specify a different diskgroup for the storage location, increase the size of the diskgroup, or reduce the size of the storage location and retry the operation.

ORA-64722: number of drives must be greater than zero
Cause: The specified number of tape drives was NULL or was less than or equal to zero.

Action: Specify a number of tape drives greater than 0 and retry the operation.

ORA-64723: number of drives reserved for restore operations must be greater than or equal to zero
Cause: The number of tape drives reserved for restore operations was NULL or was less than zero.

Action: Specify a number of tape drives reserved for restore operations greater than or equal to zero and retry the operation.

ORA-64724: number of restore drives *string* too large; must be less than *string*
Cause: The number of tape drives reserved for restore operations was at least as large as the total number of drives available. The number of tape drives reserved for restore operations must be at least one less than the total number of drives available.

Action: Specify a number of tape drives reserved for restore operations less than the total number of drives available and retry the operation.

ORA-64725: number of streams must be greater than zero
Cause: The number of streams was less than or equal to zero.

Action: Specify a number of streams greater than zero and retry the operation.

ORA-64726: number of streams *string* too large; must be no larger than *string*
Cause: The number of streams was larger than the total number of drives available. The number of streams must be no larger than the total number of drives available.

Action: Reduce the number of available streams and retry the operation.

ORA-64727: number of copies *string* not in the range 1 through 4
Cause: The number of copies was either NULL or not in the range 1 through 4 inclusive.

Action: Specify a number of copies in the range 1 through 4 and retry the operation.

ORA-64728: replication server name length *string* is too long
Cause: The replication server name was longer than 128 characters.

Action: Specify a replication server name shorter than 128 characters and retry the operation.

ORA-64729: replication server proxy port *string* must be greater than zero
Cause: The replication server proxy port number was less than or equal to zero.

Action: Specify a replication server proxy port number greater than zero and retry the operation.

ORA-64730: replication server proxy URL provided but proxy port is NULL
Cause: A replication server proxy URL was provided but a proxy port number was not. If either a proxy URL or a proxy port are specified, both must be specified.

Action: Specify both a replication server URL and a replication server proxy port number and retry the operation.

ORA-64731: replication server proxy port provided but proxy URL is NULL
Cause: A replication server proxy port number was provided but a proxy URL was not. If either a proxy URL or a proxy port are specified, both must be specified.

Action: Specify both a replication server URL and a replication server proxy port number and retry the operation.

ORA-64732: HTTP server not configured at replication host
Cause: The HTTP server at the replication host site has not been configured.

Action: Configure the HTTP server at the replication host site and retry the operation.

ORA-64733: unable to move individual backup piece with BP_KEY *string*; not a KEEP backup
Cause: An attempt was made to move an individual backup piece, but the backup set of which this backup piece was a member was not a KEEP backup.

Action: Specify a backup piece key that is a member of a KEEP backup set and retry the operation.

ORA-64735: unknown incarnation detected at Recovery Appliance, need catalog resync
Cause: A new archived log or backup set belonging to the new incarnation was received at Recovery Appliance.

Action: Using RMAN, connect to the Recovery Appliance as a recovery catalog, primary database as target database and perform the resynchronization operation using the RESYNC CATALOG RMAN command. If this error occurred at downstream of the Recovery Appliance (in a replicated Recovery Appliance setup), the reconcile operation fixes this error automatically when the same error is fixed at the upstream Recovery Appliance.

ORA-64736: Task ID *string* of type *string* has been interrupted *string* times.
Cause: The specified task was restarted an unexpected number of times. Tasks get interrupted when there is competition for resources. This is only a warning. It does not necessarily indicate a problem with the Recovery Appliance.

Action: If these problems persist for long periods, contact Oracle Support Services.

ORA-64737: unable to copy a full backup of database *string* to tape or replicated Recovery Appliance
Cause: While creating a full database backup to tape or to a replicated recovery appliance, level 0 backups of one or more data files were missing.

Action: Query the RA_SBT_TEMPLATE_MDF view to determine the data files for which backups are missing. If using the "incremental forever" backup strategy, perform a level-0 incremental backup for the given database and retry the operation.

ORA-64738: guaranteed copy suspended for database *string*
Cause: One of the following operations was performed resulting in the database using more than its allotted disk space: - UPDATE_DB lowering the DISK_SPACE_RESERVE value. - UPDATE_PROTECTION_POLICY setting the guaranteed_copy parameter to YES - DELETE_SBT_LIBRARY where backup data for the given database existed. New backup requests may be stalled until the system can recompute the safety of allowing additional backup data or backup data may be lost.

Action: This event can be avoided by ensuring backups are written to tape in a timely manner. Conversely, one should avoid the activities listed in the Cause statement when backups are not being written to tape in a timely manner.

ORA-64739: RECOVERY_WINDOW_GOAL is lost for database *string*
Cause: The recovery window golad was not available for the current set of backups. The recovery window goal in the protection policy indicates a desire to be able to restore and recover to any point in time within that range. This is not possible given the current set of backups. Possible reasons are missing archive log backups, missing data file backups or lack of reserved disk space.

Action: Ensure that backups are done regularly. Ensure that your disk reserved space value is set high enough to support your goals. Query RA_DATABASE view for DISK_RESERVED_SPACE and RECOVERY_WINDOW_SPACE parameters and compare these two parameters to ensure enough space has been provisioned to meet your goals. However, you may use the DBMS_RA.UPDATE_PROTECTION_POLICY procedure to increase the DISK_RESERVED_SPACE value to ensure additional backups are saved. Also, check for KEEP backups consuming space on the disk and decide if they should be moved to tape or other disk storage.

ORA-64740: Backups from database *string* have not been seen for more than UNPROTECTED_WINDOW period
Cause: An UNPROTECTED_WINDOW parameter in protection policy has been specified and the Recovery Appliance has not received sufficient archive log backups or data file backups from the given target database for at least that period.

Action: Ensure that backups are being performed in a timely manner and that, if set up, redo logs or backups are being sent to the Recovery Appliance.

ORA-64741: Scheduler *string* running task *string* of type *string* did not stop after *string* requests.
Cause: The specified Recovery Appliance scheduler process could not be stopped.

Action: If these problems persist for long periods, contact Oracle Support Services.

ORA-64742: database *string* is being deleted
Cause: The current command failed because the database was in the process of being deleted.

Action: No action is necessary.

ORA-64744: Argument *string* is null, invalid, or out of range.
Cause: The argument was expecting a non-null, valid value but the argument value passed in was null, invalid, or out of range.

Action: Check your program and correct the caller of the routine to not pass a null, invalid or out-of-range argument value.

ORA-64745: Name length is *string* characters; maximum length is *string* characters.
Cause: The length of the name exceeded the limit.

Action: Specify a shorter name and retry the operation.

ORA-64746: Name contains invalid characters.
Cause: The name incorrectly started with "_", "-", ":", "#" or digits or contained non-alphanumeric characters. Verify that all other double quotation marks, if any, in the string are adjacent pairs of double quotation marks. Double quotation marks must not be used in the middle of the name.

Action: Change the name and exclude the invalid characters.

ORA-64747: Name contains invalid character "*string*" at the position [*string*].
Cause: The name incorrectly started with "_", "-", ":", "#" or digits or contained non-alphanumeric characters. Verify that all other double quotation marks, if any, in the string are adjacent pairs of double quotation marks. Double quotation marks must not be used in the middle of the name.

Action: Change the name and exclude the invalid characters.

ORA-64748: trace file writing initiated using *string*
Cause: The configuration of the Recovery Appliance was modified to enable the production of trace files. Trace files have the capacity to exhaust disk space on the Recovery Appliance.

Action: Turn off the tracing when it is no longer required.

ORA-64750: Instance *string* is unable to access *string*.
Cause: The Recovery Appliance was unable to find a file that is required for its operation.

Action: Ensure that the file system of the specified file is available on the specified instance.

ORA-64751: Replication setup error during *string*. replication server:*string* database:*string*.
Cause: The Recovery Appliance was unable to complete the configuration and setup of replication for the database specified.

Action: Validate that the downstream replication server is properly configured and all network communication paths are valid.

ORA-64752: storage unavailable for new redo or backups for database *string*
Cause: There was a failure while backing up redo or copying backups from a polling location. This condition may be due to one of the following reasons: * An individual backup piece exceeded the database protection policy DISK_RESERVE_SPACE value. * Guaranteed_copy is enabled but not enough data has been spooled to tape. * Misconfiguration of the storage location size.

Action: Check for the value of DISK_RESERVED_SPACE and storage location uses.

ORA-64753: Incorrect object type specified; specified *string*, expected *string*
Cause: An incorrect object type was given to an API command.

Action: Use the object-specific API. For example, use 'resume_replication_server' instead of 'resume_sbt_library'.

ORA-64754: unable to perform operation with associated tape or replication objects
Cause: An attempt to execute 'update_db' or 'update_protection_policy' and change storage locations with a replication server or tape job associated with the protection policy failed.

Action: Create a temporary protection policy that has the same storage location as the current protection policy with the tape and replication attributes of the target protection policy, update to the temporary protection policy, and then finally update to the target protection policy.

ORA-64755: failed to delete database *string*; the Recovery Appliance is not running
Cause: An attempt was made to delete a database, but the Recovery Appliance has been deactivated by the administrator.

Action: Have the Recovery Appliance administrator execute DBMS_RA.STARTUP_RECOVERY_APPLIANCE and retry the delete_db() operation.

ORA-64757: unable to restore backup piece with BP_KEY *string*
Cause: An attempt was made to restore the specified backup piece which resulted in an error. An explanation of the error appears in the following messages.

Action: Verify the correctness of the backup piece. If it is corrupt, either delete it or replace it.

ORA-64758: unable to grow delta store metadata in tablespace *string*
Cause: Additional extents could not be allocated for the tables used to to implement the delta store.

Action: Add additional storage to the indicated tablespace.

ORA-64759: Recovery Appliance is leaving restricted resources state
Cause: The Recovery Appliance ended its restrictions on task execution. The restricted resources state was entered when tasks could not run due to insufficient temporary table space or insufficient undo space. At that time, resource intensive tasks were put into RESOURCE_WAIT state.

Action: None. This is only an informational message entered in the alert log.

ORA-64760: Database *string* has had tasks in ordering wait state for over *string* days.
Cause: The specified database had an INDEX_BACKUP task that could not be run because the task did not tile against the delta store. An incremental backup piece will not tile into the delta store when the full backup that it was built upon is not found in the delta store.

Action: Provide the missing incremental backups for the database. If no other incremental backups can be found, provide a new full backup for the database.

ORA-64761: disk group *string* is not usable by the Recovery Appliance
Cause: A disk group was supplied to either the create_storage_location or update_storage_location APIs that was not previously prepared by the installation software for the Recovery Appliance.

Action: Run the ra_update procedure to process the disk group and retry the API.

ORA-64762: cannot create snapshot
Cause: An attempt was made to create a snapshot while 'max_pdb_snapshots' was set to 0.

Action: max_pdb_snapshots should be set greater than 0 to take pdb snapshots.

ORA-64901: INMEMORY_SIZE may not exceed 16 GB with Database In-Memory Base Level
Cause: INMEMORY_SIZE cannot be greater than 16 GB because the Database In-Memory Base Level was enabled.

Action: Set inmemory_size to less than 16 GB or disable Database In-Memory Base Level with INMEMORY_FORCE parameter.

ORA-64902: Database In-Memory Base Level can only be modified in the initialization parameter file
Cause: The Database In-Memory Base Level could not be enabled or disabled dynamically.

Action: Set INMEMORY_FORCE in the initialization parameter file.

ORA-64903: Database Cell Memory Level can only be modified in the initialization parameter file
Cause: The Database Cell Memory Level could not be enabled or disabled dynamically.

Action: Set INMEMORY_FORCE in the initialization parameter file.

ORA-65000: missing or invalid pluggable database name
Cause: A valid pluggable database name was not present where required.

Action: Reissue the statement with a valid pluggable database name.

ORA-65001: missing or invalid administrative user name
Cause: A valid administrative user name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid administrative user name.

ORA-65002: missing or invalid administrative user password
Cause: A valid administrative user password was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid administrative user password.

ORA-65003: missing or invalid XML file name
Cause: A valid XML file name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid XML file name.

ORA-65004: missing or invalid database link name
Cause: A valid database link name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid database link name.

ORA-65005: missing or invalid file name pattern for file - *string*
Cause: Either source or replacement file name pattern was missing or invalid in a SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause.

Action: Correct the SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause and reissue the statement.

ORA-65006: missing or invalid ENABLE PLUGGABLE DATABASE clause
Cause: An ENABLE PLUGGABLE DATABASE clause was not present where required by the syntax of CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid ENABLE PLUGGABLE DATABASE clause.

ORA-65007: duplicate ENABLE PLUGGABLE DATABASE clause
Cause: A duplicate ENABLE PLUGGABLE DATABASE clause was specified in a CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid ENABLE PLUGGABLE DATABASE clause.

ORA-65008: missing or invalid SEED clause
Cause: A SEED clause was not present where required by the syntax of CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid SEED clause.

ORA-65010: maximum number of pluggable databases created
Cause: The number of pluggable databases exceeded either the MAX_PDBS property value or the maximum supported number of pluggable databases.

Action: Drop the existing pluggable databases and retry the operation.

ORA-65011: Pluggable database *string* does not exist.
Cause: User attempted to specify a pluggable database that does not exist.

Action: Check DBA_PDBS to see if it exists.

ORA-65012: Pluggable database *string* already exists.
Cause: User attempted to create a pluggable database with a name that already exists.

Action: Check DBA_PDBS to see if the name exists.

ORA-65013: invalid CONTAINER clause
Cause: An invalid CONTAINER clause was encountered.

Action: Reissue the DDL statement with a valid CONTAINER clause.

ORA-65014: invalid SHARING clause
Cause: An invalid SHARING clause was encountered.

Action: Reissue the DDL statement with a valid SHARING clause.

ORA-65015: missing or invalid container name
Cause: A valid container name was not present where required by the syntax of ALTER SESSION SET CONTAINER or ALTER USER ... SET|ADD|REMOVE CONTAINER_DATA statement.

Action: Reissue the statement with a valid container name.

ORA-65016: FILE_NAME_CONVERT must be specified
Cause: Data files, and possibly other files, needed to be copied as a part of creating a pluggable database. However, Oracle Managed Files (OMF) was not enabled, PDB_FILE_NAME_CONVERT was not defined, and there was a failure to specify the FILE_NAME_CONVERT clause.

Action: Enable OMF or define PDB_FILE_NAME_CONVERT system parameter before issuing CREATE PLUGGABLE DATABASE statement, or specify FILE_NAME_CONVERT clause as a part of the statement.

ORA-65017: seed pluggable database may not be dropped or altered
Cause: User attempted to drop or alter the Seed pluggable database which is not allowed.

Action: Specify a legal pluggable database name.

ORA-65018: FILE_NAME_CONVERT or NOCOPY must be specified
Cause: Oracle Managed Files (OMF) was not enabled and PDB_FILE_NAME_CONVERT was not defined. The FILE_NAME_CONVERT or the NOCOPY clause was not specified as a part of creating a pluggable database using data files.

Action: Enable OMF or define PDB_FILE_NAME_CONVERT system parameter before issuing CREATE PLUGGABLE DATABASE statement, or specify FILE_NAME_CONVERT clause or NOCOPY as a part of the statement.

ORA-65019: pluggable database *string* already open
Cause: An attempt was made to open a pluggable database that was already opened.

Action: Check the OPEN_MODE column in V$PDBS view.

ORA-65020: pluggable database *string* already closed
Cause: An attempt was made to close a pluggable database that was already closed.

Action: Check the OPEN_MODE column in V$PDBS view.

ORA-65021: illegal use of SHARING clause
Cause: A SHARING clause was encountered in unexpected context.

Action: Do not use SHARING clause outside of Oracle-supplied scripts.

ORA-65022: CONTAINER clause already specified
Cause: A statement contained multiple CONTAINER clauses.

Action: Eliminate redundant CONTAINER clauses.

ORA-65023: active transaction exists in container *string*
Cause: A statement attempted to create a new transaction in the current container while there was an active transaction in another container.

Action: Switch to the container with the active transaction and commit, rollback or detach the active transaction before attempting to issue any statement that will attempt to create a new transaction in another container.

ORA-65024: Pluggable database *string* is not open.
Cause: An operation was attempted on a pluggable database that was not open.

Action: Open the pluggable database using appropriate open mode.

ORA-65025: Pluggable database *string* is not closed on all instances.
Cause: An operation was attempted on a pluggable database that was not closed on all Oracle RAC instances.

Action: Close the pluggable database on all instances and retry the operation.

ORA-65026: XML metadata file error : *string*
Cause: An error occurred while trying to parse or write to the XML metadata file.

Action: Check that the XML metadata file exists and is readable.

ORA-65027: XML metadata file error while getting node or value for (*string* - *string*)
Cause: An error occurred while trying to parse the XML metadata file.

Action: Check and correct the XML metadata file.

ORA-65028: Unable to open plugin data file at path *string*
Cause: Error occurred while trying to open the data file.

Action: Check that the data file exists at the path.

ORA-65029: a Local User may not grant or revoke a Common Privilege or Role
Cause: A Local User issued a GRANT or REVOKE statement specifying CONTAINER=ALL, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

ORA-65030: cannot grant a privilege commonly to a local user or role
Cause: A GRANT statement was issued specifying CONTAINER=ALL and naming a local user or role as a grantee, which is illegal.

Action: If trying to grant a privilege locally, remove CONTAINER=ALL from the GRANT statement. If trying to grant a privilege commonly, remove local users and roles from the list of grantees.

ORA-65031: cannot revoke a privilege commonly from a local user or role
Cause: A REVOKE statement was issued specifying CONTAINER=ALL and naming a local user or role as a revokee, which is illegal.

Action: If trying to revoke a privilege locally, remove CONTAINER=ALL from the REVOKE statement. If trying to revoke a privilege commonly, remove local users and roles from the list of revokees.

ORA-65032: A local role may only be granted or revoked within the current container.
Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and listing a local role among the roles to be granted or revoked, which is illegal.

Action: If trying to grant or revoke a local role, remove CONTAINER=ALL from the REVOKE statement. If trying to grant or revoke roles commonly, remove local roles from the list of roles being granted or revoked.

ORA-65033: a common privilege may not be granted or revoked on a local object
Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and naming a local object on which privileges are to be granted or revoked, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

ORA-65034: PDB describe output file not specified
Cause: User attempted to describe a pluggable database without specifying an output XML file location.

Action: Specify an output file location for describe

ORA-65035: unable to create pluggable database from *string*
Cause: An attempt was made to clone a pluggable database that did not have local undo enabled.

Action: Enable local undo for the PDB and and retry the operation.

ORA-65036: pluggable database *string* not open in required mode
Cause: Attempted to perform an operation on a pluggable database in incorrect open mode.

Action: Open the pluggable database in the mode required for this operation

ORA-65037: A privilege on a local user may not be granted or revoked commonly.
Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and naming a local user on which privileges are to be granted or revoked, which is illegal.

Action: Remove CONTAINER=ALL from the GRANT or REVOKE statement.

ORA-65039: container identifier column missing or is of unexpected type in a definition of a CONTAINER_DATA object
Cause: Table or view whose definition contained a CONTAINER_DATA clause lacked a column used to identify a container to which data belongs or the column was of unexpected type.

Action: Correct the statement and reenter.

ORA-65040: operation not allowed from within a pluggable database
Cause: An operation was attempted that can only be performed in the root or application root container.

Action: Switch to the root or application root container to perform the operation.

ORA-65041: CONTAINER_DATA attribute for this user cannot be modified
Cause: An attempt was made to modify CONTAINER_DATA attribute for user SYS or SYSBACKUP which is disallowed.

Action: Do not attempt to modify CONTAINER_DATA attribute for users SYS or SYSBACKUP.

ORA-65042: name is already used by an existing container
Cause: The name was already used by another container.

Action: Specify a valid name.

ORA-65043: TABLESPACE keyword expected
Cause: TABLESPACE keyword was missing.

Action: Specify a TABLESPACE keyword.

ORA-65044: missing or invalid option following STORAGE keyword
Cause: An option other than MAXSIZE or MAX_SHARED_TEMP_SIZE was specified.

Action: Specify only legal options.

ORA-65045: pluggable database not in a restricted mode
Cause: An operation was attempted on a pluggable database that was not in restricted mode.

Action: Open the pluggable database in a restricted mode.

ORA-65046: operation not allowed from outside a pluggable database
Cause: An operation was attempted that can only be performed from within a pluggable database.

Action: Switch to a pluggable database to perform the operation.

ORA-65047: Object *string*.*string* is invalid or compiled with errors in root.
Cause: An attempt was made to issue a metadata link DDL for an object that was invalid or compiled with errors in a CDB$ROOT or an application root.

Action: Check the validity of the object in CDB$ROOT or application root.

ORA-65048: error encountered when processing the current DDL statement in pluggable database *string*
Cause: An error was encountered when executing a statement in one of the pluggable databases.

Action: Examine the cause of failure in the pluggable database.

ORA-65049: Creation of local user or role is not allowed in this container.
Cause: An attempt was made to create a local user or role in CDB$ROOT or an application root.

Action: If trying to create a common user or role, specify CONTAINER=ALL.

ORA-65050: Common DDLs only allowed in root.
Cause: An attempt was made to issue a common DDL in a pluggable database.

Action: Switch to CDB$ROOT or application root and issue the common DDL.

ORA-65051: missing valid container identifier
Cause: A valid container identifer was not specified.

Action: Specify a valid container identifier.

ORA-65052: statement involves operations with different container scope
Cause: An attempt was made to combine one operation that applies to all containers with another that only applies to the local container into one statement.

Action: Execute the operations in separate statements.

ORA-65053: A global user cannot change the container in the session.
Cause: An attempt was made by a global user to change the container using the ALTER SESSION SET CONTAINER statement.

Action: This operation is not allowed for global users.

ORA-65054: Cannot open a pluggable database in the desired mode.
Cause: An attempt was made to open a pluggable database (PDB) in a mode incompatible with the multitenant container database (CDB) or, if the PDB belonged to an application container, in a mode incompatible with the application root.

Action: Open the CDB or the application root in a compatible mode first and retry the operation.

ORA-65056: CONTAINER_DATA attribute is not used in a pluggable database.
Cause: User connected to a pluggable database attempted to modify a CONTAINER_DATA attribute, which is illegal.

Action: A user connected to a pluggable database (PDB) may only see rows of CONTAINER_DATA objects on which the appropriate privilege has been granted and which pertain to that PDB or to the multitenant container database (CDB) as a whole. The ability to see this data is not controlled by the CONTAINER_DATA attribute, which is only used to control the ability to see rows pertaining to certain containers while connected to CDB$ROOT or to an application root in a CDB.

ORA-65057: CONTAINER_DATA attribute must always include the current container
Cause: User issuing ALTER USER ... SET|REMOVE CONTAINER_DATA = ... statement attempted to exclude the current container from a CONTAINER_DATA attribute.

Action: Ensure that a CONTAINER_DATA attribute always includes the current container.

ORA-65058: object-specific CONTAINER_DATA attribute may only be specified for a CONTAINER_DATA object
Cause: Object referenced in an ALTER USER statement modifying an object-specific CONTAINER_DATA attribute is not a CONTAINER_DATA table or view.

Action: Ensure that an object referenced in the statement is a CONTAINER_DATA table or view.

ORA-65059: duplicate container name in CONTAINER_DATA clause
Cause: Duplicate references to a name of some container was encountered in a CONTAINER_DATA clause.

Action: Ensure that no container name appears more than once.

ORA-65060: CONTAINER_DATA attribute is not set
Cause: User attempted to add container(s) to an object-specific CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT or remove containers from a CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT.

Action: Avoid adding containers to object-specific CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT or removing containers from a CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT.

ORA-65061: some of specified containers do not belong to the CONTAINER_DATA attribute
Cause: User attempted to remove from a CONTAINER_DATA attribute container(s) which do not belong to it.

Action: Do not attempt to remove from a CONTAINER_DATA attribute container(s) which do not belong to it.

ORA-65062: CONTAINER_DATA attribute is set to ALL
Cause: User attempted to add or remove containers to or from a CONTAINER_DATA attribute whose current value is ALL, which is not supported.

Action: Do not attempt to add or remove containers to or from a CONTAINER_DATA attribute whose current value is ALL.

ORA-65063: CONTAINER_DATA clause has already been specified
Cause: The CONTAINER_DATA clause was specified twice.

Action: Specify only one CONTAINER_DATA clause.

ORA-65064: incorrect contents of XML metadata file
Cause: The contents of the XML metadata file were different from the actual file properties.

Action: Check and correct the XML metadata file.

ORA-65065: A local user or role can only be altered within the current container
Cause: The ALTER USER or ALTER ROLE statement was issued specifying CONTAINER=ALL and listing a local user or role among the users or roles to be altered, which is illegal.

Action: If trying to alter a local user or role, specify CONTAINER=CURRENT. If trying to alter common users or roles, remove local users or roles from the list of roles being altered.

ORA-65066: The specified changes must apply to all containers
Cause: An attempt was made to apply the specified changes to the current container.

Action: Specify CONTAINER=ALL.

ORA-65067: DEFAULT ROLE clause referencing a local role can only apply to the current container
Cause: An attempt was made to reference a local role across all containers using the DEFAULT ROLE clause.

Action: If you are trying to set a local role as the default role, specify CONTAINER=CURRENT. If trying to set common roles as the default roles, remove local roles from the list of roles referenced in the DEFAULT ROLE clause.

ORA-65068: cannot define a trigger that fires after a pluggable database is unplugged
Cause: An attempt was made to create a trigger that fires after a pluggable database has been unplugged. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after a pluggable database has been unplugged.

ORA-65069: AFTER DB_ROLE_CHANGE triggers cannot be defined on a pluggable database
Cause: An attempt was made to create a pluggable database trigger that fires after a role change occurs from a standby database to primary or vice versa. This type of trigger is not supported.

Action: Do not specify AFTER DB_ROLE_CHANGE when creating a trigger on a pluggable database.

ORA-65070: AFTER CLONE trigger can only be created on a pluggable database
Cause: An attempt was made to create an AFTER CLONE trigger on a schema or a database. This type of trigger is not supported.

Action: Do not specify AFTER CLONE when creating a trigger on a schema or a database.

ORA-65071: BEFORE UNPLUG trigger can only be created on a pluggable database
Cause: An attempt was made to create a BEFORE UNPLUG trigger on a schema or a database. This type of triggers is not supported.

Action: Do not specify BEFORE UNPLUG when creating a trigger on a schema or a database.

ORA-65072: user must be connected to a pluggable database on which a trigger is being created
Cause: An attempt was made to create a database event trigger on a pluggable database while not connected to a pluggable database. This is not supported.

Action: Connect to the pluggable database on which a database event trigger needs to be created before attempting to create such a trigger.

ORA-65073: cannot define a trigger that fires before a pluggable database is cloned
Cause: An attempt was made to create a trigger that fires before a pluggable database has been cloned. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before a pluggable database has been cloned.

ORA-65074: editions not supported for common users
Cause: An attempt was made to support editions for common users.

Action: Do not attempt to enable editions for common users.

ORA-65075: cannot recover the pluggable database
Cause: The pluggable database has been dropped.

Action: None

ORA-65076: incompatible SYSTEM tablespace in database being plugged in
Cause: An attempt was made to plug in a database that had a SYSTEM tablespace whose relative file number was not one. The most common cause of this error is when the database has been created using Oracle Database release 7 or earlier and then upgraded using the migrate utility.

Action: Migrate the database to a pluggable database using the Oracle Data Pump utility.

ORA-65080: cannot determine pluggable database name
Cause: An attempt was made to map the database ID to the pluggable database name.

Action: Contact Oracle Support Services.

ORA-65081: database or pluggable database is not open in read only mode
Cause: An operation was attempted on a database or pluggable database that is not open in read only mode

Action: Open the database or pluggable database in read only mode and then retry the operation.

ORA-65082: cannot add any more pluggable databases: limit of *string* exceeded
Cause: There was no more room in the control file for adding pluggable databases.

Action: Recreate the control file.

ORA-65083: pluggable database *string* shutdown in progress
Cause: The pluggable database is in the middle of shutdown abort

Action: Retry the operation later.

ORA-65084: object *string*.*string* does not exist in root
Cause: An attempt was made to create a common object that does not exist in root.

Action: Invoke the script using catcon.pl to create the object in all containers.

ORA-65085: cannot open pluggable database in read-only mode
Cause: The pluggable database has either been created and not opened or has not been opened in read/write mode after the undo mode has been changed for the multitenant container database (CDB).

Action: Open the pluggable database in the read/write or the restricted mode first.

ORA-65086: cannot open/close the pluggable database
Cause: The pluggable database has been unplugged.

Action: The pluggable database can only be dropped.

ORA-65087: Oracle-supplied operation not allowed from within a pluggable database
Cause: An operation in an Oracle-supplied script was attempted that can only be performed in the root container.

Action: Confirm that the operation is needed in the root container, and switch to the root container to perform the operation.

ORA-65088: database open should be retried
Cause: An inconsistency between the control file and the data dictionary was found and fixed during the database open. The database open needs to be executed again.

Action: Retry the database open.

ORA-65089: pluggable database is not clean
Cause: The pluggable database was not open anywhere but was not marked as clean yet.

Action: Wait until the cleanup is done and retry.

ORA-65090: operation only allowed in a container database
Cause: User attempted an operation that is only allowed in a CDB

Action: Connect to a CDB to perform this operation

ORA-65091: operation on *string* not allowed in a pluggable database
Cause: An undo tablespace or rollback segment operation was attempted that can only be performed in the root container.

Action: Switch to the root container to perform the undo tablespace or rollback segment operation.

ORA-65092: system privilege granted with a different scope to '*string*'
Cause: An attempt was made to revoke a system privilege that was granted with a different scope.

Action: Specify the correct value for the CONTAINER clause.

ORA-65093: multitenant container database not set up properly
Cause: An attempt was made to open a multitenant container database without the correct parameter set for a multitenant container database in the initialization parameter file.

Action: Set the 'enable_pluggable_database=true' parameter for the multitenant container database in the initialization parameter file and restart the database.

ORA-65094: invalid local user or role name
Cause: An attempt was made to create a local user or role with a name that was not valid for local users or roles. In addition to the usual rules for user and role names, local user and role names cannot start with C## or c##.

Action: Specify a valid local user or role name.

ORA-65095: invalid common object name
Cause: An attempt was made to create a common object with a name that was not valid for common objects. In addition to the usual rules for object names, common object names must consist only of ASCII characters.

Action: Specify a valid common object name.

ORA-65096: invalid common user or role name
Cause: An attempt was made to create a common user or role with a name that was not valid for common users or roles. In addition to the usual rules for user and role names,

common user and role names must consist only of ASCII characters, and must contain the prefix specified in common_user_prefix parameter.

Action: Specify a valid common user or role name.

ORA-65097: DML into a data link table is outside an application action
Cause: DML into a data link table was attempted outside an application action.

Action: Begin the application action before the DML.

ORA-65098: DML into an extended data link table is outside an application action
Cause: DML into an extended data link table was attempted in an application root outside an application action.

Action: Begin the application action before the DML.

ORA-65099: operation cannot be performed when the CDB is not open
Cause: An operation was attemped inside a pluggable database that required the container database (CDB) to be open.

Action: Open the CDB and then rerun the operation.

ORA-65100: missing or invalid path prefix - *string*
Cause: The path prefix was missing or invalid. This can also happen if any of the following are true: - The directory path specified by PATH_PREFIX clause contains the string '..' or an invalid path separator like // or exceeds the maximum length supported on host operating system. - The target path already exists as a file in operating system. - The ROOT container (CDB$ROOT, when connected to a pluggable database or application root, when connected to an application container) has a PATH_PREFIX set and either NONE or a directory location outside ROOT containers' PATH_PREFIX was specified.

Action: Correct the PATH_PREFIX clause and reissue the statement.

ORA-65101: container database set up incorrectly
Cause: An attempt was made to use a non container database control file to startup a container database (CDB).

Action: Create a new control file for the CDB.

ORA-65102: missing or invalid instance name
Cause: A valid instance name was not present where required by the syntax of a ALTER PLUGGABLE DATABASE statement.

Action: Reissue the statement with a valid instance name.

ORA-65103: UPGRADE cannot be specified for PDBs being open in READ ONLY mode
Cause: ALTER PLUGGABLE DATABASE ... OPEN UPGRADE was specified, but the root is open READ ONLY, so the specified PDBs will also be opened READ ONLY, and UPGRADE cannot be specified for PDBs being opened READ ONLY.

Action: Reissue the statement without specifying UPGRADE or reopen the root in READ WRITE mode and then reissue the statement.

ORA-65104: operation not allowed on an inactive pluggable database
Cause: The pluggable database status was INACTIVE. It was still being created or there was an error during the create operation.

Action: Wait until the status is changed to CREATED or, in case of errors, drop the pluggable database and re-create it.

ORA-65105: SYSTEM data file for pluggable database #*string* not found
Cause: Data files were not specified in a CREATE CONTROLFILE statement in the SYSTEM tablespace of a pluggable database.

Action: Locate the data files and resubmit the CREATE CONTROLFILE statement.

ORA-65106: Pluggable database #*string* (*string*) is in an invalid state.
Cause: Data files were not specified in a CREATE CONTROLFILE statement of a pluggable database.

Action: Drop the pluggable database or locate the data files and resubmit the CREATE CONTROLFILE statement.

ORA-65107: Error encountered when processing the current task on instance:*string*
Cause: An error was encountered when executing a pluggable database task on one of the Oracle RAC instances.

Action: Examine the cause of failure on the instance.

ORA-65108: invalid use of a cursor belonging to another container
Cause: An attempt was made to use a cursor that was parsed or executed in a different container.

Action: Check if there are any incorrect uses of the SET CONTAINER statement. Parse, execute, fetch, and close a cursor only all in the same container.

ORA-65109: operation not allowed in CDB$ROOT
Cause: An operation was attempted that is not supported in the Container Database root.

Action: Switch to a pluggable database to perform the operation.

ORA-65110: Invalid instance name specified
Cause: An attempt was made to use an invalid or inactive instance name in the INSTANCES clause.

Action: Specify a valid and active instance name.

ORA-65111: Cannot relocate to the same instance
Cause: An attempt was made to relocate a pluggable database to the current instance.

Action: Specify an instance which is different then the current instance.

ORA-65112: pluggable database *string* not closed on all instances of the standby database
Cause: Media recovery stopped because the pluggable database was either unplugged, dropped or renamed on the primary database.

Action: Close the pluggable database on all instances and restart the recovery.

ORA-65113: value of MAX_PDB_STORAGE property for the PDB is too low
Cause: The value of MAX_PDB_STORAGE specified in the ALTER or CREATE PLUGGABLE DATABASE statement is less than the current space usage of data files and temporary files of the container.

Action: Specify a higher value for MAX_PDB_STORAGE.

ORA-65114: space usage in container is too high
Cause: Space usage in the current container exceeded the value of MAX_PDB_STORAGE for the container.

Action: Specify a higher value for MAX_PDB_STORAGE using the ALTER PLUGGABLE DATABASE statement.

ORA-65115: CDB resource plan *string* has more than *string* PDB directives.
Cause: An attempt was made to create or update the specified multitenant container database (CDB) resource plan to use more than the supported number of directives.

Action: Remove the directives for pluggable databases (PDBs) that are not active on this database.

ORA-65116: incompatible database character set
Cause: The database character set of the container database was not a superset of the database character set of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having a compatible database character set.

ORA-65117: CONTAINER clause may only be specified when connected to a container database
Cause: The CONTAINER clause was specified when not connected to a container database (CDB).

Action: Reenter the statement without the CONTAINER clause.

ORA-65118: operation affecting a pluggable database cannot be performed from another pluggable database
Cause: An attempt was made to perform an operation affecting a pluggable database while connected to a different pluggable database.

Action: Connect to the desired pluggable database and perform the operation.

ORA-65119: incompatible national character set
Cause: The national character set of the container database was not the same as the national character set of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having the same national character set.

ORA-65120: illegal character set ID in XML metadata file
Cause: The XML metadata file for the pluggable database being plugged in contained a database or national character set ID that was not valid for the container database. This can happen if the XML file is manually modified, if it is corrupted on disk, or if the set of supported character sets differs between the container database and the source database of the pluggable database because a user-defined character set has not been installed in the Oracle Home directory of the container database.

Action: If you have manually modified the XML metadata file of the pluggable database, restore the original file or re-create the pluggable database from its source database. Manual modifications of the XML file are not supported. If the pluggable database uses a user-defined character set, make sure the character set is installed in the Oracle Home directory of the container database. Otherwise, contact Oracle Support Services.

ORA-65121: ALTER SESSION SET CONTAINER not allowed from this client
Cause: Clients earlier than Oracle Database 12c Release 1 do not support this feature.

Action: Upgrade the client to Oracle Database 12c Release 1 or later.

ORA-65122: Pluggable database GUID conflicts with the GUID of an existing container.
Cause: While creating a pluggable database, the GUID conflicted with the GUID of an existing container in the container database.

Action: Retry creating the pluggable database or consider using the AS CLONE clause for CREATE PLUGGABLE DATABASE if plugging in a copy of another pluggable database.

ORA-65123: cannot perform a SET CONTAINER operation in this context
Cause: An attempt was made to set the container inside a context where such an operation is prohibited.

Action: Do not set the container from inside a system trigger or a DML context.

ORA-65125: valid XML or PDB archive file name is required
Cause: An attempt was made to provide a file name that did not have an XML or a PDB extension.

Action: Specify a valid XML or PDB archive file.

ORA-65126: pluggable database *string* cannot be unplugged.
Cause: The pluggable database was not closed cleanly and there are active transactions that need to be recovered.

Action: Open the pluggable database in read/write mode before unplugging again so that transaction recovery can be performed.

ORA-65127: PDB recover output file not specified
Cause: An attempt was made torecover a pluggable database (PDB) without specifying an output XML file location.

Action: Specify an output file location for recovery.

ORA-65128: missing or nonexistent data file or directory name *string*
Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by either not specifying a data file or directory location, or by specifying a nonexistent data file or directory location.

Action: Specify a valid data file or directory location and retry the operation.

ORA-65129: Pluggable database *string* cannot be relocated.
Cause: The pluggable database was already opened on all instances.

Action: Close the pluggable database without RELOCATE clause or close the pluggable database on another instance.

ORA-65130: cannot relocate more than one pluggable database.
Cause: An attempt was made to relocate more than one pluggable database.

Action: RELOCATE pluggable database one at a time.

ORA-65131: The feature *string* is not supported in a pluggable database.
Cause: An attempt was made to use a feature that is not supported in a pluggable database.

Action: Do not use this feature in a pluggable database.

ORA-65134: endian mismatch
Cause: The endian of the container database was not the same as the endian of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having the same endian.

ORA-65135: cannot perform ALTER SESSION SET CONTAINER operation in this context
Cause: An ALTER SESSION SET CONTAINER operation was attempted in a context where such an operation is prohibited.

Action: Do not perform the ALTER SESSION SET CONTAINER operation from a session that can be migrated or a session from an OCI connection pool.

ORA-65136: SPFILE name cannot be specified for a pluggable database
Cause: An attempt was made to specify an SPFILE name for a pluggable database.

Action: Remove the SPFILE name and retry the operation in the pluggable database.

ORA-65137: Pluggable database *string* is in the middle of Pluggable Database RESETLOGS operation.
Cause: The pluggable database is in the middle of a Pluggable Database (PDB) RESETLOGS operation.

Action: If possible, recover the Container Database further so that this Pluggable database is not in the middle of a PDB RESETLOGS operation. Another alternative is to perform PDB point-in-time recovery. A message is logged in the alert log indicating SCN and time until which the pluggable database can be point-in-time recovered.

ORA-65138: Data file *string* of pluggable database *string* belongs to an orphan PDB incarnation.
Cause: Either the specified data file was restored from a backup that was taken during a period of time that was discarded by a RESETLOGS operation, or Oracle could not identify which pluggable database incarnation the file belongs to. The alert log contains more information.

Action: Restore a backup of this file that belonged to either the current or a prior incarnation of the pluggable database. If you are using RMAN to restore, RMAN will automatically select a correct backup.

ORA-65139: Mismatch between XML metadata file and data file *string* for value of *string* (*string*)
Cause: Either the XML metadata file or the data file was corrupt.

Action: Verify that the XML metadata file and the data file are consistent as of the point when the unplug was done and retry the operation.

ORA-65140: invalid common profile name
Cause: An attempt was made to create a common profile with a name that is not valid for common profiles. Common profile names must consist only of ASCII characters, and must contain the prefix specified in common_user_prefix parameter.

Action: Specify a valid common profile name.

ORA-65141: invalid local profile name
Cause: An attempt was made to create a local profile with a name that is not valid for local profiles. Local profile names cannot start with C## or c##.

Action: Specify a valid local profile name.

ORA-65142: A local profile can be altered only within the current container
Cause: An attempt was made to alter a local profile using an ALTER PROFILE statement with the CONTAINER=ALL clause.

Action: If attempting to alter a local profile, ensure that you are connected to the correct container and optionally specify CONTAINER=CURRENT.

ORA-65143: Creation of local profiles is not allowed in this container.
Cause: An attempt was made to create a local profile in CDB$ROOT or an application root. Except for DEFAULT and ORA_STIG_PROFILE, which are out-of-the-box Oracle supplied local profiles, no customer created local profiles are allowed in this container.

Action: If attempting to create a common profile, do not specify CONTAINER=CURRENT.

ORA-65144: ALTER SYSTEM DISABLE RESTRICTED SESSION is not permitted
Cause: An attempt was made to disable a restricted session while an unresolved error existed in PDB_PLUG_IN_VIOLATIONS.

Action: Resolve all of the errors before trying to disable a restricted session.

ORA-65145: FORCE open of multiple pluggable databases is not supported
Cause: An attempt was made to FORCE open multiple pluggable databases at the same time.

Action: Retry the FORCE open of one pluggable database at a time.

ORA-65146: account cannot be unlocked in a PDB while it is locked in the root
Cause: An attempt was made to unlock a common user account in a pluggable database (PDB) which was locked in the root of the container database.

Action: Ensure that a common user account is not locked in the root before attempting to unlock it in a PDB.

ORA-65147: DB_UNIQUE_NAME specified without SPFILE scope
Cause: An attempt was made to specify a DB_UNIQUE_NAME in an ALTER SYSTEM statement without SCOPE=SPFILE.

Action: Use DB_UNIQUE_NAME only with SCOPE=SPFILE.

ORA-65148: cannot FORCE open a pluggable database to or from upgrade mode
Cause: An attempt was made to FORCE open a pluggable database to or from upgrade mode.

Action: Close the pluggable database first and retry the operation.

ORA-65149: PDB name conflicts with existing service name in the CDB or the PDB
Cause: An attempt was made to create a pluggable database (PDB) whose name conflicts with the existing service name in the container database (CDB) or the PDB.

Action: Choose a different name for the PDB.

ORA-65150: unable to start the instance
Cause: An attempt was made to start an instance as a container or a non-container database when atleast one of the other instances was started in a different mode.

Action: Start the instance in the same mode as all the other instances.

ORA-65151: invalid tablespace name specified
Cause: An attempt was made to use an invalid tablespace name or a mandatory tablespace name (SYSTEM or SYSAUX) in the USER_TABLESPACES clause when creating a pluggable database.

Action: Specify a valid tablespace name.

ORA-65152: cannot bring datafile online
Cause: An attempt was made to bring online one or more datafiles belonging to a pluggable database that is disabled for recovery.

Action: Issue the ALTER PLUGGABLE DATABASE ENABLE RECOVERY statement first and retry the operation.

ORA-65153: cannot bring tablespace online
Cause: An attempt was made to bring online a tablespace that was either missing in the plug XML file or excluded when the pluggable database was created.

Action: Drop and recreate the tablespace to bring it online.

ORA-65154: specified logging attribute for the pluggable database is same as the current attribute value
Cause: An attempt was made to change the default logging attribute to be the same as the current attribute value for the pluggable database.

Action: Change the logging attribute to a different value.

ORA-65155: missing or invalid source file directory *string*
Cause: Source file directory was missing or invalid.

Action: Correct the SOURCE_FILE_DIRECTORY clause and reissue the statement.

ORA-65156: pluggable database version *string* not allowed
Cause: An attempt was made to plug in a pluggable database with an incompatible version of the multitenant container database or the application root.

Action: Plug in a pluggable database with a compatible version of the multitenant container database or the application root.

ORA-65157: SOURCE_FILE_NAME_CONVERT and SOURCE_FILE_DIRECTORY cannot be specified together
Cause: SOURCE_FILE_NAME_CONVERT and SOURCE_FILE_DIRECTORY clauses were both specified.

Action: Use either the SOURCE_FILE_NAME_CONVERT or the SOURCE_FILE_DIRECTORY clause and reissue the statement.

ORA-65158: could not find a matching file for - *string*
Cause: A matching file was not found in the directory specified with the SOURCE_FILE_DIRECTORY clause.

Action: Correct the SOURCE_FILE_DIRECTORY clause or check that the file exists in the directory and reissue the statement.

ORA-65159: invalid service name specified
Cause: An attempt was made to use an invalid service name in the services clause.

Action: Specify a valid service name.

ORA-65160: invalid cleanup task ID
Cause: An attempt was made to pass an invalid cleanup task ID to the DBMS_PDB.CLEANUP_TASK function.

Action: Specify a valid cleanup task ID.

ORA-65161: Unable to create pluggable database with no data
Cause: An attempt was made to clone a pluggable database which contains some clustered tables or index organized tables or advanced queue tables.

Action: Retry the clone operation after dropping all such objects from the source pluggable database.

ORA-65162: The password of the common user has expired
Cause: The password of the common user account has expired and needs to be changed. Connect to the CDB$ROOT or Application Root of the multitenant container database to change the password of the common user.

Action: Change the password of the common user or contact the DBA.

ORA-65164: PDB instance recovery cannot open a required archived redo log
Cause: The system could not access a required archived redo log file.

Action: Ensure that the offline log exists, the storage device is online, and the archived redo log file is in the correct location.

ORA-65165: missing or invalid path for file creation *string*
Cause: The path specified in CREATE_FILE_DEST clause was missing or invalid.

Action: Correct the CREATE_FILE_DEST clause and reissue the statement.

ORA-65166: cannot run noncdb_to_pdb.sql if PDB's version differs from CDB's
Cause: An attempt was made to run noncdb_to_pdb.sql when the version of the pluggable database (PDB) was different from the version of the multitenant container database (CDB).

Action: Upgrade the PDB before running noncdb_to_pdb.sql

ORA-65167: cannot run noncdb_to_pdb.sql if container database is in upgrade mode
Cause: An attempt was made to run noncdb_to_pdb.sql when the multitenant container database (CDB) was in upgrade mode.

Action: Open the CDB in non-upgrade mode.

ORA-65168: missing PFILE name
Cause: An operation involving PFILE was issued in a pluggable database without specifying the PFILE name

Action: Specify a valid PFILE name and retry the operation in the pluggable database.

ORA-65169: error encountered while attempting to copy file *string*
Cause: An error was encountered while attempting to copy the file while creating a pluggable database.

Action: Check additional error messages for the cause of the failure to copy the file, and resolve the issue accordingly.

ORA-65170: XML file *string* already exists
Cause: An attempt to create an XML file failed because a file with that name already exists.

Action: Use a different XML file name.

ORA-65171: invalid value for DB_BLOCK_CHECKING parameter
Cause: An attempt was made to specify a value of FALSE or OFF for the DB_BLOCK_CHECKING parameter in a pluggable database (PDB), when the value of DB_BLOCK_CHECKING parameter in the multitenant container database (CDB) is neither FALSE nor OFF. If the CDB has enabled the DB_BLOCK_CHECKING parameter, then the PDB cannot disable the DB_BLOCK_CHECKING parameter.

Action: Specify a value other than FALSE or OFF for the DB_BLOCK_CHECKING parameter in the PDB.

ORA-65172: cannot run noncdb_to_pdb.sql unless pluggable database is an unconverted non-container database
Cause: An attempt was made to run 'noncdb_to_pdb.sql' on a pluggable database (PDB) that was not an unconverted non-container database.

Action: 'noncdb_to_pdb.sql' is not necessary for this PDB.

ORA-65174: invalid or conflicting name in service *string* found in the pluggable database
Cause: The service name or network name in the specified service is invalid or it conflicts with an existing service name or network name in the container database.

Action: Use an appropriate SERVICE_NAME_CONVERT clause and reissue the statement.

ORA-65175: cannot grant SYSDBA privilege locally in the root
Cause: An attempt was made to grant SYSDBA privilege locally in the root of a multitenant container database (CDB).

Action: While connected to the root, SYSDBA privilege can only be granted commonly.

ORA-65176: system tablespace block size (*string*) does not match configured block sizes
Cause: The block size of the system tablespace of the pluggable database to be plugged in did not match the block sizes configured in the container database.

Action: Configure the appropriate cache for the block size of the system tablespace using the DB_*n*K_CACHE_SIZE parameter (where *n* is 2, 4, 8, 16, or 32).

ORA-65177: cannot create non-local user, role or profile with the same name as local user, role or profile
Cause: An attempt was made to create a common user, role or profile with the same name as an existing local user, role or profile.

Action: Specify a different user, role or profile name.

ORA-65178: invalid logging mode specified for the pluggable database
Cause: An attempt was made to either enable a conflicting logging mode or to disable a logging mode when it was not enabled.

Action: Check the current logging modes in DBA_PDBS for the pluggable database and specify a valid mode.

ORA-65179: cannot keep datafiles for a pluggable database that is not unplugged
Cause: An attempt was made to drop a pluggable database without specifying the INCLUDING DATAFILES clause, and the pluggable database has not been unplugged.

Action: Unplug the pluggable database before dropping the pluggable database or use the INCLUDING DATAFILES clause in the DROP PLUGGABLE DATABASE statement.

ORA-65180: duplicate file name encountered - *string*
Cause: An attempt was made to issue a CREATE PLUGGABLE DATABASE statement with a duplicate source or target file name for the source file name mentioned in the message. This could be caused by incorrect SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause.

Action: Use an appropriate SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause to ensure that there are no duplicate source or target file names and then reissue the statement.

ORA-65181: invalid argument supplied to CONTAINERS function
Cause: An attempt was made to create a multitenant container database (CDB) view with an invalid table or view name.

Action: Specify a valid table or view name of the form *owner*.<table_name | view_name>.

ORA-65182: unable to modify the state of pluggable database *string*
Cause: An attempt was made to modify the state of a pluggable database which is currently in the middle of a state transition.

Action: Retry the operation later.

ORA-65183: FORCE open of a PDB on only a few instances where its open on is not allowed
Cause: An attempt was made to FORCE open a pluggable database on only a few Oracle RAC instances where it is currently open.

Action: Retry the FORCE open and include all Oracle instances where the PDB is open

ORA-65184: encountered data files belonging to different PDBs
Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files belonging to different PDBs.

Action: Check the paths provided to DBMS_PDB.RECOVER() and retry the operation.

ORA-65185: could not find data file belonging to SYSTEM and SYSAUX tablespaces
Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files where no data files belonging to SYSTEM and SYSAUX tablespace were found. SYSTEM and SYSAUX tablespaces are critical to recover a pluggable database (PDB).

Action: Check the paths specified for DBMS_PDB.RECOVER() and ensure that they at least contain data files belonging to SYSTEM and SYSAUX tablespaces.

ORA-65186: The user, role or profile *string* has sync errors.
Cause: There were pending SQL statements involving this user, role or profile which need to be resolved in order for the pluggable database (PDB) to be synced with ROOT.

Action: Resolve the pending SQL statement in the PDB and retry the operation.

ORA-65187: duplicate file found *string*
Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files which are duplicate copies of the same file.

Action: Check the paths specified for DBMS_PDB.RECOVER() and ensure that they contain unique data files.

ORA-65188: cannot relocate a PDB opened with warnings
Cause: An attempt was made to relocate a pluggable database (PDB) which was opened with warnings or there were warnings encountered after relocating the PDB.

Action: Resolve the warnings in the PDB before attempting to relocate it or try relocating the PDB to a different multitenant container database (CDB).

ORA-65189: cannot clone a PDB from PDB$SEED as the source PDB
Cause: An attempt was made to clone a pluggable database (PDB) from PDB$SEED as the source PDB.

Action: Consider using the "create_pdb_from_seed" clause in CREATE PLUGGABLE DATABASE statement or clone the PDB from a different source PDB.

ORA-65190: operation allowed only from within an application root
Cause: An operation (such as creation of an application seed) that can only be performed in an application root was attempted by a user not connected to an application root.

Action: Connect to an application root container to perform the operation.

ORA-65191: operation allowed only from within a CDB root
Cause: An operation (such as creation of an application root) that can only be performed in a multitenant container database (CDB) root container was attempted by a user not connected to the CDB root.

Action: Connect to the CDB root container to perform the operation.

ORA-65192: database must be in UPGRADE mode for this operation
Cause: An attempt is made to issue ALTER DATABASE LOCAL UNDO [ON | OFF] when the database is not open in UPGRADE mode.

Action: Open the database in UPGRADE mode.

ORA-65194: Pluggable database *string* does not belong to the application container.
Cause: The user connected to an application root attempted to specify a pluggable database (PDB) that does not belong to the application container in a statement which can only affect PDBs belonging to the application container.

Action: Check DBA_PDBS to determine which PDBs belong to the application container.

ORA-65196: operation allowed only from within a View Pluggable Database
Cause: An operation (such as ALTER PLUGGABLE DATABASE VIEW LOCAL) that can only be performed in a View Pluggable Database was attempted by a user not connected to a View Pluggable Database.

Action: Connect to a View Pluggable Database to perform the operation.

ORA-65197: cannot clone from the PDB - file *string* has online backup set or is being moved
Cause: An attempt to clone from a pluggable database (PDB) which had one one or more data files that are currently part of an online move or a hot backup operation.

Action: Retry the operation after the backup or move of the data files is complete.

ORA-65198: operation not allowed on a PDB when it is being cloned
Cause: An attempt was made to perform an operation which is not allowed when the pluggable database (PDB) is being cloned concurrently.

Action: Retry the operation after the clone from the pluggable database is complete.

ORA-65199: database busy. operation not allowed now
Cause: An attempt was made to perform an operation while a conflicting database wide operation or a read write pluggable database (PDB) clone is in progress.

Action: Retry the operation after the conflicting operation is complete.

ORA-65200: unable to create pluggable database with no data
Cause: An attempt was made to clone a pluggable database that contains some clustered tables or advanced queue tables.

Action: Retry the clone operation after dropping all clustered tables and advanced queue tables from the source pluggable database.

ORA-65201: DML on CONTAINERS() includes only the CON_ID column
Cause: A DML on CONTAINERS() included the CON_ID column but did not include a non-CON_ID column. A DML on CONTAINERS() including the CON_ID column can be performed only if a column other than the CON_ID column is also specified.

Action: Specify a non-CON_ID column in the DML statement together with the CON_ID column.

ORA-65202: DML on CONTAINERS() specifies an invalid CON_ID column value
Cause: A DML on CONTAINERS() specified an invalid value for the CON_ID column.

Action: If the current container is an application root, then specify the pluggable database (PDB) ID of the current container or the PDB ID of a member of the application container as the value of the CON_ID column. If the current container is CDB$ROOT, then specify a valid container ID as the value of the CON_ID column.

ORA-65203: invalid pluggable database name pattern
Cause: An attempt was made to assign an invalid pluggable database pattern for this initialization parameter.

Action: Specify a valid pluggable database name pattern.

ORA-65204: STANDBYS clause is too long
Cause: The specified STANDBYS clause was too long in CREATE PLUGGABLE DATABASE statement.

Action: Use an appropriate length of STANDBYS clause and reissue the statement.

ORA-65205: missing or invalid lockdown profile name
Cause: A valid lockdown profile name was not present where required.

Action: Reissue the statement with a valid lockdown profile name.

ORA-65206: invalid value specified
Cause: An attempt was made to use an invalid value in the VALUE clause.

Action: Specify a valid value.

ORA-65207: invalid statement or feature or option specified
Cause: An attempt was made to use an invalid statement or option or feature in ENABLE or DISABLE clause.

Action: Specify a valid statement or option or feature.

ORA-65208: Lockdown profile *string* does not exist.
Cause: An attempt was made to specify a lockdown profile that did not exist.

Action: Check DBA_LOCKDOWN_PROFILES to see if a lockdown profile exists.

ORA-65209: Lockdown profile *string* already exists.
Cause: An attempt was make to create a lockdown profile with a name that already existed.

Action: Check DBA_LOCKDOWN_PROFILES to see if the lockdown profile name exists.

ORA-65210: invalid value for UPGRADE PRIORITY
Cause: The specified value for UPGRADE PRIORITY was outside of the legal range.

Action: Choose an appropriate value for the option.

ORA-65211: UPGRADE PRIORITY may only be specified for user PDBs
Cause: An attempt was made to specify UPGRADE PRIORITY for CDB$ROOT or PDB$SEED, which is illegal.

Action: Avoid explicitly specifying CDB$ROOT or PDB$SEED when changing UPGRADE PRIORITY.

ORA-65212: operation not allowed from outside an application root
Cause: An operation was attempted that can only be performed in an application root.

Action: Switch to the application root container to perform the operation.

ORA-65213: existing application action in progress
Cause: An attempt was made to 'purge' or 'begin' an application action (install, uninstall, upgrade, or patch) while another action was already in progress.

Action: Attempt operation after the ongoing application action is complete.

ORA-65214: application action has not begun
Cause: An attempt was made to end an application action (install, uninstall, upgrade, or patch) without a prior 'begin' call.

Action: Begin the action first.

ORA-65215: starting version does not match current version
Cause: The starting version of the application upgrade did not match the current version of the application.

Action: Attempt operation with the correct starting version.

ORA-65216: invalid minimum version
Cause: The minimum version for the application patch did not exist.

Action: Retry the operation with the correct minimum version.

ORA-65217: application *string* does not exist
Cause: An action was attempted on an application that did not exist.

Action: Install the application.

ORA-65218: patch *string* for application *string* already installed
Cause: An attempt was made to start an application patch that was already installed.

Action: Attempt installation of a different application patch.

ORA-65219: patch *string* for application *string* is not in progress
Cause: An attempt was made to end an application patch that was not in progress.

Action: Begin the application patch.

ORA-65220: object *string*.*string* does not exist or is not of supported common type
Cause: An attempt was made to change the sharing status of an object that either did not exist, or was of a type that could not be made common.

Action: Attempt the operation on a different object.

ORA-65221: application *string* exists already
Cause: An action was attempted on an application that already exists.

Action: Use a different application name.

ORA-65222: *string* parameter is only supported in a CDB
Cause: An attempt was made to enable a parameter only supported in a multitenant container database (CDB), and the current database is not a CDB.

Action: Remove the parameter before starting the instance.

ORA-65223: tablespace *string* does not exist
Cause: The default tablespace specified in the CREATE PLUGGABLE DATABASE statement either did not exist in the source pluggable database (PDB) or is not included in the USER_TABLESPACES clause.

Action: Specify an existing tablespace to be set as the default.

ORA-65224: SQL statement not allowed according to lock down profile *string*
Cause: An attempt was made to execute a SQL statement, in a pluggable database (PDB), which was disabled according to the corresponding lock down profile.

Action: Enable the SQL statement in the lock down profile and then try to execute the statement.

ORA-65225: cannot run apex_to_common.sql or pdb_to_apppdb.sql on an unconverted non-multitenant container database
Cause: An attempt was made to run 'apex_to_common.sql' or 'pdb_to_apppdb.sql' on a pluggable database (PDB) that is an unconverted non-multitenant container database.

Action: Run 'noncdb_to_pdb.sql' in the PDB first.

ORA-65226: incompatible client version for the current database
Cause: An attempt was made to use an incompatible client version. Clients prior to Oracle Database 12c Release 2 (12.2) do not support long identifiers.

Action: Either upgrade the Oracle client to 12.2 (or higher) or do not use long identifiers in the database.

ORA-65227: unable to open pdb archive file *string*
Cause: An attempt was made to provide an invalid file name which could not be opened for generating the unplug archive.

Action: Check that the file name is valid and the file path is accessible.

ORA-65228: invalid host name specified
Cause: An attempt was made to use an invalid host name in the HOST clause.

Action: Specify a valid host name.

ORA-65229: invalid application version specified
Cause: An attempt was made to use an invalid application version.

Action: Specify a valid application version.

ORA-65230: internal database link cannot be altered or dropped
Cause: An attempt was made to directly alter or drop an internal database link. An internal database link can be altered or dropped only through an ALTER or DROP PLUGGABLE DATABASE statement.

Action: Specify the correct ALTER or DROP PLUGGABLE DATABASE statement.

ORA-65231: The referenced pluggable database does not exist or it is closed.
Cause: An attempt was made to create or access a proxy pluggable database that referenced a non-existent or closed pluggable database.

Action: Create or open the referenced pluggable database.

ORA-65232: unable to support PDB isolation mode in a non-PDB domain instance
Cause: An attempt to support pluggable database (PDB) isolation mode in a database without per-PDB recovery domains failed. PDB isolation mode is supported only on a per-PDB domain enabled instance.

Action: Enable the per-PDB recovery domains to use PDB isolation.

ORA-65233: unable to support PDB isolation mode in a global undo instance
Cause: An attempt to support pluggable database (PDB) isolation mode in a global undo enabled pluggable database failed. PDB isolation mode is supported only on a local undo enabled CDB instance.

Action: All PDBs should use local undo before starting in PDB isolation mode.

ORA-65234: DATA_LINK_DML should be supported only for data link tables.
Cause: An attempt was made to enable DATA_LINK_DML on a non-data link table.

Action: Avoid enabling DATA_LINK_DML on a non-data link table.

ORA-65235: cannot create common user, role or profile with the same name as existing common user, role or profile
Cause: An attempt was made to create a common user, role or profile with the same name as an existing common user, role or profile.

Action: Specify a different user, role or profile name.

ORA-65236: CON_ID column cannot be dropped or renamed
Cause: An attempt was made to drop or rename a CON_ID column of a CONTAINER_DATA table which is illegal.

Action: Avoid dropping or renaming CON_ID column of a CONTAINER_DATA table.

ORA-65237: CON_ID column must have a numeric data type
Cause: An attempt was made to change the data type of a CON_ID column of a CONTAINER_DATA table to a non-numeric data type, which is illegal.

Action: Avoid assigning a non-numeric data type to a CON_ID column of a CONTAINER_DATA table.

ORA-65238: operation cannot be performed when the application root is not open
Cause: An operation was attempted inside an application root that requires the application root to be open.

Action: Open the application root and then reissue the statement.

ORA-65239: missing or invalid service name
Cause: A valid service name was not present where required by the syntax of ALTER SESSION SET CONTAINER= SERVICE=.

Action: Reissue the statement with a valid service name.

ORA-65240: not connected to an application root
Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB while connected to the root of a multitenant container database (CDB).

Action: Make sure that you are connected to an application root before attempting this operation.

ORA-65241: statement can only be executed when administering an application
Cause: An attempt was made to issue a statement affecting a user, role, or object used by an application installed in an application container while not installing, upgrading, patching, or uninstalling such application.

Action: Make sure that an application installed in an application container is being installed, upgraded, patched, or uninstalled when issuing a statement affecting a user, role, or object.

ORA-65242: CONTAINER_DATA attribute disabled
Cause: An attempt was made to disable a CONTAINER_DATA attribute of a table for which it was not enabled.

Action: Make sure that the table whose CONTAINER_DATA attribute you are trying to disable has it enabled.

ORA-65243: CONTAINER_DATA attribute already enabled
Cause: An attempt was made to enable a CONTAINER_DATA attribute of a table for which it is already enabled.

Action: Make sure that the table whose CONTAINER_DATA attribute you are trying to enable does not already have it enabled.

ORA-65244: application action has begun
Cause: An attempt was made to execute an unsupported statement after an application action (install, uninstall, upgrade, or patch) was started.

Action: End the action first.

ORA-65245: application *string* has been uninstalled
Cause: An attempt was made to operate on an application after it was uninstalled.

Action: Use a different application name.

ORA-65246: invalid user name specified
Cause: An attempt was made to use an invalid user name in the USER clause.

Action: Specify a valid user name.

ORA-65247: tablespaces for subset clone or no data clone are not self-contained
Cause: One or more tablespaces listed in the USER_TABLESPACES clause or metadata tablespaces were not self-contained.

Action: Check the violating tablespaces and objects in the PDB_PLUG_IN_VIOLATIONS view to fix and reissue the statement.

ORA-65248: invalid clause
Cause: An attempt was made to alter a lockdown profile with an invalid clause.

Action: Specify a valid clause while altering the lockdown profile.

ORA-65249: invalid option
Cause: An attempt was made to alter a lockdown profile with an invalid option.

Action: Specify a valid option while altering the lockdown profile.

ORA-65250: invalid path specified for file - *string*
Cause: An attempt was made to use a file name that does not start with CREATE_FILE_DEST for the pluggable database.

Action: Specify a file name pattern so that the resulting file name has CREATE_FILE_DEST value as a prefix.

ORA-65251: ending version already exists
Cause: The ending version of the application upgrade matched a previous version of the application.

Action: Attempt operation with the correct ending version.

ORA-65252: cannot connect or ALTER SESSION SET CONTAINER to an application root clone
Cause: An attempt was made to connect or ALTER SESSION SET CONTAINER to an application root clone.

Action: Connect or ALTER SESSION SET CONTAINER to a different pluggable database.

ORA-65253: operation not allowed within a proxy pluggable database as SYSDBA or SYSOPER
Cause: An attempt was made to access a proxy pluggable database as SYSDBA or SYSOPER.

Action: Access a proxy pluggable database with any privilege other than SYSDBA or SYSOPER.

ORA-65254: invalid path specified for the directory
Cause: An absolute path was used in the CREATE DIRECTORY statement. Since the PDB has set the PATH_PREFIX property, only relative path is allowed for directories.

Action: Specify a relative path and reissue the statement.

ORA-65255: invalid tablespace number
Cause: An attempt was made to create a pluggable database where one or more tablespaces has an invalid tablespace number.

Action: Contact Oracle Support Services.

ORA-65256: maximum number of application root clones created for application container
Cause: An attempt was made to create an application root clone for an application container that has already reached the maximum permitted number of application root clones.

Action: Avoid creating too many application root clones.

ORA-65257: target is a non-CDB instance
Cause: An attempt was made to create a proxy pluggable database to a non-multitenant container database (non-CDB) instance.

Action: Create a proxy pluggable database to a pluggable database.

ORA-65258: referenced pluggable database is an application root clone
Cause: An attempt was made to create a proxy pluggable database that references an application root clone.

Action: Create a proxy pluggable database that references a different pluggable database.

ORA-65259: partial synchronization of application is disallowed
Cause: An attempt was made to synchronize an application that has not ended its install, patch, upgrade, or uninstall.

Action: End the application install, patch, upgrade, or uninstall.

ORA-65260: unable to create a refreshable clone
Cause: An attempt was made to either create a refreshable clone of a proxy pluggable database or to create a proxy pluggable database which is also enabled for refresh.

Action: Create a refresh clone of a regular pluggable database.

ORA-65261: pluggable database *string* not enabled for refresh
Cause: An attempt was made to refresh a pluggable database (PDB) which was either not created as a refreshable PDB or the final refresh was already complete.

Action: Attempt the operation only on a PDB that is enabled for refresh.

ORA-65262: Dismount operation is not allowed.
Cause: An attempt was made to dismount a pluggable database with parameter enable_pdb_isolation set to FALSE.

Action: None

ORA-65263: internal error
Cause: This is an internally stimulated error.

Action: Contact Oracle Support Services.

ORA-65264: Dismount operation is not allowed.
Cause: An attempt was made to dismount a pluggable database on a standby instance.

Action: None

ORA-65265: PDB cannot be dropped or unplugged.
Cause: An attempt was made to drop or unplug the root of an application container to which one or more application pluggable databases (PDBs) belong.

Action: Drop the application PDBs belonging to the application container before attempting to drop or unplug the application root.

ORA-65266: application root clone may not be dropped, unplugged or altered
Cause: An attempt was made to drop, unplug, or alter an application root clone pluggable database which is not allowed.

Action: Specify a legal pluggable database name.

ORA-65267: Application PDB *string* is open in an incompatible mode.
Cause: An attempt was made to reopen an application root in a mode incompatible with that of an application PDB belonging to the same application container.

Action: Reopen the application PDB in a compatible mode and then retry the operation.

ORA-65268: PDB cannot be created
Cause: An attempt was made to either relocate a pluggable database (PDB) which was created as a refreshable PDB or to create a refreshable PDB from a PDB that was already created as refreshable PDB or was marked for relocation.

Action: None

ORA-65269: PDB cannot be refreshed
Cause: An attempt was made to refresh a pluggable database (PDB) with no refresh mode.

Action: Specify a manual or automatic refresh mode for the PDB.

ORA-65270: operation is not allowed in an application patch
Cause: An attempt was made to perform an operation that is not allowed in an application patch.

Action: Use application upgrade instead of application patch.

ORA-65271: internal application may not be altered
Cause: An attempt was made to alter an application that was created internally.

Action: Specify a non-internal application.

ORA-65272: operation not allowed from outside an application PDB
Cause: An operation was attempted that can only be performed in an application PDB.

Action: Switch to the application PDB to perform the operation.

ORA-65273: The specified changes must be restricted to the current container.
Cause: An attempt was made to apply the specified changes to all containers.

Action: Specify CONTAINER=CURRENT.

ORA-65274: operation not allowed from outside an application action
Cause: An operation was attempted that can only be performed in an application action (install, uninstall, upgrade, or patch).

Action: Begin an application action.

ORA-65275: invalid operation on a container database (CDB)
Cause: An operation was attempted that can only be performed from within a non-container database.

Action: Switch to a non-container database to perform the operation.

ORA-65276: rule already exists in the lockdown profile
Cause: An attempt was made to add a rule that already exists in the lockdown profile.

Action: Specify a rule that does not exist in the lockdown profile.

ORA-65277: Unable to support PDB isolation mode with MEMORY_TARGET or MEMORY_MAX_TARGET.
Cause: An attempt was made to support pluggable database (PDB) isolation mode with the MEMORY_TARGET or MEMORY_MAX_TARGET configuration parameters. PDB isolation mode is not supported with the MEMORY_TARGET or MEMORY_MAX_TARGET configuration parameters.

Action: Disable PDB isolation mode before starting the instance.

ORA-65278: The PDB SGA size is larger than or equal to the CDB SGA size.
Cause: An attempt was made to start a pluggable database (PDB) with a system global area (SGA) size larger than or equal to the multitenant container.

Action: Specify a PDB SGA size which is less than the CDB SGA size in the PDB SPFILE.

ORA-65279: The PDB SGA_MAX_SIZE is larger than or equal to the maximum CDB SGA size.
Cause: An attempt was made to start a pluggable database (PDB) with SGA_MAX_SIZE configuration parameter size larger than or equal to the multitenant container database (CDB).

Action: Specify a PDB SGA_MAX_SIZE configuration parameter which is less than the maximum CDB SGA size in the PDB SPFILE.

ORA-65280: The referenced pluggable database is a proxy pluggable database.
Cause: An attempt was made to create a proxy pluggable database that referenced a proxy pluggable database.

Action: Create a proxy pluggable database that references a different pluggable database.

ORA-65281: application *string* does not exist in application root
Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB or application root having an application that does not exist in the application root where the statement was issued.

Action: Install the application in the application root where the statement is issued.

ORA-65282: Aborting PDB *string*'s instance recovery due to the progress of its SHUTDOWN ABORT operation
Cause: The instance recovery could not proceed as the pluggable database (PDB) was in the middle of the SHUTDOWN ABORT operation.

Action: None

ORA-65283: pluggable database *string* does not belong to the current container database
Cause: An attempt was made to perform an operation on a pluggable database that did not belong to the current multitenant container database (CDB) in the CDB fleet.

Action: Connect to the container database where the pluggable database was created to perform the operation.

ORA-65284: Version *string* for application *string* does not exist in application root
Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB or application root having an application that has a higher version than the application root where the statement was issued.

Action: Upgrade the application in the application root where the statement is issued.

ORA-65285: Status mismatch for application *string*
Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB or application root having an application that has a mismatch status between application PDB and the application root where the statement was issued.

Action: Uninstall the application in the application root where the statement is issued.

ORA-65286: object *string*.*string* cannot be made an extended data link
Cause: An attempt was made to change the sharing status of an object to extended data link when the object was of a type for which extended data links are not supported.

Action: Ensure that the object whose sharing status is to be changed to extended data link is of appropriate type.

ORA-65287: cannot set a common application context using a local package
Cause: An attempt was made to set a common application context using a local package.

Action: Associate the common application context with a common package.

ORA-65288: PDB archive file *string* already exists.
Cause: An attempt to create a pluggable database (PDB) archive file failed because a file with that name already exists.

Action: Use a different PDB archive file name.

ORA-65289: Application root cannot be relocated to another container database.
Cause: An attempt was made to relocate the root of an application container.

Action: None

ORA-65290: Application may not be altered.
Cause: An attempt was made to alter an application when the application pluggable database was not open.

Action: Open the application pluggable database and retry.

ORA-65291: invalid container map object
Cause: An attempt was made to assign an invalid container map object to container_map property of the database.

Action: Create the container map object with partition names corresponding to the multitenant container database (CDB) ROOT or application container ROOT and their pluggable databases. And the partition key for the container map object must be single column.

ORA-65292: invalid common data map object
Cause: An attempt was made to assign an invalid common data map object to common_data_map property of the database.

Action: Create the common data map object with partition names corresponding to the pluggable database (PDB) or application PDB and its multitenant container database ROOT or application container ROOT, respectively.

ORA-65293: Implicit users cannot own common objects.
Cause: An attempt was made to create a common object to be owned by an implicit user.

Action: Create a local object.

ORA-65294: PDB's compatible parameter value (*string*) is higher than CDB's compatible parameter value (*string*).
Cause: An attempt was made to plug in or clone from a pluggable database with a higher compatible parameter value than the compatible parameter value of the multitenant container database (CDB).

Action: Create a pluggable database with the same or lower compatible parameter value of the multitenant container database.

ORA-65295: service name or module name mismatch
Cause: An attempt was made to end an application action using a service name or module name that does not match the service name or module name that was in use when the application action was started.

Action: Use the right service name or module name before ending the application action.

ORA-65296: unable to create pluggable database
Cause: An attempt was made to create a proxy pluggable database with relocate clause specified.

Action: Create a proxy pluggable database without the relocate clause.

ORA-65297: operation not allowed inside an application action
Cause: An operation was attempted that can only be performed outside an application action (install, uninstall, upgrade, or patch).

Action: Perform the operation outside an application action.

ORA-65298: cannot create an application PDB in an application root which is an unconverted non-CDB
Cause: An attempt was made to create an application pluggable database (PDB) in an application root which was created by plugging in a non-multitenant container database (non-CDB) without first running noncdb_to_pdb.sql script.

Action: Run the noncdb_to_pdb.sql script in the application root first.

ORA-65299: cannot grant or revoke a privilege to or from multiple grantees
Cause: A GRANT or REVOKE statement was issued specifying more than one grantee on an application pluggable database (PDB).

Action: If trying to grant or revoke a privilege on a PDB, specify only one grantee at a time in the GRANT or REVOKE statement.

ORA-65300: PDB common_user_prefix conflicts with common_user_prefix in CDB.
Cause: An attempt was made to set the 'common_user_prefix' parameter in a pluggable database (PDB) that conflicts with the value of the same parameter in the multitenant container database (CDB.)

Action: Choose a different 'common_user_prefix' for PDB.

ORA-65310: blocked by COMMON_SCHEMA_ACCESS lockdown
Cause: An attempt was made to run an AUTHID CURRENT_USER function or procedure, or to reference a BEQUEATH CURRENT_USER view, that is not safe under the COMMON_SCHEMA_ACCESS lockdown.

Action: Either do not call the function or procedure or reference the view, or adjust the definition of the function, procedure, or view to satisfy the requirements of COMMON_SCHEMA_ACCESS lockdown.

ORA-65311: cannot modify the common object of another application
Cause: An attempt was made to modify a common object that was created by another application.

Action: Modify the object using the same application as the one that created the object.

ORA-65312: The password of the application common user has expired and cannot be changed.
Cause: The password of the application common user had expired and needed to be changed in order to successfully log in to application containers. But the application ROOT container's application status did not allow this operation to succeed either because: - An implicit application common user was attempting to change the password from within an explicit application action. - A non-implicit application common user was attempting to change the password from within an implicit application action.

Action: Either begin an explicit application action for changing the password of a non-implicit application common user or try changing the implicit application common user's password inside an implicit application action and then try logging in or contact the DBA.

ORA-65313: cannot synchronize application in a proxy pluggable database without being in a SYSDBA session
Cause: An attempt was made to synchronize an application containing statements executed from a privileged session.

Action: Synchronize the application as SYSDBA.

ORA-65314: cannot use NOCOPY when plugging in a PDB using an archive file
Cause: An attempt was made to create a pluggable database (PDB) using an archive file using the NOCOPY clause.

Action: Specify COPY or MOVE and retry the plugin operation.

ORA-65315: invalid path specified for file - *string*
Cause: An attempt was made to use a file name that did not start with PATH_PREFIX for the pluggable database.

Action: Specify a file name that is under the PATH_PREFIX directory for the pluggable database.

ORA-65316: bad file name specified
Cause: An attempt was made to use an invalid file name as an argument.

Action: Specify a valid file name and retry the operation.

ORA-65317: cannot modify the user or role created by another application
Cause: An attempt was made to modify a user or a role that was created by another application. This can also happen when connected to an Application container and DBMS_PDB.SET_USER_EXPLICIT or DBMS_PDB.SET_ROLE_EXPLICIT procedure was invoked with the following type of users and roles: - Pluggable Database (PDB) Administrative user, that is, a user who has been granted PDB_DBA role inside the PDB. - The out-of-box Oracle supplied common users or roles. - Container Database (CDB) Common Users and roles, that is, users and roles created at CDB$ROOT container.

Action: Modify the user or role using the same application as the one that created the user or role. Do not try invoking SET_USER_EXPLICIT or SET_ROLE_EXPLICIT procedures in DBMS_PDB package against CDB common users or roles and PDB Administrative users.

ORA-65318: query to cross-container fixed tables not allowed
Cause: An attempt was made to query the cross-container fixed tables.

Action: Avoid querying the cross-container fixed tables.

ORA-65319: DML on CONTAINERS() specified an unsupported CON_ID predicate
Cause: A DML on CONTAINERS() included the CON_ID predicate in an OR chain or in an in-list.

Action: Specify the CON_ID predicate within an AND chain and without an in-list.

ORA-65320: value of CON_ID is not known for DML on CONTAINERS()
Cause: A DML on CONTAINERS() included multiple CON_ID predicates, or the single CON_ID predicate specified a value that is not a constant or a bind.

Action: Specify a single CON_ID predicate as a constant or a bind.

ORA-65321: CON_ID column cannot be updated for CONTAINERS()
Cause: A DML on CONTAINERS() attempted to set a value for the CON_ID column.

Action: Do not set a value for the CON_ID column for CONTAINERS().

ORA-65322: invalid application patch specified
Cause: An attempt was made to use an invalid application patch.

Action: Specify a valid application patch.

ORA-65323: cannot create or set an object table or object view as a data link or extended data link
Cause: An attempt was made to create or set an object table or an object view as a data link or an extended data link.

Action: Create or set the object table or object view as a metadata link.

ORA-65324: An invalid value is specified in an ALTER PLUGGABLE DATABASE CONTAINERS DEFAULT TARGET or ALTER DATABASE CONTAINERS DEFAULT TARGET statement.
Cause: An invalid value is specified in an ALTER PLUGGABLE DATABASE CONTAINERS DEFAULT TARGET or ALTER DATABASE CONTAINERS DEFAULT TARGET statement.

Action: Specify a valid pluggable database (PDB) name or NONE in the ALTER PLUGGABLE DATABASE CONTAINERS DEFAULT TARGET or ALTER DATABASE CONTAINERS DEFAULT TARGET statement.

ORA-65325: DML on CONTAINERS() cannot be performed outside the CDB root or application root.
Cause: An attempt was made to perform DML on CONTAINERS() outside the multitenant container database (CDB) root or an application root.

Action: Perform DML on CONTAINERS() in the CDB root or in an application root.

ORA-65326: cannot query an object table or object view using CONTAINERS()
Cause: An attempt was made to query an object table or object view using CONTAINERS().

Action: Query the object table or object view without using CONTAINERS().

ORA-65327: cannot modify the sharing property of an object outside an application action
Cause: An attempt was made to modify the sharing property of an object outside an application action.

Action: Begin the application action.

ORA-65328: cannot end an application action in the current session
Cause: An attempt was made to end an application action in a manner that is inconsistent with the order in which sessions will be replayed during application SYNC.

Action: Start a new session to end the application action.

ORA-65329: cannot run pdb_to_apppdb.sql unless pluggable database is an unconverted application pluggable database
Cause: An attempt was made to run 'pdb_to_apppdb.sql' on a pluggable database (PDB) that was not an unconverted application PDB.

Action: 'pdb_to_apppdb.sql' is not necessary for this PDB.

ORA-65330: cannot synchronize an application before pdb_to_apppdb.sql is executed
Cause: An attempt was made to synchronize an application in an unconverted application PDB before running 'pdb_to_apppdb.sql'.

Action: Run 'pdb_to_apppdb.sql' in the unconverted application PDB.

ORA-65331: DDL on a data link table is outside an application action.
Cause: DDL on a data link table was attempted outside an application action.

Action: Begin the application action before the DDL.

ORA-65332: DDL on an extended data link table is outside an application action.
Cause: DDL on an extended data link table was attempted in an application root outside an application action.

Action: Begin the application action before the DDL.

ORA-65333: cannot purge an application that is installed on application PDB
Cause: An attempt was made to purge an application that was installed in one or more application pluggable databases (PDBs).

Action: Drop the installed application PDB before purging.

ORA-65334: invalid number of PDBs specified
Cause: An attempt was made to either set the MAX_PDBS database property to an invalid number or the number of current pluggable databases (PDBs) exceeds the number specified.

Action: Specify a valid value which is greater than the current number of existing PDBs.

ORA-65335: application action for application *string* has not started
Cause: An attempt was made to end an application action using an incorrect application name.

Action: Use the correct application name.

ORA-65336: incorrect application patch number specified
Cause: An attempt was made to end an application action using an incorrect application patch number.

Action: Use the correct application patch number.

ORA-65337: cannot modify the profile created by another application
Cause: An attempt was made to modify a profile that was created by another application. This can also happen when connected to an Application container and DBMS_PDB.SET_PROFILE_EXPLICIT procedure was invoked and input profile type was either of the following: - The out-of-the-box Oracle supplied local profiles (DEFAULT and ORA_STIG_PROFILE). - Container Database (CDB) Common Profiles, that is, profiles created at CDB$ROOT Container.

Action: Modify the profile using the same application as the one that created the profile. Do not try invoking DBMS_PDB.SET_PROFILE_EXPLICIT procedure against Oracle supplied local profiles or CDB Common profiles.

ORA-65338: unable to create pluggable database
Cause: An attempt was made to relocate a pluggable database using a database link to the source pluggable database.

Action: Use a database link that points to the source multitenant container database root and retry the operation.

ORA-65339: unsupported operation on the source PDB
Cause: An unsupported operation was performed on the source pluggable database, which rendered the target PDB invalid.

Action: Re-create the target PDB.

ORA-65340: invalid application compatibility version
Cause: An attempt was made to set the compatibility version of an application to a version higher than that of one of the PDBs.

Action: Set a higher compatibility version.

ORA-65341: cannot open pluggable database in read/write mode
Cause: An attempt was made to open a refreshable pluggable database in read/write mode.

Action: Open the refreshable clone in read-only mode or modify the refresh mode to NONE and retry the operation.

ORA-65342: source pluggable database *string* has unrecovered transaction
Cause: The source pluggable database had an active transaction when it was closed.

Action: Open the pluggable database in read/write mode so that transaction recovery can be performed. End XA transaction.

ORA-65343: cannot unplug pluggable database *string*
Cause: An attempt was made to unplug a pluggable database that was previously unplugged.

Action: Drop the pluggable database to finish the unplug operation.

ORA-65344: cannot uninstall or purge an application that has objects, users, roles, and profiles
Cause: An attempt was made to uninstall or purge an application that had objects, users, roles, and profiles.

Action: Drop all objects, users, roles, and profiles that belong to the application.

ORA-65345: cannot refresh pluggable database
Cause: The foreign archive log required for refreshing the pluggable database was not found.

Action: Re-create the refresh pluggable database and ensure that archive logging is enabled for the source multitenant container database (CDB).

ORA-65346: The PDB version is lower and components (*string*) are missing in CDB.
Cause: An attempt was made to plug in a pluggable database (PDB) that has a lower version and has more components than the multitenant container database (CDB) or the application root.

Action: Install the missing components in CDB or the application root before plugging in the PDB.

ORA-65347: cannot downgrade database that has proxy pluggable databases or application containers
Cause: There were proxy pluggable databases or application containers in the database.

Action: Prior to downgrade, drop the proxy pluggable databases and application containers.

ORA-65348: unable to create pluggable database
Cause: An attempt was made to relocate a pluggable database with availability max clause using a target pluggable database name which is different from source pluggable database name.

Action: Use source pluggable database name as the target pluggable database name.

ORA-65349: unable to create pluggable database
Cause: An attempt was made to relocate a pluggable database with availability max and service_name_convert clauses together.

Action: Do not use service_name_convert clause when relocating with the availability max clause.

ORA-65350: cannot run approot_to_pdb.sql
Cause: An attempt was made to run 'approot_to_pdb.sql' on a pluggable database (PDB) that was already converted to a regular PDB.

Action: 'approot_to_pdb.sql' is not necessary for this PDB.

ORA-65351: invalid partition (%0!s) access with partition map size %1!s
Cause: An attempt was made to access an invalid partition using the CONTAINERS() clause.

Action: Contact Oracle Support Services.

ORA-65352: Query across containers cannot have an ancillary operator.
Cause: An ancillary operator was used with a data link, extended data link, or CONTAINERS() clause.

Action: Remove the ancillary operator in the query.

ORA-65353: The *string* tablespace is missing from the XML metadata file.
Cause: An attempt was made to plug in a pluggable database (PDB) using an XML file that does not contain the SYSTEM, SYSAUX or undo tablespace specifications.

Action: Check and correct the XML metadata file. If the XML metadata file is missing undo tablespaces, you may need to be regenerate the XML using a more recent patchset.

ORA-65355: cannot allocate PDB SGA memory
Cause: The multitenant container database (CDB) did not have sufficient system global area (SGA) memory available to open the pluggable database (PDB). *Result: Increase the CDB SGA size or dismount a PDB to free CDB SGA memory.

Action: n/a

ORA-65356: missing or invalid value for lead_cdb_uri
Cause: An attempt was made to specify an incorrect value for lead_cdb_uri. The lead_cdb_uri value can either specify the host name, port number and service name for the lead multitenant container database (CDB), or the value can specify a database link object name in the current CDB which connects to the lead CDB in the fleet.

Action: Specify a valid value for lead_cdb_uri.

ORA-65357: lead_cdb_uri and lead_cdb cannot be specified in the same CDB
Cause: An attempt was made to specify the lead_cdb_uri property in the multitenant container database (CDB) where the lead_cdb property is set to TRUE or vice versa.

Action: Specify lead_cdb or lead_cdb_uri property in the CDB.

ORA-65358: PDB *string* is not a template PDB
Cause: The PDB specified was not a template pluggable database (PDB) and thus pdb_template cannot be set to this PDB.

Action: Set pdb_template to a template PDB.

ORA-65359: unable to create pluggable database with no data
Cause: An attempt was made to clone a pluggable database that was opened in read/write mode.

Action: Retry the clone operation after the source pluggable database is in read-only mode.

ORA-65360: unable to switchover
Cause: An attempt was made to switchover a pluggable database (PDB) using a database link that pointed to the source pluggable database.

Action: Use a database link that points to the source multitenant container database root and retry the operation.

ORA-65361: pluggable database *string* is not a refresh copy
Cause: An attempt was made to switchover to a pluggable database (PDB) which was not marked as a refresh copy.

Action: Switchover operation is allowed only with a target refreshable clone PDB.

ORA-65362: pluggable database *string* is not a refresh copy of the source pluggable database
Cause: An attempt was made to switchover to a pluggable database (PDB) which was not marked as a refresh copy of the source pluggable database (PDB).

Action: Switchover operation is allowed only between a refreshable clone and its primary PDB.

ORA-65363: pluggable database *string* not enabled for snapshots
Cause: An attempt was made to snapshot a pluggable database (PDB) which was created with snapshots disabled.

Action: Retry the operation after changing the snapshot mode of the PDB.

ORA-65364: snapshot not found
Cause: An attempt was made to create a pluggable database (PDB) using a snapshot or to drop a snapshot that could not be found.

Action: Check DBA_PDB_SNAPSHOTS for all existing PDB snapshots and retry the operation.

ORA-65365: unable to create pluggable database
Cause: An attempt was made to create a pluggable database (PDB) using a snapshot when Oracle Managed Files (OMF) was not enabled or if the CREATE_FILE_DEST clause was not specified.

Action: Enable OMF or specify CREATE_FILE_DEST clause and retry creating the pluggable database.

ORA-65366: snapshot already exists
Cause: An attempt was made to create a snapshot of a pluggable database (PDB) using a name that already existed.

Action: Specify a different name and retry the operation.

ORA-65367: unable to switchover
Cause: An attempt was made to switch over a pluggable database (PDB) that was not a normal pluggable database that could be opened in read/write mode.

Action: Switchover operation is allowed only with a source PDB in NORMAL status.

ORA-65368: unable to open the pluggable database due to errors during recovery
Cause: Recovery was required prior to opening the pluggable database, but an error during recovery was determined to be fatal enough to end both the recovery and the open operation.

Action: More specific messages accompany this message. Refer to the accompanying messages for the appropriate action.

ORA-65369: The key column for the container map object has multiple values for each partition.
Cause: An attempt was made to generate logical partitioning key values using a container map object that had multiple values for each partition.

Action: Specify a container map object that has a single value for each partition and retry the operation.

ORA-65370: *string* initialization parameter cannot be specified in a lockdown profile
Cause: An attempt was made to specify an illegal initialization parameter in a lockdown profile.

Action: Do not specify this initialization parameter in a lockdown profile.

ORA-65371: *string* initialization parameter cannot be modified in a template pluggable database
Cause: An attempt was made to modify an illegal initialization parameter inside a template pluggable database (PDB).

Action: Do not modify this initialization parameter inside a template PDB.

ORA-65372: Initialization parameter %0!s cannot be modified when initialization parameter %1!s is already set.
Cause: An attempt was made to set the PDB_LOCKDOWN initialization parameter along with the PDB_TEMPLATE initialization parameter.

Action: Reset the PDB_LOCKDOWN initialization parameter before setting the PDB_TEMPLATE initialization parameter or RESET the PDB_TEMPLATE initialization parameter before setting the PDB_LOCKDOWN initialization parameter.

ORA-65373: operation not allowed in a template PDB
Cause: The specified operation was not allowed in a template pluggable database (PDB).

Action: Do not perform this operation in a template PDB.

ORA-65374: cannot set PDB_LOCKDOWN initialization parameter to an application lockdown profile
Cause: An attempt was made to set the PDB_LOCKDOWN initialization parameter to an application lockdown profile when the PDB_LOCKDOWN initialization parameter was already set to a container database (CDB) lockdown profile.

Action: If PDB_LOCKDOWN initialization parameter is being set in an application pluggable database (PDB), contact the CDB administrator. If PDB_LOCKDOWN initialization parameter is being set in an application ROOT, set the PDB_LOCKDOWN initialization parameter in the required application PDBs.

ORA-65375: cannot set PDB_TEMPLATE initialization parameter to an application template *string*
Cause: An attempt was made to set the PDB_TEMPLATE initialization parameter to an application template when the PDB_TEMPLATE initialization parameter was already set to a multitenant container database (CDB) template.

Action: If the PDB_TEMPLATE initialization parameter is being set in an application pluggable database (PDB), contact the CDB administrator. If the PDB_TEMPLATE initialization parameter is being set in an application ROOT, set the PDB_TEMPLATE initialization parameter in the required application PDBs.

ORA-65376: unable to refresh the PDB
Cause: A conflicting operation was in progress in the source pluggable database (PDB) for the refresh clone.

Action: Retry the operation later.

ORA-65377: parameter cannot be modified
Cause: An attempt was made to modify an in-memory value for the SGA_TARGET parameter with pluggable database isolation mode enabled.

Action: Do not modify an in-memory value for the SGA_TARGET parameter in PDB isolation mode.

ORA-65378: illegal use of ALTER SYSTEM clause '*string*' in the template pluggable database(PDB)
Cause: An invalid clause was used in an ALTER SYSTEM operation.

Action: Choose a valid clause and retry the operation.

ORA-65379: application *string* is in transient state
Cause: An attempt was made to unplug an application pluggable database (PDB), which had unfinished application action.

Action: Fix the application state in the application pluggable database (PDB) before unplugging the database.

ORA-65380: unable to materialize
Cause: An attempt was made to materialize a pluggable database (PDB) that was not created as a snapshot copy.

Action: Retry the operation on a PDB created as a snapshot copy.

ORA-65381: unable to rename application root
Cause: An attempt was made to rename an application root that has one or more open application PDBs.

Action: Close all application PDBs and retry the operation.

ORA-65382: operation cannot be performed when subscribed template PDB is not open
Cause: The template pluggable database (PDB) to which the current PDB was subscribed was not open.

Action: Open the template PDB that the current PDB was subscribed to before opening the current PDB.

ORA-65383: unable to set MAX_PDB_SNAPSHOTS property to greater than *string*
Cause: An attempt was made to set the MAX_PDB_SNAPSHOTS property to a higher value than the allowed maximum.

Action: Retry the operation with a lower value.

ORA-65384: missing or invalid property
Cause: The issued operation had a missing property name or the property specified was invalid or not found in the database.

Action: Retry the operation with a valid property name.

ORA-65385: missing or invalid value for property
Cause: The issued operation had a missing property value or the property value specified was invalid.

Action: Retry the operation with a valid property value.

ORA-65386: unable to alter property
Cause: An attempt was made to specify a property that could not be altered using ALTER DATABASE PROPERTY or ALTER PLUGGABLE DATABASE PROPERTY statement.

Action: Retry the operation with a different property name.

ORA-65387: unable to create pluggable database with the specified USER_TABLESPACES clause
Cause: An attempt was made to create a pluggable database using an XML file that was generate with DBMS_PDB.RECOVER and all tablespaces were not included.

Action: Retry the operation with all tablespaces and regenerate the XML using unplug and then redo the subset clone.

ORA-65388: PARTITION_CONTAINED only supported in subset cloning
Cause: An attempt was made to use PARTITION_CONTAINED clause outside subset cloning.

Action: Either specify the USER_TABLESPACES clause or remove the PARTITION_CONTAINED clause.

ORA-65389: unable to clone pluggable database
Cause: An attempt was made to create a refreshable clone of a pluggable database (PDB) or relocate a PDB from a standby database.

Action: Retry the operation using a source PDB that is part of a primary database.

ORA-65390: unable to mark the application object as specific Link
Cause: An attempt was made to use SET_SHARING_NONE, SET_METADATA_LINKED, SET_DATA_LINKED, or SET_EXT_DATA_LINKED on an object of an incompatible sharing mode.

Action: Do not mark a metadata, data, or extended data-linked object with an incompatible sharing mode.

ORA-65391: violation of container map partitions
Cause: An attempt was made to insert or update a row in a container map enabled table that violated the partitions of the container map.

Action: Insert or update a row that does not violate the partitions of the container map.

ORA-65392: object column is accessed in a fleet proxy pluggable database
Cause: An attempt was made to access an object column in a fleet proxy Pluggable Database (PDB).

Action: Remove the object column from the query.

ORA-65393: Media recovery to SCN *string* must be performed in mount mode.
Cause: One or more pluggable databases could not be recovered by the RESETLOGS operation because the Oracle Active Data Guard standby database was still open.

Action: Close Oracle Active Data Guard standby database and restart media recovery.

ORA-65394: LIBRARY does not use a DIRECTORY object
Cause: The LIBRARY objects did not use a DIRECTORY object for the pluggable database (PDB) with a defined PATH_PREFIX.

Action: Re-create LIBRARY objects in the database to use a DIRECTORY object.

ORA-65395: constraint cannot be added
Cause: An attempt was made to add a referential integrity constraint from a table to a data-linked or an extended data-linked table.

Action: Add the referential integrity constraint in NOVALIDATE mode.

ORA-65396: A linked tablespace cannot be altered to READ WRITE status.
Cause: An attempt was made to alter a linked tablespace to READ WRITE status.

Action: None

ORA-65397: cannot open pluggable database in read/write mode
Cause: An attempt was made to open a pluggable database with files in object store in read/write mode.

Action: Open the pluggable database with files in object store in read-only mode and retry the operation.

ORA-65398: cannot change password in an upgrade or uninstall block
Cause: An attempt was made to change password in an upgrade or uninstall block.

Action: Do not change password in an upgrade or uninstall block.

ORA-65399: cannot set object table, external table, hybrid partitioned table or object view with CONTAINER_DATA clause
Cause: An attempt was made to create or alter an object table, an external table, a hybrid partitioned table, or an object view with a CONTAINER_DATA clause.

Action: Do not use the CONTAINER_DATA clause when creating or alterring an object table, external table, hybrid partitioned table, or an object view.

ORA-65400: Table does not have CLUSTERING clause associated with it
Cause: User attempts to modify clustering clasue on a table that that does not have one.

Action: Create CLUSTERING clause on the table first.

ORA-65402: invalid option on CLUSTERING clause
Cause: Invalid option on CLUSTERING clause. Only [YES | NO] ON LOAD or [YES | NO] ON DATA MOVEMENT are valid.

Action: Correct the option on the CLUSTERING clause.

ORA-65403: invalid usage of CLUSTERING clause
Cause: Invalid usage of CLUSTERING clause. The clause can be specified only for [CREATE | ALTER] [TABLE | SNAPSHOT | MATERIALIZED VIEW]

Action: Do not use the CLUSTERING clause in this statement.

ORA-65404: CLUSTERING clause specified more than once on a table
Cause: A table can have only one clustering clause. The clasue was specified multiple times.

Action: Correct the statement to use only one CLUSTERING clause.

ORA-65405: CLUSTERING clause cannot be used with existing table options
Cause: The CLUSTERING clause conflicted with other clauses on the table. The CUSTERING clause cannot be used with IOT, CLUSTERED, GLOBAL TEMPORARY TABLE, or the EXTERNAL TABLE clause.

Action: Correct the statement so the CLUSTERING clause does not conflict with other clauses.

ORA-65406: invalid option on CLUSTERING clause
Cause: The CLUSTERING clause was not followed by the BY [LINEAR | INTERLEAVED] ORDER option.

Action: Correct the option on the CLUSTERING clause.

ORA-65407: CLUSTERING clause already exists on the table
Cause: The ADD CLUSTERING clause was specified on a table with an existing CLUSTERING clause.

Action: If the table has a CLUSTERING clause, you can only change the ON LOAD or ON DATA MOVEMENT options. To change other options, you must first drop the clause.

ORA-65408: CLUSTERING clause has too many columns in the BY ORDER subclause
Cause: More than 10 columns were specified in the BY ORDER subclause. You can have at most 10 columns in the BY ORDER subclause.

Action: Lower the number of columns in the BY ORDER subclause to a value of 10 or less.

ORA-65409: CLUSTERING clause has too many INTERLEAVED columns or groups
Cause: More than 40 columns or more than 4 groups were specified in the BY INTERLEAVED ORDER subclause. You can have at most 40 columns and at most 4 groups in the INTERLEAVED ORDER subclause.

Action: Lower the number of columns to 40 or less, and lower the number of groups to 4 or less in the BY INTERLEAVED ORDER subclause.

ORA-65410: CLUSTERING clause can have only scalar columns
Cause: A non-scalar column was specified in the BY [LINEAR | INTERLEAVED] ORDER subclause. Also, virtual or hidden columns are not allowed.

Action: Specify only scalar columns in the BY [LINEAR | INTERLEAVED] ORDER subclause.

ORA-65411: CLUSTERING clause does not exist
Cause: An attempt was made to modify or drop a CLUSTERING clause in a table that had no CLUSTERING clause associated with it.

Action: Do not attempt to modify a nonexistent CLUSTERING clause.

ORA-65412: invalid option on ALTER TABLE .. CLUSTERING ..
Cause: You specified an invalid option on ALTER TABLE...CLUSTERING. For example, you specified DROP and ADD CLUSTERING in one statement.

Action: Correct the statement.

ORA-65413: cannot resolve referenced object in the CLUSTERING clause
Cause: An object was referenced in the CLUSTERING clause that could not be resolved to a base table reference.

Action: The CLUSTERING clause can refer to base tables only.

ORA-65414: column resolves to multiple tables in the CLUSTERING clause
Cause: A column resolved to multiple tables in the CLUSTERING clause.

Action: Correct the statement. The column should resolve to only one table. The table name should be qualified with its owner name.

ORA-65415: wrong join condition in the CLUSTERING clause
Cause: The CLUSTERING clause had an OR condition and the individual join condition on the base table columns was not an equijoin.

Action: Correct the statement. Ensure that join conditions are equijoins and there are no OR conditions, or no expressions in the join.

ORA-65416: multiple dimension tables in the CLUSTERING clause
Cause: Joins in the CLUSTERING clause referenced a dimension table more than once.

Action: Correct the statement. Remove one of the references.

ORA-65417: illegal dimension table in the CLUSTERING clause
Cause: The dimension table in the CLUSTERING clause was illegal. Dimension table cannot be GLOBAL TEMPORARY TABLE or EXTERNAL TABLE.

Action: Rewrite the statement so it does not use an illegal option on the dimension table.

ORA-65418: primary or unique key constraint missing in CLUSTERING join
Cause: The join between the fact and dimension tables in the CLUSTERING clause did not have a primary or unique key constraint on the dimension table join column(s).

Action: Add a primary or unique key constraint to the join column(s) on the dimension table.

ORA-65419: columns in a clustering group come from different tables
Cause: Columns in the clustering group did not come from the same table. For example: .. CLUSTERING BY ..((t1.c1, t2.c2), (t2.c1, t2.c2)). Clustering group (t1.c1, t2.c2) must contain references to only one table.

Action: Restructure the clustering group so it contains only references to a single table.

ORA-65420: columns in a join condition in the CLUSTERING clause are not compatible
Cause: The data type of columns in the join condition of CLUSTERING clause were not compatible. They must be of the same type.

Action: Select a compatible data type for the join conditions in the CLUSTERING clause.

ORA-65421: The CLUSTERING clause is defined on columns that are to be modified
Cause: An ALTER TABLE MODIFY COLUMN command was issued on a column on which a CLUSTERING clause exists.

Action: Drop the CLUSTERING clause before attempting to modify the column.

ORA-65422: The CLUSTERING clause already has a zonemap defined on it
Cause: An ALTER TABLE MODIFY CLUSTERING command was issued with the WITH MATERIALIZED ZONEMAP option but the table already had zonemap define on it.

Action: Drop the zonemap associated with the base table before attempting to add zonemap using the CLUSTERING clause.

ORA-65423: The CLUSTERING clause does not have a zonemap associated with it
Cause: An ALTER TABLE MODIFY CLUSTERING command was issued with the WITHOUT MATERIALIZED ZONEMAP option but the table did not have zonemap associated with the CLUSTERING clause.

Action: Do not use the ALTER TABLE MODIFY CLUSTERING WITHOUT ZONEMAP.

ORA-65424: CLUSTERING clause has too many joins
Cause: More than 4 joins were specified in the CLUSTERING clause. You can have at most 4 joins to the dimension tables.

Action: Reduce the number of joins to 4 or less.

ORA-65425: CLUSTERING clause not supported for table stored in tablespace of this storage type
Cause: An attempt was made to define clustering on a table stored in non-Oracle Exadata storage.

Action: Create this table in a tablespace residing on Oracle Exadata storage or remove the CLUSTERING clause.

ORA-65426: Non-scalar data type is used for a clustering column
Cause: Oracle cannot perform data clustering because an attempt was made to populate a clustering column with non-scalar data values, or a clustering column defaulted to non-scalar values was omitted.

Action: Use only scalar data type for the clustering columns, or disable data clustering with NO_CLUSTERING hint.

ORA-65427: A system-generated column or unused column is used in a join condition in the CLUSTERING clause.
Cause: An attempt was made to use a system-generated or unused column in a join condition in the CLUSTERING clause.

Action: Remove the system-generated or unused column in the join condition in the CLUSTERING clause.

ORA-65428: unable to create pluggable database with temporary tablespace files in object store
Cause: An attempt was made to create a pluggable database with temporary tablespace files in the object store.

Action: Create the pluggable database with local temporary tablespace files and retry the operation.

ORA-65429: PDB cannot be created
Cause: An attempt was made to clone a source pluggable database (PDB) stored in an object store using a database link.

Action: Specify the object store credential and retry the operation.

ORA-65430: Pluggable database *string* cannot be unplugged.
Cause: An attempt was made to unplug a pluggable database (PDB) stored in an object store using an invalid credential.

Action: Specify the same credential used for the PDB in object store and retry the operation.

ORA-65431: Pluggable database *string* cannot be unplugged.
Cause: An attempt was made to unplug a pluggable database (PDB) to object store without a credential.

Action: Specify the object store credential retry the operation.

ORA-65432: unable to read/write XML file in object store
Cause: An internal error occurred when reading or writing to XML file in object store.

Action: Contact Oracle Support Services.

ORA-65433: incomplete copy of source file - *string* (blocks *number* - *number*)
Cause: An attempt to copy a source file failed for the block ranges specified in the error message. The failure could be due to inability to access the source file.

Action: Verify the source file and retry the operation.

ORA-65451: Advanced index compression is not supported for tablespaces on this storage type.
Cause: An attempt was made to use advanced index compression on an unsupported storage type.

Action: Drop and re-create the index with a compression option that is supported on the current storage type.

ORA-65455: family *string* is invalid
Cause: An invalid family was used to specify a parameter value.

Action: Use a valid family.

ORA-65456: family *string* is not valid in *string* instance
Cause: The specified family could not be used in the current instance type.

Action: Remove the family from the environment variable ORACLE_FAMILY.

ORA-65457: family *string* is not valid in *string* instance
Cause: The specified family could ot be used in the current instance type.

Action: Use a family that is valid for this instance to set the initialization parameter.

ORA-65458: maximum length of parameter qualifier exceeded
Cause: Too many characters were specified in the parameter qualifier in the initialization parameter file.

Action: Change the parameter qualifier to a valid SID or family.

ORA-65459: family used with a specific system identifier (SID)
Cause: A SID was used with FAMILY.

Action: Use FAMILY without a SID.

ORA-65460: family *string* is invalid
Cause: An invalid family was specified for this instance in ORACLE_FAMILY.

Action: Use a valid family in ORACLE_FAMILY.

ORA-65461: invalid parameter name specified with CONTAINER clause set to ALL
Cause: The CONTAINER clause was set to ALL in the ALTER SYSTEM SET statement for a non-PDB modifiable or non-inheritable PDB parameter.

Action: Retry the ALTER SYSTEM SET statement without the CONTAINER clause.

ORA-65462: error while updating a dependent parameter '*string*'
Cause: An internal error was encountered while trying to update dependent parameter value.

Action: Contact Oracle Support Services.

ORA-65466: family '*string*' contains an illegal character or is too long
Cause: The specified family contained an illegal character or the family specified was too long, which cannot occur in an SPFILE setting. Illegal characters include *,#'"=() and whitespace.

Action: Use a family that does not contain a special character or whitespace. Check platform-specific documentation for the maximum length of family.

ORA-65470: unnecessary lost write command - lost write already in requested state
Cause: Lost write was already in the requested state. If enable or disable lost write was specified, then lost write was already in the enabled or disabled state.

Action: No action is necessary. This is an informational message only.

ORA-65471: LOST WRITE PROTECTION cannot be enabled on this type of tablespace.
Cause: LOST WRITE PROTECTION could not be enabled for lost write tablespaces or temporary tablespaces.

Action: Do not attempt to enable LOST WRITE PROTECTION for these types.

ORA-65472: invalid option for ALTER lost write TABLESPACE
Cause: An invalid option was specified while altering a LOST WRITE PROTECTION tablespace.

Action: Lost write tablespaces cannot be altered with clauses LOGGING, ENCRYPTION, REKEY, FLASHBACK, TEMPORARY, DEFAULT, or COMPRESS options.

ORA-65473: invalid option for FLASHBACK
Cause: An invalid option was specified while creating or altering a flashback tablespace.

Action: Lost write tablespaces cannot be used for flashback.

ORA-65474: lost write tablespace does not exist or has insufficient space or lost write is off
Cause: Enabling lost write protection could not succeed because the lost write tablespaces did not exist or had insufficient space. It is possible that shadow lost write was not enabled for the database.

Action: Create a lost write tablespace or add space to an existing lost write tablespace. Also, ensure that the shadow lost write protection is turned on for the database.

ORA-65476: could not get data file space header
Cause: There was an internal error code.

Action: Make sure the data file is online and the database is open.

ORA-65477: lost write protection - invalid state transition
Cause: The object that was manipulated could not be set to the requested state.

Action: Ensure that the state transition is valid.

ORA-65478: shadow lost write protection - found lost write
Cause: A lost write was found in a data block protected by lost write.

Action: The data block can be recovered to fix lost write.

ORA-65479: operation affecting a pluggable database cannot be performed from another pluggable database [*string*]
Cause: An attempt was made to perform an operation affecting a pluggable database while connected to a different pluggable database.

Action: Connect to the desired pluggable database and perform the operation.

ORA-65480: invalid option for CREATE TABLESPACE
Cause: An invalid option was specified while creating LOST WRITE PROTECTION tablespace.

Action: LOST WRITE PROTECTION cannot be specified with the DEFAULT, EXTENT MANAGEMENT, SEGMENT SPACE MANAGEMENT, FORCE, MINIMUM EXTENT, LOGGING, ENCRYPTION, TEMPORARY, UNDO, or FLASHBACK options.

ORA-65481: LOST WRITE PROTECTION option already specified
Cause: In CREATE TABLESPACE, the LOST WRITE PROTECTION option was specified more than once.

Action: Remove all but one of the LOST WRITE PROTECTION specifications.

ORA-65482: invalid option for CREATE TABLESPACE
Cause: An invalid option was specified while creating a tablespace.

Action: Review the syntax and reissue the command.

ORA-65483: invalid option for creation of LOST WRITE PROTECTION tablespace
Cause: The BIGFILE keyword was not specified while creating a LOST WRITE PROTECTION tablespace.

Action: Specify the BIGFILE keyword while creating a LOST WRITE PROTECTION tablespace.

ORA-65484: cannot specify LOST WRITE PROTECTION tablespace as default tablespace
Cause: An attempt was made to assign a LOST WRITE PROTECTION tablespace to be a user's default tablespace.

Action: Assign a permanent tablespace to be the default tablespace.

ORA-65485: cannot create user objects in LOST WRITE PROTECTION tablespace
Cause: An attempt was made to create user objects in a LOST WRITE PROTECTION tablespace. Other system objects such as rollback segments are also illegal.

Action: Create the object in a permanent tablespace.

ORA-65486: cannot specify a LOST WRITE PROTECTION tablespace as default tablespace
Cause: An attempt was made to assign a LOST WRITE PROTECTION tablespace to be a default tablespace.

Action: Assign a permanent tablespace to be the database default tablespace.

ORA-65487: Lost write tablespaces must all have the same block size.
Cause: A different block size was specified when a SHADOW LOST WRITE tablespace was created.

Action: Retry creating the lost write tablespace using the same block size as the other lost write tablespaces. If a duplicate tablespace name error is encountered then you may have to drop this tablespace using the SQL DROP TABLESPACE <tablespace_name> command.

ORA-65488: SHADOW LOST WRITE cannot be enabled on a standby database.
Cause: An attempt was made to enable SHADOW LOST WRITE on a standby database.

Action: SHADOW LOST WRITE can only be enabled on a primary database.

ORA-65489: Lost write tablespace cannot be enabled or created
Cause: An attempt was made to enable lost write when the database was not open or an access error occurred when attempting to access the new_lost_write_shadows$ dictionary table

Action: Enable SHADOW LOST WRITE or create a shadow tablespace when the database is open.

ORA-65490: invalid parameters for LOST WRITE PROTECTION tablespace
Cause: Invalid parameters were specified for a LOST WRITE PROTECTION tablespace. Only BIGFILE TABLESPACE, SIZE and BLOCKSIZE for a LOST WRITE PROTECTION tablespace can be specified upon creation. ALTER cannot be used to make a LOST WRITE PROTECTION tablespace read-only.

Action: Create the tablespace using the CREATE BIGFILE TABLESPACE *tablespace name* ... DATAFILE '<data_file_name>' SIZE *size* BLOCKSIZE <block_size> LOST WRITE PROTECTION statement.

ORA-65491: A lost write bigfile tablespace must exist before attempting to enable lost write
Cause: The lost write tablespace does not exist.

Action: Create the tablespace using the CREATE BIGFILE TABLESPACE <tablespace_name> ... DATAFILE '<datafile_name>' SIZE *size* BLOCKSIZE *size* LOST WRITE PROTECTION statement;

ORA-65492: Cannot get data file space header
Cause: An internal error occurred.

Action: Try disabling the lost write protection and then create the lost write tablespace again using the CREATE BIGFILE TABLESPACE *tablespace name* DATAFILE '<datafile_name>' SIZE *size* BLOCKSIZE *size* LOST WRITE PROTECTION. You may have to drop the lost write tablespace first on which this command failed.

ORA-65493: cannot shrink a lost write tablespace
Cause: An attempt was made to shrink a lost write tablespace.

Action: Lost write tablespaces cannot be shrunk. The drop can either drop all tracking data or move it to another lost write tablespace.

ORA-65494: LOST WRITE PROTECTION could not write to or read dictionary tables or inconsistent dictionary tables.
Cause: There was an internal error in lost write subsystem. The SYSAUX tablespace may be inaccessible or full.

Action: Check the SYSAUX tablespace first. If the SYSAUX tablespace is OK then this is an internal error.

ORA-65495: LOST WRITE PROTECTION could not create shadow tablespace.
Cause: There was an internal error in lost write subsystem.

Action: Drop the lost write shadow tablespace just created using the SQL DROP TABLESPACE <tablespace_name> ... command.;

ORA-65496: Lost write tables are inconsistent. Delete may have occurred.
Cause: One of the lost write tracking tables was inconsistent. A parallel operation may have caused this problem.

Action: If lost write tracking is working properly, then this error can be ignored.

ORA-65498: SHADOW LOST WRITE tablespace could not be dropped.
Cause: An internal error occurred when performing drop side effects

Action: The lost write tablespace should still be operational. Contact Oracle Support Services.

ORA-65499: Illegal SHADOW LOST WRITE operation on a read-only database
Cause: The attempted lost write operation is prohibited on a read-only database.

Action: Set the database to read/write before performing this command.

ORA-65500: could not modify DB_UNIQUE_NAME, resource exists
Cause: DB_UNIQUE_NAME could not be modified, because a database resource identified by DB_UNIQUE_NAME existed in the cluster. To modify DB_UNIQUE_NAME, any resource it identifies must first be removed.

Action: Remove the database resource identified by DB_UNIQUE_NAME before modifying DB_UNIQUE_NAME.

ORA-65501: locator from *string* container cannot be used in container *string* for this operation
Cause: In a pluggable database environment, an attempt was made to modify a LOB using a locator which belongs to a different container.

Action: Switch back to the original container.

ORA-65502: cannot access temporary LOB data
Cause: The database did not open.

Action: Open the database before accessing LOB data.

ORA-65503: cannot send or receive temporary LOB locators over a database link
Cause: An attempt was made to send or receive a temporary LOB locator over a database link.

Action: Do not send or receive a temporary LOB locator over a database link.

ORA-65504: cannot send or receive LOB locators from an index-organized table over a database link
Cause: An attempt was made to send or receive a temporary LOB locator from an index-organized table over a database link.

Action: Do not send or receive a LOB locator from an index-organized table over a database link.

ORA-65505: cannot pass a remote LOB locator as parameter to this operation
Cause: An attempt was made to pass a remote LOB locator as a parameter to a LOB operation which does not accept a remote LOB locator.

Action: Do not pass a remote LOB locator as a parameter to this operation.

ORA-65506: cannot pass LOB locators belonging to different databases
Cause: An attempt was made to pass LOB locators belonging to different databases as parameters to the same LOB operation.

Action: Ensure that all of the LOB locator parameters belong to the same database.

ORA-65507: cannot select a LOB locator across multiple database links
Cause: An attempt was made to select from a remote database, a LOB locator which was obtained by the remote from another remote database.

Action: Ensure that the locator which is selected from a remote database belongs to that remote database.

ORA-65508: cannot send or receive an invalid LOB locator over database link
Cause: An attempt was made to send or receive an invalid LOB locator over a database link.

Action: Ensure that the locator which is sent to a remote database or received from a remote database is a valid locator.

ORA-65509: Cannot use remote LOBs in INSERT AS SELECT DMLs with INSTEAD OF triggers.
Cause: An attempt was made to perform an operation INSERT AS SELECT on a view with INSTEAD OF trigger on it and a remote LOB column in the select list.

Action: Do not use remote LOB locators in INSERT AS SELECT DMLs with INSTEAD OF triggers.

ORA-65510: Distributed LOB operations are not supported on pre-12.2 databases.
Cause: An attempt was made to send or receive a LOB locator over a database link to a pre-12.2 database.

Action: Ensure that the remote database for a distributed LOB operation is Oracle Database version 12.2 or higher.

ORA-65511: SQL statement executed on a remote database over a database link cannot access a LOB on the local database with parallel execution enabled on the remote side
Cause: This is likely the result of passing a local LOB locator as a bind value to a SQL statement that is executed on a remote database over a database link. For example, running the statement "INSERT INTO tabl1@@dblink VALUES (:1)" where the bind value is a local persistent LOB locator and parallel execution is enabled on the remote side.

Action: Disable parallel execution for the SQL statement on the remote database.

ORA-65512: cannot access temporary LOB from old incarnation of pluggable database *string*
Cause: When the pluggable database was closed, any temporary LOBs in it were freed. An attempt was made to access a freed LOB.

Action: Reinitialize the temporary LOB in the current incarnation of the pluggable database.

ORA-65531: maximum level reached in index segment with object id *string*
Cause: The attempted operation resulted in the number of index levels exceeding the maximum allowed.

Action: Reduce the size of the relevant index, for example, by using compression or partitioning.

ORA-65532: cannot alter or drop automatically created indexes
Cause: An attempt was made to alter or drop an automatically created index.

Action: Do not perform the action on an automatically created index.

ORA-65533: index coalesce on object *string* could not complete
Cause: An alter index coalesce command could not fully complete. Further coalescing may still be possible.

Action: Retry the coalesce in a quieter period when there is less DML activity against the table indexed.

ORA-65535: Oracle Database client cannot handle error code exceeding 65535. Actual error code and message follow:\n
Cause: Oracle Database clients earlier than release 12.1 could not handle error codes larger than 65535.

Action: Upgrade Oracle Database client library to release 12.1 or later.

100

ORADNFS-65000 to ORADNFS-65072

ORADNFS-65000: Permission denied. You are not a member of ORA_DBA group.
Cause: The ORADNFS utility was invoked by a user who was not in the ORA_DBA group.

Action: Add user of this utility to ORA_DBA group and retry, or log on as a different user (who is in the ORA_DBA group) and retry.

ORADNFS-65001: Currently this option is supported only on Windows.
Cause: The ORADNFS command was issued on an operating system other than Windows.

Action: Run this command only on Windows.

ORADNFS-65002: NFS initialization failed, error code: *number*.
Cause: NFS initialization failed. error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered. NEGATIVE ERROR EXAMPLES: - An impossible instance id. - context not initialized to zero. POSITIVE ERROR EXAMPLES: - Execution thread does not have privilege needed to access ODM. - Insufficient memory to allocate context

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65003: failed to query user's local groups in the system, error code: *number*
Cause: failed to query user's local groups in the system Error code Description- 0005 : The user does not have access rights to the requested information. This error is also returned if the servername parameter has a trailing blank. 0124 : The system call level is not correct. This error is returned if the level parameter was not specified as 0. 0087 : A parameter is incorrect. This error is returned if the flags parameter contains a value other than LG_INCLUDE_INDIRECT. 0234 : More entries are available. Specify a large enough buffer to receive all entries. 0008 : Insufficient memory was available to complete the operation. 2453 : The domain controller could not be found. 2221 : The user could not be found. This error is returned if the username could not be found. 1722 : The RPC server is unavailable. This error is returned if the servername parameter could not be found. access denied, not enough memory, no dc controller or many more

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65004: NFS registration failed, error code: *number*.
Cause: NFS registration failed, error code - 4 in case of error

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65005: Invalid value for parameter *string*.
Cause: Invalid input value entered for SEEK or SKIP.

Action: Enter only numeric values.

ORADNFS-65006: Invalid use. Refer to Help for valid use.
Cause: Invalid usage of command, either some argument may be missing or some invalid value might be entered for an input flag.

Action: Check the usage in help and pass correct arguments.

ORADNFS-65007: No oranfsodm19.dll in ORACLE_HOME\rdbms\lib\odm
Cause: oranfsodm19.dll missing in ORACLE_HOME\rdbms\lib\odm

Action: Run ORADNFS DNFSENABLE command to copy the DLL.

ORADNFS-65008: No oranfstab in ORACLE_HOME\dbs, file: *string*.
Cause: oranfstab file missing in ORACLE_HOME\dbs

Action: Run ORADNFS DNFSENABLE & ORADNFS MOUNT to create oranfstab.

ORADNFS-65009: DNFS is enabled.
Cause: DNFS is in enabled status for given ORACLE_HOME 1.oranfstab file present in ORACLE_HOME\dbs 2.oranfsodm19.dll present in ORACLE_HOME\rdbms\lib\odm 3.size of oranfstab is non zero

Action: None

ORADNFS-65010: DNFS is not enabled.
Cause: DNFS is not in enabled status for given ORACLE_HOME

Action: Confirm that - 1.oranfstab file present in ORACLE_HOME\dbs 2.oranfsodm19.dll present in ORACLE_HOME\rdbms\lib\odm 3.size of oranfstab is non zero

ORADNFS-65011: No entries found in oranfstab.
Cause: size of oranfstab is zero

Action: Use the ORADNFS MOUNT command to add appropriate entries to the oranfstab file.

ORADNFS-65012: failed to discover NFS path. error code: *number*
Cause: failed to discover NFS path, error code- 1 no common version found 2 file system not installed 3 permission to access ODM denied 4 some other error occured

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65013: failed to get statistics of file *string* on local file system
Cause: failed to get statistics of file on local file system

Action: Ensure that you have read access to the file and retry.

ORADNFS-65014: Filer *string* may not be defined in this system.
Cause: Filer may not be defined in this system

Action: None

ORADNFS-65015: failed to set attributes of file *string* on local file system
Cause: failed to change attributes of file on local file system

Action: Ensure that you have required access to change parameters of file and retry.

ORADNFS-65016: source file not specified
Cause: source file not specified in command line arguments

Action: Specify source file in command line and retry.

ORADNFS-65017: destination file not specified
Cause: destination file not specified in command line arguments

Action: Specify destination file in command line and retry.

ORADNFS-65018: warning: file *string* already exists
Cause: It's a warning message to user saying that destination already exists.

Action: None

ORADNFS-65019: No value specified for option -IF
Cause: Input filename not specified.

Action: Specify input filename and retry.

ORADNFS-65020: Invalid value:*number* entered for IBS.
Cause: Invalid value entered for IBS.

Action: Value of IBS must be less than COUNT,enter a valid value and retry.

ORADNFS-65021: Invalid value: *number* entered for SKIP parameter.
Cause: Invalid value entered for SKIP parameter.

Action: Enter a valid value for SKIP parameter and retry. Value of SKIP should be less than file size.

ORADNFS-65022: Operation failed.
Cause: this is a generic message which tells that the given command failed

Action: Examine the preceding error messages to determine the problem.

ORADNFS-65023: Operation completed successfully.
Cause: this is a generic message which tells that the given command succeeded

Action: None

ORADNFS-65024: invalid ORADNFS command verb
Cause: An unrecognized command verb or option was specified.

Action: Issue 'oradnfs' for information on command verbs.

ORADNFS-65025: Error in seeking file: *string*
Cause: Error in seeking file

Action: None

ORADNFS-65026: Could not open log file: *string* errno: *number*.
Cause: failed to open log file to write traces

Action: Ensure that a writable file system path is provided.

ORADNFS-65027: NFS I/O completion failed, errno: *number*
Cause: NFS I/O completion failed 2 timeout 4 waitlist complete 8 completion list full 16 no more active I/O

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65028: Not a directory: *string*.
Cause: given file is not a directory

Action: None

ORADNFS-65029: NFS file creation failed. file: *string* error code: *number*.
Cause: NFS file creation failed error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65030: NFS file deletion failed, file: *string* error code: *number*.
Cause: NFS file deletion failed, error code- 1 file is not an ODM file 2 file is identified so it is still in use 3 file has already been deleted

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65031: failed to read directory: *string*
Cause: failed to read directory

Action: review the system configuration and retry

ORADNFS-65032: failed to open directory on local file system: *string*
Cause: failed to open directory on local file system

Action: Ensure that you have read access to path provided and retry.

ORADNFS-65033: no value specified for option -OF
Cause: Output filename not specified.

Action: specify output filename and retry

ORADNFS-65034: failed to remove directory on local file system: *string*
Cause: failed to remove directory on local file system

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65035: failed to re-identify NFS file: error code: *number*
Cause: failed to re-identify NFS file error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65036: failed to identify NFS file: *string* error code: *number*
Cause: failed to identify NFS file, error code- 1 successfully identified the file 2 cannot be identified by ODM 3 no file exists with this path name

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65037: ORACLE_HOME not defined in environment
Cause: ORACLE_HOME not defined in environment

Action: Define ORACLE_HOME in environment and retry.

ORADNFS-65038: failed to delete file on local file system: *string*.
Cause: failed to delete file on local file system

Action: Ensure that you have write access to the path provided and retry.

ORADNFS-65039: missing required value for parameter *string*
Cause: value missing for -BS, -IBS, -OBS, -COUNT, -SEEK or -SKIP parameter BS means block size, it specifies the size of read and write I/O IBS means input block size, it specifies the size of read I/O OBS means output block size, it specifies the size of write I/O SEEK specifies the offset of destination file from where we should start writing SKIP specifies the offset from start of source file from where we should begin reading the file

Action: Specify the missing value of paramter and retry.

ORADNFS-65040: failed to get fully qualified user name
Cause: failed to get fully qualified user name for current user 0234 : The lpNameBuffer buffer is too small. The lpnSize parameter contains the number of bytes required to receive the name. 1355 : The domain controller is not available to perform the lookup 1332 : The user name is not available in the specified format.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65041: no value specified for option -P (parallel)
Cause: value missing for -P command line argument -p specifies the degree of parallelism done

Action: specify whether to use parallel I/O or not

ORADNFS-65042: failed to read nfs link, file: *string* error code: *number*
Cause: failed to read nfs link,error code- 1 symbolic link is not an ODM file 2 server error 3 symbolic link does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65043: failed to read NFS directory, error code: *number*
Cause: failed to read NFS directory, error code- 1 directory is not an ODM file 2 server error 3 directory does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65044: invalid trace level for component *string*
Cause: invalid trace level entered for kgodm, kgnfs, skgnfs or oradnfs

Action: Enter a value between 0-4 and retry

ORADNFS-65045: failed to resize NFS file: error code: *number*
Cause: failed to resize NFS file. error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65046: failed to commit NFS file. error code: *number*
Cause: failed to Commit NFS file error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: None

ORADNFS-65047: invalid size suffix multiplier
Cause: Invalid unit size entered for BS, IBS or OBS

Action: unit size must be one of w, B, k, KB, M, MB, G or GB. w - BS* 2 b,B - BS* 512 KB,kb - BS* 1000 K,k - BS* 1024 MB, mb - BS* 1000*1000 M,m - BS* 1024*1024 GB, gb - BS* 1000*1000*1000 G,g - BS* 1024*1024*1024 Eg: -BS 1M means 1*1024*1024 bytes is the block size for read and write I/O

ORADNFS-65048: failed to get statistics of NFS file, file: *string* error code: *number*
Cause: failed to get statistics of NFS file,error code- 1 file is not an ODM file 2 server error 3 file does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65049: File *string* does not exist on local file system.
Cause: File does not exist on local file system.

Action: None

ORADNFS-65050: failed to un-identify NFS file: *string* error code: *number*
Cause: failed to un-identify NFS file error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65059: error during validation of file specification *string*
Cause: Checks if input filename is of valid format or not. For example, if user is running the utility in Windows and if he gives Linux style '/' in file path, it will be converted to Windows style '' and processesed. In this case it will be considered positive validation and no error is returned. Likewise there are negative cases as well where error will be returned saying that validation failed

Action: Ensure that input filename is of valid format.

ORADNFS-65060: Failed to allocate requested amount of memory: *number* bytes.
Cause: Failed to allocate required memory.

Action: None

ORADNFS-65061: failed to open file *string* on local file system
Cause: failed to open file on local file system

Action: Ensure that you have write access to the path specified and retry.

ORADNFS-65062: failed to make directory on local file system, file: *string* errno: *number*.
Cause: failed to make directory on local file system

Action: Ensure that you have write access to the path specified and retry.

ORADNFS-65063: failed to make NFS directory: *string* errno:*number*
Cause: failed to make NFS directory,error code- 1 directory is not an ODM dir 2 server error 3 directory already exists

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65064: failed to copy oranfsodm19.dll to $OH\rdbms\lib\odm
Cause: failed to copy oranfsodm19.dll to $OH\rdbms\lib\odm

Action: Ensure that we have write access to $OH\rdbms\lib\odm.

ORADNFS-65065: failed to reap NFS I/O, errno: *number*
Cause: failed to reap NFS I/O 2 timeout 4 waitlist complete 8 completion list full 16 no more active I/O

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65066: failed to get information of NFS file, file: *string* errno: *number*
Cause: failed to get information of NFS file,errno- 1 file is not an ODM file 2 server error 3 file does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65067: failed to get attributes of NFS file: *string* errno: *number*
Cause: failed to get attributes of NFS file, errno- 1 file is not an ODM file 2 server error 3 nonexistant or stale file handle

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65068: failed to set attributes of NFS file: *string* errno: *number*
Cause: failed to set attributes of NFS file, errno - 1 file is not an ODM file 2 file server error 3 nonexistant or stale file handle

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65069: failed to remove NFS directory, file: *string* errno: *number*
Cause: failed to remove NFS directory, errno - 1 directory is not an ODM file 2 server error 3 directory has already been deleted 4 directory is still in use

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65070: failed to submit NFS I/O, errno: *number*
Cause: failed to submit NFS I/O, errno - 2 timeout 4 waitlist complete 8 completion list full 16 no more active I/O

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65071: Input path is DNFS enabled.
Cause: The NFS mount listed in oranfstab was a part of or matched the input path.

Action: None

ORADNFS-65072: Input path is not DNFS enabled.
Cause: The NFS mount listed in oranfstab was not a part of or did not match the input path.

Action: Ensure that the input path is specified in the mount location present in the oranfstab file.

101
PCC-02010 to PCC-02474

PCC-02010: found end-of-file while scanning string literal
Cause: A string in a SQL statement, which should be delimited by single quotation marks, was not terminated properly.

Action: Check that all strings are delimited.

PCC-02011: found identifier greater than 128 characters (truncated)
Cause: The precompiler found an identifier that was too long.

Action: Shorten the identifier. SQL identifiers should be limited to 128 characters.

PCC-02012: did not find matching quote for char constant
Cause: A character constant with a single quotation mark was not terminated.

Action: Terminate the character constant.

PCC-02013: unknown escape sequence
Cause: The precompiler found an escape sequence that it could not process inside a string literal. This error can arise when multibyte character strings that can contain shift-in or shift-out escape sequences are used.

Action: Correct the string representation.

PCC-02014: Syntax error at line *number*, column *number*, file *string*:\n
Cause: The precompiler detected an errorin C or embedded SQL syntax. This message is followd by a more specific error message.

Action: Correct the syntax error.

PCC-02015: unable to open include file
Cause: The precompiler could not open a header file that was specified using the #include preprocessor directive or the EXEC SQL INCLUDE statement. This can happen if the file specification is inaccurate or if read permission or read access rights on the file or on one or more of the directories in the path were not granted.

Action: Recheck that the file specification is correct, that the file exists, and that read permission has been granted so that the file can be read.

PCC-02016: Absolute path to included file, "*string*" exceeds the limit of *number* characters
Cause: The file name length specified exceeded the maximum length. Some operating systems have a maximum file name length.

Action: Use a file name of length less than or equal to the maximum platform specific file name length.

PCC-02017: unable to open output file
Cause: The precompiler could not open an output file. This could be a generated code output file(.c file) or a listing file. This message can result from many causes. For example:

o) A pathname for a specified output file contains a non-exixtent directory. o) An operating-system error occured because the file system or disk is full. o) Write permission on the specified directory or directories in the path do not exist.

Action: Track down the cause of the error, as suggested above, and correct it.

PCC-02018: found end-of-file while scanning comment
Cause: A C comment either in C code or in an embedded SQL statement, was not terminated.

Action: Find the unterminated comment and terminate it with */ .

PCC-02019: Preprocessor warning at line *number*, column *number*, file *string*:\n
Cause: This message indicates that a warning condition occured as the precompiler was doing the preprocessor pass. A more specific warning message will follow this message.

Action: Correct the condition according to the action specified for the message that follows.

PCC-02020: Preprocessor error at line *number*, column *number*, file *string*:\n
Cause: This message indicates that an error condition occured as the precompiler was in the preprocessing phase. A more specific error message will follow this message.

Action: Correct the error according to the action specified for the message that follows.

PCC-02021: Found newline while scanning string literal
Cause: A string constant contains a newline character, For example char x[] = "Hello world";

Action: Remove the newline character.

PCC-02022: Found end of file while scanning a SQL statement
Cause: The precompiler encountered an end of file while parsing an EXEC SQL statement.

Action: Add statement terminator(;) or complete the EXEC SQL statement.

PCC-02023: Found end of file while scanning a PL/SQL statement
Cause: The precompiler encountered an end of file while parsing a PL/SQL statement (EXEC SQL EXECUTE ...).

Action: Complete the PL/SQL statement.

PCC-02035: CMD-LINE: CONFIG= option is invalid in a config file
Cause: A user configuration file inside a user configuration file cannot be specified. That is, nested configuration files cannot be nested.

Action: If there are nested configuration files, move the options from the nested files to the top levels.

PCC-02040: CMD-LINE: Option selected, but no value provided
Cause: An option on the command line was specified, but a value for it was not included. For example, the offending code might look like: proc iname=sample1.pc oname=

Action: Provide a value for the option.

PCC-02041: CMD-LINE: Option does not exist:
Cause: A non existent option on the command line was specified.

Action: See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for a list of the valid command line options and their possible values.

PCC-02043: CMD-LINE: Option syntax is incorrect
Cause: A value for a command line option was incorrectly specified.

Action: See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for the correct syntax for specifying command line option values.

PCC-02044: CMD-LINE: Illegal or out of range value for option:
Cause: A value specified for a command line option was not within the accepted range. For example,, the range for the MAXOPENCURSORS option is 5 to 256. If a value outside the range is specified, the message is triggered.

Action: See the Programmer's Guide to the Oracle Precompilers for the ranges that option values can take.

PCC-02045: CMD-LINE: Option is not unique:
Cause: An option name was partially specified on the command line that made it non unique. For example, % proc in=t.pc the "in" option can imply either the INAME or INCLUDE option.

Action: Provide sufficient characters on the command line to make the option name unique.

PCC-02046: CMD-LINE: Unable to open config file:
Cause: A non-existent user configuration file was specified on the command line with the config option.

Action: Provide a valid filename for the configuration file.

PCC-02047: CMD-LINE: Option is not allowed inline:
Cause: An option was entered inline that can only be entered on the command line or in a configuration file. For example, the offending code might look like EXEC ORACLE OPTION (NLS_CHAR=*name*); The NLS_CHAR option can only be entered on the command line or in a configuration file.

Action: Remove the option from the source file, and specify it on the command line.

PCC-02066: CMD-LINE: Could not find or could not open system config file
Cause: The system configuration file has a standard name (pmscfg.h) and a location that is operating system dependent. On UNIX systems, it is located in the ORACLE_HOME/proc directory. If a file named pmscfg.h is not found in the standard location, this warning message is issued.

Action: Create a system configuration file in the standard location. The file can be empty. See also the operating system specific Oracle documentation.

PCC-02081: CMD-LINE: Unterminated option value list or value list was truncated.
Cause: An option that takes a list of values was entered. The value list did not have a closing parenthesis. This error may also occur if the list of values entered on a single line was too long and Pro*C truncated it.

Action: Ensure that all value lists are terminated with a closing parenthesis. Split long value lists into individual entries.

PCC-02100: Unable to initialize PL/SQL
Cause: The precompiler connected to Oracle but could not invoke the PL/SQL engine. This error can result if an earlier release of Oracle7 is used without the Procedural Option.

Action: To use PL/SQL, upgrade to a more recent release of Oracle7.

PCC-02101: Unable to open input file
Cause: The precompiler could not open the input file. This is the .pc file specified in the INAME=option. This means that the file does not exist, that a directory was incorrectly specified in the pathname, or that the person running the precompiler does not have read permission for the file. This message could also result from operating-system errors. For example, an unmounted file system or disk I/O errors, could trigger this error.

Action: Check that permission to read the file exists and that the full pathname has been specified correctly. Check for operating- system problems. See also the operating system-specific Oracle documentation.

PCC-02102: Fatal error while doing C preprocessing
Cause: The precompiler issues this message after a more specific message.

Action: Correct the problem specified in the previous message or messages.

PCC-02103: Password:
Cause: The username was specified on the command line without a password. For example, proc sqlcheck=full iname=sample1.pc userid=scott

Action: Re-enter the command line, and include the password or specify the password when prompted.

PCC-02104: Unable to connect to Oracle
Cause: The precompiler could not connect to Oracle with the username, password, and, if applicable, database link that was supplied. Note that this is a precompiler message, not a runtime message. This means that the USERID option value, either on the command line or in a configuration file, was incorrect.

Action: Check that the username and password are current and correct. Run SQL*DBA or SQL*PLUS and verify that connection can be made using that username and password.

PCC-02105: Unable to open list file
Cause: The precompiler could not open the listing file. This message can result from many causes. For example, o) A pathname for a specified listing file contains a non-existent directory. o) An operating-system error occured because the file system or disk is full. o) Write permission on the specified directory has not been granted.

Action: Track down the cause of the error, as suggested above, and correct it.

PCC-02106: Userid only used when SQLCHECK = FULL, userid ignored.
Cause: The USERID option was specified on the command line, but SQLCHECK was not equal to FULL or SEMANTICS. The USERID has no effect, unless SQLCHECK=FULL or SQLCHECK=SEMANTICS.

Action: This is a warning message only.

PCC-02107: You may not specify PARSE = FULL when CODE = CPP
Cause: The PARSE=FULL and CODE=CPP options were both specified on the command line. The PARSE=FULL option invokes the C parser which does not understand any C++ constructs generated by the precompiler with CODE=CPP option.

Action: Set the PARSE option to either NONE or PARTIAL if the CODE=CPP option is specified.

PCC-02108: UNSAFE_NULL=YES allowed if MODE=ORACLE and DBMS=V7 or V8
Cause: UNSAFE_NULL=YES was specified on the command line, but but either the MODE was not ORACLE or the DBMS was not V7 or V8.

Action: Specify MODE=ORACLE and DBMS=V7 or V8 when using UNSAFE_NULL=YES.

PCC-02109: SQLCHECK=NONE is no longer supported.. using SYNTAX
Cause: SQLCHECK=NONE was specified on the command line but is no longer a supported option. SQLCHECK=SYNTAX was used instead.

Action: This is a warning message only. To avoid this warning, specify SQLCHECK=SYNTAX or SQLCHECK=SEMANTICS.

PCC-02110: DBMS=V6_CHAR is deprecated. Use CHAR_MAP=VARCHAR2, DBMS=V7 instead
Cause: DBMS=V6_CHAR was specified on the command line but is no longer a supported option. The options CHAR_MAP=VARCHAR2 and DBMS=V7 were used instead.

Action: This is a warning message only. To avoid this warning, specify CHAR_MAP=VARCHAR2 and, if required, DBMS=V7.

PCC-02111: CHAR_MAP option ignored. Only CHAR_MAP=VARCHAR2 allowed for DBMS=V6
Cause: DBMS=V6 was specified, and CHAR_MAP was specified with a value other than VARCHAR2. The CHAR_MAP value is ignored.

Action: This is a warning message only. To avoid this warning, specify a DBMS value other than DBMS=V6 or use CHAR_MAP=VARCHAR2.

PCC-02112: OBJECTS option ignored. OBJECTS=YES is not allowed for DBMS=V6 or V7.
Cause: OBJECTS=YES was specified on the Pro*C command line, but the DBMS option value was not valid.

Action: This is a warning message only. To avoid this warning for OBJECTS=YES, use DBMS=V8 or DBMS=NATIVE with a V8 database.

PCC-02113: DBMS=V6 no longer supported; using DBMS=NATIVE, CHAR_MAP=VARCHAR2.
Cause: DBMS=V6 was specified on the command line, but is no longer a supported option value. The options DBMS=NATIVE and CHAR_MAP=VARCHAR2 were used instead.

Action: Check your program to verify that you are not depending on any V6 behavior. Please refer to the Programmer's Guide to the Pro*C/C++ Precompiler for effects of specifying DBMS=V6.

PCC-02114: Command line argument MODE=ANSI may not be used with DBMS=V6
Cause: The semantics of certain operations (such as character comparison) in Oracle version ^ are not 100% compliant with the ANSI/ISO SQL standards. When V6 semantics are requested, using the DBMS=V6 or DBMS=V6_CHAR option, precompilation with MODE=ANSI is not permitted.

Action: Do not use ANSI mode with V6 options.

PCC-02115: Unable to open output file for writing
Cause: An attempt was made to precompile a header file where the output data file could not be opened (or created) for writing.

Action: Check for appropriate permissions on the directory and possibly file objects (if a data file already exists) to make sure that write permissions have been granted.

PCC-02116: You must specify a file extension using the HEADER option
Cause: An attempt was made to precompile a header file without specifying the name of the extension to use when creating the generated data file.

Action: Use the HEADER option to specify the name of a file extension to use when creating a data file for a precompiled header.

PCC-02117: Semantic checking disabled by TimesTen.
Cause: Semantic checking is not supported by TimesTen

Action: This is a warning message only.

PCC-02129: CMD-LINE: Client supplied static options table is invalid
Cause: This is an internal error message not usually issued.

Action: Call Oracle customer support.

PCC-02132: CMD-LINE: Could not allocate memory
Cause: This is an internal error message not usually issued.

Action: Call Oracle customer support.

PCC-02133: CMD-LINE: Error in string processing function
Cause: This is an internal error message not usually issued. It indicates that a C string function, such as strcpy or strlen, returned an error.

Action: Call Oracle customer support.

PCC-02134: CMD-LINE: Null option supplied
Cause: A zero length option was specified on the command line.

Action: Re-enter the command line with a valid option.

PCC-02135: CMD-LINE: User asked for help
Cause: This is a final message that the precompiler issues when information about the command line options has been requested. For example, if the command proc ? is issued to get a list of current default values for the command line options, this message appears at the end of the list.

Action: No action required.

PCC-02138: CMD-LINE: Internal consistency error
Cause: This is an internal message for program exceptions. An unexpected condition was encountered by the command-line processor and a consistency check failed. Some possible causes of this message include: --invalid command-line options --memory corruption

Action: Report this error to Worldwide Support after gathering the following information: --the events that led to the error --the attempted operations that led to the error --any unusual circumstances prior to this error

PCC-02144: CMD-LINE: Blank characters are not allowed on either side of an equal sign (=)
Cause: An equal sign (=) was either immediately preceded or followed by a blank character.

Action: Precompile your program again without blank characters on either side of any equal sign (=) on the command line.

PCC-02146: CMD-LINE: value of option too long
Cause: The length of the user option exceeded 1023 bytes

Action: Reduce the length of the user option

PCC-02150: Error at line *number*, column *number* in file *string*
Cause: An error was encounter at the given location.

Action: Check the named source file and correct the error using the additional information which follows this error message.

PCC-02151: Line *number* column *number* file *string*:
Cause: An error was encounter at the given location.

Action: Check the listed source file and correct the error using the additional information which follows this error message.

PCC-02152: Unable to open file *string* to display or list the source line *number*
Cause: The file contains an error, but could not be reopened to list or display the incorrect line.

Action: Check that the file is intact and it has read permission. Then rerun the operation.

PCC-02153: Open file: *string*
Cause: A new source file was opened while producing the list file.

Action: No action required; this is an informational message.

PCC-02154: Close file: *string*
Cause: A source file was closed while producing the list file.

Action: No action required; this is an informational message.

PCC-02200: found unrecognized punctuation sequence
Cause: The error indicates that the precompiler parser encountered a badly-formed identifier or keyword.

Action: Correct the syntax.

PCC-02201: Found syntax error
Cause: This general message precedes one or more specific messages that detail the nature of the error.

Action: No action required. Correct the errors diagnosed in the following message(s).

PCC-02202: No typedef name was given
Cause: The precompiler parser encountered a typedef statement that had no name after the type specification. For example, typedef int;

Action: Correct the syntax

PCC-02203: found end of file when not expected
Cause: The parser can emit this message when a general syntax error occurs, for example, an unmatched '{' or '('.

Action: Correct the syntax.

PCC-02204: EXEC SQL INCLUDE not permitted from within an included file
Cause: EXEC SQL INCLUDE statements cannot be nested. Also, EXEC SQL INCLUDE statement cannot be put inside a file that is included using the #include preprocessor command.

Action: Recode the program so that the nested include statement is not required.

PCC-02205: Parser error at line *number*, column *number*, file *string*:\n
Cause: The precompiler parser encountered a syntax error, either in C code or in SQL code. A more specific message should follow.

Action: No action required for this message. Take the appropriate action for any following messages.

PCC-02206: Host variables are not permitted within a DDL statement
Cause: A Data Definition Language statement cannot use host variables. For example, the statement CREATE TABLE :table_name (c1 char(10)); is illegal, because the name of the table in a CREATE TABLE statement cannot be represented using host variable.

Action: Use dynamic SQL to create the names of database objects (tables, views, columns, etc.) at runtime. See the Programmer's Guide to the Oracle Precompilers, Release2.2 for information about dynamic SQL.

PCC-02207: Invalid macro name
Cause: The precompiler parser encountered a #define directive that had no macro name associated with it. For example, #define

Action: Correct the syntax.

PCC-02208: No filename specified in #include statement
Cause: The precompiler parser encountered a #include directive that had no filename associated with it. For example, #include

Action: Specify appropriate filename with the #include directive, or correct the syntax.

PCC-02209: Macro invocation has incorrect number of arguments
Cause: A macro invocation in the source does not have the same number of arguments as the macro definition in the #define line.

Action: Correct the macro reference or the macro definition.

PCC-02210: C++ punctuation sequences are not permitted
Cause: C++ punctuation sequences are not supported by the ProC/C++ precompiler.

Action: Rewrite your C++ code without using punctuation sequences and precompile it again.

PCC-02301: cannot reopen input file for reading
Cause: The semantic analysis phase of the precompiler could not reopen the input file to generate the output code.

Action: Check that the input file and it's directory protection and priveleges do not change during precompilation.

PCC-02302: cannot open code generation output file "*string*"
Cause: Pro*C was unable to open one or both temporary files required for code generation. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files in the the directory where you precompile.

PCC-02303: cannot open include file
Cause: The precompiler was not able to open a header file specified using the #INCLUDE preprocessor directive or the EXEC SQL INCLUDE statement. This can happen if the file specification is inaccurate or if read permission or read-access rights on the file or on one or more of the directories in the path have not been granted.

Action: Recheck that the file specification is correct, that the file exists, and that read permission has been granted so that the file can be read.

PCC-02304: invalid declaration of C function
Cause: A C function using invalid syntax was declared.

Action: Consult a C programming manual and correct the declaration.

PCC-02305: illegal mixing of new and old style C function declarations
Cause: All C functions using either the traditional style (K&R style) function declarations or the new (ANSI) style must be declared; the two styles cannot be mixed.

Action: Adopt a consist declaration style for functions.

PCC-02306: illegal name of C function
Cause: A C function was declared with a name that is not a legal C identifier.

Action: Use legal C identifiers for all function names.

PCC-02307: void can only be used when single parameter
Cause: A function can be declared or defined using the following syntax: int func1(void) to indicate that the function has no parameters. void can be used only once in this case.

Action: Remove the extra voids in the function definition or declaration.

PCC-02308: identifier required in this function declaration
Cause: A function definition written in ANSI C must have both the name and the type for all parameters.

Action: Rewrite the function definition so that it contains the name of each parameter.

PCC-02309: illegal formal parameter declaration
Cause: A formal parameter to a function was specified without giving its type.

Action: Rewrite the function declaration and include types of all parameters in function declarations.

PCC-02310: formal parameter VARCHARs should be declared as pointers
Cause: Many C compilers allow structures to be passed to and returned from functions. Although a VARCHAR is implemented as a C struct, VARCHARs must be passed to a function as pointers.

Action: Take the address of a VARCHAR when it is passed to a function. See the example in the section "Referencing VARCHAR Variables" in the Programmer's Guide to the Oracle Precompilers.

PCC-02311: cannot have VARCHAR bit fields
Cause: Host variables cannot contain bit fields.

Action: Recode the application to remove the bit fields.

PCC-02312: arrays of VARCHAR greater than 2 dimensions not allowed
Cause: A VARCHAR variable having more that 2 dimensions was declared. Multidimensional arrays are not supported as host variables.

Action: Recode the application to remove multidimensional array usage.

PCC-02313: malformed VARCHAR declaration - missing length
Cause: When a VARCHAR is declared, a length specification is mandatory. For example, the following VARCHAR declaration is meaningless, hence illegal: VARCHAR v1[];

Action: Specify the length for each declared VARCHAR.

PCC-02314: cannot evaluate constant sizeof expression
Cause: A SIZEOF operator was used where a precompiler expression was expected. For example, as the length of a varchar.

Action: Eliminate the SIZEOF operator in this instance.

PCC-02315: cannot evaluate expression as constant
Cause: The specified expression does not evaluate to a constant. Such expressions are required, for example, as the length of a VARCHAR.

Action: Replace the expression with one that does evaluate to a constant integer.

PCC-02316: illegal operator in constant expression
Cause: A non-arithmetic operator was present in a constant expression.

Action: Rewrite the expression to eliminate the non-arithmetic operator.

PCC-02317: illegal cast type expression
Cause: An illegal cast is present in the expression.

Action: Remove the illegal cast.

PCC-02318: missing type expression
Cause: The specified expression is missing the declaration of a type.

Action: Specify a type for the expression.

PCC-02319: expression type does not match usage
Cause: The type of a variable does not match is usage. For example, in dynamic SQL, a host variable containing the text of a SQL statement must be declared as a C character type or be equivalenced to the SQL type STRING.

Action: Remove the declaration.

PCC-02320: arithmetic expression does not have correct operand types
Cause: The arithmetic expression must be specified with integral types.

Action: Rewrite the expression using integral types.

PCC-02321: only subtraction between two pointers is permitted
Cause: Pointer values cannot be added, multiplied, or divided. The only arithmetic operation permitted with pointers is subtraction.

Action: Recode to avoid this error message.

PCC-02322: found undefined identifier
Cause: An identifier used in a SQL statement was not defined. For example, a cursor name was referenced that had not been declared, or in a DECLARE CURSOR statement, a statement name was used that had not been PREPAREd.

Action: Check that all SQL identifiers, such as cursor names and statement names, have been defined before use. Provide a declaration for the variable and/or its type identifier.

PCC-02323: found typedef name used in an expression (expecting a value)
Cause: The name of a typedef was found where a variable was expected.

Action: Rewrite the expression and remove the reference to the typedef.

PCC-02324: found variable name used as a typedef name
Cause: The name of a variable was found where a typedef was expected.

Action: Rewrite the expression and specify the correct typedef reference.

PCC-02325: illegal indirection operation
Cause: An attempt was made to use a non-pointer type as a pointer.

Action: Rewrite the expression.

PCC-02326: illegal structure reference operation
Cause: A structure component using invalid syntax was referenced. For example, a -> operator was used instead of a required `.' operator.

Action: Correct the invalid reference.

PCC-02327: struct or struct pointer required
Cause: A scalar host variable was used in a context where a structure (or its pointer) is required.

Action: Make the host variable a structure or add more scalar host variables to satisfy the SQL syntax requirements.

PCC-02328: undefined struct member
Cause: A structure component was referenced that was not declared as part of the structure.

Action: Redefine the structure member.

PCC-02329: found reference to undeclared function
Cause: A function was referenced that was not declared. All function references must be declared.

Action: Declare the function.

PCC-02330: expecting an expression of integer type
Cause: The expression does not evaluate to an integer. For example, a SQL FOR expression must evaluate to an integral type.

Action: Rewrite the expression.

PCC-02331: undefined SQL identifier
Cause: All SQL identifiers must be declared before they are used. This message can result when a CURSOR or STATEMENT is not declared (defined) before being referenced.

Action: Define the SQL identifier before it is used.

PCC-02332: attempted to redefine SQL identifier
Cause: A SQL identifier (such as a cursor name) can be defined only once.

Action: Do not redefine the SQL identifier.Use a different name.

PCC-02333: SQL identifier was not declared as a statement
Cause: A SQL statement identifier was referenced in a DECLARE... CURSOR statement that was not PREPAREd.

Action: Check that all SQL statement names have been declared. Remember that SQL statement names are identifiers, not variables, and that they are local to the precompilation unit.

PCC-02334: SQL identifier was not declared as a cursor
Cause: A cursor name was used in an OPEN, FETCH, or CLOSE statement that had not been DECLAREd.

Action: Check that all SQL cursor names have been declared. Remember that cursors are identifiers, not variables, and that they are local to the precompilation unit.

PCC-02335: body of cursor must name statement identifier
Cause: In a Dynamic SQL Method 4 application, the DECLARE... CURSOR statement must name a statement identifier that has been PREPAREd in a preceding statement. The PREPARE statement must physically (not logically) precede the DECLARE command.

Action: This error message is followed by another message that gives the line and column of the reference to the statement. Recode the application.

PCC-02336: host variable expression has invalid type
Cause: The host variable was declared using a C type that is not permitted as a host variable. See the Programmer's Guide to the Oracle Precompilers for a list of the permissible C types for host variables.

Action: Use a permissible host variable type.

PCC-02337: cannot declare multi-dimensioned array for this type
Cause: Host variable arrays of scalars with more than 1 dimension cannot be declared.The only host variables allowed to be multi-dimensioned are CHAR and VARCHAR.

Action: Rewrite the variable declaration.

PCC-02338: structure contains a nested struct or union
Cause: A structure used as a host variable may not have structures or unions nested within it.

Action: Rewrite the variable declaration.

PCC-02339: host variables cannot be of union types
Cause: A C union as a host variable cannot be used.

Action: This error message is followed by another message that gives the line and column of the reference to the illegal union. Recode, using a struct or individual scalar host variables.

PCC-02340: structure contains a bit field
Cause: Bit fields are not allowed in host variables because they are meaningless for database DML operations.

Action: This error message is followed by another message that gives the line and column of the reference to the offending host variable. Recode the application.

PCC-02341: host variable has illegal type
Cause: A host variable has an unpermitted type (i.e.; enum, void, etc).

Action: Rewrite the host variable declaration, using a permissible host variable type.

PCC-02342: using WHERE CURRENT OF on cursor defined without FOR UPDATE clause
Cause: When MODE=Oracle, a cursor defined with a WHERE CURRENT OF clause must also have a FOR UPDATE clause.

Action: Rewrite the cursor definition.

PCC-02343: body of cursor must be a query expression
Cause: A cursor definition must be a SELECT statement.

Action: Rewrite the cursor definition.

PCC-02344: Host variable array size mismatch. Using minimum: *number*
Cause: Host variable arrays in a single statement should all be of equal size.

Action: Redefine the bind variable array lengths to all be the same size.

PCC-02345: SQLCHECK=SEMANTICS must be given when embedded PL/SQL blocks are used
Cause: Embedded PL/SQL blocks require that the command-line flag SQLCHECK=SEMANTICS is used.

Action: Use the SQLCHECK=SEMANTICS option. This also requires that the USERID connect option be given.

PCC-02346: PL/SQL found semantic errors
Cause: A database entity, such as a table or column name, was referenced, that does not exist. This is a compile time error, not a runtime error.

Action: Check that all referenced objects in PL/SQL statements actually exist and that the necessary access permission on them have been granted.

PCC-02347: PL/SQL found syntax errors
Cause: A PL/SQL statement was used illegally.

Action: Check the PL/SQL User's Guide and Reference for the correct syntax.

PCC-02348: indicators are not allowed in EXEC IAF statements
Cause: Indicator variables associated with host variables cannot be used in EXECIAF statements such as GET and PUT in a user exit.

Action: Eliminate the indicator variabls. If feasible (for example with Forms V4), use EXEC TOOLS statements, which do allow indicator variables. See the Programmer's Guide to the Oracle Precompilers for more information of EXECIAF and EXEC TOOLS statements.

PCC-02349: precision must be specified for this type
Cause: In a VAR or TYPE statement, certain Oracle types require that the precision be specified. For example, VARCHAR2 or CHAR.

Action: Indicate the precision.

PCC-02350: cannot equivalence this SQL type
Cause: Datatype or variable equivalencing to the datatypes NUMBER or DECIMAL cannot be used. See the "Datatype Equivalencing" section in the Programmer's Guide to the Oracle Precompilers for more information.

Action: Use the appropriate datatype for the application.

PCC-02351: illegal datatype equivalencing operation
Cause: The datatype specified could not be equivalenced, or the syntax was incorrect in the VAR or TYPE statement.

Action: See the Programmer's Guide to the Oracle Precompilers for a list of the datatypes that can be equivalenced and the correct syntax of the VAR or TYPE statement.

PCC-02352: out of bounds bind position from PL/SQL
Cause: PL/SQL requested a bind position that does not exist.

Action: Contact ORACLE customer support.

PCC-02353: Semantic error at line *number*, column *number*, file *string*:\n
Cause: This error message precedes a more specific error message.

Action: No action required. Correct the error(s) reported in the following message(s).

PCC-02354: A file included with #include may not contain SQL statements
Cause: The Pro*C Precompiler reads header files referenced in #INCLUDE directives and uses the values defined in them. But the precompiler never generates code using statements in header files, so use of SQL statements in these files is illegal.

Action: Move the SQL statement(s) into the main body of the application or use EXEC SQL INCLUDE to check that the included file is precompiled.

PCC-02355: Invalid or obsolete option, ignored
Cause: A command-line option that is not used in Pro*C Release 2.0 was specified. For example, the option AREASIZE is no longer valid with precompilers used with the Oracle7 Server.

Action: No action required. This is an informational message.

PCC-02356: Warning at line *number*, column *number*, file *string*:\n
Cause: This is a generic warning message. It precedes a more specific warning.

Action: No action required. Correct the error(s) indicated in the following message(s).

PCC-02357: Function calls may not be used as host variable expressions
Cause: Only objects that are lvalues (that resolve to an address) can be host variables. Because a function call is not an lvalue, one cannot be used in place of a host variable.

Action: Recode the application.

PCC-02358: Identifier following ARRAYLEN must be the name of an array
Cause: A declared array must be specified as the argument for an ARRAYLEN statement. Declare the array textually before the ARRAYLEN statement. See the Programmer's Guide to the Oracle Precompilers for the syntax of the ARRAYLEN statement.

Action: Correct the statement, specifying a host array as the argument.

PCC-02359: Identifier specifying ARRAYLEN must be a 4-byte integer
Cause: The expression that specifies the ARRAYLEN dimension must evaluate to an integer. For example, the statement EXEC SQL ARRAYLEN my_array(1,3) cannot be parsed.

Action: Correct the statement, using an integral dimesnsion.

PCC-02360: This array type is invalid for use with ARRAYLEN statement
Cause: Arrays of some host variables types are not allowed and hence also cannot be used in ARRAYLEN statements. VARCHAR and DATE are examples.

Action: Specify an array with a datatype that can be used in host arrays.

PCC-02361: Use of ARRAYLEN with SQL bind arrays is ignored
Cause: ARRAYLEN is only valid with arrays that can be bound in PL/SQL blocks.

Action: Use an appropriate array type.

PCC-02362: Host variable not declared within SQL DECLARE section
Cause: When MODE=ANSI is specified at precompile time, all host variables must be declared inside Declare Sections. Remember that MODE=ANSI refers to ANSI SQL, not ANSI C.

Action: Add the EXEC SQL BEGIN DECLARE SECTION... EXEC SQL END DECLARE SECTION statements around all host variable declarations.

PCC-02363: Indicator variable must be a structure
Cause: If a host variable is a structure, the associated indicator variable must also be a structure.

Action: Recode the application to create an indicator variable as a structure.

PCC-02364: Host struct and its indicator must have the same number of fields
Cause: When a structure containing indicator variables is declared and associated with a host structure, the indicator structure must contain the same number of fields as the host structure. This is so even when some of the indicators will not be used or even when it would not make sense to do so (for fields constrained as NON NULL, for example).

Action: Redeclare the indicator variable with the correct number of fields.

PCC-02365: Indicator array size cannot be smaller than host array size
Cause: An indicator array must have dimension greater than or equal to the corresponding host variable array dimension.

Action: Change the dimension of the indicator array.

PCC-02366: Command line argument MODE=ANSI may not be used with DBMS=V6
Cause: The semantics of certain operations (such as character comparison) in Oracle version ^ are not 100% compliant with the ANSI/ISO SQL standards. When V6 semantics are requested, using the DBMS=V6 or DBMS=V6_CHAR option, precompilation with MODE=ANSI is not permitted.

Action: Do not use ANSI mode with V6 options.

PCC-02367: This indicator variable must be declared as type short
Cause: An indicator for a host variable of this type must have the C type short. An array of such indicators must be an array of shorts.

Action: Declare the indicator variable or indicator array as type short.

PCC-02368: An EXEC TOOLS host variable context name is not type char
Cause: If a host variable is used to define a context name in an EXEC TOOLS GET CONTEXT or EXEC TOOLS SET CONTEXT statement, that host variable must be of a character type.

Action: Redeclare the context name to a host variable of a char type.

PCC-02369: An EXEC TOOLS host pointer variable is not a pointer
Cause: The host variable specifying an EXEC TOOLS context must be a pointer type.

Action: Redeclare the variable, making sure that it is a pointer.

PCC-02370: An EXEC TOOLS MESSAGE host variable is not type char
Cause: f a host variable is used to define a context name in an EXEC TOOLS GET CONTEXT or EXEC TOOLS SET CONTEXT statement, that host variable must be of a character type.

Action: Declare the message to a host variable of a char type.

PCC-02371: Illegal FOR clause
Cause: The argument of a FOR clause must be specified as an integer or as an identifier containing an integer.

Action: Rewrite the FOR clause.

PCC-02372: FOR clause not allowed in SELECT statement
Cause: A SQL statement containing a SELECT command cannot contain a FOR clause. The meaning of such a statement would be unclear.

Action: Rephrase the SELECT statement, removing the FOR clause.

PCC-02373: Invalid declaration in EXEC SQL DECLARE section
Cause: An improper declaration was placed in a Declare Section. This message is usually caused by including an EXEC SQL TYPE or EXEC SQL VAR declaration in a Declare Section.

Action: Move the declaration outside of the SQL DECLARE section.

PCC-02374: SQLCHECK value exceeds command line value
Cause: The value given to the SQLCHECK option in an EXEC ORACLE statement in a program was greater than the value given either on the command line or greater than the default value if no SQLCHECK option was given on the command line. The order of the option values is SEMANTICS>SYNTAX>NONE. When this warning message is issued, the original value of SQLCHECK (the default or the command-line value) stays in effect.

Action: Remove or recode the EXEC Oracle option(s) in the .pc source file to avoid this warning message.

PCC-02375: SQL statement found outside the body of a function
Cause: A SQL statement other than a declarative, datatype equivalence or WHENEVER statement was found outside the body of a function when PARSE=FULL.

Action: Move the SQL statement inside the body of a function.

PCC-02376: You may not declare SQLCODE when DEF_SQLCODE = TRUE
Cause: The DEF_SQLCODE option may not be specified if a SQLCODE declaration already explicitely appears in the program.

Action: Remove the SQLCODE declaration from the program or specify DEF_SQLCODE=NO (the default).

PCC-02377: Arrays of implicit varchars are not permitted
Cause: An array of implicit VARCHARS was declared when HOST_VARCHAR=TRUE.

Action: Rewrite the implicit VARCHAR declaration without using arrays.

PCC-02378: Invalid type for National Language character variable
Cause: A variable declared as a National Language character using the NLS_CHAR option was not declared as a char or implicit VARCHAR.

Action: Declare the variable as a char or implicit VARCHAR or do not specify using the NLS_CHAR option.

PCC-02379: Cannot equivalence National Language character variables
Cause: A National Language character variable (specified using the NLS_CHAR option) has undergone datatype equivalencing using either the EXEC SQL VAR or TYPE statements.

Action: Do not equivalence National Language character variables.

PCC-02380: Cannot specify a connect mode when altering a user password
Cause: An attempt was made to connect in either SYSOPER or SYSDBA mode while at the same time trying to change passwords using the ALTER AUTHORIZATION clause in the same CONNECT statement.

Action: Changing passwords while connecting in SYSOPER or SYSDBA mode is prohibited. Rewrite the connect statement by either removing the ALTER AUTHORIZATION cluase or the CONNECT MODE clause.

PCC-02382: You must specify MODE=ANSI when using NLS_LOCAL=YES
Cause: NLS_CHAR was used to specify NLS multi-byte character variables without specifying MODE=ANSI.

Action: Specify MODE=ANSI on the command line when using NLS_LOCAL=TRUE.

PCC-02383: Expecting an expression of type OCIExtProcContext
Cause: The type of the bind variable given in a REGISTER CONNECT USING statement was not (pointer to) OCIExtProcContext.

Action: Declare a variable having type (pointer to) OCIExtProcContext and use it in the REGISTER CONNECT USING statement.

PCC-02384: Missing array length specifier
Cause: An array declaration was given without an array length specifier.

Action: Provide the length for the array declaration.

PCC-02385: CHAR_MAP disallowed when using NLS_CHAR and NLS_LOCAL=TRUE
Cause: The CHAR_MAP option was specified while indicating which host variables are to be treated by the precompiler as NLS multi-byte character variables. This mapping cannot be performed with the option NLS_LOCAL=TRUE. This error also occurs when DBMS=V6 is used in conjunction with NLS_CHAR and NLS_LOCAL=TRUE.

Action: Remove either the CHAR_MAP option or set NLS_LOCAL=FALSE. Ensure that DBMS is not set to V6.

PCC-02386: Use of the AT clause is not permitted here
Cause: An explicit AT clause was used with an ALLOCATE statement or a FETCH/CLOSE statement also using a SQL_CURSOR declaration.

Action: Remove the AT clause.

PCC-02387: Expecting an expression of type sql_cursor
Cause: A host bind variable was used in an ALLOCATE, FETCH or CLOSE statement that was not declared as a result set SQL_CURSOR.

Action: Declare the variable to be of type sql_cursor.

PCC-02388: Arrays not allowed in FROM/WHERE clause of SELECT statement
Cause: A host array was used in the WHERE clause of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using arrays or use a cursor.

PCC-02389: Arrays not allowed as input bind variables in SELECT list
Cause: A host array was used in the SELECT list of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using arrays in SELECT list.

PCC-02390: No EXEC SQL CONTEXT USE statement encountered
Cause: No EXEC SQL CONTEXT USE statement was encountered and the option threads=yes was requested.

Action: Ensure that the necessary context variable (of type sql_context) has been declared and that has been ALLOCATEd and USEd prior to any executable SQL statements.

PCC-02391: Runtime context variable not of correct type
Cause: The host variable in a EXEC SQL CONTEXT USE statement or in the RETURNING clause of a REGISTER CONNECT statement was not declared to be of type SQL_CONTEXT.

Action: Declare the runtime context variable to be of type SQL_CONTEXT.

PCC-02392: You are already in an EXEC SQL DECLARE SECTION
Cause: A SQL DECLARE SECTION appears nested inside another one.

Action: Do not nest DECLARE SECTIONS. Remove any nested inner ones.

PCC-02393: SQL statement found inside an EXEC SQL DECLARE SECTION
Cause: An executable SQL statement appears inside a DECLARE SECTION.

Action: Move the SQL statement into the body of a function.

PCC-02394: Input file name and output filename are identical
Cause: The values of INAME and ONAME are the same or the default output filename is the same as that specified by ONAME.

Action: Use ONAME to specify a different filename for the output file.

PCC-02395: Using arrays of structs requires that the struct be named
Cause: An array of some unnamed struct was used as a host variable. When using arrays of structs, the struct requires a name or tag.

Action: Provide a name for the struct.

PCC-02396: Illegal use of arrays inside an array of structs
Cause: An array of a struct that contained arrays of scalars or two-dimensional char or VARCHAR fields was used as a host variable.

Action: Rewrite the struct so that there are no scalar arrays or two-dimensional char or VARCHAR fields.

PCC-02397: VARCHAR declarations not permitted in #include file
Cause: A VARCHAR declaration was found in a file included using a #include form.

Action: Use the EXEC SQL INCLUDE form to include files with VARCHAR declarations instead.

PCC-02398: Indicator ignored in this statement for this type
Cause: An indicator variable was used in a host/indicator variable pair for some type in a statement that did not require or need one. Typically, indicator variables are not used in ALLOCATE and FREE statements for types other than object or collection types. They are also not used in OBJECT CREATE/DEREF statements for REF types.

Action: Remove the use of the indicator for the type in the specified statement. It will be ignored otherwise.

PCC-02399: Illegal CHAR_MAP option value for DBMS=V6. Option ignored.
Cause: A CHAR_MAP option other than CHAR_MAP=VARCHAR2 was specified inline. Since DBMS=V6, this option is ignored for a character or string variable in the offending statement.

Action: Either set DBMS to something other than V6, or specify CHAR_MAP=VARCHAR2.

PCC-02400: This host variable must be declared as a pointer type
Cause: The specified host variable was not declared as a pointer type.

Action: Declare the host variable to be a pointer type.

PCC-02401: Host variable arrays of this type are currently not supported
Cause: Host variable arrays of the specified type are not supported.

Action: Rewrite your program so that there are no arrays of this type.

PCC-02402: Pro*C option OBJECTS=YES is required when using the object cache
Cause: The object cache will be used for this host variable, but OBJECTS=NO was specified on the Pro*C command line.

Action: Specify OBJECTS=YES on the Pro*C command line when using the object cache.

PCC-02403: Invalid indicator variable type for this host variable
Cause: The type of the indicator variable is not appropriate for the specified host variable.

Action: Change the type of the indicator variable to a valid type. Refer to the "Programmer's Guide to the ORACLE Pro*C/C++ Precompiler" for a discussion of appropriate indicator variable declarations.

PCC-02404: This indicator variable must be declared as a pointer type
Cause: The specified indicator variable was not declared as pointer type.

Action: Declare the indicator variable to be a pointer type.

PCC-02405: Variable is of undefined type
Cause: No declaration was found for the type identifier of the variable.

Action: Provide a valid declaration for the type of the host variable. If using objects in your program, check that the OTT-generated header for the object type was #included and that the typefile was specified in the INTYPE option on the Pro*C command line.

PCC-02406: Expecting the form 'RETURN[ING] REF INTO :*ref*' only
Cause: When using the RETURNING clause in an OBJECT CREATE statement, only a single 'REF INTO :*host variable*' is expected. This error occurs if the expression list to which REF belongs is greater than one or if there are more than one host variables supplied in the into list.

Action: Rewrite the RETURNING clause as per the given specification.

PCC-02407: Object and REF types do not match
Cause: In an OBJECT CREATE or DEREF statement, the types of the given Object and its associated REF do not match.

Action: Make sure that the Object and its REF have the same type. The type information is generated by OTT and should appear in the header file which OTT creates.

PCC-02408: Expecting an expression of some Object type
Cause: The expression is not an Object type. For example, many host variable expressions in the Navigational statements require that the variable be declared of some Object type.

Action: Rewrite the expression or declare the variable to be an Object.

PCC-02409: Expecting an expression of some REF type
Cause: The expression is not a REF type. For example, some host variables in the Navigational CREATE and DEREF statements are required to be declared of some REF type.

Action: Rewrite the expression or declare the variable to be a REF.

PCC-02410: Expecting an expression of some Collection type.
Cause: The expression is not a Collection type. A VARRAY or Nested Table object was expected, but the given host variable did not resolve to a valid Collection type.

Action: Check that the OTT-generated header for the Collection type was properly #included in the Pro*C/C++ program and that the typefile was specified in the INTYPE option on the Pro*C/C++ command line.

PCC-02411: Invalid type for INDICATOR descriptor item host variable
Cause: The type of the host variable paired with the INDICATOR descriptor item was invalid. The only permissable types for the INDICATOR item are a signed 2 byte numeric type or an indicator struct generated by the Object Type Translator for a user defined object type.

Action: Either replace the INDICATOR host variable with a valid one having an acceptable type or redeclare the existing host variable to be of a valid type.

PCC-02412: FOR clause not permitted in OBJECT GET or SET statement
Cause: An explicit FOR clause was used in an OBJECT GET or OBJECT SET statement. Use of the FOR clause is illegal for these statements.

Action: Remove the FOR clause.

PCC-02413: Number of attributes does not match number of host variables
Cause: The number of attributes supplied in the attribute list of an OBJECT SET of GET statement does not match the total number of host variables also supplied in that statement.

Action: Either remove some attributes or remove some host variables from the statement in order to make the total count for each the same.

PCC-02414: This attribute does not exist in the specified Object
Cause: An attribute given in the attribute list of an OBJECT SET or GET statement is not a member of the specified object in that statement.

Action: Remove the attribute from the list.

PCC-02415: Cannot manipulate Object attributes in an OBJECT GET or SET
Cause: An attempt was made to either GET or SET an attribute of an Object that itself was an Object or REF type.

Action: Remove the attribute from the attribute list in the statement.

PCC-02416: The Object in an OBJECT GET or SET must not be an array
Cause: The Object specified in an OBJECT GET or SET statement is an array which is illegal.

Action: Redeclare the Object so that it is not an array or subscript the Object so that only a single element of the Object array is specified.

PCC-02417: Illegal type conversion between attribute and host variable
Cause: An illegal type conversion was attempted in a Navigational GET or SET statement between the type of the Attribute and the type of the Host Variable.

Action: Change the type of either the Attribute or the Host Variable.

PCC-02418: Array size mismatch between Object and REF host variables
Cause: The array sizes of the Object and REF variables in an OBJECT CREATE or DEREF do not match.

Action: Adjust the array dimensions of the two host variables so that they are equal to one another.

PCC-02419: Host variable arrays not allowed in an OBJECT SET or GET
Cause: An array was found in the host variable list of an OBJECT SET or GET statement.

Action: Only scalars are allowed (except for single dimensioned char or varchar variables) in the host variable list of an OBJECT SET or GET. Make sure to use only scalars in these statements.

PCC-02420: Incomplete (or missing) type specification
Cause: An incomplete or perhaps missing type specification was given when declaring a host variable used in some SQL statement.

Action: Provide a complete type definition when declaring host variables intended for use inside any SQL statements.

PCC-02421: This host variable requires the use of an indicator variable
Cause: No indicator variable was provided (or matched) with a specific host variable where one was explicitely required.

Action: Provide an indicator variable for use with the specified host variable in the given SQL statement.

PCC-02422: Invalid value specified for the given context option
Cause: An illegal value was given for the specified runtime context option in the CONTEXT *option* OPTION SET (or GET) statement.

Action: Use a valid option value in the statement for the specified option being manipulated by the statement.

PCC-02423: Host variable has an invalid type for this option value
Cause: The type of the host variable corresponding to a specific option value in a CONTEXT *option* OPTION SET (or GET) statement is invalid for that particular value.

Action: Use a type suitable for the specific value being manipulated.

PCC-02424: The number of values and host variables does not match
Cause: There is a mismatch between the number of values specified and the number of valid host variables given in a CONTEXT *option* OPTION SET (or GET) statement.

Action: Use the same number of host variables as there are values given in that particular statement.

PCC-02425: An indicator variable is not required with this attribute
Cause: In a LOB or Collection DESCRIBE, an Indicator Variable was used with a Host Variable when retrieving a LOB attribute that doesn't require one.

Action: Remove the Indicator Variable.

PCC-02426: Incompatible LOB types
Cause: A LOB operation was attempted between LOBs whose types were not compatible. For example, When ASSIGNing one LOB to another, both LOBs must be of the same type. If they are not, this error results.

Action: Correct the LOB operation by having it function between LOBs of the same type. This may require a redeclaration of one of the LOBs used in the LOB statement performing the specified operation.

PCC-02427: Expression is not of the correct character string type
Cause: The given host variable expression was not declared to be of the required character type. In this case, one of several possible character types would have been accepted. However, the host variable type did not match any of them.

Action: Redeclare the problematic host variable, using one of the permitted character types.

PCC-02428: Buffer type is incompatible with LOB type
Cause: This error can occur in either of the following situations 1. An attempt to READ from a LOB into a buffer whose type was not compatible with the LOB type. 2. An attempt to WRITE a buffer into a LOB whose type was not compatible with the buffer type.

Action: Either the LOB type or the buffer type needs to be changed so that the LOB and buffer types become compatible for the specified operation.

PCC-02429: Expecting an expression of some internal LOB type
Cause: The given host variable was not declared to be an Internal LOB. BLOB, CLOB or NCLOB would have been accepted, however, the type of the host variable did not match any of these.

Action: Redeclare the host variable using one of the Internal LOB types.

PCC-02430: Expecting an expression of some arbitrary LOB type
Cause: The given host variable was not declared to be any type of LOB, Internal or External. In addition to any Internal LOB type, BFILE would also have been accepted, however, the type of the host variable did not match any of these.

Action: Redeclare the host variable using any of the LOB types, Internal or External.

PCC-02431: Expecting an expression of type external LOB (BFILE)
Cause: The given host variable was not declared to be an External LOB. Only BFILE would have been accepted in this case.

Action: Redeclare the host variable using an External LOB type (BFILE).

PCC-02432: Cannot open an external LOB (BFILE) in READ WRITE mode
Cause: An attempt was made to OPEN a BFILE in READ WRITE mode. Writable BFILEs are currently not supported so this operation is considered erroneous.

Action: Do not open BFILEs using READ WRITE mode. BFILEs can only be OPENed in READ ONLY mode.

PCC-02433: Invalid host variable and attribute pairing
Cause: The host variable and attribute pairing in a LOB or Collection DESCRIBE is invalid. Most likely, this was due to some problem with the host variable. For example, this error could occur if the host variable was not declared or is otherwise not provided.

Action: Usually, other, more specific, errors will accompany this one. Correcting some or all of those problems should resolve this error.

PCC-02434: FOR clause not permitted in any LOB statement
Cause: An explicit FOR clause was used in some LOB statement. The use of the FOR clause in LOB statements is erroneous.

Action: Remove the FOR clause.

PCC-02435: This attribute is only valid for internal LOB types
Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not of some Internal LOB type.

Action: Replace the LOB host variable in the LOB DESCRIBE with one that was declared to be an Internal LOB.

PCC-02436: This attribute is only valid for external LOB types (BFILEs)
Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not an External LOB type (BFILE).

Action: Use an External LOB (BFILE) host variable in the LOB DESCRIBE statement.

PCC-02437: Expecting an expression having binary integral type
Cause: A host variable was given that was not declared to be of some acceptable binary numberic integral type. Generally, when this error occurs, a signed or unsigned integral type was expected. Floating point or otherwise imprecise numeric types are considered erroneous.

Action: Replace the problematic host variable with one that was declared using a proper exact numeric integral type.

PCC-02438: Arrays of collection objects are not allowed
Cause: An array of collections was given in a COLLECTION statement. Only scalar (non-array) collection objects are allowed in any of the COLLECTION statements.

Action: Change the declaration of the Collection host variable so that it is not an array.

PCC-02439: FOR clause not allowed in this COLLECTION statement
Cause: An illegal FOR clause was used in a COLLECTION statement that did not allow one, particularly, one of either the TRIM or DESCRIBE COLLECTION statements.

Action: Remove the FOR clause from the statement.

PCC-02440: This attribute is valid for either internal or external LOBs
Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB host variable was neither an Internal an External LOB (BFILE) type.

Action: Use either an Internal or External LOB host variable in the LOB DESCRIBE statement.

PCC-02441: Number of attributes does not match number of host variables
Cause: There is a mismatch between the number of attributes and the number of valid host variables in the LOB or Collection DESCRIBE.

Action: Make sure that for each attribute being requested there is at most a single valid host variable given to hold its value.

PCC-02442: Expecting a value between 1 and 65535 inclusive
Cause: The value specified in the WITH MAX clause of an ALLOCATE DESCRIPTOR statement or the VALUE clause of a GET/SET DESCRIPTOR statement was either less than 1 or greater than 65535.

Action: Specify a value between 1 and 65535 inclusive.

PCC-02443: This usage is only valid when DYNAMIC=ANSI is specified
Cause: One of the following statements was used without specifying a DYNAMIC=ANSI command line option setting o EXEC SQL ALLOCATE/ DEALLOCATE/GET/SET DESCRIPTOR o EXEC SQL DESCRIBE OUTPUT/ INPUT ... USING ... *descriptor* o EXEC SQL EXECUTE ... INTO ... o EXEC SQL EXECUTE ... USING ... *descriptor* o EXEC SQL OPEN ... INTO ... o EXEC SQL OPEN ... USING ... *descriptor*

Action: Specify DYNAMIC=ANSI or remove statements like those above from the program.

PCC-02444: Invalid combination of descriptor and non-descriptor clauses
Cause: There was a mixing of descriptor and non-descriptor clauses in an ANSI Dynamic SQL statement.

Action: Do not mix descriptors and non-descriptors in the ANSI statement in question.

PCC-02445: USING clause valid only on a PREPAREd dynamic statement
Cause: The USING clause was used with an OPEN cursor statement where the cursor declaration was not for a PREPAREd statement. The correct sequence of statements should be as follows EXEC SQL PREPARE s FROM :stmt; EXEC SQL DECLARE c CURSOR FOR s; EXEC SQL OPEN c USING ...;

Action: Use the PREPARE statement for the SQL statement and use that in the DECLARE CURSOR statement.

PCC-02446: FOR clause not allowed in a DEALLOCATE statement
Cause: An explicit FOR clause was used in a DEALLOCATE DESCRIPTOR statement.

Action: Remove the FOR clause from the statement.

PCC-02447: Cannot specify destination offset in a LOB WRITE APPEND
Cause: A destination offset was specified in a LOB WRITE APPEND statement. The destination offset is assumed to be the end of the LOB so specifying an explicit destination offset is erroneous.

Action: Remove the destination offset from the LOB WRITE APPEND statement.

PCC-02448: Cannot specify a UCS2 variable in the NLS_NCHAR option
Cause: A variable declared as utext, uvarchar, or longuvarchar was specified in the NLS_NCHAR command line option.

Action: Re-precompile without specifying the variable in an NLS_NCHAR command line option.

PCC-02449: Cannot type equivalence a UCS2 type
Cause: A UCS2 type has been type equivalenced in an EXEC SQL TYPE statement or a variable of UCS2 type has been type equivalenced in an EXEC SQL VAR statement.

Action: Remove the EXEC SQL TYPE or EXEC SQL VAR statement.

PCC-02450: Cursor was not declared in scrollable mode
Cause: A cursor which was not DECLAREd in SCROLL mode was used in scrollable mode in the FETCH statement.

Action: Declare the cursor in scroll mode using the SCROLL keyword.

PCC-02451: Value of offset cannot be negative in ABSOLUTE orientation mode
Cause: The offset for the FETCH ABSOLUTE statement is negative.

Action: Value of offset should be positive.

PCC-02452: Common SQL Front End found semantic error
Cause: A database entity, such as a table or column name, was referenced, that does not exist. This is a compile time error, not a runtime error.

Action: Check that all referenced objects in the SQL statements actually exist and that the necessary access permission on them have been granted.

PCC-02453: Must use option SQLCHECK=SEMANTICS(FULL) when option OUTLINE is used
Cause: The precompiler option OUTLINE was used without specifying SQLCHECK=SEMANTICS(FULL).

Action: Set the precompiler option SQLCHECK=SEMANTICS(FULL).

PCC-02454: Must use option OUTLINE when option OUTLINPREFIX is used
Cause: The precompiler option OUTLINEPREFIX was used without specifying OUTLINE=YES|*OUTLINENAME*. The precompiler option OUTLINE must be specifiied if OUTLINPREFIX is used.

Action: Set the precompiler option OUTLINE=YES|*OUTLINENAME*.

PCC-02455: Must use option OUTLINE when option RUNOUTLINE is used
Cause: The precompiler option RUNOUTLINE was used without specifying OUTLINE=YES|*OUTLINENAME*. The precompiler option OUTLINE must be specifiied if RUNOUTLINE is used.

Action: Set the precompiler option OUTLINE=YES|*OUTLINENAME*.

PCC-02456: Unable to open Outline SQL file
Cause: Pro*C was unable to open the OUTLINE SQL file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02457: Unable to open Outline LOG file
Cause: Pro*C was unable to open the OUTLINE LOG file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02458: Outline name length exceeds the allowed limit
Cause: Outline name *value of outline option_filename_ filetype_seqno* has exceeded the allowed limit.

Action: Use OUTLINPREFIX option to specify the outline name which will be well in the permitted limit.

PCC-02459: Number of outlines has exceeded the limit
Cause: Number of outlines that can be created has exceeded the file limit. Allowed outlines per file is 10000.

Action: Split the file so that each file can have not more than 10000 outlines.

PCC-02460: Outline cannot be created
Cause: Outline cannot be created as there is syntax error; or outlines are not supported on that statement.

Action: Correct the syntax error in the actual SQL used in the file or refer to "Performance Tuning Guide" for the list of supported statements.

PCC-02461: Must specify SQLCHECK=FULL along with option PLAN_BASELINE
Cause: The precompiler option PLAN_BASELINE was used without specifying SQLCHECK=FULL.

Action: Set the precompiler option SQLCHECK=FULL.

PCC-02462: Must use option PLAN_BASELINE along with option PLAN_PREFIX
Cause: The precompiler option PLAN_PREFIX was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02463: Must use option PLAN_BASELINE along with option PLAN_RUN
Cause: The precompiler option PLAN_RUN was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02464: Unable to open Plan Baseline SQL file
Cause: Pro*C was unable to open the Plan Baseline SQL file. The user executing the precompiler must have write permission (or the appropriate privileges) on the current directory.

Action: Check that permission is granted to create files.

PCC-02465: Unable to open Plan Baseline LOG file
Cause: Pro*C was unable to open the Plan Baseline LOG file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02466: Length of Plan Baseline name exceeds the allowed limit
Cause: Plan Baseline name <module_name>*_filename_ filetype_seqno* exceeded the allowed limit.

Action: Use PLAN_PREFIX option to specify the Plan Baseline prefix-name.

PCC-02467: Number of Plan Baselines has exceeded the limit per file
Cause: Number of Plan Baselines that can be created has exceeded the file limit. Allowed Plan Baselines per file is 10000.

Action: Split the file so that each file can have no more than 10000 Baselines.

PCC-02468: Plan Baseline cannot be created
Cause: Plan Baseline cannot be created, as there is a syntax error or Baselines are not supported on that statement.

Action: Correct the syntax error in the actual SQL used in the file or refer to the Oracle Database Performance Tuning Guide for the list of supported statements.

PCC-02469: Must use option PLAN_BASELINE along with option PLAN_ENABLED
Cause: Parameter required for Plan Baseline creation (PLAN_ENABLED) was used without specifying the option PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02470: Must use option PLAN_BASELINE along with option PLAN_FIXED
Cause: Parameter required for Plan Baseline creation (PLAN_FIXED) was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02471: Cannot use both PLAN_BASELINE and OUTLINE simultaneously
Cause: Both PLAN_BASELINE and OUTLINE options were specified. These options are not supported simultaneously.

Action: Specify either the PLAN_BASELINE option or the OUTLINE option, but not both.

PCC-02472: Module name exceeds 30 bytes, will be truncated in database
Cause: SQL Plan Management (SPM) does not support module names greater than 30 bytes and the specified module name exceeded this limit.

Action: Shorten the module name to stay within this limit.

PCC-02473: program has EXEC SQL DECLARE TABLE, therefore PLAN_RUN option is ignored
Cause: PLAN_RUN was ignored because DECLARE TABLE was found. Baseline plans were not created during precompilation.

Action: Run the generated SQL manually.

PCC-02474: invalid numeric value
Cause: The numeric value was invalid.

Action: Specify a proper numeric value.

102
PGA-20900 to PGA-22014

PGA-20900: unable to obtain *number* bytes of storage for *string*
Cause: Memory shortage in the gateway server process.

Action: Ensure your system has enough available memory to support the number of concurrent users you are running.

PGA-20901: internal gateway error: *string*
Cause: Internal error in the gateway server process.

Action: Reproduce the error with debugging enabled to produce a log file. Supported customers should contact Oracle Worldwide Support for assistance.

PGA-20905: invalid conversation id: no active conversations were found
Cause: There were no APPC conversations active for the user.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-20906: invalid conversation id: no matching conversation was found
Cause: The conversation id received from the caller is not a valid active conversation id.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-20907: preceding error occurred during gateway *string* processing
Cause: An error occurred processing the Oracle function *func*. This message is preceded by additional messages providing more detailed information about the error.

Action: Refer to the messages preceding this one to determine the course of action to take.

PGA-20910: communication error: CPI-C *string* failed, rc = *number*, errno = *number*
Cause: An unexpected communication error occurred while executing the specified CPI-C function *func*. The CPI-C function return code *rc* and system error number *errno* are provided in the message text. The CPI-C function return codes and system error numbers are described in the vendor documentation.

Action: Determine the cause of the communications error, correct it, and rerun the transaction.

PGA-20911: update transaction is already active with TP *string* at LU *string*
Cause: Transaction *tpname* has already been started at LU *luname* by a PGAINIT call with synclevel set to 1 or 2. Only one transaction at synclevel 1 or 2 is allowed at any given time.

Action: The new transaction is not started. Change your application to start the second update transaction after the first one has completed, or to use a different gateway database link for the second update transaction.

PGA-20912: send and receive buffer lengths cannot both be zero
Cause: Both the send and receive buffer lengths passed to PGAXFER were zero. This is invalid.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20914: send buffer length of *number* exceeds actual send buffer size of *number*
Cause: The send buffer length *len* passed to PGAXFER was larger than the actual size *size* of the send buffer passed to PGAXFER.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20915: receive buffer length of *number* exceeds the maximum of *number*
Cause: The receive buffer length *len* passed to PGAXFER was larger than the maximum allowed length *max*.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20916: send count is *number* but only *number* send lengths were specified
Cause: The first value *count* in the send lengths array passed to PGAXFER specified more elements than the send lengths array contained. Only *num* elements were found in the array.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20917: receive count is *number* but only *number* receive lengths were specified
Cause: The first value *count* in the receive lengths array passed to PGAXFER specified more elements than the receive lengths array contained. Only *num* elements were found in the array.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20918: send length number *number* is *number* but only *number* bytes are left in the buffer
Cause: The length *len* specified in send lengths array element number *num* exceeded the number of bytes *bytes* of data remaining in the send buffer.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20919: receive length number *number* is *number* but only *number* bytes are left in the buffer
Cause: The length *len* specified in receive lengths array element number *num* exceeded the number of bytes *bytes* of space remaining in the receive buffer.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20920: unexpected request-to-send received
Cause: The remote transaction program requested to send data when the gateway was still sending data.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20921: buffer overflow on receive: requested *number* bytes, received *number* bytes
Cause: The remote transaction program sent *len* bytes of data when the gateway was expecting to receive only *num* bytes.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20922: no data available to receive: *number* bytes were requested
Cause: The remote transaction program has either requested to receive or deallocated the conversation, but the gateway is still expecting to receive more data.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20923: unexpected status, *number* (*string*), received after *string*
Cause: An unexpected status code *stat* was received from the remote transaction program following the CPI-C *func* call. The descriptive name of the status code is *desc*. *func* is the CPI-C function receiving the status.

Action: This is usually a problem with the remote transaction program or a network problem. The status codes for each CPI-C function call are documented in the platform-specific SNA software documentation for your system. Refer to the "System Requirements" chapter of the Oracle Database Gateway for APPC Installation and Configuration Guide for your platform for titles of SNA software documentation.

PGA-20924: unable to enter send state for deallocate, state = *number* (*string*)
Cause: The gateway was unable to enter send state to perform a normal deallocation. The conversation state is *state*, and its descriptive name is *desc*. The conversation states are documented in the /usr/include/cmc.h header file.

Action: This is usually a problem with the remote transaction program or a problem with the network. Check the remote system for diagnostic information. The gateway will perform an abnormal deallocation after this error has been encountered.

PGA-20925: missing LU/TP/MODE name parameter and no side info profile specified
Cause: PGAINIT was called with no Side Information profile name specified but the LU name, TP name, and MODE name parameters were not all filled in with non-blank values.

Action: Check the PGDL used to define the transaction program to PGAU to ensure that either a valid Side Information profile name is specified (SIDEPROFILE keyword), or that the LU name, TP name, and Mode name (LUNAME, TPNAME, LOGMODE keywords) are all specified with valid values. If no Side Information profile is specified, the LU name, TP name, and Mode name parameters are all required.

PGA-20926: userid *string* length of *number* is invalid; maximum length is *number*
Cause: The userid *uid* is too long (*len*) to be used with APPC conversation security. The maximum allowable length for the userid is *max* characters. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to either SAME or PROGRAM.

Action: The userid must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. This restriction is imposed by SNA and APPC, not by the gateway.

PGA-20927: password length of *number* is invalid; maximum length is *number*
Cause: The password is too long (*len*) to be used with APPC conversation security. The maximum allowable length for the password is *max* characters. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to PROGRAM.

Action: The password must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. This restriction is imposed by SNA and APPC, not by the gateway.

PGA-20928: cannot open parameter file *string*
Cause: The gateway cannot locate or open the file specified.

Action: Make sure that the file exists in a location expected by the gateway and can be opened.

PGA-20930: invalid SYNCLEVEL, *number*, specified; valid range is *number*:*number*
Cause: The synclevel, *sync*, passed to PGAINIT is not a valid value. This value is specified by the SYNCLEVEL keyword in the DEFINE TRANSACTION statement used to define the transaction to PGAU.

Action: The value for SYNCLEVEL must fall within the range *min*:*max*. Correct the value specified in the DEFINE TRANSACTION statement for the SYNCLEVEL keyword, and regenerate the PL/SQL TIP using PGAU.

PGA-20931: send buffer length of *number* exceeds the maximum of *number*
Cause: The send buffer length, *len*, passed to PGAXFER was larger than the maximum allowed, *max*.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU do not define any data items larger than the maximum size allowed by APPC. Correct the data item(s) in error and regenerate the PL/SQL TIP using PGAU.

PGA-20932: invalid function code, *string*, passed to pgatctl
Cause: The function code, *func*, passed to the PGATCTL function was invalid.

Action: Correct the function code in the PL/SQL procedure, recompile it, and retry the operation.

PGA-20933: invalid value specified by initialization parameter *string=string*
Cause: The keyword parameter *keyword=value* specifies an invalid value.

Action: Refer to the Oracle Database Gateway for APPC, Installation and Configuration Guide, documenting gateway initilization parameters for the keyword and correct the error.

PGA-20934: side information profile *string* not defined; cannot establish conversation
Cause: The Side Information profile *profile* is not defined to the SNA software. Either the profile name was misspelled, or no profile has been defined.

Action: Correct the profile name if it was misspelled, or have the profile defined to the SNA software if it was not already defined.

PGA-20936: send buffer length is *number* but no send lengths were specified
Cause: The send buffer length passed to PGAXFER was *len*, but the send lengths array was either null or contained a send count of zero.

Action: Check that the PGDL or COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions.

PGA-20937: receive buffer length is *number* but no receive lengths were specified
Cause: The receive buffer length passed to PGAXFER was *len*, but the receive lengths array was either null or contained a receive count of zero.

Action: Check that the PGDL or COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions.

PGA-20938: send lengths array too small (*number*) to contain a valid send count
Cause: The send lengths array passed to PGAXFER was too small to contain a valid send item count. The actual length of the send lengths array was *len*. The minimum length of the send lengths array is 4 bytes.

Action: If the TIP was generated by PGAU, ensure that it was not modified incorrectly. If the TIP was not modified, supported customers should contact Oracle Worldwide Support for assistance. If the TIP was modified or was not generated by PGAU, correct the send lengths array passed to PGAXFER.

PGA-20939: receive lengths array too small (*number*) to contain a valid receive count
Cause: The receive lengths array passed to PGAXFER was too small to contain a valid receive item count. The actual length of the receive lengths array was *len*. The minimum length of the receive lengths array is 4 bytes.

Action: If the TIP was generated by PGAU, ensure that it was not modified incorrectly. If the TIP was not modified, supported customers should contact Oracle Worldwide Support for

assistance. If the TIP was modified or was not generated by PGAU, correct the receive lengths array passed to PGAXFER.

PGA-20945: unable to log on to Oracle for transaction logging
Cause: The gateway server was unable to connect to the Oracle server where the transaction log table is stored. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. If the protocol is SNA: also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. If the protocol is TCP/IP: also check the PGA_TCP_DB, PGA_TCP_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20947: unable to bind variable *string* for transaction logging
Cause: The gateway server was unable to bind variable *var* for use in performing transaction logging functions. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20948: unable to prepare the statement for transaction logging
Cause: The gateway server was unable to prepare the statement to be used to call the transaction logging PL/SQL stored procedure. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Verify that the transaction logging PL/SQL procedure has been properly installed into the Oracle server under the userid and password specified by PGA_LOG_USER and PGA_LOG_PASS and that it is executable. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20949: unable to define variable *string* for transaction recovery
Cause: The gateway server was unable to define variable *var* to be used in accessing the transaction log table during recovery processing. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20950: unable to perform *string* on transaction log
Cause: The gateway server was unable to insert, update, or delete a pending transaction row in the transaction log table. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Verify that the transaction logging PL/SQL stored procedure and the transaction log table have been properly installed into the Oracle server under the userid and password specified by PGA_LOG_USER and PGA_LOG_PASS. Refer to the Oracle Server Message and Codes Manual for information on the Oracle server message.

PGA-20960: missing *string* parameter, required when PGA_CAPABILITY=*string*
Cause: The PGA_CAPABILITY parameter specified *cap*, but another required parameter, *parm*, was omitted.

Action: Add the missing parameter to the gateway initialization file. Refer to Appendix A, 'Gateway Initialization Parameters', in the Oracle Database Gateway for APPC Installation and Configuration Guide for information on required parameters.

PGA-20961: synclevel 1 conversations not allowed when PGA_CAPABILITY=2_PHASE
Cause: A conversation was requested at synclevel 1. The gateway init file specified PGA_CAPABILITY=2_PHASE. When 2-phase commit is enabled, synclevel 1 conversations are not supported, since they are not protected by 2-phase processing.

Action: Either use synclevel 2 for the conversation (if the remote transaction program supports it) or use a different gateway SID for this conversation.

PGA-20962: synclevel 2 conversations not currently allowed
Cause: A conversation was requested at synclevel 2, but the SNA software allocated the conversation at synclevel 0 or 1. This means that the SNA software is not configured to support synclevel 2, or has no RRM enabled.

Action: Correct the SNA software configuration to support synclevel 2 and to enable RRN processing.

PGA-20963: side profile *string* specifies the wrong local LU name (*string*)
Cause: The Side Information profile *profile* specified for this conversation has a local LU name *lu* that is different from the local LU name specified by the PGA_LOCAL_LU gateway initialization parameter.

Action: This message will be accompanied by message PGA-20984, which provides the local LU name that was specified by the PGA_LOCAL_LU gateway initialization parameter. The Side Information profile must be changed to use the same local LU name.

PGA-20964: local LU name specified by PGA_LOCAL_LU is *string*
Cause: Message PGA-20963 was issued. This message always follows.

Action: See message PGA-20963.

PGA-20965: syncpoint error: expecting *string* PS header, received *string*
Cause: During the processing of a 2-phase commit, an incorrect response was received from the remote transaction program following a syncpoint control command. The response received was *rcv* and not a *pstype* PS header as expected.

Action: This is an error in the remote transaction program or the remote OLTP. Check the remote system for error messages from the OLTP. Contact the system administrator for the remote system to assist in problem determination.

PGA-20966: syncpoint error: sent *string*, expecting *string*, received *string*
Cause: During the processing of a 2-phase commit, an incorrect response *resp* was received from the remote transaction program following a syncpoint control command *psh*. The expected response was *exp*.

Action: This is an error in the remote transaction program or the remote OLTP. Check the remote system for error messages from the OLTP. Contact the system administrator for the remote system to assist in problem determination.

PGA-20967: 2-phase commit recovery attempted, DBA action required
Cause: The recovery process of the Oracle integrating server has connected to the gateway to perform recovery. However, the gateway cannot perform automatic recovery for this transaction due to unknown heuristic action taken by the target OLTP.

Action: The DBA must attempt to manually resolve the in-doubt transaction. Detailed information on how to proceed is contained in Chapter 8 of the Oracle Database Gateway for APPC Installation and Configuration Guide, in the section titled "Manual Recovery of In-Doubt Transactions".

PGA-20995: communication error: '*string*' failed, rc = *number*, errno = *number*
Cause: An unexpected communications error occurred while executing the AIX SNA Server API *func* function. The function return code is *rc* and the system error number is *errno*. The AIX SNA Server LU6.2 API function return codes and system error numbers are described in the vendor documentation. The SNA system error numbers can also be found in the /usr/include/luxsna.h header file on AIX systems.

Action: Determine the cause of the communications error, correct it, and rerun the transaction. If you need assistance, contact your system adminstrator.

PGA-20999: SIGDANGER received from system - all conversations deallocated
Cause: The system sent a SIGDANGER signal to the server, indicating that there is a shortage of paging space. All currently active conversations are deallocated abnormally.

Action: Contact your system administrator.

PGA-21001: internal error: *string*
Cause: Internal error in the gateway RRM process.

Action: Reproduce the error with tracing enabled to produce a trace file. Supported customers should contact Oracle Worldwide Support for assistance.

PGA-21002: unable to obtain *number* bytes of memory for *string*
Cause: Memory shortage in the gateway RRM process. A request failed to allocate *bytes* of memory for the *usage* area.

Action: Ensure your system has enough available memory to support the RRM.

PGA-21003: memory allocation error in lxlinit
Cause: Memory shortage in the gateway RRM process.

Action: Ensure your system has enough available memory to support the RRM.

PGA-21004: invalid *string* specified by NLS_LANG
Cause: The *comp* component of the NLS_LANG environment variable was not valid. The component can be the language, territory, or character set.

Action: Correct the invalid component and restart the RRM process.

PGA-21005: no message file found for language '*string*'
Cause: There was no message file available for the language *lang* specified by the NLS_LANG environment variable.

Action: Refer to Appendix J, National Language Support, for a list of message file languages supported by the RRM. If the language required is supported, ensure that the ORACLE_HOME environment variable specifies the gateway's home directory and that the message files are properly installed.

PGA-21006: RRM initialization failed
Cause: The initialization of the gateway RRM process failed.

Action: This message is sent to the system log as an ALERT message when the initialization of the RRM failed before it could initialize the message facility or before it could determine the local LU name for which it was started.

PGA-21010: missing fully-qualified local LU name argument
Cause: The fully-qualified local LU name was not passed as the first argument to the pg4arrm program on the command line.

Action: The fully-qualified local LU name must be specified as the first argument to the pg4arrm program. Reenter the command line with the fully-qualified local LU name specified.

PGA-21011: invalid network name length (*number*), valid range is *number*:*number*
Cause: The network name portion of the fully-qualified local LU name specified as the first argument to the pg4arrm program is the wrong length (*len*).

Action: The valid range of lengths for the network name is given in the message text by *min*:*max*. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21012: invalid LU name length (*number*), valid range is *number*:*number*
Cause: The LU name portion of the fully-qualified local LU name specified as the first argument to the pg4arrm program is the wrong length (*len*).

Action: The valid range of lengths for the LU name is given in the message text by *min*:*max*. Reenter the command line with a valid LU name specified in the fully-qualified local LU name.

PGA-21013: missing period(.) in fully-qualified local LU name
Cause: There is no period (.) in the fully-qualified local LU name specified as the first argument to the pg4arrm program.

Action: A fully-qualified local LU name must contain a network name and an LU name, separated by a period (.). Reenter the command line with a valid fully-qualified local LU name specified.

PGA-21014: invalid character(s) found in network name '*string*'
Cause: One or more invalid characters were found in the network name portion *net* of the fully-qualified local LU name.

Action: The network name must begin with an upper-case alphabetic character or one of the national characters $, #, or @. Subsequent characters can be upper-case alphabetic,

national, or numeric. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21015: invalid character(s) found in LU name '*string*'
Cause: One or more invalid characters were found in the LU name portion *lu* of the fully-qualified local LU name.

Action: The LU name must begin with an upper-case alphabetic character or one of the national characters $, #, or @. Subsequent characters can be upper-case alphabetic, national, or numeric. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21016: RRM initialization failed for LU *string*
Cause: The initialization of the gateway RRM process for local LU *lu* failed.

Action: This message is sent to the system log as an ALERT message when the initialization of the RRM failed for the local LU.

PGA-21017: RRM already active for LU *string*
Cause: The RRM has already been started for the local LU *lu*. A second RRM cannot be started for the same local LU.

Action: Determine whether the RRM is still active and functioning. If it is not, then it may have terminated without cleaning up. On AIX systems, the /tmp/o/e*luname* file may still exist. This will prevent a new RRM from being started. If you have verified that the original RRM is no longer running, you can delete the file to allow a new copy of the RRM to be started.

PGA-21020: error creating path object for init file
Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21021: error creating name object for init file
Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21022: error creating file object for init file
Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21023: error opening init file *string*
Cause: An error occurred opening the init file *ifn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21024: error reading init file *string*
Cause: An error occurred reading the init file *ifn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21025: error closing init file *string*
Cause: An error occurred opening the init file *ifn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21030: invalid keyword in line *number*
Cause: An invalid keyword was encountered in the init file in line number *line*.

Action: Correct the invalid line in the init file and restart the RRM process.

PGA-21031: length of *string* value (*number*) not within valid range (*number*:*number*)
Cause: The length *len* of the value specified in the init file by the keyword *key* is not within the valid range *min*:*max*.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21032: invalid value specified by *stringstring*
Cause: The value *val* specified in the init file by the keyword *key* is invalid.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21033: error(s) found in init file
Cause: One or more errors were found in the init file during RRM initialization. The RRM process has terminated.

Action: Correct all init file errors and restart the RRM process.

PGA-21034: too many errors in init file, cannot continue
Cause: The init file contained more errors than the RRM initialization code could process.

Action: Correct all errors that have been processed so far, and restart the RRM process. Any additional errors will then be processed. This error is received only when the init file contains a very large number of invalid lines.

PGA-21035: value of *string* (*number*) not within valid range (*number*:*number*)
Cause: The value *val* specified in the init file by the keyword *key* is not within the valid range *min*:*max*.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21040: error creating path object for log file
Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21041: error creating name object for log file
Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21042: error creating file object for log file
Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21043: error opening log file *string*
Cause: An error occurred opening the log file *lfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21044: error writing to log file *string*
Cause: An error occurred writing to the log file *lfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21045: error closing log file *string*
Cause: An error occurred closing the log file *lfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21046: logging switched to system log due to error on log file
Cause: An error occurred writing to the log file, and logging as been switched to the system log facility for the remainder of this RRM execution.

Action: Correct the problem that cause d the error on the log file, so that the next restart of the RRM will be able to write to the log file. A common cause for this message is unavailable disk space for the file.

PGA-21050: error creating path object for trace file
Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21051: error creating name object for trace file
Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21052: error creating file object for trace file
Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21053: error opening trace file *string*
Cause: An error occurred opening the trace file *tfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21054: error writing to trace file *string*
Cause: An error occurred writing to the trace file *tfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21055: error closing trace file *string*
Cause: An error occurred closing the trace file *tfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21056: tracing suspended due to error on trace file
Cause: An error occurred writing to the trace file, and tracing has been suspended for the remainder of this RRM execution.

Action: Correct the problem that cause d the error on the trace file, so that the next restart of the RRM will be able to write to the trace file. A common cause for this message is unavailable disk space for the file.

PGA-21060: system errno = *number*
Cause: The system error number was *errno* following a failure in a file operation.

Action: The system error codes are documented in the header file /usr/include/errno.h. Determine the cause of the file error and correct it.

PGA-21100: RRM initializing for local LU *string*
Cause: The RRM is initializing for the local LU *llu*.

Action: Informational message.

PGA-21101: initialization parameters read from *string*
Cause: Init parameters were read from the file *ifn*.

Action: Informational message.

PGA-21102: log messages written to *string*
Cause: Log messages will be written to the file *lfn*.

Action: Informational message.

PGA-21103: trace information written to *string*
Cause: Trace information will be written to the file *tfn*.

Action: Informational message.

PGA-21104: trace level currently set to *number*
Cause: The trace level specified by the TRACE_LEVEL parameter is *trc*.

Action: Informational message.

PGA-21105: startup for local LU *string* is warm
Cause: The RRM is warm-starting for the local LU *llu*. The RRM will attempt to restore all LU6.2 log states from the RRM LU6.2 log as it existed at the last RRM shutdown.

Action: Informational message.

PGA-21106: warm start complete for local LU *string*
Cause: The RRM has warm-started for the local LU *llu*. This means that all state information for the local LU and partner LUs with which the RRM has previously communicated was restored from the RRM LU6.2 log as it existed at the last RRM shutdown.

Action: Informational message.

PGA-21107: startup for local LU *string* is cold
Cause: The RRM is cold-starting for the local LU *llu*. The RRM will not retain any LU6.2 log states from the previous execution.

Action: Informational message.

PGA-21108: cold start complete for local LU *string*
Cause: The RRM has cold-started for the local LU *llu*. The RRM has a new local LU6.2 log name and all LU6.2 log names for partner LUs have been erased.

Action: Informational message.

PGA-21109: local log name is x'*string*'
Cause: The local LU's LU6.2 log name is *llog*. Since the log name is not necessarily a printable string, it is listed as a hexadecimal string.

Action: Informational message.

PGA-21110: XLN received from partner LU *string*
Cause: An Exchange Log Names (XLN) GDS variable has been received from the RRM at the partner LU *plu*. This is the first thing that occurs when communication is established with a partner LU for the first time since either the local RRM or the partner RRM was last started.

Action: Informational message.

PGA-21111: partner log name is x'*string*'
Cause: The partner LU's LU6.2 log name is *plog*. Since the log name is not necessarily a printable string, it is listed as a hexadecimal string.

Action: Informational message.

PGA-21112: creating new log entry for partner LU *string*
Cause: The RRM is creating an entry in its LU6.2 log for the partner LU *plu*. This happens only the first time that the partner LU's RRM contacts the local RRM since the last cold start of the local RRM.

Action: Informational message.

PGA-21113: warm starting for partner LU *string*
Cause: The RRM is warm starting for the partner LU *plu*. This happens when the partner LU's RRM is warm starting and is contacting the local RRM for the first time since the local RRM was started.

Action: Informational message.

PGA-21114: cold starting for partner LU *string*
Cause: The RRM is cold starting for the partner LU *plu*. This happens when the partner LU's RRM is cold starting and is contacting the local RRM for the first time since the local RRM was started.

Action: Informational message.

PGA-21115: shutdown request received
Cause: A shutdown request has been received by the RRM.

Action: Informational message.

PGA-21116: RRM termination complete for local LU *string*
Cause: The RRM has terminated for the local LU *llu*.

Action: Informational message.

PGA-21200: connect to Oracle Server as *string* failed
Cause: The RRM was unable to connect as user *user* to the Oracle server where its LU6.2 log information is stored. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the LOG_DB, LOG_USER, and LOG_PASS parameters in the RRM init file and ensure that they specify the correct database string, userid, and password, respectively.

PGA-21201: error selecting PGA_2PC_LUS row for local LU *string*
Cause: The RRM was unable to read its local LU6.2 log entry. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21202: error updating PGA_2PC_LUS row for local LU *string*
Cause: The RRM was unable to update its local LU6.2 log entry during warm start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21203: error inserting PGA_2PC_LUS rows for local LU *string*
Cause: The RRM was unable to create its local LU6.2 log entry during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21204: error deleting PGA_2PC_PENDING rows for local LU *string*
Cause: The RRM was unable to delete the pending transaction entries from its local LU6.2 log during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_PENDING table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21205: error deleting PGA_2PC_LUS rows for partner LUs
Cause: The RRM was unable to delete the partner LU entries from its local LU6.2 log during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21206: error selecting PGA_2PC_LUS row for partner LU *string*
Cause: The RRM was unable to read its local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21207: error inserting PGA_2PC_LUS row for partner LU *string*
Cause: The RRM was unable to create a local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21208: error updating PGA_2PC_LUS row for partner LU *string*
Cause: The RRM was unable to update its local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21209: error selecting PGA_2PC_PENDING rows for partner LU *string*
Cause: The RRM was unable to read the pending transaction entries from its LU6.2 log for the partner LU *plu*. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_PENDING table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21210: unable to open connection with SNA services
Cause: The RRM was unable to initialize its connection with the SNA software for LU6.2 communications. An OS-specific error message precedes this message.

Action: Check the error information in the OS-specific error message to determine the cause of the problem, and take corrective action. Once the problem has been corrected, restart the RRM.

PGA-21211: unable to allocate LU6.2 listen for RRM TP
Cause: The RRM was unable to allocate an LU6.2 listen with the SNA software for LU6.2 communications. An OS-specific error message precedes this message.

Action: Check the error information in the OS-specific error message to determine the cause of the problem, and take corrective action. Once the problem has been corrected, restart the RRM.

PGA-21212: incorrect data received from partner LU *string*
Cause: A partner LU has sent incorrect data in its initial communication with the local RRM. The first data received should be an Exchange Log Names (XLN) GDS variable, but was not.

Action: This error indicates that there is a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21213: received x'*string*'
Cause: This message follows message PGA-00208, and dumps out the first 32 bytes of the data received from the partner LU.

Action: If the data in this message is not sufficient for determination of the problem at the partner LU, use SNA traces on either side of the connection to gather more detailed information, or use the TRACE_LEVEL parameter in the RRM init file to enable SNA data tracing to the trace file.

PGA-21214: incorrect service flag in XLN
Cause: The service flag in the Exchange Log Names (XLN) GDS variable received from the partner LU's RRM is not correct. The XLN is expected to have the REQUEST flag set.

Action: This error indicates that there is a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21215: partner log name mismatch on warm start
Cause: The Exchange Log Names (XLN) GDS variable received from the partner LU's RRM contains an LU6.2 log name that is different from that known by the local LU's RRM.

Action: This can happen if the partner LU was cold started and later warm started, all between the times the local LU's RRM was last shut down and warm started. The local LU's RRM is not aware that the partner LU was cold started, and therefore assumes that the partner LU's RRM is using the wrong LU6.2 log name. Verify that this is what happened, and if so, the local LU's RRM can be forced to accept the new LU6.2 log name from the partner LU's RRM by deleting the local RRM's LU6.2 log entry for the partner LU, and then forcing the partner LU to reinitiate the connection to the local LU. For further information on recovery from this error, refer to "RRM Recovery" in Chapter 12, "2-Phase Commit".

PGA-21216: last stored log name x'*string*'
Cause: This message always follows message PGA-00213, and lists the last partner LU LU6.2 log name *plog* saved by the local LU's RRM.

Action: The log name in the message may be of use to the system administrator for the partner LU in determining the cause for the log name mismatch.

PGA-21217: partner sent log name x'*string*'
Cause: This message always follows message PGA-00214, and lists the LU6.2 log name *plog* sent by the partner LU's RRM in the warm start Exchange Log Names (XLN) GDS variable.

Action: The log name in the message may be of use to the system administrator for the partner LU in determining the cause for the log name mismatch.

PGA-21218: cold start for partner LU *string* rejected, *number* pending transactions exist
Cause: A cold start was requested by the partner LU's RRM, but the local RRM determined that there are still unresolved pending transactions for that LU in the local RRM's LU6.2 log.

Action: If the pending transactions have been resolved, then they must be manually deleted from the local RRM's LU6.2 log before the partner LU's cold start request will be accepted. If the pending transactions have not been resolved, then they must be resolved and then manually deleted from the local RRM's LU6.2 log before the partner LU's cold start request will be accepted.

PGA-21219: recovery action by DBA required for local LU *string*
Cause: A condition has occurred which requires action by the DBA. This message is also sent to the system log as an alert message.

Action: The DBA should examine the RRM log file to determine what action to take. The messages in the log file show what event has occurred that makes DBA action

necessary, and their descriptions in this appendix provide the DBA with a course of action. For further information on recovery, refer to "RRM Recovery" in Chapter 8, "Implementing Two-Phase Commit", of the Oracle Database Gateway for APPC Installation and Configuration Guide.

PGA-21220: logging error limit (*number*) exceeded, RRM shutting down for LU *string*
Cause: The limit of *lim* Oracle errors while accessing the RRM's local LU6.2 log tables has exceeded. The RRM for the local LU *llu* is shutting down.

Action: The DBA should examine the RRM log file to determine what action to take. The messages in the log file will show what Oracle errors have occurred, and the DBA should take whatever corrective action is required.

PGA-21221: commit failed during cold start of local LU *string*
Cause: The RRM was unable to commit updates to its local log during a cold start of local LU *llu*. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21222: commit failed during warm start of local LU *string*
Cause: The RRM was unable to commit updates to its local log during a warm start of local LU *llu*. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21223: commit failed during first-time processing for partner LU *string*
Cause: The RRM was unable to commit updates to its local log during a first-time processing for partner LU *plu*. An Oracle Server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21224: commit failed during cold start of partner LU *string*
Cause: The RRM was unable to commit updates to its local log during a cold start of partner LU *plu*. An Oracle Server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21300: received no data when expecting data
Cause: The RRM was expecting to receive data from a partner RRM, but received none.

Action: This error indicates that there may be a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21301: invalid control received: *string*
Cause: The RRM received an invalid control flag *control* from a partner RRM.

Action: This error indicates that there may be a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21400: ORACLE_HOME environment variable not set
Cause: The ORACLE_HOME environment variable was not set before the RRM was started.

Action: The ORACLE_HOME environment variable must be set to the gateway's ORACLE_HOME directory before the RRM is started.

PGA-21401: ORACLE_HOME environment variable set to null string
Cause: The ORACLE_HOME environment variable was set to a null value.

Action: The ORACLE_HOME environment variable must be set to the gateway's ORACLE_HOME directory before the RRM is started.

PGA-21402: error opening file *string*, fopen errno = *number*
Cause: An error occurred opening the RRM enqueue file *fn* for writing. The error number from fopen is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21403: error writing to file *string*, fputs errno = *number*
Cause: An error occurred writing to the RRM enqueue file *fn*. The error number from fputs is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21404: error closing file *string*, fclose errno = *number*
Cause: An error occurred closing the RRM enqueue file *fn*. The error number from fclose is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21405: error deleting file *string*, remove errno = *number*
Cause: An error occurred deleting the RRM enqueue file *fn* during shutdown. The error number from remove is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM. The file *fn* must be manually deleted before attempting to start the RRM.

PGA-21450: communication error: '*string*' failed, errno = *number*
Cause: The AIX SNA function *func* failed with a system error number of *errno*.

Action: The AIX SNA error codes are documented in the IBM manual AIX SNA Server: Diagnosis Guide and Messages. Use this manual to determine the cause of the problem and correct it. AIX SNA system error numbers are also documented in the /usr/include/luxsna.h header file on AIX systems.

PGA-21451: SNA Server is shutting down
Cause: SNA Server is being shut down and sent a SIGUSR1 to the RRM.

Action: The RRM must terminate when this occurs. Contact the system administrator to determine the cause of the SNA Server shutdown. Restart the RRM after SNA Server has been restarted.

PGA-22001: remote host name is null.
Cause: TCP/IP protocol has returned "null" for the remote host name.

Action: Verify the remote host name via the pg4tcpmap tool and re-execute your PL/SQL statement. If the problem cannot be resolved, supported customers should contact Oracle Support Services.

PGA-22002: communication error: TCP/IP *string* failed, rc = *number*
Cause: The function *func* has failed with the return code of *rc*.

Action: If the problem cannot be resolved, the supported customers should contant Oracle Support Servics for assistance.

PGA-22003: communication error: TCP/IP *string* failed, rc = *number*, for, *string*
Cause: An unexpected communications error occurred while executing the specified TCP/IP function *func*. The TCP/IP function return code is *rc* and the function *func* parameter is *parm*.

Action: If the problem cannot be resolved, the supported customers should contant Oracle Support Servics for assistance.

PGA-22004: length of the total message value (*number*) not within valid range (*number*:*number*)
Cause: The length *len* for the value is not within the valid range *min*:*max*.

Action: If the problem cannot be resolved, the supported customers should contant Oracle Support Servics for assistance.

PGA-22005: invalid socket file descriptor: no active conversations were found
Cause: There were no TCP/IP conversations active for the user.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-22006: Parameter *string* is not specified.
Cause: Parameter *parm* is missing from the gateway initialization file.

Action: Add the missing parameter to the gateway initialization file. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required initialization parameters for gateways using TCP/IP.

PGA-22007: user ID *string* length of *number* is invalid; maximum length is *number*
Cause: The user id *uid* is too long *len* to be used. The maximum allowable length for the user ID is *max* characters.

Action: The user id must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22008: password length of *number* is invalid; maximum length is *number*
Cause: The password is too long *len* to be used. The maximum allowable length for the password is *max* characters.

Action: The password must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22009: database name *string* length of *number* is invalid; maximum length is *number*
Cause: The database name *db name* is too long *len* to be used. The maximum allowable length for the database name is *max* characters.

Action: The database name must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22010: userid *string* length of *number* is invalid; maximum length is *number*
Cause: The userid *uid* is too long (*len*) to be used with TCP/IP RACF conversation security. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to either SAME or PROGRAM.

Action: The userid must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. The maximum allowable length for the userid is *max* characters. This restriction is imposed by RACF, not by the gateway.

PGA-22011: password length of *number* is invalid; maximum length is *number*
Cause: The password is too long (*len*) to be used with TCP/IP RACF conversation security. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to PROGRAM.

Action: The password must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. The maximum allowable length for the password is *max* characters. This restriction is imposed by RACF, not by the gateway.

PGA-22012: IMS Connect error: return code = *string*, reason code = *string*
Cause: An unexpected IMS Connect error occurred while executing the 'recv' function. The return code *rc* and reason code *rsc* are provided in the message text. For more information, look at the OLTP SDSF log and IMS Connect error message which starts with HWS. The messages are documented in the IBM IMS Connect Guide and Refrence manual.

Action: Determine the cause of the error, correct it, and rerun the transaction.

PGA-22014: Transaction code length of *number* exceeds the maximum of *number*
Cause: The transaction code length *len* passed to PGAINIT or PGAINIT_SEC was larger than the maximum allowed length *max*.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL

TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

103
PGU-00100 to PGU-50101

PGU-00100: invalid SPOOL file name
Cause: When using the SPOOL command, you specified the name of a file that already exists.

Action: Specify a valid name for a file that does not currently exist.

PGU-00101: extraneous text at end of command
Cause: There were unrecognized commands or other text on the command line.

Action: Check the syntax of the command, then issue the command again.

PGU-00106: invalid ECHO switch
Cause: An invalid option for the SET ECHO command was specified.

Action: Use either ON or OFF as an option for the SET ECHO command.

PGU-00107: invalid TERMOUT switch
Cause: An invalid option for the SET TERMOUT command was specified.

Action: Use either ON or OFF as an option for the SET TERMOUT command.

PGU-00108: invalid TIMING switch
Cause: An invalid option for the SET TIMING command was specified.

Action: Use either ON or OFF as an option for the SET TIMING command.

PGU-00110: illegal SET option
Cause: An invalid option for the SET command was specified.

Action: Check the syntax of the SET command and issue the command again.

PGU-00111: illegal SHOW option
Cause: An invalid option for the SHOW command was specified.

Action: Check the syntax of the SHOW command and issue the command again.

PGU-00115: unexpected end of command
Cause: An option was specified without the required arguments.

Action: Check the syntax of the command and enter the command again with the appropriate arguments for options that require values.

PGU-00120: invalid STOPONERROR switch
Cause: An invalid options switch was specified for the SET STOPONERROR command.

Action: Use either ON or OFF as an option for the SET STOPONERROR command.

PGU-00122: invalid SET numeric parameter
Cause: A character or an invalid value was specified when a number was expected as a value for a SET command option.

Action: Check the syntax of the command, use an appropriate number for the option, and enter the command again.

PGU-00125: integer value overflow
Cause: A numeric value was specified that was too large.

Action: Use a smaller number.

PGU-00129: value out of range (1 - *number*)
Cause: The specified value was out of range. The valid range is given by the error message.

Action: Use a number within the range specified by this message.

PGU-00132: null hostname/password specified
Cause: The hostname/password was not specified.

Action: Specify the correct hostname/password.

PGU-00136: bad variable specification
Cause: A variable was incorrectly specified using the VARIABLE command.

Action: Check the syntax of the command, then issue the command again.

PGU-00137: syntax error in PL/SQL Block
Cause: The PL/SQL block contains a syntax error.

Action: Correct the syntax error.

PGU-00142: cannot recognize object type, owner or name
Cause: The specified object type, owner, or name was not recognized.

Action: Specify a legal object type, owner, or name.

PGU-00143: variable has not been defined
Cause: The specified variable was not recognized.

Action: Specify an existing variable.

PGU-00144: invalid object type for DESCRIBE
Cause: The specified object type was not TABLE, VIEW, or PROCEDURE.

Action: Check that the object is a table, view, or procedure. If so, check that you specified the correct name and try again. If not, you describe the object.

PGU-00145: invalid object name for DESCRIBE
Cause: The specified table, view, stored procedure, or function was not recognized.

Action: Check the spelling and be sure to specify an existing table, view, stored procedure, or function.

PGU-00149: invalid SERVEROUTPUT switch
Cause: An invalid option was specified for the SET SERVEROUTPUT command.

Action: Check the syntax of the command, then issue the command again.

PGU-00300: internal error code; arguments: [*number*], [*string*]
Cause: You have encountered an internal error.

Action: Supported customers should contact Oracle Worldwide Support and provide the circumstances leading to the error and the complete set of messages.

PGU-00302: not connected to a database
Cause: You must be connected to the database for the requested operation.

Action: CONNECT to the database using a valid username and password before retrying the operation.

PGU-00304: input file I/O error [*number*] - input aborted
Cause: A command file used as input to PGAU is corrupt or invalid.

Action: Check the file before retrying the operation.

PGU-00305: command size exceeds internal buffer size (*number*)
Cause: The SQL statement size exceeds PGAU's buffer size.

Action: Shorten the SQL statement by removing extra blanks or by using intermediate statements as views, if necessary.

PGU-00306: monitor cycle interval time out of range (1 - *number*)
Cause: You entered an invalid number for the cycle interval.

Action: Enter a number between 1 and 3600 for the cycle interval. The number indicates seconds.

PGU-00307: cannot open spool file *string*
Cause: PGAU tried to open a spool file after you entered SPOOL filename, but could not open the file. Possible causes are not enough disk space or inadequate privileges to create a file.

Action: Determine why PGAU could not create a new file and retry.

PGU-00308: no spool file opened
Cause: You entered SPOOL OFF, but you were not spooling currently so there was no file to close.

Action: If you wish to capture session output, first use the SPOOL command to open a file, and then enter your commands before closing the file with SPOOL OFF.

PGU-00309: cannot close spool file *string*
Cause: SPOOL OFF could not close the currently open spool file.

Action: Check for an operating system reason that the spool file could not be closed.

PGU-00310: cannot open parameter file *string*
Cause: PGAU cannot locate or open the file specified by the PFILE option, either because the file does not exist or because PGAU has insufficient privilege to open the file.

Action: Make sure that the file exists in a location expected by PGAU and can be opened.

PGU-00311: data exceeds internal buffer size
Cause: The results returned by a SQL query exceed the internal PGAU buffer.

Action: Use the SET command to increase MAXDATA or decrease ARRAYSIZE.

PGU-00314: invalid parameter given on PGAU command line
Cause: An unrecognzed parameter was given on the PGAU command line.

Action: Check the parameters given on the PGAU command line.

PGU-00315: cannot open command file *string*
Cause: PGAU cannot locate the specified command file.

Action: Verify the file's name and PGAU's access to it before retrying.

PGU-00317: version of tool conflicts with version [*string*] of DATA
Cause: This version of the PGAU tool cannot process the DATA in the database.

Action: You are attempting to use a tool that might cause damage to the current database. If the version of DATA is greater than the version of the tool, then you are using the wrong version of the tool. If the version of the tool is greate than the version of the DATA, check to see if there is an ORACLE-supplied SQL script to update the DATA to the correct version level.

PGU-00318: PGAU command line error [*number*]
Cause: You made a syntax or typing error while entering a PGAU command line.

Action: Check the syntax and try again.

PGU-00319: cannot locate pgau configuration file, *string*
Cause: File mentioned cannot be located.

Action: Make sure that the specified file exists before re-running PGAU.

PGU-00320: cannot open pgau configuration file, *string*
Cause: File mentioned cannot be opened.

Action: Make sure that the specified file is available for use by PGAU.

PGU-00322: total size of command line parameters exceeds buffer size
Cause: You entered too many command line arguments and the PGAU buffer was exceeded.

Action: Reduce the number of command line arguments.

PGU-00325: pfile too large
Cause: The file you specified using PFILE is too large (exceeds 8K).

Action: Reduce the size of the parameter file before specifying it again with PFILE.

PGU-00327: command not available in this mode
Cause: You have specified a command that is not available in this mode.

Action: Do not specify the command.

PGU-00328: insufficient privilege for this display
Cause: You attempted to display a MONITOR display without sufficient privileges.

Action: Contact the DBA to obtain the required privileges.

PGU-00331: cannot allocate enough memory for SQL Buffer
Cause: There is not enough memory for the current SQL buffer.

Action: Use the SET command to reduce MAXDATA.

PGU-00337: missing instance name
Cause: The instance name was not specified in the connect statement.

Action: Use 'connect username/password@instance' or 'connect username/password'.

PGU-00341: '*string*' is an undefined bind variable
Cause: The SQL statement refers to an undefined bind variable.

Action: Use the VARIABLE statement to define the bind variable and re-execute the query.

PGU-00347: no offline tablespaces exist
Cause: The list box of set tablespace online contained 0 elements.

Action: No action is required.

PGU-00359: monitor already active
Cause: An instantiation of this monitor is already active.

Action: Cycle through windows until this monitor becomes visible.

PGU-00360: object to be described does not exist
Cause: The object in a DESCRIBE FUNCTION/PROCEDURE/PACKAGE statement does not exist.

Action: check that the object name and owner are correct and that the object exists.

PGU-00361: error during describe
Cause: An unexpected error occurred during a describe.

Action: Check the following error and correct the problem.

PGU-00362: object *string* is a package; use 'DESCRIBE *package.procedure*'
Cause: The named object is a package. DESCRIBE does not currently describe an entire package specification.

Action: Describe the package specification, as indicated in the message text.

PGU-00363: procedure or function *string* not found in the package
Cause: The named package does not contain the procedure or function specified.

Action: Specify a procedure or function within the package.

PGU-00364: object *string* is a remote object, cannot further describe
Cause: The specified object name contains a database link, or is a synonym that resolves to a name with a database link. Such objects cannot currently be described.

Action: Specify a local object.

PGU-00365: object *string* is invalid, it may not be described
Cause: The object must have been successfully compiled.

Action: Fix any errors in the object and recompile.

PGU-00366: name *string* is malformed, it must be of form [[a.]b.]c@dblink
Cause: The name may have at most 3 parts and a dblink.

Action: Use a well-formed object name.

PGU-00370: mandatory field/list needs to be filled in
Cause: You tried to execute the dialog before filling in all required items.

Action: Fill in all required items and retry.

PGU-00371: cannot open/locate input help file, *string*
Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Put the help file in the location specified.

PGU-00372: cannot open/locate input index file, *string*
Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Put the index help file in the location specified.

PGU-00373: cannot allocate memory of size *number* from toolkit
Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Exit PGAU and re-enter and try again.

PGU-00374: could not set file position in *string* directly
Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: The fseek() routine failed. Alternate chosen - no action is necessary.

PGU-00375: unexpected end of file, *string*
Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Exit PGAU and install the correct help file.

PGU-00376: mandatory field has to be filled in before navigation is possible
Cause: Attempted to navigate to the next/previous item.

Action: Fill in current field and then go to the next/previous item.

PGU-00377: mandatory list item has to be selected before navigation is possible
Cause: Attempted to navigate to the next/previous item.

Action: Select an item and then go to the next/previous item.

PGU-00378: an item has to be selected before help can be sought for it
Cause: Attempted to obtain help before selecting an item.

Action: Select an item first and re-execute.

PGU-00379: variable(s) not defined
Cause: Attempted SHOW VAR[IABLES] [var-name] and the variable was not defined, or no variables were specified or defined.

Action: Ensure the variables are correctly defined.

PGU-00380: procedural option required for this statement
Cause: Attemt to execute a statement that requires the Procedural option was made, but the Procedural option is not installed.

Action: This statement cannot be issued without the Procedural option. Install the Procedural option to execute this statement.

PGU-00381: error in the SERVEROUTPUT option
Cause: Most likely the package DBMS_OUTPUT not installed. Check the accompanying messages for more information.

Action: Check accompanying messages and take appropriate action.

PGU-00382: value *string* is not a recognizable file name for *string*
Cause: The value for the PGAU initialization variable (which points to the initialization file) is not a recognizable file name.

Action: Specify a valid file name or do not define the variable to avoid running the initialization file.

PGU-00383: file name *string* pointed to by *string* could not be opened
Cause: The file name pointed to by the PGAU initialization variable could not be opened.

Action: Specify an available file or do not define the variable to avoid running the initialization file.

PGU-00384: could not open pgau resource file, *string*
Cause: The specified file could not be opened.

Action: Make the file available to PGAU.

PGU-00385: could not locate pgau resource file, *string*
Cause: The specified file could not be located.

Action: Make sure file exists before rerunning PGAU.

PGU-00386: could not open toolkit resource file, *string*
Cause: The specified file could not be opened.

Action: Make the file available to PGAU.

PGU-00387: could not locate toolkit resource file, *string*
Cause: The specified file could not be located.

Action: Make sure file exists before rerunning PGAU.

PGU-00388: cannot start PGAU in screen mode; check if values are legal:
Cause: A variable was not properly set.

Action: Check the values listed by PGAU to see if they are correct.

PGU-00389: toolkit resource file name is defined to *string*
Cause: The specified file could not be located.

Action: Ensure the file specified exists and can be accessed.

PGU-00390: terminal type *string* is defined by *string*
Cause: Terminal type specified by *variable* may not be valid.

Action: Ensure the terminal specification is correct.

PGU-00391: value *string* is defined to *string*; legal values: *string* or *string*
Cause: The PGAU mode has been incorrectly defined.

Action: Define the value of the variable as one of the legal values.

PGU-20000: *string* of *string* statement failed for table *string*, rc=*number*
Cause: PGAU encounterred a syntax error during parse operation *oper* of the statement *statement* for the table *table* with the indicated return code *rc*.

Action: Check the PGAU statement identifier names for proper spelling and punctuation, or other syntax errors.

PGU-20001: *string* of *string* variable of *string* statement failed for table *string*, rc=*number*
Cause: The operation *oper* on the variable *varname* for the statement *statement* against the PG DD table *table* failed with return code *rc*.

Action: A semantic error has occurred. Check all the identifier names in the PGAU script.

PGU-20002: unable to login to Oracle
Cause: An error occurred attempting to logon to the Oracle server. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational.

PGU-20003: unable to open the cursor
Cause: Internal PGAU logic error - should not occur. An error occurred opening an SQL statement cursor. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20004: unable to close the cursor
Cause: Internal PGAU logic error - should not occur. An error occurred closing an SQL statement cursor. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20005: unable to commit PG DD changes
Cause: Internal PGAU logic error - should not occur. An error occurred attemtping to commit changes to the PG DD. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20006: unable to logout from Oracle
Cause: Internal PGAU logic error - should not occur. An error occurred during logoff from the Oracle server. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20007: unable to rollback PG DD changes
Cause: Internal PGAU logic error - should not occur. An error occurred attemtping to rollback changes from the PG DD. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30000: transaction *string*, version *string* specification generated to file *string*
Cause: PGAU successfully completed generation of the TIP specification for transaction *tranname* and version *version* into file *fileid*.

Action: None required. This is an informational message.

PGU-30001: PGAU internal error - *string*
Cause: An internal PGAU operation error has occurred.

Action: Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30002: >>> Initialization of *string* File Header <<<
Cause: This record is written to the Trace or Log file upon initialization.

Action: This is an informational message only.

PGU-30003: transaction *string*, version *string* body generated to file *string*
Cause: PGAU successfully completed generation of the TIP body for transaction *tranname* and version *version* into file *fileid*.

Action: None required. This is an informational message.

PGU-30008: failure to open file *string*
Cause: Before complete initialization of LMS functions, PGAU tracing or logging to disks was requested, but PGAU failed to open the indicated trace or log file. *fileid*.

Action: Ensure that write access exists to the file and that space for file growth is available.

PGU-30009: failure to close file *string*
Cause: After termination of LMS functions,PGAU tracing or or logging to disks had been requested, but PGAU failed to close the indicated trace or log file. *fileid*.

Action: Ensure that write access exists to the file and that space for file growth is available.

PGU-30010: failure to obtain *string* bytes of storage for *string*
Cause: Before complete initialization of LMS functions, PGAU failed to obtain *bytes* of storage for *use*, commensurate with LMS initialization.

Action: Increase the total amount of private storage available to PGAU during operation.

PGU-30012: invalid language environment (*string*), default used
Cause: Before complete initialization of LMS functions, the environment variable LANGUAGE specified an invalid Oracle NLS language *lang*. The language environment variable SSTDLANG setting was used as the default.

Action: Correct the LANGUAGE environment variable to specify a valid Oracle NLS Language.

PGU-30014: pgau message file *string* not found
Cause: Before complete initialization of LMS functions, the PGAU message file *fileid* could not be located.

Action: Ensure that the Oracle message file resides in $ORACLE_HOME/pg4appc/mesg directory and is not damaged. Valid fileid's are of the form pguxx.msb where xx is the country code.

PGU-30024: memory allocate failure: *string* for *string* bytes
Cause: Insufficient memory available. Storage failed to be allocated for the reason *purpose* of the size *len* specified.

Action: Increase the total amount of private storage available to PGAU during GENERATE operation.

PGU-30026: open failure: file *string* in *string* mode
Cause: Error during fopen processing *file* for *mode* access.

Action: Ensure PGAU has access to the file specified, and write acccess if file is used for output.

PGU-30028: file *string* failure: *string* rc *string*
Cause: An error occurred during *oper* processing for the file *fileid* with return code *rc*. File operations include: 'fclose' to close input or output files 'remove' to erase, delete, or remove output files

Action: Ensure PGAU has access to the file specified, and write access if file is used for output.

PGU-30030: read failure: *string* from *string* after offset *string*
Cause: Error during fgets *oper* processing for *file* at *offset* bytes into the file.

Action: Ensure PGAU has access to the file specified.

PGU-30031: write failure: *string* to *string* at *number* for *string* bytes
Cause: Error during fputs *oper* processing for *file* from buffer at *addr* for *len* bytes of data.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30032: write log failure: rc %4li, message no was *string*
Cause: fprintf returned the error code *rc* attempting to print PGAU error message number *msgno*. The indicated event message was being written when the error occured.

Action: Check to insure that PGAU has write access to the pgau.log file and that disk space is available for file growth.

PGU-30033: write trace failure: rc %4li, message no was *string*
Cause: fprintf returned the error code *rc* attempting to print PGAU trace message number *msgno*. The indicated trace message was being written when the error occured.

Action: Check to insure that PGAU has write access to the pgau.trc file and that disk space is available for file growth.

PGU-30035: file control failure: *string* for *string*, rc *string*
Cause: Error during control function *oper* processing for *file* with error code *rc* returned.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30036: no ORACLE_HOME environment variable available
Cause: The ORACLE_HOME environment variable setting is missing or invalid.

Action: Correct the ORACLE_HOME environment variable to specify the current Oracle home directory.

PGU-30120: missing *string* attribute for parm *string*, field *string* f#*string*
Cause: The parameter *parm* specifies an aggregate data record for which field *field* with PG DD field id number <f#> was being processed, but the field had no relative level attribute *attr*. Typical relative level attributes are: nn ... COBOL-clauses for IBMVSCOBOLII 'LEVEL' attribute Each attribute is stored as a separate row in the PG DD, and the missing attribute's row may have been deleted from the PG DD.

Action: Check the PG DD to ensure that the failing field has a level attribute assigned.

PGU-30122: level limit: field f#=*string* nest level *string* exceeds *string* of *string*
Cause: PGAU was processing nested records when the next field <f#> for nest level *lev* exceeded the product defined minimum or maximum nest level *limit*.

Action: Simplify the data record definition to reduce nest levels.

PGU-30123: level limit: level *string* field *string* can't follow level *string*
Cause: PGAU was processing nested records when the next field at at level *levN*, identified by <fld#>, occurred after fields at current level *levC*. Additional fields at intermediate levels should have preceded this field. This error happens when special fields such as COBOL RENAMES (at LEVEL 66) appear next after the level 01 definition.

Action: Correct the data record definition to place the special fields in theire proper sequece, and/or insert fields being modified ahead of the special modifying field.

PGU-30220: allocate failure: *string* storage of *string* bytes
Cause: Insufficient memory available for the specified purpose. Requestor attempted to allocate a *type* control block of *len* size specified.

Action: Increase the total amount of private storage available to PGAU during GENERATE operation.

PGU-30233: control block load failure: *string* block from PG DD
Cause: Control block of the specified *type* was being loaded with a row from the PG Data Dictionary when an error occurred. A preceding message issued specifies the cause.

Action: Refer to the Action for the preceding message.

PGU-30234: attribute array for *string* exceeded by PG DD rows > *string*
Cause: A control block of the specified *type* was being loaded with attribute rows from the PG Data Dictionary when the *limit* was exceeded.

Action: Reproduce the error with tracing enablead and attempt to determine what PG DD rows are exceeding the attribute limit and delete any possible duplicates. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30300: work file output error writing *string*
Cause: PGAU encountered an error writing a PL/SQL code segment to the indicated work file *fileid*.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30301: TIP output error appending *string* to *string*
Cause: PGAU encountered an error appending the work file *infile* to the TIP output file *outfile*.

Action: Ensure PGAU has access to both files specified, and that disk space is available for TIP output file growth.

PGU-30302: TIP output error writing function *string* to file *string*
Cause: PGAU encountered an error appending the TIP function definition *func* to the work output file *file*. Error occurred during generation of the TIP Package Specification.

Action: Ensure PGAU has write access to the file specified, and that disk space is available for TIP output work file growth.

PGU-30303: TIP generation error writing variable *string* to file *string*
Cause: PGAU encountered an error appending the TIP variable definition *var* to the work output file *file*. Error occurred during generation of the TIP Package Specification.

Action: Ensure PGAU has write access to the file specified, and that disk space is available for TIP output work file growth.

PGU-30304: TIP generation warning: *string* name truncated to *string* characters
Cause: This is a warning of possible non-unique PL/SQL names. PGAU encountered record field names which combined exceed the maxmimum PL/SQL name length, and the last field name specified *field* was truncated to the length *len*. The condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Revise the PG DD entries for the defined parameters and either reduce the number of nested record levels or shorten the record field names.

PGU-30305: TIP generation error defining record type *string* for *string*
Cause: An occured during generation of a nested record type *type* for the indicated field name *name*. This message should be preceded by the specific error. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Follow recommended action for the first error message issued.

PGU-30306: TIP generation: invalid PL/SQL parameter mode *string* for *string*
Cause: The parameter call mode *mode* specified for the parameter *parm*. Valid parameter modes are IN, OUT or IN OUT. Probable PG DD content error.

Action: Revise the PG DD entries for the indicated parameter and correct the PL/SQL parameter call mode for the indicated parameter.

PGU-30307: TIP generation: invalid PL/SQL variable type *string* for *string*
Cause: An invalid PL/SQL record type *type* was encountered while generating conversion statements for the data field *field*. The indicated *type* is neither valid PL/SQL nor a nested record type, for the indicated record field *field*. Probable PG DD content error.

Action: Revise the PG DD entries for the indicated parameter and either correct the PL/SQL variable type for the field, or define a corresponding nested record for the field.

PGU-30308: TIP generation: name *string*.*string* exceeds max length of *string* characters
Cause: The number of nested groups and lengths of their field names in the input data, when concatenated to form a fully qualified PL/SQL record field variable name <recname.varname>, exceeded the maximum length allowed by PL/SQL *maxlen*. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Revise the PG DD entries for the defined parameters and either reduce the number of nested record levels or shorten the record field names.

PGU-30309: TIP generation: call *string* parm *string* exceeds PGAXFER *string* limit (*string*)
Cause: The TIP function call *cname* at parm *pname* exchanges too many parameters for the *type* buffers on a PGAXFER RPC. The PGAXFER parameter limit is *limit*. The indicated *type* is either 'SEND' or RECEIVE'. Probable PGAU DEFINE CALL error, coding too many parameters. Note also that IN OUT mode parameters are present in both send and receive buffers and may be causing the excess.

Action: Revise the transaction and call to specify the excessive parameters on an additional function call and include that added call in the transaction definition.

PGU-30314: TIP generation: failure converting record type *string* for *string*
Cause: An occured during generation of PL/SQL statements for conversion of a nested record type *type* for the indicated field name *name*. This message should be preceded by the specific error. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Follow recommended action for the first error message issued.

PGU-30315: TIP generation: parameter conversion error for *string*, *string*
Cause: Failure to generate PL/SQL conversion statements for the indicated parameter data *dname* for function *call*. This message may be preceeded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is alllowed to output work files.

PGU-30316: TIP generation: PL/SQL *string* control logic for *string string*
Cause: Failure to generate PL/SQL statement *stmt* used to control TIP processing of the field *fname* for compiler clause *clause*. Typical IBMVSCOBOLII clauses are: OCCURS (requires FOR/LOOP logic) OCCURS DEPENDING ON (requires FOR/LOOP logic) REDEFINES (requires IF/END IF logic) This message may be preceeded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is alllowed to output work files.

PGU-30317: TIP generation: PL/SQL *string* statements for *string string*
Cause: Failure to generate PL/SQL control logic *stmt* to process TIP parameter *dataname* in function *callname*. This message may be preceeded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is alllowed to output work files.

PGU-30318: TIP generation: *string string*, PL/SQL *string* for *string*
Cause: Data field *d-field* <f#> was referenced by other fields which required PL/SQL statements *stmt* be generated for the value *num*, but an error occurred during the generation of the statements. This message may be preceeded by specific messages describing the error. Possible errors include disk access and memory exceeded.

Action: Follow recommended action for the first error message issued, and ensure that disk access is alllowed to output work files.

PGU-30319: TIP generation: *string string*
Cause: TIP execution diagnostics for PG Data Dictionary References PKGEX(DR) was requested on the PGAU GENERATE statement, but the PG DD reference for *type* <id#> couldn't be generated. This message may be preceeded by specific messages describing the error. Possible errors include disk access and memory exceeded.

Action: Follow recommended action for the first error message issued, and ensure that disk access is alllowed to output work files.

PGU-30600: TIP generation: invalid COBOL syntax in *string*:
Cause: The COBOL data field *field* specifies conflicting or invalid PIC *mask* and USAGE *maskopts* clauses. The invalid PIC and USAGE definitions were selected from the PG DD to identify field conversion function calls. PGAU also issues messages 30601 for *mask* and 30602 for *maskopts* .

Action: Use the pgddsf.sql script to reproduce the selected rows and then correct the mask and maskopts columns for the stated field in the PG DD.

PGU-30601: COBOL mask: *string*
Cause: Issued to identify *mask* for the preceding message.

Action: See preceding message.

PGU-30602: COBOL maskopts: *string*
Cause: Issued to identify *maskopts* for the preceding message.

Action: See preceding message.

PGU-30604: missing *string* attribute for *string*
Cause: A COBOL field *field* containing a clause of the form *syntax* required a missing attribute *attr* corresponding to *token*. PGAU issues messages 30603 and 30604 consecutively for *field*, *syntax*, *attr*, and *token*. Typical IBMVSCOBOLII required token attributes are: field OCCURS int-1 TIMES where 'int-1' is the token for attribute 'repgrpff' field OCCURS int-1 TO int-2 TIMES DEPENDING ON name-1 where 'int-1' is the token for attribute 'repgrpvf' 'int-2' is the token for attribute 'repgrpvl' 'name-1' is the token for attribute 'repgrpvm' field RENAMES name-1 THRU name-2 where 'name-1' is the token for attribute 'renamemf' 'name-2' is the token for attribute 'renameml' field REDEFINES name-1 WHEN name-2 = value where 'name-1' is the token for attribute 'remapsmf' 'name-2' is the token for attribute 'remapsml' 'value' is the token for attribute 'remapswc' or for attribute 'remapswn' field LENGTH IS name-1 where 'name-1' is the token for attribute 'length' Each attribute is stored as a separate row in the PG DD, and the missing attribute's row may have been deleted from the PG DD.

Action: In the PG DD, redefine the referencing data item to restore the missing attribute row.

PGU-30605: TIP generation: invalid COBOL syntax in unknown field:
Cause: An unidentified COBOL field specifies conflicting or invalid PIC *mask* and USAGE *maskopts* clauses. The invalid PIC and USAGE definitions were selected from the PG DD to identify global TIP conversion variables. PGAU also issues messages 30601 for *mask* and 30602 for *maskopts* .

Action: Use the pgddsxf.sql script to reproduce the selected rows and then correct the mask and maskopts columns for the invalid row in the PG DD.

PGU-30606: TIP generation: missing multi-byte NLS name for *string*:
Cause: The COBOL data field *field* specifies character data in the the PIC *mask* and USAGE *maskopts* clauses which require translation with a multi-byte character set (MBCS), but no Oracle MBCS NLS name was specified. The MBCS-oriented PIC and USAGE definitions were selected from the PG DD to identify field conversion function calls. PGAU also issues messages 30601 for *mask* and 30602 for *maskopts* .

Action: Use the pgddsxa.sql script to reproduce the selected rows and then either correct the mask and maskopts columns for the stated field in the PG DD to not require MBCS translation, or use the PGAU REDEFINE DATA FIELD NLS_LANGUAGE(nlsname) parameter to specify an Oracle MBCS NLS name for the field, or specify the NLS_MBCS(nlsname) parameter on the PGAU DEFINE TRANSACTION statement.

PGU-30611: references missing field *string* specified for *string*
Cause: The data field *d-field* containing a clause of the form *syntax* references a missing field *r-field* specified by the clause word *token*. PGAU issues messages 30610 and 30611 consecutively for *d-field syntax r-field* and *token*. Typical IBMVSCOBOLII clause syntax for this error includes: d-field OCCURS int-1 TIMES d-field OCCURS int-1 TO int-2 TIMES DEPENDING ON name-1 d-field RENAMES name-1 THRU name-2 d-field REDEFINES name-1 WHEN name-2 = value d-field LENGTH IS name-1 The clause references a field *r-field* specified by the word *token*. PGAU GENERATE searched previous fields within the current parameter but failed to find the named field *r-field*. The word *token* may be misspelled in the defining clause or the referenced field whose name should match *token* may be missing from, or misspelled in the PG DD.

Action: In the PG DD, redefine the entry for *d-field* to change its clause *token* to specify the correct name of the intended field *r-field*, or redefine the data name of the intended field *r-field* to match the subsequent clause's *token* reference. Also ensure the data field *d-field* containing the clause follows the intended field *r-field* in the data definition.

PGU-30622: unable to insert *string* value for field *string*
Cause: During TIP generation, an attempt to insert a new attribute value for the *attr* attribute for the named field *fname* failed.

Action: Check for an Oracle error message preceding this message to determine the cause of the problem.

PGU-30631: no alignment for environment *string string*, datatype *string string*
Cause: The data field *d-field* <f#> specified an attribute which specifies remote host boundary alignment. The PG DD environment tables were searched for alignment information for environment *ename* compiler *compno* datatype *dtype* datatype alignment group *dagno*, but no entries were found matching these characteristics. PGAU issues messages 30630 and 30631 consecutively for *d-field* <f#> and *ename compno dtype dagno*. PGAU requires the alignment information to properly align the remote host data in the TIP transfer buffers. Supported: envrionment and compilers are; IBM370 for compiler IBMVSCOBOLII alignment attributes are; *d-field* ... PIC S9(n) *dtype* SYNC *d-field* ... PIC S9(n) *dtype* SYNCHRONIZE datatype values *dtype* may be; COMP COMPUTATIONAL COMP-4 COMPUTATIONAL-4 datatypes grouped under *dagno* by length/alignment: dagno = 1 for 2-byte length aligned on 2-byte boundary dagno = 2 for 4-byte length aligned on 4-byte boundary Possible causes are: - The TRANSACTION entry in the PG DD for the TIP being generated may have specified an invalid ENVIRONMENT. - The DATA entry in the PG DD being referenced in the TIP function call being generated may have specified an invalid LANGUAGE. - The field datatype and/or length within the DATA entry may be invalid or unsupported. - The PG DD may be unavailable, in which case previous error messages will indicate problems accessing the PG DD.

Action: In the PG DD, redefine the TRANSACTION or DATA entries to correct the specification of ENVRIONMENT, LANGUAGE or the field datatype and attributes. Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-30632: TIP generation: *string string*, *string* ignored for *string*
Cause: The data field *d-field* <f#> specified a modifying clause *clause* which is ignored for datatype *dtype* by thecompiler in the remote host environment. For supported: envrionment and compilers; IBM370 for compiler IBMVSCOBOLII *clause* is ignored when *dtype* is; SYNC | SYNCHRONIZE COMP-3 | COMPUTATIONAL-3 SYNC | SYNCHRONIZE DISP | DISPLAY

Action: This is a warning message, PGAU execution continues. No action is necessary. The user may wish to ensure the resulting TIP data conversion is consistent with the remote host data format.

PGU-30635: TIP generation: *string string*, nested repeating group for *string*
Cause: The data field *d-field* <f#> specified a repeating group clause *clause* while a previous repeating group is active. The repeating group in *d-field* cannot be nested within a previous repeating group. TIP's use PL/SQL tables to implement repeating

groups, and PL/SQL tables are limited to a single key or subscript which cannot support nested repeating groups (a table of tables).

Action: Redefine the data such that the previous repeating group is ended before beginning another repeating group.

PGU-30636: TIP generation: *string string*, *string* attribute value (*string*) ignored
Cause: The data field *d-field* <f#> specified an attribute *attr* whose value *attrval* is being ignored. Attribute values are ignored for supported: envrionment and compilers; IBM370 for compiler IBMVSCOBOLII when *attr* is the *attrval* is ignored: SYNC | SYNCHRONIZE LEFT JUST | JUSTIFY LEFT

Action: This is a warning message, PGAU execution continues. No action is necessary. The user may wish to ensure the resulting TIP data conversion is consistent with the remote host data format.

PGU-30637: TIP generation: *string string*, *string* attribute value (*string*) invalid
Cause: The data field *d-field* <f#> specified an attribute *attr* whose value *attrval* is invalid or unsupported.

Action: In the PG DD, redefine the FIELD entry to correct the attribute clause to specify a supported value.

PGU-35002: failure to open cursor for statement *string*: rc *string*
Cause: Open of an Oracle cursor for the PGAU SQL statement *stmtname* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35003: failure to parse SQL statement *string* for cursor *string*: rc *string*
Cause: Parsing of the PGAU SQL statement *stmtname* for Oracle cursor *curno* failed with Oracleerror *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35004: failure to bind *string* for cursor *string* statement *string*: rc *string*
Cause: Binding input variable *invar* for Oracle cursor *curno* to the PGAU SQL statement *stmtname* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35005: failure to define *string* for cursor *string* statement *string*: rc *string*
Cause: Defining output variable *outvar* for Oracle cursor *curno* to the PGAU SQL statement *stmtname* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35006: failure to execute for cursor *string* statement *string*: rc *string*
Cause: Executing Oracle cursor *curno* PGAU SQL statement *stmtname* failed with Oracle error *rc*. Possible error in PGAU GENERATE statement transaction or version parameters, or possible missing rows or misspelled in the PG DD for the requested transaction. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Check that all call, data, and attribute definitions associated with the requested transaction and version are properly defined in the PG DD. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35007: failure to fetch for cursor *string* statement *string*: rc *string*
Cause: Fetch using Oracle cursor *curno* PGAU SQL statement *stmtname* failed with Oracle error *rc*. Possible error in PGAU GENERATE statement transaction or version parameters, or possible missing rows or misspelled in the PG DD for the requested transaction. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. Check that all call, data, and attribute definitions associated with the requested transaction and version are properly defined in the PG DD. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35008: failure to close cursor *string* for statement *string*: rc *string*
Cause: Close of Oracle cursor *curno* for PGAU SQL statement *stmtname* failed with rc *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35009: no transaction rows for statement *string*, *string string*: rc *string*
Cause: No Transaction rows were fetched from the PG DD for PGAU SQL statement *stmt* with transaction name *tname* and transaction version *tver*. The Oracle error code is *rc*. Either the transaction name and version supplied on the GENERATE statement were invalid or the transaction entry is missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35010: no *string* rows for statement *string*, id no *string*: rc *string*
Cause: No *type* rows were fetched from the PG DD for PGAU SQL statement *stmt* with id number *idno*. The Oracle error code is *rc*. Either the parent PG DD entry references an invalid subordinate entry or the entry is missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35011: no environment rows for statement *string*, *string string*: rc *string*
Cause: No Environment rows were fetched from the PG DD for PGAU SQL statement *stmt* with environment name *ename* and compiler number *compno*. The Oracle error code is *rc*. Either the environment specified for the transaction or the compiler specified for the data entry in the transaction were invalid, or the entries are missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35012: missing transaction entry *string string*
Cause: The transaction *tname tver* was not found in the PG DD. Either the transaction name and version requested in the GENERATE statement were invalid or the transaction specified in a previous DEFINE TRANSACTION *tname* may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and version definitions in the PG DD or correct the GENERATE statement.

PGU-35013: missing call entry for transaction *string string* (*string*)
Cause: A call entry under transaction definition *tname tver* (*tin*) was not found in the PG DD. The call entry associated with the transaction (as specified in a previous DEFINE TRANSACTION ... CALL(cname)) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35014: missing parm entry for transaction *string string* (*string*) call *string string* (*string*)
Cause: A parameter or data entry for transaction *tname tver* (*tin*), call *cname cver* (*cin*) was not found in the PG DD. The parm or data entry associated with the call (as specified in a previous DEFINE CALL *cname* ... PARMS(dname)) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35015: missing field entry for transaction *string string* (*string*) call *string string* (*string*) parm *string* data *string string* (*string*)
Cause: A data field entry for transaction *tname tver* (*tin*), call *cname cver* (*cin*), parm *relno* data *dname dver* (*din*) was not found in the PG DD. The field entry associated with this data (as specified in the input file field position or FIELD(fname) of a previous DEFINE or REDEFINE DATA statement) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35016: missing formatted conversion entry for transaction *string string*
Cause: For transaction *tname tver*, the data field usage, mask, and maskopts entries were not found in the PG DD. PG DD field entries are selected with usage='PASS' and not null mask and maskopts columns, to identify which data fields will use UTL_RAW

MAKE_..._FORMAT conversions. Possible invalid entries in pga_fields(usage,mask,maskopts) columns. This message may be preceded by specific messages describing the error.

Action: Correct the data definitions for the requested transaction in the PG DD.

PGU-35017: missing environment *string string* for t# *string* d# *string*
Cause: The combined environment *ename compno* was not found in the PG DD for transaction id# *tin* and data id# *din*. The environment name stored in the transaction entry and the compiler no stored in a call parameter data entry have no environment rows stored in the PG DD environment tables. This message may be preceded by specific messages describing the error.

Action: Ensure the Oracle server supporting the PG DD is active, and that the TRANSACTION ENVIRONMENT name and the DATA LANGUAGE name are defined in the PG DD with supported values. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35018: failed select for statement *string*, *string string*: rc *string*
Cause: No information was fetched from Oracle dual for SQL statement *stmt* with date format *dfmt* and time format *tfmt*. The Oracle error code is *rc*. Either the date and time formats specified are invalid or some other Oracle server error occurred. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting PGAU is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

Action: None

PGU-39211: Termination failure rc %4li
Cause: Initialization/Termination Tracing Active. Failed termination by indicated subroutine.

Action: None

PGU-39300: QM rc %4li, *number*
Cause: Queue Management Tracing Active. Successful alteration of the TDT.

Action: None

PGU-39301: QM failure rc %4li, *number*
Cause: Queue Management Tracing Active. Failed alteration of the TDT.

Action: None

PGU-39302: QM p-*stringstring*, c-f#*string*, LD *string*
Cause: Queue Management Tracing Active. Successful alteration of the TDT.

Action: None

PGU-39303: QM warning rc %4li, *number*
Cause: Queue Management Tracing Active. Requested structure not located.

Action: None

PGU-39400: IT read %4li bytes from *string*
Cause: Initation/Termination Tracing Active. Successful read of file or segment data.

Action: None

PGU-39404: IO file *string string* for *string* mode
Cause: I/O Tracing Active. Successful file control operation.

Action: None

PGU-39405: IO *string* %4li bytes *string*
Cause: I/O Tracing Active. Successful read/write of file or segment data.

Action: None

PGU-39500: DD rc %4li, *number stringstring*
Cause: Data Dictionary Tracing Active. Successful select and load of a PG DD entry

Action: None

PGU-39501: DD rc %4li - warning
Cause: Data Dictionary Tracing Active. Failed select and/or load of a PG DD entry

Action: None

PGU-39502: DD rc %4li, *number string string string string*
Cause: Data Dictionary Tracing Active. Successful select and load of a format conversion block

Action: None

PGU-39503: OC %3ls %5ls %2li
Cause: Oracle Call Tracing Active. Successful cursor operation

Action: None

PGU-39504: DD rc %4li, *string*, *string*, *string*
Cause: Data Dictionary Tracing Active. Successful select from dual for current session attributes

Action: None

PGU-39510: OC %7ls %12ls cursor %2li %3ls, rc *string*
Cause: Oracle Call Tracing Active. Successful BIND variable operation

Action: None

PGU-39512: OC %7ls %12ls cursor %2li %3ls, rc *string*
Cause: Oracle Call Tracing Active. Successful DEFINE operation

Action: None

PGU-39513: OC %7ls cursor %2li %3ls, rc *string*
Cause: Oracle Call Tracing Active. Successful EXECUTE operation

Action: None

PGU-39514: OC %7ls cursor %2li %3ls, rows *string*, rc *string*
Cause: Oracle Call Tracing Active. Successful FETCH operation

Action: None

PGU-39600: TG TIP *string*, SFD *string*
Cause: TIP package generation tracing active. Successful generation of TIP specification function definition.

Action: None

PGU-39601: TG TIP *string*, SVD *string*
Cause: TIP package generation tracing active. Successful generation of TIP specification variable definition.

Action: None

PGU-39602: TG *string* for *string*=*string* *string*, *string* l=*string* o=*string*
Cause: TIP package generation tracing active. Successful generation of TIP data conversion logic. This trace entry is written at the completion of generation for every data parameter of a TIP call and field of a data parameter. There should be one trace for every parameter exchanged by the TIP and one trace for every data field of each parameter.

Action: None

PGU-39603: TG DBlink *string*, rpc *string*
Cause: TIP package generation tracing active. Successful generation of specified PGA gateway server RPC.

Action: None

PGU-39604: TG edit var *string* PLS *string*
Cause: TIP package generation tracing active. Successful generation of specified PL/SQL variable conversion.

Action: None

PGU-39605: TG F-chk *string string* f#*string* fl=*string stringstring* pl=*string*
Cause: TIP package generation tracing active. Successful syntax check of cobol field.

Action: None

PGU-39606: TG %8ls=> *string*
Cause: TIP package generation tracing active. Successful syntax check of cobol field. This trace entry is supplemental to 39605.

Action: None

PGU-39607: TG %8ls=> a#*string string string*
Cause: TIP package generation tracing active. Successful syntax check of cobol field numeric attribute This trace entry is supplemental to 39605.

Action: None

PGU-39608: TG %8ls=> a#*string string string*
Cause: TIP package generation tracing active. Successful syntax check of cobol field numeric attribute This trace entry is supplemental to 39605.

Action: None

PGU-39609: TG %8ls=> a#*string string string*
Cause: TIP package generation tracing active. Successful syntax check of cobol field date attribute This trace entry is supplemental to 39605.

Action: None

PGU-39610: TG *string* for *string* #*string string*, *string*
Cause: TIP package generation tracing active. Successful generation of TIP Function. This trace entry is written at the completion of generation for every TIP public function. There should be one trace of this type for every Call defined in the Transaction.

Action: None

PGU-39620: TG rc %4li, *string*
Cause: TIP package generation tracing active. Successful alignment/offset computation

Action: None

PGU-41000: invalid field definition syntax
Cause: An field definition is invalid. There may be invalid punctuation or an invalid keyword present.

Action: Delete invalid punctuation; replace invalid keyword.

PGU-41001: unexpected end of input
Cause: An unexpected end-of-file condition has occurred in the PGAU command stream.

Action: Check the PGAU statement for proper syntax and premature ending on the last line.

PGU-41002: improper REPORT statement
Cause: There is a syntax error in the REPORT statment.

Action: Check for mispelled items or unbalanced parentheses within the REPORT statement.

PGU-41003: invalid data field definition name
Cause: A DEFINE or REDEFINE DATA statement has specified an invalid field name for a field definition. The field name may be missing. A field name must begin with an alphabetic character and contain only alphanumeric characters or an underscore ('_'). Syntax checking only continues with the next statement.

Action: Correct the specification of the field name or its delimiters. Supply the field name if it is missing.

PGU-41004: invalid delimiter
Cause: An invalid delmiter has been found (such as a parenthesis or comma in the wrong place.

Action: The delimiter may have to be deleted. Or there may be tokens missing before the delimiter.

PGU-41005: invalid PGAU statement syntax
Cause: A token has been found which is not a valid PGAU keyword, delimiter, or identifer name. Syntax checking only continues with the next statement.

Action: Correct the PGAU statement.

PGU-41006: value for parameter '*string*' missing
Cause: The parameter keyword *keyword* was properly specified but parameter value was not found. Syntax checking only continues with the next statement.

Action: Supply the missing parameter value or remove the keyword from the PGAU statement. PGAU parameter values should be enclosed in parentheses immediately following the keyword with no intervening space. statement.

PGU-41007: parameter '*string*' was previously specified
Cause: The parameter *dupparm* has been specified earlier in a PGAU statement and is only allowed once. Syntax checking only continues with the next statement.

Action: Remove one of the duplicated specifications from the statement.

PGU-41008: invalid DATA definition dname specified
Cause: An invalid token has been specified for the data name for a DEFINE DATA or REDEFINE DATA statement. A DATA identifier dname must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the DATA dname identifer in the statement.

PGU-41012: invalid PLSDNAME parameter
Cause: The parameter specified in the PLSDNAME clause of a DEFINE or REDEFINE DATA statement does not comply with PL/SQL syntax for PL/SQL variable names. Syntax checking only continues with the next statement.

Action: Correct the PLSDNAME parameter to use a name which complies with PL/SQL syntax for data variables.

PGU-41013: invalid LANGUAGE parameter
Cause: The LANGUAGE parameter in a DEFINE or REDEFINE DATA statement is not a valid PGA Compiler Language. Syntax checking only continues with the next statement.

Action: Correct the LANGUAGE parameter to specify a valid PGA Compiler language. Valid languages are: "IBMVSCOBOLII"

PGU-41014: invalid USAGE parameter
Cause: The USAGE parameter in a DEFINE or REDEFINE DATA statement is not a valid PGAU usage. Syntax checking only continues with the next statement.

Action: Correct the USAGE parameter to specify a valid use. Valid use choices are SKIP, ASIS, PASS, and NULL.

PGU-41015: USAGE parameter was previously specified
Cause: The USAGE parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of USAGE from the PGAU statement.

PGU-41016: LANGUAGE parameter was previously specified
Cause: The LANGUAGE parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LANGUAGE from the PGAU statement.

PGU-41017: PLSDNAME parameter was previously specified
Cause: The PLSDNAME parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PLSDNAME from the statement.

PGU-41018: invalid COMPOPTS parameter
Cause: The COMPOPTS parameter in a DEFINE or REDEFINE DATA statement is not a valid compiler option string recognized by PGAU. Syntax checking only continues with the next statement.

Action: Correct the COMPOPTS parameter to specify valid options. The only valid option is 'TRUNC(BIN)'.

PGU-41019: COMPOPTS parameter was previously specified
Cause: The COMPOPTS parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of COMPOPTS from the PGAU statement.

PGU-41020: invalid CALL definition cname specified
Cause: The token is not a valid call identifier name for a DEFINE CALL statement. A CALL identifier cname must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the CALL cname identifer in the statement.

PGU-41021: PKGCALL parameter was previously specified
Cause: The PKGCALL parameter has already been specified in a DEFINE CALL statement and is only allowed once per call definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PKGCALL from the statement.

PGU-41022: invalid PKGCALL parameter
Cause: The function name specified in the PKGCALL parameter of a DEFINE CALL statement does not comply with PL/SQL syntax for PL/SQL function names. Syntax checking only continues with the next statement.

Action: Correct the PKGCALL parameter to use a name which complies with PL/SQL syntax for function calls.

PGU-41025: invalid VERSION number specified
Cause: The token is not a valid version number in a PGAU DEFINE or UNDEFINE CALL or TRANSACTION statement, or in a GENERATE statement. Valid version numbers are all numeric and must match a the Oracle sequence object value reported by a previous DEFINE statement. Syntax checking only continues with the next statement.

Action: Correct the VERSION number in the statement.

PGU-41026: PARMS parameter was previously specified
Cause: The PARMS parameter has already been specified in a DEFINE CALL statement and is only allowed once once per call definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PARMS from the statement.

PGU-41029: invalid TRANSACTION CALL cname specified
Cause: The token is not a valid call identifier name for specifying CALLs in a DEFINE TRANSACTION statement. A CALL identifier cname must begin with an alphabetic character and contain only alphanumeric characters, and must have originated in a previous DEFINE CALL statement. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION CALL cname parameter in the statement.

PGU-41030: NLS_LANGUAGE parameter was previously specified
Cause: The NLS_LANGUAGE parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of NLS_LANGUAGE from the statement.

PGU-41031: parameter '*string*' specifies undefined Oracle NLS name '*string*'
Cause: The PGAU parameter *parm* specifies an Oracle NLS language name *nlsname* which is not defined on the Oracle server to re PGAU executes. which PGAU is connected. The language *nlsname* is not defined possibly because it was not selected when Oracle was installed, or the GENERATE'd TIPs are intended to execute on another Oracle, or it is not a valid Oracle NLS Language, i.e. misspelled or unsupported. Syntax checking only continues with the next statement.

Action: Correct the parameter value to specify a valid Oracle NLS Language, or install the language, or ensure the TIPs execute on a server which has the NLS language installed, (in which case this message may be considered a warning). Valid languages must begin with an alphabetic character, contain only alphanumeric characters, not exceed 40 characters in length. Supported customers may contact Oracle Worldwide Support for assistance with installing or determining NLS language support for your platform.

PGU-41032: ENVIRONMENT parameter was previously specified
Cause: The ENVIRONMENT parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of ENVIRONMENT from the statement.

PGU-41033: invalid ENVIRONMENT parameter
Cause: The ENVIRONMENT parameter in a DEFINE TRANSACTION statement is not a valid PGA ENVIRONMENT. Syntax checking only continues with the next statement.

Action: Correct the ENVIRONMENT parameter to specify a valid PGA ENVIRONMENT. Valid environments are: "IBM370"

PGU-41034: SIDEPROFILE parameter was previously specified
Cause: The SIDEPROFILE parameter as already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of SIDEPROFILE from the statement.

PGU-41035: invalid SIDEPROFILE name specified
Cause: The token is not a valid name for specifying an SNA Side Profile in a DEFINE TRANSACTION statement. A Side Profile name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION SIDEPROFILE parameter in the statement.

PGU-41036: LUNAME parameter was previously specified
Cause: The LUNAME parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LUNAME from the statement.

PGU-41037: invalid LUNAME name specified
Cause: The token is not a valid name for specifying an SNA LU name in a DEFINE TRANSACTION statement. An LU name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION LUNAME parameter in the statement.

PGU-41038: TPNAME parameter was previously specified
Cause: The TPNAME parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of TPNAME from the statement.

PGU-41039: invalid TPNAME name specified
Cause: The token is not a valid name for specifying an SNA TP name in a DEFINE TRANSACTION statement. A TP name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION TPNAME parameter in the statement.

PGU-41040: LOGMODE parameter was previously specified
Cause: The LOGMODE parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LOGMODE from the statement.

PGU-41041: invalid LOGMODE name specified
Cause: The token is not a valid name for specifying an SNA logmode in a DEFINE TRANSACTION statement. A logmode must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION LOGMODE parameter in the statement.

PGU-41042: SYNCLEVEL parameter was previously specified
Cause: The SYNCLEVEL parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of SYNCLEVEL from the statement.

PGU-41043: invalid SYNCLEVEL value specified
Cause: The token is not a valid value for specifying an APPC SYNC level in a DEFINE TRANSACTION statement. The only values allowed for SYNC level are 0 and 1. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION SYNCLEVEL parameter in the statement.

PGU-41044: invalid TRANSACTION name
Cause: The token is not a valid transaction identifier name in a DEFINE TRANSACTION statement. A transaction name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION name parameter in the statement.

PGU-41045: missing call name in DEFINE TRANSACTION
Cause: PGAU DEFINE TRANSACTION syntax requires a call name which was not found. Syntax checking only continues with the next statement.

Action: Correct the DEFINE TRANSACTION statement to specify a call name.

PGU-41046: SIDEPROFILE omitted: all of LUNAME, TPNAME, and LOGMODE required
Cause: If the SNA SIDEPROFILE parameter is not specified, then all three of the LUNAME, TPNAME and LOGMODE parameters must be specified in a DEFINE TRANSACTION statement. Syntax checking only continues with the next statement.

Action: Correct the DEFINE TRANSACTION statement to specify either (1) the SIDEPROFILE parameter, (2) all three of the LUNAME, TPNAME and LOGMODE parameters, or (3) the SIDEPROFILE parameter and any combination of the LUNAME, TPNAME, and LOGMODE parameters.

PGU-41048: CALL parameter was previously specified
Cause: The CALL parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of CALL parameter from the statement.

PGU-41049: DEFINE TRANSACTION parameter *string* previously specified
Cause: The parameter *parm* has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of the parameter *parm* from the DEFINE TRANSACTION statement.

PGU-41053: VERSION parameter was previously specified
Cause: The VERSION parameter has already been specified, and is only allowed once in a GENERATE or REDEFINE statement. Syntax checking only continues with the next statement.

Action: Remove the second specification of VERSION from the statement.

PGU-41054: invalid version number in VERSION parameter
Cause: The version number must follow the VERSION keyword enclosed in parenthesis in a GENERATE or REDEFINE statement. Syntax checking only continues with the next statement.

Action: Correct the version number specification in the VERSION parameter.

PGU-41055: invalid FIELD or PLSFNAME name for indicated language
Cause: The token is not a valid field identifier name in the specified language for specifying a FIELD or PLSFNAME parameter in a REDEFINE DATA statement. A field identifier name must obey the naming conventions of the specified language. In COBOL, only alphamerics may be used in addition to the hyphen character and the first character must be alphabetic. Syntax checking only continues with the next statement.

Action: Correct the FIELD or PLSFNAME identifier name in the statement.

PGU-41058: invalid transaction name specified
Cause: The token is not a valid transaction identifier name for a GENERATE statement. A transaction identifier name must begin with an alphabetic character and contain only alphanumeric characters, and must have originated in a previous DEFINE TRANSACTION statement. Syntax checking only continues with the next statement.

Action: Correct the transaction identifier name in the statement.

PGU-41059: PKGNAME parameter was previously specified
Cause: The PKGNAME parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of PKGNAME from the statement.

PGU-41060: invalid PKGNAME name specified
Cause: The token is not a valid identifier name for specifying the PL/SQL TIP package name in a GENERATE statement. A package name identifier must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the GENERATE PKGNAME parameter in the statement.

PGU-41061: OUTFILE parameter was previously specified
Cause: The OUTFILE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of OUTFILE from the statement.

PGU-41063: DIAGNOSE parameter was previously specified
Cause: The DIAGNOSE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of DIAGNOSE from the statement.

PGU-41064: PGANODE parameter was previously specified
Cause: The PGANODE parameter *keyword* has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of PGANODE from the statement.

PGU-41065: invalid PGANODE name specified
Cause: The token is not a valid PGA node identifier name in a GENERATE statement. A PGA node identifier name must begin with an alphabetic character and contain only alphanumeric characters, and be a valid Oracle DB link name. Syntax checking only continues with the next statement.

Action: Correct the PGANODE parameter in the statement.

PGU-41068: unable to open the input definition file
Cause: An error occurred opening the input definition file specified with the INFILE parameter in a DEFINE or REDEFINE DATA statement. Syntax checking only continues with the next statement.

Action: Ensure that the input definition file exists and read access is allowed to the input definition file.

PGU-41070: COBOL inline definition must start with left-paren at line end
Cause: A COBOL inline definition starts with a left parenthesis. The left parenthesis must be the last character on the line preceding any COBOL data definition statements.

Action: Make sure an inline COBOL data definition starts on a line following a left parenthesis

PGU-41071: missing LANGUAGE parameter
Cause: PGAU DEFINE or REDEFINE DATA syntax requires a LANGUAGE parameter which was not found. Syntax checking only continues with the next statement.

Action: Correct the DEFINE or REDEFINE DATA statement to specify a LANGUAGE parameter.

PGU-41072: OPTIONS parameter was previously specified
Cause: The OPTIONS parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of OPTIONS from the statement.

PGU-41073: repeated OPTIONS subparameter
Cause: The indicated subparameter was previously specified in an OPTIONS parameter. The only valid OPTIONS subparameter is UDF. It may be specified only once per GENERATE statement. Syntax checking only continues with the next statement.

Action: Remove the duplicate subparameter from the OPTIONS specification.

PGU-41075: TRACE parameter was previously specified
Cause: The TRACE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of TRACE from the statement.

PGU-41076: repeated TRACE or PKGEX parameter
Cause: The indicated parameter was previously specified in a DIAGNOSE TRACE or PKGEX parameter. The valid TRACE parameters are SE, IT, QM, IO, OC, DD, and TG. The valid PKGEX parameters are DC and DR. Each may be specified only once per GENERATE statement. Syntax checking only continues with the next statement.

Action: Remove the duplicate parameter from the TRACE/PKGEX specification.

PGU-41077: PKGEX parameter was previously specified
Cause: The PKGEX parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request.

Action: Remove the second specification of PKGEX from the statement.

PGU-41079: data definition *string* version *number* inserted into PG DD
Cause: PGAU inserted the data definition *dname* with version number *dver* as the result of processing a DEFINE DATA statement.

Action: Note the VERSION number of the data definition for future reference.

PGU-41080: call definition *string* version *number* inserted into PG DD
Cause: PGAU inserted the call definition *cname* with version number *cver* as the result of processing a DEFINE CALL statement.

Action: Note the VERSION number of the call definition for future reference.

PGU-41081: transaction definition *string* version *number* inserted into PG DD
Cause: PGAU inserted the transaction definition *tname* with version number *tver* as the result of processing a DEFINE TRANSACTION statement.

Action: Note the VERSION number of the transaction definition for future reference.

PGU-41082: data definition *string* version *number* updated in PG DD
Cause: PGAU updated the data definition *dname* with version number *dver* as the result of processing a REDEFINE DATA statement.

Action: None required. This is an informational message.

PGU-41083: data definition *string* version *number* deleted from PG DD
Cause: PGAU deleted the data definition *dname* with version number *dver* as the result of processing an UNDEFINE DATA statement.

Action: None required. This is an informational message.

PGU-41084: call definition *string* version *number* deleted from PG DD
Cause: PGAU deleted the call definition *cname* with version number *cver* as the result of processing an UNDEFINE CALL statement.

Action: None required. This is an informational message.

PGU-41085: transaction definition *string* version *number* deleted from PG DD
Cause: PGAU deleted the transaction definition *tname* with version number *tver* as the result of processing an UNDEFINE TRANSACTION statement.

Action: None required. This is an informational message.

PGU-41086: length of *string* token exceeds maximum allowed length of *number*
Cause: The object name of type *var* is longer than the maximum length *len* allowed by PGAU. Only syntax checking continues with the next statement.

Action: Reduce the length of the indicated name.

PGU-41087: data name *string* does not exist
Cause: A DEFINE CALL references a data definition name *dname* that does not exist.

Action: Use only previously defined data definitions in a DEFINE CALL statement.

PGU-41088: data name *string* or specified version (*number*) of data name *string* does not exist
Cause: A DEFINE CALL references a data definition name *dname* that does not exist, or specified a non-existent version *dver* of the data definition *dname*.

Action: Use only previously defined data definitions in a DEFINE CALL statement.

PGU-41089: call name *string* does not exist
Cause: A DEFINE TRANSACTION references a call definition name *cname* that does not exist.

Action: Use only previously defined call definitions in a DEFINE TRANSACTION statement.

PGU-41090: call name *string* or specified version (*number*) of call name *string* does not exist
Cause: A DEFINE TRANSACTION references a call definition name *cname* that does not exist, or specified a non-existent version *cver* of the call definition *cname*.

Action: Use only previously defined data definitions in a DEFINE TRANSACTION statement.

PGU-41091: data name *string* does not exist
Cause: An UNDEFINE DATA references a data definition name *dname* that does not exist.

Action: Use only previously defined data definitions in an UNDEFINE DATA statement.

PGU-41092: data name *string* or specified version (*number*) of data name *string* does not exist
Cause: An UNDEFINE DATA references a data definition name *dname* that does not exist, or specified a non-existent version *dver* of the data definition *dname*.

Action: Use only previously defined data definitions in an UNDEFINE DATA statement.

PGU-41093: call name *string* does not exist
Cause: An UNDEFINE CALL references a call definition name *cname* that does not exist.

Action: Use only previously defined call definitions in an UNDEFINE CALL statement.

PGU-41094: call name *string* or specified version (*number*) of call name *string* does not exist
Cause: An UNDEFINE CALL references a call definition name *cname* that does not exist, or specified a non-existent version *cver* of the call definition *cname*.

Action: Use only previously defined call definitions in an UNDEFINE CALL statement.

PGU-41095: transaction name *string* does not exist
Cause: An UNDEFINE TRANSACTION references a transaction definition name *tname* that does not exist.

Action: Use only previously defined transaction definitions in an UNDEFINE TRANSACTION statement.

PGU-41096: transaction name *string* or specified version (*number*) of transaction name *string* does not exist
Cause: An UNDEFINE TRANSACTION references a transaction definition name *tname* that does not exist, or specified a non-existent version *tver* of the transaction definition *tname*.

Action: Use only previously defined transaction definitions in an UNDEFINE TRANSACTION statement.

PGU-41097: language parameter given in REDEFINE DATA conflicts with DEFINE DATA
Cause: The LANGUAGE parameter in a REDEFINE DATA statement for a given dataname specifies a language different than the language originally specified in the DEFINE DATA statement for the given dataname.

Action: Change the LANGUAGE parameter in the REDEFINE DATA statement to that of the original DEFINE DATA statement. The associated language-dependent field definitions must also be changed.

PGU-41100: FIELD parameter on REDEFINE specifies unknown field name (*string*)
Cause: A REDEFINE with the FIELD parameter specifies a field name *fname* that does not currently exist in the data object being REDEFINEd.

Action: Specify the correct field name on the FIELD parameter. Use the REPORT DATA statement to list current field names.

PGU-41101: INFILE parameter given on DEFINE DATA with inline data
Cause: An INFILE parameter was found on a DEFINE DATA statement, but an inline data definition was also found. Only one of the two forms is allowed in a single DEFINE DATA statement.

Action: Remove the INFILE specification or the inline data definition.

PGU-41102: data definition missing on *string* DATA
Cause: Neither an inline data definition nor an INFILE parameter was found in a DEFINE DATA or REDEFINE DATA statement. One of these is required in a DEFINE DATA. One of these may be required in a REDEFINE DATA depending on other parameters given.

Action: Specify either an INFILE parameter or an inline data definition.

PGU-41103: INFILE parameter was previously specified
Cause: The INFILE parameter has already been specified in a DEFINE DATA or REDEFINE DATA statement and is only allowed once per data definition or redefinition. Syntax checking only continues with the next statement.

Action: Remove the second specification of INFILE from the statement.

PGU-41105: memory exhausted
Cause: An attempt to allocated memory failed.

Action: Supported customers should contact Oracle Worldwide Support for assistance.

PGU-41106: missing left parenthesis in a GROUP
Cause: Left parenthesis must immediately follow a GROUP verb

Action: Examine source for missing left parenthesis.

PGU-41107: GROUP within a GROUP not allowed
Cause: A GROUP was found within a GROUP.

Action: There is no need to have a recursive GROUP. Delete the inner GROUP along with its enclosing parentheses.

PGU-41108: data definition *string* does not exist
Cause: A data name, *name*, was specified but does not exist.

Action: Check *name* for a misspelling or, if an explicit version was specified, recheck for a misnumbering. Use the REPORT verb to find out what really exists.

PGU-41109: field name *string* does not exist in data definition *string*
Cause: The field name *fld* does not exist in the data definition named *dnm*.

Action: Check the data definition named *dnm* for the existence of a field named *fld*. Use the REPORT verb to find out what really exists in the data definition named *dnm*.

PGU-41110: field name *string* appears multiple times in data definition *string*
Cause: A REDEFINE specifies the field name *fld*; this field name is multiply defined in the data definition *dnm*. The field name must be sufficiently qualified to remove the ambiguity so that a unique field may be referenced.

Action: Replace the ambiguous field name *fld* with a sufficiently qualified field name. An example of a qualified field name is SUBFIELD2 OF FIELD1 (or the generic equivalent, FIELD1.SUBFIELD2). It may be easier to just spool the output for a REPORT of the DATA definition for *dnm* into an output file, edit the output file, and DEFINE the DATA object named *dnm* anew.

PGU-41111: missing *string* name
Cause: A DEFINE or REDEFINE statement is missing the name of a transaction object, a call object, or a data object. *token* is the type of object.

Action: Supply the missing name (as well as any other parameters that are surely needed).

PGU-41112: invalid name for UNDEFINE *string*
Cause: The identifier name in an UNDEFINE statement is invalid. An identifier name must begin with an alphabetic character and contain only alphanumeric characters. *token* is the type of object.

Action: Check the name for illegal characters in the identifier name.

PGU-41113: invalid WITH operand
Cause: The token is not a valid operand in a WITH phrase. Only DATA and CALLS are valid.

Action: WITH must be followed by DATA or CALLS.

PGU-41114: duplicate WITH operand
Cause: An identical WITH phrase has been previously found in this statement.

Action: Delete one of the identical phrases.

PGU-41115: invalid WITH operand in this context
Cause: A WITH phrase has been found in an invalid context. The phrase WITH CALLS can appear only in an UNDEFINE TRANSACTION; the phrase WITH DATA cannot appear in an UNDEFINE DATA.

Action: Delete the offending WITH phrase

PGU-41119: expecting one of DATA, CALL, or TRANSACTION in a DEFINE
Cause: One of DATA, CALL, or TRANSACTION must be given to specify what type of object is to be defined.

Action: Insert one of DATA, CALL, or TRANSACTION into the command.

PGU-41120: VERSION parameter conflicts with UNDEFINE ALL
Cause: A VERSION parameter was found in an UNDEFINE ALL.

Action: Either delete the ALL (in UNDEFINE ALL) or delete the VERSION parameter.

PGU-41121: invalid DIAGNOSE parameter
Cause: An invalid sub-parameter was found within a DIAGNOSE parameter.

Action: Check the sub-parameter for mispelling.

PGU-41122: no transaction name given in a GENERATE statement
Cause: The transaction name is missing.

Action: Provide a transaction name.

PGU-41123: expecting DATA (type of object)
Cause: DATA was expected to be found at this point in the REDEFINE.

Action: Examine the REDEFINE statement for the missing DATA token and insert if necessary.

PGU-41124: expecting one of DATA, CALL, or TRANSACTION in an UNDEFINE
Cause: One of DATA, CALL, or TRANSACTION must be given to specify what type of object is to be deleted.

Action: Insert one of DATA, CALL, or TRANSACTION into the command.

PGU-41125: expecting the name of a *string* object
Cause: The type of object (DATA, CALL, or TRANSACTION) must be followed by a name for the object.

Action: Insert the name of a DATA, CALL, or TRANSACTION object.

PGU-41126: WITH token immediately followed by another WITH token
Cause: There are two succesive WITH tokens in the command input stream.

Action: Insert DATA or CALLS after the WITH token depending on which type of referenced objects should also be UNDEFINEd or REPORTed.

PGU-41127: a DATA or CALLS token was found but not preceded by a WITH token
Cause: There is a missing WITH token before DATA or CALLS

Action: Insert the WITH token in the proper place.

PGU-41128: a WITH token ends *string*
Cause: A WITH token was found as the last token in an UNDEFINE or REPORT command.

Action: The WITH token must be followed either by DATA or CALLS to delete or REPORT all referenced DATA or CALLS.

PGU-41129: parameter *string* invalid without FIELD parameter
Cause: The FIELD parameter is a pre-requisite to specify the *parm* parameter because *parm* applies to FIELDs within a DATA redefinition. PGAU REDEFINE parameters which require FIELD are: - PLSFNAME - CODEPAGE

Action: Include the FIELD parameter in the REDEFINE statement to indicate to which FIELD the redefinition of *parm* applyes, or remove the *parm* specification.

PGU-41131: FIELD specified, but USAGE, PLSFNAME, or language input absent
Cause: The FIELD keyword must be accompanied by at least one of the following keywords: USAGE, PLSFNAME, INFILE.

Action: Make sure at least one of the above keywords is specified.

PGU-41132: language input defines more than one field
Cause: A REDEFINE DATA with the FIELD option indicates that a single field is being redefined. The language input contained definitions for more than one field.

Action: Delete the extra field definitions.

PGU-41133: language input defines no data field for REDEFINE ... FIELD(...)
Cause: A REDEFINE DATA with the FIELD option indicates that a single field is being redefined. However, the language input contained no field definitions.

Action: Supply the (single) field defintion in the language input.

PGU-41134: no *string* PGAU objects satisfied the REPORT request
Cause: A REPORT command requested information about a group of unnamed PGAU data objects with a type specified by *token*. But there were no objects of that type.

Action: This is an informational message.

PGU-41135: no PGAU *string* objects named *string* satisfied the REPORT request
Cause: A REPORT command requested information about a PGAU data object with a type specified by *type* and a name of *name*. But there were no objects of that *type* with the given *name*.

Action: This is an informational message.

PGU-41136: no *string* PGAU object named *string* at version *number* satisfied the REPORT request
Cause: A REPORT command requested information about a specific PGAU data object with a type specified by *type*, a name of *name*, and a version of *vsn*. But there is no object with that name and version.

Action: This is an informational message.

PGU-41137: too many version requests; maximum of *number* allowed
Cause: The VERSION parameter of a REPORT request has too many sub-parameters; the *maximum* is specified in the message.

Action: split the request into multiple REPORTs.

PGU-41138: missing *string* name
Cause: The *object* name is missing in a REPORT statement.

Action: suppluy the missing name.

PGU-41139: use of VERSION parameter conflicts with ALL parameter
Cause: A VERSION parameter has been found. But an ALL parameter has also been found (denoting all versions)

Action: Delete the ALL parameter or the VERSION parameter.

PGU-41140: version number expected
Cause: A version number was expected at this point.

Action: supply a version number or delete the entire VERSION parameter.

PGU-41141: an invalid version number was found
Cause: A non-numeric string was found when scanning for a version number.

Action: Inspect statement for missing delimiters.

PGU-41142: version parameter has already been specified
Cause: The VERSION parameter has already been found.

Action: Delete a VERSION parameter so there is only one left.

PGU-41143: this type of WITH operand invalid with a *string* object
Cause: The WITH phrase is invalid with respect to an object of type *type*. For example, REPORT DATA ... WITH DATA is invalid,

Action: Delete the offending WITH phrase.

PGU-41144: default PKGCALL parameter truncated to *string*
Cause: The PKGCALL parameter was defaulted in a DEFINE CALL statement and normally takes the value of the CALL object name. However, the length of the CALL object name is greater than the maximum length allowed for the PKGCALL parameter (which is 30). The default value actually used is *value*.

Action: None. This is an informational message.

PGU-41145: default PLSDNAME parameter truncated to *string*
Cause: The PLSDNAME parameter was defaulted in a DEFINE DATA statement and normally takes the value of the DATA object name. However, the length of the DATA object name is greater than the maximum length allowed for the PLSDNAME parameter (which is 30). The default value actually used is *value*.

Action: None. This is an informational message.

PGU-41146: invalid INFILE parameter
Cause: The INFILE parameter in a DEFINE or REDEFINE DATA statement does not designate a valid filename. Syntax checking only continues with the next statement.

Action: Correct the INFILE parameter to specify a valid filename.

PGU-42001: ALL not valid in VALUE(S) clause at level 88
Cause: ALL cannot be specified in a level 88 (condition-names) entry

Action: Delete the reserved word ALL

PGU-42002: COPY statement: ended prematurely
Cause: There are missing operands in the COPY clause

Action: Supply missing operands

PGU-42003: COPY reserved word found within a COPY clause
Cause: COPY clause found embedded within another COPY clause

Action: Examine COPY clauses. Statment terminator may be missing.

PGU-42004: COPY not allowed as operand-1 or operand-2 in COPY REPLACING
Cause: COPY reserved word not allowed as operand-1 or operand-2 in the REPLACING clause of a COPY statement.

Action: If operand-1 replace COPY by some other word here and in the copied source file. If operand-2, examine offending COPY clause for missing terminator or reserved words.

PGU-42005: COPY statement: nothing to copy
Cause: No filename operand given in COPY clause

Action: Supply filename operand in COPY clause

PGU-42006: invalid token *string*
Cause: An unrecognzied token *token* was found when checking for a COBOL reserved word

Action: Check source around the unrecognzied token for other missing reserved words or for a missing statment terminator.

PGU-42007: invalid EJECT statement
Cause: An EJECT statement cannot be given with operands

Action: Delete the extraneous text after EJECT up to the statement terminator

PGU-42008: invalid SKIPn statement
Cause: A SKIP1, SKIP2, or SKIP3 statment cannot have operands

Action: Delete the extraneous text after the SKIPn up to the statement terminator.

PGU-42009: *string*
Cause: This is an echo of the offending source line, *sourceline*.

Action: Peruse this line with respect to a previous error message

PGU-42010: level-number with *number* digits exceeds maximum of two
Cause: A level-number was found with *number* digits. Level-numbers are restricted to a maximum of two digits

Action: Make sure level number is in range 01-49, 66, 77, or 88

PGU-42011: invalid level number of *number* found
Cause: Level numbers are restricted to 01-49, 66, 77, or 88; *number* was found.

Action: Change level number.

PGU-42012: level 01 or 77 has yet to be found
Cause: Record definition must start at level 01 or 77; a level other than 01 or 77 has been found.

Action: Examine source for missing level 01 or 77 definition; if offending definition is a top-level for a record, then renumber it to level 01 or 77.

PGU-42013: level 01 or 77 not yet found or begun between columns *number* and *number*
Cause: Missing level 01 or 77 in source file or the 01 or 77 did not start within the column limits specified by *margin-A* and *margin-B*.

Action: If level 01 or 77 appears, make sure it starts before *margin-B* and after *margin-A*. If level 01 or 77 does not appear, a renumbering of levels may be appropriate.

PGU-42014: RENAMES clause must be at level 66
Cause: The RENAMES reserved word may be used ONLY at level 66.

Action: Renumber the level to 66.

PGU-42015: multiple *string* clauses found
Cause: Multiple instances of a clause of type *type* were found.

Action: Make sure there is only one instance of the type of clause given.

PGU-42016: invalid figurative_type value passed
Cause: This is an internal error.

Action: Supported customers should contact Oracle Worldwide Support.

PGU-42017: VALUES can be used only at level 88
Cause: The VALUES keyword can only be specified in a data definition describing a condition and only at level 88.

Action: If the defintion describes a condition, make sure it is at level 88; if the definition does not describe a condition, then use VALUE IS rather than VALUES ARE.

PGU-42018: could not open input file *string*
Cause: The specified input file *file* could not be opened for reading.

Action: Make sure the file exists and allows read access.

PGU-42019: REDEFINES clause should be first clause
Cause: A REDEFINES clause must appear before any other clause in a data definition.

Action: Move the REDEFINES clause to the beginning of the data definition immediately after the data definition name.

PGU-42020: RENAMES dn-1 (THROUGH) dn-2 must stand alone
Cause: If a RENAMES clause appears in a data definition, it must be the ONLY clause.

Action: Delete other clauses.

PGU-42021: unterminated record definition found
Cause: An end-of-file was found before the ending statement terminator. This also results from COBOL definitions which extend beyond column 72.

Action: Check last records in input file for a missing statement terminator. Also check to ensure that the data definitions reside within their proper starting and ending columns.

PGU-42022: VALUES clause must be the only clause at level 88
Cause: The only clause allowed at level 88 is a VALUE or VALUES clause.

Action: Delete any clauses other than a VALUE or VALUES clause at level 88.

PGU-42024: missing period-separator in TITLE statement
Cause: A TITLE statement is not ended by a period separator.

Action: Check for missing period separator.

PGU-42025: invalid TITLE statement
Cause: Invalid format for TITLE statement.

Action: Check format of TITLE statement.

PGU-42026: COPY copies a COPY REPLACING or vice versa
Cause: The source file copied by a COPY statement cannot contain a COPY ... REPLACING statment; or the source file copied by a COPY ... REPLACING statement cannot have a COPY statement.

Action: Correct the file in error.

PGU-42027: in line *number* of file *string* as follows
Cause: This message follows another message that describes the actual error. The line following this message echoes the input COBOL source line. The source line was found in line *line* of file *filename*.

Action: Peruse messages immediately before and after this message.

PGU-42028: invalid USAGE token: *string*
Cause: An invalid word, *token* follows USAGE in a USAGE clause. *token* may be valid in some COBOL dialects.

Action: Replace *token* in the USAGE clause with a valid USAGE operand for the IBMVSCOBOLII COBOL dialect.

PGU-42029: reserved word *string* is invalid as a PICTURE
Cause: A reserved word, *token*, was used as a PICTURE operand.

Action: Check PICTURE clause for missing PICTURE operand.

PGU-42030: a *string* clause has been prematurely terminated
Cause: A clause of type *type* has ended but there are missing operands.

Action: Check the clause for missing operands.

PGU-42031: *string* phrase is misplaced after *string* phrase
Cause: A phrase introduced by *key-word-1* cannot come after a phrase introduced by *key-word-2*. Certain phrases must precede other phrases in a data definition. For instance, an ASCENDING [KEY] phrase must appear before an INDEXED phrase.

Action: Reverse the placement of the phrases.

PGU-42032: state value *string* is *string*
Cause: An internal error has occurred in the PGAU COBOL parser. State *state* is either valid or invalid according to *validity*.

Action: Reproduce the error with full diagnostics enabled and save all related input and output files and listings. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-42033: extraneous text at column *string*
Cause: Extraneous text has been found at the end of a record definition. It starts in column *column* of the source input record.

Action: The only source text that can follow the terminating '.' of a record definition is a COPY, EJECT, or SKIPn statement. Check to see if the terminating '.' has been misplaced.

PGU-42034: COPY for file *string* is recursive
Cause: A COPY statement for file *filename* has been found while processing a previous occurrence of a COPY specifying the same file.

Action: Check the COBOL source for recursive COPY. A single COPY file may need to be replaced with multiple, uniquely-named COPY files to achieve the desired results.

PGU-42035: invalid null operand in pseudo-text in a COPY REPLACING clause
Cause: The first operand in a REPLACING clause of a COPY statment is pseudo-text but the pseudo-text is null.

Action: Replace the null pseudo-text string with a non-null string.

PGU-42036: invalid input in *string* clause or paragraph
Cause: Invalid syntax in a *special* clause or paragraph.

Action: Check the indicated source line(s) for syntactical errors.

PGU-42037: missing END-EXEC token
Cause: An END-EXEC was not found while processing an EXEC clause.

Action: Insert an END-EXEC where appropriate. If the COBOL source input was generated by another product, regenerate the source using that product.

PGU-42038: invalid use of reserved word *string*
Cause: A reserved word, *reserved*, was found in an illegal context.

Action: Check to see if a reserved word is perhaps being used where a user dataname would normally appear.

PGU-42039: in line as follows
Cause: This message follows another message that describes the actual error. The line following this message echos the input COBOL source line.

Action: Refer to messages immediately before and after this message.

PGU-42040: DEPENDING ON phrase missing in OCCURS clause
Cause: An OCCURS clause describes a variable length table. One needs a DEPENDING ON phrase to tell how large is the current instance of the table. The

DEPENDING ON clause is missing. DEPENDING ON phrase that tells how large the current instance

Action: Supply the DEPENDING ON clause or make the table a fixed length table.

PGU-42041: missing or invalid USAGE clause for DBCS PIC clause
Cause: A PICTURE clause specifies a DBCS datatype, but the required USAGE IS DISPLAY-1 clause is misisng or inavlid.

Action: Supply the USAGE clause or revise the PIC datatype to noth required DBCS.

PGU-42042: LENGTH IS clause not allowed for numeric or edited data
Cause: A LENGTH IS clause was specified for a data item that is not non-edited character data.

Action: Remove the LENGTH IS clause or change the PICTURE clause for the data item to specify a non-edited, character data mask.

PGU-50001: error reading the log file.
Cause: An error occured reading the log file.

Action: Determine the cause of the problem and correct it before restarting PG4TCPMAP.

PGU-50002: no data found.
Cause: The predicate that was chosen to delete the row from the PGA_TCP_IMSC table is not found.

Action: Determine the cause of the problem and correct it before restarting PG4TCPMAP.

PGU-50003: *string* length of *number* exceeds the maximum of *number*.
Cause: The parameter, *parm* length, *len*, passed to PG4TCPMAP tool was larger than the maximum allowed, *max*.

Action: Correct the parameter in error and recall PG4TCPMAP tool. For more information, refer to Oracle Database Gateway for APPC, User's Guide.

PGU-50004: PG4TCPMAP has ended with a failure.
Cause: An error occured processing pg4tcpmap tool. This message is preceded by additional messages providing more information about the error.

Action: Refer to the messages preceding this one to determine the course of action.

PGU-50101: You have entered an invalid value.
Cause: This is a warning that you have entered an invalid value.

Action: The question will be asked again. Enter a valid value.

104
PLS-00001 to PLS-01919

PLS-00001: *string*

PLS-00022: out of memory

PLS-00027: redeclared SQL Identifier '*string*' at line *number* in file *string*

PLS-00028: option '*string*' not legal as EXEC ORACLE OPTION

PLS-00029: ambiguous option '*string*'

PLS-00030: invalid label range specified

PLS-00031: invalid operand '*string*' for option '*string*'

PLS-00032: invalid option '*string*'

PLS-00033: missing operand for option '*string*'

PLS-00035: no host language specified

PLS-00036: no input file name specified

PLS-00037: ?? unable to log on to ORACLE with '*string*'

PLS-00038: ?? unable to open a cursor

PLS-00039: unable to open input file '*string*'

PLS-00040: unable to open listing file '*string*'

PLS-00041: unable to open output file '*string*'

PLS-00042: unable to close output file '*string*'

PLS-00049: bad bind variable '*string*'
Cause: The client (caller) of PL/SQL has parsed a bind variable that it has informed to be 'bad'.

Action: n/a

PLS-00102: parser stack overflow because nesting is too deep
Cause: The parser, which checks the syntax of PL/SQL statements, uses a data structure called a stack; the number of levels of nesting in the PL/SQL block exceeded the stack capacity.

Action: Reorganize the block structure to avoid nesting at too deep a level. For example, move the lowest-level sub-block to a higher level.

PLS-00103: *string*
Cause: This error message is from the parser. It found a token (language element) that is inappropriate in this context.

Action: Check previous tokens as well as the one given in the error message. The line and column numbers given in the error message refer to the end of the faulty language construct.

PLS-00104: empty argument list in call of procedure '*string*' must be omitted
Cause: In a subprogram call, the name of the subprogram was followed by an empty parameter list. For example, procedure P was called as P(). This is not allowed.

Action: Remove the empty parameter list. In the example, change the procedure call to P.

PLS-00105: at most one forward declaration of type '*string*' is permitted
Cause: More than one forward declaration of a type is redundant.

Action: Remove all but one forward declaration.

PLS-00106: double quote disallowed in a quoted identifier

PLS-00108: declarative units must be a single variable declaration
Cause: While checking a declarative unit (a top-level declare block without the BEGIN...END), PL/SQL found that there was more than one item declared or that the item was not a variable declaration. A table is a common variable declaration at the unit level. To define a TABLE, compile a DECLARE compilation unit, but only one at a time is allowed.

Action: Declare variables in separate declarative units.

PLS-00109: unknown exception name '*string*' in PRAGMA EXCEPTION_INIT
Cause: No declaration for the exception name referenced in an EXCEPTION_INIT pragma was found within the scope of the pragma.

Action: Make sure the pragma follows the exception declaration and is within the same scope.

PLS-00110: bind variable '*string*' not allowed in this context
Cause: A bind variable, that is, an identifier prefixed with a colon, was found in an inappropriate context.

Action: Remove the colon or replace the bind variable with the appropriate object.

PLS-00111: end-of-file in comment
Cause: A Comment had a comment initiator (/*), but before the

Action: Remove the Comment initiator or add a comment terminator. The line and column numbers accompanying the error message refer to the beginning of the last legal token before the Comment initiator.

PLS-00112: end-of-line in quoted identifier
Cause: A quoted identifier had a beginning quote ("), but before the ending quote (") was found, an end-of-line marker was encountered.

Action: Remove the beginning quote or add the ending quote. The line and column numbers accompanying the error message refer to the beginning of the quoted identifier.

PLS-00113: END identifier '*string*' must match '*string*' at line *string*, column *string*
Cause: Following the keyword END, which terminates some language constructs (such as loops, blocks, functions, and procedures), you can optionally place the name of that construct. For example, at the end of the definition of loop L you might write END L. This error occurs when the optional name does not match the name given to the language construct. It is usually caused by a misspelled identifier or by faulty block structure.

Action: Make sure the spelling of the END identifier matches the name given to the language construct and that the block structure is correct.

PLS-00114: identifier '*string*' too long
Cause: The name of a PL/SQL variable is longer than 30 characters. Legal identifiers (including quoted identifiers) have a maximum length of 30 characters. A string literal might have been mistakenly enclosed in double quotes instead of single quotes, in which case PL/SQL considers it a quoted identifier.

Action: Shorten the identifier.

PLS-00115: this PRAGMA must follow the declaration of '*string*'
Cause: The pragma refers to a PL/SQL object that was not declared or is not within the scope of the reference. Identifiers must be declared before they are used in a pragma; forward references are not allowed.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00116: Duplicate where-clause in table expression
Cause: Two or more WHERE clauses were found in a DELETE, SELECT, or UPDATE statement. The WHERE clause specifies a condition under which rows in a table are processed. The condition can contain several logical expressions connected by AND or OR, but a statement can contain only one WHERE clause.

Action: Remove one of the WHERE clauses and, if necessary, connect logical expressions by AND or OR

PLS-00117: Duplicate connect-by clause in table expression
Cause: Two or more CONNECT BY clauses were found in a SELECT statement. The CONNECT BY clause defines a relationship used to return rows in a hierarchical order. The relationship can contain two expressions separated by a relational operator (such as = or !=), but a statement can contain only one CONNECT BY clause.

Action: Remove one of the CONNECT BY clauses and, if necessary, separate expressions by a relational operator.

PLS-00118: Duplicate group-by clause in table expression
Cause: Two or more GROUP BY clauses were found in a SELECT statement. The GROUP BY clause lists column expressions used to form a summary row for each group of selected rows. The list can contain several column expressions separated by commas, but a statement can contain only one GROUP BY clause.

Action: Remove one of the GROUP BY clauses and, if necessary, separate column expressions by commas.

PLS-00119: Duplicate having-clause in table expression
Cause: Two or more HAVING clauses were found in a SELECT statement. The HAVING clause specifies a condition under which groups of rows (formed by the GROUP BY clause) are included in the result. The condition can include several logical expressions connected by AND or OR, but a statement can contain only one HAVING clause.

Action: Remove one of the HAVING clauses and, if necessary, connect logical expressions by AND or OR.

PLS-00120: inappropriate argument in OPEN statement
Cause: The asterisk (*) option was used in the argument list of a SQL group function other than COUNT. For example, the code might look like SELECT SUM(*) INTO emp_count FROM emp; -- should be COUNT(*) Only COUNT permits the use of the asterisk option, which returns the number of rows in a table.

Action: Remove the asterisk option from the argument list and replace it with an expression that refers to one or more database columns.

PLS-00123: program too large (*string*)
Cause: The PL/SQL compiler has exceeded one of its capacity limits. The compiler cannot proceed.

Action: Revise the PL/SQL program so that it no longer exceeds the reported limit. The specific revision depends on the limit that was exceeded. However, usually a simple reduction in the size of the unit being compiled will fix the problem. Consider splitting the library unit into two or more library units, or shrinking repetitious or patterned code (possibly by creating helper routines).

PLS-00124: name of exception expected for first arg in exception_init pragma
Cause: The first argument passed to the EXCEPTION_INIT pragma was something other than an exception name. The first argument must be the name of a legally declared exception.

Action: Replace the first argument with the name of a legally declared exception.

PLS-00125: type name expected
Cause: When a constant or variable was declared, its datatype was not specified. For example, the code might look like pi CONSTANT := 3.14159; -- should be CONSTANT REAL := 3.14159 Every constant and variable must have a datatype, which specifies a storage format, constraints, and valid range of values.

Action: Supply the type name

PLS-00126: selector ALL is not allowed
Cause: The ALL shortcut for specifying system privileges or statement options was used in a SQL statement. PL/SQL does not support the ALL shortcut.

Action: Remove the ALL shortcut from the SQL statement.

PLS-00127: Pragma *string* is not a supported pragma
Cause: The named pragma (compiler directive) is not among those supported by PL/SQL. The pragma name might be misspelled, or the pragma syntax might be faulty.

Action: Check the spelling of the pragma name, and make sure the proper syntax was used.

PLS-00128: Illegal number of arguments for pragma *string*
Cause: The number of arguments (actual parameters) passed to the named pragma (compiler directive) is incorrect. A required argument was omitted from the argument list, or the pragma syntax is faulty (for example, a comma might be missing between two parameters).

Action: Supply the missing argument, or correct the faulty syntax.

PLS-00129: Pragma INTERFACE only supports C as its first argument
Cause: The first parameter passed to pragma INTERFACE specified a host language other than C. Currently, C is the only host language supported. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, which should be C, and make sure the proper syntax was used.

PLS-00130: Pragma *string* expects 1st argument to be a procedure/function/package/cursor
Cause: The first argument (actual parameter) passed to the named pragma (compiler directive) was not the name of a subprogram, package, or cursor, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, and make sure the proper syntax was used.

PLS-00131: Pragma *string* expects 2nd argument to be a procedure/function
Cause: The second argument (actual parameter) passed to the named pragma (compiler directive) was not the name of a procedure or function, as required. The parameter cannot be a non-static method. The parameter might be misspelled or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the second parameter and make sure the proper syntax was used.

PLS-00132: Pragma *string* does not support *string*
Cause: One of the parameters passed to this pragma was not among the list of allowed values. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of all the parameters and make sure the proper syntax was used.

PLS-00133: Pragma *string* expects 1st argument to be an identifier or string-literal
Cause: The first argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or string literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, and make sure the proper syntax was used.

PLS-00134: Pragma *string* expects 2nd argument to be an identifier or string-literal
Cause: The second argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or string literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the second parameter, and make sure the proper syntax was used.

PLS-00135: Pragma *string* expects 3rd argument to be an identifier, string or numeric literal
Cause: The fourth argument (actual parameter) passed to the named pragma (compiler directive) was not a numeric literal, as required. The parameter might be miscoded, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the coding of the fourth parameter, and make sure the proper syntax was used.

PLS-00138: Precision for a binary type must be one of 8, 16, or 32
Cause: Invalid precision was specified for a signed or unsigned binary type.

Action: Specify precision as one of 8, 16, or 32.

PLS-00139: duplicate external NAME specification in subprogram expression
Cause: The subprogram was found to have two external NAME specifications.

Action: Remove one of the external NAME specifications.

PLS-00140: duplicate external LIBRARY specification in subprogram expression
Cause: The subprogram was found to have two external LIBRARY specifications.

Action: Remove one of the external LIBRARY specifications.

PLS-00141: duplicate external PARAMETER STYLE specification in subprogram expression
Cause: The subprogram was found to have two external PARAMETER STYLE specifications.

Action: Remove one of the external PARAMETER STYLE specifications.

PLS-00142: duplicate external PARAMETER list specification in subprogram expression
Cause: The subprogram was found to have two external PARAMETER STYLE specifications.

Action: Remove one of the external PARAMETER STYLE specifications.

PLS-00143: duplicate external LANGUAGE specification in subprogram expression
Cause: The subprogram was found to have two external LANGUAGE specifications.

Action: Remove one of the external LANGUAGE specifications.

PLS-00144: duplicate external CALLING STANDARD specification in subprogram expression
Cause: The subprogram was found to have two external CALLING STANDARD specifications.

Action: Remove one of the external CALLING STANDARD specifications.

PLS-00145: duplicate external WITH CONTEXT specification in subprogram expression
Cause: The subprogram was found to have two external WITH CONTEXT specifications.

Action: Remove one of the external WITH CONTEXT specifications.

PLS-00146: duplicate external TRUSTED/UNTRUSTED specification in subprogram expression
Cause: The subprogram was found to have two external TRUSTED/UNTRUSTED specifications.

Action: Remove one of the external external TRUSTED/UNTRUSTED specifications.

PLS-00147: LIBRARY or ASSEMBLY file specification string is empty
Cause: A zero-length string was found for the LIBRARY or ASSEMBLY file specification.

Action: Specify a non-zero length string for the LIBRARY or ASSEMBLY file specification.

PLS-00148: Only 1 pragma of this type is allowed per subprogram
Cause: The subprogram was found to have two PRAGMA RESTRICT_REFERENCES.

Action: Remove one of the PRAGMA RESTRICT_REFERENCES.

PLS-00150: found: *string* but expected : INTEGER
Cause: This error happens in the creation of a pl/sql external type: [SIGNED | UNSIGNED] BINARY INTEGER (*precision*). It may be referenced only in a create type statement. Such types are non-queryable. Something other than 'INTEGER' was supplied.

Action: n/a

PLS-00151: Expression or Variable is an illegal type to PLS/QL: *string*
Cause: A type was used which does not belong PL/SQL. This type can only be referenced in CREATE TYPE statements, and is a non-queryable data type.

Action: n/a

PLS-00152: POINTER type may only reference an object type.
Cause: A POINTER type which does not belong to PL/SQL can only refer to an object type. This type can only be referenced in CREATE TYPE statements, and is a non-queryable data type.

Action: n/a

PLS-00153: A *string* type may only be used as an object type attribute.
Cause: A POINTER or [SIGNED/UNSIGNED] BINARY INTEGER can only be used as attributes of object types. These types can only be referenced in CREATE TYPE statements, and are non-queryable data types. One of these external PL/SQL types outside of an object type.

Action: n/a

PLS-00154: An object type may have only 1 MAP or 1 ORDER method.
Cause: More than one map or order function was declared. An object type can have only one map function or one order function, but not both.

Action: n/a

PLS-00155: Only a function may be a MAP, ORDER or CONSTRUCTOR method.
Cause: A procedure was declared as a MAP, ORDER or CONSTRUCTOR method. Only functions can be MAP, ORDER or CONSTRUCTOR methods.

Action: n/a

PLS-00156: Null constraints not supported for object attributes.
Cause: A null constraint was specified for an attribute in an object. This is not supported.

Action: Remove the constraint.

PLS-00157: Only schema-level programs allow *string*
Cause: An AUTHID or DEFAULT COLLATION clause was specified for a subprogram inside a package or type. These clauses are only supported for top-level stored procedures, packages, and types.

Action: Remove the clause.

PLS-00160: AUTHID must specify CURRENT_USER or DEFINER
Cause: The only two allowed options for AUTHID are CURRENT_USER and DEFINER.

Action: Fix the AUTHID clause to specify CURRENT_USER or DEFINER

PLS-00161: Pragma *string* expects 3rd argument to be an identifier or a string literal
Cause: The third argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or a string literal when there is a fourth argument to the pragma. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the third parameter, and make sure the proper syntax was used.

PLS-00162: Pragma *string* expects 4th argument to be a positive integer literal
Cause: The fourth argument (actual parameter) passed to the named pragma (compiler directive) was not a numeric literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the fourth parameter, and make sure the proper syntax was used.

PLS-00164: cursor subqueries are not supported in this release
Cause: This feature is not yet implemented.

Action: n/a

PLS-00165: call statement is not supported in PL/SQL
Cause: A CALL statement was found in PL/SQL source.

Action: Use an ordinary PL/SQL function or procedure call.

PLS-00166: bad format for date, time, timestamp or interval literal
Cause: The contents of the date, time, timestamp or interval literal did not match the expected format.

Action: Correct the format for the date, datetime, or interval literal.

PLS-00167: keyword BULK is used in a wrong context
Cause: keyword BULK is used illegally. For example, BULK is used without INTO clause

Action: remove the keyword BULK.

PLS-00168: duplicate modifier specification '*string*'
Cause: A method or object type modifier was specified more than once.

Action: Remove all but one occurence of the duplicate modifier.

PLS-00169: modifier '*string*' conflicts with prior '*string*' specification
Cause: The method or object type modifier specified conflicts with an earlier modifier. For example, a FINAL modifier cannot be combined with a NOT FINAL modifier.

Action: Remove one of the conflicting modifiers.

PLS-00170: the SQL statement in an OPEN statement or FOR loop must be a SELECT
Cause: An OPEN cursor statement or cursor FOR loop can only invoke a SELECT statement, not an UPDATE, INSERT or DELETE.

Action: Use only SELECT statements in OPEN or cursor FOR loops

PLS-00171: duplicate dedicated AGENT specification in subprogram expression
Cause: The subprogram was found to have two dedicated AGENT specifications.

Action: Remove one of the dedicated AGENT specifications.

PLS-00172: string literal too long
Cause: The string literal was longer than 32767 bytes.

Action: Use a string literal of at most 32767 bytes.

PLS-00173: SPACE, TAB or RETURN are disallowed as alternative quote delimiters
Cause: SPACE, TAB or RETURN was used as alternative quote delimiter.

Action: Use a character other than SPACE, TAB or RETURN as the alternative quote delimiter.

PLS-00174: a static boolean expression must be used
Cause: The expression contained a syntax or semantic error, or it did not have a boolean type or its evaluation raised an exception.

Action: Write correct static boolean expression.

PLS-00176: unexpected preprocessor token '$*string*'
Cause: A preprocessor token was used inappropriately.

Action: Remove the preprocessor token that is inappropriately used.

PLS-00177: '$*string*' preprocessor directive does not end properly
Cause: A preprocessor directive was not ended properly.

Action: Use $end to end the preprocessor directive properly.

PLS-00178: a static character expression must be used
Cause: The expression contained a syntax or semantic error, or it did not have a character type or its evaluation raised an exception.

Action: Write correct static character expression.

PLS-00179: $ERROR: *string*
Cause: $ERROR directive was used. This is an expected error message.

Action: NA

PLS-00180: preprocessor directives are not supported in this context
Cause: A preprocessor directive was used in a compilation unit for which conditional compilation is not supported.

Action: Do not use any preprocessor directives in this compilation unit.

PLS-00181: unsupported preprocessor directive '*string*'
Cause: An unsupported preprocessor directive was used.

Action: Use a supported preprocessor directive.

PLS-00182: Identifier cannot be an empty string
Cause: Identifier was declared using an empty string,

Action: rename the identifier to a non empty string.

PLS-00183: too many bind variables
Cause: The library unit used more bind variables than permitted. (The current limit is 65535 bind variables in one library unit.)

Action: Reduce the number of bind variables in the library unit. Consider splitting the library unit into two or more library units, or shrinking repetitious or patterned code (possibly by creating helper routines.)

PLS-00184: misplaced START WITH clause
Cause: A table expression specified a START WITH clause without the corresponding CONNECT BY clause.

Action: Specify a CONNECT BY clause with the START WITH clause.

PLS-00185: invalid arguments for JSON call
Cause: A JSON function was specified with arguments that were either invalid or not supported.

Action: Specify the correct arguments for the called JSON function.

PLS-00201: identifier '*string*' must be declared
Cause: You tried to reference either an undeclared variable, exception, procedure, or other item, or an item to which no privilege was granted or an item to which privilege was granted only through a role.

Action: 1) Check your spelling and declaration of the referenced name. 2) Verify that the declaration for the referenced item is placed correctly in the block structure. 3) If

the referenced item is indeed declared but you don't have privileges to refer to that item, for security reasons, you will be notified only that the item is not declared. 4) If the referenced item is indeed declared and you believe that you have privileges to refer to that item, check the privileges; if the privileges were granted only via a role, then this is expected and documented behavior. Stored objects (packages, procedures, functions, triggers, views) run in the security domain of the object owner with no roles enabled except PUBLIC. Again, you will be notified only that the item was not declared.

PLS-00202: type '*string*' must be declared
Cause: An attempt was made to reference an undefined type. Either the type specifier was not declared or it is not within the scope of the reference.

Action: Check the spelling and declaration of the type specifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00203: function DECODE must be called with at least 3 non-boolean arguments
Cause: Less than three arguments were passed to the built-in function DECODE. Though DECODE takes a variable number of (non-Boolean) arguments, at least three arguments must be passed.

Action: Call DECODE with three or more arguments

PLS-00204: function or pseudo-column '*string*' may be used inside a SQL statement only
Cause: A pseudocolumn or proscribed function was used in a procedural statement. The SQL pseudocolumns (LEVEL, ROWID, ROWNUM) can be used only in SQL statements. Likewise, certain functions such as DECODE, DUMP, and VSIZE and the SQL group functions (AVG, MIN, MAX, COUNT, SUM, STDDEV, VARIANCE) can be used only in SQL statements.

Action: Remove the pseudocolumn reference or function call from the procedural statement. Or, replace the procedural statement with a SELECT INTO statement; for example, replace bonus := DECODE(rating, 1, 5000, 2, 2500, ...); with the following statement: SELECT DECODE(rating, 1, 5000, 2, 2500, ...) INTO bonus FROM dual;

PLS-00205: Aggregate not allowed here
Cause: An aggregate, that is, a parenthesized list of values such as (7788, 'SCOTT', 20), was found in an inappropriate context.

Action: Remove or relocate the aggregate.

PLS-00206: %%TYPE must be applied to a variable, column, field or attribute, not to "*string*"
Cause: The program object declared using the %TYPE datatype attribute is not of the appropriate class. It must be a variable, column, record component, subprogram formal parameter, or other object to which values can be assigned.

Action: Declare an object of the appropriate class or define the datatype in another way (for example, use %ROWTYPE).

PLS-00207: identifier '*string*', applied to implicit cursor SQL, is not a legal cursor attribute
Cause: An identifier that is not a cursor attribute was applied to the identifier SQL. For example, this error occurs if the cursor attribute is misspelled.

Action: Check the spelling of the cursor attribute name. Make sure the attribute is one of these: %NOTFOUND, %FOUND, %ROWCOUNT, %ISOPEN.

PLS-00208: identifier '*string*' is not a legal cursor attribute
Cause: An identifier not declared as a cursor attribute was applied to an identifier declared as a cursor. For example, this error occurs if the cursor attribute is misspelled.

Action: Check the spelling of the cursor attribute name. Make sure the attribute is one of these: %NOTFOUND, %FOUND, %ROWCOUNT, %ISOPEN.

PLS-00209: table '*string*' is not in FROM clause
Cause: In a query, a table referenced by the select list is not named in the FROM clause.

Action: Check the spelling of the table names, make sure each column in the select list refers to a table in the FROM clause, then re-execute the query.

PLS-00210: an OTHERS clause is required in this CASE statement
Cause: Unless the clauses of a CASE statement mention all values of the type of the selecting expression, an OTHERS clause must be provided as the last clause of the CASE statement. It is impossible to cover all values of type INTEGER (or NUMBER), so an OTHERS clause is always required when the expression following the keyword CASE is of type INTEGER (or NUMBER).

Action: n/a

PLS-00211: CASE labels or ranges must not be duplicated in different WHEN clauses
Cause: In this CASE statement, a value appears in more than one WHEN clause. A value may appear in at most one WHEN clause of a CASE statement.

Action: n/a

PLS-00212: could not obtain enough memory to compile CASE statement
Cause: The CASE statement is too big. The compiler did not have enough storage to process it.

Action: n/a

PLS-00213: package STANDARD not accessible
Cause: The PL/SQL compiler could not find package STANDARD in the current Oracle database. To compile a program, PL/SQL needs package STANDARD.

Action: Make sure that package STANDARD is available in the current Oracle database, then retry the operation.

PLS-00214: BEGIN...END block nesting is too deep
Cause: The number of levels of nesting in the PL/SQL block is too large. Blocks can be nested up to 255 levels deep, depending on the availability of system resources such as memory.

Action: Reorganize the block structure to avoid nesting at too deep a level. For example, move the lowest-level sub-block to a higher level.

PLS-00215: String length constraints must be in range (1 .. 32767)
Cause: When a character variable was declared, a length outside the legal range was specified. For example, the following declarations are illegal: flag CHAR(0); -- illegal; zero length name VARCHAR2(-10); -- illegal; negative length

Action: Change the length constraint, making sure that it lies in the range 1 .. 32767.

PLS-00216: NUMBER precision constraint must be in range (1 .. 38)
Cause: A NUMBER variable was declared with a precision that is outside the legal range. Declarations such as N NUMBER(800) or N NUMBER(123,10) are not supported.

Action: Change the illegal NUMBER precision constraint, making sure that it lies in the range 1 .. 38.

PLS-00217: NUMBER scale constraint must be in range (-84 .. 127)
Cause: A NUMBER variable was declared with a scale that is outside the legal range. Declarations such as N NUMBER(10,345) or N NUMBER(10,-100) are not supported.

Action: Change the illegal NUMBER scale constraint, making sure that it lies in the range -84 .. 127.

PLS-00218: a variable declared NOT NULL must have an initialization assignment
Cause: In general, variables that have no initialization clause in their declaration are automatically initialized to NULL. This is illogical for NOT NULL variables; therefore, an initialization clause is required.

Action: Add an initialization clause to the variable declaration. If the initilization is too complicated for the syntax, one can add a function call (in a later release).

PLS-00219: label '*string*' reference is out of scope
Cause: A block or loop label was used to qualify a variable (as in outer_block.date) that was not declared or is not within the scope of the label. The variable name might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the variable name. Also confirm that the declaration is placed correctly in the block structure.

PLS-00220: simple name required in this context
Cause: A qualified name such as A.B or A.B.C is not permitted here.

Action: Use a simple name such as A instead.

PLS-00221: '*string*' is not a procedure or is undefined
Cause: An identifier being referenced as a procedure was not declared or actually represents another object (for example, it might have been declared as a function).

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00222: no function with name '*string*' exists in this scope
Cause: An identifier being referenced as a function was not declared or actually represents another object (for example, it might have been declared as a procedure).

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00223: paramaterless procedure '*string*' used as function
Cause: An identifier being referenced as a parameterless function actually represents a procedure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure. If necessary, change the declaration of the identifier or change the reference so that it does not require a return value.

PLS-00224: object '*string*' must be of type function or array to be used this way
Cause: An identifier being referenced as a function or an array actually represents an object (a number or date, for example) that cannot be referenced in this way.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00225: subprogram or cursor '*string*' reference is out of scope
Cause: The prefix in a qualified name was a subprogram or cursor which was not in an enclosing scope; i.e., a subprogram or cursor name is being used as a scope qualifier for a reference to an entity (within that subprogram or cursor) that is not in scope. Example: declare x number; type t1 is record (a number); function f return t1 is a number; begin x := f.a; -- legal use of function "f" as a scope qualifier; -- resolves to local variable "a" in function "f". x := f().a; -- legal reference to component "a" of returned record end; begin x := f.a; -- illegal use of function "f" as a scope qualifier x := f().a; -- legal reference to component "a" of returned record end;

Action: a) if the intention was to refer to a local variable of a non-enclosing function, this is not allowed; remove the reference b) if this is a parameterless function, and the the intention was to access a field of the result of a call to this function, then use empty parentheses in the call.

PLS-00226: package '*string*' used as variable reference
Cause: A package was referenced in an expression as if it were a variable or function. Either the name of the variable or function is misspelled or the reference is not fully qualified. For example, to call the function my_function, which is stored in package my_package, dot notation must be used, as follows: ... my_package.my_function ...

Action: Correct the spelling of the variable or function name or use dot notation to reference the packaged variable or function.

PLS-00227: subprogram 'in' formal *string* is not yet denotable
Cause: When the formal parameters of a subprogram were declared, one parameter was used to initialize another, as in PROCEDURE my_proc (j NUMBER, k NUMBER := j) IS ... The first parameter has no value until run time, so it cannot be used to initialize another parameter.

Action: Remove the illegal formal parameter reference.

PLS-00228: Illegal declaration of variable of type LONG
Cause: An attempt was made to declare a variables to be of type LONG. Only columns can be of type LONG. CAUSE: The identifier is a formal parameter which is being used in the context of a default expression value for a formal parameter in the same formal parameter list. E.g.: procedure p(j number, k number := j).

Action: Remove the offending variable definition

PLS-00229: Attribute expression within SQL expression
Cause: An attribute expression, such as SQL%NOTFOUND, was used in a SQL statement, but attribute expressions are allowed only in procedural statements.

Action: To workaround this limitation, assign the value of the attribute expression to a variable, then use the variable in the SQL statement. For example, replace the statement INSERT INTO audits VALUES (c1%ROWCOUNT, ...); with the following statements: row_count := c1%ROWCOUNT; INSERT INTO audits VALUES (row_count, ...);

PLS-00230: OUT and IN OUT formal parameters may not have default expressions
Cause: When the formal parameters of a procedure were declared, an OUT or IN OUT parameter was initialized to a default value, as in PROCEDURE calc_bonus (bonus OUT REAL := 0, ...) IS ... However, only IN parameters can be initialized to default values.

Action: Remove the illegal default expression.

PLS-00231: function '*string*' may not be used in SQL
Cause: A proscribed function was used in a SQL statement. Certain functions such as SQLCODE and SQLERRM can be used only in procedural statements.

Action: Remove the function call from the SQL statement. Or, replace the function call with a local variable. For example, the following statement is illegal: INSERT INTO errors VALUES (SQLCODE, SQLERRM); However, you can assign the values of SQLCODE and SQLERRM to local variables, then use the variables in the SQL statement, as follows: err_num := SQLCODE; err_msg := SQLERRM; INSERT INTO errors VALUES (err_num, err_msg);

PLS-00232: nested packages not permitted
Cause: A package was declared inside another package, but package declarations are allowed only at the top level. In other words, packages cannot be nested.

Action: Move the package declaration outside the enclosing package.

PLS-00233: function name used as an exception name in when clause
Cause: The WHEN clause in an exception handler contains a function call instead of an exception name. A valid exception handler consists of a WHEN clause, which must specify an exception, followed by a sequence of statements to be executed when that exception is raised.

Action: Check the spelling of the identifier in the WHEN clause, then replace the function call with an exception name.

PLS-00234: PARAMETER STYLE SQL may not be specified with a PARAMATERS list
Cause: A subprogram cannot specify both PARAMETER STYLE SQL and an explicit PARAMETERS list. Use PARAMETER STYLE GENERAL to supply default PARAMETERS list types.

Action: Change the subprogram specification.

PLS-00235: the external type is not appropriate for the parameter
Cause: An unsuccessful attempt was made to convert a parameter to the specified external parameter type.

Action: Specify a different external type or parameter type.

PLS-00236: Invalid external type specification for *string*.
Cause: The external type specified is not valid for one of the following: INDICATOR, LENGTH, MAXLEN, TDO, DURATION, CHARSETID, or CHARSETFORM.

Action: Check the manual and specify an appropriate external type.

PLS-00237: invalid BY VALUE indicator or length specification
Cause: BY VALUE was specified with an indicator or length parameter that is being passed in OUT or IN OUT mode. Only IN mode parameters may be passed by value.

Action: Remove the BY VALUE specification or change it to IN mode.

PLS-00238: external parameter name *string* not found in formal parameter list
Cause: An external parameter name was specified that does not match one in the formal parameter list.

Action: Correct the external parameter name.

PLS-00239: invalid external type specification for SQLCODE
Cause: An inappropriate external parameter type was specified for the SQLCODE parameter.

Action: Correct the SQLCODE parameter specification.

PLS-00240: Invalid type specification for RETURN indicator, length, tdo, duration
Cause: An inappropriate external parameter type was specified for the RETURN indicator, LENGTH, TDO, or DURATION.

Action: Correct the RETURN parameter specification.

PLS-00241: invalid external type specification for SQLSTATE
Cause: An inappropriate external parameter type was specified for the SQLSTATE parameter.

Action: Correct the SQLSTATE parameter specification.

PLS-00242: invalid external type specification for CONTEXT
Cause: An inappropriate external parameter type was specified for the CONTEXT parameter.

Action: Correct the CONTEXT parameter specification.

PLS-00243: invalid external type specification for SQLNAME
Cause: An inappropriate external parameter type was specified for the SQLNAME parameter.

Action: Correct the SQLNAME parameter specification.

PLS-00244: Multiple declarations in foreign function formal parameter list
Cause: There are multiple declarations of at least one the following FORMAL, INDICATOR, LENGTH, MAXLENGTH, or CONTEXT. PL/SQL allows only one declaration of the above for each formal parameter in the PARAMETERS clause.

Action: Correct the PARAMETERS clause.

PLS-00245: Formals used in the 'parameters' clause must appear exactly once
Cause: There are multiple declarations of the formal parameter in the PARAMETERS clause. PL/SQL allows only one declaration of the formal parameter in the PARAMETERS clause.

Action: Correct the PARAMETERS clause.

PLS-00246: PARAMETER STYLE is unsupported
Cause: A PARAMETER STYLE clause was placed in the external subprogram body.

Action: Remove the PARAMETER STYLE clause.

PLS-00247: LIBRARY or ASSEMBLY name must be specified
Cause: The LIBRARY or ASSEMBLY name is missing from the external subprogram body.

Action: The LIBRARY or ASSEMBLY name was not specified in the external subprogram body.

PLS-00248: Invalid Library Syntax
Cause: The LIBRARY syntax was entered incorrectly.

Action: Correct the LIBRARY syntax and recompile.

PLS-00249: Invalid WITH CONTEXT Syntax
Cause: CONTEXT was used in a WITH CONTEXT or a PARAMETERS clause. This is invalid.

Action: Check if WITH CONTEXT is used without specifying CONTEXT in the PARAMETERS clause or vice versa. The PARAMETERS clause must be complete. Thus if WITH CONTEXT is specified, then CONTEXT must be referenced in the PARAMETERS clause (if there is one).

PLS-00250: Incorrect Usage of *string* in parameters clause.
Cause: The usage of Keywords such as MAXLEN, LENGTH, CHARSETID, CHARSETFORM RETURN in the parameters clause was incorrect

Action: This error occurs if keywords like MAXLEN, LENGTH, TDO, DURATION, CHARSETID, or CHARSETFORM cannot be used with PL/SQL formal parameters or the mode of the formal parameter. For example, MAXLEN can only be declared for a CHAR or VARCHAR2 PL/SQL variable and its use is allowed only for OUT or INOUT PL/SQL variables. Also, RETURN was specified in the parameters clause for a PL/SQL PROCEDURE. E.g. CREATE PROCEDURE proc IS EXTERNAL NAME ... LIBRARY ... PARAMETERS(RETURN INDICATOR SHORT, RETURN);

PLS-00251: RETURN, for actual function return, must be last in the parameters clause
Cause: RETURN specification for the actual function return, used within the parameters clause must hold the very last position. Example : The following will give this error since the RETURN specification for the actual function return in the parameters clause is not the last. FUNCTION myexternalfunc (var1 BINARY_INTEGER, var2 BINARY_INTEGER) RETURN BINARY_INTEGER IS EXTERNAL NAME "myexternalfunc" LIBRARY somelib PARAMETERS (var1 LONG, var2 SHORT, RETURN INT, RETURN INDICATOR SHORT); The correct syntax is the following. Note that RETURN for actual function return is the last specification in the parameters clause. FUNCTION myexternalfunc (var1 BINARY_INTEGER, var2 BINARY_INTEGER) RETURN BINARY_INTEGER IS EXTERNAL NAME "myexternalfunc" LIBRARY somelib PARAMETERS (var1 LONG, var2 SHORT, RETURN INDICATOR SHORT, RETURN INT);

Action: Correct the syntax of the RETURN specification in the parameters clause

PLS-00252: reference to the wrong copy of package STANDARD
Cause: A reference is made to the fixed package version of STANDARD when the database is open, or to the on-disk version when the database is closed. Explicit use of a SYS.X$ package name can lead to this. One might also see this from a compilation that begins while the db is closed but has the bad luck to have another session open the db before compilation is complete. Another possible cause is having 'set serveroutput on' through svrmgrl when doing an 'alter database close'.

Action: Make use of on-disk versions of packages when the database is open and fixed (preloaded) versions when the database is closed. Do not attempt to use the wrong set. It should be quite hard to reference the wrong set, except by using SYS.X$ package names explicitly. Also, be sure to 'set serveroutput off' before doing an 'alter database close'.

PLS-00253: Formal parameter *string* missing in the parameters clause
Cause: The parameter clause does not have a matching parameter for a parameter specified in the formal parameter list.

Action: Provide a matching parameter in parameters clause for every formal parameter.

PLS-00254: OUT and IN/OUT modes cannot be used in this context
Cause: actual parameter mode (OUT, or IN/OUT) is not used properly in USING clause. For USING clause in an OPEN statement, only IN mode is allowed.

Action: change the parameter mode in the USING clause to an appropriate mode.

PLS-00255: CALL Specification parameters cannot have default values
Cause: CALL Specification formal parameters default values are disallowed.

Action: Remove the default values in the formal parameter list (spec or body) and compile again.

PLS-00256: *string* is not a valid external library or assembly
Cause: The supplied external library or assembly name in the external clause is not a valid alias library or assembly.

Action: Provide the name of a valid alias library or assembly which is previously declared.

PLS-00257: illegal use of EXTERNAL clause in a TYPE or PACKAGE specification
Cause: An EXTERNAL Clause was detected in a TYPE Specification or a PACKAGE specification.

Action: Remove the EXTERNAL Clause and use the new CALL Specification syntax.

PLS-00258: constrained datatypes disallowed in CALL Specifications
Cause: A call specification for C or Java cannot have constraints on the PL/SQL formal parameter types. PL/SQL types which have have constraints are NATURAL, NATURALN, POSITIVE, POSITIVEN, SIGNTYPE, INTEGER, INT, SMALLINT, DECIMAL, NUMERIC, DEC This includes NOT NULL constraints from POSITIVEN, NATURALN

Action: Use the unconstrained type for that PL/SQL formal declaration i.e NUMBER, BINARY_INTEGER or PLS_INTEGER

PLS-00259: rights model (AUTHID) must be specified
Cause: It is mandatory to specify the rights model if a PL/SQL PROCEDURE, FUNCTION, PACKAGE OR TYPE HAS CALL-Specifications

Action: Add the AUTHID clause indicating the rights model.

PLS-00260: Datetime/Interval constraints must be in range (0 .. 9)
Cause: A Datetime/Interval variable or attribute was declared with a constraint outside the legal range.

Action: Change the illegal constraint.

PLS-00261: Java CALL Specification not yet allowed as a method in an object type
Cause: A call specification declaring that an implementation is in Java has been found for a method of an object or opaque type. This usage is not yet supported.

Action: Implement the method using a language other than Java. A PL/SQL method implementation is permitted to call to Java through a call specification provided as a schema-level procedure or in a package; such a call specification can only target a static Java method, however.

PLS-00262: incorrect placement of *string* clause
Cause: An ACCESSIBLE BY clause was specified in the wrong place. This clause may be specified on top-level stored procedures, packages, and types, and also on subprograms which are directly contained in a package. This clause may not be specified on methods.

Action: Remove the clause.

PLS-00263: mismatch between *string* on a subprogram specification and body
Cause: An ACCESSIBLE BY clause was specified in a package body for an item which did not have an equivalent clause in the package specification. In a package body, this clause can only be specified on externally visible subprograms, and the subprogram specification and body must have equivalent clauses. This clause cannot be specified on package-local or nested subprograms.

Action: Modify the clause on the subprogram body to agree with the specification ****** errors until 300 are reserved for External Procedures ********** ****** PH2 errors **********

PLS-00301: Invalid GOTO to non-label '*string*'
Cause: A GOTO was attempted to something which is not a label (for example, a variable).

Action: Specify a valid label name.

PLS-00302: component '*string*' must be declared
Cause: In a reference to a component (for example, in the name "A.B", "B" is a component of "A"), the component has not been declared. The component might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the component. Also confirm that the declaration is placed correctly in the block structure.

PLS-00303: qualifier '*string*' must be declared
Cause: In a name such as "A.B", "A" is the qualifier, and "B" is a component of the qualifier. This error occurs when no declaration for the qualifier is found.The qualifier might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the qualifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00304: cannot compile body of '*string*' without its specification
Cause: The compiled package specification required to compile a package body could not be found. Some possible causes follow: --the package name is misspelled --the package specification was never compiled --the compiled package specification is not accessible The package specification must be compiled before compiling the package body, and the compiler must have access to the compiled specification.

Action: Check the spelling of the package name. Compile the package specification before compiling the package body. Also, make sure the compiler has access to the compiled specification.

PLS-00305: previous use of '*string*' (at line *string*) conflicts with this use
Cause: While looking for prior declarations of a cursor, procedure, function, or package, the compiler found another object with the same name in the same scope. Or, the headers of subprogram in a package specification and body do not match word for word.

Action: Check the spelling of the cursor, procedure, function, or package name. Also check the names of all constants, variables, parameters, and exceptions declared in the same scope. Then, remove or rename the object with the duplicate name. Or, change the headers of the packaged subprogram so that they match word for word.

PLS-00306: wrong number or types of arguments in call to '*string*'
Cause: This error occurs when the named subprogram call cannot be matched to any declaration for that subprogram name. The subprogram name might be misspelled, a parameter might have the wrong datatype, the declaration might be faulty, or the declaration might be placed incorrectly in the block structure. For example, this error occurs if the built-in square root function SQRT is called with a misspelled name or with a parameter of the wrong datatype.

Action: Check the spelling and declaration of the subprogram name. Also confirm that its call is correct, its parameters are of the right datatype, and, if it is not a built-in function, that its declaration is placed correctly in the block structure.

PLS-00307: too many declarations of '*string*' match this call
Cause: The declaration of a subprogram or cursor name is ambiguous because there was no exact match between the declaration and the call and more than one declaration matched the call when implicit conversions of the parameter datatypes were used. The subprogram or cursor name might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the subprogram or cursor name. Also confirm that its call is correct, its parameters are of the right datatype, and, if it is not a built-in function, that its declaration is placed correctly in the block structure.

PLS-00308: this construct is not allowed as the origin of an assignment
Cause: The construct or expression does not designate a value that can be assigned to a variable. For example, the datatype name NUMBER cannot appear on the right hand side of an assignment statement as in X := NUMBER.

Action: Correct the illegal assignment statement.

PLS-00309: with %%LAST attribute, '*string*' must be a variable of an enumerated type
Cause: The "%LAST" attribute must be applied to an identifier that has been declared as a variable of an enumerated type (or subtype of an enumerated type). This error occurs when "%LAST" follows some identifier that has not been so declared.

Action: n/a

PLS-00310: with %%ROWTYPE attribute, '*string*' must name a table, cursor or cursor-variable
Cause: The %ROWTYPE attribute must be applied to an identifier declared as a cursor, cursor variable, or database table. This error occurs when %ROWTYPE follows some identifier that has not been so declared.

Action: Change the declaration or do not apply the %ROWTYPE attribute to the identifier.

PLS-00311: the declaration of "*string*" is incomplete or malformed
Cause: This occurrence of the identifier cannot be compiled because its type has not been properly defined.

Action: Correct the faulty datatype declaration.

PLS-00312: a positional parameter association may not follow a named association
Cause: When a list of parameters is passed to a subprogram or cursor, if both positional and named associations are used, all positional associations must be placed in their declared order and before all named associations, which can be in any order.

Action: Reorder the parameter list to meet the requirements or use named association only.

PLS-00313: '*string*' not declared in this scope
Cause: There is no declaration for the given identifier within the scope of reference. The identifier might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00314: TABLE declarations are not allowed as PL/SQL local variables
Cause: In a precompiled program, the DECLARE TABLE statement was mistakenly used inside an embedded PL/SQL block. If an embedded PL/SQL block refers to a database table that does not yet exist, use the DECLARE TABLE statement to tell the precompiler what the table will look like. However, DECLARE TABLE statements are allowed only in the host program.

Action: Move the DECLARE TABLE statement outside the embedded PL/SQL block. If you want a variable that can store an entire row of data selected from a database table or fetched from a cursor or cursor variable, use the %ROWTYPE attribute.

PLS-00315: Implementation restriction: unsupported table index type
Cause: In the INDEX BY clause of a PL/SQL table declaration, a datatype other than BINARY_INTEGER, PLS_INTEGER, or VARCHAR2 was specified. PL/SQL tables can have one column and a primary key. The column can have any scalar type, but the primary key must be either a binary integer type or VARCHAR2.

Action: Use one of the supported key types in the INDEX BY clause.

PLS-00316: PL/SQL TABLEs must use a single index
Cause: In the INDEX BY clause of a PL/SQL table declaration, a composite primary key was specified. PL/SQL tables must have a simple, unnamed primary key of a binary integer or VARCHAR2 type.

Action: Use one of the supported key types in the INDEX BY clause.

PLS-00317: incomplete type "*string*" was not completed in its declarative region
Cause: An incomplete type declaration was not completed in the declarative region where it was declared.

Action: Complete the type appropriately, then retry the operation.

PLS-00318: type "*string*" is malformed because it is a non-REF mutually recursive type
Cause: A type-declaration such as: -- a non-REF recursive type, for example: type t is record (a t); or -- non-REF mutually dependent types, for example: type t1; type t2 is record (a t1); type t1 is record (a t2); was performed. In these examples, the type is malformed because it participates in a mutually recursive non-REF relationship with itself and possibly other types.

Action: Use another type to remove the recursion.

PLS-00319: subquery in an IN or NOT IN clause must contain exactly one column
Cause: An invalid expression such as X IN (SELECT A,B ...) was used. When a [NOT]IN clause is used with a subquery, it does not test for set membership. The number of expressions in the [NOT]IN clause and the subquery select list must match. So, in the example above, the subquery must specify at most one column.

Action: Change the subquery to select only one column.

PLS-00320: the declaration of the type of this expression is incomplete or malformed
Cause: In a declaration, the name of a variable or cursor is misspelled or the declaration makes a forward reference. Forward references are not allowed in PL/SQL. A variable or cursor must be declared before it is referenced it in other statements, including other declarative statements. For example, the following declaration of dept_rec raises this exception because it refers to a cursor not yet declared: DECLARE dept_rec dept_cur%ROWTYPE; CURSOR dept_cur IS SELECT ... ...

Action: Check the spelling of all identifiers in the declaration. If necessary, move the declaration so that it makes no forward references.

PLS-00321: expression '*string*' is inappropriate as the left hand side of an assignment statement
Cause: The expression does not designate a variable that can have a value assigned to it. For example, the function SYSDATE cannot appear on the left hand side of an assignment statement such as SYSDATE := '01-JAN-1990';

Action: Correct the illegal assignment statement.

PLS-00322: declaration of a constant '*string*' must contain an initialization assignment
Cause: A constant declaration lacks the assignment of an initial value. For example, in the following declaration" := 3.14159" is the initialization clause: "pi constant number := 3.14159;"

Action: Correct the constant declaration by supplying the missing initialization assignment.

PLS-00323: subprogram or cursor '*string*' is declared in a package specification and must be defined in the package body
Cause: A subprogram specification was placed in a package specification, but the corresponding subprogram body was not placed in the package body. The package body implements the package specification. So, the package body must contain the definition of every subprogram declared in the package specification.

Action: Check the spelling of the subprogram name. If necessary, add the missing subprogram body to the package body.

PLS-00324: cursor attribute may not be applied to non-cursor '*string*'
Cause: This error occurs when a cursor-attribute ("%FOUND", "%NOTFOUND", "%ROWS", "%IS_OPEN", etc.) appears following an identifier that is not declared as a cursor or cursor variable. It occurs, for example, if the variable name my_cur in my_cur%FOUND was not properly declared as a cursor or if the variable declaration was placed incorrectly in the block structure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00325: non-integral numeric literal *string* is inappropriate in this context
Cause: A non-integral numeric literal was used in a context that requires an integer (a number with no digits to the right of its decimal point).

Action: Replace the inappropriate literal with an integer literal.

PLS-00326: IN clause must contain same number of expressions as subquery
Cause: The number of expressions in an IN clause did not equal the number of expressions in a corresponding subquery select list. For example, the following statement is invalid because the IN clause contains two expressions, but the subquery select list contains just one: ... WHERE (ename, sal) IN (SELECT sal FROM emp);

Action: Check the number of expressions in each set, then revise the statement to make the numbers equal.

PLS-00327: "*string*" is not in SQL scope here
Cause: In a SQL statement, a reference was made to an out-of-scope database object. The referenced object might be misspelled, or the reference might be mixed, as in the following example: CURSOR c1 IS SELECT dept.dname FROM emp;

Action: Check the spelling of all database objects in the SQL statement, and make sure all references are to objects within the current scope.

PLS-00328: A subprogram body must be defined for the forward declaration of *string*.
Cause: A subprogram specification was declared, but the corresponding subprogram body was not defined. Write the subprogram specification and body as a unit. An alternative solution is to separate the specification from its body, which is necessary when you want to define mutually recursive subprograms or you want to group subprograms in a package.

Action: Check the spelling of the subprogram name. If necessary, supply the missing subprogram body.

PLS-00329: schema-level type has illegal reference to *string*
Cause: An attempt was made to make a reference from a schema-level type to something other than a schema-level type.

Action: Replace the illegal reference and retry the operation.

PLS-00330: invalid use of type name or subtype name
Cause: A datatype or subtype specifier was mistakenly used in place of a constant, variable, or expression. For example, the code might look like IF emp_count > number THEN ... -- illegal; NUMBER is a datatype specifier

Action: Replace the datatype or subtype specifier with a valid constant, variable, or expression.

PLS-00331: illegal reference to *string*
Cause: You had an EITHER 1. an illegal reference to some object in user SYS. to use one of them in an illegal way OR 2. an illegal reference to a remote object type.

Action: Remove the reference.

PLS-00332: "*string*" is not a valid prefix for a qualified name
Cause: You have a malformed qualified name because the prefix is not valid.

Action: Remove or change the reference.

PLS-00333: "*string*" must match an object-table alias in this context
Cause: The name, appearing in the context of a REF or VALUE, did not resolve to an object-table alias.

Action: 1) If there is no object table in the scope, then remove the REF or VALUE; or provide the missing object table reference. 2) If there is an object table in the scope, but you're not referring to it, add the reference.

PLS-00334: "*string*" matches table or view without an alias
Cause: You have a reference to a table or view name without an alias.

Action: Replace the reference with a reference to an object-table alias.

PLS-00335: a package name conflicts with an existing object
Cause: In a CREATE PACKAGE statement, a package (which is a database object that groups logically related PL/SQL types, objects, and subprograms) was given the same name as an existing database object.

Action: Give the package a unique name.

PLS-00336: non-object-table "*string*" illegal in this context
Cause: You have a REF or VALUE modifier for a non-object-table

Action: Replace the reference with a reference to an object-table alias.

PLS-00337: "*string*" matches too many object table aliases
Cause: You have an ambiguous reference to an object-table alias; there are at least two object-table aliases in the same scope.

Action: Remove all but one of the references or change the alias names of the remaining.

PLS-00338: unable to resolve "*string*" as a column or row expression
Cause: You have a reference to a name that could not be resolved as a column or row expression. This occurred in an update or insert statement involving an object-table.

Action: If this is an update statement and you intended to code this as a column reference, fix it as such. If you intended to code this as a row expression, change this to refer to an alias of an object-table.

PLS-00339: "*string*" matches object-table without a REF or VALUE modifier
Cause: You have an object-table name appearing without a REF or VALUE modifier.

Action: If you intended to code this with a REF or VALUE modifier, add the modifier; if you intended to code this as a column reference, change the reference appropriately; otherwise, remove the reference.

PLS-00341: declaration of cursor '*string*' is incomplete or malformed
Cause: A cursor declaration is improper or an identifier referenced in the cursor declaration was not properly declared. A return type that does not refer to an existing database table or a previously declared cursor or cursor variable might have been specified. For example, the following cursor declaration is illegal because c1 is not yet fully defined: CURSOR c1 RETURN c1%ROWTYPE IS SELECT ... -- illegal In this case, a return type does not have to be specified because it is implicit.

Action: Check the spelling and declaration of the cursor name and any identifiers referenced in the cursor declaration. Also confirm that the declaration is placed correctly in the block structure. If a return type was specified, make sure that it refers to an existing database table or a previously declared cursor or cursor variable.

PLS-00351: Not logged onto database '*string*'
Cause: An attempt was made to access an Oracle database without being logged on. Probably, an invalid username or password was entered.

Action: Log on to Oracle with a correctly spelled username and password before trying to access the database.

PLS-00352: Unable to access another database '*string*'
Cause: An attempt was made to reference an object in a database other than the current local or remote Oracle database.

Action: Correct the reference and make sure the object is in the current Oracle database.

PLS-00353: '*string*' must name a user in the database
Cause: This error occurs when the username was misspelled or when the user does not exist in the database.

Action: Check the spelling of the username and make sure the user exists.

PLS-00354: username must be a simple identifier
Cause: A qualified username such as scott.accts is not permitted in this context.

Action: Specify a simple username such as scott instead.

PLS-00355: use of pl/sql table not allowed in this context
Cause: A PL/SQL table was referenced in the wrong context (for example, with a remote link).

Action: Remove the PL/SQL table reference or change the context.

PLS-00356: '*string*' must name a table to which the user has access
