KUP-04124: no file name specified for location *number* in LOCATION clause\n
Cause: An empty string was specified for a file name in the LOCATION clause.

Action: Either specify a valid file name or remove that entry from the LOCATION clause.

KUP-04125: no directory object specified for location *number* in LOCATION clause\n
Cause: An empty string was specified for a directory object in the LOCATION clause and the DEFAULT DIRECTORY clause was not specified.

Action: Either specify the name of a valid directory object or specify the DEFAULT DIRECTORY clause.

KUP-04126: invalid CREDENTIAL parameter *string* specified\n
Cause: An invalid name for the CREDENTIAL parameter was specified.

Action: Specify a valid CREDENTIAL parameter in the external table access parameters. A schema name cannot be specified as part of a CREDENTIAL name.

KUP-04127: invalid URI *string* specified in LOCATION clause\n
Cause: An invalid URI was specified in the LOCATION clause.

Action: Verify that each URI specified in the LOCATION clause is valid.

KUP-04128: An unknown error occurred while retrieving URI objects.\n
Cause: This is an internal error.

Action: Contact Oracle Support Services.

KUP-04129: no file name specified in LOCATION clause\n
Cause: An empty string was specified for a file name in the LOCATION clause.

Action: Either specify a valid file name or remove that entry from the LOCATION clause.

KUP-04130: The NUMBER FORMAT clause was specified multiple times.\n
Cause: The NUMBER FORMAT clause was specified more than once.

Action: Do not specify the NUMBER FORMAT clause more than once.

KUP-04131: The NUMBER FORMAT clause is not supported for column *string*.\n
Cause: An attempt was made to specify the NUMBER FORMAT clause for a column that did not involve a character to Oracle NUMBER conversion.

Action: Do not specify the NUMBER FORMAT clause unless conversion from a character value to Oracle NUMBER is required.

KUP-04132: Decompression failed for file *string*/*string*.\n
Cause: Decompression failed for the specified file.

Action: Check the compression type access parameter to be sure compression specified for the file is correct.

KUP-04133: invalid string specified for NUMERIC_CHARACTERS clause\n
Cause: The string specified for the NUMERIC_CHARACTERS clause was converted to the character set of the data files. The resulting string must consist of two single-byte characters.

Action: Specify two single byte characters in the NUMERIC_CHARACTERS clause.

KUP-04134: The NUMERIC_CHARACTERS clause was specified multiple times.\n
Cause: The NUMERIC_CHARACTERS clause was specified more than once.

Action: Do not specify the NUMERIC_CHARACTERS clause more than once.

KUP-04135: insufficient privileges on CREDENTIAL *string*\n
Cause: An attempt was made to access an external table without the required EXECUTE privileges on the credential object.

Action: Ask your database administrator to grant you the necessary EXECUTE privileges on credential objects and retry the operation.

KUP-05001: Shift based character sets not supported with CSV format files\n
Cause: CSV is being used with a shift based chararcter set.

Action: Either use a non-shift based character set or do not use CSV format files.

KUP-05002: There are no matching files for any file specification in the LOCATION clause.
Cause: One or more file specifications including wild cards were specified in the LOCATION clause, but none of the files matched any of the specifications.

Action: Check to make sure that the file specifications are correct and that one or more files match the file specifications and then try the operation again.

KUP-05003: Warning: There are no matching files for this specification.\n
Cause: No matching files were found for the LOCATION clause specification listed in the previous error message.

Action: No action is required. However, if you expected the LOCATION clause specification to match one or more files, check the specification and the files in the directory to make sure that they are correct. If needed, try the operation again.

KUP-05004: Warning: Intra source concurrency disabled because parallel select was not requested.\n\n
Cause: Intra source concurrency can only be used when parallel select has been requested.

Action: No action is required this message is informational.

KUP-05005: Warning: Intra source concurrency disabled because a field of type RECNUM exists.\n\n
Cause: Intra source concurrency cannot be used with RECNUM fields.

Action: No action is required this message is informational.

KUP-05006: Warning: Intra source concurrency disabled because a complex terminator string is being used.\n\n
Cause: Intra source concurrency cannot be used with terminators where replicated substrings in the terminator could cause ambiguity during record parsing.\n\n"

Action: No action is required this message is informational.

KUP-05007: Warning: Intra source concurrency disabled because the preprocessor option is being used.\n\n
Cause: Intra source concurrency cannot be used with the PREPROCESSOR option.

Action: No action is required this message is informational.

KUP-05008: Warning: Intra source concurrency disabled because the input data is in DELIMITED record format and the characterset is neither fixed width nor UTF8.\n\n
Cause: Intra source concurrency cannot be used with the DELIMITED record format if the characterset is neither fixed width or UTF8.

Action: No action is required this message is informational.

KUP-05009: Warning: Intra source concurrency disabled because the input data is in VARIABLE record format.\n\n
Cause: Intra source concurrency cannot be used with the VARIABLE record format.

Action: No action is required this message is informational.

KUP-05010: Warning: Intra source concurrency disabled because the input data is in CSV format with embedded record delimiters/terminators.\n\n
Cause: Intra source concurrency cannot be used with the CSV record format that has embedded record delimiters/terminators.

Action: No action is required this message is informational.

KUP-05011: Size of file *string* in directory *string* has changed from *number* to *number*.\n
Cause: While executing a query against an external table, the size of one of the files changed. Changing the data in a file during execution can cause incorrect or inconsistent results.

Action: Do not modify the data files for an external table while querying the table.

KUP-05012: File *string* in directory *string* is no longer a sequential file.\n
Cause: While executing a query against an external table, the file went from being a sequential file at the beginning of the query to a non-sequential file later in the query.

Action: Do not modify the data files for an external table while querying the table.

KUP-05013: File *string* in directory *string* is now a sequential file.\n
Cause: While executing a query against an external table, the file went from not being a sequential file at the beginning of the query to being a sequential file later in the query.

Action: Do not modify the data files for an external table while querying the table.

KUP-05014: Warning: Intra source concurrency disabled because the URLs specified for the Cloud Service map to compressed data.\n\n
Cause: Intra source concurrency was used with a Cloud Service URL that maps to compressed data.

Action: No action is required, this message is informational.

KUP-05015: Shift-based character sets not supported with TRUNCATE_COLUMNS option.\n
Cause: TRUNCATE_COLUMNS option was being used with a shift-based chararcter set.

Action: Either use a nonshift-based character set or do not use a larger field width for the columns and do not use TRUNCATE_COLUMNS option.

KUP-06000: Unable to process LOB Location Specifier field.\n
Cause: The LOB Location Specifier field was not processed correctly.

Action: Make sure the LOB Location Specifier is formatted correctly.

KUP-06001: LOB Location Specifier for column *string* - invalid offset or length.\n
Cause: The LOB Location Specifier contained an invalid offset or length.

Action: The offset must not be a negative value. The length can only be negative if a value of -1 (for a NULL LOB) is specified.

KUP-06002: LOB Location Specifier for column *string* must be loaded into a LOB column.\n
Cause: The destination column for a LOB Location Specifier field was not a LOB data type.

Action: Make sure the destination column is a LOB data type.

KUP-06003: LOB Location Specifier file name cannot contain a directory path.\n
Cause: The file name for a LOB Location Specifier field contained a directory path.

Action: Make sure the file name specified does not contain any forward slash or backslash characters.

KUP-06004: The CREDENTIAL access parameter must accompany COMPRESSION access parameter.\n
Cause: The COMPRESSION access parameter was specified but the CREDENTIAL access parameter was not present.

Action: Specify the CREDENTIAL access parameter in addition to the COMPRESSION access parameter.

KUP-06006: The CREDENTIAL access parameter is not supported in populate mode.\n
Cause: The CREDENTIAL access parameter was specified for the ORACLE_DATAPUMP access driver in populate mode.

Action: Do not specify the CREDENTIAL access parameter in populate mode.

KUP-11000: file truncated error\n
Cause: A truncated file was used for the load operation.

Action: Verify unload operation completed successfully.

KUP-11001: files not from the same unload operation\n
Cause: Files used for the load operation were not from the same unload operation.

Action: Verify the files used are from the same unload operation.

KUP-11002: unable to read data chunk *string*\n
Cause: A read or seek to this data chunk was not possible. This chunk may not have existed.

Action: Verify the files used for the load operation are correct.

KUP-11003: bad data encountered while reading from file *string*\n
Cause: There was a datatype conversion error while attempting to convert the data in the data file to match the datatype of a column in the external table. The message that follows this one displays the name of the column and the start of the data for the column that could not be converted. The row containing the bad data is rejected and not included as a row in the external table.

Action: If the row containing the bad data should not be filtered out, then modify the definition of the external table so that the datatypes of the columns match the datatypes of the fields in the data file.

KUP-11004: requested version *string* not supported by ORACLE_DATAPUMP\n
Cause: This database version (defaulted to COMPATIBLE if not user-specified) was not supported by ORACLE_DATAPUMP external table access driver. Note: Database versions before 9.2 were not supported.

Action: Specify a supported version and rerun the operation.

KUP-11005: error seeking in file: *string*\n
Cause: An attempt to seek to the specified position in file failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

KUP-11006: file truncated error in *string*\n
Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully.

KUP-11007: conversion error loading table *string*.*string*
Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being loaded matches the definition of the table being unloaded.

KUP-11008: conversion error loading table *string*.*string* partition *string*
Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being loaded matches the definition of the table being unloaded.

KUP-11009: data for row: *string* \n
Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

KUP-11010: unable to open at least one dump file for fetch\n
Cause: None of the files in the LOCATION clause can be opened for a fetch on an external table.

Action: A fetch operation on an external table in SQL mode requires that at least one file could be opened. Check that the directory object and file names to the dump files are correct.

KUP-11011: the following file is not valid for this load operation\n
Cause: This file could not be used for this load operation. See the following message for more information.

Action: Verify all the files in the LOCATION clause are from the same unload operation and that the unload was successful.

KUP-11012: file *string* in *string* already exists\n
Cause: The specified file could not be used for this unload because that would mean overwriting an existing file.

Action: Specify a file that does not currently exist.

KUP-11013: internal number in header in file *string* is not valid\n
Cause: The specified file could not be used for this operation because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

KUP-11014: internal metadata in file *string* is not valid\n
Cause: The specified file could not be used for this operation because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the LOCATION clause are the correct dump files to use.

KUP-11015: error in unloading or loading data\n
Cause: An error has occurred in a stream unload or load operation.

Action: Contact Oracle Support Services.

KUP-11016: database version in file *string* is not valid\n
Cause: The specified file could not be used for this fetch because its database version was not compatible with the database version in the other files in the LOCATION clause.

Action: Verify all the files in the LOCATION clause were populated with compatible database versions.

KUP-11017: file *string* not found\n
Cause: The file was not found.

Action: Verify the correct file (path and file name) was specified.

KUP-11018: file *string* not a valid dump file\n
Cause: This file did not have the correct file format. It could not be used for an external table fetch operation.

Action: Verify this file is from a SQL mode external table populate operation and that the operation was successful.

KUP-11019: the following file is not valid for this fetch operation\n
Cause: A file could not be used for this fetch. See the following message for more information.

Action: Verify all the files in the LOCATION clause are from successful populate operations. If the files were generated from various populate operations, then verify that those were done with common attributes such as with the same tables and compatible database versions.

KUP-11020: header in file *string* may not contain correct information\n
Cause: The header for ORACLE_DATAPUMP file was invalid.

Action: Ensure that you have specified the correct file.

KUP-11021: header in file *string* has an incompatible version number\n
Cause: A dump file was specified for a load operation whose version number is incompatible with the dump file version currently produced by the Oracle server on the system. Usually this message indicates that the dump file was produced by a newer version of the Oracle server.

Action: Load this dump file using the same version of the Oracle server that created the file.

KUP-11022: specified file name "*string*" is invalid\n
Cause: The file name specified for a dump or log file was invalid or null.

Action: Specify a valid file name for the dump or log file.

KUP-11023: specified path for directory object "*string*" is invalid\n
Cause: The default directory or a directory object specified for a dump or log file contained an invalid path name or was null.

Action: Specify a valid path name for the directory object.

KUP-11024: This external table can only be accessed from within a Data Pump job.
Cause: An attempt was made to access a temporary external table that was created by Data Pump to be used internally during the execution of an export or import job.

Action: None

KUP-11025: LOCATION clause is not allowed for ORACLE_HIVE external tables.\n
Cause: The LOCATION clause was specified for an ORACLE_HIVE access driver. The ORACLE_HIVE access driver gets LOCATION information from the metadata in the Hive catalog.

Action: Omit the LOCATION clause when creating an external table using the ORACLE_HIVE access driver.

KUP-11026: bad header format at start of granule [*number*] detected\n
Cause: The granule header was read but did not appear to be formatted correctly. The incorrect format could be due to a dump file corruption.

Action: Contact Oracle Support Services.

KUP-11027: A stream format internal error was detected unloading data "*string*".\n
Cause: An error occurred in a stream unload operation.

Action: Contact Oracle Support Services.

KUP-11028: Data load operation detected data stream format error *number* for granule *number*.\n
Cause: The format of the dump file data stream was not correct.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

KUP-11029: Data load operation detected data stream format error for granule *number*, attempting to continue.\n
Cause: The format of the dump file data stream was not correct.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

KUP-11501: ORACLE_BIGDATA access driver does not support modifying access parameters\n
Cause: A select of an ORACLE_BIGDATA external table used the EXTERNAL MODIFY clause to specify additional access parameters. An ORACLE_BIGDATA external table does not support modification of access parameters.

Action: Remove the EXTERNAL MODIFY clause from the SELECT statement.

KUP-11502: unexpected error loading Java Virtual Machine\n
Cause: The external procedure agent for the external table access driver was unable to load the Java Virtual Machine.

Action: Contact Oracle Support Services.

KUP-11503: cannot access cluster\n
Cause: An attempt was made to access table data in an ORACLE_HIVE or an ORACLE_HDFS external data source.

Action: Contact the database administrator about gaining access to ORACLE_HIVE and ORACLE_HDFS external data sources.

KUP-11504: error from external driver: *string*\n
Cause: An error occurred while attempting to access data in an ORACLE_HIVE or an ORACLE_HDFS external data source.

Action: Correct the problem as suggested by the error message and retry the operation.

KUP-11505: invalid value "*string*" specified for access parameter "*string*"\n
Cause: A NULL or invalid value was supplied for the access parameter.

Action: Correct the invalid value and retry the operation.

KUP-11506: cannot change cluster in the same session\n
Cause: An attempt was made to change the cluster in the same session. The first access to an Oracle BigData external table within a database session establishes the cluster for that session. This is determined by the cluster specified in the table's access parameters or, if no cluster was specified in the table's access parameters, by the default cluster set in the Oracle Big Data configuration file. Accessing an Oracle BigData external table in a different cluster within the same database session is not allowed.

Action: Establish a new database session and retry the operation.

KUP-11507: missing separator at offset *number* in line "*string*"\n
Cause: Access parameters in an Oracle Big Data external table as well as entries in the Oracle Big Data configuration file were lists of one or more property name or value pairs. In some cases, the property name does not require a value. In other cases where a value must be supplied with the property name, the two must be separated by an equal sign ('=') or a colon (':').

Action: Correct the problem as suggested by the error message and retry the operation.

KUP-11508: invalid character at offset *number* in line "*string*"\n
Cause: An invalid multibyte UTF character was encountered in the access parameters of an Oracle Big Data external table.

Action: Contact Oracle Support Services.

KUP-11509: invalid escape sequence at offset *number* in line "*string*"\n
Cause: An invalid escape sequence was encountered in the access parameters of an Oracle Big Data external table. This may be caused by \unnnn Unicode code point that does not generate a valid Unicode character.

Action: Correct the problem as suggested by the error message and retry the operation.

KUP-11510: missing value at offset *number* in line "*string*"\n
Cause: Access parameters in an Oracle Big Data external table as well as entries in the Oracle Big Data configuration file were lists of one or more property name or value pairs. In some cases, the property name does not require a value. In other cases, where a value must be supplied with the property name, the two must be separated by an equal sign ('=') or a colon (':'). In this instance, a property name and a separator were found without a corresponding value.

Action: Correct the problem as suggested by the error message and retry the operation. Supply a value if the property name requires one. Otherwise, remove the separator and supply only the property name.

KUP-11511: failed to initialize logging in external driver\n
Cause: The external driver code could not initialize a context for logging messages. This usually indicates a problem with the value of the Java classpath used by the external driver.

Action: Contact your system administrator to examine the contents of both the Oracle Big Data configuration file and the Oracle Big Data log4j configuration file to ensure that the entries in these files contain correct information.

KUP-11516: memory allocation error while initializing the Java Virtual Machine\n
Cause: An error occurred while trying to allocate memory in order to initialize the Java Virtual Machine in the external driver.

Action: Contact your system administrator.

KUP-11521: invalid value when attempting to modify access parameter "*string*"\n
Cause: An attempt was made to modify an invalid access parameter.

Action: The only valid access parameters which can be modified are: "com.oracle.bigdata.log.qc" "com.oracle.bigdata.log.exec" "com.oracle.bigdata.log.opt" "com.oracle.bigdata.debug" "com.oracle.bigdata.datamode" Correct the invalid access parameter and retry the operation.

KUP-11523: external driver failed with unexpected error: *string*\n
Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error condition.

Action: Contact Oracle Support Services.

KUP-11524: initialization failure for Java Native Interface (JNI) call\n
Cause: The external driver encountered an unexpected error while trying to initialize its internal context for calling the Java Native Interface (JNI). This may indicate a classpath problem in the Oracle Big Data configuration file or a problem in the Oracle Big Data log4j configuration file.

Action: Contact your system administrator to examine the contents of both the Oracle Big Data configuration file and the Oracle Big Data log4j configuration file to ensure that the entries in these files contain correct information.

KUP-11525: The external driver was unable to attach to the Java Virtual Machine.\n
Cause: The external driver encountered an unexpected error while trying to attach a thread to the Java Virtual Machine.

Action: Contact Oracle Support Services.

KUP-11526: memory allocation failure for Java Native Interface (JNI) call\n
Cause: An error occurred while trying to allocate memory in order to make a Java Native Interface (JNI) call in the external driver.

Action: Contact your system administrator.

KUP-11527: The external driver was unable to attach to shared memory.\n
Cause: The external driver encountered an unexpected error while trying to attach to a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11528: access to cluster "*string*" is not properly defined\n
Cause: Access to an ORACLE_HIVE or ORACLE_HDFS external data source was not defined as documented.

Action: Contact the database administrator.

KUP-11529: class "*string*" is invalid for *string* external tables\n
Cause: An invalid value was specified for the COM.ORACLE.BIGDATA.CLASS access parameter for an ORACLE_HIVE or ORACLE_HDFS external table access driver. The ORACLE_HIVE and ORACLE_HDFS access drivers use a built-in class in order to access their data source.

Action: Omit the COM.ORACLE.BIGDATA.CLASS access parameter when creating an external table using the ORACLE_HIVE or ORACLE_HDFS access driver. Alternatively, the builtin class names, COM.ORACLE.BIGDATA.AD.HIVE and COM.ORACLE.BIGDATA.AD.HDFS, may be used when creating an external table using the ORACLE_HIVE or ORACLE_HDFS access driver.

KUP-11530: value for com.oracle.bigdata.buffersize larger than maximum allowed value *number*\n
Cause: The com.oracle.bigdata.buffersize was specified for the external table and the value specified was larger than the maximum allowed value.

Action: Change the value specified for com.oracle.bigdata.buffersize to be smaller than the maximum value reported in the message.

KUP-11531: missing mandatory property "*string*" in the Oracle Big Data configuration file\n
Cause: A mandatory property was not found in the Oracle Big Data configuration file.

Action: Contact your system administrator to modify the Oracle Big Data configuration file so that it contains all of the required information.

KUP-11532: duplicate property "*string*" in the Oracle Big Data configuration file\n
Cause: A duplicate property was found in the Oracle Big Data configuration file.

Action: Contact your system administrator to remove all duplicate properties from the Oracle Big Data configuration file.

KUP-11533: error collecting JVM information: *string*\n
Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to collect information such as memory usage from the Java Virtual Machine (JVM).

Action: Contact your system administrator.

KUP-11534: external driver JNI initialization failure: *string*\n
Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to initialize its internal context for calling the Java Native Interface (JNI). This may indicate a classpath problem in the Oracle Big Data configuration file or a problem in the Oracle Big Data log4j configuration file.

Action: Contact your system administrator.

KUP-11535: XAD version "*string*" incompatible with JXADProvider version "*string*"\n
Cause: A version mismatch between the ORACLE_HIVE or ORACLE_HDFS access driver and the external driver Java components has been detected.

Action: Contact your system administrator.

KUP-11536: external driver MTA initialization failure: *string*\n
Cause: The ORACLE_HIVE or ORACLE_HDFS multithreaded external agent encountered an initialization failure that prevented it from starting.

Action: Contact your system administrator.

KUP-11542: error initializing dynamic-link librarian: *string*\n
Cause: An error occurred while trying to initialize the dynamic-link librarian needed to access the Java Virtual Machine library.

Action: Contact Oracle Support Services.

KUP-11543: error accessing the Java Virtual Machine library: *string*\n
Cause: An error occurred while trying to open the Java Virtual Machine library in the external driver.

Action: Contact your system administrator.

KUP-11544: error locating symbol address in the Java Virtual Machine library: *string*\n
Cause: An error occurred while trying to locate a symbol address in the Java Virtual Machine library.

Action: Contact your system administrator.

KUP-11545: unable to set NLS *string* to required value *string*
Cause: An error occurred while the ORACLE_HIVE or ORACLE_HDFS external agent was trying to set up its NLS environment.

Action: Contact Oracle Support Services.

KUP-11546: external driver unable to attach to shared memory: [*string*] [*string*] [*string*] [*string*] [*string*] [*string*][*string*]\n
Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to attach to a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11547: external driver unable to detach from shared memory: [*string*] [*string*] [*string*] [*string*] [*string*] [*string*][*string*]\n
Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to detach from a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11548: error encountered creating shared memory: [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*][*string*]\n
Cause: The ORACLE_HIVE or ORACLE_HDFS access driver encountered an unexpected error while trying to create a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11549: error encountered destroying shared memory: [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*][*string*]\n
Cause: The ORACLE_HIVE or ORACLE_HDFS access driver encountered an unexpected error while trying to destroy a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11550: invalid JNI version "*string*" encountered while initializing the Java Virtual Machine\n
Cause: A Java Native Interface (JNI) version error occurred while trying to create and initialize the Java Virtual Machine in the external agent.

Action: Contact your system administrator.

KUP-11551: error generating file name for file "*string*" in directory "*string*": *string*\n
Cause: An error occurred while trying to generate a full file name specification.

Action: Contact your system administrator.

KUP-11552: error initializing the Java Virtual Machine: *string*\n
Cause: An error occurred while trying to create and initialize the Java Virtual Machine in the external agent.

Action: Contact your system administrator.

KUP-11553: The Oracle Big Data configuration file "*string*" is empty.\n
Cause: There was no content in the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11554: error accessing the Oracle Big Data configuration file "*string*": *string*\n
Cause: A file I/O error occurred while attempting to access the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11555: error opening the Oracle Big Data configuration file "*string*": *string*\n
Cause: A file I/O error occurred while trying to open the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11556: error reading the Oracle Big Data configuration file "*string*": *string*\n
Cause: A file I/O error occurred while trying to read from the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11557: error closing the Oracle Big Data configuration file "*string*": *string*\n
Cause: A file I/O error occurred while trying to close the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11558: invalid cluster name "*string*"\n
Cause: An invalid cluster name was specified for the external table in the com.oracle.bigdata.cluster access parameter. The name must contain only alphanumeric characters or the underscore character. In Oracle Database 12c release 12.1.0.2, the cluster

name is limite to 15 bytes. In Oracle Database 12c release 12.2 and higher, the cluster name is limited to 113 bytes.

Action: Correct the cluster name for the external table and retry the operation.

KUP-11559: invalid default cluster name "*string*"\n
Cause: An invalid cluster name was specified for the bigdata.cluster.default property in the Oracle Big Data configuration file. The name must contain only alphanumeric characters, the hyphen or underscore character. In Oracle Database 12c release 12.1.0.2, the cluster name is limited to 15 bytes. In Oracle Database 12c release 12.2 and higher, the cluster name is limited to 113 bytes.

Action: Contact your system administrator to correct the value of the bigdata.cluster.default property in the Oracle Big Data configuration file and retry the operation.

KUP-11560: error accessing the Oracle Big Data cluster directory "*string*": *string*\n
Cause: A file I/O error occurred while attempting to access the Oracle Big Data cluster directory file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11561: error while attempting to allocate Java memory: *string*\n
Cause: An error occurred while trying to allocate Java memory to the external driver.

Action: Examine the accompanying text in the error message and contact your system administrator.

KUP-11562: error while attempting to allocate *string* bytes of native memory\n
Cause: An error occurred while trying to allocate native memory to the external driver.

Action: Contact your system administrator.

KUP-11600: unable to find first record in a split with I/O buffer size of *number* kilobytes\n
Cause: The access driver was unable to find the first record in the split for a Hadoop Distributed File System (HDFS) file.

Action: The access driver requires that the size of records in the file are not larger than the size of the I/O buffers. Try increasing the size of the I/O buffers with the access parameter com.oracle.bigdata.fieldmode.buffersize.

KUP-11601: record exceeded the maximum record size of *number* kilobytes\n
Cause: The access driver found a record in a Hadoop Distributed File System (HDFS) file that is longer than the largest size allowed for this table.

Action: The access driver requires that the size of records in the file are not larger than the size of the I/O buffers. Try increasing the size of the I/O buffers with the access parameter com.oracle.bigdata.fieldmode.buffersize.

KUP-11602: conversion error for column *string* in column array row *number*\n
Cause: There was a data type conversion error while attempting to convert the data in the data file to match the data type of a column in the external table.

Action: Make sure the data is correct. Also, verify that the data types specified for the fields are correct.

KUP-11603: no directory object specified for bad file\n
Cause: The file name in the BADFILE clause was specified without a directory object and the DEFAULT DIRECTORY clause was not specified for the external table.

Action: Either specify a directory object as part of the BADFILE clause or specify the DEFAULT DIRECTORY clause.

KUP-11604: no directory object specified for log file\n
Cause: A log file for an external table did not have a directory object.

Action: Either specify a directory object as part of the log file name in the ACCESS PARAMETERS or query, or specify the DEFAULT DIRECTORY clause in the ACCESS PARAMETERS or query. ORACLE_LOADER and ORACLE_DATAPUMP access drivers will create a log file by default. If you do not want a log file, then use the NOLOG clause in the access parameters.

KUP-11605: no directory object specified for discard file\n
Cause: The file name in the DISCARDFILE clause was specified without a directory object and the DEFAULT DIRECTORY clause was not specified for the external table.

Action: Either specify a directory object as part of the DISCARDFILE clause or specify the DEFAULT DIRECTORY clause.

KUP-11606: no directory object specified for PREPROCESSOR file\n
Cause: The file name in the PREPROCESSOR clause was specified without a directory object and the DEFAULT DIRECTORY clause was not specified for the external table.

Action: Either specify a directory object as part of the PREPROCESSOR clause or specify the DEFAULT DIRECTORY clause.

KUP-11607: sequential data files were not supported by BIGDATA access driver, *string*\n
Cause: The file names in the message was a sequential file. The BIGDATA access driver does not support sequential files.

Action: Modify the files listed in the LOCATION clause to omit the sequential file.

KUP-11608: conversion error for column *string* in file *string*/*string* row *number*\n
Cause: There was a data type conversion error while attempting to convert the data in the data file to match the data type of a column in the external table.

Action: Ensure that the data is correct. Also, verify that the data types specified for the fields are correct.

KUP-11609: conversion error for column *string* in file *string*/*string*\n
Cause: There was a data type conversion error while attempting to convert the data in the data file to match the data type of a column in the external table.

Action: Ensure that the data is correct. Also, verify that the data types specified for the fields are correct.

KUP-11610: field setting error for column *string* in file *string*/*string* row *number*\n
Cause: There was a field setting error while attempting to parse the data in the data file.

Action: Ensure that the data format for the field is correct.

KUP-11611: field setting error for column *string* in file *string*/*string*\n
Cause: There was a field setting error while attempting to parse the data in the data file.

Action: Ensure that the data format for the field is correct.

KUP-11612: quoting error\n
Cause: The field was not properly quoted.

Action: Ensure that the use of quotes for the field is correct.

KUP-11613: character overflow error\n
Cause: The character field size was exceeded.

Action: Reduce the data size or increase the field size.

KUP-13000: compression type *string* not supported\n
Cause: File compression codec cannot be decompressed by Oracle.

Action: Specify a supported compression codec.

KUP-13001: unable to read *string* file *string*: *string*
Cause: Trying to open the big data file failed. The file either was not a big data file or it was corrupted.

Action: Ensure that the files named in the location clause are valid big data files.

KUP-13002: invalid value *string* for access parameter *string*\n
Cause: The value given to the access parameter was not valid.

Action: Try another value.

KUP-13003: cannot retrieve metadata for column *string*\n
Cause: This problem might be caused by corrupted column metadata.

Action: None

KUP-13004: unsupported column type encountered for column *string*\n
Cause: The data type of the indicated column is currently not supported.

Action: None

KUP-13005: cannot fetch access parameter *string*\n
Cause: An unknown error was encountered while trying to fetch the value of the specified parameter.

Action: Check the access parameter syntax in the table definition.

KUP-13006: encountered a file with unspecified URI\n
Cause: A file was defined with an empty URI.

Action: Check whether all files in the table definition have URIs.

KUP-13007: cannot open file *string*\n
Cause: This problem might occur for several reasons.

Action: Check whether the file exists and look for additional logs and tracing information.

KUP-13008: cannot set iterator to vector in file *string*\n
Cause: This might be an indication of a corrupted big data file.

Action: Look for additional logs and tracing information.

KUP-13009: cannot initialize IO context\n
Cause: This is an internal error. It might occur when there is limited available memory.

Action: None

KUP-13010: cannot retrieve granule information\n
Cause: This could happen due to an internal error.

Action: Look for additional logs and tracing information.

KUP-13011: encountered a vector in file *string* with more than %li rows\n
Cause: A vector exceeded the maximum supported number of rows.

Action: Create file with smaller vectors.

KUP-13012: cannot configure granules, no input files\n
Cause: No bigdata files found.

Action: Please verify files in the table definition.

KUP-13014: HTTP request for *string* failed: *string*, reference: *string*
Cause: An HTTP request for a given URL failed.

Action: Ensure the URL is correct, that the credential used is valid or required, that the proxy, if necessary, is correctly set, and that proper ACLs are in place to allow access.

KUP-13015: failed to get an HTTP response for *string*: *string*, reference: *string*
Cause: An HTTP response for a specified URL could not be retrieved. The server may have disconnected or sent some data that could not be understood.

Action: Check the error reason which indicates the operation can be tried again later, or that a configuration issue is apparent. Use the reference code if set for any inquiries.

KUP-13016: unexpected HTTP response status for *string*: *string*, reference: *string*
Cause: The HTTP request returned an unexpected response.

Action: Ensure that the URL is in compliance if the response status code is in the 300 range. If the response status code is in the 400 range, ensure that the correct credentials are applied and that the object is accessible on the remote server. If the response status code is in the 500 range, ensure that the remote service is available, that the proxy server is working correctly, and that the remote bandwidth quotas are sufficient. Use the reference code if set for any inquiries.

KUP-13017: invalid URI for service *string*: *string* is required in *string*
Cause: The specified universal resource identifier (URI) was incorrectly formulated for the targetted service.

Action: Ensure that the URI is formulated correctly.

KUP-13018: IO read failed for *string*: *string*, reference: *string*
Cause: Read returned less bytes than expected.

Action: Check the (remote) service is up and reachable, and that the requested resource is complete and undamaged.

KUP-13019: IO read failed for *string*: *string*, reference: *string*
Cause: An attempt was made to request more data than what was available.

Action: Ensure that the object being read is not modified while reading.

KUP-13020: IO read failed for *string*: *string*, reference: *string*
Cause: Positioning the file stream to return a location failed.

Action: Check the requested resource is complete and undamaged and that positionings are supported by the (remote) service.

KUP-13021: IO read failed for *string*: *string*, reference: *string*
Cause: The underlying read function returned an error.

Action: Ensure that the network is working properly, and that the requested resource is available.

KUP-13022: requested object *string* not found
Cause: The LOCATION clause pointed to a remote object that did not exist.

Action: Check whether the object exists in the remote storage or that its name is entered correctly.

KUP-13023: nothing matched wildcard query *string*
Cause: The LOCATION clause used a wildcard expression that failed to match any objects on the remote storage.

Action: Check whether the expression is correct and that the objects exist on the remote storage.

KUP-13024: incompatible URIs *string* and *string* found in LOCATION clause
Cause: At least one of the specified universal resource identifiers (URI) was incorrectly formulated. All URIs in the location clause must be the same type.

Action: Ensure that the URIs specified are all of the same type.

KUP-13025: failed to begin HTTP request for *string*: *string*, reference: *string*
Cause: A configuration problem prevented the request to be made.

Action: The given ORA error code describes the problem encountered, refer to the error cause and action.

KUP-13026: failed to establish connection for *string*: *string*, reference: *string*
Cause: A configuration problem prevented the request to be made.

Action: The given ORA error code describes the problem encountered, refer to the error cause and action.

KUP-13027: unable to establish connection for *string*: *string*, reference: *string*
Cause: A problem occurred while attempting to connect.

Action: Ensure the URL is correct, that the proxy, if necessary, is correctly set, and that proper ACLs are in place to allow access.

KUP-13028: cannot write POST data for *string*: *string*, reference: *string*
Cause: Sending the POST data for the HTTP request failed.

Action: Ensure the URL is correct and that the remote system is available and configured to accept POST requests.

KUP-13029: cannot create request, network library unavailable
Cause: The system is improperly configured.

Action: Ensure the system is properly installed, all libraries relinked and installation files are undamaged.

KUP-13030: cannot create request, setting proxy configuration failed
Cause: The system is improperly configured.

Action: Verify the values for the HTTP_PROXY and NO_PROXY properties are valid.

KUP-13031: cannot create request, setting wallet configuration failed
Cause: The system is improperly configured.

Action: Verify the wallet property points to a valid wallet file.

KUP-13032: IO read failed for *string*: *string*, reference: *string*
Cause: The underlying read function returned an error.

Action: Ensure that the network is working properly, and that the requested resource is available.

KUP-13033: timeout waiting for available resources to offload query, reference: *string*
Cause: The pool of available offload servers is empty.

Action: Ensure offload servers are available. Check resource limits and other pending queries offload server usage.

KUP-13034: remote host appears not to be a supported offload server, reference: *string*
Cause: The remote contacted host did not identify itself as an offload server, or as a supported offload server.

Action: Ensure access to the remote host is permitted and possible by e.g. proxy servers, and that a correct tracker url is setup.

KUP-13035: problem handling offload server response, reference: *string*
Cause: The interaction between database and offload server went wrong. The database could not understand or handle the message received.

Action: Verify the health of the offload server, use the given reference for further support.

KUP-13036: offload server failed to execute task, reference *string*
Cause: The offload server could not complete the request because one of the sub-tasks failed after repeated tries.

Action: Retry the query, if the issue persists, use the reference given when asking for support.

KUP-13037: wildcard listing not supported on non-REST or non-ObjectStorage uri *string*
Cause: The LOCATION does not point to a REST target, or a REST target that is not of ObjectStorage type.

Action: Ensure that the LOCATION is of type REST, and that it is pointing to a supported ObjectStorage endpoint.

47

LCD-00100 to LCD-00219

LCD-00100: internal error, argument [*number*]
Cause: An internal error has occurred

Action: Report it to your System Administrator immediately

LCD-00111: value not in legal range [*string*]
Cause: The value of the parameter is outside bounds

Action: Refer to the manual for the bounds on the parameter

LCD-00112: illegal integer radix specification [*string*]
Cause: Self Explanatory

Action: valid characters are 'd', 'h', 'D' and 'H'

LCD-00113: integer conversion error or negative integer [*string*]
Cause: A bad or negative integer was assigned to an integer parameter

Action: Self explanatory

LCD-00114: illegal boolean response [*string*]
Cause: You a value than TRUE or FALSE to a boolean parameter

Action: Boolean parameters only take TRUE or FALSE

LCD-00122: unrecognized keyword [*string*]
Cause: You have misspelled the parameter name

Action: Spell the parameter name correctly

LCD-00128: invalid positional parameter value [*string*]
Cause: An invalid positional parameter value has been entered

Action: Remove the invalid positional parameter

LCD-00161: ORACLE error (possible syntax error) parameter [*string*]
Cause: Possible syntax error. Additional messages follow.

Action: Correct the parameter in error.

LCD-00201: could not open specified filename [*string*]
Cause: The file specified does not exist

Action: Create an appropriate parameter file

LCD-00203: missing keyword [*string*]
Cause: A keyword is expected but none was found

Action: Add a keyword followed by an '=' sign and a parameter value

LCD-00204: left parenth and no parameter specified [*string*]
Cause: A parameter list was started but no parameter was specified

Action: Add an appropriate list of values and close the parameter list

LCD-00205: unbalanced parentheses [*string*]
Cause: Self explanatory

Action: Balance the parentheses

LCD-00206: positional parameter entered after keyword [*string*]
Cause: An '=' sign is missing

Action: All keywords must be followed by '=' signs

LCD-00207: nested parentheses encountered [*string*]
Cause: Only one set of parentheses is permitted

Action: Remove the nested parentheses

LCD-00208: unexpected keyword in value list [*string*]
Cause: A keyword was found instead of a value

Action: Insert an appropriate value for the given parameter

LCD-00209: missing value for keyword at end of string [*string*]
Cause: A keyword is specified with no value

Action: Specify a valid value for the keyword

LCD-00210: illegal assignment operator [*string*]
Cause: You used a sign other than '=' to assign a keyword a value

Action: Use only the '=' sign

LCD-00211: unexpected delimiter [*string*]
Cause: An invalid delimiter was found between values

Action: A comma or a space is a valid delimiter

LCD-00212: runaway quoted string [*string*]
Cause: The parameter value was quoted on the left side but not on the right

Action: Quote the parameter value on both sides

LCD-00215: parameter files nested too deep [*string*]
Cause: Too many levels of indirection of file parameters. Maximum is 3.

Action: Reduce the level of indirection to less than 3

LCD-00217: failure while processing file parameter [*string*]
Cause: An error occurred while processing the specified file parameter

Action: Specific details will appear in other messges

LCD-00218: error in file [*string*]
Cause: An error occurred in the particular file.

Action: Refer to the other messages for the specific error.

LCD-00219: nested include file [*string*] is too large
Cause: There is a limit on the size of a parameter file, and it was exceeded. This limit is now 8192 bytes.

Action: Remove characters from the file to make it smaller, or use another level of nesting.

48
LFI-00002 to LFI-01525

LFI-00002: Out of memory. *string*
Cause: The File IO package failed in trying to dynamically allocate memory. function name is used for additional comments to indicate where, when and why the error occured.

Action: Perform whatever actions necessary to make more memory available to the executing program.

LFI-00003: Internal exception code. icode = [*string*], [*string*].
Cause: Unknown - indicated by parameters. The first '%s' gives the internal exception code; the second is for any other additional comments.

Action: Report to the appropriate development group

LFI-00004: Call to *string* failed.
Cause: A function call has failed. This error is a generic message to show that the exception has occurred in a particular function function name. This allows the client to know the trace runtime calling sequence by examining the exception stack.

Action: See the accompanying error messages for more information.

LFI-00005: Free some memory failed in *string*.
Cause: A call to free some memory in function function name has failed.

Action: See the accompanying error messages for more information and contact Oracle Worldwide Support immediately.

LFI-00006: Invalid parameter to function *string*.
Cause: The function was called with an invalid parameter.

Action: Check the function call to make sure that the correct parameters are being passed.

LFI-00007: NLSRTL's call failed. *string*.
Cause: LX calls return failure

Action: Check if our parameters are correct. Contact the appropriate group immediately if we parameters are valid.

LFI-00008: SLTS's initializing/terminating mutex failed for *string*.
Cause: SLTS's call return failure in function '%s'.

Action: Contact the appropriate development group.

LFI-00100: Unable to perform operation, file not opened in *string*.
Cause: The file has not been successfully opened at the time the operation is attempted.

Action: Check to make sure that the file exists (for read) or that the program has access to the write a file (for write). It is also possible that the file was just never opened

LFI-00101: Write failed, file cannot be written to.
Cause: The buffer write operation failed. Possibly due to incorrect parameters being passed in.

Action: Check the underlying error for more information.

LFI-00102: Unable to seek in sequentially accessed file.
Cause: The file was opened with the flag LFILFA_SEQ for sequential file operations. Use seek only on files that are opened with the LFILFA_RANDOM flag for random access.

Action: Check to see how the file is being opened and accessed and make the two operations consistent (that is, make them both operations either sequential or random).

LFI-00103: Seek operation failed.
Cause: The buffer seek operation failed. Probably due to incorrect parameters or flags.

Action: Check syntax of the seek command and retry the operation.

LFI-00104: Read operation failed.
Cause: The buffer read operation failed. Probably due to incorrect parameters or flags.

Action: Check syntax of the read command and retry the operation.

LFI-00105: Unable to add path.
Cause: One of the following might have caused the error: the current path might not be in the proper format the directory might not be in the proper format the name object might not have been initialized properly

Action: Check the format of the current path and the new directory; check that the name object was initialized properly.

LFI-00106: Path object holds more than one path.
Cause: The path object passed to lfippth() holds more than one path.

Action: Make sure that the path object used in lfippth() holds only one path.

LFI-00107: Open does not expect the file [*string*][*string*] to exist.
Cause: The flags specified for the open indicate that the file does not exist. However, the file does exist.

Action: Check to make sure that the options that were specified for the file are correct and that you do not expect that the file should exist. If so then find out why the file does exist.

LFI-00108: Open expect the file [*string*][*string*] to exist.
Cause: The flags specified for the open indicate that the file the file to exist and it does not.

Action: Check to make sure that the options that were specified for the file are correct and that you expect that the file should exist. If so then find out why the file doesn't.

LFI-00109: Unable to open file [*string*][*string*]. *string*.
Cause: Either: the process does not have the proper access rights to open the file the file is already open

Action: Check to make sure the proper access permissions are assigned. If they are and the file still cannot be opened, then contact Oracle Worldwide Support.

LFI-00110: Unable to initialize the Buffer Manager.
Cause: The Buffer Manager initialization routine failed; probably because memory was exhausted.

Action: See the accompanying error messages for more information.

LFI-00111: No other flags allowed in fixed length format.
Cause: The function lfigfo() was called with an invalid File ID Descriptor. The valid File ID Descriptors are LFISTDIN, LFISTDOUT, and LFISTDERR.

Action: Check the call to lfigfo() to make sure it is correct.

LFI-00113: Unable to initialize the Standard File object *string*.
Cause: The call to open the standard file object failed.

Action: Check the underlying errors for more information.

LFI-00114: Append is not allowed with *string*.
Cause: Attempting to append using certain options.

Action: Check the flag options to verify its usage.

LFI-00115: Buffer free failed.
Cause: Probably do to the buffer flush failing.

Action: See the accompanying error messages for more information.

LFI-00116: Unable to close file in operation *string*.
Cause: The file close operation failed.

Action: See the accompanying error messages for more information.

LFI-00117: Unable to rename file.
Cause: The rename operation failed. Rename is called when we are protecting a file by operating on a temp file.

Action: Check to make sure that the process has the correct access rights to perform a rename.

LFI-00118: Unable to change type to Unknown.
Cause: The function lfichty() was called to change the file extension to LFIEXUNK (Unknown). This is not a valid operation.

Action: Check why you are doing this. If the extension is already unknown then you do not need to do this. If you just want no extension then use the extension type LFIEXNONE.

LFI-00119: Unable to Abort an Unprotected file.
Cause: The Abort function lfiabt() was called on a file that was not opened as a protected file. As such the abort operation is not valid.

Action: Check to see if you intended to open the file as a protected file.

LFI-00120: Unable to parse root filename *string*.
Cause: The root filename that was given to lfimknam() is not in a format that this platform understands.

Action: Check the format of the filename and retry the operation.

LFI-00121: Only one of REPLACE, or PROT allowed for opty.
Cause: Two or more of the following open type options were specified for the lfilini() function: LFILOPTY_REPLACE, or LFILOPTY_PROT.

Action: Remove one or more the of options such that you are only passing in one of the three.

LFI-00122: Can only delete a file if we create it.
Cause: The delete file flag was specified for a file that was not created by this file operation. The ability to delete a file is not portable. As such the only deletion that is allowed by this package is if we know we want to delete the file when we create it.

Action: You can only delete a file that you create. If you need to delete a file that you do not create then you will have to find another means of doing so.

LFI-00123: Cannot access file Sequentially and Randomly.
Cause: Both the LFILFA_SEQ (sequential) and LFILFA_RANDOM (random) flags were specified during the file object creation. This is not allowed. Only one of the two may be specified.

Action: Choose how you wish to access the file. If you choose random you can still access sequentially by just not using the repositioning functions.

LFI-00124: No access mode was specified, default is sequential.
Cause: Neither LFILFA_SEQ (sequential) or LFILFA_RANDOM (random) were specified during file object creation.

Action: The default is sequential but this should be explicitly set.

LFI-00125: Random access only allowed on fixed length record files.
Cause: The LFILFA_RANDOM flag was specified on a file that was not organized into fixed-length records. Random access is only allowed on fixed-length record files.

Action: Determine if the organization of your data needs to be in variable-length records and if you need to have random access to the file. If both conditions are true then you might need to buffer the entire file or enough of it to remove your need for random access. Another option is to close and rescan the file although this is not the optimal solution.

LFI-00126: Record format can only be one of Fixed or Variable.
Cause: Both LFILRF_FIXED (fixed) and LFILRF_VAR (variable) were specified during file object creation. Only one of the two is allowed for a given file.

Action: Determine how the file is organized and choose the option that matches.

LFI-00127: No Record Format was specified, default is variable.
Cause: Neither LFILRF_FIXED (fixed) or LFILRF_VAR (variable) were specified for record format. One of the two must be specified for each file.

Action: The default is LFILRF_VAR, but this should be explicitly set during file object creation.

LFI-00128: Carriage Control is only valid for Standard file objects.
Cause: The Carriage Control option is only valid for the standard file objects (LFISTDIN, LFISTDOUT, LFISTDERR). You may not specify this option for any other type of file.

Action: Choose between LFILRF_FIXED and LFILRF_VAR for the record format.

LFI-00129: Invalid option *string* were specified on an input only file.
Cause: The file was opened as input only but the output mode option LFILRF_WR_ASIS or delete option LFLOPTY_DELETE was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00130: Input option specified on output only file.
Cause: The file was opened as output only but one of the input mode options (LFILRF_READ_NL or LFILRF_FORCE_NL) or was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00131: No open type specified.
Cause: The file object was created without an open type (that is, LFILOPTY_INPUT, LFILOPTY_OUTPUT, etc.).

Action: Decide how the file should be accessed and specify one of the open types.

LFI-00132: Record length *string* is greater than max length of *string*.
Cause: The record length specified for the file is greater than the max supported by this platform.

Action: Decrease the record length.

LFI-00133: Trying to create file *string* that already exists.
Cause: The file object was initialized with LFILOPTY_OUTPUT and without LFILOPTY_REPLACE and yet a file by this name already exists.

Action: Check to make sure that you are creating the right file. If you intend to overwrite the file if it exists that specify the replace option LFILOPTY_REPLACE when initializing the file object.

LFI-00134: Unable to protect a file for an append operation.
Cause: The LFILOPTY_APPEND and LFILOPTY_PROT options were both specified for the file. This is currently not allowed because it would require copying the entire file at open time.

Action: Decide if you really need to protect the file for append. If so then think about making a copy of it before appending.

LFI-00135: Unable to remove temporary file.
Cause: A temporary file was created to protect a file and when the the tempfile was nolonger needed it LFI attempted to remove it and was unable to do so.

Action: Check the permissions and where the temp files are being created.

LFI-00136: Unable to change type of open file.
Cause: The function lfichty() was called on an opened file.

Action: This is a bug in the client code. lfichty() cannot be used in this case.

LFI-00137: Unable to perform *string* on a file object that is *string*.
Cause: Unable to perform an LFI operation on a file object for the given reason.

Action: Take the appropriate corrective measure. For example if a file is supposed to be opened before the operation can be performed, client code will need to open the file first.

LFI-00138: Unable to perform *string* on a name object that is *string*.
Cause: Unable to perform an LFI operation on a name object for the given reason.

Action: Take the appropriate corrective measure.

LFI-00139: Option *string* cannot be used with option *string* in calling *string*.
Cause: First option cannot be used with second option in such a function call.

Action: Re-examine code to determine which option is needed.

LFI-00140: Invalid option *string* were specified on input-output file.
Cause: The file was opened as input-output and one of the mode options (LFIOPTY_DELETE or non-LFIOPTY_RANDOM) was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00141: Unable to abort file in operation *string*.
Cause: The abort operation failed.

Action: Check the underlying errors for more information.

LFI-00142: Unable to delete an existing file [*string*][*string*] not owned by Oracle.
Cause: The file was not created by Oracle.

Action: Change owner of file to Oracle or give Oracle access privileges to delete it.

LFI-00143: Unable to delete non-existent file *string*.
Cause: The file to be deleted does not exist.

Action: Check the underlying errors for more information.

LFI-00144: File [*string*][*string*] does not exist
Cause: The file does not exist.

Action: Check to make sure the file exists and retry the operation.

LFI-00145: User buffer too short.
Cause: The buffer that was passed is not large enough.

Action: Allocate a larger buffer and retry the operation.

LFI-00146: copy does not expect the file *string*.*string* to exist
Cause: We are expecting the destination file not to exist and it does.

Action: Find out why the file does exist.

LFI-00147: File *string*.*string* does not exist
Cause: The file does not exist.

Action: Check to make sure the file exists and retry the operation.

LFI-00148: *string* can be called only on files opened in byte mode
Cause: A routine that should be used only for files in byte mode was called for a file that was opened in record mode

Action: In order to use this function, the file should be opened in byte mode.

LFI-00149: Error on destroying hash table in function *string*
Cause: We were expecting the cache path object and it does not.

Action: In order to use this function, the path object should be cache path object.

LFI-00150: Error on creating hash table in function *string*
Cause: routine failed to create path object hash table

Action: make sure that startsize <= LHTQMAXSLOTS

LFI-00151: Error on inserting into hash table in function *string*
Cause: routine failed to insert into hash table

Action: make sure there is enough memory for allocation and that the hash table exists.

LFI-00152: Read operation (byte mode) failed.
Cause: Byte mode read operation failed. Probably due to incorrect parameters or flags, or trying to read beyond end of file.

Action: Check syntax of the read command and size of file.

LFI-01000: Unable to write line to file.
Cause: The file being written to may no longer be open or we may have reached the end of the file.

Action: Examine underlying errors for more information.

LFI-01001: Unable to write *string* bytes to file.
Cause: The file being written to may no longer be open or we may have reached the end of the file.

Action: Examine underlying errors for more information.

LFI-01002: Unable to read line from file.
Cause: The file being read from may no longer be open.

Action: Examine underlying errors for more information.

LFI-01003: Unable to read *string* bytes from file.
Cause: The file being read from may no longer be open.

Action: See the accompanying error messages for more information.

LFI-01004: Unable to empty buffer.
Cause: The buffer manager is probably unable to write to the underlying file.

Action: Examine underlying errors for more information.

LFI-01005: Unable to fill buffer.
Cause: The buffer manager is probably unable to read from the underlying file.

Action: See the accompanying error messages for more information.

LFI-01006: File ends in partial character in *string*.
Cause: A line ends in a partial character.

Action: Examine underlying errors for more information.

LFI-01007: Line is too long; encountered in function *string*.
Cause: The length of the line exceeds the maximum length.

Action: Examine underlying errors for more information.

LFI-01500: Error condition on call to OSD function *string*.
Cause: An error condition arises in calling an OSD function. This message occurs if calls to malloc or free functions failed.

Action: Contact Oracle Worldwide Support.

LFI-01501: tmpnam() fails to generate temporary file name.
Cause: Operating system was unable to create temporary file name.

Action: Contact the development organization.

LFI-01502: Base filename does not exist.
Cause: The filename that was parsed had no base file. It was either all path or extension.

Action: Check the filename being passed in to make sure it is correct.

LFI-01503: Max filename size exceeded generating filename.
Cause: While building a filename we exceeded the buffer allocated to hold the new filename.

Action: Contact the development organization.

LFI-01504: fseek() failed(OSD return value = *string*) in *string*.
Cause: The function fseek() returned an error condition.

Action: Contact Oracle Worldwide Support.

LFI-01505: fclose() failed(OSD return value = *string*) in *string*.
Cause: The function fclose() returned an error condition.

Action: Contact Oracle Worldwide Support.

LFI-01506: fflush() failed(OSD return value = *string*).
Cause: The function fflush() returned an error condition.

Action: Contact the development organization.

LFI-01507: fwrite() failed(OSD return value = *string*) in *string*.
Cause: File pointer may be null or may not be opened for write.

Action: Contact the development organization.

LFI-01508: access() failed.
Cause: Call to access() failed.

Action: Contact the development organization.

LFI-01509: fopen() failed(OSD return value = *string*).
Cause: Call to fopen() failed.

Action: Contact Oracle Worldwide Support.

LFI-01510: fread() failed(OSD return value = *string*) in *string*.
Cause: Call to fread() failed.

Action: Contact Oracle Worldwide Support.

LFI-01511: unlink() failed(OSD errno = *string*) in *string*.
Cause: Call to unlink() failed.

Action: Contact the development organization.

LFI-01512: stat() failed
Cause: Call to stat() failed.

Action: Contact Oracle Worldwide Support.

LFI-01514: ftell() failed in *string*
Cause: The ftell() function returned an error.

Action: Contact Oracle Worldwide Support.

LFI-01515: truncate() failed.
Cause: The function truncate() returned an error condition.

Action: Contact the development organization.

LFI-01516: read() failed (OSD return value = *string*) in *string*.
Cause: Call to read() failed.

Action: Contact the development organization.

LFI-01517: open() failed(OSD return value = *string*).
Cause: Call to open() failed.

Action: Contact the development organization.

LFI-01518: write() failed(OSD return value = *string*) in *string*.
Cause: Call to write() failed.

Action: Contact the development organization.

LFI-01519: llseek() failed(OSD return value = *string*) in *string*.
Cause: The llseek() function returned an error.

Action: Contact Oracle Worldwide Support.

LFI-01520: close() failed(OSD return value = *string*) in *string*.
Cause: The function close() returned an error condition.

Action: Contact the development organization.

LFI-01521: fsync() failed(OSD return value = *string*) in *string*.
Cause: The function fsync() returned an error condition.

Action: Contact the development organization.

LFI-01522: opendir() failed.
Cause: The function opendir() returned an error condition.

Action: Contact the development organization.

LFI-01523: rename() failed.
Cause: The function rename() returned an error condition.

Action: Contact the development organization.

LFI-01524: fdopen() failed(OSD return value = *string*).
Cause: Call to fdopen() failed.

Action: Contact the development organization.

LFI-01525: setvbuf() failed.
Cause: A call to lficstd() had failed.

Action: Contact development service

49
LPX-00000 to LPX-01160

LPX-00000: normal, successful completion
Cause: Normal exit

Action: No action required.

LPX-00001: NULL pointer
Cause: A NULL pointer was detected as an internal error condition.

Action: This is a programming error by the caller of the XML parser. Please contact someone who can fix the problem.

LPX-00002: out of memory
Cause: The operating system has run out of memory.

Action: Make more memory available to the program.

LPX-00003: duplicate entry in hash table
Cause: An internal error has occurred (a key was requested to be placed in a hash table but was already there).

Action: Contact Oracle Support Services and report the error.

LPX-00004: internal error "~s"
Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LPX-00005: ~1s buffer overflow, maximum size is ~2u bytes
Cause: A name, quoted string, URL, or other document component was too long.

Action: Restrict the component to the maximum size shown.

LPX-00006: invalid child type for parent node
Cause: An attempt was made to add an invalid node-type to a parent node.

Action: Correct the code.

LPX-00007: unexpected end-of-file encountered
Cause: The documented ended unexpectedly, perhaps due to truncation.

Action: Verify that the document is complete.

LPX-00008: invalid memory callback
Cause: The memory callback structure passed to xmlinit was missing the allocate or free functions (or both).

Action: Provide both functions in the callback structure.

LPX-00011: In line ~1u of ~2s [general entity ~3S]:
Cause: Error message prefixes, not errors themselves. These are the possible banner messages which appear before an XML error to describe the position (line#) and source (buffer or URI) in which the error occurred, as well as the entity's name (if the source is an entity). Parameter entity banner must be at +1 to non-entity banner, general entity at +2 (see lpxerr.c).

Action: No action required. This is not an error message.

LPX-00012: Unicode data alignment error
Cause: An input Unicode (UCS2) datum was not aligned properly.

Action: UCS2 data consists of an array of shorts (ub2) which must be aligned on an even-byte boundary.

LPX-00013: wrong node type
Cause: The wrong node type was given as argument to a DOM call.

Action: Review the failing function call, consult the documentation, and make sure the node types passed as correct.

LPX-00014: context is not clean
Cause: An operation was performed on a context that has already been used (so is not "clean").

Action: Some functions must be performed on a newly initialized context before being used for parsing. For example, setting a shared DTD. Change the code and do the call before parsing.

LPX-00017: ~1sNodeName: <~2S>
Cause: More error message boilerplate.

Action: No action required. This is not an error message.

LPX-00018: internal error "nested open strings"
Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LPX-00019: property "~s" unknown
Cause: An unexpected error has occured in a subsystem used by XML. Subcode is the error code returned by that failing subsystem.

Action: Contact Oracle Support Services and report the error and subcode.

LPX-00024: Qname prefix too long
Cause: The specified Qname prefix exceeded the maximum length of 255.

Action: Use a shorter prefix.

LPX-00050: initialization error: NLS mismatch
Cause: A language ID was specified without the matching global area.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00051: NLS initialization failed
Cause: The NLS (National Language Support) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00052: LEH initialization failed
Cause: The LEH (Library Exception Handling) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00053: LML initialization failed
Cause: The LML (Low-Level Memory manager) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00054: LPU initialization failed, error ~u
Cause: The LPU (URL Parser/Loader) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00100: root element "~1S" does not match DTD root "~2S"
Cause: Validity Constraint 2.8 failed: "The Name in the document type declaration must match the element type of the root element." *Example: <?xml version="1.0"?> <!DOCTYPE greeting [<!ELEMENT greeting (#PCDATA)>]> *salutation*Hello!*/salutation* *Explanation: The document's root element, salutation, does not match the root element declared in the DTD (greeting).

Action: Correct the document.

LPX-00101: parameter-entity markup cannot be split up
Cause: Validity Constraint 2.8 failed: "Parameter-entity replacement text must be properly nested with markup declarations." *Example: <?xml version="1.0"?> <!DOCTYPE greeting [<!ENTITY % e "<!ELEMENT "> %e; greeting (#PCDATA)>]> *greeting*Hello!*/greeting* *Explanation: The parameter entity 'e' contains markup which may not be split up; the entire ELEMENT (or ATTLIST or ENTITY) definition must be present in one piece.

Action: Correct the document.

LPX-00102: standalone document declaration should be "no"
Cause: Validity Constraint 2.9 failed: "Standalone document declaration must have the value 'no' if any external markup declarations contain declarations of: * attributes with default values - or - * entities - or - * attributes with values subject to normalization - or - * element types with element content"

Action: Correct the document.

LPX-00103: document structure does not match DTD
Cause: Validity Constraint 3 failed: "An element is valid if there is a declaration matching elementdecl where the Name matches the element type, and one of the following holds: * The declaration matches EMPTY and the element has no content * The declaration matches children and the sequence of child elements belongs to the language generated by the regular expression in the content model, with optional white space (characters matching the nonterminal S) between each pair of child elements. * The declaration matches Mixed and the content consists of character data and child elements whose types match names in the content model. * The declaration matches ANY, and the types of any child elements have been declared."

Action: Correct the document.

LPX-00104: element "~S" is not declared in the DTD
Cause: Validity Constraint 3 failed: The named element has no matching elementdecl in the DTD

Action: Correct the document.

LPX-00105: element "~S" is not empty as required by the DTD
Cause: Validity Constraint 3 failed: The named element is declared as EMPTY in the DTD but contains sub-elements in the document.

Action: Correct the document.

LPX-00106: attribute "~1S" of element "~2S" is undefined
Cause: Validity Constraint 3.1 failed:

Action: Correct the document.

LPX-00107: element "~S" has multiple declarations
Cause: Validity Constraint 3.2 failed: "No element type may be declared more than once."

Action: Correct the DTD.

LPX-00108: parameter-entity parenthetical cannot be split up
Cause: Validity Constraint 3.2.1 failed: "Parameter-entity replacement text must be properly nested with parenthesized groups. For interoperability, if a parameter-entity reference appears in a choice, seq, or Mixed construct, its replacement text should not be empty, and neither the first nor last non-blank character of the replacement text should be a connector (| or ,). *Example: <?xml version="1.0"?> <!DOCTYPE foo [<! ELEMENT greeting (#PCDATA)> <!ENTITY % e "(#PCDATA|"> <!ELEMENT foo %e; greeting)>]> *greeting*Hello!*/greeting* *Explanation: The parenthetical content of the 'e' entity may not be split up into sections: both open and close parentheses must be in the same declaration.

Action: Correct the DTD.

LPX-00109: duplicate name "~S" in mixed-content declaration
Cause: Validity Constraint 3.2.2 failed: "The same name must not appear more than once in a single mixed-content declaration." *Example: <!ELEMENT p (#PCDATA|a|b|c|d|a)> *Explanation: 'a' occurs more than once in the mixed-content declaration.

Action: Correct the DTD.

LPX-00110: invalid ~1s "~2S" (not a Name)
Cause: Validity Constraint 3.3.1 failed: Given thing is not a Name

Action: Correct the document.

LPX-00111: invalid ~1s "~2S" (not a Nmtoken)
Cause: Validity Constraint 3.3.1 failed: Given thing is not a Nmtoken

Action: Correct the document.

LPX-00112: element "~S" has multiple ID attributes
Cause: Validity Constraint 3.3.1 failed: "No element type may have more than one ID attribute specified."

Action: Correct the document.

LPX-00113: element "~1S" ID attribute "~2S" must be #IMPLIED or #REQUIRED
Cause: Validity Constraint 3.3.1 failed: "An ID attribute must have a declared default of #IMPLIED or #REQUIRED."

Action: Correct the document.

LPX-00114: element "~1S" attribute "~2S" has invalid enumeration value "~3S"
Cause: Validity Constraint 3.3.1 failed: "Values of this type must match one of the Nmtoken tokens in the declaration."

Action: Correct the document.

LPX-00115: element "~1S" is missing required attribute "~2S"
Cause: Validity Constraint 3.3.2 failed: "If the default declaration is the keyword #REQUIRED, then the attribute must be specified for all elements of the type in the attribute-list declaration."

Action: Correct the document.

LPX-00116: element "~1S" attribute "~2S" has invalid value "~3S", must be "~4S"
Cause: Validity Constraint 3.3.2 failed: "If an attribute has a default value declared with the #FIXED keyword, instances of that attribute must match the default value."

Action: Correct the document.

LPX-00118: undefined entity "~S"
Cause: Validity Constraint 4.1 failed: "In a document with an external subset or external parameter entities with "standalone='no'", the Name given in the entity reference must match that in an entity declaration."

Action: Correct the document.

LPX-00119: element "~1S" attribute "~2S" must be an unparsed entity
Cause: The attribute value must be an unparsed entity.

Action: Correct the document.

LPX-00120: entity "~1S" NDATA (notation) "~2S" is undefined
Cause: Entity's NDATA (notation) is undefined

Action: Correct the document.

LPX-00121: undefined notation "~S"
Cause: Notation is not known.

Action: Correct the document.

LPX-00122: undefined ID "~S" in IDREF
Cause: Validity Constraint 3.3.1 failed: "A name must not appear more than once in an XML document as a value of this type; i.e., ID values must uniquely identify the elements which bear them."

Action: Correct the document.

LPX-00123: duplicate ID "~S"
Cause: An ID was used twice, they must be unique.

Action: Correct the document.

LPX-00124: attribute value should be one or more tokens
Cause: An attribute with tokenized type (IDREFS, ENTITIES, NMTOKENS) did not contain any tokens.

Action: Value must contain one or more tokens, separated by spaces.

LPX-00125: duplicate entity "~S" (ignored)
Cause: Warning returned by XmlDomGetDecl when original document did not contain an XMLDecl

Action: This is a warning, not an error. The value XMLERR_NO_DECL is used by the programmer to detect whether a document had an XMLDecl or not. It does not indicate a problem.

LPX-00200: could not convert from encoding ~1s to ~2s
Cause: The conversion cannot be made between the specified encodings.

Action: Choose a data encoding which can represent all expected input encoding (such as a Unicode-based encoding, UTF-8 or UTF-16).

LPX-00201: unknown encoding "~s"
Cause: The specified encoding was not known. It should be an IANA or Oracle encoding name.

Action: Use an appropriate encoding.

LPX-00202: could not open "~s" (error ~u)
Cause: The named input (file, URL, etc) does not exist.

Action: Make sure the named input is available and can be opened.

LPX-00203: could not read from "~s" (error ~u)
Cause: Data could not be read from the named input.

Action: Take appropriate action to allow data to be read.

LPX-00204: syntax error
Cause: A syntax error was found.

Action: Check the XML document line and correct it.

LPX-00205: expected "<!--" at the start of comment
Cause: Bad syntax detected when processing a comment.

Action: Fix the comment syntax.

LPX-00206: invalid CDATA section
Cause: Bad syntax detected when processing CDATA. Proper format is '<![CDATA[' data ']]>'.

Action: Correct the CDATA syntax.

LPX-00207: expected "[" at the start of conditional section
Cause: Bad syntax detected when processing a conditional section.

Action: Fix the conditional section syntax.

LPX-00208: unknown DTD keyword "~s"
Cause: An unknown keyword was found in the DTD.

Action: Use a proper keyword.

LPX-00209: PI names starting with XML are reserved
Cause: Processing instruction starting with XML was found.

Action: Use another name for the processing instruction.

LPX-00210: expected '~1c' instead of '~2c'
Cause: A syntax error was detected.

Action: Use proper syntax.

LPX-00211: attribute default must be REQUIRED, IMPLIED, or FIXED
Cause: Attribute default was invalid.

Action: Default must be REQUIRED, IMPLIED, or FIXED.

LPX-00212: comment must not contain "--"
Cause: A syntax error was detected in the comment.

Action: Use '--' only when specifying the end of the comment.

LPX-00213: comment did not end in "-->"
Cause: A syntax error was detected in the comment.

Action: Be sure to end the comment with '-->'.

LPX-00214: CDATA section did not end in "]]>"
Cause: A syntax error was detected in the CDATA section.

Action: Be sure to end the CDATA section with ']]>'.

LPX-00215: processing instruction did not end in "?>"
Cause: A syntax error was detected in the PI section.

Action: Be sure to end the PI with '?>'.

LPX-00216: invalid character ~1u (~2X)
Cause: An invalid multibyte character was found.

Action: Use only characters allowed by the XML specification.

LPX-00217: invalid character ~1u (~2x)
Cause: An invalid Unicode character was found.

Action: Use only characters allowed by the XML specification.

LPX-00218: invalid character ~1u ('~2c')
Cause: An invalid native (ASCII/EBCDIC) character was found.

Action: Use only characters allowed by the XML specification.

LPX-00219: invalid digit '~c' in character reference
Cause: An invalid digit was found in a character reference.

Action: Character references are either &#DDD; where D's are decimal digits, or &#xHHH; where H's are hexadecimal digits.

LPX-00220: the string "]]>" cannot occur in character data
Cause: Found ']]>' in character data.

Action: Do not use ']]>' in character data.

LPX-00221: the character "<" cannot occur in attribute values
Cause: Found '<' in an attribute value.

Action: Do not use '<' in attribute values.

LPX-00222: error received from SAX callback function
Cause: An error was received from the SAX callback function.

Action: Examine the additional error messages and take corrective action.

LPX-00223: external entity "~s" found in an attribute value
Cause: An external entity reference was found in an attribute value.

Action: Use only references to internal or character entities in attribute values.

LPX-00224: multiple occurrences of attribute "~S" found
Cause: An attribute occurred multiple times in the same start-tag or empty-element tag.

Action: Make sure that the attributes are unique.

LPX-00225: end-element tag "~1S" does not match start-element tag "~2S"
Cause: An element tag was not ended properly.

Action: Make sure that the correct end element tag is used.

LPX-00226: entity "~S" is not declared
Cause: An entity is not declared.

Action: Declare the entity before referencing it.

LPX-00227: entity "~S" is not a parsed entity
Cause: An entity reference contained the name of an unparsed entity.

Action: Only reference parsed entities.

LPX-00228: entity reference "~S" refers to itself
Cause: An entity reference contains a recursive reference to itself.

Action: Modify the contents of the entity reference to remove this recursion.

LPX-00229: input source is empty
Cause: An XML input file has no contents.

Action: The XML file representing a document must contain at least one element.

LPX-00230: invalid character ~1u (~2x) found in a Name or Nmtoken
Cause: An invalid character was found in a NAME or NMTOKEN.

Action: Use only the characters allowed for NAMES and NMTOKENS by the XML specification.

LPX-00231: invalid character ~1u ('~2c') found in a Name or Nmtoken
Cause: An invalid character was found in a NAME or NMTOKEN.

Action: Use only the characters allowed for NAMES and NMTOKENS by the XML specification.

LPX-00232: invalid use of a parameter entity reference
Cause: A parameter entity reference was found in an improper location in the internal DTD subset.

Action: Use a parameter entity reference only where markup declarations can occur in the internal DTD subset, in the external DTD subset, or in an external entity.

LPX-00233: namespace prefixes starting with "xml" are reserved
Cause: Namespace prefix starting with XML was found.

Action: Use another name for the namespace prefix.

LPX-00234: namespace prefix "~S" is not declared
Cause: Namespace prefix is not declared.

Action: Declare the prefix in an attribute list.

LPX-00235: invalid XML version, must be 1.0 or 1.1
Cause: An invalid XML version was specified. Only version 1.0 of the XML specification is supported. Version 1.1 may be specified but will be treated as version 1.0.

Action: Use the 1.0 or 1.1 specification and set the version number accordingly.

LPX-00236: invalid character ~1u ('~2c') found in public identifier
Cause: An invalid character was found in a public identifier.

Action: Use only the characters allowed for public identifiers by the XML specification.

LPX-00237: invalid condition section keyword, must be INCLUDE or IGNORE
Cause: A conditional section <![keyword [markup]]> had invalid keyword, must be either "IGNORE" or "INCLUDE"

Action: Correct condition section usage in document.

LPX-00238: unterminated conditional section
Cause: A conditional section was not properly terminated with]]>.

Action: Verify conditional nesting in document and correct.

LPX-00239: invalid attribute type "~s"
Cause: The attribute type is not valid. Options are CDATA, ID, IDREF, IDREFS, ENTITY, ENTITIES, NMTOKEN, or NMTOKENS.

Action: Check and correct attribute declaration.

LPX-00240: element-start tag is not well formed
Cause: A start-element tag was improperly formed.

Action: Check and correct the start-element syntax.

LPX-00241: entity reference is not well formed
Cause: An entity reference (general or parameter) was not formed properly.

Action: Form entity reference correctly as "&name;" or "%name;".

LPX-00242: invalid use of ampersand ('&') character (use &)
Cause: The ampersand character is used only to start entity or character references.

Action: To include an ampersand character as data, use the built-in & general entity.

LPX-00243: element attribute value must be enclosed in quotes
Cause: An attribute defined in an element's start-tag must be enclosed in single (') or double ("") quotes.

Action: Enclose the attribute value in quotes.

LPX-00244: invalid use of less-than ('<') character (use <)
Cause: The less-than character ('<') is not permitted as data.

Action: Use the built-in entity < instead. Check for mismatched quotes (") in case the '<' is part of subsequent markup.

LPX-00245: extra data after end of document
Cause: After the close of the top-level element, more data was found.

Action: The end-element tag for the top-level element must be the last thing in the document.

LPX-00246: missing system ID after public ID
Cause: In an external ID declaration, the public ID literal was not followed by the system ID literal as required.

Action: Provide with public *and* system IDs for 'PUBLIC' type.

LPX-00247: invalid Document Type Declaration (DTD)
Cause: Problems were encountered in the DTD declaration.

Action: Review the DTD and correct the problems.

LPX-00248: invalid entity declaration
Cause: Problems were encountered parsing an entity declaration.

Action: Check and correct the declaration syntax.

LPX-00249: invalid external ID declaration
Cause: Problems were encountered parsing an external ID declaration.

Action: Check and correct the declaration syntax.

LPX-00250: invalid attribute declaration
Cause: Problems were encountered parsing an attribute declaration.

Action: Check and correct the declaration syntax.

LPX-00251: conditional sections are valid only in external DTDs
Cause: A condition section is not permitted in internal DTDs.

Action: Remove the condition section.

LPX-00252: invalid entity replacement-text nesting
Cause: Markup included from an entity must nest/group properly. That is, open/close markup must occur within the same entity. For example, <!DOCTYPE doc [<!ENTITY e "*/foofoo*">]> *docfoo*&e;*/foo/doc* Is invalid since foo's start-tag occurs in the top-level document, but the close-tag is provided by the "e" entity. Both start and end must be provided by the same source.

Action: Examples, such as the ones above, are not permitted.

LPX-00253: missing required version number in XML declaration
Cause: An XML declaration was missing the required version#.

Action: Always provide a version#, which must come first in the declaration. XML is case sensitive, so only "version" (not "Version", and so on) is valid.

LPX-00254: invalid XML declaration
Cause: Problems were encountered parsing an XML declaration.

Action: Check and correct the declaration syntax.

LPX-00255: XML standalone declaration must be "yes" or "no"
Cause: The "standalone" parameter in the XML declaration had an invalid value.

Action: standalone must be set to either "yes" or "no". Case is sensitive, so "Yes", "YES", and so on, are invalid.

LPX-00256: invalid element declaration
Cause: Problems were encountered parsing an element declaration.

Action: Check and correct the declaration.

LPX-00257: invalid children specification in element declaration
Cause: The 'children' specification in an element declaration was invalid.

Action: Check and correct the declaration.

LPX-00258: invalid "Mixed" specification in element declaration
Cause: The 'Mixed' specification in an element declaration was invalid.

Action: Check and correct the declaration.

LPX-00259: invalid notation declaration
Cause: Problems were encountered parsing a notation declaration.

Action: Check and correct the declaration syntax.

LPX-00260: invalid xml:space attribute declaration
Cause: The xml:space attribute must be declared as an enumeration with choices "default" and "preserve". For example, <!ATTLIST foo xml:space (default|preserve) 'preserve').

Action: Declare the special attribute as above.

LPX-00261: invalid URL ~s
Cause: The specified URL was invalid and could not be parsed.

Action: Correct the URL; consult RFC-2396.

LPX-00262: unsupported protocol ~s
Cause: An URL was encountered which requested a protocol not supported by the XML parser. Only HTTP and file are currently allowed.

Action: Make the data available through the filesystem or HTTP.

LPX-00263: couldn't connect to host ~s port ~d
Cause: A TCP connection couldn't be opened to the named host.

Action: Verify the hostname and connectivity to the host.

LPX-00264: send failed to host ~s
Cause: An error occurred trying to send data over a TCP connection.

Action: Verify network connectivity, and so on.

LPX-00265: read failed from to host ~s
Cause: An error occurred trying to read data from a TCP connection.

Action: Verify network connectivity, and so on.

LPX-00266: invalid language specification ~s
Cause: The given language specification was invalid.

Action: Language specification has the format *language_territory.character set*. For example, "French_France".

LPX-00267: could not resolve relative URL ~s
Cause: The named relative URL couldn't be resolved against its parent.

Action: Make sure the relative makes sense in relation to its parent URL; see RFC-2396 sections 4, 5, and appendix C.

LPX-00268: invalid access method ~1d, must be 0 to ~2d
Cause: The provided access code was not in the valid range.

Action: The code should be one of the XMLACCESS_xxx codes defined in oraxml.h, in the range shown in the error message.

LPX-00269: all three access functions (open/close/read) must be provided
Cause: An attempt was made to set the access method callbacks, but all three functions were not provided.

Action: All three callback functions (open, close, and read) are required. They must all be provided, even if they are stub functions which do nothing.

LPX-00270: FTP error: ~s
Cause: An error was returned from the FTP server while trying to retrieve a file. See the specific message for details.

Action: Corrective action depends on the error.

LPX-00271: FTP login failed: ~s
Cause: The username/password combination was invalid for FTP login.

Action: Specify a valid pair.

LPX-00272: FTP server unavailable: ~s
Cause: The FTP server is unavailable for use.

Action: No action is possible from the client side. See server's error message.

LPX-00273: failed to initialize TCP/IP
Cause: The TCP/IP package could not be initialized.

Action: Check with system administrator to see if this is a configuration problem or a connectivity problem.

LPX-00274: can't import node type
Cause: Some node types (DOCUMENT_NODE & DOCUMENT_TYPE_NODE) cannot be imported with importNode().

Action: No action required.

LPX-00275: can't set output/data encoding AFTER parsing
Cause: Output/data encoding must be set after initialization but BEFORE any parsing has taken place.

Action: Set encoding before parsing any documents.

LPX-00276: bad HTTP/Mime header
Cause: An HTTP reply contained an invalid Mime header.

Action: Verify HTTP reply for accuracy. See RFC 2616.

LPX-00277: no closing quote was seen
Cause: A quoted string was started but not finished.

Action: Put a closing quote in the proper location.

LPX-00278: invalid ~s proxy "~s"
Cause: The proxy specification for the given protocol was invalid.

Action: Check and correct the proxy specification. For HTTP, this is the environment variable "http_proxy".

LPX-00279: invalid no_proxy "~s"
Cause: The no_proxy specification was invalid.

Action: Check and correct it. no_proxy is a comma- or space-separated list of machine or domain names, with an optional port part. If no port part is present, then it applies to all ports on that domain.

LPX-00280: HTTP error ~s
Cause: An HTTP protocol error occurred.

Action: Corrective action depends on the error..

LPX-00281: unsupported encoding "~s"
Cause: The specified encoding is known but not supported by the parser.

Action: Try a different encoding.

LPX-00282: document cannot have both internal/external and shared DTDs
Cause: A parser context which had a shared DTD set was used to parse a document which also contained a DTD. You cannot use both a shared DTD and and internal/external one.

Action: If a shared DTD is to be used, then the documents parsed must not contain or reference a DTD.

LPX-00283: document encoding is ~s-based but default input encoding is not
Cause: The input document was detected to be ASCII (or EBCDIC) based, but no encoding was specified in the XMLDecl and the default input coding was not ASCII (or EBCDIC) based, so could not be applied.

Action: Add an explicit encoding specification to the XMLDecl so the default input encoding is not needed, or pick a default encoding which matches the input document.

LPX-00284: namespace prefix to NULL URI is not allowed
Cause: An element's namespace prefix declarations was for a NULL URI, e.g. <foo xmlns:bar=""/> This is illegal presently in XML 1.0, but will be legal in XML 1.1

Action: Remove erroneous prefix definition.

LPX-00285: invalid Unicode surrogate ~X ~X
Cause: A Unicode document contained an invalid surrogate. If the first (high) surrogate is in the correct range 0xD800 to 0xDBFF, then the second (low) surrogate must be in the range 0xDC00 to 0xDFFF.

Action: Correct the document.

LPX-00286: Exceeded max depth for recursion
Cause: The depth of embedded elements in the document exceeded the limit of 2000.

Action: Correct the document.

LPX-00287: Max limit of ~1d exceeded for ~s
Cause: Max limit exceeded

Action: Correct the document.

LPX-00288: CDATA-section-close delimiter is prohibited in element content
Cause: Element content contained CDATA-section-close delimiter.

Action: Correct the document.

LPX-00289: invalid redefinition of xmlns URI
Cause: The XML namespace Uniform Resource Identifier 'http://www.w3.org/2000/xmlns/' must not be assigned a prefix.

Action: Correct the document.

LPX-00290: invalid use of xmlns as a prefix
Cause: The prefix 'xmlns' was reserved and could not be used as a prefix.

Action: Correct the document.

LPX-00291: too many template patterns
Cause: The style sheet had too many template match patterns, or the total length of all template match patterns in the style sheet was too long.

Action: Reduce the number of template match conditions and shorten the template match patterns.

LPX-00300: no name in attribute set
Cause: The name attribute was not found in the attribute-set element.

Action: Add a name attribute for this element.

LPX-00301: error in XPATH evaluation
Cause: The XPATH evaluation returns an error.

Action: Check specified XPATH expression to determine the error.

LPX-00302: Incorrect stylesheet. The node is not valid.
Cause: The child node is of invalid type or has invalid name for this particular location in stylesheet, rendering the stylesheet as invalid XSLT.

Action: Fix the stylesheet by using valid nodes only.

LPX-00303: attribute value "~S" not expected for ~S
Cause: Attribute is found but its value is not the expected value.

Action: Set the attribute value to the correct value.

LPX-00304: input parameter to function is null
Cause: An input parameter passed into this function is null when it is not supposed to.

Action: Make sure the caller function is not passing null for this parameter.

LPX-00305: missing token
Cause: An expected token is not found.

Action: Check the input string to make sure the expected token is present.

LPX-00306: inputed string ended with no corresponding closing '}'
Cause: A closing '}' is expected.

Action: Add the closing '}' to the input string or remove the extra opening '{'.

LPX-00307: namespace prefix ~S used but not declared
Cause: Namespace prefix is used but not declared.

Action: Either declare the namespace or don't use this namespace prefix.

LPX-00308: attribute ~S not found in ~S
Cause: The expected attribute for this node is not found.

Action: Need to add this attribute to the node.

LPX-00309: cannot initialize XPATH
Cause: XPATH context could not be initialized.

Action: Check the initialization function LpxsutInitXpathCtx().

LPX-00310: element ~S not found in ~S
Cause: The expected element is not found.

Action: Check the initialization function LpxsutInitXpathCtx().

LPX-00311: unsupported feature: ~s
Cause: This feature is not supported.

Action: Do not use this feature.

LPX-00312: cannot construct XML PI with content: ~S
Cause: The content of XML PI node might be invalid.

Action: Make necessary changes to make the node valid according to spec.

LPX-00313: cannot construct XML comment with content: ~S
Cause: The content of XML comment node might be invalid.

Action: Make necessary changes to make the node valid according to spec.

LPX-00314: an internal failure occurred
Cause: An internal error occurred in the code.

Action: Contact appropriate developer.

LPX-00315: extension function ~S not supported
Cause: This extension function is not supported.

Action: Either contact appropriate developer for more information or don't use this extension function.

LPX-00316: invalid value ~S for ~S attribute ~S
Cause: The value for the specified attribute is invalid.

Action: Consult the XSL spec, use only legal values.

LPX-00317: undefined decimal-format "~S"
Cause: The named decimal-format is undefined (the name "#default" means the default format).

Action: Define the desired decimal-format before trying to use it.

LPX-00318: duplicate xsl:decimal-format "~S"
Cause: The named decimal-format was declared more than once.

Action: Make sure there is only a single declaration.

LPX-00319: The node specified is not valid
Cause: The node specified is not of expected type.

Action: Use only the nodes of legal type.

LPX-00320: No more attributes can be added to a non empty element
Cause: The element to which an attribute was being added is non empty and hence can not add anymore attributes to it.

Action: Modify the XSLT stylesheet so that all the attributes are added to an element before anything else is added to it. If you absolutely can not do that then select your output method to be DOM based rather then a stream or SAX based output which you are using presently.

LPX-00321: None of the output method (DOM, SAX, Stream) is selected
Cause: User is trying to process an XML file with out selecting any mechanism for output.

Action: User must select one of the output mechanisms (SAX/DOM/Stream) before attempting to process the XML file.

LPX-00322: A doc referred by XSLT stylesheet could not be opened : ~s
Cause: Either an import,include or document() function tried to open a document and failed.

Action: Make sure that document is present and can be opened.

LPX-00323: illegal apply-imports because of no current template: ~s
Cause: apply-imports was used even when there was no current template possibly with in for-each.

Action: Make sure that apply-imports are invoked only if there is a current template and it is not in a xsl:for-each.

LPX-00324: "~S" is not a valid value for the lang attribute of xsl:sort
Cause: An invalid language name was specified for sorting.

Action: Provide a valid value for the lang attribute of xsl:sort.

LPX-00327: unknown or undefined parameter for style sheet
Cause: A named parameter supplied to a style sheet did not match any parameters defined for the style sheet.

Action: This is a warning, not an error. Omit the parameter or use a correct name for the parameter.

LPX-00328: style sheet parameter was previously set
Cause: A style sheet parameter was previously set and already had a value; the value cannot be changed.

Action: This is a warning, not an error. The previous value will be used. Avoid setting the parameter multiple times.

LPX-00400: an internal error has occurred in XPATH
Cause: An internal error has occurred in XPATH.

Action: Contact the appropriate developer.

LPX-00401: invalid QName in the XSL file
Cause: An invalid QName was passed to the XPATH parser.

Action: See whether there are any invalid QNames in the XSL file.

LPX-00402: invalid axisname in the XSL file
Cause: An invalid axis name was passed to the XPATH parser.

Action: See whether all axis names in the XSL file are correct.

LPX-00403: unmatched quote in the XSL file
Cause: An unmatched quote was found in the XSL file.

Action: Check for unmatched quotes in the XSL file.

LPX-00404: unable to resolve namespace URI
Cause: The namespace URI may not be valid.

Action: Make sure that the name space URIs are valid.

LPX-00405: unable to allocate memory
Cause: May be out of memory.

Action: Try increasing virtual memory.

LPX-00406: object of incorrect type passed to the function
Cause: An object of incorrect type was passed to the XPATH/XSL function.

Action: Do the required conversion before passing in an object of type which is different from the expected type.

LPX-00407: right square bracket missing in the XSL file
Cause: Right square bracket missing in the XSL file.

Action: Check for unmatched square bracket in the XSL file.

LPX-00408: right parenthesis missing in the XSL file
Cause: Right parenthesis missing in the XSL file.

Action: Check for unmatched parenthesis in the XSL file.

LPX-00409: incorrect token encountered while parsing
Cause: An unexpected token encountered while parsing the expression/ pattern.

Action: Check the syntax of the expressions/patterns.

LPX-00410: unable to resolve the variable reference
Cause: Variable reference may not be valid.

Action: Check whether the variable references are valid.

LPX-00411: unknown function name encountered
Cause: The function is not supported at this time or the name is invalid.

Action: Check the function names. If valid and this error occurs, then avoid using them at this time.

LPX-00413: loss of precision due to excessively large numerical constant
Cause: The numerical constant in the XPath expression is too big.

Action: n/a

LPX-00601: Invalid token in: '~S'
Cause: Invalid token in XPath expression.

Action: Check the expression.

LPX-00602: Invalid child element '~1S' of element '~2S'.
Cause: Invalid child element in this stylesheet context.

Action: Check the stylesheet.

LPX-00603: Invalid attribute value '~1S': {element '~2S', attribute '~3S'}.
Cause: Invalid attribute value in this stylesheet context.

Action: Check the stylesheet.

LPX-00604: Invalid attribute value '~1S', for attribute '~2s'.
Cause: Invalid attribute value for this attribute.

Action: Check the stylesheet.

LPX-00605: Invalid attribute '~1S' in element '~2S'.
Cause: Invalid attribute for this element.

Action: Check the stylesheet.

LPX-00606: Missing attribute '~1s' in element '~2S'.
Cause: Missing attribute for this element.

Action: Check the stylesheet.

LPX-00607: Invalid reference: '~S'.
Cause: Invalid variable or parameter or template reference.

Action: Check the stylesheet.

LPX-00608: Repeated declaration of '~1S' in element '~2S'.
Cause: Only one declaration is allowed at this level.

Action: Check the stylesheet.

LPX-00609: Function call with invalid number of arguments in '~1S'.
Cause: Invalid number of arguments.

Action: Check the function signature.

LPX-00610: NULL pointer or XML node
Cause: A NULL pointer was detected as an internal error condition.

Action: Contact the appropriate developer.

LPX-00650: Template call chain too deep.
Cause: The nested series of template calls is too deep.

Action: Check for a recursive dependency between templates.

LPX-00651: VM Stack overflow.
Cause: The XML data is too large.

Action: Increase the size of VM stacks in XmlXslVMCreate().

LPX-00652: SAX callback returns with error.
Cause: SAX callback returns an error.

Action: Check the callback function.

LPX-00653: Output attribute '~S' doesn't have a parent element.
Cause: Attribute is generated in a wrong context.

Action: Check the XSLT stylesheet.

LPX-00654: Output namespace attribute '~S' doesn't have a parent element.
Cause: Attribute generated in the wrong context.

Action: Check the XSLT stylesheet.

LPX-00655: Invalid output comment '~S'.
Cause: Invalid comment node.

Action: Check the XSLT stylesheet.

LPX-00656: XSLTVM terminate.
Cause: VM terminates.

Action: No action.

LPX-00657: Invalid output PI '~S'.
Cause: Invalid PI node.

Action: Check the XSLT stylesheet.

LPX-00658: Invalid XSLT object type.
Cause: Invalid object type in XPath evaluation.

Action: Check the XSLT stylesheet.

LPX-00659: Output write failed.
Cause: Write operation failed.

Action: Check the write method.

LPX-00660: Not a well-formed document or external entity.
Cause: The generated document is not well-formed.

Action: Check the XSLT stylesheet.

LPX-00661: Failed to load: '~s'.
Cause: Failed to load a document.

Action: Check the XSLT stylesheet.

LPX-00662: Invalid encoding.
Cause: Invalid encoding specified.

Action: Check the encoding string.

LPX-00663: VM String-Stack overflow.
Cause: The string data is too large.

Action: Increace the size of VM StringStack in XmlXslVMCreate().

LPX-00664: VM Node-Stack overflow.
Cause: Too many XML nodes.

Action: Increace the size of VM NodeStack in XmlXslVMCreate().

LPX-00690: Invalid argument.
Cause: Invalid or missing argument.

Action: Check the function signature.

LPX-00700: invalid SOAP context
Cause: The SOAP context passed to an XmlSoap function was invalid.

Action: Make sure the context passed is an xmlsoapctx and is still valid (has not been destroyed).

LPX-00701: invalid SOAP role
Cause: An invalid SOAP role was specified.

Action: Only xmlsoaprole enum values should be used (see xml.h).

LPX-00702: invalid SOAP connection binding
Cause: An invalid SOAP connection binding was specified.

Action: Only xmlsoapbind enum values should be used (see xml.h).

LPX-00703: SOAP POST failed
Cause: A SOAP message sent with an HTTP binding failed.

Action: See the returned HTTP error to determine the problem.

LPX-00704: elem has no mustUnderstand
Cause: Header block does not have a mustUnderstand attribute.

Action: This is legal, no action required.

LPX-00705: elem has no role
Cause: Header block does not have a role attribute.

Action: This is legal, no action required.

LPX-00706: message has no fault
Cause: Message body has no Fault child.

Action: This is legal, no action required.

LPX-00707: no Fault reason w/given language
Cause: Fault element does not have a reason with given language.

Action: This is legal, no action required.

LPX-00708: SOAP failed to make HTTP connection
Cause: SOAP failed to make an HTTP connection to the given URL.

Action: Possible cause is invalid URL or memory exhaustion.

LPX-00709: SOAP reply not valid XML
Cause: The reply to a SOAP call was not a valid XML document.

Action: Check the calling URL for validity; otherwise the problem is likely to be on the reply side.

LPX-00711: invalid SOAP version
Cause: The version string specified at SOAP creation time was invalid.

Action: Specify a valid version string, either '1.1' or '1.2'.

LPX-00712: failed to set HTTP header
Cause: Connection does not exists, or header is badly formed, or maximum number of headers is exceeded.

Action: Check that connection exists, header has ':', decrease number of headers.

LPX-00713: body has more than one fault
Cause: Message body has multiple Fault children.

Action: Most likely bug in the server.

LPX-00714: fault is not a single child
Cause: Message body has additional children besides Fault.

Action: Most likely bug in the server.

LPX-00715: badly formed fault elemen
Cause: Fault element does not have one of mandatory children or has children, which are not allowed.

Action: Most likely bug in the server.

LPX-00716: badly formed Text subelement
Cause: Mandatory text child is missing from the requested message subelemt.

Action: Most likely bug in the server.

LPX-00717: badly formed Value subelement
Cause: Mandatory Value child of the Code child of the Fault badly formed or absent.

Action: Most likely bug in the server.

LPX-00718: message has no envelope
Cause: The message has no envelope element child.

Action: Most likely bug in the server.

LPX-00719: prefix too long
Cause: The maximum size of encoded namespace attribute name is 1022.

Action: Use shorter prefix.

LPX-00720: envelope has no header
Cause: The message envelope does not have header.

Action: This is legal, no action required

LPX-00721: envelope has no body
Cause: The message envelope does not have body.

Action: Most likely bug in the server.

LPX-00722: elem has no relay
Cause: Header block does not have a relay attribute.

Action: This is legal, no action required.

LPX-00723: no such element
Cause: The element with requested namespace name and local part does not exists.

Action: This is legal, no action required.

LPX-00750: arguments "~1s" to function "~2s" are null
Cause: Input arguments passed into this function are null when it is not supposed to.

Action: Make sure the caller function is not passing null for this parameter.

LPX-00751: arguments "~s" are exclusive
Cause: Input arguments passed into this function are exclusive. Specify only one of them.

Action: Specify only one of the exclusive arguments.

LPX-00752: invalid ~1s, must be ~2s
Cause: Invalid value was specified for attribute.

Action: Correct the value with one of the suggested values.

LPX-00753: invalid proxy "~s"
Cause: The proxy specification for the given protocol was invalid.

Action: Check and correct the proxy specification. For HTTP, this is the environment variable "http_proxy".

LPX-00754: invalid no_proxy "~s"
Cause: The no_proxy specification was invalid.

Action: Check and correct the specification. no_proxy is a comma- or space-separated list of machine or domain names, with an optional port part. If no port part is present, then it applies to all ports on that domain.

LPX-00755: missing required argument "~s"
Cause: A required argument was missing.

Action: Provide the missing argument to the function.

LPX-00756: Etags and tokens must be either all tagged or all untagged
Cause: The list of condition factors need to be either all tagged with absoluteURI's or all untagged with absoluteURI's.

Action: If all condition factors were applied to the resource receiving the request, make them all untagged. Otherwise, make them all tagged with appropriate resource's URI's.

LPX-00757: maximum XML document size (~s bytes) exceeded
Cause: The input XML document's size exceeded the limit set by "max_xml_size" attribute set in XmlDavCreate().

Action: Raise the value set for max_xml_size attribute in XmlDavCreate() if this does not create problems with security.

LPX-00758: user-provided callback returns null
Cause: Null was returned from user-provided callback function.

Action: Check error(s) encoutered within the callback function.

LPX-00759: failed to initialize TCP/IP
Cause: The TCP/IP package could not be initialized.

Action: Check with your system administrator to see if this is a configuration problem or a connectivity problem.

LPX-00760: couldn't connect to host ~s port ~u
Cause: A TCP connection couldn't be opened to the named host.

Action: Verify the hostname and connectivity to the host.

LPX-00761: send failed to host ~s
Cause: An error occurred trying to send data over a TCP connection.

Action: Verify network connectivity.

LPX-00762: read failed from host ~s
Cause: An error occurred trying to read data from a TCP connection.

Action: Verify network connectivity.

LPX-00763: exceeded maximum TCP connections
Cause: The maximum allowable number of TCP connections were exceeded. This happens only if too many pending HTTP responses have not been properly ended or destroyed.

Action: End a pending response session or destroy response objects that have been processed.

LPX-00764: TCP connection was broken
Cause: Either the server terminated the TCP connection or the TCP connection is in a bad state.

Action: Analyze the error. After cleanup, retry the method.

LPX-00765: HTTP error ~s
Cause: An HTTP protocol error occurred.

Action: Corrective action depends on the error.

LPX-00766: unsupported transfer-coding values: ~s
Cause: Only "chunked" and "identity" transfer-coding values are supported.

Action: This is WebDAV implementation's shortfall. There is no workaround for this problem.

LPX-00767: not a text media type
Cause: A text media type was expected. But other media types were found.

Action: Since this data cannot be read as a text type, use another routine to read it.

LPX-00768: no entity body found
Cause: No entity body was found when it was read.

Action: Check the HTTP status code and headers to see why the entity body was not found.

LPX-00769: not xml media type
Cause: An XML media type was expected. But other media types were found.

Action: Since this data cannot be read as an XML type, use another routine to read it.

LPX-00770: missing lock token in lock refresh request
Cause: A LOCK request to refresh a lock had no lock token header specified.

Action: Use XmlDavUpdResDesc to set a lock token in the resource

LPX-00771: missing lock token in UNLOCK request
Cause: An UNLOCK request to remove a lock had no lock token header specified.

Action: Use XmlDavUpdResDesc to set a lock token in the resource

LPX-00772: wrong object type
Cause: The wrong object type was given as argument to a WebDAV call.

Action: Review the failing function call, consult the documentation, and make sure the object types pass as correct.

LPX-00773: protocol violation: ~s
Cause: The entity body sent by the server in Chunked Transfer Encoding violated protocol.

Action: Either this is an internal implementation error or a server implementation error. Users should file a bug agaist either the server's or the client's implementation.

LPX-00800: XQuery invalid token
Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00801: XQuery syntax error at
Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00802: Too many arguments
Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00803: Too few arguments
Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00804: Invalid token: '~S'
Cause: Invalid program.

Action: Correct the program.

LPX-00805: Syntax error at '~S'
Cause: Invalid program.

Action: Correct the program.

LPX-00806: Invalid token in the pattern
Cause: The program was invalid.

Action: Correct the program.

LPX-00807: Invalid range
Cause: The program was invalid.

Action: Correct the program.

LPX-00808: internal error, invalid OPCODE
Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LPX-00809: Invalid subexpression reference
Cause: The replacement string was invalid.

Action: Correct the replacement string.

LPX-00825: Can't compile the element:
Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

LPX-00826: Can't compile the attribute:
Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

LPX-00827: Namespace conflict for prefix:
Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

LPX-00903: Invalid flags specified for XmlDiff or XmlPatch
Cause: Invalid value supplied to flags parameter for XmlDiff or XmlPatch functions.

Action: Specify valid flags (see xmldf.h).

LPX-00904: Invalid inputs were supplied to XmlDiff or XmlPatch
Cause: Data could not be read from inputs to XmlDiff or XmlPatch functions.

Action: Specify valid inputs (see xmldf.h).

LPX-00910: The root nodes in input documents to XmlDiff did not match
Cause: The root nodes in input documents do not match.

Action: Make sure the root nodes have same qualified name in both input documents. XmlDiff can be called only if the root nodes are same in input documents.

LPX-00913: XmlPatch could not process the XML PI oracle-xmldiff
Cause: The diff document either did not specify the XML Processing Instruction "oracle-xmldiff" or did not specify all data required by XmlPatch. The PI should be the first child of the top-level xdiff element. This error is also thrown when the output-model is 'snapshot' and operations-in-docorder is 'false'.

Action: Specify the "oracle-xmldiff" PI correctly. See documentation for XmlPatch C function in xmldf.h.

LPX-00918: XmlPatch encountered an error in translating XPATH using XmlXVM
Cause: XmlPatch encountered an invalid XPATH in the diff document.

Action: If you handcoded the diff document, make sure all the XPATHs in the diff document are valid.

LPX-00950: JSON path processing error
Cause: The JavaScript Object Notation (JSON) path engine encountered a fatal condition.

Action: Contact Oracle Support Services and report the error.

LPX-01001: [XPST0001] Static context component '~S' has no value
Cause: It is a static error if analysis of an expression relies on some component of the static context that has not been assigned a value.

Action: n/a

LPX-01002: [XPDY0002] Dynamic context component '~S' has no value
Cause: It is a dynamic error if evaluation of an expression relies on some// part of the dynamic context that has not been assigned a value.

Action: n/a

LPX-01003: [XPST0003] Syntax error at '~s'
Cause: It is a static error if an expression is not a valid instance of the grammar defined in A.1 EBNF

Action: n/a

LPX-01004: [XPTY0004] Expression type does not match a required type
Cause: It is a type error if, during the static analysis phase, an expression is found to have a static type that is not appropriate for the context in which the expression occurs, or during the dynamic evaluation phase, the dynamic type of a value does not match a required type as specified by the matching rules in 2.5.4 SequenceType Matching.

Action: Check the expression type.

LPX-01005: [XPST0005] Invalid empty-sequence() expression
Cause: During the analysis phase, it is a static error if the static type assigned to an expression other than the expression () or data(()) is empty-sequence().

Action: n/a

LPX-01006: [XPTY0006]
Cause: Not currently used.

Action: n/a

LPX-01007: [XPTY0007]
Cause: Not currently used.

Action: n/a

LPX-01008: [XPST0008] Invalid reference
Cause: It is a static error if an expression refers to an element name, attribute name, schema type name, namespace prefix, or variable name that is not defined in the static context, except for an ElementName in an ElementTest or an AttributeName in an AttributeTest.

Action: n/a

LPX-01009: [XQST0009] Schema Import Feature not supported
Cause: An implementation that does not support the Schema Import Feature must raise a static error if a Prolog contains a schema import.

Action: n/a

LPX-01010: [XPST0010] Axis '~S' not supported
Cause: An implementation must raise a static error if it encounters a reference to an axis that it does not support.

Action: n/a

LPX-01012: [XQST0012] Invalid XML schema
Cause: It is a static error if the set of definitions contained in all schemas imported by a Prolog do not satisfy the conditions for schema validity specified in Sections 3 and 5 of [XMLSchema] Part 1 i.e., each definition must be valid, complete, and unique

Action: n/a

LPX-01013: [XQST0013] Invalid pragma content
Cause: It is a static error if an implementation recognizes a pragma but determines that its content is invalid.

Action: n/a

LPX-01014: [XPTY0014] Too many levels of nesting
Cause: An expression contained too many levels of nested parentheses.

Action: n/a

LPX-01015: [XQST0015]
Cause: Not currently used.

Action: n/a

LPX-01016: [XQST0016] Module Feature not supported
Cause: An implementation that does not support the Module Feature raises a static error if it encounters a module declaration or a module import.

Action: n/a

LPX-01017: [XPST0017] Invalid function call
Cause: It is a static error if the expanded QName and number of arguments in a function call do not match the name and arity of a function signature in the static context.

Action: n/a

LPX-01018: [XPTY0018] Path last step contains both nodes and atomic values
Cause: It is a type error if the result of the last step in a path expression contains both nodes and atomic values.

Action: n/a

LPX-01019: [XPTY0019] Path step contains atomic values
Cause: It is a type error if the result of a step (other than the last step) in a path expression contains an atomic value.

Action: n/a

LPX-01020: [XPTY0020] The path step context item is not a node
Cause: It is a type error if, in an axis step, the context item is not a node.

Action: n/a

LPX-01021: [XPDY0021]
Cause: Not currently used.

Action: n/a

LPX-01022: [XQST0022] The value of a namespace must be a URILiteral.
Cause: It is a static error if the value of a namespace declaration attribute is not a URILiteral.

Action: n/a

LPX-01023: [XPDY0023]
Cause: Not currently used.

Action: n/a

LPX-01024: [XQTY0024] Attribute node out of context
Cause: It is a type error if the content sequence in an element constructor contains an attribute node following a node that is not an attribute node.

Action: n/a

LPX-01025: [XQDY0025] Repeated attribute name
Cause: It is a dynamic error if any attribute of a constructed element does not have a name that is distinct from the names of all other attributes of the constructed element.

Action: n/a

LPX-01026: [XQDY0026] Processing instruction content contains '?>'
Cause: It is a dynamic error if the result of the content expression of a computed processing instruction constructor contains the string '?>'.

Action: n/a

LPX-01027: [XQDY0027] Invalid PSVI validity property of the root element
Cause: In a validate expression, it is a dynamic error if the root element information item in the PSVI resulting from validation does not have the expected validity property: valid if validation mode is strict, or either valid or notKnown if validation mode is lax.

Action: n/a

LPX-01028: [XQDY0028]
Cause: Not currently used

Action: n/a

LPX-01029: [XQDY0029]
Cause: Not currently used

Action: n/a

LPX-01030: [XQTY0030] Expression should evaluate to exactly one node
Cause: It is a type error if the argument of a validate expression does not evaluate to exactly one document or element node.

Action: n/a

LPX-01031: [XQST0031] Version not supported by the implementation
Cause: It is a static error if the version number specified in a version declaration is not supported by the implementation.

Action: n/a

LPX-01032: [XQST0032] Repeated base URI declaration
Cause: A static error is raised if a Prolog contains more than one base URI declaration.

Action: n/a

LPX-01033: [XQST0033] Multiple bindings for the namespace prefix '~s'
Cause: It is a static error if a module contains multiple bindings for the same namespace prefix.

Action: n/a

LPX-01034: [XQST0034] Repeated function declaration
Cause: It is a static error if multiple functions declared or imported by a module have the number of arguments and their expanded QNames are equal (as defined by the eq operator).

Action: n/a

LPX-01035: [XQST0035] Repeated schema components
Cause: It is a static error to import two schema components that both define the same name in the same symbol space and in the same scope.

Action: n/a

LPX-01036: [XQST0036] Importing module should import schema '~s'
Cause: It is a static error to import a module if the importing module's in-scope schema types do not include definitions for the schema type names that appear in the declarations of variables and functions (whether in an argument type or return type) that are present in the imported module and are referenced in the importing module.

Action: n/a

LPX-01037: [XQST0037]
Cause: Not currently used

Action: n/a

LPX-01038: [XQST0038] Invalid collation
Cause: It is a static error if a Prolog contains more than one default collation declaration, or the value specified by a default collation declaration is not present in statically known collations.

Action: n/a

LPX-01039: [XQST0039] Repeated parameter name
Cause: It is a static error for a function declaration to have more than one parameter with the same name.

Action: n/a

LPX-01040: [XQST0040] Repeated attribute name
Cause: It is a static error if the attributes specified by a direct element constructor do not have distinct expanded QNames.

Action: n/a

LPX-01041: [XQDY0041] Expression can't be cast to the type xs:NCName
Cause: It is a dynamic error if the value of the name expression in a computed processing instruction constructor cannot be cast to the type xs:NCName.

Action: n/a

LPX-01042: [XQST0042]
Cause: Not currently used.

Action: n/a

LPX-01043: [XQST0043]
Cause: Not currently used.

Action: n/a

LPX-01044: [XQDY0044] Invalid attribute namespace
Cause: It is a dynamic error if the node-name property of the node constructed by a computed attribute constructor is in the namespace http://www.w3.org/2000/xmlns/ (corresponding to namespace prefix xmlns), or is in no namespace and has local name xmlns.

Action: n/a

LPX-01045: [XQST0045] Invalid function namespace
Cause: It is a static error if the function name in a function declaration is in one of the following namespaces: http://www.w3.org/XML/1998/namespace, http://www.w3.org/2001/XMLSchema, http://www.w3.org/2001/XMLSchema-instance, http://www.w3.org/2005/xpath-functions.

Action: n/a

LPX-01046: [XQST0046] Invalid URILiteral
Cause: An implementation MAY raise a static error if the value of a URILiteral is of nonzero length and is not in the lexical space of xs:anyURI.

Action: n/a

LPX-01047: [XQST0047] Repeated import module target namespace
Cause: It is a static error if multiple module imports in the same Prolog specify the same target namespace.

Action: n/a

LPX-01048: [XQST0048] Namespace should be as the module target namespace
Cause: It is a static error if a function or variable declared in a library module is not in the target namespace of the library module.

Action: n/a

LPX-01049: [XQST0049] Repeated variable declaration
Cause: It is a static error if two or more variables declared or imported by a module have equal expanded QNames (as defined by the eq operator.)

Action: n/a

LPX-01050: [XPDY0050] Invalid dynamic type
Cause: It is a dynamic error if the dynamic type of the operand of a treat expression does not match the sequence type specified by the treat expression. This error might also be raised by a path expression beginning with "/" or "//" if the context node is not in a tree that is rooted at a document node. This is because a leading "/" or "//" in a path expression is an abbreviation for an initial step that includes the clause treat as document-node().

Action: n/a

LPX-01051: [XPST0051] AtomicType not defined
Cause: It is a static error if a QName that is used as an AtomicType in a SequenceType is not defined in the in-scope schema types as an atomic type.

Action: n/a

LPX-01052: [XQDY0052]
Cause: Not currently used.

Action: n/a

LPX-01053: [XQDY0053]
Cause: Not currently used.

Action: n/a

LPX-01054: [XQST0054] The variable depends on itself
Cause: It is a static error if a variable depends on itself.

Action: n/a

LPX-01055: [XQST0055] Repeated copy-namespaces declaration
Cause: It is a static error if a Prolog contains more than one copy-namespaces declaration.

Action: n/a

LPX-01056: [XQST0056]
Cause: Not currently used.

Action: n/a

LPX-01057: [XQST0057] Missing schema import target namespace
Cause: It is a static error if a schema import binds a namespace prefix but does not specify a target namespace other than a zero-length string.

Action: n/a

LPX-01058: [XQST0058] Repeated schema import target namespace
Cause: It is a static error if multiple schema imports specify the same target namespace.

Action: n/a

LPX-01059: [XQST0059] Can't find schema or module with namespace '~s'
Cause: It is a static error if an implementation is unable to process a schema or module import by finding a schema or module with the specified target namespace.

Action: n/a

LPX-01060: [XQST0060] Function name should have a namespace
Cause: It is a static error if the name of a function in a function declaration is not in a namespace (expanded QName has a null namespace URI).

Action: n/a

LPX-01061: [XQDY0061] Invalid document node
Cause: It is a dynamic error if the operand of a validate expression is a document node whose children do not consist of exactly one element node and zero or more comment and processing instruction nodes, in any order.

Action: n/a

LPX-01062: [XQDY0062]
Cause: Not currently used.

Action: n/a

LPX-01063: [XQST0063]
Cause: Not currently used.

Action: n/a

LPX-01064: [XQDY0064] Processing instruction name contains 'XML'
Cause: It is a dynamic error if the value of the name expression in a computed processing instruction constructor is equal to "XML" (in any combination of upper and lower case).

Action: n/a

LPX-01065: [XQST0065] Repeated ordering mode declaration
Cause: A static error is raised if a Prolog contains more than one ordering mode declaration.

Action: n/a

LPX-01066: [XQST0066] Repeated default declaration
Cause: A static error is raised if a Prolog contains more than one default element/type namespace declaration, or more than one default function namespace declaration.

Action: n/a

LPX-01067: [XQST0067] Repeated construction declaration
Cause: A static error is raised if a Prolog contains more than one construction declaration.

Action: n/a

LPX-01068: [XQST0068] Repeated boundary-space declaration
Cause: A static error is raised if a Prolog contains more than one boundary-space declaration.

Action: n/a

LPX-01069: [XQST0069] Repeated empty order declaration
Cause: A static error is raised if a Prolog contains more than one empty order declaration.

Action: n/a

LPX-01070: [XQST0070] Invalid (prefix, URI) combination
Cause: A static error is raised if a namespace URI is bound to the predefined prefix xmlns, or if a namespace URI other than http://www.w3.org/XML/1998/namespace is bound to the prefix xml, or if the prefix xml is bound to a namespace URI other than http://www.w3.org/XML/1998/namespace.

Action: n/a

LPX-01071: [XQST0071] Repeated namespace attribute
Cause: A static error is raised if the namespace declaration attributes of a direct element constructor do not have distinct names.

Action: n/a

LPX-01072: [XQDY0072] Element content contains invalid hyphens combination
Cause: It is a dynamic error if the result of the content expression of a computed comment constructor contains two adjacent hyphens or ends with a hyphen.

Action: n/a

LPX-01073: [XQST0073] Cyclic import sequence
Cause: It is a static error if the graph of module imports contains a cycle (that is, if there exists a sequence of modules M1 ... Mn such that each Mi imports Mi+1 and Mn imports M1), unless all the modules in the cycle share a common namespace.

Action: n/a

LPX-01074: [XQDY0074] Invalid element or attribute QName
Cause: It is a dynamic error if the value of the name expression in a computed element or attribute constructor cannot be converted to an expanded QName (for example, because it contains a namespace prefix not found in statically known namespaces.)

Action: n/a

LPX-01075: [XQST0075] Validate expression not supported
Cause: An implementation that does not support the Validation Feature must raise a static error if it encounters a validate expression.

Action: n/a

LPX-01076: [XQST0076] Invalid collation
Cause: It is a static error if a collation subclause in an order by clause of a FLWOR expression does not identify a collation that is present in statically known collations.

Action: n/a

LPX-01077: [XQST0077]
Cause: Not currently used.

Action: n/a

LPX-01078: [XQST0078]
Cause: Not currently used.

Action: n/a

LPX-01079: [XQST0079] Invalid extension expression
Cause: It is a static error if an extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces.

Action: n/a

LPX-01080: [XPST0080] Invalid target type
Cause: It is a static error if the target type of a cast or castable expression is xs:NOTATION or xs:anyAtomicType.

Action: n/a

LPX-01081: [XPST0081] Invalid prefix
Cause: It is a static error if a QName used in a query contains a namespace prefix that cannot be expanded into a namespace URI by using the statically known namespaces.

Action: n/a

LPX-01082: [XQST0082]
Cause: Not currently used.

Action: n/a

LPX-01083: [XQST0083]
Cause: Not currently used.

Action: n/a

LPX-01084: [XQDY0084] Missing top-level element declaration
Cause: It is a dynamic error if the element validated by a validate statement does not have a top-level element declaration in the in-scope element declarations, if validation mode is strict.

Action: n/a

LPX-01085: [XQST0085] The namespace URI shouldn't be a zero-length string
Cause: It is a static error if the namespace URI in a namespace declaration attribute is a zero-length string, and the implementation does not support [XML Names 1.1].

Action: n/a

LPX-01086: [XQTY0086] No-preserve mode conflict
Cause: It is a type error if the typed value of a copied element or attribute node is namespace-sensitive when construction mode is preserve and copy-namespaces mode is no-preserve.

Action: n/a

LPX-01087: [XQST0087] Invalid encoding
Cause: It is a static error if the encoding specified in a Version Declaration does not conform to the definition of EncName specified in [XML 1.0].

Action: n/a

LPX-01088: [XQST0088] Target namespace string shouldn't be of zero length
Cause: It is a static error if the literal that specifies the target namespace in a module import or a module declaration is of zero length.

Action: n/a

LPX-01089: [XQST0089] Repeated variable name
Cause: It is a static error if a variable bound in a for clause of a FLWOR expression, and its associated positional variable, do not have distinct names (expanded QNames).

Action: n/a

LPX-01090: [XQST0090] Invalid character reference
Cause: It is a static error if a character reference does not identify a valid character in the version of XML that is in use.

Action: n/a

LPX-01091: [XQDY0091] Invalid xml:id
Cause: An implementation MAY raise a dynamic error if an xml:id error, as defined in [XML ID], is encountered during construction of an attribute named xml:id.

Action: n/a

LPX-01092: [XQDY0092] Invalid xml:space value
Cause: An implementation MAY raise a dynamic error if a constructed attribute named xml:space has a value other than preserve or default.

Action: n/a

LPX-01093: [XQST0093] Module depends on itself
Cause: It is a static error to import a module M1 if there exists a sequence of modules M1 ... Mi ... M1 such that each module directly depends on the next module in the sequence (informally, if M1 depends on itself through some chain of module dependencies.)

Action: n/a

LPX-01094: [FORG0003] fn:zero-or-one called with a sequence containing more than one item
Cause: It is a dynamic error if fn:zero-or-one is called with a sequence containing more than one item

Action: n/a

LPX-01095: [FORG0004] fn:one-or-more called with a sequence containing no items
Cause: It is a dynamic error if fn:one-or-more is called with a sequence containing no items

Action: n/a

LPX-01096: [FORG0005] fn:exactly-one called with a sequence containing zero or more than one item
Cause: It is a dynamic error if fn:exactly-one is called with a sequence containing zero or more than one item

Action: n/a

LPX-01097: [FORG0006] Invalid argument type
Cause: It is a dynamic error if an XQuery F&O is called with wrong argument type.

Action: n/a

LPX-01098: [FOCA0002] Invalid lexical value
Cause: It is a dynamic error if an XQuery F&O is called with wrong argument value.

Action: n/a

LPX-01099: [FOCA0001] Input value too large for decimal
Cause: It is a dynamic error if the Input value too large for decimal

Action: n/a

LPX-01100: [FOCA0003] Input value too large for integer
Cause: It is a dynamic error if the Input value too large for integer

Action: n/a

LPX-01101: External Error '~s' occurs
Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

LPX-01102: [FORG0008] both arguments to fn:dateTime have a specified timezone
Cause: It is an error to pass arguments to fn:dateTime having a specified timezone

Action: n/a

LPX-01105: [FOAR0001] Division by zero
Cause: It is an error to divide by zero

Action: n/a

LPX-01106: [FOAR0002] Numeric operation overflow/underflow
Cause: Numeric operations causes overflow/underflow

Action: n/a

LPX-01107: [FORG0002] invalid argument to fn:resolve-uri()
Cause: Wrong argument to fn:resolve-uri() function

Action: n/a

LPX-01108: [FORG0009] error in resolving a relative URI against a base URI in fn:resolve-uri()
Cause: Error resolving relative URI in fn:resolve-uri() function

Action: n/a

LPX-01109: [FOCA0005] NaN supplied as float/double value
Cause: NaN supplied as float/double value

Action: n/a

LPX-01110: [FOCA0006] String to be cast to decimal has too many digits of precision
Cause: String to be cast to decimal has too many digits of precision

Action: n/a

LPX-01111: [FOCH0002] Unsupported collation
Cause: Unsupported collation

Action: n/a

LPX-01112: [FOCH0003] Unsupported normalization form
Cause: Unsupported normalization form

Action: n/a

LPX-01113: [FOCH0004] Collation does not support collation units
Cause: Collation does not support collation units

Action: n/a

LPX-01114: [FODC0001] No context document
Cause: No context document

Action: n/a

LPX-01115: [FODC0002] Error retrieving resource
Cause: Error retrieving resource

Action: n/a

LPX-01116: [FODC0003]
Cause: Function stability not defined

Action: Function stability not defined

LPX-01117: [FODC0004] Invalid argument to fn:collection
Cause: Invalid argument to fn:collection

Action: n/a

LPX-01118: [FODC0005] Invalid argument to fn:doc or fn:doc-available
Cause: Invalid argument to fn:doc or fn:doc-available

Action: n/a

LPX-01119: [FODT0001] Overflow/underflow in date/time operation
Cause: Overflow/underflow in date/time operation

Action: n/a

LPX-01120: [FODT0002] Overflow/underflow in duration operation
Cause: Overflow/underflow in duration operation

Action: n/a

LPX-01121: [FODT0003] Invalid timezone value
Cause: Invalid timezone value

Action: n/a

LPX-01122: [FONS0005] Base-uri not defined in the static context
Cause: Base-uri not defined in the static context

Action: n/a

LPX-01123: [FORG0001] Invalid value for cast/constructor
Cause: Invalid value for cast/constructor

Action: n/a

LPX-01124: [FORX0001] Invalid regular expression flags
Cause: Invalid regular expression flags

Action: n/a

LPX-01125: [FORX0002] Invalid regular expression
Cause: Invalid regular expression

Action: n/a

LPX-01126: [FORX0003] Regular expression matches zero-length string
Cause: Regular expression matches zero-length string

Action: n/a

LPX-01127: [FORX0004] Invalid replacement string
Cause: Invalid replacement string

Action: n/a

LPX-01128: [FOTY0012] Argument node does not have a typed value
Cause: Argument node does not have a typed value

Action: n/a

LPX-01129: [XUST0001] Updating expression in a wrong position
Cause: It is a static error if an updating expression is used in any position other than one of the following: 1. The topmost expression in the body of a query. 2. The modify clause of a transform expression. 3. The return clause of a FLWOR expression. 4. The return clauses of a typeswitch expression in which every return clause contains an updating expression, an empty expression ( ), or a call to the fn:error function. 5. The then and else clauses of a conditional statement in which both the then and else clauses contain either an updating expression, an empty expression ( ), or a call to the fn:error function. 6. An operand of a comma expression in which each operand is either an updating expression, an empty expression ( ), or a call to the fn:error

function. 7. The content of a parenthesized expression. 8. The body of a function declaration in which the keyword updating is specified.

Action: n/a

LPX-01130: [XUST0002] Non-updating expression in a wrong position
Cause: It is a static error if an non-updating expression other than an empty expression ( ) or a call to the fn:error function is used in one of the following positions: 1. The modify clause of a transform expression. 2. The top-level expression in the body of a function declaration in which the keyword updating is specified.

Action: n/a

LPX-01131: [XUST0003] Repeated revalidation declaration
Cause: It is a static error if a Prolog contains more than one revalidation declaration.

Action: n/a

LPX-01132: [XUTY0004] Invalid attribute node in the insertion sequence
Cause: It is a type error if the insertion sequence of an insert expression contains an attribute node following a node that is not an attribute node.

Action: n/a

LPX-01133: [XUTY0005] Invalid target expression for 'insert'
Cause: In an insert expression where into, as first into, or as last into is specified, it is a type error if the target expression returns a non-empty result that does not consist of a single element or document node.

Action: n/a

LPX-01134: [XUTY0006] Invalid target expression for 'insert'
Cause: In an insert expression where before or after is specified, it is a type error if the target expression returns a non-empty result that does not consist of a single element, text, comment, or processing instruction node.

Action: n/a

LPX-01135: [XUTY0007] Invalid target expression for 'delete'
Cause: It is a type error if the target expression of a delete expression does not return a sequence of zero or more nodes.

Action: n/a

LPX-01136: [XUTY0008] Invalid target expression for 'replace'
Cause: In a replace expression, it is a type error if the target expression returns a non-empty result that does not consist of a single element, attribute, text, comment, or processing instruction node.

Action: n/a

LPX-01137: [XUDY0009] Invalid target expression for 'replace'
Cause: In a replace expression where value of is not specified, it is a dynamic error if the node returned by the target expression does not have a parent.

Action: n/a

LPX-01138: [XUTY0010] Invalid replacement sequence for 'replace'
Cause: In a replace expression where value of is not specified and the target is an element, text, comment, or processing instruction node, it is a type error if the replacement sequence does not consist of zero or more element, text, comment, or processing instruction nodes.

Action: n/a

LPX-01139: [XUTY0011] Invalid replacement sequence for 'replace'
Cause: In a replace expression where value of is not specified and the target is an attribute node, it is a type error if the replacement sequence does not consist of zero or more attribute nodes.

Action: n/a

LPX-01140: [XUTY0012] Invalid target expression for 'rename'
Cause: In a rename expression, it is a type error if the target expression returns a non-empty result that does not consist of a single element, attribute, or processing instruction node.

Action: n/a

LPX-01141: [XUTY0013] Invalid copy expression for transform
Cause: In a transform expression, it is a type error if a source expression in the copy clause does not return a single node.

Action: n/a

LPX-01142: [XUDY0014] Modified node was not created by the copy clause
Cause: In a transform expression, it is a dynamic error if the modify clause modifies any node that was not created by the copy clause.

Action: n/a

LPX-01143: [XUDY0015] Duplicate 'rename' for the same target node
Cause: It is a dynamic error if any node is the target of more than one rename expression within the same query.

Action: n/a

LPX-01144: [XUDY0016] Duplicate 'replace' for the same target node
Cause: It is a dynamic error if any node is the target of more than one replace expression (without value of being specified) within the same query.

Action: n/a

LPX-01145: [XUDY0017] Duplicate 'replace' for the same target node
Cause: It is a dynamic error if any node is the target of more than one replace value of expression within the same query.

Action: n/a

LPX-01146: [XUDY0018] External not updating function returns an updated value
Cause: It is a dynamic error if a function that was declared to be external but not updating returns a non-empty pending update list.

Action: n/a

LPX-01147: [XUDY0019] External updating function returns an invalid value
Cause: It is a dynamic error if a function that was declared to be both external and updating returns a non-empty data model instance.

Action: n/a

LPX-01148: [XUDY0020] Deleted node has no parent
Cause: An implementation may (but is not required to) raise a dynamic error if a node is deleted that had no parent before execution of the query began.

Action: n/a

LPX-01149: [XUDY0021] The result XDM instance violates XDM constraints
Cause: It is a dynamic error if the XDM instance that would result from applying all the updates in a query violates any constraint specified in [XQuery/XPath Data Model (XDM)]. In this case, none of the updates in the query are made effective.

Action: n/a

LPX-01150: [XUTY0022] Invalid attribute insertion into a document node
Cause: It is a type error if an insert expression specifies the insertion of an attribute node into a document node.

Action: n/a

LPX-01151: [XUDY0023] Updating expression introduces a namespace conflict
Cause: It is a dynamic error if an insert, replace, or rename expression affects an element node by introducing a new namespace binding that conflicts with one of its existing namespace bindings.

Action: n/a

LPX-01152: [XUDY0024] Updating expression introduces a namespace conflict
Cause: It is a dynamic error if the effect of a set of updating expressions is to introduce conflicting namespace bindings into an element node.

Action: n/a

LPX-01153: [XUDY0025] Invalid QName for processing instruction rename
Cause: It is a dynamic error if the target of a rename expression is a processing instruction node, and the new name expression returns a QName with a non-empty namespace prefix.

Action: n/a

LPX-01154: [XUST0026] Revalidation mode '~s' is not supported
Cause: It is a static error if a revalidation declaration in a Prolog specifies a revalidation mode that is not supported by the current implementation.

Action: n/a

LPX-01155: [XUDY0027] Invalid target expression
Cause: It is a dynamic error if the target expression of an insert, replace, or rename expression evaluates to an empty sequence.

Action: n/a

LPX-01156: [XUST0028] Updating function should not have a return type
Cause: It is a static error if a function declaration specifies both updating and a return type.

Action: n/a

LPX-01157: [XUDY0029] Insert expression target node doesn't have a parent
Cause: In an insert expression where before or after is specified, it is a dynamic error if node returned by the target expression does not have a parent.

Action: n/a

LPX-01158: [XUDY0030] Invalid insertion of an attribute node
Cause: It is a dynamic error if an insert expression specifies the insertion of an attribute node before or after a child of a document node.

Action: n/a

LPX-01159: [FOUP0001] Invalid 'fn:put' first operand
Cause: It is a dynamic error if the first operand of fn:put is not a node of a supported kind.

Action: n/a

LPX-01160: [FOUP0002] Invalid 'fn:put' second operand
Cause: It is a dynamic error if the second operand of fn:put is not a valid lexical representation of the xs:anyURI type.

Action: n/a

50
LRM-00100 to LRM-00123

LRM-00100: internal error [*number*]
Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LRM-00101: unknown parameter name '*string*'
Cause: The parameter name was misspelled.

Action: Spell the parameter name correctly.

LRM-00102: '*string*' is not in the legal range for '*string*'
Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

LRM-00103: '*string*' contains an illegal integer radix for '*string*'
Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

LRM-00104: '*string*' is not a legal integer for '*string*'
Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

LRM-00105: '*string*' is not a legal Boolean for '*string*'
Cause: The value is not a valid Boolean.

Action: Refer to the manual for allowable Boolean values.

LRM-00106: out of memory
Cause: The operating system has run out of memory.

Action: Take action to make more memory available to the program.

LRM-00107: parameter name abbreviation '*string*' is not unique
Cause: The given abbreviation was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

LRM-00108: invalid positional parameter value '*string*'
Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

LRM-00109: could not open parameter file '*string*'
Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

LRM-00110: syntax error at '*string*'
Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00111: no closing quote for value '*string*'
Cause: A quoted string was started but not finished.

Action: Put a closing quote in the proper location.

LRM-00112: multiple values not allowed for parameter '*string*'
Cause: An attempt was made to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

LRM-00113: error when processing file '*string*'
Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

LRM-00114: error when processing from command line
Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

LRM-00115: error when processing an environment variable
Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

LRM-00116: syntax error at '*string*' following '*string*'
Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00117: syntax error at '*string*' at the start of input
Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00118: syntax error at '*string*' at the end of input
Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00119: unable to obtain a valid value for '*string*'
Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

LRM-00120: '*string*' is not a legal Oracle number for '*string*'
Cause: The value is not a valid Oracle number.

Action: Refer to the manual for allowable Oracle number values.

LRM-00121: '*string*' is not an allowable value for '*string*'
Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

LRM-00122: value '*string*' for '*string*' must be between '*number*' and '*number*'
Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

LRM-00123: invalid character *number* found in the input file
Cause: A character that is invalid was found in the input file.

Action: Specify an input file that contains only valid characters.

51
LSX-00001 to LSX-00347

LSX-00001: NULL pointer
Cause: A NULL pointer was detected as an internal error condition.

Action: This is a programming error by the caller of the Schema processor. Contact someone who can fix the problem.

LSX-00002: root element is not *schema*
Cause: The top-level element of an XML Schema must be *schema*.

Action: Correct the Schema; consult the Schema specification.

LSX-00003: invalid attribute "~1S" for element "~2S"
Cause: The named Schema element had an invalid attribute.

Action: Correct the Schema; consult the Schema specification.

LSX-00004: unexpected XML node type
Cause: Schema contains an XML node other than element, text (or CDATA),

Action: Other node types are not permitted; remove them.

LSX-00008: feature "~s" is not implemented
Cause: An attempt was made to use a feature that is not yet implemented.

Action: Make an enhancement request for the feature.

LSX-00009: data missing for type "~S"
Cause: Data is missing for an element or attribute of a simple type.

Action: Add data in the element or attribute.

LSX-00010: extra element(s) at end of "~S"
Cause: Extra elements exist at the end of schema component declarations.

Action: Remove the extra elements.

LSX-00011: internal error: ~s\n
Cause: Implementation error.

Action: File a bug.

LSX-00013: element "~S" not from Schema of Schemas
Cause: Bogus element exists in the schema file. Its name is not from Schema of Schemas.

Action: Remove the bogus element.

LSX-00014: empty instance document
Cause: Instance document to be Schema validated was empty (no top-level element).

Action: Provide a complete XML instance document.

LSX-00015: failed to parse document
Cause: Failed to parse the schema document using the given URI.

Action: Provide the correct URI and make sure that the schema document is valid.

LSX-00016: schema and instance document have incompatible character sets
Cause: Parsed schema components were in a simple-type character set while the parsed instance document data was not. A simple-type character set is single-byte, not shift sensitive, and has no linguistic specials in use.

Action: Reinitialize the schema global context with appropriate parser context settings, i.e. pass a parser context with its output encoding set to be a multibyte or Unicode character set.

LSX-00018: invalid schema context
Cause: An invalid schema context was provided to the processor. Multiple schema documents were loaded and assembled into the schema context. At least one of them is not fully valid with respect to a schema corresponding to the Schema for Schemas.

Action: Check the errors reported when schema documents were loaded, mapped, or validated. Correct errors found in the identified schema documents and reload them into a new schema context. Then provide the new schema context to the processor.

LSX-00020: unknown type "~S"
Cause: A specified type was unknown (not defined in any loaded Schemas).

Action: Make sure the type was defined and that the type usage referenced the correct Schema.

LSX-00021: undefined element "~S"
Cause: Element is undefined in the specified namespace.

Action: If the element name is misspelled, correct the spelling.

LSX-00022: unknown namespace prefix "~S"
Cause: Prefix in a QName is undefined in the current scope.

Action: Correct the prefix name if it's misspelled.

LSX-00023: unknown namespace URI "~S"
Cause: Namespace URI is unknown to the schema processor.

Action: Correct the namespace URI if it's misspelled.

LSX-00024: unknown attribute group "~S"
Cause: The name of attribute group is unknown to the schema processor in the current scope.

Action: Correct the name of attribute group if it's misspelled.

LSX-00025: unknown group "~S"
Cause: The name of group is unknown to the schema processor in the current scope.

Action: Correct the name of group if it's misspelled.

LSX-00026: unknown attribute "~S"
Cause: The name of attribute is unknown to the schema processor in the current scope.

Action: Correct the name of attribute if it's misspelled.

LSX-00027: property "~s" unknown
Cause: The named validation property was unknown.

Action: Refer to the documentation for the complete list of validation properties.

LSX-00102: duplicate element "~S"
Cause: Element declaration is not unique within its scope.

Action: Rename the element.

LSX-00103: duplicate group "~S"
Cause: Group declaration is not unique within its scope.

Action: Rename the group.

LSX-00104: duplicate type "~S"
Cause: Type definition is not unique within its scope.

Action: Rename the type.

LSX-00105: duplicate attribute group "~S"
Cause: Attribute group declaration is not unique within its scope.

Action: Rename the attribute group.

LSX-00106: duplicate attribute "~S"
Cause: Attribute declaration is not unique within its scope.

Action: Rename the attribute.

LSX-00110: facet "~S" should have single value attribute
Cause: A facet declaration did not have a value attribute.

Action: Each facet declaration must contain one and only one value attribute.

LSX-00111: type "~S" contains invalid facets
Cause: A specified facet was invalid for a type. Each datatype has a different set of facets which may apply.

Action: Use only applicable facets for the type.

LSX-00112: facet "~S" duplicated
Cause: A facet (other than "enumeration") was specified more than once.

Action: Only the enumeration facet may be used more than once for a type.

LSX-00113: facet "~1S" has invalid value "~2S"
Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

LSX-00114: facet "~S" not in schema schema
Cause: Facets are not defined in the XMLSchema namespace.

Action: Remove illegal facet declarations.

LSX-00116: mutually exclusive facets are not allowed
Cause: Mutual exclusiveness violations were found for facets. For example, both "length" and either "minLength" or "maxLength" are not allowed to be facets.

Action: Remove the facets that are at fault.

LSX-00117: "minLength" should not be greater than "maxLength"
Cause: The value of "minLength" must be less than or equal to the value of "maxLength".

Action: Correct either "minLength" or "maxLength".

LSX-00118: fixed facet value cannot be changed
Cause: The value of a fixed facet in the base type definition should remain the same.

Action: Remove the fixed facet specification in the parent's type for the erroneous facet component.

LSX-00119: value is not valid restriction of parent's minLength
Cause: There was an error in that minLength was among the members of {facets} of {base type definition} and {value} was less than the {value} of the parent minLength.

Action: Increase the {value} of minLength.

LSX-00120: value is not valid restriction of parent's maxLength
Cause: There was an error in that maxLength was among the members of {facets} of {base type definition} and {value} was greater than the {value} of the parent maxLength.

Action: Increase the {value} of maxLength.

LSX-00121: value is not valid restriction of parent's length
Cause: There was an error in that length was among the members of {facets} of {base type definition} and {value} was not equal to the {value} of the parent length.

Action: Make {value} the same as parent's.

LSX-00122: value is not valid restriction of parent's whiteSpace
Cause: There was an error in that whiteSpace was among the members of {facets} of {base type definition} and at least one of the following conditions was true: 1 {value} is replace or preserve and {value} of the parent whiteSpace is collapse 2 {value} is preserve and the {value} of the parent whiteSpace is replace

Action: Change the {value} of whiteSpace.

LSX-00123: base type is required
Cause: Missing base type declaration in the type definition.

Action: Define a base type.

LSX-00124: "list" element is improperly defined
Cause: A "list" element either must have its "itemType" attribute set or have one of its children be a "simpleType" element, but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00125: "restriction" element is improperly defined
Cause: A "restriction" element either must have its "base" attribute set or have one of its children be a "simpleType" element, but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00126: facet "~1S" has invalid value "~u"
Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

LSX-00127: totalDigits must be greater than or equal to fractionDigits
Cause: The value of the facet totalDigits is less than the value of the facet fractionDigits.

Action: Ensure that totalDigits is greater than or equal to fractionDigits.

LSX-00128: facet "~1S" has invalid value "~s"
Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

LSX-00130: attribute "processContents" has invalid value "~S"
Cause: Attribute "processContents" in the "any" element or "anyAttribute" declaration has an invalid value.

Action: Specify one of the following values: lax, skip, or strict.

LSX-00132: attribute "~1S" has invalid occurrences value "~2S"
Cause: A minOccurs or maxOccurs attribute had an invalid value (not a integer or less than zero).

Action: Use a legal "occurs" value.

LSX-00133: attribute "use" has invalid value "~S"
Cause: A "use" attribute had an invalid value. Choices for "use" are "default", "fixed", "optional", "prohibited", or "required".

Action: Change the attribute to one of the above values.

LSX-00134: attribute "~1S" has invalid qualification "~2S"
Cause: An attribute that specifies qualification (form, attributeFormDefault, elementFormDefault) was invalid; it must be one of "qualified" or "unqualified".

Action: Change the attribute to one of the above values.

LSX-00135: invalid min/max Occurs for *all* element, must be 0/1
Cause: "minOccurs" has a value other than 0/1 or "maxOccurs" has a value other than 1.

Action: Specify 0/1 for "minOccurs" or "maxOccurs".

LSX-00136: "maxOccurs" is less than "minOccurs"
Cause: The value of the "maxOccurs" specification is less than the value of the "minOccurs" specification.

Action: Correct "minOccurs" or "maxOccurs".

LSX-00141: ID type may only be used in attributes
Cause: For backward compatibility with DTD, ID type may only be used in attributes.

Action: Remove the ID type.

LSX-00142: invalid sub-element "~1S" for element "~2S"
Cause: There was an invalid sub-element in the content of either the attribute or the element declaration. This was because the sub-element was either at the wrong position or out of context.

Action: Remove the sub-element or move it to the correct position.

LSX-00143: element "~S" must have type or ref
Cause: A Schema element was declared but was neither type or reference.

Action: One of type or reference must be specified.

LSX-00144: attribute "~1S" invalid derivation-restriction value "~2S"
Cause: An attribute which specifies a derivation-restriction setting (block, content, final) had an invalid value. Choices are "#all", "extension", or "restriction".

Action: Change the attribute to one of the above values.

LSX-00145: attribute "~1S" invalid derived value "~2S"
Cause: A derivedBy attribute had an invalid value. Choices are "extension" or "restriction".

Action: Change the attribute to one of the above values.

LSX-00146: element or attribute is improperly defined
Cause: An element or attribute definition must have either its "type" attribute set or must have one of its children be a "simpleType" or "complexType" element but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00147: "~1S" cannot contain "~2S"
Cause: An invalid schema component exists in the current declaration.

Action: Remove the schema component.

LSX-00148: annotation must come first in "~S"
Cause: "annotation" element must be the first in the content.

Action: Make "annotation" the first element.

LSX-00149: duplicated ID specified in "~S"
Cause: An attempt was made to specify two distinct members of {attribute uses}with {attribute declaration}s, both of whose {type definition}s are from ID or are derived from ID.

Action: Declare only one member of the {attribute uses} whose {type definition} is from ID or will be derived from ID.

LSX-00150: attributeGroup reference shouldn't have children
Cause: A reference-to-attributeGroup element has children. It is suppose to be empty except for annotations.

Action: Remove the children.

LSX-00151: invalid combination of attributes "ref" and "name"
Cause: If the item's parent is not *schema*, then either the "ref" or the "name" attribute must be present, but not both. Top-level elements or attributes must have a name.

Action: Specify either the "ref" or "name" attribute.

LSX-00152: only "minOccurs", "maxOccurs", or "id" is allowed
Cause: If the item's parent is not *schema* and "ref" is present, then "complexType", "simpleType", "key", "keyref", "unique", "nillable", "default", "fixed", "form", "block", and "type" must be absent.

Action: Remove the prohibited attribute.

LSX-00153: invalid combination of default and fixed attributes
Cause: It is an error for a declaration to contain both fixed and default attributes.

Action: Remove either the default or the fixed attributes.

LSX-00154: attribute "use" must have its value set to "optional"
Cause: If "default" and "use" are both present, use must have its value set to "optional".

Action: Remove the default attribute or change the value of the "use" attribute.

LSX-00155: invalid use of attribute "ref"
Cause: If the item's parent is not *schema* and the attribute "ref" is present, then the element "simpleType" and the attributes "form" and "type" must be absent.

Action: Remove the prohibited items.

LSX-00156: type is final and no derivations are allowed
Cause: Derivation from a type that is declared to be final occurred.

Action: Remove the final declaration from the base type.

LSX-00157: "~S" is abstract and cannot be used in an instance document
Cause: The element declaration or the type definition was abstract.

Action: When an element is declared to be abstract, a member of that element's substitution group must appear in the instance document. When an element's corresponding type definition is declared as abstract, all instances of that element must use xsi:type to indicate a derived type that is not abstract.

LSX-00158: base type of "~S" must be simple type or primitive datatype
Cause: The derivation constraint was violated.

Action: Use complexType instead of simpleType.

LSX-00159: list content of multiple simple types is not allowed
Cause: Two or more simple types were specified within the list content .

Action: Specify only one simple type.

LSX-00160: invalid substitution group affiliation between "~S" and "~S"
Cause: There was an error in that {substitution group exclusions} prevented substitution group affiliation by type restriction or type extension.

Action: Remove the offending deriving method from the {substitution group exclusions} list.

LSX-00161: disallowed type substitution between "~S" and "~S"
Cause: There was a substituted type whose deriving method falls in the union of the {disallowed substitutions} and the {type definition}'s {prohibited substitutions}.

Action: Remove the offending deriving method from the element's {disallowed substitutions} list or the {type definition}'s {prohibited substitutions} list.

LSX-00162: string "~S" is an invalid default for the complex type
Cause: If the {content type} is a simple type definition, then the string must be valid with regard to the simple type definition as defined by String Valid (3.14.4). If the {content type} is mixed, then the {content type}'s particle must be emptiable as defined by Particle Emptiable (3.9.6). However, one of these conditions was not met, resulting in this error.

Action: Make the default string a valid default with regard to the complex type definition.

LSX-00163: duplicated content specification in "~S"
Cause: There was a duplicate content specification in the children of complexType.

Action: Remove the duplicate content specification.

LSX-00164: no content specified in "~S"
Cause: In a simpleContent specification, either "restriction" or "extension" was not specified as a child.

Action: Add either a "restriction" or an "extension" element information item.

LSX-00165: content type of "~S" must be simple type
Cause: The content type of the type definition was not a simple type definition.

Action: Use complexContent instead of simpleContent .

LSX-00166: both content types must be mixed or both must be element-only
Cause: If the content types of the derived type and base type are not the same simple type definition and the content type of the base type is not empty, then both content types must be mixed or both must be element-only. This was not the case, resulting in this error.

Action: Add attribute mixed="true" or remove it.

LSX-00167: defining form of "~S" must occur at the top level
Cause: The defining form did not occur at the top level of a schema.

Action: Move attributeGroup or group definition to the top level of the schema.

LSX-00168: referring form of "~S" must NOT occur at the top level
Cause: The referring form did not occur within a complex type definition or an attribute group definition.

Action: Move the attributeGroup definition to within a complex type definition or an attribute group definition. Or, move the group definition to within a complex type, restriction, extension, choice, or sequence.

LSX-00169: circular group reference is disallowed outside *redefine*
Cause: There was a circular group reference.

Action: One of the group references needs to be changed to a group definition.

LSX-00170: union must have memberTypes attribute or some simpleType children
Cause: There was no member type definition for the union declaration.

Action: Add memberTypes attribute or simpleType children.

LSX-00171: missing required sub-element "~S"
Cause: The sub-element specified in the error message was required.

Action: Add the required sub-element.

LSX-00172: "~S" is not a valid restriction of "~S"
Cause: The schema component constraint, Derivation Valid (Restriction, Complex) or Particle Valid (Restriction), was violated.

Action: Modify the base type (particle) or the restricted type (particle) definition.

LSX-00173: ~S of ~S type is not a valid restriction of ~S of ~S type
Cause: The schema component constraint, Particle Restriction OK (Elt:Elt -- NameAndTypeOK), was violated.

Action: Modify either or both element declaration particles.

LSX-00174: "~S" is not a valid derivation of "~S"
Cause: The schema component constraint, Derivation Valid (Restriction, simple), (Restriction, complex) or (Extension), was violated.

Action: Modify the base type or the derived type definition.

LSX-00175: a complex base within "simpleContent" must have simple content
Cause: A complex base within "simpleContent" was not restricted to contain only simple content.

Action: Modify the base type or the derived type definition.

LSX-00176: circular reference detected in schema component named "~S"
Cause: An attempt was made to use a circular reference. This is not allowed. For example, it is not possible to return to an element declaration by repeatedly following the {substitution group affiliation} property. Or, within the {particles} of a group there must not be at any depth a particle whose {term} is the group itself.

Action: Modify one of the schema components in the loop.

LSX-00200: element "~S" not empty
Cause: Content of the element must be empty.

Action: Remove any schema components in the content.

LSX-00201: contents of "~S" should be elements only
Cause: Node with type other than "element", "processing instruction", or "comment" exists in the content of the violating element.

Action: Remove the offending nodes.

LSX-00202: contents of "~S" should be text only
Cause: Node with type other than "text", "processing instruction", or "comment" exists in the content of the violating element.

Action: Remove the offending nodes.

LSX-00204: extra data at end of complex element
Cause: Extra nodes exist at the end of an element with a complex type definition.

Action: Remove the offending nodes or check the definition of the complex type.

LSX-00205: element "~1S" value "~2S" is wrong (must be "~3S")
Cause: The element had a value other than its fixed value.

Action: Use the fixed value as its value.

LSX-00206: substitution for element "~S" is disallowed
Cause: An attempt was made to substitute an element that violated a constraint.

Action: Change to a valid new element that can be substituted for the headElement.

LSX-00207: empty list is disallowed
Cause: An empty list was supplied where at least one value is required.

Action: Specify at least one valid list item.

LSX-00208: circular type reference disallowed
Cause: A type referenced itself as a member type, either directly or indirectly using other types.

Action: Remove the circular type dependency.

LSX-00209: fixed or default not allowed on ID-based type
Cause: A type derived from the ID type specified a fixed value or a default value.

Action: Remove the fixed or default value from the type.

LSX-00210: value "~1S" out of range for type "~2S"
Cause: Value is out of range for the data with a specific type.

Action: Fix the value.

LSX-00211: value "~1S" whose fractional digits exceeds ~2d
Cause: Too many fractional digits after the decimal point.

Action: Remove the extra fractional digits.

LSX-00212: value "~1s" whose total digits exceeds ~2d
Cause: Too many digits in the decimal data.

Action: Remove the extra digits.

LSX-00213: only ~1d occurrences of particle "~2S", minimum is ~3d
Cause: Too few occurrences of particles in the node.

Action: Specify more particles.

LSX-00214: too many occurrences of particle "~1S", maximum is ~2d
Cause: Too many occurrences of particles in the node.

Action: Remove extra ones.

LSX-00215: value "~1S" whose total digits exceeds ~2d
Cause: There were too many digits in the decimal data.

Action: Remove the extra digits.

LSX-00220: "~1S" is wrong length, should be ~2d
Cause: Data of simple type has invalid length.

Action: Fix the length of the data.

LSX-00221: "~1S" is too short (minimum length is ~2d)
Cause: The length of the data is too short.

Action: Prepend extra characters (such as zeros or blank characters) to make the data longer.

LSX-00222: "~1S" is too long (maximum length is ~2d)
Cause: The length of the data is too long.

Action: Remove extra characters from the data.

LSX-00229: item type is not a valid type for a list simple type
Cause: The specified item type must not itself be a list type, and must be one of the types identified in [XML Schemas: Datatypes] as a suitable item type for a list simple type.

Action: Change the list schema component's declaration.

LSX-00230: invalid integer "~S"
Cause: Illegal characters exist in the "integer" or its derivative type declarations.

Action: Remove illegal characters.

LSX-00231: invalid unsigned integer "~S"
Cause: Illegal characters exist in the "unsignedLong", "unsignedInt", "unsignedShort", or "unsignedByte" declarations.

Action: Remove illegal characters.

LSX-00232: invalid unsigned long "~S"
Cause: Illegal characters exist in the "unsignedLong" declaration.

Action: Remove illegal characters.

LSX-00233: invalid long "~S"
Cause: Illegal characters exist in the "long" declaration.

Action: Remove illegal characters.

LSX-00234: invalid decimal "~S"
Cause: Illegal characters exist in the "decimal" declaration.

Action: Remove illegal characters.

LSX-00235: invalid URI "~S"
Cause: Invalid URI specification for data of "anyURI" type.

Action: Remove illegal characters.

LSX-00237: invalid Name "~S"
Cause: Invalid XML name.

Action: Remove illegal characters.

LSX-00238: invalid Nmtoken "~S"
Cause: Invalid Nmtoken.

Action: Remove illegal characters.

LSX-00240: bad float "~S"
Cause: Invalid value for "float" type data.

Action: Remove illegal characters.

LSX-00241: bad double "~S"
Cause: Invalid value for "double" type data.

Action: Remove illegal characters.

LSX-00242: bad Boolean "~S"
Cause: Boolean data must have a value from the following set: "1", "0", "true", or "false".

Action: Specify one of "1", "0", "true", or "false".

LSX-00243: invalid date "~S"
Cause: Invalid value for data of "date" type.

Action: Remove illegal characters.

LSX-00244: invalid NCName "~S"
Cause: Invalid value for data of "NCName" type.

Action: Remove illegal characters.

LSX-00245: invalid ID "~S"
Cause: Data specified is not of "NCName" type.

Action: Remove illegal characters.

LSX-00246: invalid QName "~S"
Cause: Invalid value for data of "QName" type.

Action: Remove illegal characters.

LSX-00247: invalid language specification "~S"
Cause: Invalid value for data of "language" type.

Action: Remove illegal characters.

LSX-00248: invalid duration "~S"
Cause: Invalid value for data of "duration" type.

Action: Remove illegal characters.

LSX-00249: invalid date or time "~S"
Cause: Invalid value for data of "dateTime", "time", "gYearMonth", "gYear", "gMonthDay", "gDay", or "gMonth" type.

Action: Remove illegal characters.

LSX-00250: invalid normalizedString "~S"
Cause: Invalid value for data of "normalizedString" type.

Action: Remove illegal characters.

LSX-00251: invalid token "~S"
Cause: Invalid value for data of "token" type.

Action: Remove illegal characters.

LSX-00252: invalid union "~S"
Cause: Data of simple type is not one of the union type.

Action: Use one of the union type as its type.

LSX-00253: branch is empty
Cause: The pattern specification "branch1 | branch2" has either "branch1" or "branch2" missing.

Action: Remove '|' or add either "branch1" or "branch2".

LSX-00255: mismatched parentheses
Cause: ")" found without a matching "(" in a pattern specification.

Action: Add "(" to the pattern specification.

LSX-00256: empty character class expression
Cause: "[]" found when processing a character class expression.

Action: Specify the character group within the brackets.

LSX-00257: atom specification is missing
Cause: A quantifier was found without an atom specification.

Action: Add an atom specification in front of the quantifier.

LSX-00258: invalid escape character
Cause: "x" in "\x" is not a valid escape character.

Action: Change "x" to a valid escape character.

LSX-00259: invalid character found in the pattern
Cause: An unexpected character was found in the pattern.

Action: Fix the pattern.

LSX-00260: unexpected end of pattern
Cause: Something is missing at the end of the pattern.

Action: Fix the pattern.

LSX-00261: invalid character property
Cause: An error occurred when processing the character property. For example, "{" is missing after "\p" or "\P".

Action: Fix the character property.

LSX-00262: attribute "~1S" cannot have complex type "~2S"
Cause: The type of the attribute is "complex".

Action: Specify the type of the attribute to be "simple".

LSX-00263: undefined attribute "~S"
Cause: Violating attribute is not defined in the current scope.

Action: Correct the attribute name if it's misspelled.

LSX-00264: attribute "~S" is prohibited (may not occur)
Cause: Global declarations cannot contain the attributes "ref", "minOccurs", or "maxOccurs", or the use of this attribute is explicitly declared as "prohibited" by the schema.

Action: Remove the attribute.

LSX-00265: attribute "~1S" value "~2S" is wrong (must be "~3S")
Cause: Attribute has a value other than its fixed value.

Action: Use fixed value as its value.

LSX-00266: missing required attribute "~S"
Cause: A required attribute is missing.

Action: Add the required attribute.

LSX-00270: hex-encoded binary has odd length
Cause: Data of "hexBinary" type has odd number of digits.

Action: Add missing digits as appropriate.

LSX-00271: invalid character "~c" in hex-encoded binary
Cause: Data of "hexBinary" type has invalid characters.

Action: Remove illegal characters.

LSX-00272: BASE64-encoded binary grouped improperly (not 4's)
Cause: Number of digits is not a multiple of four.

Action: Add missing digits as appropriate.

LSX-00273: invalid character "~c" in base64-encoded binary
Cause: Data of "base64Binary" type has invalid characters.

Action: Remove illegal characters.

LSX-00274: invalid padding in base64-encoded binary
Cause: Invalid padding characters at the end of data.

Action: Use "=" as the padding characters.

LSX-00280: duplicate ID "~S"
Cause: ID name is not unique within the schema scope.

Action: Rename the ID.

LSX-00281: referenced ID "~S" is not defined
Cause: Referenced ID name is not defined within the schema scope.

Action: Define the ID.

LSX-00282: duplicate notation name "~S"
Cause: The name of the "notation" element is not unique within the schema scope.

Action: Rename the element.

LSX-00283: referenced notation "~S" is not defined
Cause: Referenced notation name is not defined within the schema scope.

Action: Define the element.

LSX-00284: duplicate constraint name "~S"
Cause: Each constraint declaration has a name which exists in a single symbol space for constraints.

Action: Choose a different name.

LSX-00285: referenced key "~S" is not defined
Cause: Referenced key name is not defined within the schema scope.

Action: Define the key.

LSX-00286: duplicate key "~S" for {"~S"}"~S"
Cause: The key value was not unique within its scope.

Action: Change the key value.

LSX-00287: duplicate key "~S"
Cause: The key value was not unique within its scope.

Action: Change the key value.

LSX-00290: invalid enumeration choice "~S"
Cause: The value of the data is not one of the enumeration choice.

Action: Select one of the enumeration choice as its value.

LSX-00291: value "~1S" is less than minimum "~2S" (~3S)
Cause: Data has a value less than required minimum.

Action: Increase the value.

LSX-00292: value "~1S" is greater than maximum "~2S" (~3S)
Cause: Data has a value greater than maximum.

Action: Decrease the value.

LSX-00293: missing one or more fields from element "~S"
Cause: The required fields were missing from the content of the element.

Action: Add the fields.

LSX-00294: field "~S" produced multiple hits
Cause: XPath expressions relative to each element selected by a {selector}are specified by {fields}. These XPath expressions must identify a single node (element or attribute) whose content or value was used in the constraint. This content or value must be of a simple type.

Action: Remove duplicate elements or attributes.

LSX-00295: field element "~S" is not a simple type
Cause: The field element evaluated to a node-set with a member that was not a simple type.

Action: Change the field element's type.

LSX-00296: field value "~S" could not be compared to facet
Cause: The value of the data could not be compared to the facet value because one value had a time zone while the other did not.

Action: Correct the data to add the necessary time zone or to remove the unnecessary time zone.

LSX-00300: group must have name or ref but not both
Cause: "ref" or "name" attributes are either both missing or have both been specified.

Action: Specify either "ref", "name", but not both.

LSX-00310: local element or attribute should be namespace qualified
Cause: Element or attribute name is not namespace qualified.

Action: Add prefix or default namespace URI declaration.

LSX-00311: local element or attribute shouldn't be namespace qualified
Cause: Element or attribute name is namespace qualified.

Action: Remove prefix or default namespace URI declaration from itself or ancestors.

LSX-00320: missing required elements in *all*
Cause: Some required elements in "all" particle are missing.

Action: Add the missing elements.

LSX-00330: missing range start character
Cause: Missing range start character in a character range specification.

Action: Add the missing characters.

LSX-00331: missing comma
Cause: A comma is missing in a range specification.

Action: Add the missing characters.

LSX-00332: bad decimal digits in a quantifier specification
Cause: Quatifier has invalid characters.

Action: Remove illegal characters.

LSX-00333: literal "~S" is not valid with respect to the pattern
Cause: Literal is not valid with respect to the pattern.

Action: Choose correct characters in the literal.

LSX-00340: improper namespace value for the imported element
Cause: If the namespace attribute is present, then its actual value must not match the actual value of the enclosing schema's targetNamespace attribute. If the namespace attribute is not present, then the enclosing schema must have a targetNamespace attribute.

Action: Match namespace value.

LSX-00341: ENTITY or ENTITIES type may only be used in attributes
Cause: For compatibility, ENTITY or ENTITIES should be used only on attributes.

Action: Remove the ENTITY or ENTITIES.

LSX-00342: value of attribute "base" must be a complex type definition
Cause: If the "complexContent" alternative is chosen, then the type definition resolved to by the actual value of the attribute "base" must be a complex type definition.

Action: Choose a complex type definition as its base type.

LSX-00343: "~S" is not nillable
Cause: Attribute nillable was set to be "false" in element's declaration.

Action: Remove attribute xsi:nil from the instance document.

LSX-00344: namespace values "~1S" and "~2S" differ
Cause: The targetNamespace specified in the schema document differed from either: a) the value of the enclosing schema's namespace attribute, or b) the value of the namespace attribute identified in the import element information item.

Action: Match the namespace value to the enclosing schema's targetNamespace attribute or the actual value of the namespace attribute identified in the import element information item.

LSX-00345: Element ("~1S") from "~2S" namespace is unexpected. Expecting element from "~3S" namespace
Cause: The namespace of the Xml Node in the instance document does not match with the expected element definition namespace

Action: n/a

LSX-00346: pattern too long or complex
Cause: The pattern facet was too long or too complex and exceeded the maximum size allowed after compilation as a regular expression.

Action: Simplify the pattern expression.

LSX-00347: search of pattern contains too many branches
Cause: Evaluation of the string value versus the pattern resulted in too many branches and was prematurely terminated.

Action: Simplify the pattern expression.

52
MGTCA-01001 to MGTCA-01724

MGTCA-01001: clusterware stack did not respond
Cause: A wallet operation was requested when the Oracle Clusterware stack was down.

Action: Contact Oracle Support Services.

MGTCA-01002: clusterware stack did not respond to wallet operation
Cause: User attributes could not be read because the Grid Infrastructure Management Repository wallet location was not accessible.

Action: Contact Oracle Support Services.

MGTCA-01003: wallet access denied
Cause: An attempt to access the wallet was denied because the user does not have the required permissions.

Action: Contact Oracle Support Services.

MGTCA-01004: clusterware wallet internal error
Cause: An invalid wallet operation was performed or Oracle Cluster Registry storage for wallet was not present.

Action: Contact Oracle Support Services.

MGTCA-01005: Could not connect to the GIMR. \n{0}
Cause: An attempt to perform a SQL operation against the Oracle Grid Infrastructure Management Repository (GIMR) failed because a connection could not be established to the repository. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

MGTCA-01006: Could not change user credentials for Oracle Grid Infrastructure Management Repository.
Cause: An attempt to change user credentials for the Oracle Grid Infrastructure Management Repository (GIMR) failed. The accompanying messages provide detailed failure information. This was an internal error.

Action: Contact Oracle Support Services.

MGTCA-01007: Grid Infrastructure Management Repository is not running on this node
Cause: During the execution of 'mgmtca', no running instance of the Grid Infrastructure Management Repository was found on the node.

Action: Run 'mgmtca' on the node having Grid Infrastructure Management Repository.

MGTCA-01008: An internal error occurred while querying for the node running Grid Infrastructure Management Repository
Cause: During the execution of 'mgmtca', an internal error occurred while querying for the node running Grid Infrastructure Management Repository.

Action: Contact Oracle Support Services.

MGTCA-01009: failed to perform pre-rollback operations in the current cluster
Cause: An attempt to execute the 'mgmtca' command encountered an internal error.

Action: Contact Oracle Support Services.

MGTCA-01100: This utility is used to configure the Grid Infrastructure Management Repository.\nUsage: mgmtca [*verb options*]\nFollowing are the supported verbs on the Grid Infrastructure Management Repository Server Cluster:\n createGIMRContainer - creates local Grid Infrastructure Management Repository database for server cluster.\n createRepos - creates a repository and credentials for the local cluster or a member cluster.\n removeRepos - removes the repository and credentials for a member cluster.\n queryRepos - lists the member clusters that are currently serviced by the Domain Services Cluster.\n configRepos - configures the repository for the local cluster or a member cluster.\n setpasswd - sets the password for a set of users in the local cluster.\nFollowing are the supported verbs on the member cluster:\n createRepos - creates a schema in the repository for the member cluster.\n configRepos - configures the repository for the member cluster. Type 'mgmtca *verb* -h' to get help on a specific mgmtca verb.
Cause: None

Action: None

MGTCA-01101: GIMR SQL operation failure
Cause: An attempt to perform a SQL operation against the Oracle Grid Infrastructure Management Repository (GIMR) failed. Additional failure information is provided by the accompanying messages. This was an internal error.

Action: Contact Oracle Support Services.

MGTCA-01102: failure in performing database operation to retrieve the name of the Pluggable Database in the Oracle Grid Infrastructure Management Repository
Cause: An attempt to retrieve the name of the Pluggable Database in Oracle Grid Infrastructure Management Repository failed.

Action: Contact Oracle Support Services

MGTCA-01103: failure in performing database operation to unlock the user of Oracle Grid Infrastructue Management Database
Cause: The user account to be unlocked did not exist.

Action: Contact Oracle Support Services

MGTCA-01104: An internal error occurred during the remote execution of 'mgmtca' on node {0}, which is running the GIMR.
Cause: An attempt to execute 'mgmtca' remotely on the indicated node encountered an internal error. The indicated node was running the Oracle Grid Infrastructure Management Repository (GIMR).

Action: Contact Oracle Support Services.

MGTCA-01105: The GIMR is not running in this cluster.
Cause: An attempt to execute the command 'mgmtca' was rejected because the Oracle Grid Infrastructure Management Repository (GIMR) was not running in this cluster.

Action: Start the GIMR using the command 'srvctl start mgmtdb', then verify that it has started using the command 'srvctl status mgmtdb'. Retry the operation once the GIMR has been started.

MGTCA-01106: An internal error occurred while querying the state of the Grid Infrastructure Management Repository.
Cause: During the execution of 'mgmtca', an internal error occurred while querying the state of the Grid Infrastructure Management Repository.

Action: Contact Oracle Support Services.

MGTCA-01107: The resource for the Grid Infrastructure Management Repository does not exist.
Cause: The execution of 'mgmtca' could not complete because the resource for the Grid Infrastructure Management Repository did not exist.

Action: Contact Oracle Support Services.

MGTCA-01108: failed to determine CRS Home location
Cause: Execution of 'mgmtca' to retrieve the CRS Home location failed. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01109: failed to determine Oracle Base location
Cause: Execution of 'mgmtca' to retrieve the Oracle Base location failed. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01110: An internal error occurred while querying the state of the Grid Infrastructure Management Repository during reconfiguration.
Cause: The execution of 'mgmtca' could not complete because an internal error occurred while querying the state of the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

MGTCA-01111: An internal error occurred while stopping the existing instance of the Grid Infrastructure Management Repository during reconfiguration.
Cause: The execution of 'mgmtca' could not complete because an internal error occurred while stopping the existing instance of the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

MGTCA-01112: An internal error occurred while removing the existing instance of the Grid Infrastructure Management Repository during reconfiguration.
Cause: The execution of 'mgmtca' could not complete because an internal error occurred while removing the existing instance of the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

MGTCA-01113: The reconfigure operation for the Grid Infrastructure Management Repository could not complete because there was already an instance running on the cluster.
Cause: The reconfigure operation for the Grid Infrastructure Management Repository could not complete because there was already an instance running on the cluster.

Action: Contact Oracle Support Services.

MGTCA-01114: An internal error occurred while creating the Grid Infrastructure Management Repository during reconfiguration.
Cause: The execution of 'mgmtca' could not complete because an internal error occurred while creating the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

MGTCA-01115: An internal error occurred while starting the resource for the Grid Infrastructure Management Repository during reconfiguration.
Cause: The execution of 'mgmtca' could not complete because an internal error occurred while starting the resource for the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

MGTCA-01116: The syntax of the 'mgmtca' command is incorrect.
Cause: The 'mgmtca' command was rejected because the syntax as entered was incorrect.

Action: Reenter the 'mgmtca' command with the correct syntax. Enter 'mgmtca -h' to display usage.

MGTCA-01117: The user name specififed in the 'mgmtca' command is invalid.
Cause: The 'mgmtca' command was rejected because the user name specified in the command had invalid content.

Action: Provide a valid user name for the 'mgmtca' command.

MGTCA-01118: A credential store operation failed.
Cause: The 'mgmtca' command did not complete because a credential store operation failed.

Action: Contact Oracle Support Services.

MGTCA-01119: Trace file configuration failed.
Cause: The 'mgmtca' command did not complete because trace file configuration failed.

Action: Contact Oracle Support Services.

MGTCA-01120: command not supported on a member cluster
Cause: An attempt to execute the command 'mgmtca' was rejected because it was not supported on a member cluster.

Action: Run the command on the Domain Services Cluster where the Grid Infrastructure Management Repository is hosted. Export the credentials from the Domain Services Cluster and import them on the member cluster.

MGTCA-01121: failed to determine cluster name
Cause: Execution of 'mgmtca' to retrieve cluster name failed. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01122: The credential store operation to retrieve the Grid Infrastructure Management Repository domain failed.
Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the Grid Infrastructure Management Repository domain failed.

Action: Contact Oracle Support Services.

MGTCA-01123: A credential store operation failed while initializing the connection to the credential store.
Cause: Execution of 'mgmtca' failed because a credential store operation failed while initializing the connection to the credential store.

Action: Contact Oracle Support Services.

MGTCA-01124: A credential store operation failed while terminating the connection to the credential store.
Cause: Execution of 'mgmtca' failed because a credential store operation failed while terminating the connection to the credential store.

Action: Contact Oracle Support Services.

MGTCA-01125: A credential store operation failed while importing the Cluster Manifest File.
Cause: An attempt to execute the command 'mgmtca' failed while importing the Cluster Manifest File because credentials could not be stored.

Action: Contact Oracle Support Services.

MGTCA-01126: A credential store operation failed while exporting the Cluster Manifest File.
Cause: Execution of 'mgmtca' failed because a credential store operation failed while exporting the Cluster Manifest File.

Action: Contact Oracle Support Services.

MGTCA-01127: The credential store operation to retrieve a user domain failed.
Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the user domain failed.

Action: Contact Oracle Support Services.

MGTCA-01128: The credential store operation to retrieve the credential set for a user failed.
Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the credential set for a user failed.

Action: Contact Oracle Support Services.

MGTCA-01129: The credential store operation to retrieve the domain representing the member cluster failed.
Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the domain representing the member cluster failed.

Action: Contact Oracle Support Services.

MGTCA-01130: The credential store operation to retrieve the domain representing the Domain Services Cluster failed.
Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the domain representing the Domain Services Cluster failed.

Action: Contact Oracle Support Services.

MGTCA-01131: Cluster Manifest File specified in the command did not exist at the specified location.
Cause: Execution of 'mgmtca' failed because the Cluster Manifest File specified in the command did not exist at the specified location.

Action: Re-execute the command with the correct path to the Cluster Manifest File.

MGTCA-01132: failed to retrieve SCAN information for the cluster
Cause: Execution of 'mgmtca' to retrieve the SCAN information failed. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01133: failed to initialize connection to the credential store
Cause: Execution of 'mgmtca' failed because the connection to the credential store could not be initialized.

Action: Contact Oracle Support Services.

MGTCA-01135: failed to determine type of cluster
Cause: Execution of 'mgmtca' to retrieve the type of cluster failed. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01136: failed to create a repository for the member cluster
Cause: An attempt to execute 'mgmtca' to create a repository for a member cluster encountered an internal error.

Action: Contact Oracle Support Services.

MGTCA-01137: failed to remove the repository for the member cluster
Cause: An attempt to execute 'mgmtca' to create a repository for a member cluster encountered an internal error.

Action: Contact Oracle Support Services.

MGTCA-01138: failed to plug in the repository for the member cluster
Cause: An attempt to execute 'mgmtca' to create a repository for a member cluster encountered an internal error.

Action: Contact Oracle Support Services.

MGTCA-01139: failed to unplug the repository for the member cluster
Cause: An attempt to execute 'mgmtca' to create a repository for a member cluster encountered an internal error.

Action: Contact Oracle Support Services.

MGTCA-01140: failed to migrate the Rapid Home Provisioning schema
Cause: Execution of 'mgmtca' to migrate the Rapid Home Provisioning schema failed.

Action: Contact Oracle Support Services.

MGTCA-01141: cannot run command as root
Cause: An attempt to run 'mgmtca' as the OS root user was rejected.

Action: Run the command 'mgmtca' as the Grid Infrastructure user.

MGTCA-01142: When run on the Domain Services Cluster, this command creates a repository and credentials for the local cluster or a member cluster.\nUsage: mgmtca createRepos [-manifest <manifest_file_location> -member <member_cluster_name> -version <member_cluster_version> -guid <member_cluster_guid> -clusterInfoDir <member_cluster_pdb_backup_dir>]\n -manifest <manifest_file_location> - absolute file path of the Cluster Manifest File where the credentials are to be exported.\n -member <member_cluster_name> - name of the member cluster for which the repository is to be created.\n -version <member_cluster_version> - version of the member cluster for which the repository is to be created.\n -guid <member_cluster_guid> - GU ID of the member cluster, if it already pertains to another DSC and corresponding PDB is unplgged from that DSC and will be attached to current DSC on which the command is running. \n -clusterInfoDir <member_cluster_pdb_backup_dir> - This is the directory location of the backup and metadata files of member cluster's unplgged PDB, if and only if the member cluster already pertains to another DSC
Cause: None

Action: None

MGTCA-01143: When run on the Domain Services Cluster, this command removes the repository and credentials for a member cluster.\nUsage: mgmtca removeRepos -member <member_cluster_name>\n -member <member_cluster_name> - name of the member cluster whose repository and credentials are to be removed.\nThis command is not supported on a member cluster.
Cause: None

Action: None

MGTCA-01144: When run on the Domain Services Cluster, this command plugs in a repository for a member cluster.\nUsage: mgmtca plugRepos -manifest <manifest_file_location> -member <member_cluster_name> -pdbBackupFile <backup_file_location> -pdbMetadataFile <metadata_file_location>\n -manifest <manifest_file_location> - absolute file path of the Cluster Manifest File where the credentials are to be exported.\n -member <member_cluster_name> - name of the member cluster whose repository is to be plugged in.\n -pdbBackupFile <backup_file_location> - absolute file path for the backup file for the repository that is to be plugged in.\n -pdbMetadataFile <metadata_file_location> - absolute file path of the metadata file for the repository that is to plugged in.\nThis command is not supported on a member cluster.
Cause: None

Action: None

MGTCA-01145: When run on the Domain Services Cluster, this command unplugs the repository for a member cluster.\nUsage:mgmtca unplugRepos -member <member_cluster_name> -pdbBackupFile <backup_file_location> -pdbMetadataFile <metadata_file_location>\n -member <member_cluster_name> - name of the member cluster whose repository is to be unplugged.\n -pdbBackupFile <backup_file_location> - absolute file path for the backup file for the repository that is to be unplugged.\n -pdbMetadataFile <metadata_file_location> - absolute file path of

the metadata file for the repository that is to be unplugged.\nThis command is not supported on a member cluster.
Cause: None

Action: None

MGTCA-01146: When run on the Domain Services Cluster, this command configures the repository for the local cluster or a member cluster.\nUsage: mgmtca configRepos [exportCred -manifest <manifest_file_location> -member <member_cluster_name> | setpasswd -member <member_cluster_name> [-user <user_ID>[,...] | -allusers]]\n exportCred - exports the credentials for all the users to the Cluster Manifest File for the local cluster or a member cluster.\n -manifest <manifest_file_location> - absolute file path of the Cluster Manifest File where the credentials are to be exported.\n -member <member_cluster_name> - name of the member cluster whose credentials is to be exported.\n setpasswd - automatically generates and sets the password for a set of users for the local cluster or a member cluster.\n -member <member_cluster_name> - name of the member cluster whose credentials are to be exported.\n -user *userID*[,...] - comma-separated list of user IDs (CHMOS, CHA, CALOG, QOS, GRIDHOME) whose password is to automatically generated and set.\n -allusers - automatically generate and set password for all users.\nWhen run on a member cluster, this command configures the repository for the member cluster.\nUsage: mgmtca configRepos importCred -manifest <manifest_file_location>\n importCred - imports credentials for all the users from the Cluster Manifest File for a member cluster.\n -manifest <manifest_file_location> absolute file path of the Cluster Manifest File from where credentials are to be imported.
Cause: None

Action: None

MGTCA-01147: When run on the Domain Services Cluster, this command sets the password for a set of users in the local cluster.\nUsage: mgmtca setpasswd -user <user_IDs>[,...] | -allusers]\n -user <user_ID>[,...] - comma-separated list of user IDs (CHMOS, CHA, CALOG, QOS, GRIDHOME) whose password is to automatically generated and set.\n -allusers - automatically generate and set passwords for all users.\nThis command is not supported on a member cluster.
Cause: None

Action: None

MGTCA-01148: member cluster name specified in the Cluster Manifest File is invalid.
Cause: An attempt to import the Cluster Manifest File for the member cluster failed because the cluster name in the Cluster Manifest File did not match the name of the member cluster on which the mgmtca command was issued.

Action: Run 'mgmtca createRepos -manifest <manifest_file_location> -member <member_cluster_name>' on the Domain Services Cluster with a valid member cluster name.

MGTCA-01149: member cluster '{0}' already exists.
Cause: An attempt to add a member cluster was rejected because the specified member cluster is already a member of this Cluster Domain.

Action: Specify a unique member cluster name that is not already a member of this Domain Services Cluster.

MGTCA-01150: member cluster '{0}' does not exist.
Cause: An attempt to remove the member cluster was rejected because the specified member cluster is not a member of this Domain Services Cluster.

Action: Specify a valid member cluster name that is a member of this Domain Services Cluster.

MGTCA-01151: There are no members for the Domain Services Cluster
Cause: Status Message

Action: None

MGTCA-01152: member cluster '{0}' cannot be removed.
Cause: An attempt to remove the member cluster was rejected because the specified member cluster was the Domain Services Cluster.

Action: Specify a valid member cluster name that is a member of this Cluster Domain.

MGTCA-01153: member cluster '{0}' cannot be removed.
Cause: An attempt to remove the member cluster was rejected because there were active sessions connected to the repository for the specified member cluster."

Action: Shut down and deconfigure the member cluster.

MGTCA-01154: When run on the Domain Services Cluster, this command lists the member clusters that are serviced by the Domain Services Cluster.\nUsage: mgmtca queryRepos [-member <member_cluster_name>]\n -member <member_cluster_name> - name of the member cluster which needs to be queried. If this parameter is not specified the query returns all the members serviced by the Domain Services Cluster.\nThis command is not supported on a member cluster.
Cause: None

Action: None

MGTCA-01155: Unable to retrieve the Domain Services Cluster for member cluster {0}
Cause: An attempt to identify the Domain Services Cluster for the indicated member cluster failed.

Action: Re-export the credentials on the Domain Services Cluster using the command 'mgmtca configRepos exportCred -member <member_cluster_name> -manifest <manifest_file_location>' and import them on the member cluster.

MGTCA-01156: command not supported on a Domain Services Cluster
Cause: Execution of 'mgmtca' failed because the command was not supported on a Domain Services Cluster.

Action: Run the command on a member cluster.

MGTCA-01157: failed to retrieve the member cluster Globally Unique Identifier (GUID) from the Cluster Manifest File
Cause: An attempt to retrieve the member cluster Globally Unique Identifier (GUID) from the Cluster Manifest File failed or an incorrect Cluster Manifest File was supplied.

Action: Recreate the Cluster Manifest File on the Domain Services Cluster, copy the Cluster Manifest File to the member cluster or specify the correct Cluster Manifest File and retry the operation.

MGTCA-01158: failed to generate a Globally Unique Identifier (GUID) for the member cluster
Cause: An attempt to configure the Grid Infrastructure Management Repository (GIMR) for the member cluster using the 'createRepos' command failed because of a failure to generate a Globally Unique Identifier (GUID).

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

MGTCA-01159: failed to add the member cluster Globally Unique Identifier (GUID) to the Cluster Manifest File
Cause: An attempt to configure the Grid Infrastructure Management Repository (GIMR) for the member cluster using the 'createRepos' command failed because of a failure to add the Globally Unique Identifier (GUID) to the credentials file.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

MGTCA-01160: failed to retrieve the name of the Grid Infrastructure Management Repository Server
Cause: Execution of 'mgmtca' to retrieve the name of the Grid Infrastructure Management Repository Server failed.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

MGTCA-01161: failed to validate the provided Cluster Manifest File
Cause: Execution of 'mgmtca' to validate the provided Cluster Manifest File failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

MGTCA-01162: failed to add a property to the provided Cluster Manifest File
Cause: Execution of 'mgmtca' to add a property to the provided Cluster Manifest File failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

MGTCA-01163: The Globally Unique Identifier (GUID) present in the credential file is {0}.
Cause: None

Action: None

MGTCA-01164: Credential file does not contain a Globally Unique Identifier (GUID).
Cause: None

Action: None

MGTCA-01165: An error occurred during the remote execution of 'mgmtca' on the node running the Grid Infrastructure Management Repository.
Cause: During the execution of 'mgmtca', an error occurred while remotely executing the operation of the node running the Grid Infrastructure Management Repository. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported if possible.

MGTCA-01166: An error occurred while querying for the node running Grid Infrastructure Management Repository.
Cause: During the execution of 'mgmtca', an error occurred while querying for the node running Grid Infrastructure Management Repository. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported if possible. Make sure that the Grid Infrastructure Management Repository has been configured and running.

MGTCA-01167: The Grid Infrastructure Management Repository is in an invalid state
Cause: The execution of the createRepos operation failed because the repository for the Domain Services Cluster was not present. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01168: failed to create a Repository as an additional {0} MB of space is required in the Disk Group
Cause: The execution of the createRepos operation failed because the Disk Group did not contain the space required to create a repository.

Action: Add disks to the disk group that is used by the Grid Infrastructure

MGTCA-01169: Cluster Manifest File is valid
Cause: Status Message.

Action: None

MGTCA-01170: Cluster Manifest File is invalid
Cause: Execution of 'mgmtca' to validate the provided Cluster Manifest File failed. The structure of the provided Cluster Manifest File is invalid. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages and follow the action recommended there.

MGTCA-01171: Cluster Manifest File is invalid
Cause: Execution of 'mgmtca' to validate the provided Cluster Manifest File failed. The connection endpoints specified in the Cluster Manifest File are invalid. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages and follow the action recommended there.

MGTCA-01172: failed to get CHA instance for the cluster
Cause: Execution of 'mgmtca' failed to get CHA instance. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01173: failed to deploy CHA models for the cluster with error \n{0}
Cause: Execution of 'mgmtca' to deploy CHA models failed. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01174: failed to start CHA resource \n{0}
Cause: An attempt to start the CHA resource failed. This may be a transient error.

Action: Retry 'srvctl start cha' to see whether the CHA resource starts. If it continues to fail, contact Oracle Support Services.

MGTCA-01175: failed to create CHA resource \n{0}
Cause: Execution of 'mgmtca' failed to create CHA resource. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01176: An error occurred while marking the Cluster Manifest File as expired.
Cause: During the execution of 'mgmtca', an error occurred while marking the Cluster Manifest File as expired. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

MGTCA-01177: An error occurred while checking the expiration status of the Cluster Manifest File.
Cause: During the execution of 'mgmtca', an error occurred while checking the expiration status of the Cluster Manifest File. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

MGTCA-01178: The cluster name of the Domain Services Cluster is the same as the member cluster specified in the command.
Cause: An attempt to add a member cluster was rejected because the specified member cluster name is the same as that of the Domain Services Cluster.

Action: Specify a unique member cluster name that is not the name of the Domain Services Cluster.

MGTCA-01179: failed to create the cluster repository for the member cluster '{0}' because the Cluster Manifest File '{1}' has already been used
Cause: An attempt to add a member cluster was rejected because the Cluster Manifest File had already been used.

Action: Create a repository for the member cluster using a Cluster Manifest that has not expired.

MGTCA-01180: cannot create a repository for a member cluster on a Standalone cluster
Cause: An attempt to add a member cluster was rejected because the command was issued on a Standalone cluster.

Action: The command 'mgmtca createRepos' is not supported on a Standalone Cluster.

MGTCA-01181: command cannot be executed by current user
Cause: An attempt to run 'mgmtca' was rejected because the current user was not the Grid Infrastructure user.

Action: Run the command 'mgmtca' as the Grid Infrastructure user.

MGTCA-01182: failed to retrieve cluster classification for current cluster
Cause: An attempt to run 'mgmtca' was rejected because of a failure to retrieve the cluster classification.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

MGTCA-01183: incorrect arguments passed to the Cluster Manifest File validation API
Cause: An attempt validate the Cluster Manifest File was rejected because an incorrect number of arguments were passed.

Action: Reissue the command passing the location to the Cluster Manifest File and name of the member cluster to be validated.

MGTCA-01184: The credential store operation to retrieve the password from a credset failed.
Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the password from a credset failed. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01185: The execution of the 'mgmtca' command completed successfully.
Cause: None

Action: None

MGTCA-01186: Not used
Cause: None

Action: None

MGTCA-01187: An error occurred while locking the PCMRADMIN account.\n{0}
Cause: An attempt to perform a SQL operation against the Grid Infrastructure Management Repository (GMIR) failed. Additional failure information is provided by the accompanying messages. This may be an internal error.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

MGTCA-01188: An error occurred while unlocking the PCMRADMIN account.\n{0}
Cause: An attempt to perform a SQL operation against the Grid Infrastructure Management Repository (GMIR) failed. Additional failure information is provided by the accompanying messages. This may be an internal error.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

MGTCA-01189: An error occurred while applying the patch.\n{0}
Cause: An attempt to apply a patch failed. Additional failure information is provided by the accompanying messages. This may be an internal error.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

MGTCA-01190: The cluster name specified in the 'mgmtca' command is invalid.
Cause: An attempt to create a Grid Infrastructure Management Repository (GIMR) for a cluster was rejected because the cluster name specified was invalid.

Action: Retry the operation providing a valid cluster name.

MGTCA-01191: The operation to create a repository for the member cluster failed.
Cause: An attempt to create a repository for the member cluster failed because of insufficient disk space in the ASM disk groups configured for the Grid Infrastructure Management Repository (GIMR).

Action: Retry the operation after adding disks to the ASM disk groups configured for the GIMR.

MGTCA-01192: The operation to create a repository for the member cluster failed.
Cause: An attempt to create a repository for the member cluster failed because the query to estimate the size required for creating the repository failed.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

MGTCA-01193: The operation to create a repository for the member cluster failed.
Cause: An attempt to create a repository for the member cluster failed because the operation to resize the Grid Infrastructure Management repository failed.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

MGTCA-01194: The operation to create a repository for the member cluster failed.
Cause: An attempt to create a repository for the member cluster failed because the operation to restart the Grid Infrastructure Management repository failed.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

MGTCA-01195: An error occurred while querying the value of the initialization parameter in the Grid Infrastructure Management Repository.
Cause: An attempt to query the value of the initialization parameter in the Grid Infrastructure Management Repository failed. Additional failure information is provided by the accompanying messages.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

MGTCA-01196: An error occurred while setting the value of the initialization parameter in the Grid Infrastructure Management Repository.
Cause: An attempt to set the value of the initialization parameter in the Grid Infrastructure Management Repository failed. Additional failure information is provided by the accompanying messages.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

MGTCA-01197: An error occurred while querying the classification of the cluster.
Cause: An attempt to query the classification of the cluster failed. Additional failure information is provided by the accompanying messages.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

MGTCA-01198: The cluster version specified to the 'mgmtca' command is invalid.
Cause: An attempt to run the 'mgmtca' command was rejected because the cluster version specified to the command was invalid.

Action: Retry the 'mgmtca' command, providing a valid cluster version.

MGTCA-01199: No record exists of the Domain Services Cluster {0} which should provide services for the member cluster {1}.
Cause: An attempt to run the 'mgmtca' command was rejected because no record existed of the indicated Domain Services Cluster, which should have provided services for the indicated member cluster. This was an internal error.

Action: Contact Oracle Support Services.

MGTCA-01200: The server cluster {0} is not a valid Domain Services cluster.
Cause: An attempt to run the 'mgmtca' command was rejected because the indicated server cluster, which was configured to provide services for the client cluster, was not a valid Domain Services Cluster. This was an internal error.

Action: Contact Oracle Support Services.

MGTCA-01201: The cluster version specified to the 'mgmtca' command '{0}' does not match the one in the Cluster Manifest File '{1}'.
Cause: An attempt to run the 'mgmtca' command was rejected because the specified cluster version did not match the indicated version in the Cluster Manifest File.

Action: Retry the 'mgmtca' command, providing a valid cluster version.

MGTCA-01202: failed to retrieve the member cluster version from the Cluster Manifest File
Cause: An attempt to retrieve the CLIENT_CLUSTER_VERSION property from the Cluster Manifest File failed.

Action: Recreate the Cluster Manifest File on the Domain Services Cluster, copy the Cluster Manifest File to the member cluster, and then retry the operation.

MGTCA-01203: The name supplied to -oldClusterName '{0}' is the same as the current cluster name.
Cause: An attempt to execute 'mgmtca' to update the cluster name property of the Grid Infrastructure Management Repository failed because the indicated name specified as the 'old cluster name' was the same as the current cluster name. Either the cluster rename was not complete or the wrong name was specified.

Action: Verify the cluster name has indeed changed and retry the operation indicating the correct old cluster name.

MGTCA-01204: The name supplied to -oldClusterName '{0}' is not found in the GIMR records.
Cause: An attempt to execute 'mgmtca' to update the cluster name property of the Grid Infrastructure Management Repository (GIMR) failed because the indicated name specified as the 'old cluster name' did not match the current cluster name property in the GIMR.

Action: Verify the old cluster name stored in the GIMR is the cluster name prior to the cluster rename and retry the operation specifying the correct old cluster name.

MGTCA-01205: failed to update the cluster name property for the current cluster in the GIMR
Cause: An attempt to execute 'mgmtca' to update the cluster name property of the Grid Infrastructure Management Repository (GIMR) failed. Additional failure information is provided by the accompanying messages.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

MGTCA-01206: failed to access the properties file containing information about the current cluster at '{0}'
Cause: An attempt to access a properties file containing the Cluster Name, GUID and Type at the indicated location failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

MGTCA-01207: Process of RMAN backup of the GIMR Database is failed, due to following reason
Cause: An attempt to perform RMAN backup of GIMR database failed.

Action: Contact Oracle support services.

MGTCA-01208: The directory location '{0}' does not exist or is not writable.
Cause: An attempt to execute 'mgmtca' failed because the indicated directory did not exists or was not writable.

Action: Retry the operation, specifying a writable directory.

MGTCA-01209: Failed to drop GIMR from old home.
Cause: An attempt to drop of GIMR database failed.

Action: Contact Oracle support services.

MGTCA-01210: Failed to create GIMR in new home.
Cause: An attempt to creation of GIMR database failed.

Action: Contact Oracle support services.

MGTCA-01211: Required file '{0}' not found at the expected location.
Cause: An attempt to execute 'mgmtca' failed because the indicated required file was not found in the expected location.

Action: Make sure the file is present and is readable in the expected location, and then retry the operation.

MGTCA-01212: GIMR Database is in inconsistent state.
Cause: An attempt to execute upgrade failed because the database was in the inconsistent state.

Action: Contact oracle support services.

MGTCA-01213: Unable to create tablespace due to lack of space. {0}
Cause: An attempt to execute create tablespace failed because the disk space is not sufficient.

Action: Ensure free space is sufficient for creation of the tablespaces, and then retry the operation.

MGTCA-01214: Retrieval of the control file location of the GIMR database in the old home failed.
Cause: An attempt to upgrade GIMR database failed because retrieval of the control file location of the GIMR database in the old home failed .

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

MGTCA-01215: failed to retrieve attribute {0} for the Grid Infrastructure Management Repository resource
Cause: An attempt to execute 'mgmtca' command failed because there was an error while reading an attribute in the resource for the Grid Infrastructure Management Repository.

Action: Contact Oracle Support Services.

MGTCA-01216: unable to write SP file location.
Cause: An attempt to write GIMR SP file location failed.

Action: Contact Oracle Support Services.

MGTCA-01217: unable to read SP file location.
Cause: An attempt to read GIMR SP file location failed.

Action: Contact Oracle Support Services.

MGTCA-01218: The specified storage type for GIMR creation is not valid.
Cause: An attempt to execute create GIMR was rejected because the specified storage type was not ASM or shared file system.

Action: Retry with appropriate storage type.

MGTCA-01219: Retrieval of the Datafile location of the GIMR database failed.
Cause: An attempt to upgrade GIMR database failed because retrieval of the OCR location of the GIMR database failed.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

MGTCA-01220: GIMR storage location {0} does not contain enough free space to configure MGMTDB.
Cause: An attempt to execute upgrade GIMR is not supported because the storage location does not contain enough free space to configure MGMTDB.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

MGTCA-01221: Unable to create MGMTLSNR in the GI Home.
Cause: An attempt to create MGMTLSNR failed.

Action: Contact oracle support services.

MGTCA-01222: Cluster Version {0} is not compatible with GIMR version {1}
Cause: Unable to perform the operation because the provided version is not supported by the current GIMR version.

Action: Make sure versions are compatible and retry the operation.

MGTCA-01224: failed to create the repository for the server cluster
Cause: An attempt to execute an Grid Infrastructure Management Repository Configuration Assistant (MGMTCA) command to create a repository for a server cluster encountered an internal error.

Action: Contact Oracle Support Services.

MGTCA-01225: failed to remove the repository for the server cluster
Cause: An attempt to execute an Grid Infrastructure Management Repository Configuration Assistant (MGMTCA) command to remove a repository for a server cluster encountered an internal error.

Action: Contact Oracle Support Services.

MGTCA-01226: deprecated this command in console mode
Cause: An attempt to execute 'mgmtca -em' command to set password for em user failed because it was attempted from console.

Action: Execute 'mgmtca setpasswd -user em'.

MGTCA-01227: Unused PDB in GIMR container.
Cause: An unused PDB exists in GRID Infrastructure Management Repository (GIMR) container database.

Action: Cleanup existing PDB and retry the operation.

MGTCA-01228: GIMR resource does not exist.
Cause: GRID Infrastructure Management Repository (GIMR) resource does not exist.

Action: Contact oracle support services.

MGTCA-01229: failed to enable role separation for user {0} in the CRS Credentials Domain
Cause: The Oracle Cluster Ready Services (CRS) Credential Domain group permissions were not updated.

Action: Contact Oracle Support Services.

MGTCA-01231: failed to operate on dependent resource {0}
Cause: Grid Infrastructure Management Repository (GIMR) dependent resource failed to operate.

Action: Contact Oracle Support Services.

MGTCA-01233: Command not supported in Domain Services Cluster Version {0}
Cause: GRID Infrastructure Management Repository (GIMR) Domain Services Cluster does not support the command in the current version.

Action: Contact oracle support services.

MGTCA-01244: Internal error encountered during execution.
Cause: The command failed during execution.

Action: Contact Oracle Support Services.

MGTCA-01248: Grid Infrastructure Management Repository (GIMR) is not configured in the current cluster.
Cause: An attempt to run the 'mgmtca' command was rejected because the GIMR service status was either 'Not Configured' or 'To Be Configured'.

Action: Retry the 'mgmtca' command once GIMR is configured in this cluster.

MGTCA-01249: command not supported when Grid Infrastructure Management Repository (GIMR) is configured to run remotely
Cause: An attempt to execute the 'mgmtca' command was rejected because the Oracle Grid Infrastructure Management Repository (GIMR) was not running in this cluster.

Action: Run the command on the cluster where Grid Infrastructure Management Repository is hosted.

MGTCA-01250: command not supported when Grid Infrastructure Management Repository (GIMR) is configured locally
Cause: An attempt to execute the 'mgmtca' command was rejected because the Grid Infrastructure Management Repository (GIMR) was not running remotely.

Action: Run the command on a remote cluster that is being serviced by the current cluster.

MGTCA-01254: Specified file location '{0}' is not writable.
Cause: An attempt to execute the 'mgmtca' command failed because the application was not allowed to write to the indicated file location.

Action: Ensure that the parent directory is writable for the Oracle Grid Infrastructure user in the expected location, and then retry the operation.

MGTCA-01255: Current cluster classification '{0}' does not match classification for this repository '{1}' in the server cluster.
Cause: An attempt to execute the 'mgmtca' command failed because the repository for the current cluster was created for a different cluster class.

Action: Ensure that the repository for the cluster in the credential file was created correctly in the server cluster.

MGTCA-01256: unable to find repository for cluster {0}
Cause: An attempt to run the 'mgmtca' command was rejected because no record existed for the specified cluster.

Action: Contact Oracle Support Services.

MGTCA-01257: The specified parameter {0} unit {1} is invalid. Valid values are in range {2} - {3}.
Cause: An attempt to run the 'mgmtca' command was rejected because the value was out of range.

Action: Specify a value in the valid range.

MGTCA-01258: The specified resize parameter '{0}' is invalid.
Cause: None

Action: None

MGTCA-01259: There are no client clusters for the Grid Infrastructure Management Repository server cluster.
Cause: None

Action: None

MGTCA-01261: This command creates the Grid Infrastructure Management Repository (GIMR) Container. It is only supported on the Domain Services or Standard Cluster.\n Usage : mgmtca createGIMRContainer [-storageDiskLocation <disk_Location>] When run with no options, the GIMR Container files are created in the same location as Oracle Clusterware Registry.\n Options:\n -storageDiskLocation <disk_Location> - The GIMR container files will be created in the specified disk Location.
Cause: None

Action: None

MGTCA-01265: When run on the Grid Infrastructure Management Repository (GIMR) server cluster, this command creates a repository and credentials for the client cluster.\nUsage: mgmtca createRepos (-member <member_cluster_name> -manifest <manifest_file_location> | -clusterName <client_cluster_name> -clientDataFile <client_data_file_location>)[-version <client_cluster_version>] [-guid <client_cluster_guid> -clusterInfoDir <client_cluster_pdb_backup_dir>]\n -member <member_cluster_name> - name of the member cluster for which the repository is to be created.\n -manifest <manifest_file_location> - absolute file path of the Cluster Manifest File where the credentials are to be exported.\n -clusterName <client_cluster_name> - name of the client cluster for which the repository is to be created.\n -clientDataFile <client_data_file_location> - absolute file path of the Client Data File where the credentials are to be exported.\n -version <client_cluster_version> - version of the client cluster for which the repository is to be created.\n -guid <client_cluster_guid> - This option is specified when completing the move of the repository from another (source) server cluster to the current (target) server cluster.\n The GUID of client cluster whose repository was unplugged from the source server cluster. \n -clusterInfoDir <client_cluster_pdb_backup_dir> - directory location that contains the backup and metadata files of the client cluster repository that was unplugged from the source server cluster.
Cause: None

Action: None

MGTCA-01266: de-supported command to create a repository for the member cluster
Cause: An attempt to execute 'mgmtca' to create a repository for a member cluster failed because the member cluster version is not supported.

Action: None

MGTCA-01271: Specified storage location and storage type did not match.
Cause: An attempt to execute the 'mgmtca' command failed because the specified storage location did not match the storage type.

Action: Retry the command with the proper storage type for the specified storage location.

MGTCA-01272: Current cluster name '{0}' does not match cluster name '{1}' in the client data file.
Cause: An attempt to execute the 'mgmtca' command failed because the current cluster name did not match the client data file.

Action: Ensure that the repository for the cluster in the client data file was created correctly in the server cluster.

MGTCA-01274: Unable to determine whether the current home is a Windows Secured Home.
Cause: An attempt to upgrade the Grid Infrastructure Management Repository failed while checking that the current home was secured. This was an internal error.

Action: Contact Oracle Support Services.

MGTCA-01275: Unable to retrieve password for Windows Secured Home.
Cause: An attempt to upgrade the Grid Infrastructure Management Repository failed because the password for the current secured home could not be retrieved. This was an internal error.

Action: Contact Oracle Support Services.

MGTCA-01277: Failed to run srvctl command "{0}"
Cause: There was an internal error while running SRVCTL command.

Action: Contact Oracle Support Services.

MGTCA-01278: Failed to run datapatch on the node {0}.
Cause: There was an internal error while running datapatch command.

Action: Contact Oracle Support Services.

MGTCA-01282: Failed to get the inventory of the patches applied on the node {0}.
Cause: There was an internal error while running OPATCHUtil API.

Action: Contact Oracle Support Services.

MGTCA-01286: failed to deconfigure the cluster repository
Cause: An attempt to execute the 'mgmtca' command encountered an internal error.

Action: Contact Oracle Support Services.

MGTCA-01287: Unable to remove repository for client cluster {0} because it was not marked for deletion on the client side.
Cause: An attempt to execute the 'mgmtca' command failed because the specified cluster was not marked for deletion.

Action: Invoke 'mgmtca deconfigRepos' in the client side first and then retry the command.

MGTCA-01289: Failed to run SQL on GIMR_APP_PATCH_REGISTRY table
Cause: An attempt to execute SQL command on GIMR_APP_PATCH_REGISTRY failed.

Action: Contact Oracle Support Services.

MGTCA-01291: Failed to parse XML file {0}
Cause: An attempt to parse XML file failed.

Action: Contact Oracle Support Services.

MGTCA-01293: Failed to zip rollback files {0}.
Cause: An attempt to zip rollback files failed.

Action: Contact Oracle Support Services.

MGTCA-01294: Failed to unzip rollback files.
Cause: An attempt to unzip rollback files failed.

Action: Contact Oracle Support Services.

MGTCA-01299: Failed to set password for the users used in patching operation.
Cause: An attempt to execute the 'mgmtca' command failed because set password for the patching users was failed.

Action: Retry the command after setting password for the PCMRADMIN, PCMRPATCH and CHA users.

MGTCA-01300: command not supported on a Standalone Cluster.
Cause: Execution of 'mgmtca' failed because the command was supported only on a Domain Services Cluster.

Action: None

MGTCA-01307: Grid Infrastructure Management Repository Connection through SCAN succeeded.
Cause: None

Action: None

MGTCA-01308: failed to deconfigure the Grid Infrastructure Management Repository (GIMR) Oracle Home because it is providing service for other client clusters
Cause: None

Action: None

MGTCA-01309: Grid Infrastructure Management Repository Connection through ora.mgmtlsnr succeeded.
Cause: None

Action: None

MGTCA-01310: Grid Infrastructure Management Repository (GIMR) for cluster '{0}' cannot be removed.
Cause: An attempt to remove the cluster repository was rejected because it corresponds to the GIMR server cluster.

Action: Specify a valid client cluster name.

MGTCA-01311: Grid Infrastructure Management Repository (GIMR) for cluster '{0}' does not exist.
Cause: Failed to perform the operation because the repository for the specified cluster was not found.

Action: Specify a valid cluster name.

MGTCA-01312: Conversion of local Grid Infrastructure Management Repository (GIMR) to a remote location is not supported because Rapid Home Provisioning (RHP) Server resource is not local.
Cause: An attempt to perform the operation was rejected because rhpserver resource is not local.

Action: Remove rhpserver from this cluster before proceeding.

MGTCA-01313: Grid Infrastructure Management Repository (GIMR) is not running in the current cluster.
Cause: An attempt to run the 'mgmtca' command was rejected because the GIMR service is offline.

Action: Retry the 'mgmtca' command once GIMR is online in this cluster.

MGTCA-01314: Grid Infrastructure Management Repository (GIMR) parameter {0} is not set.
Cause: An attempt to run the 'mgmtca' command was rejected because the ora.mgmtdb resource was not properly configured.

Action: Retry the 'mgmtca' command once ora.mgmtdb resource is configured properly.

MGTCA-01315: Grid Infrastructure Management Repository System version is {0}, where as Grid Infrastructure version is {1}.
Cause: An attempt to run the 'mgmtca' command was rejected because previous gimr upgrade or fresh install operation was not completed successfully.

Action: Retry the 'mgmtca' command once GIMR is upgraded or installed successfully.

MGTCA-01316: Server cluster pdb {0} is not open.
Cause: An attempt to run the 'mgmtca' command was rejected because the server cluster PDB was not open.

Action: Contact Oracle Support Services.

MGTCA-01317: Grid Infrastructure Management Repository application version is {0}, where as Grid Infrastructure version is {1}.
Cause: An attempt to run the 'mgmtca' command was rejected because previous gimr upgrade or fresh install operation was not completed successfully.

Action: Retry the 'mgmtca' command once GIMR is upgraded of installed successfully.

MGTCA-01318: Grid Infrastructure Management Repository admin user {0} is not configured.
Cause: An attempt to run the 'mgmtca' command was rejected because previous gimr upgrade or fresh install operation was not completed successfully.

Action: Retry the 'mgmtca' command once GIMR is upgraded of installed successfully.

MGTCA-01319: Unable to create tablespace {0} .
Cause: An attempt to run the 'mgmtca' command was rejected because previous gimr upgrade or fresh install operation was not completed successfully.

Action: Retry the 'mgmtca' command once GIMR is upgraded of installed successfully.

MGTCA-01320: Grid Infrastructure user is not a part of OSDBA group.
Cause: An attempt to run the 'mgmtca' command was rejected because the Grid Infrastructure user is not part of OSDBA group.

Action: Contact Oracle Support Services.

MGTCA-01321: Grid Infrastructure Management Repository user schema {0} does not exist.
Cause: An attempt to run the 'mgmtca' command was rejected because previous gimr upgrade or fresh install operation was not completed successfully.

Action: Retry the 'mgmtca' command once GIMR is upgraded of installed successfully.

MGTCA-01323: This command checks the sanity of the ora.mgmtdb and dependent resources after upgrade or fresh install of ora.mgmtdb and before Grid Infrastructure patching.\nUsage: mgmtca validateGIMR [-report | -fix] [-verbose] \nThis command checks the sanity of the ora.mgmtdb and dependent resources after upgrade or fresh install of ora.mgmtdb resource and before patching of the Grid Infrastructure. If -fix option is provided, it fixes up the errors as well.\n report - If report option is provided, it reports the issue but does not attempt to fixup.\n fix - If fix option is provided, it attempts to fixup the issue.\n verbose - If verbose option is provided, it prints the checks and result in detail.
Cause: None

Action: None

MGTCA-01324: This command sets the RDBMS event for error tracing on the root and PDBs of the ora.mgmtdb. \nUsage: mgmtca setEvent -event *errortracingEvent* [-clusterName *Cluster Name*] \nThis command sets RDBMS event for error tracing. This command is supported in server cluster only. \n event - Erro tracing event string concatenated with ':'. Valid example is event='1652 trace name errostack level 1: 1691 trace name errostack level 1';\n clusterName - If clusterName option is provided, event is set at corresponding PDB, else event is set at CDB$ROOt.
Cause: None

Action: None

MGTCA-01325: Grid Infrastructure Management Repository (GIMR) is not enabled in the current cluster.
Cause: An attempt to run the 'mgmtca' command was rejected because the GIMR service is disabled.

Action: Retry the 'mgmtca' command once GIMR is enabled in this cluster.

MGTCA-01326: Unable to find the size for the tablespace{0}
Cause: None

Action: None

MGTCA-01327: An internal error occurred while querying the state of the ora.mgmtlsnr.
Cause: During the execution of 'mgmtca', an internal error occurred while querying the state of the ora.mgmtlsnr resource.

Action: Contact Oracle Support Services.

MGTCA-01328: An internal error occurred while querying the group of the Grid Infrastructure user.
Cause: During the execution of 'mgmtca', an internal error occurred while querying the state of the Grid Infrastructure user.

Action: Contact Oracle Support Services.

MGTCA-01329: An internal error occurred while querying the version of the Grid Infrastructure Management Repository.
Cause: During the execution of 'mgmtca', an internal error occurred while querying the version of the Grid Infrastructure Management Repository.

Action: Contact Oracle Support Services.

MGTCA-01330: Verification of GIMR configuration ... FAILED.
Cause: An attempt to run the 'mgmtca' command was failed because GIMR is not configured in the cluster.

Action: Contact Oracle Support Services.

MGTCA-01331: Verification of GIMR state ... FAILED.
Cause: An attempt to run the 'mgmtca' command was failed because GIMR is not running in the cluster.

Action: Contact Oracle Support Services.

MGTCA-01332: Pluggable database {0} is in restricted session mode.
Cause: An attempt to run the 'mgmtca' command was failed because pluggable database is in restricted session mode.

Action: Contact Oracle Support Services.

MGTCA-01333: Client Data File '{0}' specified in the command is not a valid XML file name.
Cause: Execution of 'mgmtca' failed because the specified Client Data File was invalid.

Action: Retry the 'mgmtca' command specifying a valid Client Data File name.

MGTCA-01337: Client Data File location '{0}' must be different than input directory {1}.
Cause: Execution of 'mgmtca' failed because the location specified to generate a Client Data File was invalid.

Action: Retry the 'mgmtca' command specifying a different Client Data File location.

MGTCA-01338: Failed to read JSON file at {0}.
Cause: Execution of 'mgmtca' failed to read specified JSON file.

Action: Contact Oracle Support Services.

MGTCA-01339: Grid Infrastructure Management Repository CDB is not open.
Cause: Execution of 'mgmtca' failed as Grid Infrastructure Management Repository is not open.

Action: Contact Oracle Support Services.

MGTCA-01723: Top level key {0} does not exist in the OCR.
Cause: The indicated top level key was not created in the Oracle Clusterware Repository (OCR). This was an internal error.

Action: Contact Oracle Support Services.

MGTCA-01724: OCR operation failed
Cause: An Oracle Clusterware Repository (OCR) operation failed. This was an internal error.

Action: Contact Oracle Support Services.

53
NCR-00001 to NCR-04028

NCR-00001: NCR: Could not allocate memory
Cause: Insufficient swap space or system memory.

Action: Increase swap space or system memory.

NCR-00002: NCR: Invalid usage
Cause: Bad function parameter.

Action: Check function call.

NCR-00003: NCR: Initialization failure
Cause: Usually insufficient swap space or system memory.

Action: Increase swap space or system memory.

NCR-01003: NCRS: Read error.
Cause: Failed to read data from an input device.

Action: Check the input device driver return code for further information.

NCR-01004: NCRS: Write error.
Cause: Failed to write data to an output device.

Action: Check the output device driver return code for further information.

NCR-01005: NCRS: Failed to flush the output buffer.
Cause: Failed to write data in the output buffer to an output device.

Action: Check the output device driver return code for further information.

NCR-01006: NCRS: Data buffer overflow.
Cause: An attempt to read or write data outside of a given data buffer.

Action: Check data buffer size.

NCR-01007: NCRS: Operation is not supported in a given mode.
Cause: Attempt to perform an operation which is not supported for the current mode.

Action: See documentation for a list of work modes and supported operations.

NCR-01008: NCRS: Failed to obtain transport parameters.
Cause: Could not identify transport layer parameters.

Action: Check the transport layer return code for further information.

NCR-01009: NCRS: Record handling error.
Cause: Encountered an invalid record or an attempt to read beyond last record.

Action: See documentation for description of record handling methods.

NCR-01010: NCRS: Invalid network address length.
Cause: Network address size is set to 0.

Action: See documentation for valid network address sizes.

NCR-01011: NCRS: Send message failure.
Cause: Failed to send a message over network.

Action: Check the network interface return code for further information.

NCR-01012: NCRS: Receive message failure.
Cause: Failed to receive a network message.

Action: Check the network interface return code for further information.

NCR-01013: NCRS: Unvalid connection type.
Cause: Connection type is other than stream or message.

Action: See documentation for description of connection types.

NCR-01018: NCRS: Encryption failure.
Cause: Can not do the encryption for the data.

Action: See the SNS documentation for more information.

NCR-01019: NCRS: Checksumming failure.
Cause: Can not add the checksumming for the data.

Action: See the SNS documentation for more information.

NCR-01020: NCRS: Operation would block.
Cause: An I/O operation returned with no data read/written because the transport connection is "non-blocking" and, to succeed, the operation would have needed to block.

Action: This is a soft error; retry the operation.

NCR-02003: NCRF: Invalid type passed to format interpreter.
Cause: The format interpreter was given a data type it did not recognize.

Action: Check the types returned to the interpreter from either the type callback routine or from the type context structure.

NCR-02004: NCRF: Invalid format interpreter type context
Cause: The format interpreter was given an invalid type context.

Action: This error usually happens due to an improperly described aggregrate. For example, declaring NCRF_END_STRUCT_DATA_TYPE within a context, without a complementary NCRF_STRUCT_DATA_TYPE, is invalid.

NCR-02005: NCRF: Invalid session mode
Cause: The data format layer received a session mode other than GET,PUT or FREE.

Action: None

NCR-02006: NCRF: Invalid floating point representation received
Cause: The data format layer received a floating point representation it did not recognize.

Action: Check incoming format descriptor for errors.

NCR-02007: NCRF: Invalid format descriptor received
Cause: The data format layer received an improperly formed format descriptor. Subsequent data could not be formatted.

Action: Check for data integrity on receipt from remote host.

NCR-02008: NCRF: Error within stream processing in format interpreter
Cause: An error occured while the interpreter was processing an NCRF_STREAM_DATA_TYPE.

Action: Check for data integrity, or for stream existence.

NCR-02009: NCRF: Unable to open trace file
Cause: Failure to open tracing file.

Action: Make sure that this is a legal file name and that the user has write access.

NCR-02010: NCRF: Call context is not available
Cause: Call context not passed to format context.

Action: Make sure that create call context has been called.

NCR-02011: NCRF: Exceeded maximum number of rfids.
Cause: Exceeded maximum number of rfids.

Action: Call Oracle Support.

NCR-03002: NCRO: Maximum number of contexts has been reached
Cause: An attempt to create either a call context or a service context has failed because all context slots are in use.

Action: Free-up context slots by destroying those contexts no longer required, or, reconfigure NCRO with more context slots.

NCR-03003: NCRO: Unexpected message
Cause: Message read from service connection is not of the expected type.

Action: Application error - debug and fix.

NCR-03004: NCRO: Unknown message
Cause: Message read from service connection is of unknown type.

Action: Internal error - contact customer support.

NCR-03005: NCRO: Orphan message
Cause: Message read from service connection is for a call context that no longer exists.

Action: Application error - debug and fix.

NCR-03006: NCRO: Invalid operation
Cause: Attempted operation over call context is invalid. For example, attempting to send IN args for a procedure which is defined to have none.

Action: Application error - debug and fix.

NCR-03007: NCRO: Context is busy
Cause: Attempted operation failed because service/call context is busy performing a previous operaion.

Action: Application error - debug and fix.

NCR-03008: NCRO: Call rejected
Cause: An attempt to execute a remote procedure has failed because the server has rejected the procedure id.

Action: If wrong procedure id, send the correct one. If wrong server was contacted, then contact the right one.

NCR-03009: NCRO: Protocol version mismatch
Cause: Client and server NCRO layers are at incompatible versions levels.

Action: Upgrade to latest NCRO version.

NCR-03010: NCRO: Transfer callback error
Cause: Application transfer callback function has returned a "FAILED" status.

Action: Debug the transfer callback function.

NCR-03012: NCRO: Invalid session mode
Cause: Attempted operation has failed because the session context is in an invalid state.

Action: Internal error - contact customer support.

NCR-03013: NCRO: Operation not supportd
Cause: Attempted operation is not supported on this service connection because it is incompatible with the NCRO version level of the remote application.

Action: Link remote application with latest NCR library.

NCR-03014: NCRO: Bad transport address
Cause: A service context cannot be created because the transport address descriptor (contained in the binding context) is invalid.

Action: Application error - initialize the transport address descriptor correctly.

NCR-03015: NCRO: No transport address
Cause: A service context cannot be created because no transport address was provided (in the binding context) and the transport protocol uses datagrams.

Action: Application error - provide a transport address.

NCR-03016: NCRO: Message has bad address
Cause: Message read from service connection has bad address information.

Action: Internal error - contact customer support.

NCR-03017: NCRO: Transport type RSLV not supported
Cause: Support for transport type RSLV has not been built.

Action: Re-compile NCR library with NCR_USE_RSLV defined.

NCR-03018: NCRO: Failed to make RSLV connection
Cause: Failure to make RSLV connection usually means that the name resolution failed or the resolved TNS address is bad.

Action: Make sure that the name is in TNSNAMES.ORA and that it is set to the correct TNS address.

NCR-03019: NCRO: Unable to initialize thread support
Cause: Attempt to initialize the Core thread package has failed.

Action: Internal error - contact customer support.

NCR-03020: NCRO: Invalid call context
Cause: The call context is not an valid call context.

Action: Call context was destroyed, probably because the Break was received

NCR-03021: NCRO: Reset the in-band line
Cause: Our parnter is asking to reset the in-band line, after receiving a break

Action: The in-band line is required to be reset

NCR-03022: NCRO: Cannot send the break
Cause: There is an error occur when sending the break using the side-band channel

Action: Read the documention regarding to side-band break support issues

NCR-03023: NCRO: Cannot receive the break
Cause: There is an error occur when receiving the break using the side-band channel

Action: Read the documention regarding to side-band break support issues

NCR-03024: NCRO: Transport type LIST not supported
Cause: Support for transport type LIST has not been built.

Action: Re-compile NCR library with NCR_USE_LIST defined.

NCR-03025: NCRO: Failed to make LIST connection(s)
Cause: Failure to make LIST connection(s) usually means one of two things: (1) Address list syntax error, (2) Could not connect with supplied addresses

Action: Check address list syntax and make sure that there is a 'listener' process for each (or some) of the supplied addresses.

NCR-03026: NCRO: The result buffer has overflowed
Cause: The result buffer for holding the pickling result is too small.

Action: Please enlarge the result buffer and try again.

NCR-03027: NCRO: No remote service session set up yet.
Cause: Sender-makes-right needs the remote FID.

Action: Please set up the remote session before using the Send Make's Right option.

NCR-03028: NCRO: Partner refused request for sender-makes-right.
Cause: Sender-makes-right was requested by the current side, yet refused by the server.

Action: Check the server side to see why it refused SMR.

NCR-04002: NCRR: Invalid interface descriptor
Cause: An attempt to register an interface has failed because of an invalid interface descriptor.

Action: Check interface descriptor passed into the ncrrri_register_interface call.

NCR-04003: NCRR: Interface exists
Cause: An attempt to register an interface has failed because an interface already exists.

Action: Application error - register a new interface, destroy the old one, or indicate that the old one must be replaced.

NCR-04004: NCRR: Invalid interface instance handle
Cause: A service registration API call has failed because of an invalid instance handle.

Action: Application error - debug and fix.

NCR-04005: NCRR: Invalid procedure handle
Cause: A procedure/object registration has failed because of an invalid procedural handle.

Action: Application error - debug and fix.

NCR-04006: NCRR: Invalid argument descriptor
Cause: A procedure registration has failed because of an invalid argument descriptor.

Action: Application error - debug and fix.

NCR-04007: NCRR: Invalid object handle
Cause: A service registration API call failed because of an invalid object handle, for example, one that does not exist.

Action: Application error - debug and fix.

NCR-04008: NCRR: Procedure exists
Cause: An attempt to register a remote procedure has failed because the procedure already exists in this interface.

Action: Application error - register a new procedure, destroy the old one, or indicate that the old one must be replaced.

NCR-04009: NCRR: Object exists
Cause: An attempt to register an object has failed because the object already exists in this interface.

Action: Application error - register a new object, destroy the old one, or indicate that the old one must be replaced.

NCR-04010: NCRR: Unable to contact Oracle Internet Directory Server
Cause: Service export or import failed to contact Oracle Internet Directory Server.

Action: Ensure Oracle Internet Directory configuration is correct. Otherwise, turn on tracing and/or contact customer support.

NCR-04011: NCRR: Oracle Internet Directory error
Cause: Service export or import failed during interaction with Oracle Internet Directory Server.

Action: Either wrong parameters with respect to the Remote Operations Service Registration Schema were passed in and/or the Oracle Internet Directory server refused to perform the requested operation. Refer the Remote Operations Service Registration Schema and/or turn on Oracle Internet Directory tracing and/or contact customer support.

NCR-04012: NCRR: Invalid address descriptor
Cause: An ncrrei_export_interface call failed because of an invalid address descriptor.

Action: Application error - debug and fix.

NCR-04013: NCRR: Insufficient authorization
Cause: Attempted Oracle Internet Directory Server operation has failed because of insufficient authorization.

Action: Contact customer support.

NCR-04014: NCRR: Invalid instance name
Cause: Service export or import failed because of an invalid instance name

Action: Application error - debug and fix.

NCR-04015: NCRR: Invalid interface name
Cause: Service export or import failed because of an invalid interface name

Action: Application error - debug and fix.

NCR-04016: NCRR: Last interface instance handle
Cause: The instance handle passed in is the last instance handle in the list.

Action: Not an error - means reaching the end of the list.

NCR-04017: NCRR: Unable to find the interface instance handle
Cause: The instance handle corresponding to the instance name was not found.

Action: Application error - debug and fix.

NCR-04018: NCRR: Unable to create the TNS address list
Cause: Unable to create the TNS address list from the interface instance list.

Action: Application error - debug and fix.

NCR-04019: NCRR: Interface or instance name already exists
Cause: Service export failed because the name already exists with the Oracle Internet Directory server

Action: Application error - debug and fix.

NCR-04020: NCRR: Interface or instance name does not exist
Cause: Service expunge/query failed because the name does not exist with the Oracle Internet Directory server

Action: Use Oracle Internet Directory tools on the relevant Oracle Internet Directory instance to verify the same. Otherwise turn on tracing and/or contact customer support

NCR-04021: NCRR: Pickler errors
Cause: Service export/query failed because of pickler errors

Action: Contact customer support

NCR-04022: NCRR: Invalid procedure descriptor
Cause: A procedure registration has failed because of an invalid procedural descriptor.

Action: Application error - debug and fix.

NCR-04023: NCRR: Invalid object descriptor
Cause: An object registration has failed because of an invalid object descriptor.

Action: Application error - debug and fix.

NCR-04024: NCRR: Maximum number of procedures reached
Cause: A procedure registration has failed because the procedures array is filled up.

Action: Re-register the interface increasing the maximum # of procedures.

NCR-04025: NCRR: Operation timed out
Cause: An operation for the Oracle Internet Directory server failed because it exceeded the timeout period.

Action: Retry the operation and/or turn on Oracle Internet Directory tracing.

NCR-04026: NCRR: Operation not supported
Cause: An operation for the Oracle Internet Directory server failed because it met with a server referral to another instance.

Action: Unify the Remote Ops registration entries into the Oracle Internet Directory instance and/or turn on Oracle Internet Directory tracing.

NCR-04027: NCRR: Operation failed
Cause: An operation for the Oracle Internet Directory server failed because the Service Registration interfaces met with invalid parameters.

Action: Contact customer support.

NCR-04028: NCRR: Operation failed
Cause: An operation for the Oracle Internet Directory server failed because the data involved exceeds the maximum allowed size.

Action: Check the entries in the Oracle Internet Directory instance with tools available from Oracle Internet Directory and/or turn on Oracle Internet Directory tracing.

54
NDFN-00020 to NDFN-00025

NDFN-00020: missing IPMI userid
Cause: Required user name argument was not specified.

Action: Reissue command with correct arguments.

NDFN-00021: missing node list
Cause: Required node list was not supplied.

Action: Re-issue command with correct arguments.

NDFN-00022: unrecognized command option: '*string*'
Cause: Operation type missing or mis-spelled.

Action: Re-issue command with correct arguments.

NDFN-00023: no password read. Re-issue request
Cause: Required administrator password was not read in response to the password prompt before finding end-of-line.

Action: Re-issue command and be sure to type the password immediately following the prompt.

NDFN-00024: caught I/O exception: *string*
Cause: Unexpected I/O exception was encountered while attempting to read the password. Exception string should indicate the precise cause.

Action: Re-issue command after repairing root cause.

NDFN-00025: *string* failed for node *string*
Cause: The indicated operation could not be completed for the specified node. The lower-level error messages attached should indicate the root cause.

Action: Re-issue command after repairing the condition indicated.

55
NID-00001 to NID-00604

NID-00001: Illegal command line syntax - parse error = (*number*)
Cause: Illegal operand on command line.

Action: Remove illegal operand.

NID-00002: Parse error: *string*
Cause: An error was encountered while parsing the command line.

Action: Remove offending operand.

NID-00010: Password:
Cause: Password was not specified in command line.

Action: Type password at this prompt.

NID-00100: Cannot open datafile "*string*"
Cause: The specified datafile could not be opened.

Action: Ensure that the specified datafile exists and is writable.

NID-00101: LOGFILE (*string*) not accessible
Cause: The specified log file could not be opened.

Action: Specify a log file that is writable.

NID-00102: Garbled target string
Cause: The supplied connect string could not be parsed. The connect string does not have the correct format.

Action: Refer to Oracle9i Database Concepts.

NID-00103: Missing password in connect string "*string*"
Cause: Could not find the password in the supplied connect string. The connect string does not have the correct format.

Action: Refer to Oracle9i Database Concepts.

NID-00104: Need to specify TARGET connection parameter in command line
Cause: The mandatory parameter TARGET was not specified.

Action: Specify TARGET=*username*/*password* when invoking this utility.

NID-00105: Need to specify "LOGFILE=*logfile*" when using APPEND=YES option
Cause: The APPEND parameter was specified without a LOGFILE.

Action: Specify APPEND=YES only when LOGFILE is also specified.

NID-00106: LOGIN to target database failed with Oracle error:\n*string*
Cause: An Oracle error was reported while attempting to log in to the target database.

Action: Follow the actions for the specified Oracle error.

NID-00107: File I/O error on datafile "*string*" during *string* operation (*number*/*string*)
Cause: An operating system error was reported while performing the specified operation in the specified file.

Action: Verify the datafile and check for operating system errors.

NID-00109: DBNAME string length *number* exceeds maximum length of *number*
Cause: The specified new database name exceeded the maximum size.

Action: Specify a shorter, valid name.

NID-00110: Cannot use REVERT and specify a database name at the same time
Cause: Conflicting options were specified in the command line.

Action: Choose only one of the options.

NID-00111: Oracle error reported from target database while executing\n*string*\n*string*
Cause: An Oracle error was reported when executing an OCI operation.

Action: Follow the actions for the specified Oracle error.

NID-00112: unsupported connection mode
Cause: A mode different than SYSDBA or SYSBACKUP was specified for the connection to the target.

Action: Specify only AS SYSDBA or AS SYSBACKUP.

NID-00113: Error reading answer - aborting
Cause: Response caused an error.

Action: Retry the operation.

NID-00114: Must specify new database name when SETNAME is used
Cause: SETNAME=YES was specified but no DBNAME was provided.

Action: Specify DBNAME or remove the SETNAME=YES option.

NID-00115: Database should be mounted
Cause: The database was not mounted.

Action: Mount the database.

NID-00116: The Oracle Pluggable Database option specified is invalid.
Cause: The Oracle Pluggable Database option specified was not valid.

Action: Remove the Oracle Pluggable Database option, or specify ALL or NONE options.

NID-00120: Database should be mounted exclusively
Cause: The database was started in parallel mode. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and start it in exclusive mode.

NID-00121: Database should not be open
Cause: The database was open. To change the DBID, the database must be mounted exclusively.

Action: Shutdown the database and mount it in exclusive mode.

NID-00122: Database should have no offline immediate datafiles
Cause: The database has one or more datafiles that are in OFFLINE IMMEDIATE mode.

Action: Drop the datafiles or recover them and bring them online.

NID-00123: Magic number for datafile "*string*" is incorrect
Cause: Block 0 header has an incorrect magic number for the specified datafile.

Action: Verify that the datafile is correct and retry the operation.

NID-00124: Mismatched dbid for datafile *string*, expected *number*, found *number*
Cause: The dbid of the datafile does not match the 'old' DBID or the 'new' DBID.

Action: Verify that this datafile belongs to the database. You may need to restore a backup of the datafile.

NID-00125: Database should have no disabled datafiles
Cause: The database has one or more datafiles that are disabled.

Action: Drop the datafiles or recover them and bring them online.

NID-00126: Database should have no datafiles in unknown state
Cause: The database has one or more datafiles that are in an unknown state.

Action: Drop the datafiles or recover them and bring them online.

NID-00127: All online files in the database must have the same checkpoint SCN
Cause: The database has one or more datafiles that have a checkpoint SCN that does not match the database checkpoint SCN.

Action: Restart the database and shut it down cleanly, then retry the operation.

NID-00128: Cannot revert change of database, change not in progress
Cause: The REVERT option was used, but the control file does not show that a change of DBID was in progress.

Action: Do not use the REVERT option, or possibly restore the control file that was in place when the utility was started.

NID-00129: Invalid DBID for datafile "*string*", expecting *number*, found *number*
Cause: A datafile header shows a different DBID from the rest of the database files.

Action: Ensure that the file belongs to this database.

NID-00130: Mismatched CHECKPOINT_CHANGE# in datafile "*string*", expecting *string*, found *string*
Cause: The datafile header does not match information in the control file.

Action: Revert the change, open the database, and verify that all datafiles are consistent. Then, shut down the database and retry the operation.

NID-00131: Control file is not current
Cause: A non-current control file is currently mounted.

Action: Perform necessary actions to make the control file current and retry.

NID-00132: CHECKPOINT_CHANGE# in datafile "*string*": *string* in the future of controlfile: *string*
Cause: The checkpoint in the datafile header is ahead of the checkpoint in the control file.

Action: Make the database consistent and retry.

NID-00133: Database should have only consistent datafiles
Cause: The database has one or more datafiles that are marked FUZZY in the control file.

Action: Restart the database and shut down consistently, then retry the operation.

NID-00134: Datafile "*string*" is not consistent
Cause: The datafile is marked as fuzzy in its header.

Action: Restart the database and shut down cleanly, then retry the operation.

NID-00135: There are *number* active threads
Cause: There are active threads in the database. The most likely cause is that the database crashed the last time it was shut down.

Action: Ensure that all threads are closed before retrying the operation. Start and open the database to perform crash recovery, then shut down with the NORMAL or IMMEDIATE options to close it cleanly. Finally, try running the utility again.

NID-00137: All datafiles that are not dropped should be readable
Cause: The database had one or more files that could not be read.

Action: Restore the missing files and retry the operation.

NID-00138: Block verification failed for datafile *string* (*number*)
Cause: Block header checksum yields a nonzero value for the specified datafile.

Action: Verify that the datafile is correct and retry the operation.

NID-00139: Mismatched dbname for datafile *string*, expected *string*, found *string*
Cause: The dbname of the datafile does not match the 'old' dbname or the 'new' dbname.

Action: Verify that this datafile belongs to the database. You may need to restore a backup of the datafile.

NID-00140: Specified database name *string* does not match previous name used *string*
Cause: This is a continuation of a failed attempt. However in the failed attempt, the database name is different than the one used in the last attempt.

Action: Retry the command using the original database name.

NID-00141: No database name specified, previous attempt used *string*
Cause: This is a continuation of a failed attempt. However, in the failed attempt, a database name was provided.

Action: Retry the command using the original database name.

NID-00142: Only changing database name, previous attempt changed dbid to *number*
Cause: This is a continuation of a failed attempt. However, in the failed attempt, the database id was also being changed.

Action: Retry the command removing SETNAME=YES.

NID-00143: Mismatched controlfile *string*
Cause: A controlfile did not have the correct status.

Action: Shutdown the database, remove the mismatched controlfile, mount the database, and retry the operation.

NID-00144: New name for database *string* is the same as current name *string*
Cause: The specified name is the same as the current name of the database.

Action: Specify a different name or do not use the DBNAME option.

NID-00145: nls subsystem initialization failure for product=*string*, facility=*string*
Cause: The NLS product/facility error message file could not be located or properly initialized.

Action: Check that the error message directory and file(s) have been properly installed.

NID-00300: Connected to database *string* (DBID=*number*)
Cause: Informational message.

Action: No action required.

NID-00301: Datafile *string* - dbid changed, wrote new name
Cause: Informational message.

Action: No action required.

NID-00302: Datafile *string* - dbid changed
Cause: Informational message.

Action: No action required.

NID-00303: Datafile *string* - wrote new name
Cause: Informational message.

Action: No action required.

NID-00304: Datafile *string* - reverted
Cause: Informational message.

Action: No action required.

Cause: Informational message.

Action: No action required.

NID-00507: APPEND Append to output log NO
Cause: Informational message.

Action: No action required.

NID-00508: HELP Displays these messages NO
Cause: Informational message.

Action: No action required.

NID-00600: Internal Error - [*number*] [*number*] [*number*] [*number*]
Cause: This is the generic internal error number for program exceptions. This indicates that the program has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number

NID-00601: Internal Error - [*number*] [*string*] [*number*] [*number*]
Cause: This is the generic internal error number for program exceptions. This indicates that the program has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number

NID-00602: Could not allocate *number* bytes for "*string*"
Cause: Memory allocation failed.

Action: Free memory at the operating system level and retry operation.

NID-00603: No datafiles found in database
Cause: Controlfile has not datafiles recorded

Action: Report as a bug - the first argument is the internal error number

NID-00604: No control files found in database
Cause: Instance has no control files recorded

Action: Report as a bug - the first argument is the internal error number

56
NMP-00001 to NMP-00011

NMP-00001: value too big
Cause: The SNMP program interface received a value too large for it to process. This error is usually displayed underneath an error which describes in more detail the value which caused the problem.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NMP-00002: no such SNMP variable name
Cause: An SNMP request was not processed because the one or more of the variable names in the request does not exist. This error is not normally visible to the user except in a trace file, where it is usually part of a "soft" error condition which is normal.

Action: The error may indicate that a managed server does not support an operation requested by its control program, perhaps because of version incompatibility. For further details, turn on tracing and re-execute the failing operation. If the error persists, and does not occur as part of a "soft" error condition as noted in the trace file, contact Worldwide Customer Support.

NMP-00003: bad SNMP variable value
Cause: The SNMP program interface received a variable value which has an unsupported data type. This error may occur if a standard SNMP network monitor is sending requests to an Oracle service through an SNMP-to-TNS gateway, and that service cannot understand the requests.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00004: SNMP variable is read only
Cause: The user attempted to change a variable value at a remote server, and that variable is read-only. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Read-only variables may never be modified.

NMP-00005: general SNMP error
Cause: an SNMP error occured which did not fall under the heading of any other more specific error condition. This error may occur if a standard SNMP network monitor is sending requests to an Oracle service through an SNMP-to-TNS gateway, and that service cannot understand the requests.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00006: uninitialized SNMP context
Cause: An internal function attempted to use an uninitialize SNMP handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NMP-00007: I/O failure
Cause: The SNMP program interface attempted to send or receive an SNMP request and was unable to do so because of a network failure of some sort. This error is usually displayed underneath an error which describes the problem in more detail. The problem typically occurs when a control program is attempting to communicate with a service and either that service has unexpectedly terminated or the network path between the control program and the service has been interrupted.

Action: n/a

NMP-00008: SNMP message has incorrect version, version 0 is required
Cause: The SNMP program interface received a protocol request with an illegal version number. This error may occur if a standard SNMP network monitor is sending malformed requests to an Oracle service through an SNMP-to-TNS gateway.

Action: Ensure that the management platform in question is sending SNMP requests with the correct version number. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00009: SNMP initialization failure
Cause: The SNMP program interface could not be initialized, either because its error message file could not be found, or because there is a malformed snmp.communities parameter value in the parameter table.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations. Turn on tracing and look for parameter table load errors.

NMP-00010: memory exhausted
Cause: The program interface has run out of memory.

Action: Add more memory or run fewer processes.

NMP-00011: internal SNMP program interface error
Cause: An internal error occurred inside the SNMP program interface. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

57
NNC-00001 to NNC-00501

NNC-00001: maximum number of connections already open
Cause: All available name service connections are handling requests.

Action: If the problem occurs when running a name server, increase the values of names.max_open_connections. If the problem occurs in a client program, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00002: error listening on stream *string*
Cause: The name server was asked to listen on the specified address, and failed, probably because the address is malformed, or because it uses a SQL*Net protocol adaptor which has not been installed.

Action: Make sure the address is properly formed, and that it uses a protocol adaptor which has been installed on your system.

NNC-00003: error opening stream *string*
Cause: A name server or client program attempted to open a connection to another server and failed, either because the server is down, or because the network path to that server is not working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Make sure that the server being connected to is listening on the address used, and that there is network connectivity between the two end-points.

NNC-00004: connection is broken
Cause: The connection from a name server or client program to another server has been broken, either because that server has shut down, or because the network path to the server has stopped working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Make sure that the server being connected to is running and listening on the address used, and that there is network connectivity between the two end-points.

NNC-00005: cannot initialization stream subsystem
Cause: The name service stream subsystem could not be started, probably because of a missing TNS error message file.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NNC-00050: message format error
Cause: A corrupted name server message was received by a name server or the name server program interface.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00051: message content error
Cause: A corrupted name server message was received by a name server or the name server program interface.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00052: client and server protocol versions are incompatible
Cause: A name server message with an incompatible protocol version was received by a name server or the name server program interface. This problem will occur when there are clients and servers with widely varying protocol versions that are trying to communicate.

Action: upgrade older client and server software so it is compatible with newer software.

NNC-00053: ASN.1 error encountered while sending or receiving message
Cause: The name server or the name server program interface attempted to send or receive a message and failed because of an ASN.1 error.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00400: memory exhausted
Cause: The program interface has run out of memory.

Action: Add more memory or run fewer processes.

NNC-00401: program interface initialization failed
Cause: The name server program interface could not be initialised, probably because of a missing TNS or name server error message file.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NNC-00402: program interface de-initialization failed
Cause: An internal error occurred while the name server program interface was being de-initialised by an internal function.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00403: program interface has not been initialised
Cause: An internal function has attempted to de-initialise the name service program interface when it has not yet been initialised.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00404: supplied buffer of size *string* is smaller than minimum size *string*
Cause: A caller supplied the name server program interface with a memory buffer too small for the interface's requirements. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00405: network failure
Cause: The network connection between the client program and the name server has failed, either because the server has shut down, or because the network path to the server has stopped working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Contact your name server administrator to make sure that the server being connected to is running and listening on the address used, and that there is network connectivity between the two end-points.

NNC-00406: name "*string*" does not exist
Cause: The user asked for information associated with a global name that does not exist.

Action: Re-try the failing operation with a global name that exists.

NNC-00407: alias loop in name request
Cause: The name service detected an "alias loop" when trying to retrieve information associated with a global name. An alias loop occurs when an alias name X points to another alias name Y, which in turn points back to X, rather than eventually to a global name which contains data.

Action: Contact your name server administrator to have the alias loop investigated and fixed.

NNC-00408: name "*string*" exists but desired data does not
Cause: The user asked for information associated with a global name. The name in question exists, but does not contain the desired type of information.

Action: Re-try the failing operation with a type which the desired name does contain.

NNC-00409: temporary name service failure
Cause: There are no name servers available to handle a client request, or a name server was temporarily unable to handle a client request. This situation is almost always temporary, and occurs when the program interface has issued a name server request and not received a timely response from any of its preferred servers. Such delays can occur due to transient network or name server outages or heavy load.

Action: Re-try the failing operation. If the error persists, make sure there is network connectivity between the client and its preferred name servers, and contact your name server administrator to make sure that those name servers are running.

NNC-00410: invalid preferred server address list
Cause: The names.preferred_servers parameter in sqlnet.ora is malformed.

Action: Make sure the address list is properly formatted.

NNC-00411: invalid default domain name "*string*"
Cause: The names.default_domain parameter in sqlnet.ora is invalid.

Action: Make sure the parameter value is a valid global name. See your documentation for the characters which may be used in a global name.

NNC-00412: invalid name "*string*"
Cause: The name server program interface was given an invalid global name to process.

Action: Supply a valid domain name. If the error is caused by an internal function, contact Worldwide Customer Support.

NNC-00413: general failure
Cause: A name server program interface error occured which did not fall under the heading of any other more specific error condition. The error will usually be followed by more specific lower-level information.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00414: invalid name-value binding string "*string*"
Cause: A caller provided the name server program interface with an invalid name-value binding string value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid name-value binding string argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00415: section identifier *string* is invalid, must be between *string* and *string*
Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00416: user callback function returned error number *string*
Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00417: name "*string*" already exists
Cause: A caller has attempted to create a new global name, and that name already exists.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a name that does not already exist. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00418: name "*string*" cannot be modified because it has children
Cause: A caller has attempted to delete or rename a global name, and that name cannot be modified because it has child names underneath it in the name space.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a name that is a leaf node. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00419: authoritative server is unreachable
Cause: A name server request cannot be processed because the server which received the operation does not own the name specified in the request and cannot locate the server which does own the name. The error is almost always transient, and occurs either because the path between the server receiving the request and the request's final destination has been interrupted, or because the final destination is down.

Action: Not normally visible to the user, except when using the name server control program. Because the error is typically a transient one, retrying the failing operation will usually work. If the failure persists, the name server which is allowed to process the failing operation is probably shut down or unreachable. Contact your name server administrator to make sure that your site's name servers are running, and are properly configured.

NNC-00420: operation not allowed
Cause: A name server request cannot be processed because the server which received the operation is not allowed to process it. The problem typically occurs when an administrator has disabled request processing at a particular server for some reason.

Action: Contact your name server administrator to determine why server request processing has been disabled.

NNC-00421: invalid modification directive *string*, must be between *string* and *string*
Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00422: invalid data type name "*string*"
Cause: A caller has provided an invalid data type name to the name server program interface.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid type name. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00423: invalid data item syntax code *string*
Cause: A caller has provided an invalid data type code to the name server program interface.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid type name. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00424: invalid address "*string*"
Cause: A caller provided the name server program interface with an invalid address value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid address argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00425: meta-data violation
Cause: A caller issued a name server modification request and that request cannot be processed because it would violate data type meta-data constraints.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, examine the meta-data constraints for the data type being operated upon and don't violate them. Examples of typical constraint violations are attempts to add a new data item to a name which already contains alias information, or attempts to add alias information to a name which already contains other data, or attempts to replace a data item with another item that has the wrong syntax. If the error occurs outside the control program, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00426: no such data type
Cause: A caller attempted to create a data item, and could not because the data item's type does not exist.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the operation with an existent data type. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00427: server does not support this version of the protocol
Cause: A name server message with an incompatible protocol version was received by a name server or the name server program interface. This problem will occur when there are clients and servers with widely varying protocol versions that are trying to communicate.

Action: upgrade older client and server software so it is compatible with newer software.

NNC-00428: invalid meta-data data item
Cause: A caller provided the name server program interface with an invalid meta-data data item.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid meta-data argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00429: invalid octet string literal "*string*"
Cause: A caller provided the name server program interface with an invalid octet string string value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid octet string argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00430: Database not accessible
Cause: When a database is used for consistency between different nameservers, any modify operation should not only modify the cache but also the database. And if the database is not accessible, this error occurs.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, make sure database is available and then re-execute the operation. If error persists, contact Worldwide Customer Support.

NNC-00431: NS address does not match any of the current addresses
Cause: When delegating a domain, the address of the Nameserver is provided by the client. If the nameserver already exists, then it already has address(es) associated with it. So, the address supplied by the client must match one of them. Otherwise, this error occurs.

Action: Not normally visible to the user, except when using name server control program. If the error occurs when using the control program, either provide an one of the existing addresses of the name server or delegate the domain to a new nameserver.

NNC-00500: warning: "*string*" parameter value is illegal, setting to *string*
Cause: The named parameter value is invalid.

Action: Make sure the parameter value is formatted correctly. Valid choices for boolean parameter values are TRUE, FALSE, YES, NO, ON, and OFF.

NNC-00501: warning: "*string*" parameter value must be between *number* and *number*, setting to *number*
Cause: The named parameter value is invalid or outside legal boundary values.

Action: Make sure the parameter value is a number, and falls between valid minimum and maximum values, as specified in the error text.

58
NNF-00001 to NNF-04009

NNF-00001: Not a TNS address
Cause: While asking to read an address the name service returned a record which was not an address.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00002: Invalid value passed to function call
Cause: An invalid value was passed to an interface function.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00003: Naming adapter *string* does not exist
Cause: The requested name service adapter was not found in the current adapter table.

Action: Check the spelling of the adapter reqested. Verify that the adapter runs on this platform, and the adapter is compiled into the adapter table linked into the executable.

NNF-00004: Operation not supported in *string*
Cause: The operation requested is not supported under this adapter.

Action: Verify that the operation being performed is not under restriction, such as writing to read-only name service. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00005: Functionality not implemented
Cause: The operation requested is not supported in this implementation.

Action: If this is retrieved from a production release, contact Worldwide Customer Support. Otherwise, check the release notes as to the restrictions in this release.

NNF-00110: no values exist
Cause: Test program help text.

Action: None

NNF-00540: Failed to insert name: *string*
Cause: Failed to insert name into the native service.

Action: Verify that the name is not already in the native namespace and the appropriate access permissions are set for the namespace.

NNF-01001: ds_initialize: workspace initialization failed
Cause: The DCE workspace as setup by ds_initialize() failed to initialize.

Action: Verify that conditions necessary for a successful ds_initialize() call are present on this platform (e.g is there enough memory?). Check that there is not another workspace user in

this program. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01002: DCE could not open configuration file
Cause: A DCE call returned an error that it could not access its configuration file.

Action: Check that the DCE configuration file for this platform is present, and accessable. On Unix this file is dce_cf.db. Check if a simple call to dce_cf_get_cell_name() succeeds.

NNF-01003: DCE could not find cell name
Cause: A DCE call returned an error that it could not find the cell name in its configuration file.

Action: Check that this machine has been configured for a DCE cell. Chcek that the DCE configuration file is not corrupted. On Unix, this file is dce_cf.db. Check if a simple call to dce_cf_get_cell_name() succeeds.

NNF-01004: DCE returned unspecified error *string*
Cause: A DCE call returned an status that was not in this implementation's list of possible status values for this DCE call.

Action: Verify that this platform's DCE release is not beyond those supported by this Oracle application. If the error persists, contact Worldwide Customer Support.

NNF-01005: Internal XOM class violation
Cause: A DCE XOM call returned statuses inconsistent with the class definitions in the DCE documentation.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01006: Attribute *string* not available
Cause: A insertion call attempted to use an attribute which did not have a translation to a DCE attribute.

Action: Use another attribute, or insert the translation into DCE.

NNF-01007: DCE long strings are not supported
Cause: A query returned a object which has a XOM OM_S_LONG_STRING. The current implementation does not support such objects.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01008: XDS attribute syntax *string* incorrect for Oracle Names syntax *string*
Cause: The syntax as specified in the XDS object is different than that which is expected for the given Oracle names syntax.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-02001: NIS client error string: *string*
Cause: A call to an NIS (YP) function failed. This message contains the text of the NIS error code returned.

Action: Should only be visible when returned as part of another error. If the error persists, contact Worldwide Customer Support.

NNF-02002: NIS value does not conform to adapter schema: *string*
Cause: The values in the maps used by the NIS adapter must conform to a specific set of internal formatting rules. This value returned did not conform to those rules.

Action: Should not be visible, unless you are attempting to create your own maps. If the error persists, contact Worldwide Customer Support.

NNF-02003: Unknown NIS error code: *string*
Cause: An error code returned by a NIS (YP) function was not in the list expected by this program.

Action: Verify that the error is generated by the YP functions on this platform. Notify Worldwide Customer Support of the error.

NNF-02004: NIS map *string* does not exist
Cause: The requested attribute does not exist.

Action: For an unused attribute, no action is required, as this is the expected error. Otherwise, add the attribute and reload the NIS (YP) maps.

NNF-02005: NIS key *string* does not exist in map *string*
Cause: The requested name was not found.

Action: For an unused name, no action is required, as this is the expected error. Otherwise, add the name to the map and reload the NIS (YP) maps.

NNF-03002: Unknown BIND error code: *string*
Cause: The return code in the BIND (DNS) query response did not conform to those values listed in RFC 1035.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-03003: Format error parsing server response
Cause: The query response packet returned from the BIND (DNS) API did not conform to the format listed in RFC 1035.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-03004: DNS Class mismatch (*string*)
Cause: The query response packet returned a class different from the ones expected by the interface.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-04000: File succesfully converted
Cause: The requested conversion is performed.

Action: Normal condition, no action necessary.

NNF-04001: Error converting input file
Cause: The input file contains lines that cannot be converted by the conversion program.

Action: Check that the syntax of the input file is correct.

NNF-04002: Outputfile already exists
Cause: An old output file already exists in the current directory

Action: Remove the existing file, and restart the conversion tool

NNF-04003: Entry in inputfile is too long
Cause: The makedbm program, limits entries in mapfiles to 1017 characters. Therefor, the conversion tool will not process TNS addresses which are longer than 1017 characters.

Action: Shorten the offending entry.

NNF-04004: Invalid string in inputfile
Cause: the input file contains invalid lines.

Action: Check that the syntax of the input file is correct.

NNF-04005: Cannot open inputfile
Cause: The specified input file could not be found.

Action: restart the conversion tool with the correct input file.

NNF-04006: Could not create outputfile
Cause: An output file could not be created in the current working directory

Action: Change the permissions of the current directory and restart the conversion tool.

NNF-04007: Error reading input file
Cause: A problem while reading the input file. This could be caused by an unexpected end of file in the input file.

Action: Check that the file is intact and that the syntax of the input file is correct.

NNF-04008: Error writing outputfile
Cause: An error occured while writing to the output file.

Action: Check available disk space. If the error persists, contact Worldwide Customer Support.

NNF-04009: Usage: tns2nis *filename*
Cause: The conversion tool was not invoked properly. The filename should either be tnsnames.ora or native.ora

Action: Restart the conversion tool with the proper parameter.

59
NNL-00001 to NNL-01078

NNL-00001: request argument "*string*" is invalid
Cause: The user entered an invalid request command argument.

Action: Supply a valid argument.

NNL-00002: request argument "*string*" is not allowed with this operation
Cause: The user entered a request command argument which is not valid with the particular request command.

Action: Supply a valid argument.

NNL-00003: memory exhausted
Cause: The program has run out of memory

Action: Check the amount of available memory on your machine to ensure that there is enough memory to run this executable. If necessary, free up memory by running fewer programs, then try again.

NNL-00004: invalid command argument "*string*"
Cause: The user entered an invalid command argument.

Action: Supply a valid argument.

NNL-00005: no server has been set. Use the "SET SERVER" command first
Cause: The user attempted to issue a command which requires that a default managed Oracle Names server be set first.

Action: Use the SET SERVER command to set your default server, then reissue the command. Alternatively, if the command allows, re-issue it with a specific server name so the control program does not need to use the default.

NNL-00006: timeout, server is not responding
Cause: The control program issued a request to an Oracle Names server and no response arrived in a timely fashion. The network connection between the control program and the server may be faulty, the server may be very heavily loaded, or there may be substantial network delays between the control program and the server. The latter is especially true for WAN links.

Action: Reissue the command; if it continues to fail, check to see that the server being managed is running correctly and that the network connection between the server and the control program is working correctly.

NNL-00007: server responded with an error
Cause: The control program issued a request to an Oracle Names server and the server responded with an error.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00008: request not understood by server
Cause: The control program issued a request to an Oracle Names server and the server did not understand the request.

Action: If the server and the control program have different versions, they may be unable to communicate. Check your documentation for version compatibility constraints. If the server and control program are compatible, turn on tracing for further details, and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00009: encryption of server password failed
Cause: The control program attempted and failed to encrypt a server password, supplied either through the SET PASSWORD command or the namesctl.server_password configuration parameter.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00010: error getting address for server "*string*"
Cause: The control program attempted to translate a server name to its corresponding address, and failed. There are a large number of possible causes for the failure. The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. If the user has changed managed servers with the SET SERVER command, the new server must be running, and must be able to resolve the address or forward the request to another server which can resolve the address. Alternatively, a TNSNAMES.ORA file with valid name server names and addresses must exist in the correct system-specific location.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00011: no server with name "*string*" exists
Cause: The user issued a SET SERVER request and the current managed Oracle Names server was unable to translate that name into an address. Alternatively, the user issued a control program request to a specific server, and that server's name could not be translated into an address. Both problems are almost always caused by mis-typing the server name.

Action: Re-issue the request with a valid server name.

NNL-00012: invalid "*string*" value "*string*"
Cause: The first argument is a data type, the second is a value. The user supplied an invalid data value of the specified type.

Action: Re-issue the failing operation with correct data.

NNL-00013: not performed, permission denied for supplied password
Cause: The user issued a request to an Oracle Names server, and the password supplied with the request was incorrect.

Action: Check to see that the password sent by the control program to the server is correct for that server. You can set a new password with the SET PASSWORD control program command.

NNL-00014: unknown data type "*string*"
Cause: The user issued a name server request which contained an unknown data type.

Action: It is possible that the server had no information on the type, but automatically fetched it in response to the failing request. Re-issue the failing request; if the server has in the meantime fetched the appropriate data type information, the error will go away. If the error persists, the data type is probably invalid.

NNL-00015: type "*string*" has "*string*" syntax, which has no textual representation
Cause: Not all data type syntaxes can be represented as text. This message indicates that the user issued a name server request for a type with an non-textual representation.

Action: Re-issue the operation with a data type that has a syntax with a textual representation.

NNL-00016: cannot start server, error getting program directory's name
Cause: The user issued a STARTUP request, but the control program was unable to start the server because it was unable to find the name of the directory where the server executable resides.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00017: cannot start server, program "*string*" does not exist
Cause: The user issued a STARTUP request, but the control program was unable to start the server because it was unable to find the server executable.

Action: Make sure that a copy of the server executable exists in your system's oracle executable directory.

NNL-00018: warning: could not contact default name server
Cause: The control program was unable to contact its default name server during startup. There are a number of possible causes for this error. The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. The first server in the preferred-server list must be running, and there must be network connectivity between the control program and that server.

Action: Check to see that all of the above are true. If the control program is still unable to contact its default server, turn on tracing and restart the control program. If the error persists, contact Worldwide Customer Support.

NNL-00019: warning: server either changed or ignored your request
Cause: The user issued a request to an Oracle Names server and that request was altered in some way. Typically the user specified an invalid argument of some sort, and the server either ignored the request, or replaced the invalid argument with a reasonable default.

Action: Use the control program to check the current state of the value that you attempted to change. The server's log file may also contain information about the exact cause of the problem. Re-issue the operation with correct arguments.

NNL-00020: warning: no TNSNAMES.ORA file and no preferred name servers in SQLNET.ORA
Cause: The control program was unable to find a TNSNAMES.ORA file and was unable to find a default name server in SQLNET.ORA. The control program will operate in this state,

but will be unable to resolve any names until a default server has been set, and that server must be set using its raw TNS address.

Action: The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. The first server in the preferred-server list must be running, and there must be network connectivity between the control program and that server. Alternatively, a TNSNAMES.ORA file with valid name server information must exist in the correct system-specific location.

NNL-00022: error changing trace level from *string* to *string*, level change ignored
Cause: The user attempted to change the control program's local trace level, and the program encountered an error while changing the level. Usually the problem is that tracing was enabled for the first time (by changing the trace level from OFF to something else) and the trace file is not writeable by the control program.

Action: Check to see that the trace file is writeable. Your documentation will tell you the name of the trace file.

NNL-00023: SET command is missing an argument
Cause: The user attempted to issue a SET command with no argument.

Action: Supply a valid argument to the SET command.

NNL-00024: warning: no preferred name servers in SQLNET.ORA
Cause: The control program was unable to find any preferred name servers in SQLNET.ORA, and will therefore not connect to a default server.

Action: Make sure that the SQLNET.ORA file contains a valid names.preferred_servers entry.

NNL-00035: File *string* or nested IFILEs not found.
Cause: Error in loading from the tnsfile.

Action: None

NNL-00036: No records loaded
Cause: No loadable data.

Action: None

NNL-00037: Error *number* while sequencing through parameter table.
Cause: The NL Parameter system reported an error while retrieving the next name from the table.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00038: Distinguished Name syntax error
Cause: Distinguished Name incorrectly specified.

Action: Supply a valid DN.

NNL-00039: no RRs
Cause: Object has no relevant RRs to be mapped to LDAP objects.

Action: None

NNL-00040: Distinguished Name exceeds buffer length: *string*
Cause: Distinguished Name derived from Domain Name is too long.

Action: Either move the object to a domain whose name is shorter or manually update the LDAP object.

NNL-00041: Object *string* not in domain *string*
Cause: Object has no relevant RRs to be mapped to LDAP objects.

Action: None

NNL-00042: LDAP bind failure: *number*, *string*
Cause: Call to ldap_bind failed with return set to given number.

Action: Correct user/pwd parameters or definitions.

NNL-00043: LDAP open failure
Cause: LDAP server could not be contacted.

Action: Correct connect info or server unavailability.

NNL-00044: Unsupported data type *string* not mapped
Cause: ONames data type could not be mapped to LDAP attributes

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00045: No host given for LDAP server
Cause: LDAP open will dump core without a host.

Action: Provide appropriate host with '-h' option.

NNL-00046: Name *string* exceeds DN template depth
Cause: There are more domains in the name than are specified in the DN template.

Action: Add fields to the template or migrate subdomains with separate dump operations.

NNL-00047: LDAP modify returned error: 0x*number*, *string*
Cause: LDAP failed with the return code shown.

Action: Refer to LDAP documentation for the meaning of the error.

NNL-00048: Error opening file: *string*
Cause: Named file cannot be opened.

Action: Provide for access to file.

NNL-00049: Output in *string* cannot be renamed to *string*
Cause: The given file cannot be created.

Action: Insure that the file specified can be created before running the command. Or use the temporary file itself.

NNL-00201: Shutdown occurs in *string*
Cause: Control program general message.

Action: None

NNL-00202: No shutdown currently scheduled
Cause: Control program general message.

Action: None

NNL-00203: Scheduled shutdown to occur in *string*
Cause: Control program general message.

Action: None

NNL-00204: Cancelled shutdown
Cause: Control program general message.

Action: None

NNL-00205: Reload check occurs in *string*
Cause: Control program general message.

Action: None

NNL-00206: No reload check currently scheduled
Cause: Control program general message.

Action: None

NNL-00207: Scheduled reload check to occur in *string*
Cause: Control program general message.

Action: None

NNL-00208: Cancelled reload check
Cause: Control program general message.

Action: None

NNL-00209: Cache checkpoint interval is currently *string*
Cause: Control program general message.

Action: None

NNL-00210: Cache checkpointing is currently disabled
Cause: Control program general message.

Action: None

NNL-00211: Cache checkpoint interval is now *string*
Cause: Control program general message.

Action: None

NNL-00212: Cache checkpointing is now disabled
Cause: Control program general message.

Action: None

NNL-00213: No entry with specified index number, try "SHOW SYSTEM_QUERIES"
Cause: Control program general message.

Action: None

NNL-00214: Next auto-refresh for specified index number occurs in *string*
Cause: Control program general message.

Action: None

NNL-00215: Scheduled specified index number's next auto-refresh to occur in *string*
Cause: Control program general message.

Action: None

NNL-00216: Disabled auto-refresh for specified index number
Cause: Control program general message.

Action: None

NNL-00217: Controller is sleeping for *number* seconds
Cause: Control program general message.

Action: None

NNL-00218: Ignoring spurious trailing text "*string*"
Cause: Control program general message.

Action: None

NNL-00219: Statistic counter logging interval is currently *string*
Cause: Control program general message.

Action: None

NNL-00220: Statistic counter logging is currently disabled
Cause: Control program general message.

Action: None

NNL-00221: Statistic counter logging interval is now *string*
Cause: Control program general message.

Action: None

NNL-00222: Statistic counter logging is now disabled
Cause: Control program general message.

Action: None

NNL-00223: Statistic counters are next logged in *string*
Cause: Control program general message.

Action: None

NNL-00224: Scheduled statistic counters to be logged in *string*
Cause: Control program general message.

Action: None

NNL-00225: Currently managing name server "*string*"
Cause: Control program general message.

Action: None

NNL-00226: Current request-processing delay is *string*
Cause: Control program general message.

Action: None

NNL-00227: Request-processing delay is currently disabled
Cause: Control program general message.

Action: None

NNL-00228: Request-processing delay is now *string*
Cause: Control program general message.

Action: None

NNL-00229: Request-processing delay is now disabled
Cause: Control program general message.

Action: None

NNL-00230: Controller NOCONFIRM mode is currently *string*
Cause: Control program general message.

Action: None

NNL-00231: Controller NOCONFIRM mode is now *string*
Cause: Control program general message.

Action: None

NNL-00232: Auto-refresh failure-retry interval is currently *string*
Cause: Control program general message.

Action: None

NNL-00233: Auto-refresh failure-retry interval is now *string*
Cause: Control program general message.

Action: None

NNL-00234: Auto-refresh failure-retry expiration period is currently *string*
Cause: Control program general message.

Action: None

NNL-00235: Auto-refresh failure-retry expiration period is now *string*
Cause: Control program general message.

Action: None

NNL-00236: Statistic counter reset interval is currently *string*
Cause: Control program general message.

Action: None

NNL-00237: Resetting of statistic counters is currently disabled
Cause: Control program general message.

Action: None

NNL-00238: Statistic counter reset interval is now *string*
Cause: Control program general message.

Action: None

NNL-00239: Resetting of statistic counters is now disabled
Cause: Control program general message.

Action: None

NNL-00240: Starting "*string*"...
Cause: Control program general message.

Action: None

NNL-00241: Processing of modification requests is currently enabled
Cause: Control program general message.

Action: None

NNL-00242: Processing of modification requests is currently disabled
Cause: Control program general message.

Action: None

NNL-00243: Processing of modification requests is now enabled
Cause: Control program general message.

Action: None

NNL-00244: Processing of modification requests is now disabled
Cause: Control program general message.

Action: None

NNL-00245: General request processing is currently enabled
Cause: Control program general message.

Action: None

NNL-00246: General request processing is currently disabled
Cause: Control program general message.

Action: None

NNL-00247: General request processing is now enabled
Cause: Control program general message.

Action: None

NNL-00248: General request processing is now disabled
Cause: Control program general message.

Action: None

NNL-00249: DEFAULT-FORWARDERS-ONLY mode is currently enabled
Cause: Control program general message.

Action: None

NNL-00250: DEFAULT-FORWARDERS-ONLY mode is currently disabled
Cause: Control program general message.

Action: None

NNL-00251: DEFAULT-FORWARDER-ONLY mode is now enabled
Cause: Control program general message.

Action: None

NNL-00252: DEFAULT-FORWARDER-ONLY mode is now disabled
Cause: Control program general message.

Action: None

NNL-00253: Server-generated requests currently request forwarding
Cause: Control program general message.

Action: None

NNL-00254: Server-generated requests currently do not request forwarding
Cause: Control program general message.

Action: None

NNL-00255: Server-generated requests now request forwarding
Cause: Control program general message.

Action: None

NNL-00256: Server-generated requests now do not request forwarding
Cause: Control program general message.

Action: None

NNL-00257: Server-generated requests currently require authoritative answers
Cause: Control program general message.

Action: None

NNL-00258: Server-generated requests currently do not require authoritative answers
Cause: Control program general message.

Action: None

NNL-00259: Server-generated requests now require authoritative answers
Cause: Control program general message.

Action: None

NNL-00260: Server-generated requests now do not require authoritative answers
Cause: Control program general message.

Action: None

NNL-00261: Request forwarding is currently enabled
Cause: Control program general message.

Action: None

NNL-00262: Request forwarding is currently disabled
Cause: Control program general message.

Action: None

NNL-00263: Request forwarding is now enabled
Cause: Control program general message.

Action: None

NNL-00264: Request forwarding is now disabled
Cause: Control program general message.

Action: None

NNL-00266: Round trip time is *string*
Cause: Control program general message.

Action: None

NNL-00267: Address is *string*
Cause: Control program general message.

Action: None

NNL-00268: Enter name server password:
Cause: Prompt for password after user has issued 'set password'

Action: Type password, invisibly.

NNL-00270: Current default domain is "*string*"
Cause: Control program general message.

Action: None

NNL-00271: Default domain is now "*string*"
Cause: Control program general message.

Action: None

NNL-00272: Removed name "*string*" from caches along the following path:
Cause: Control program general message.

Action: None

NNL-00273: server successfully started\n
Cause: Control program general message.

Action: None

NNL-00274: server not started, errors follow
Cause: Control program general message.

Action: None

NNL-00275: Trace level is currently *number*
Cause: Control program general message.

Action: None

NNL-00276: Trace level is now *number*
Cause: Control program general message.

Action: None

NNL-00277: Maximum number of times a request can be reforwarded is currently *number*
Cause: Control program general message.

Action: None

NNL-00278: Maximum number of times a request can be reforwarded is now *number*
Cause: Control program general message.

Action: None

NNL-00279: Restart occurs in *string*
Cause: Control program general message.

Action: None

NNL-00280: No restart currently scheduled
Cause: Control program general message.

Action: None

NNL-00281: Scheduled restart to occur in *string*
Cause: Control program general message.

Action: None

NNL-00282: Cancelled restart
Cause: Control program general message.

Action: None

NNL-00283: Next cache checkpoint occurs in *string*
Cause: Control program general message.

Action: None

NNL-00284: Scheduled cache checkpoint to occur in *string*
Cause: Control program general message.

Action: None

NNL-00285: Server has no queued system queries
Cause: Control program general message.

Action: None

NNL-00286: Server does not own any domains
Cause: Control program general message.

Action: None

NNL-00287: Cache flush occurs in *string*
Cause: Control program general message.

Action: None

NNL-00288: No cache flush currently scheduled
Cause: Control program general message.

Action: None

NNL-00289: Scheduled cache flush to occur in *string*
Cause: Control program general message.

Action: None

NNL-00290: Cancelled cache flush
Cause: Control program general message.

Action: None

NNL-00291: Statistic counters are next reset in *string*
Cause: Control program general message.

Action: None

NNL-00292: Scheduled statistic counters to be reset in *string*
Cause: Control program general message.

Action: None

NNL-00293: Controller's trace level remains unchanged
Cause: Control program general message.

Action: None

NNL-00294: No entries found
Cause: Control program general message.

Action: None

NNL-00295: Controller's local trace level is currently *number*
Cause: Control program general message.

Action: None

NNL-00296: Controller's local trace level changed from *number* to *number*
Cause: Control program general message.

Action: None

NNL-00297: Cache will be dumped to trace file in *string*
Cause: Control program general message.

Action: None

NNL-00298: No cache dump currently scheduled
Cause: Control program general message.

Action: None

NNL-00299: Scheduled server cache dump to occur in *string*
Cause: Control program general message.

Action: None

NNL-00300: Cancelled server cache dump
Cause: Control program general message.

Action: None

NNL-00301: Server shutting down
Cause: Control program general message.

Action: None

NNL-00302: Server restarting
Cause: Control program general message.

Action: None

NNL-00303: Server checking for reload
Cause: Control program general message.

Action: None

NNL-00304: Server flushing its cache
Cause: Control program general message.

Action: None

NNL-00305: Server dumping statistics to the log file
Cause: Control program general message.

Action: None

NNL-00306: Server setting all statistic counters to zero
Cause: Control program general message.

Action: None

NNL-00307: Server checkpointing its cache
Cause: Control program general message.

Action: None

NNL-00308: Server dumping its cache to the trace file
Cause: Control program general message.

Action: None

NNL-00340: Trace file name is currently *string*
Cause: Control program general message.

Action: None

NNL-00341: Trace file name is now *string*
Cause: Control program general message.

Action: None

NNL-00342: Log file name is currently *string*
Cause: Control program general message.

Action: None

NNL-00343: Log file name is now *string*
Cause: Control program general message.

Action: None

NNL-00344: Save_config_on_stop is currently ON
Cause: Control program general message.

Action: None

NNL-00345: Save_config_on_stop is currently OFF
Cause: Control program general message.

Action: None

NNL-00346: Save_config_on_stop is now ON
Cause: Control program general message.

Action: None

NNL-00347: Save_config_on_stop is now OFF
Cause: Control program general message.

Action: None

NNL-00348: Server saving the config file now
Cause: Control program general message.

Action: None

NNL-00349: Configuration will be saved in *string*
Cause: Control program general message.

Action: None

NNL-00350: No save config currently scheduled
Cause: Control program general message.

Action: None

NNL-00351: Scheduled configuration save to occur in *string*
Cause: Control program general message.

Action: None

NNL-00352: Cancelled save config
Cause: Control program general message.

Action: None

NNL-00353: Not allowed
Cause: Control program general message.

Action: None

NNL-00400: Response status:
Cause: Control program general message.

Action: None

NNL-00401: Authoritative answer: *string*
Cause: Control program general message.

Action: None

NNL-00402: Authoritative server: *string*
Cause: Control program general message.

Action: None

NNL-00403: Number of answers: *number*
Cause: Control program general message.

Action: None

NNL-00404: TTL: *string*
Cause: Control program general message.

Action: None

NNL-00405: Forwarding information:
Cause: Control program general message.

Action: None

NNL-00406: Canonical name: *string*
Cause: Control program general message.

Action: None

NNL-00407: Alias translations:
Cause: Control program general message.

Action: None

NNL-00408: Answers:
Cause: Control program general message.

Action: None

NNL-00409: data type is "*string*"
Cause: Control program general message.

Action: None

NNL-00410: Average response time: *string*
Cause: Control program general message.

Action: None

NNL-00411: Minimum response time: *string*
Cause: Control program general message.

Action: None

NNL-00412: Number of requests: *number*
Cause: Control program general message.

Action: None

NNL-00413: Total response time: *string*
Cause: Control program general message.

Action: None

NNL-00414: Maximum response time: *string*
Cause: Control program general message.

Action: None

NNL-00415: Name: *string*
Cause: Control program general message.

Action: None

NNL-00416: Last timestamp: *number*
Cause: Control program general message.

Action: None

NNL-00417: Distinguished Name: *string*
Cause: Control program general message.

Action: None

NNL-00418: Attributes Mapped: *number*
Cause: Control program general message.

Action: None

NNL-00500: Shows information on domains served by this server
Cause: Control program help text.

Action: None

NNL-00501: set|show log_stats_interval [*seconds*] [<server_list>] :\nset|show the server's statistic counter logging interval
Cause: Control program help text.

Action: None

NNL-00502: Shows, sets, or cancels when the server next dumps its statistic counters
Cause: Control program help text.

Action: None

NNL-00503: repeat *number command* [*args*] : repeat a command *number* times
Cause: Control program help text.

Action: None

NNL-00505: log_stats [<server_list>] : write Names server statistics to the log file
Cause: Control program help text.

Action: None

NNL-00506: reset_stats [<server_list>] : reset Names server statistics
Cause: Control program help text.

Action: None

NNL-00507: Shows, sets, or cancels the time when an auto-refresh query is next issued
Cause: Control program help text.

Action: None

NNL-00508: show system_queries [<server_list>] : show system query information
Cause: Control program help text.

Action: None

NNL-00509: set|show cache_checkpoint_interval [*seconds*] [<server_list>] :\nset|show the server's cache checkpoint interval
Cause: Control program help text.

Action: None

NNL-00510: Adds a data record to an existing name
Cause: Control program help text.

Action: None

NNL-00511: Shows or sets the server's system query authority requirements
Cause: Control program help text.

Action: None

NNL-00512: Shows or sets the server's auto-refresh expiration period
Cause: Control program help text.

Action: None

NNL-00513: Shows or sets the server's auto-refresh failure retry interval
Cause: Control program help text.

Action: None

NNL-00514: Creates a new name with a default TTL
Cause: Control program help text.

Action: None

NNL-00515: Deletes a name and its data
Cause: Control program help text.

Action: None

NNL-00516: Displays complete server status
Cause: Control program help text.

Action: None

NNL-00517: Insert-replaces a data item under an existing name
Cause: Control program help text.

Action: None

NNL-00518: Shows or sets the maximum number of times a server can reforward a request
Cause: Control program help text.

Action: None

NNL-00519: Shows, enables, or disables modification request processing
Cause: Control program help text.

Action: None

NNL-00520: Changes an existing name's TTL
Cause: Control program help text.

Action: None

NNL-00521: Shows or sets the server's system query forwarding requirements
Cause: Control program help text.

Action: None

NNL-00522: Removes a data item from a name by value or by type
Cause: Control program help text.

Action: None

NNL-00523: Renames an existing name
Cause: Control program help text.

Action: None

NNL-00524: Replaces a data item with another data item
Cause: Control program help text.

Action: None

NNL-00525: Shows or sets the server's default-forwarding status
Cause: Control program help text.

Action: None

NNL-00526: Starts a server using a non-standard executable and optional arguments
Cause: Control program help text.

Action: None

NNL-00527: Shows, sets, or cancels the time when the server next checkpoints its cache
Cause: Control program help text.

Action: None

NNL-00528: [set] password *password* : set the password for subsequent calls
Cause: Control program help text.

Action: None

NNL-00529: set|show default_domain [<domain_name>] : set|show the current default domain
Cause: Control program help text.

Action: None

NNL-00530: quit|exit : exit the names control program
Cause: Control program help text.

Action: None

NNL-00531: flush_name *name* :\nremoves a name from caches along a route to an authoritative server
Cause: Control program help text.

Action: None

NNL-00532: set|show forwarding_available [<on|off>] [<server_list>] :\nenable, disable or show server request forwarding
Cause: Control program help text.

Action: None

NNL-00533: ping [<server_list>] : ping one or more Names servers
Cause: Control program help text.

Action: None

NNL-00534: query *name* [*type*] : query for a desired name and RR type
Cause: Control program help text.

Action: None

NNL-00535: reload [<server_list>] : reload server cache data if there are changes
Cause: Control program help text.

Action: None

NNL-00536: set|show requests_enabled [<on|off>] [<server_list>] :\nenable, disable or show server request processing
Cause: Control program help text.

Action: None

NNL-00537: set|show server [<server_name>] : set|show the currently managed server
Cause: Control program help text.

Action: None

NNL-00538: stop|shutdown [<server_list>] : stop one or more Names servers
Cause: Control program help text.

Action: None

NNL-00539: start|startup [*args*] : start the Names server with optional arguments
Cause: Control program help text.

Action: None

NNL-00540: [show] status [<server_list>] : display server status summary
Cause: Control program help text.

Action: None

NNL-00541: set|show trace_level [*level*] [<server_list>] :\nset|show the server's tracing level
Cause: Control program help text.

Action: None

NNL-00542: restart [<server_list>] : restart one or more Names servers
Cause: Control program help text.

Action: None

NNL-00543: [show] version [<server_list>] :\nshow the name and version of one or more Names servers
Cause: Control program help text.

Action: None

NNL-00544: Displays operations statistics
Cause: Control program help text.

Action: None

NNL-00545: Displays query request statistics
Cause: Control program help text.

Action: None

NNL-00546: Displays delete request statistics
Cause: Control program help text.

Action: None

NNL-00547: Displays rename request statistics
Cause: Control program help text.

Action: None

NNL-00548: Displays update request statistics
Cause: Control program help text.

Action: None

NNL-00549: Displays stream usage statistics
Cause: Control program help text.

Action: None

NNL-00550: flush [<server_list>] : flush one or more servers' cache(s)
Cause: Control program help text.

Action: None

NNL-00551: Displays cache statistics
Cause: Control program help text.

Action: None

NNL-00553: Displays forwarding statistics
Cause: Control program help text.

Action: None

NNL-00555: Displays meta data statistics
Cause: Control program help text.

Action: None

NNL-00556: set|show reset_stats_interval [*seconds*] [<server_list>] :\nset|show server statistic counter reset interval
Cause: Control program help text.

Action: None

NNL-00557: Causes the controller to sleep for N seconds
Cause: Control program help text.

Action: None

NNL-00558: set|show namesctl_trace_level : set|show the controller's tracing level
Cause: Control program help text.

Action: None

NNL-00559: Shows, sets, or cancels the time for the next cache dump to the trace file
Cause: Control program help text.

Action: None

NNL-00560: Shows or sets the server's request-processing delay
Cause: Control program help text.

Action: None

NNL-00561: register *name* [-t*type*] [-d*address*] [-h*hostname*] [-l<listener_name>] :\nregister an object with Oracle Names
Cause: Control program help text.

Action: None

NNL-00562: unregister *name* [-d*address*] [-l<listener_name>] :\nunregister an object with Oracle Names
Cause: Control program help text.

Action: None

NNL-00563: timed_query [*timestamp*] : query all objects in the Names server's cache
Cause: Control program help text.

Action: None

NNL-00565: set trace_file_name [*filename*] [<server_list>] :\nset|show the server's trace file name
Cause: Control program help text.

Action: None

NNL-00566: set|show log_file_name [*filename*] [<server_list>] :\nset|show the log file name on one or more servers
Cause: Control program help text.

Action: None

NNL-00567: reorder_ns [<server_address>] : Generate the enhanced discovery file
Cause: Control program help text.

Action: None

NNL-00568: delegate_domain <domain_name> <NS_name> <NS_Addr> : Delegate the given domain to the given nameserver
Cause: Control program help text.

Action: None

NNL-00569: domain_hint <domain_name> <NS_name> <NS_Addr> : Provide hint of a nameserver for a given domain
Cause: Control program help text.

Action: None

NNL-00570: save_config [<server_list>] : saves server configuration to parameter file
Cause: Control program help text.

Action: None

NNL-00571: set|show save_config_on_stop [<on|off>]
Cause: Control program help text.

Action: None

NNL-00572: set|show save_config_interval [*seconds*] [<server_list>] : set time of next config save
Cause: Control program help text.

Action: None

NNL-00573: load_tnsnames [*file*, ...] : load tnsnames into ONames
Cause: Control program help text.

Action: None

NNL-00574: dump_tnsnames [*file*] : dump ONames addresses into tnsnames file
Cause: Control program help text.

Action: None

NNL-00575: list_objects: list all objects in a domain or subtree
Cause: Control program help text.

Action: None

NNL-00576: list_delegated: list all delegated domains in the region or subtree
Cause: Control program help text.

Action: None

NNL-00577: list_domains: list authoritative domains in the region or subtree
Cause: Control program help text.

Action: None

NNL-00578: dump_ldap: dump addresses in the domain or region to LDAP
Cause: Control program help text.

Action: None

NNL-00579: _scan: find objects/records matching the given types
Cause: Control program help text.

Action: None

NNL-00580: register_ns: *name server address domain*
Cause: Control program help text.

Action: None

NNL-00581: unregister_ns: *name server domain*
Cause: Control program help text.

Action: None

NNL-00582: dump_alias: dump aliases in the domain or region to LDAP
Cause: Control program help text.

60
NNO-00050 to NNO-00854

NNO-00050: serious errors in configuration data, server cannot run
Cause: The server's configuration data has a problem of some sort which prevents the server from starting.

Action: Previous error messages in the log file will specify the exact problems leading to the shutdown. The problem most frequently occurs when the network is broken up into multiple administrative regions and the delegation points are incorrect. Read the Oracle Names documentation sections on region delegation and ensure that their directions are being followed correctly.

NNO-00051: domain count *number* exceeds maximum of *number*, first *number* will be loaded
Cause: The server's configuration contains more domains than the server can support.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00052: invalid domain description list
Cause: The server's configuration contains an invalid domain description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00053: duplicate domain description for domain "*string*"
Cause: The server's configuration contains duplicate domain descriptions in the domain description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00054: invalid domain name "*string*"
Cause: The server's configuration contains a domain description with an invalid name.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00055: invalid domain minimum TTL "*string*"
Cause: The server's configuration contains a domain description with an invalid minimum TTL.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00056: warning: domain minimum TTL must be between *number* and *number*, set to *number* seconds
Cause: The server's configuration contains a domain description with an invalid minimum TTL. This error is not fatal; the server will automatically set the TTL to a default value which is suitable for most uses.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00057: loading and verifying topology data
Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00058: cannot load topology data from configuration database
Cause: An error was encountered while trying to load the server's topology data from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00059: cannot construct topology checkpoint file name
Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00060: loading server topology from checkpoint file "*string*"
Cause: An informational message written to the log file when the server has been forced to load from its most recent topology checkpoint file, by setting the names.no_region_database parameter to TRUE.

Action: None

NNO-00061: loading data for domain "*string*"
Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00062: cannot load domain data from configuration database
Cause: An error was encountered while trying to load the server's domain data from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00063: cannot construct domain checkpoint file name
Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00064: loading domain data from checkpoint file "*string*"
Cause: An informational message written to the log file when the server has been forced to load from its most recent domain checkpoint file, by setting the names.no_region_database parameter to TRUE.

Action: None

NNO-00065: loading cached data from checkpoint file "*string*"
Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00066: server will perform reload check of administrative region in *number* seconds
Cause: An informational message written to the log file whenever the Oracle Network Manager or the Oracle Names control program send a reload request to the server.

Action: None

NNO-00067: server reload check countdown aborted
Cause: An informational message written to the log file whenever the Oracle Names control program halts a reload request previously sent to the server

Action: None

NNO-00068: warning: administrative region check failed, next check in *number* seconds
Cause: this warning is issued whenever the server fails to connect to the configuration database to see if any configuration data has changed. The server will automatically begin reissuing reload checks more frequently, and will eventually give up if connections fail continuously for three days.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database.

NNO-00069: warning: too many administrative region check failures, checking disabled
Cause: a warning issued whenever the server has continuously failed for three days in its attempts to connect to the configuration database. The server disables reload checking. Reload checking can later be re-enabled from the Oracle Network Manager or the Oracle Names control program.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00070: administrative region has changed, reloading domain data
Cause: An informational message written to the log file whenever the server's configuration has changed, and the server is reloading the new configuration from the configuration database.

Action: None

NNO-00071: cannot construct cache checkpoint file name
Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00072: loading from region database
Cause: normal

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00073: loading server config from region database
Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00074: downloading region from server *string*
Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00080: domain "*string*" cannot be delegated because its parent is already delegated
Cause: an internal delegation error has occurred. Delegation is controlled by the Oracle Network Manager, which enforces correct delegation rules.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00081: domain "*string*" has no name servers
Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00082: domain "*string*" is missing my name "*string*" as a name server
Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00083: domain "*string*" server "*string*" has no addresses
Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00084: domain "*string*" is not in the authoritative domain list
Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00104: line *string*: syntax error, data ignored
Cause: the server found a syntax error its domain data. This message will also appear if the server's internal checkpoint files become corrupted. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00105: line *string*: invalid name "*string*", data ignored
Cause: the server found an invalid global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00106: line *string*: invalid TTL "*string*", data ignored
Cause: the server found an invalid TTL in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00107: line *string*: ignoring stale checkpoint data
Cause: an informational message which appears during server startup when the server detects out-of-date cached data in its cache checkpoint file. The message is part of normal server startup.

Action: None

NNO-00108: line *number*: TTL of *number* seconds below domain minimum *number*, using minimum
Cause: the server found an invalid TTL value in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00109: line *string*: invalid data type name "*string*", data ignored
Cause: the server found an invalid data type name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00110: line *string*: unknown data type "*string*", data ignored
Cause: the server found an unknown data type in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00111: line *string*: data type "*string*" has syntax "*string*", should be "*string*", data ignored
Cause: the server found an invalid data type syntax in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00112: line *string*: ignored duplicate data of type "*string*"
Cause: the server found a duplicate record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00113: line *string*: alias data already exists, all other data ignored
Cause: the server found a alias and non-alias data with the same global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00114: line *string*: other data exists, alias data ignored
Cause: the server found a alias and non-alias data with the same global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00115: line *string*: single-value data type "*string*", other instances ignored
Cause: the server found more than one record with the same name and type, when the type allows only a single record with a particular name. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00116: warning: data type "*string*" in *string* load
Cause: the server found a record with an invalid data type in its domain data.

Action: No action required; adjustments to data will eliminate warning.

NNO-00117: line *string*: missing data type, data ignored
Cause: the server found a record with a missing data type in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00118: line *string*: data length *string* exceeds maximum of *string*, data ignored
Cause: the server found a record whose length exceeds an internal limit. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00119: line *string*: server not authoritative for name "*string*", data ignored
Cause: the server found a global name in its domain data for which it is not authoritative. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00120: line *string*: topology name "*string*" not allowed here
Cause: the server found an invalid record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00121: LDIF file *string* open failed: error = *number*
Cause: the server found an invalid record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00122: invalid name, data ignored: entry:\n*string*
Cause: the server found an invalid global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00123: node "*string*" has no authoritative parent, data ignored
Cause: an object in the domain data is apparently not in the domain(s) which the server is authoritative for. The record in question is not loaded, but the server continues to load data.

Action: Check for inconsistencies in the data and correct any errors in topology definition or domain data outside of authoritative domains.

NNO-00150: warning: invalid hint list, no hints loaded
Cause: The server's configuration contains an invalid hint description list. The server will continue to run, but will not load any hints.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00151: warning: ignoring hint for domain "*string*", server is authoritative
Cause: the server's configuration contained a hint for a domain in the server's administrative region. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00152: warning: hint count *number* exceeds maximum of *number*, first *number* will be loaded
Cause: There are too many hints in the server's hint list. The server will load a specified maximum number of hints, ignore the rest, and continue running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00153: warning: hint domain *number* has invalid name "*string*", hint domain ignored
Cause: The server's configuration contains a hont domain with an invalid name. The domain is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00154: warning: hint *number* has invalid server name "*string*", hint ignored
Cause: The server's configuration contains a hint with an invalid server name. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00155: warning: hint *number* has missing address, hint ignored
Cause: The server's configuration contains a hint with no server address. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00156: warning: hint *number* address length *number* exceeds maximum of *number*, hint ignored
Cause: The server's configuration contains a hint whose address length exceeds an internal limit. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00157: warning: hint *number* has invalid address, hint ignored
Cause: The server's configuration contains a hint with an invalid address. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00158: warning: hint domain count *number* exceeds maximum of *number*, first *number* will be loaded
Cause: The server's hint domain list is too long. The server will load a specified maximum number of hint domains, ignore the rest, and continue running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00159: warning: ignoring duplicate hint domain *number* name "*string*"
Cause: The server's hint domain list contains a duplicate domain. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00160: warning: ignoring duplicate hint server "*string*"
Cause: The server's hint server list contains a duplicate server. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00250: invalid administrative region description
Cause: The server encountered an invalid administrative region description during startup. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00251: missing administrative region parameter *string*
Cause: The server's administrative region description is missing a required parameter. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00252: invalid administrative region parameter *string* value "*string*"
Cause: The server encountered an invalid administrative region parameter. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00253: administrative region parameter *string* length *string* exceeds maximum of *string*
Cause: The server encountered an administrative region parameter whose length exceeds an internal limit. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00254: warning: parameter *string* value must be between *number* and *number*, set to *number* seconds
Cause: The server encountered an administrative region parameter with an invalid value. The value is set to a default suitable for most applications, and the server continues running. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00255: cannot initialize ROS
Cause: The server was unable to initialize ROS during startup. The error prevents the server from running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00256: using administrative region "*string*"
Cause: an informational message which appears during server startup, and notes the name of the administrative region for future diagnostic use by administrators. The message is part of normal server startup.

Action: None

NNO-00257: warning: cannot get serial number from region store
Cause: The server encountered an error while trying to get the configuration database's serial number. The error occurs almost always because time the server is unable to access the configuration database. If the error occurs during server startup, the server will shut down. If the error occurs during server operation (the server checks the serial number periodically to see if it should reload itself), then the server assumes a transient failure has occurred and repeats the operation a short while later. If the repetitions continue to fail for three days, the server will log another error and stop issuing the serial number load operation.

Action: First make sure that the Netadmin program has exported a server configuration for this name server. Next, make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. If the error occurs during server startup, you can force startup anyway, with checkpoint data, by starting the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00258: cannot load configuration from configuration database
Cause: An error was encountered while trying to load the server's configuration from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00259: configuration tables have not been installed or are inaccessible
Cause: The configuration database has not been properly installed.

Action: Make sure the Oracle Network Manager and its database have been properly installed

NNO-00260: loading configuration data from checkpoint file "*string*"
Cause: An informational message written to the log file when the server has been forced to load from its most recent configuration checkpoint file, by setting the names.no_region_database parameter to TRUE.

Action: None

NNO-00261: cannot construct configuration checkpoint file name
Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00262: warning: cannot write checkpoint file "*string*"
Cause: the server was unable to write the named checkpoint file. This problem is typically due to the file system's protection settings. The error is not fatal; it simply means the server will not create any checkpoint data. Note, however, that if the configuration database is ever unavailable during a future server startup, the lack of checkpoint data means you will be unable to force a startup from checkpoint data with the names.no_region_database parameter.

Action: Check to see that the server has permission to write the file named in the error message.

NNO-00263: error from configuration database
Cause: the server encountered an error while accessing the configuration database. The error can occur when the database is unavailable, or SQL*Net connectivity to the database is interrupted.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00264: configuration database query returned no data
Cause: the server attempted to fetch data from the configuration database and no data was found.

Action: The error generally appears underneath a more specific error which will tell you the exact nature of the problem.

NNO-00265: warning: cannot load data from checkpoint file
Cause: the server was started using checkpoint data, and was unable to read that data. The remaining errors below this one on the error stack provide more specific information about the problem.

Action: Check to see that the named file exists and that the server has permission to read it.

NNO-00266: cannot find document "*string*" in configuration database
Cause: The server encountered an error while trying to get its configuration ID from the configuration database. The error can occur any time the server is unable to access the configuration database. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between

the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00267: warning: configuration database contains no data for server "*string*"
Cause: the server successfully contacted the configuration database, but was unable to find any configuration information associated with the server's name. The name is specified in the server's names.ora configuration file. The error occurs almost always because the server configuration has not been exported from the Netadmin program.

Action: Make sure that the Netadmin program has exported a server configuration for this name server.

NNO-00268: warning: configuration database is not used, using checkpoint data instead
Cause: An informational message indicating that the server has been started with the names.no_region_database parameter set to TRUE, and that it will use checkpoint data rather than attempting to contact the configuration database.

Action: None

NNO-00269: configuration database is version *string*, server requires at least version *string*
Cause: The server cannot use the specified configuration database because it is of an incorrect version.

Action: Run the document conversion utility supplied with the Network Manager and re-export your network. The conversion utility will upgrade old documents to a version which can be understood by the name server.

NNO-00270: ORACLE error *string*
Cause: An ORACLE error was encountered while accessing the configuration database. The error can occur when the database is unavailable, or SQL*Net connectivity to the database is interrupted.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00271: warning: names.ora region is version *string*, network definition is version *string*
Cause: The region description in names.ora is out of synch with the network definition.

Action: No action is required unless the name server cannot run with the network definition. To be safe names.ora should be updated with one which is consistent with the network definition.

NNO-00272: line *string*; invalid DIT/DN
Cause: There is a syntax error in the DIT/DN provided in the region description.

Action: Correct the error and restart the server.

NNO-00300: no listen addresses specified, at least one is required
Cause: the server's configuration is missing addresses on which to listen.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00301: server will shut down in *number* seconds
Cause: An informational message written to the log file when the server receives a shutdown request from the Oracle Names control program.

Action: None

NNO-00302: server stopped
Cause: An informational message written to the log file when the server shuts down.

Action: None

NNO-00303: server "*string*" started with process ID *number*
Cause: An informational message written to the log file when the server successfully starts up.

Action: None

NNO-00304: listen address *string* length *string* exceeds maximum of *string*
Cause: the length of one of the server's listen addresses exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00305: trace level changed from *number* to *number*
Cause: An informational message written to the log file when the server changes its trace level in response to a request from the Oracle Names control program.

Action: None

NNO-00306: server shutdown countdown aborted
Cause: An informational message written to the log file whenever the Oracle Names control program halts a shutdown request previously sent to the server

Action: None

NNO-00307: invalid server name "*string*"
Cause: the server's name is invalid. The name is specified in the server's names.ora configuration file.

Action: Make sure that the names.server_name parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00308: server will restart in *number* seconds
Cause: An informational message written to the log file when the server receives a restart request from the Oracle Names control program.

Action: None

NNO-00309: server restarting
Cause: An informational message written to the log file when the server restarts.

Action: None

NNO-00310: server restart countdown aborted
Cause: An informational message written to the log file whenever the Oracle Names control program halts a restart request previously sent to the server

Action: None

NNO-00311: invalid listen address list
Cause: the server's configuration contains an invalid listen address list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00312: listen address *string* is invalid
Cause: the server's configuration contains an invalid listen address.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00313: server password length *string* exceeds maximum of *string*
Cause: the server's password length exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00314: error changing trace level from *number* to *number*, level change ignored
Cause: the server encountered an error while changing its trace level in response to a request from the Oracle Names control program.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00315: server is listening on address *string*
Cause: An informational message written to the log file during server startup.

Action: None

NNO-00316: statistic counter reset disabled
Cause: An informational message written to the log file when the server disables statistic counter resetting in response to a request from the Oracle Names control program.

Action: None

NNO-00317: statistic counter reset interval changed to *number* seconds
Cause: An informational message written to the log file when the server changes its statistic counter reset interval in response to a request from the Oracle Names control program.

Action: None

NNO-00318: overriding next statistic counter reset, resetting in *number* seconds
Cause: An informational message written to the log file when the server resets its statistic counters in response to a request from the Oracle Names control program.

Action: None

NNO-00320: missing server name parameter
Cause: the server could not find a names.server_name parameter. The name is specified in the server's names.ora configuration file.

Action: Make sure that the names.server_name parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00321: statistic counter dump disabled
Cause: An informational message written to the log file when the server disables statistics dumping in response to a request from the Oracle Names control program.

Action: None

NNO-00322: statistic counter dump interval changed to *number* seconds
Cause: An informational message written to the log file when the server changes its statistic dump interval in response to a request from the Oracle Names control program.

Action: None

NNO-00323: overriding next statistic counter dump, dumping in *number* seconds
Cause: An informational message written to the log file when the server dumps its statistic counters in response to a request from the Oracle Names control program.

Action: None

NNO-00326: server statistic counter dump follows
Cause: An informational message written to the log file at the beginning of a statistic dump. The message is followed by a set of server statistics, and ends with another informational message indicating the dump has finished.

Action: None

NNO-00327: server statistic counter dump ends
Cause: An informational message written to the log file at the end of a statistic dump. The message is preceded by a set of server statistics.

Action: None

NNO-00328: server has reset statistic counters to zero
Cause: An informational message written to the log file when the server resets its statistic counters to zero in response to a request from the Oracle Names control program.

Action: None

NNO-00329: server will save the config file in *number* seconds
Cause: An informational message written to the log file when the server saves the config to config file in response to a request from the Oracle Names control program.

Action: None

NNO-00330: server saved the config file "*string*".
Cause: An informational message written to the log file when the server saves the config to config file in response to a request from the Oracle Names control program.

Action: None

NNO-00331: error saving new value *string* of *string* to the save config table.
Cause: An informational message written to the log file when the a set operation is performed and the change cannot be saved in the save config ptable, but should be.

Action: None

NNO-00332: warning: region store serial number reduced from *number* to *number*
Cause: An informational message written to the log file when the server finds the region database has its serial number set lower than it was when the server previously loaded the region data. This is an unnatural condition- every update to the region should increment the serial number so a reduction of the serial number might reflect tampering or accidental manual alteration this and possibly other region tables.

Action: Administrators should find out how/why the serial number decreased.

NNO-00333: warning: ROS admin_region types obsolete; using SQL
Cause: the value set in names.admin_region is an obsolete ROS type

Action: No action is necessary; administrators should set the value to the correct type- probably SQL, possibly LDAP or LDIF

NNO-00334: region load failure: ROS admin_region type *number* unsupported
Cause: the value set in names.admin_region is an obsolete ROS type

Action: No action is necessary; administrators should set the value to the correct type- probably SQL, possibly LDAP or LDIF

NNO-00600: warning: forwarder count *number* exceeds maximum of *number*, first *number* will be loaded
Cause: the server's configuration contains too many default forwarders. The server loads a specified maximum number of forwarders, ignores the rest, and continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00601: warning: no forwarders, DEFAULT-FORWARDERS-ONLY mode ignored
Cause: the server's configuration enables DEFAULT-FORWARDERS-ONLY mode but the configuration contains no default forwarders. The server ignores the request and continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00602: warning: forwarder *number* has invalid address, forwarder ignored
Cause: One of the forwarders in the default forwarder list has an invalid address. The forwarder definition is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00603: enabling all request processing
Cause: An informational message written to the log file when the server enables request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00604: disabling all request processing
Cause: An informational message written to the log file when the server disables request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00605: enabling modification requests
Cause: An informational message written to the log file when the server enables modification-request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00606: disabling modification requests
Cause: An informational message written to the log file when the server disables modification-request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00607: server will forward to default forwarders only
Cause: An informational message written to the log file when the server's configuration enables DEFAULT-FORWARDERS-ONLY mode.

Action: None

NNO-00608: received corrupted message
Cause: The server received a corrupted request. The request is ignored.

Action: corrupted requests are usually caused by transient network problems. If many corrupted messages are received, turn on tracing for further information. If the errors persist, contact Worldwide Customer Support.

NNO-00609: warning: forwarder *number* address length *number* exceeds maximum of *number*, ignored
Cause: the server's configuration contains a forwarder address whose length exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00610: detected possible alias loop involving name "*string*"
Cause: the server detected an alias loop involving the specified name. An alias loop occurs when an alias "X" points to another alias "Y", which points back to "X" rather than to an address or other name server data. The loop can contain more hops but the basic idea remains the same. Loops occur when administrators mis-enter network data, particularly when an alias in one administrative region points to data in another administrative region.

Action: Use the Oracle Names control program to query for the specified name. The control program will describe the alias path, and you can use that information to find which names are incorrect and what administrative regions the incorrect data belongs to.

NNO-00611: disabling request forwarding
Cause: An informational message written to the log file when the server disables request forwarding in response to a request from the Oracle Names control program.

Action: None

NNO-00612: enabling request forwarding
Cause: An informational message written to the log file when the server enables request forwarding in response to a request from the Oracle Names control program.

Action: None

NNO-00613: disabling FORWARDING-DESIRED on system queries
Cause: An informational message written to the log file when the server disables the FORWARDING-DESIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00614: enabling FORWARDING-DESIRED on system queries
Cause: An informational message written to the log file when the server enables the FORWARDING-DESIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00615: disabling DEFAULT-FORWARDERS-ONLY mode
Cause: An informational message written to the log file when the server disables DEFAULT-FORWARDERS-ONLY mode in response to a request from the Oracle Names control program.

Action: None

NNO-00616: enabling DEFAULT-FORWARDERS-ONLY mode
Cause: An informational message written to the log file when the server enables DEFAULT-FORWARDERS-ONLY mode in response to a request from the Oracle Names control program.

Action: None

NNO-00617: enabling AUTHORITY-REQUIRED on system queries
Cause: An informational message written to the log file when the server enables the AUTHORITY-REQUIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00618: disabling AUTHORITY-REQUIRED on system queries
Cause: An informational message written to the log file when the server disables the AUTHORITY-REQUIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00622: warning: too many auto-refresh failures for name "*string*", query expired
Cause: If an auto-refresh query is issued and continuously returns an error for three days, the query is removed from the auto-refresh queue and a warning logged. The query can be restarted from the Oracle Names control program.

Action: this message will be preceded by numerous warnings that the query in question is failing. Use the Oracle Names control program to describe the failing query. Make sure the server being queried is running and that there is network connectivity between the querying server and the server being queried.

NNO-00623: setting auto-refresh retry interval to *number* seconds
Cause: An informational message written to the log file when the server changes its auto-refresh retry interval in response to a request from the Oracle Names control program.

Action: None

NNO-00624: setting auto-refresh expiration period to *number* seconds
Cause: An informational message written to the log file when the server changes its auto-refresh expiration period in response to a request from the Oracle Names control program.

Action: None

NNO-00625: overriding auto-refresh of name "*string*", type "*string*", refresh in *number* seconds
Cause: An informational message written to the log file when the server changes the time when an auto-refresh query is next issued. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00626: cannot enable DEFAULT-FORWARDERS-ONLY mode, no default forwarders exist
Cause: the Oracle Names control program issued a request to enable DEFAULT-FORWARDERS-ONLY mode, and the request was ignored because the server has no default forwarders.

Action: None

NNO-00627: cancelling auto-refresh of name "*string*", type "*string*"
Cause: An informational message written to the log file when the server removes a query from the auto-refresh queue in response to a request from the Oracle Names control program.

Action: None

NNO-00628: setting maximum reforwards per query to *number*
Cause: An informational message written to the log file when the server changes its maximum-reforward count in response to a request from the Oracle Names control program.

Action: None

NNO-00629: warning: invalid forwarder list, no default forwarders loaded
Cause: The server's configuration contains an invalid forwarder description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00630: setting request-processing delay to *number* seconds
Cause: An informational message written to the log file when the server sets an artificial request-processing delay in response to a request from the Oracle Names control program.

Action: None

NNO-00631: warning: forwarder *number* has invalid name "*string*", forwarder ignored
Cause: The server's configuration contains a forwarder description with an invalid server name.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00632: warning: forwarder *number* has missing address, forwarder ignored
Cause: The server's configuration contains a forwarder description with a missing address.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00633: detected fatal delegation loop involving server "*string*"
Cause: the server detected a fatal delegation loop while forwarding a request. A loop occurs when the server's topology data indicates that it should forward a request to itself. The server immediately shuts down in response to this error.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00634: received authoritative name "*string*" when we are its authority
Cause: a server "X" received authoritative data from another server "Y" when server "X" is also authoritative for the data. Such situations should never arise because if server "X" is authoritative for the requested data, it should never forward the request to another server.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00635: warning: ignoring duplicate forwarder "*string*"
Cause: The server's default forwarder list contains a duplicate server. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00700: warning: cannot checkpoint the cache, trying again in *number* seconds
Cause: The server was unable to perform its normal periodic cache checkpointing, typically because the cache checkpoint file could not be written. The cache checkpoint file name appears as an informational message during server startup.

Action: Check to see that the server has permission to write the cache checkpoint file, and that there is sufficient disk space for the file to be written.

NNO-00701: warning: cannot construct checkpoint file name, checkpointing disabled
Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00702: cache checkpointing disabled
Cause: An informational message written to the log file when the server disables cache checkpointing in response to a request from the Oracle Names control program.

Action: None

NNO-00703: checkpoint interval changed to *number* seconds
Cause: An informational message written to the log file when the server changes its cache checkpoint interval in response to a request from the Oracle Names control program.

Action: None

NNO-00705: warning: cannot open checkpoint file "*string*", checkpointing disabled
Cause: the server was unable to open the named checkpoint file for writing. This problem is typically due to the file system's protection settings. The error is not fatal; it simply means the server will not checkpoint its cache.

Action: Check to see that the server has permission to write the file named in the error message.

NNO-00706: overriding next cache checkpoint, checking in *number* seconds
Cause: An informational message written to the log file when the server checkpoints its cache in response to a request from the Oracle Names control program.

Action: None

NNO-00707: server's cache will be flushed in *number* seconds
Cause: An informational message written to the log file when the server flushes its cache in response to a request from the Oracle Names control program.

Action: None

NNO-00708: cache flush countdown aborted
Cause: An informational message written to the log file whenever the Oracle Names control program halts a cache flush request previously sent to the server

Action: None

NNO-00709: failed delete of cache checkpoint file "*string*", cache flush may not work
Cause: the server attempted to flush its cache, which also deletes the cache checkpoint file. The file deletion failed, although the rest of the cache flush succeeded. Succeeding errors describe the reason for the deletion failure.

Action: This error typically occurs when two cache-flush operations are issued in succession without an intervening cache checkpoint operation (which would recreate the file). The first deletes the cache file, the second attempts to do so, but fails since the file has already been deleted. In such cases, the message is harmless and can be ignored. If, however, the error occurs because the server lacks permission to delete the file, then you must change the file system permissions so the server is allowed to delete the file.

NNO-00710: server's cache will be dumped to the trace file in *number* seconds
Cause: An informational message written to the log file when the server dumps its cache to the trace file in response to a request from the Oracle Names control program.

Action: None

NNO-00711: cache dump countdown aborted
Cause: An informational message written to the log file whenever the Oracle Names control program halts a cache dump request previously sent to the server

Action: None

NNO-00712: warning: group *string* cache checkpoint failed
Cause: The server was unable to perform its normal periodic cache checkpointing, typically because the cache checkpoint file could not be written. The cache checkpoint file name appears as an informational message during server startup.

Action: Check to see that the server has permission to write the cache checkpoint file, and that there is sufficient disk space for the file to be written.

NNO-00800: Error: cannot read version from config database
Cause: The query for the region database version failed. The database may be shut down, or the tables may not exist in the schema specified in names.ora.

Action: Correct any access problems accordingly.

NNO-00801: Error: OCI_SUCCESS_WITH_INFO: *string*
Cause: Diagnostic information was returned from OCI during region database access.

Action: None

NNO-00802: Error: OCI_NEED_DATA
Cause: The server did not provide sufficient data to the OCI interface while accesing the region database.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00803: Error: OCI_INVALID_HANDLE
Cause: The server called OCI with an invalid handle whilc accessing the region database.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00804: Error: OCI_STILL_EXECUTE
Cause: An OCI operation between the server and the database is still in progress.

Action: None

NNO-00805: Error: OCI_CONTINUE
Cause: Not possible.

Action: None

NNO-00806: Error: OCI_ERROR: *string*
Cause: An OCI occurred accessing the region database. More specific details will be written to the log file.

Action: Find the appropriate entry in the log file and correct the cause of the failure if possible. Otherwise contact Worldwide Customer Support.

NNO-00807: End of Fetch: OCI_NO_DATA
Cause: All rows have been returned from the region table.

Action: None

NNO-00808: Error connecting to region database
Cause: Not possible.

Action: None

NNO-00809: Unknown OCI error: *number*
Cause: Not possible.

Action: None

NNO-00850: Error: LDAP query returns *string*
Cause: The LDAP API returned an error. More specific details will be written to the log file.

Action: Find the appropriate entry in the log file and correct the cause of the failure if possible. Otherwise contact Worldwide Customer Support.

NNO-00851: LDAP open/bind failed: error = *number*
Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

NNO-00852: failed to get LDAP entry: error = *number*
Cause: the server could not retrieve query entries from the LDAP API.

Action: Find the cause of the error and correct it and restart the server.

NNO-00853: failed to get LDAP attribute/value: error = *number*
Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

NNO-00854: error unbinding LDAP: error = *number*
Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

61
NPL-00100 to NPL-00420

NPL-00100: cannot initialize ASN.1 context
Cause: The ASN.1 program interface could not be initialized, probably because its error message file could not be found.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NPL-00101: uninitialized ASN.1 context
Cause: The ASN.1 program interface received an uninitialized ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00102: missing stream functions in ASN.1 context initialization
Cause: An internal function imporoperly attempted to initialize an ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00103: unusable ASN.1 context
Cause: The ASN.1 program interface received an unusable ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00300: maximum ASN.1 element nesting depth *string* exceeded on read
Cause: An ASN.1 construct is too complex for the program interface to read.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00301: maximum ASN.1 element nesting depth *string* exceeded on write
Cause: An ASN.1 construct is too complex for the program interface to write.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00302: ASN.1 type tag is greater than maximum of 16383
Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00303: uninitialized ASN.1 class attribute
Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00304: uninitialized ASN.1 tag attribute
Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00305: unsupported ASN.1 "UNIV" type *string*
Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00307: ASN.1 sequence has already been ended on write
Cause: An internal function attempted to end an ASN.1 construct prematurely.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00308: requested ASN.1 class *string* does not match received class *string*
Cause: An internal function requested an ASN.1 construct different from that received by the ASN.1 protocol engine.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00309: requested ASN.1 type tag *string* does not match received type tag *string*
Cause: An internal function requested an ASN.1 construct different from that received by the ASN.1 protocol engine.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00310: ASN.1 sequence has already been ended on read
Cause: An internal function attempted to finish reading an ASN.1 construct which has already been completely read.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00311: cannot end constructed ASN.1 encoding, *string* encoding octets unread
Cause: An internal function attempted to finish reading an ASN.1 construct prematurely.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00312: attempt to put ASN.1 "UNIV" type with illegal tag *string*
Cause: An internal function attempted to create an illegal ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00313: requested form *string* does not match actual form *string*
Cause: An internal function received an ASN.1 construct different from that expected.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00410: incoming ASN.1 value too large (*string* octets) to store locally
Cause: The ASN.1 protocol engine was unable to translate an ASN.1 construct to its host representation because the construct was too big.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00411: incoming ASN.1 NULL encoding has nonzero length of *string*
Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00412: incoming ASN.1 BOOLEAN encoding has incorrect length of *string*
Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00413: incoming ASN.1 encoding has length *string*, maximum allowed is *string*
Cause: The ASN.1 protocol engine received an ASN.1 construct too large for it to process.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00414: incoming ASN.1 type tag is greater than maximum of 16383
Cause: The ASN.1 protocol engine received an illegal ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00415: received unsupported ASN.1 INDEFINITE-LENGTH encoding
Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00416: received illegal ASN.1 encoding length of *string*
Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00417: received ASN.1 length octet count greater than maximum of *string*
Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it..

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00418: received malformed ASN.1 object identifier
Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00419: received ASN.1 object identifier with sub-identifier that is too large
Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00420: received ASN.1 object identifier with more than 256 sub-identifiers
Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

62
NZE-28750 to NZE-29249

NZE-28750: unknown error
Cause: An Oracle Security Server error of an unspecified type occurred.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28751: memory allocation failure
Cause: The allocation of memory failed due to insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28752: data source initialization failure
Cause: A data source failed to initialize. Frequently, this error is caused by insufficient system resources.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28753: failure to terminate use of data source
Cause: The system failed to terminate its use of a data source. This error may have been caused by memory or disk corruption, among other things.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28755: object retrieval failure
Cause: The system failed to retrieve information from a file or a database.

Action: Check if the data source exists, or check to ensure that the correct information exists.

NZE-28756: callback failure to allocate memory
Cause: A function supplied by the caller failed to allocate memory. This error could have been caused by system memory exhaustion.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28757: system attempt to allocate 0 bytes of memory
Cause: The system attempted to allocate 0 bytes of memory because there was no available memory left to allocate. This error could have been caused by insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28758: memory release failure
Cause: The release of a memory fragment failed. This may be due to memory corruption either within the application or in the Oracle Security Server library.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28759: failure to open file
Cause: The system could not open the specified file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28763: Invalid parameter type found in configuration file.
Cause: A parameter in the sqlnet.ora file may have been specified incorrectly.

Action: Check the sqlnet.ora file for this parameter value.

NZE-28764: failure to retrieve a configuration parameter
Cause: The system failed to retrieve a configuration parameter from the sqlnet.ora file. This error may have occurred because a necessary configuration parameter was not specified in the sqlnet.ora file.

Action: Supply the needed configuration parameter in the sqlnet.ora file.

NZE-28766: failure to terminate use of data source
Cause: The system failed to terminate its use of a data source. This error may have been caused by memory or disk corruption, or a system error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28767: invalid version number
Cause: Version number of the wallet was incorrect. A corrupt wallet or an incompatible wallet was provided.

Action: Ensure that proper wallet is being used.

NZE-28768: bad magic number
Cause: An invalid magic number was specified in a data file. This could have been caused by a corrupted disk or by some other process overwriting the file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28769: Specified method does not exist.
Cause: The data access method that was specified in the configuration file is not supported.

Action: Specify a supported method. Consult the Oracle Security Server documentation to determine the supported types.

NZE-28770: Data source is already initialized.
Cause: The caller attempted to initialize a data source which was already initialized.

Action: This is a programming error. An application should not attempt to initialize a data source more than once.

NZE-28771: Data source is not yet initialized.
Cause: The caller attempted to use a data source which had not yet been initialized.

Action: This is a programming error. The application must always initialize the data source before it can be used.

NZE-28773: failure to write magic and version numbers
Cause: Both the magic and version numbers failed to write. This usually occurs because of insufficient disk space.

Action: Delete unnecessary files to free up disk space or add disk space to the system.

NZE-28774: file cannot write to disk
Cause: The output of a file failed. This error usually occurs because of insufficient disk space.

Action: Delete unnecessary files to free up disk space or add disk space to the system.

NZE-28775: file cannot close
Cause: Failed to close a file which is used by a data access method. This error usually indicates memory corruption or a system error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28776: Output buffer supplied is too small.
Cause: The data returned by a function was too large for the supplied buffer.

Action: Call the routine again with a larger buffer.

NZE-28777: binding creation failure
Cause: Failed to create a binding for use in the parsing of a parameter value. This error can be caused by the parameter value being in an incorrect format, such as a right parenthesis was not supplied where expected, or due to insufficient system memory.

Action: Make sure that the parameter is specified in the correct format. If the format is correct, free up system memory by terminating processes or adding more memory.

NZE-28778: Configuration parameter is not specified in the proper format.
Cause: The configuration parameter was not specified in the proper format.

Action: Consult the Oracle Security Server documentation for a description of the proper format for this parameter.

NZE-28779: no data access method specified in parameter
Cause: No method for data access was specified in the parameter value.

Action: Specify a method for data access in the parameter. Consult the Oracle Security Server documentation for the supported data access methods for this data type.

NZE-28780: invalid data access method specified by the parameter
Cause: The data access method specified by the parameter value is not supported.

Action: Specify a supported data access method. Consult the Oracle Security Server documentation for the supported data access methods for this data data type.

NZE-28781: No data for the access method is specified in the parameter.
Cause: No data was specified in the parameter for use with the specified access method.

Action: Consult the Oracle Security Server documentation for the data that must be specified for the access method.

NZE-28782: data source is not allocated
Cause: No memory was allocated for a data source.

Action: Ensure that the application calls in the data source initialization function.

NZE-28783: invalid parameter
Cause: There was no match for the parameter name that was used in the configuration file.

Action: Check your sqlnet.ora file for the correct parameter name.

NZE-28784: file name translation failure
Cause: The translation of a file name from Oracle format to native format has failed.

Action: Specify a correct file name. Consult your Oracle documentation for the correct file name format.

NZE-28785: parameter does not exist
Cause: A necessary configuration parameter was not found in the parameter file.

Action: Supply the required parameter.

NZE-28786: decryption of encrypted private key failure
Cause: An incorrect password was used to decrypt an encrypted private key.

Action: Enter the correct password.

NZE-28787: private key encryption failure
Cause: This may have been caused by an error in the mkwallet parameter of the sqlnet.ora file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28788: user provided invalid information, or an unknown error
Cause: User may have responded to a prompt with unexpected input, or an unknown error occurred.

Action: Enter correct input, or enable tracing to check the trace file for errors.

NZE-28790: NLS string open failure
Cause: The opening of a string for use by the NLS subsystem failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28791: certificate verification failure
Cause: Verification of the certificate, which the user supplied, failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28794: data type attribute did not initialize
Cause: The initialization of the attribute data type failed. This error may be due to insufficient system resources.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28795: data type attribute did not terminate
Cause: The termination of the use of the attribute data type subsystem failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28796: access method is not supported
Cause: The method specified to access data is not supported.

Action: Use a supported access method. Consult your Oracle documentation to determine which access methods are supported.

NZE-28797: invalid key data type
Cause: The type specified for a key is not supported.

Action: Correct the key type. Consult your Oracle documentation to determine which key types are supported.

NZE-28800: data source failed to open
Cause: A data source (a file or a database) failed to open.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28802: invalid mode or data source in configuration file
Cause: An invalid mode or data source has been specified in the configuration file (sqlnet.ora).

Action: Check the method parameter in the sqlnet.ora file. If the parameter value is correct, then enable tracing to determine the exact error.

NZE-28803: I/O operation failure
Cause: The system or application failed to access a data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28804: Data source cannot close.
Cause: The data source, which could be either a file or a database), failed to close.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28805: Cannot retrieve information from the data source.
Cause: The system or application failed to retrieve information from the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28806: Cannot write to the data source.
Cause: The system or application failed to write to the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28807: Cannot update the data source.
Cause: The system or application failed to update the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28808: Cannot retrieve method information from the configuration file.
Cause: The system or application failed to retrieve method information from the sqlnet.ora configuration file.

Action: Check the method configuration parameters in the sqlnet.ora file. If the method configuration parameters are correct, then enable tracing to determine the exact error.

NZE-28809: Cannot delete information from the data source.
Cause: The system or application failed to delete information from the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28810: Cannot create key descriptor.
Cause: The system failed to create a key descriptor.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28814: Cannot convert a number in Oracle format to native format.
Cause: Failed to convert a number from Oracle format to native format.

Action: This is an internal programming exception. Enable tracing to try and reproduce the problem. Contact Oracle customer support and supply the trace file.

NZE-28815: Cannot convert a number in native format to Oracle format.
Cause: Failed to convert a number from native format to Oracle portable format failed.

Action: This is an internal programming exception. Enable tracing to try and reproduce the problem. Contact Oracle customer support and supply the trace file.

NZE-28818: No package context provided.
Cause: The context that holds the state of the security package was not passed to a function or procedure that was expecting it.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28836: Wallet is not open.
Cause: The wallet to be used has not yet been opened.

Action: Call the function that opens the wallet.

NZE-28840: Wallet is already open.
Cause: An attempt was made to open a wallet that was already open.

Action: This is a programming error. A wallet should only be opened once.

NZE-28841: Operation is not supported.
Cause: An attempt was made to perform an operation that is not supported.

Action: This is a programming error. Please refer to Oracle documentation to determine which operations are supported.

NZE-28842: Incorrect file permissions
Cause: The subject file did not have the correct permissions for the operation.

Action: Ensure that the file permissions allow the current operation.

NZE-28843: Operating system error while creating/opening file
Cause: An operating system dependent error occurred while trying to create/ open the file or while trying to set the appropriate permissions on the file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28844: No wallet present
Cause: There was no wallet in the location specified.

Action: Check to ensure that the wallet is in the correct directory location.

NZE-28845: No certificate
Cause: Either there is no certificate or the system cannot find it.

Action: Check to ensure that the certificate is in the specified wallet.

NZE-28846: No private key
Cause: Either there is no private key or the system cannot find it.

Action: Check to ensure that the private key is in the specified wallet.

NZE-28847: No clear private key file
Cause: Failed to retrieve private key from SSO wallet

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28848: No encrypted private key file
Cause: Failed to retrieve private key from the wallet

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28849: No Trustpoints
Cause: The wallet does not have any trusted certificates

Action: Ensure that the wallet/keystore has trusted certificates.

NZE-28853: Initialization failure
Cause: Either initialization or module loading has failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28854: Memory allocation failure
Cause: The allocation of memory failed due to insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28855: Unsupported SSL operation
Cause: An unsupported operation was attempted, for example, an attempt was made to select a mode of operation that is not allowed.

Action: Refer to the SSL chapter in the product's documentation.

NZE-28857: Unknown SSL error
Cause: An unknown SSL error occurred.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28858: SSL protocol error
Cause: An error occurred while negotiating the SSL handshake between two processes.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28859: SSL negotiation failure
Cause: An error occurred during negotiation between two processes as part of the SSL protocol. This error will occur if the two sides to the connection do not support a common cipher suite.

Action: Configure each process so they support a common cipher suite. Then attempt the connection again. If error occurs again, enable tracing and retry the connection. Then contact Oracle customer support with the trace output.

NZE-28860: Fatal SSL error
Cause: An error occurred during the SSL connection to the peer. It is likely that this side sent data which the peer rejected.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28861: SSL connection would block
Cause: This error is informational. It should never be communicated to the user.

Action: Enable tracing and retry the connection to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-28862: SSL connection failed
Cause: This error occurred because the peer closed the connection.

Action: Enable tracing on both sides and examine the trace output. Contact Oracle Customer support with the trace output.

NZE-28863: SSL session not found
Cause: This error is informational. It indicates that a specified session does not exist.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-28864: SSL connection closed gracefully
Cause: This error is informational. It indicates that the connection closed without error.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28865: SSL connection closed
Cause: The SSL connection closed because of an error in the underlying transport or because the peer process quit unexpectedly.

Action: Enable tracing and retry the connection. The trace output should indicate how the failure occurred.

NZE-28866: Invalid peer certificate encoding
Cause: A field from a certificate in the peer's certificate chain could not be recognized.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-28867: Integer value is too big.
Cause: The certificate presented had an integer field whose value was too large.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-28868: Peer certificate chain check failed.
Cause: The check of the certificate list presented by the peer failed. Possible causes include: 1. the expiration of one of the certificates; 2. a certificate authority in a certificate was not recognized as a trust point; 3. the signature in a certificate could not be verified.

Action: Refer to Oracle Wallet Manager documentation to find out how to open your wallet and ensure that: 1. all of the certificates installed in your wallet are current 2. a certificate authority's certificate from your peer's certificate chain is added as a trusted certificate in your wallet

NZE-28869: Peer's certificate is expired.
Cause: The certificate being used to authenticate a client or server has expired.

Action: Obtain a new certificate, which is unexpired, and attempt the connection again.

NZE-28870: Name comparison failure
Cause: A comparison of the names contained in two certificates failed.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28871: Peer certificate chain is incomplete.
Cause: The peer certificate chain presented was incomplete because it did not end with a self-signed root certificate.

Action: Refer to Oracle Wallet Manager documentation to find out how to open your wallet and ensure that: 1. the certificate authority's root certificate is self-signed. 2. a certificate

authority's certificate from your peer's certificate chain is added as a trusted certificate in your wallet

NZE-28872: Invalid peer certificate format
Cause: The peer certificate does not conform to the X.509v3 standard.

Action: Refer to Oracle Wallet Manager documentation to find out how to get the peer certificate. Then contact Oracle customer support with the peer's certificate.

NZE-28874: SSL: I/O closed - override goodbye kiss
Cause: This error is informational. It indicates that the connection closed without error.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28875: SSL: use server-gated cryptographic suites
Cause: This is used as a internal status indicator and not really an error.

Action: This message is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28884: invalid cipher suite
Cause: An invalid cipher suite string has been specified in the product's configuration file.

Action: Refer to the product documentation for information about supported cipher suites.

NZE-28885: No certificate with the required key usage found.
Cause: Certificate not created with the appropriate X509v3 key usage extension.

Action: Refer to Oracle Wallet Manager documentation to find out the supported key usages.

NZE-28890: Entrust Login Failed
Cause: An application failed to log in to an Entrust Profile. Possible causes include: 1. Entrust Admin/Authority was not online. 2. Invalid password for Entrust profile was specified. 3. Invalid path to Entrust profile was specified 4. Invalid Entrust initialization file was specified. 5. Entrust Server Login program was not executed (server-side only).

Action: Make sure that: 1. Entrust Authority is online; 2. Password for Entrust profile is specified correctly; 3. Path to Entrust profile is specified correctly; 4. A valid Entrust initialization file is provided; 5. Entrust Server Login program is run before the database startup. For more information, enable tracing and examine the trace output to get exact the Entrust failure codes.

NZE-29000: Certificate not installed
Cause: Trying to delete a certificate which has not been installed.

Action: Refer to the Oracle Wallet Manager documentation for information about delete option.

NZE-29002: SSL transport detected invalid or obsolete server certificate.
Cause: The client detected a mismatch between the server's distinguished name specified on the server's certificate and the server's SID or service name.

Action: Refer to the SSL chapter in Oracle Advanced Security Administrator's Guide for information about enabling server distinguished name matching. Contact your administrator to perform the appropriate action.

NZE-29003: SSL transport detected mismatched server certificate.
Cause: The client detected a mismatch between the server's distinguished name specified on the server's certificate and the server's SID or service name.

Action: Refer to the SSL chapter in Oracle Advanced Security Administrator's Guide for information about enabling server distinguished name matching. Contact your administrator to perform the appropriate action.

NZE-29005: The certificate is invalid.
Cause: The peer certificate encoding is invalid when using SSL 2.0.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-29006: The certificate request message is invalid when using SSL 2.0.
Cause: There is an error processing the SSL 2.0 REQUEST-CERTIFICATE message.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29007: Bad Clear Key Length when using SSL 2.0
Cause: The clear key length of an SSL 2.0 Client Master key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29008: Bad DH Param key length
Cause: The length of the Diffie-Hellman params exceeds export restrictions.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29009: Bad encrypted key length when using SSL 2.0
Cause: The encrypted key length of an SSL 2.0 Client Master key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29010: Export key length does not meet export restrictions.
Cause: The server sent a ServerKeyExchange message with an export key which does not meet export restrictions. For RSA, the export key must be exactly 512 bits.

Action: Obtain a certificate with the appropriate key length.

NZE-29011: Finished message is incorrect.
Cause: The FINISHED message data verification failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29012: Bad key argument length when using SSL 2.0
Cause: The key argument length of an SSL 2.0 Client Master Key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29013: SSL MAC verification failure
Cause: Verification of SSL Record MAC failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29014: Maximum fragment length extension is incorrect.
Cause: The maximum fragment length extension specified is incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29015: incorrect message length
Cause: The message length is not correct.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29016: inadequate PKCS1 message padding
Cause: The message was not properly padded before encryption.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29017: The premaster secret length is incorrect.
Cause: The premaster secret sent by the peer has an incorrect length.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29018: The premaster secret contains an incorrect version number.
Cause: The premaster secret must contain the same version number as the ClientHello. The version sent by the client was incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29019: The protocol version is incorrect.
Cause: There is a protocol version mismatch between the two peers.

Action: Specify the correct protocol version in the product's configuration file.

NZE-29020: The handshake record length is too long.
Cause: The handshake record length exceeds the maximum that is allowed by the SSL specification.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29021: Secret key length is incorrect when using SSL 2.0.
Cause: The length of the decrypted ENCRYPTED-KEY is incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29022: Operation is being attempted on the wrong side of the client/server connection.
Cause: The SSL network layer has detected that the operation has been attempted on the wrong side of the client/server connection.

Action: Select the protocol side (of this protocol) to be the same as the one selected with a previous protocol.

NZE-29023: The buffers are not empty.
Cause: Trying to free buffers that are not empty.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29024: Certificate validation failure
Cause: The certificate sent by the other side could not be validated. This may occur if the certificate has expired, has been revoked, or is invalid for another reason.

Action: Check the certificate to determine whether it is valid. Obtain a new certificate, alert the sender that the certificate has failed, or resend.

NZE-29025: Error found in certificate check callback.
Cause: The application callback failed during additional certificate validation. Additional checks include CRL validation and extension checking.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29026: Decryption failure
Cause: SSL record decryption failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29027: Error in entropy collection
Cause: The internal entropy collection failed to generate enough seed data.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29028: Server verification failure when using SSL 2.0
Cause: Processing of an SSL 2.0 SERVER-VERIFY message failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29029: SSL handshake already completed
Cause: The system is trying to initiate a handshake when it has already been completed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29030: SSL handshake is requested.
Cause: The peer sends this message if it wishes to renegotiate. The application can either proceed with the renegotiation or reject the request.

Action: This is not an error. To find out more details enable tracing and retry the connection. Contact Oracle customer support with the trace output.

NZE-29031: SSL handshake is required.
Cause: Renegotiation cannot proceed before the SSL handshake is completed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29032: The given identity is not complete.
Cause: The certificate list does not contain both private key and certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29034: Correct cipher suite or client authentication is needed.
Cause: Before installing a private key, a cipher suite or client authentication suite using the same key exchange algorithm must be installed first. This has not been done.

Action: Install a cipher suite or client authentication suite that uses the same key exchange algorithm as the private key before re-installing the private key.

NZE-29036: This feature is not supported
Cause: Operation is not supported by the current connection parameters.

Action: Check the Oracle documentation to determine the appropriate connection parameters required for this operation.

NZE-29037: No certificate is present
Cause: The other client or server sent a certificate message that contained no certificates.

Action: Check the other side (client or server) to ensure they have appropriate credentials.

NZE-29038: There are no matching certificates.
Cause: The other client or server sent a certificate message that contained a certificate which was not signed by a trusted certificate authority (CA).

Action: Check to ensure that the other client or server sends a certificate which is signed by a CA that is in your trusted list. Or, include the CA certificate for the other client or server's certificate as a trustpoint in your wallet.

NZE-29039: There are no matching cipher suites.
Cause: Neither end of the handshake can agree on a cipher suite.

Action: Check to ensure that both sides of the handshake select cipher suites that are supported.

NZE-29040: There are no supported cipher suites.
Cause: This end of the handshake cannot support any cipher suites. This connection and the peer have some matching cipher suites, however, these cipher suites cannot be negotiated because they cannot be supported by the connection.

Action: Check to ensure that both sides of the handshake select cipher suites that are supported by the connection. Refer to Oracle documentation for supported cipher suites.

NZE-29043: Read is required.
Cause: Renegotiation with the peer has not yet started. There is application data which must be processed before the handshake can proceed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29044: Renegotiation has already been requested.
Cause: Renegotiation has already been requested.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29045: Renegotiation request has been refused.
Cause: A renegotiated handshake has been refused by the peer.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29046: Session is resumable.
Cause: Server is trying to resume a session with different session parameters.

Action: Server should resume the session with the correct session parameters.

NZE-29047: Mismatch in Transport Layer Security extension
Cause: Neither side can agree on a TLS extension.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29048: Unexpected message received.
Cause: An unexpected message has been received.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29049: Unknown record
Cause: The record type is unknown.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29050: Installed client authentication mode is not supported.
Cause: The enabled client authentication mode(s) cannot be used within the selected cipher suite.

Action: Enable a client authentication mode that can be used within the selected cipher suite.

NZE-29051: The given public key type is not supported.
Cause: The public key in the first certificate is not supported.

Action: Check to ensure that the certificate complies with the X.509v3 standard.

NZE-29052: Write buffer is not empty.
Cause: There is an attempt to free a write buffer that is not empty.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29084: The parameter specified is illegal.
Cause: The parameter is not correct. For example, it could be bad input, or an invalid message.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29095: Index is not correct.
Cause: The instance identified by the index parameter doesn't exist.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29096: The given length is incorrect.
Cause: The specified length is too small or is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29100: Cannot create local key ID.
Cause: Creation of local key identifier for the certificate or the private key failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29101: Cannot add private key bag.
Cause: The private key could not be added to the PKCS#12 object. Possible reasons are: (i) A required parameter is NULL (ii) The PKCS#12 construct is not supported (iii) An ASN.1 encoding error occurred in the certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29102: Cannot add certificate bag.
Cause: Creation of certificate bag failed. The application could have run out of memory.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29103: Cannot create PKCS #12 wallet.
Cause: Creation of PKCS#12 wallet failed possibly due to memory allocation failure.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29104: Cannot add certificate request.
Cause: Adding certificate request to the PKCS#12 wallet failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29105: Cannot export PKCS #12 wallet.
Cause: A required parameter is NULL or the PKCS#12 construct is not supported.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29106: Cannot import PKCS #12 wallet.
Cause: A required parameter is NULL or the BER-encoding is malformed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29107: Cannot create PKCS #12 wallet.
Cause: PKCS#12 wallet creation failed. The application may have run out of memory.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29108: Cannot initialize random object.
Cause: The random object could not be initialized or seeded. Either memory allocation has failed or the pseudo random number generator module has not been installed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29109: Cannot create private key object.
Cause: The private key object could not be created. Memory allocation may have failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29110: Invalid PKCS #12 bag type
Cause: The PKCS #12 bag type is invalid. Either one of the required parameters is NULL or the requested OID is not in the list.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29111: Invalid index
Cause: The index passed for getting the bag type is less than 1.

Action: Check to ensure that the index is greater than 1.

NZE-29112: Cannot access attributes from a PKCS #12 certificate bag.
Cause: The certificate cannot be accessed. One of the required parameters is probably NULL, or the index specified by the application does not contain a certbag, or the certificate could be malformed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29113: Cannot access attributes from a PKCS #12 key bag.
Cause: Retrieval of the private key failed. One of the required parameters is probably NULL or the index specified by the application does not contain a key bag.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29114: Cannot import private key.
Cause: The private key could not be imported. One of the required parameters could be NULL or the encoded private key could be malformed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29115: Cannot export private key.
Cause: The private key could not be exported. Either the application ran out of memory or the key type is not valid.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29116: Cannot get PKCS #12 attributes.
Cause: Retrieval of an attribute failed. One of the required parameters could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29117: Cannot add PKCS #12 attributes.
Cause: Could not add an attribute. The attribute parameter could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29118: Cannot create PKCS #12 attributes.
Cause: Creation of the attributes failed, possibly due to a memory allocation error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29119: Cannot import certificate.
Cause: The certificate cannot be imported. One of the required parameters could be NULL or the certificate has an invalid X.509 BER or DER encoding.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29120: Cannot export certificate.
Cause: The certificate cannot be exported. One of the required parameters could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29122: could not add pkcs11 info to the pkcs12 wallet
Cause: Failed while adding pkcs11 information into a pkcs12 wallet.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29123: could not get pkcs11 info from the pkcs12 wallet
Cause: An error was encountered while retrieving pkcs11 information from the wallet.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29124: pkcs11 library name already set
Cause: pkcs11 library information was already set in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29125: pkcs11 token label already set
Cause: pkcs11 token label information was already set in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29126: pkcs11 token passphrase already set
Cause: The pkcs11 token passphrase can be set only once in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29127: unknown pkcs11 information
Cause: An unknown pkcs11 information type was encountered. The wallet may have been corrupted due to a system error or memory corruption.

Action: Enable tracing and retry the failed operation. Contact Oracle customer support with the trace output.

NZE-29128: pkcs11 library name not set
Cause: The wallet does not have pkcs11 library information.

Action: Ensure that the wallet was created with valid library location or update the wallet with this information.

NZE-29129: pkcs11 token label not set
Cause: The wallet does not have pkcs11 token label information.

Action: Ensure that the wallet was created with valid token label information or update the wallet with this information.

NZE-29130: pkcs11 token passphrase not set
Cause: The wallet does not have pkcs11 token passphrase.

Action: Ensure that the wallet was created with valid token passphrase information or update the wallet with this information.

NZE-29131: pkcs11 certificate label already set in wallet
Cause: The pkcs11 certificate label was already set in the wallet.

Action: Use an empty wallet (created with orapki).

NZE-29135: Seed generation for Random Number Generator failed.
Cause: Generation of seed for random number generator failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29136: The allocated buffer is too small.
Cause: The output buffer is too small.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29137: The global context is incorrect.
Cause: The global context is incorrectly configured or invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29140: Cannot create certificate object.
Cause: Creation of the certificate object failed. The application could have run out of memory.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29141: Cannot import in the der format.
Cause: Cannot import the certificate into the certificate object. The reason could be a malformed certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29150: DES self-test failure
Cause: DES power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29151: 3DES self-test failure
Cause: 3DES power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29152: SHA-1 self-test failure
Cause: The SHA-1 power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29153: RSA self-test failure
Cause: The RSA power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29154: deterministic RNG self-test failure
Cause: The deterministic Random Number Generator power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29155: continuous key pair consistency check self-test failure
Cause: The public-private key pair check test failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29156: conditional RNG self-test failure
Cause: Continuous Random Number Generator test, which is needed in FIPS mode, has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29157: Unable to build an absolute path to the library.
Cause: Not able to construct an absolute path to the location of the library.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29158: Unable to open library.
Cause: Opening of the library failed.

Action: Check to ensure that the library is present in the location specified, and that it has the appropriate file permissions.

NZE-29159: Unable to read library.
Cause: Not able to read the library on which the DAC check has to be performed. Read call failed.

Action: Check if the library has the appropriate file permissions.

NZE-29160: NZ library being used is different.
Cause: The NZ library being used at runtime is not the same one on which the digest was computed for the software integrity check.

Action: Check to ensure that the library being used is the same as the one on which the digest was pre-computed.

NZE-29161: software integrity self-test failure
Cause: The software integrity check test on the NZ shared library has failed.

Action: Check to ensure that the library being used is the same as the one on which the digest was pre-computed.

NZE-29162: Non-FIPS cipher suites being used in FIPS mode.
Cause: The cipher suite being used does not contain FIPS-approved algorithms.

Action: Use cipher suites that contain FIPS-approved algorithms.

NZE-29163: Third party PKI vendor is not supported in FIPS mode.
Cause: Third party PKI vendors like Entrust and MCS are not supported in FIPS mode.

Action: Use only Oracle PKI when running in FIPS mode.

NZE-29164: External PKCS #12 wallet is not supported in FIPS mode.
Cause: PKCS #12 wallets created using third party software cannot be used in FIPS mode.

Action: Use only PKCS #12 wallets created by Oracle Wallet Manager when running in FIPS mode.

NZE-29166: Bad key size in FIPS mode.
Cause: User attempted to use a key size that is not allowed in FIPS mode

Action: Ensure that the key size meets FIPS usage requirement. For example, RSA key modulus cannot be less than 1024 bits in FIPS mode.

NZE-29167: Bad key size specified.
Cause: User attempted to use a RSA keysize that is not a standard keysize

Action: Ensure that the keysize is of 512, 1024, 2048, 4096 etc bitsizes

NZE-29176: CRL signature verification failed
Cause: A CRL is verified before being used. CRL signature cannot be verified.

Action: Get a new CRL from CA

NZE-29177: certificate serial number is not in CRL
Cause: Cert is not revoked

Action: n/a

NZE-29178: certificate serial number is in CRL
Cause: Cert has been revoked

Action: Reject the certificate

NZE-29179: certificate validation check failed
Cause: Could not complete checking certificate status with a CRL.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29180: Unsupported validation protocol
Cause: The certificate validation protocol is not supported

Action: Make sure a supported certificate validation protocol is specified

NZE-29181: ldap_open failed
Cause: Could not connect to the LDAP server

Action: Ensure that correct LDAP information was provided. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-29182: ldap_bind failed
Cause: Could not log in to the LDAP server

Action: Ensure that correct LDAP credentials were provided. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-29183: ldap_search failed
Cause: Failed to complete search operation in LDAP server

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29184: ldap_result failed
Cause: Failed to retrieve results from LDAP operation

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29185: ldap_first_attribute failed
Cause: Could not get the first attribute from LDAP entry.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29186: ldap_get_values_len failed
Cause: Failed to retrieve attribute values from LDAP entry

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29187: unsupported validation mechanism
Cause: The validation mechanism specified in OID is not supported

Action: Make sure a supported validation mechanism is set in OID

NZE-29188: ldap_count_entries failed
Cause: Failed to get count of entries from a search result chain.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29189: No entry found in OID
Cause: CRL not found in OID

Action: Upload the CRL to OID

NZE-29190: Multiple entries in OID
Cause: For a given issuer name there should be only one CRL in OID

Action: Make sure there is only one CRL for a given issuer name in OID

NZE-29191: OID connection information not set
Cause: To connect to OID the connection information must be available

Action: Set the OID connection information.

NZE-29192: Validation mechanism not set in OID
Cause: The validation mechanism to be used is not set in OID

Action: Set validation mechanism to be used in OID at cn=ValidationMechanism, cn=Validation, cn=PKI, cn=Products, cn=OracleContext

NZE-29193: no CRL found using CRLDP mechanism
Cause: A CRL could not fetched using CRL Distribution point (CRLDP)

Action: Contact the CA

NZE-29194: no CRL found in cache
Cause: CRL not in cache

Action: n/a

NZE-29195: CRL is expired
Cause: CRL nextUpdate time is in the past

Action: Get a new CRL from the CA

NZE-29222: Distinguished name does not match.
Cause: Distinguished name (DN) on certificate doesn't match user.

Action: Create the global user in the database with the DN that matches with the one in the user certificate on the client side.

NZE-29223: Cannot create certificate chain.
Cause: Unable to create a certificate chain with the existing trust points for the certificate that is to be installed.

Action: Install the trust point that signed the certificate.

NZE-29224: Cannot locate matching certificate request.
Cause: No matching certificate request for the certificate was found.

Action: Install the correct certificate.

NZE-29225: Certificate already installed.
Cause: Attempting to install a certificate into a persona which already has it.

Action: Do not install the certificate.

NZE-29226: No matching private key found.
Cause: Could not locate a matching private key in the persona for the given certificate (public key).

Action: n/a

NZE-29227: Certificate is expired.
Cause: Certificate is no longer valid..

Action: Obtain another certificate or renew this certificate.

NZE-29228: Cannot calculate the number of bytes for output.
Cause: The cryptographic engine is confused about the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29229: the magic number found in the header does not match expected
Cause: The input TDU has either been corrupted or is not being used correctly.

Action: Check that the TDU is being used from the beginning. If possible, compare the size of the TDU upon generation to the size being used.

NZE-29230: the header length is not sufficient for message header
Cause: The input TDU has either been corrupted or it is not being used correctly.

Action: Check that the TDU is being used from the beginning. If possible, compare the size of the TDU upon generation to the size being used.

NZE-29231: the cryptographic engine failed to initialize
Cause: During initialization of the cryptographic engine, some failure occurred. Possible causes include running out of memory and trying to seed the random number generator.

Action: Make sure the executable has been linked with compatible library versions, and that you are not running out of swap space.

NZE-29232: the cryptographic engine key initialization failed
Cause: During initialization of a key for cryptography, some failure occurred. This includes running out of memory and passing illegal arguments.

Action: Make sure the executable has been linked with compatible library versions, and that the correct parameters are being used for the cryptographic functions.

NZE-29233: the key object could not be encoded
Cause: The key object may be corrupted or may be an unsupported type.

Action: Check the key object being passed to the encoding routine.

NZE-29234: a key object was not extracted from encoding
Cause: The encoding may be corrupted or may not be a key object at all.

Action: Check the encoding and parameters passed to decoding routine.

NZE-29235: the key information could not be retrieved
Cause: The key may be corrupted or may be an unsupported type.

Action: Check the parameters being used with the cryptographic functions.

NZE-29236: the random number generator will not accept seed
Cause: The cryptographic engine may have run out of memory.

Action: Make sure the executable has been linked with compatible library versions.

NZE-29237: the cryptographic engine could not finish the algorithm
Cause: The cryptographic engine does not have enough information to correctly finish applying the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29238: the cryptographic engine could not apply the algorithm
Cause: The cryptographic engine does not have enough information to correctly apply the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29239: the cryptographic engine could not initialize the algorithm
Cause: The cryptographic engine does not have enough information to correctly initialize the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29240: the cryptographic engine does not recognize the algorithm
Cause: The application may be passing wrong parameters.

Action: Check the parameters being used with the cryptographic functions.

NZE-29241: a buffer block needs more space but its length is fixed
Cause: The application has preallocated an output buffer that is too short for the operation and has specified that the buffer should not grow as needed.

Action: Either preallocate a larger buffer or allow the toolkit to grow the output buffer as needed.

NZE-29242: the asymmetric key is too short to be used with the data.
Cause: An asymmetric key must be at least 11 bytes longer than the data it is being used to encrypt.

Action: Use an asymmetric key with more bits or break the data into smaller pieces.

NZE-29243: the toolkit does not recognize the type of key being used
Cause: The application may be passing wrong parameters.

Action: Check the parameters being used with the toolkit functions.

NZE-29245: the toolkit does not recognize the function being used
Cause: The application is probably passing the wrong parameters.

Action: Check the parameters being used with the toolkit functions.

NZE-29246: the toolkit could not parse the tdu
Cause: The TDU could be corrupted.

Action: Check the parameters being used with the toolkit functions.

NZE-29247: an unopen toolkit object was used before it was opened
Cause: Some toolkit objects must be opened before they can be used.

Action: Check the parameters being used with the toolkit functions.

NZE-29248: an unrecognized WRL was used to open a wallet
Cause: WRL's have a specific set of types and must be formatted correctly.

Action: Check the parameters being used with the toolkit functions.

NZE-29249: an unrecognized state was passed to a cryptographic function
Cause: The application is probably passing the wrong parameters.

Action: Check the parameters being used with the toolkit functions.

63
NZE-43000 to NZE-43084

NZE-43000: pkcs11 library not found
Cause: The PKCS11 library could not be found.

Action: Make sure that the pkcs11 library is at the location specified in the wallet.

NZE-43001: pkcs11 token not found
Cause: The PKCS11 token could not be found.

Action: Make sure that a token with correct label is present in slot.

NZE-43002: pkcs11 passphrase is wrong
Cause: The PKCS11 passphrase is wrong.

Action: Make sure that the token passphrase specified is correct.

NZE-43005: pkcs11: No tokens present
Cause: a token is not present in the slot

Action: Place a pkcs11 token in the slot

NZE-43011: pkcs11: Token login failed
Cause: To login to the pkcs11 token a correct passphrase is needed

Action: Check the token passphrase.

NZE-43014: pkcs11: finding private key on token error
Cause: error occurred while finding private key on token

Action: Make sure the private key corresponding to the certificate in wallet is on the token. Check trace message

NZE-43015: pkcs11: key pair gen error
Cause: error occurred while generating key pair using HSM

Action: Check trace message

NZE-43017: pkcs11: No certificate found on the smart card/HSM
Cause: No certificate was found on the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to populate the smart card/HSM with certificate.

NZE-43018: pkcs11: No user certificate found on the smart card/HSM
Cause: No user certificate was found on the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to populate the smart card/HSM with certificate and private key.

NZE-43019: pkcs11: No certificate found on smart card/HSM label with given cert label
Cause: There were no certificate labels on the smart card/HSM that matched the certificate label specified in the wallet.

Action: Follow smart card/HSM vendor documentation to set certificate label in smart card/HSM.

NZE-43020: pkcs11: Multiple certificates found on smart card/HSM with given cert label
Cause: Certificates with identical labels were found in the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to assign unique certificate labels to certificates.

NZE-43021: pkcs11: Certificate with given cert label is not a user cert
Cause: The certificate with the specified certificate label did not have a matching private key in the smart card/HSM.

Action: Follow smart card/HSM vendor instructions to create credentials (certificate/private key) in smart card/HSM.

NZE-43084: Certificate is using forbidden or unsupported signature algorithm.
Cause: Certificate may be using MD2 or MD5 signature algorithm.

Action: Review wallet content and remove or replace certificates using obsolete algorithms.

64
O2F-00301 to O2F-00341

O2F-00301: Error attempting to read from the INTYPE file
Cause: An operating system error occurred while attempting to read from the INTYPE file.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file.

O2F-00302: Unable to allocate memory
Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2F-00303: No INTYPE file was specified
Cause: The required option INTYPE was not specified.

Action: Set the INTYPE option to the name of the file containing names of types for OTT to translate. The INTYPE option may be specified on the command line or in a CONFIG file.

O2F-00304: Invalid filename for the INTYPE file
Cause: The filename specified for the INTYPE file is not syntactically correct.

Action: Make sure you spelled the filename of the INTYPE file correctly.

O2F-00305: Error opening the INTYPE file for reading
Cause: An operating system error occurred while attempting to open the INTYPE file.

Action: Make sure you spelled the filename of the INTYPE file correctly. Try opening the INTYPE file with an editor to make sure you have access to the file.

O2F-00306: Unable to close the INTYPE file
Cause: An operating system error occurred while attempting to close the INTYPE file.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file.

O2F-00307: Unable to read the INTYPE file
Cause: The first token of the INTYPE file was not read. Either an operating system error occurred while attempting to read from the INTYPE file, or all lines of the INTYPE file are blank lines or comment lines.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file. Make sure the INTYPE file contains one or more type specifications.

O2F-00308: No type specifications were seen in the INTYPE file
Cause: Either there are no type specifications in the INTYPE file, or the first type specification could not be read due to a previously reported error.

Action: Fix any previously reported errors. Make sure there are one or more type specifications in the INTYPE file.

O2F-00309: Name of user-defined type is illegal or missing
Cause: The name of a user-defined type is expected following the keyword TYPE at the beginning of a type specification. No legal type name was seen.

Action: Make sure that the type specification is syntactically correct, and that the type name is spelled correctly.

O2F-00310: Illegal or missing identifier name
Cause: A legal C or C++ identifier was expected following AS, but was not seen.

Action: Use a legal C or C++ identifier, consisting of letters, digits, and underscores not beginning with a digit.

O2F-00311: Illegal or missing file name
Cause: A legal file name was expected, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct file name.

O2F-00312: Illegal or missing type version string
Cause: A type version name was expected, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct version name.

O2F-00313: Illegal or missing attribute name
Cause: An attribute name was expected in the INTYPE file, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct attribute name.

O2F-00314: AS expected but not seen in the INTYPE file
Cause: Incorrect syntax in the INTYPE file.

Action: Make sure your TYPE file syntax is correct.

O2F-00315: An attribute of a type is listed twice in a type specification
Cause: An attribute of a user-defined type is listed twice in a type specification in the INTYPE file. The second occurrence is ignored.

Action: Remove one of the two occurrences of the attribute.

O2F-00316: An unexpected token was seen at the end of a type specification
Cause: There is a syntax error in the INTYPE file.

Action: Check your documentation to make sure the type specifications in the INTYPE file are syntactically correct. Check your documentation to make sure the type specifications

O2F-00317: Error opening the ERRTYPE file for writing
Cause: An operating system error occurred while attempting to open the ERRTYPE file for writing.

Action: Make sure you spelled the ERRTYPE filename correctly. Try creating or modifying the ERRTYPE file to make sure you have write access to the file.

O2F-00318: Error writing to the OUTTYPE file
Cause: An operating system error occurred when attempting to write to the OUTTYPE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2F-00319: No OUTTYPE file specified
Cause: The required option OUTTYPE was not specified.

Action: Set the OUTTYPE option to the name of the file to which the TYPE file produced by OTT should be written. The OUTTYPE option may be specified on the command line or in a CONFIG file.

O2F-00320: Invalid filename for the OUTTYPE file
Cause: The filename specified for the OUTTYPE file is not syntactically correct.

Action: Make sure you spelled the filename of the OUTTYPE file correctly.

O2F-00321: Error opening the OUTTYPE file for writing
Cause: An operating system error occurred while attempting to open the OUTTYPE file.

Action: Make sure you spelled the filename of the OUTTYPE file correctly. Make sure you have operating system permission to open the the file.

O2F-00322: Unable to close the OUTTYPE file
Cause: An operating system error occurred while attempting to close the OUTTYPE file.

Action: Try opening the OUTTYPE file with an editor to make sure you are able to access the file.

O2F-00323: Internal error in OTT facility O2F
Cause: An internal OTT error occurred in the O2F component of OTT.

Action: Contact ORACLE customer support.

O2F-00324: Unable to convert from the database character set to the compiler character set
Cause: The name of a type, attribute, or method cannot be converted from the client character set in effect when OTT was invoked to the compiler character set (typically ASCII or EBCDIC).

Action: A name is translated first from the database character set to the client character set, and then from the client character set to the compiler character set. The client character set is specified in a platform-dependent manner (On UNIX platforms, the client character set is specified by setting the NLS_LANG environment variable). Use a client character set that can be translated to the compiler character set. The compiler character set itself is one such character set. Specify synonyms in the INTYPE file for any names of database objects that cannot be successfully translated to the client character set.

O2F-00325: None of the characters in a name were legal identifier characters
Cause: None of the characters in the name of a database entity could be translated to a character that may begin a C or C++ identifier, such as a letter or an underscore.

Action: Specify an explicit translation for the name in the INTYPE file.

O2F-00326: Some characters in this name were not legal identifier characters
Cause: One or more characters in the name of a database entity could not be translated to a character that may appear in a C or C++ identifier, such as a letter, an underscore, or a digit. The characters that could not be translated were replaced with underscores.

Action: Make sure that the name is spelled correctly, and that it is terminated by a blank, the end of a line, or an equals sign ("="). You may use the translated name with added underscores, or you may specify an explicit translation for the name in the INTYPE file.

O2F-00327: CASE option has an illegal value
Cause: The value given for the CASE option in the INTYPE file is not legal.

Action: Change the value given for the CASE option to one of the following legal values: SAME, LOWER, UPPER, or OPPOSITE.

O2F-00328: Illegal INITFUNC name
Cause: The function name given for the INITFUNC option in the INTYPE file is not a legal C or C++ identifier.

Action: Specify the name of the INITFUNC function as a legal C or C++ identifier. This name can be given in the INTYPE file, given on the command line, or derived from the INITFILE name.

O2F-00329: Type or option specification expected
Cause: A type or option specification was expected in the INTYPE file, but was not seen.

Action: Check the INTYPE file for syntax errors. Supply a type or option specification. A type specification begins with the word TYPE. An option specification begins with the word CASE, INITFILE, or INITFUNC.

O2F-00330: Name exceeds 265 bytes in length
Cause: A name seen in the INTYPE file exceeds 265 bytes in length.

Action: Choose a shorter name.

O2F-00331: A syntactically illegal name was seen in the INTYPE file
Cause: A syntax error occurred in a name used in the INTYPE file.

Action: If the name is quoted, make sure that the quotes are at the beginning and at the end of the name. If a period (which separates a schema name from a type name) appears, make sure that the schema name and the type name are both present.

O2F-00332: A database link may not appear in the name of a user-defined type
Cause: A database link was seen in the name of a user-defined type. This feature is not yet supported.

Action: Declare the user-defined type in the database to which OTT connects.

O2F-00333: An unexpected token appeared where a keyword was expected in the INTYPE file
Cause: A keyword such as TYPE was expected in the INTYPE file, but an incorrect or misspelled keyword was seen.

Action: Verify that your TYPE specification obeys the syntax described in your documentation. Verify that your keyword is spelled correctly.

O2F-00334: A user-defined type is listed more than once in the INTYPE file
Cause: The same name of a user-defined type appears in more than one type specification. The duplicate specifications of the type name will be ignored.

Action: Put all of the information about the type, including all type name and attribute name translations, in a single TYPE specification, and eliminate the duplicate TYPE specifications.

O2F-00335: Internal error in O2F component of OTT
Cause: A request was made that all types in the database schema are to database.

Action: List the types to be processed in an INTYPE file. Contact ORACLE customer support.

O2F-00336: Error reported by subsystem:\n
Cause: A request was made to generate declarations for all the types in a database schema. An error occurred in a subsystem when accessing the database.

Action: Examine the error message reported by the sybsystem to determine its cause. List the types to be processed in an INTYPE file.

O2F-00337: Schema not found, or no types found in schema
Cause: A request was made to generate declarations for all the types in a database schema. Either the schema was not found, no user-declared types were found in the schema, or unable to connect to Oracle.

Action: Ensure that a login/password string was specified for OTT and that the Oracle database can be accessed with it. Ensure that the USER_TYPES table contains at least one row.

O2F-00338: Illegal or missing package name
Cause: A legal Java package name was expected following IN or PACKAGE or IN PACKAGE, but was not seen.

Action: Use a legal Java package name.

O2F-00339: CODE option has an illegal value
Cause: The value given for the CODE option in the INTYPE file is not legal.

Action: Change the value given for the CODE option to one of the following legal values: C, ANSI_C, KR_C, JAVA, NATIVE_JAVA, ORACLE_JAVA.

O2F-00340: Name was null
Cause: A name had a length of 0 characters.

Action: This error should never be reported to the user. Contact ORACLE customer support.

O2F-00341: An error occurred for which no message is available
Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

65
O2I-00101 to O2I-00133

O2I-00101: Invalid value for the USERID parameter
Cause: The value supplied for the USERID parameter is not a legal *username*/*password*[@*databasename*] string.

Action: Set the USERID option to the correct *username*/*password* or *username*/*password@database name* combination to use when connecting to the database. If you have an OPS$ account, you may instead omit the USERID option, in which case OTT will attempt to connect to the database using the userid OPS$*username*. The USERID option may be specified on the command line or in a CONFIG file.

O2I-00102: Unable to connect to Oracle
Cause: OTT could not connect to Oracle with the username, password, and, if applicable, database link that was supplied. Either the USERID option value was incorrect, or, if the USERID was not supplied, the userid OPS$*username* was not accepted.

Action: Check that the username and password are current and correct. Run another program that connects to Oracle to verify that you can connect using that username and password.

O2I-00103: Two file names refer to the same HFILE file in the INTYPE file
Cause: Two different file names have been used in the INTYPE file to refer to the same HFILE file, or different file names have been used to refer to the same HFILE file on the command line and in the INTYPE file.

Action: Consistently refer to each HFILE file using the same file name.

O2I-00110: Internal error in OTT component O2I
Cause: An internal OTT error occurred in the O2I component of OTT.

Action: Contact ORACLE customer support.

O2I-00111: Unable to allocate memory
Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2I-00112: Unable to write to the HFILE file
Cause: An operating system error occurred when attempting to write to the HFILE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00113: No HFILE specified
Cause: The HFILE file to which C declarations generated by OTT are written was not specified.

Action: Specify the global HFILE option on the command line or in a CONFIG file. You may choose a different HFILE for a particular type by specifying a different HFILE in the INTYPE

file entry describing the type. If every INTYPE file entry specifies an HFILE, and if none of the types in the HFILE require declarations of types not mentioned there, the global HFILE option may be omitted. An INTYPE file generated by a previous invocation of OTT satisfies these conditions.

O2I-00114: Invalid HFILE file name
Cause: An HFILE file name was specified that is not syntactically correct.

Action: Make sure the HFILE filename is spelled correctly.

O2I-00115: Error opening the HFILE file
Cause: An operating system error occurred while attempting to open the HFILE file for writing.

Action: Make sure the HFILE filename is spelled correctly. Try creating or modifying the HFILE to make sure you have write access to the file.

O2I-00116: Unable to close the HFILE file
Cause: An operating system error occurred while attempting to close the HFILE file.

Action: Try creating or modifying the HFILE file to make sure you are able to access the file.

O2I-00117: Internal error: No message file for component O2U
Cause: The message file for the internal OTT component O2U was not found. OTT may not be correctly installed.

Action: Contact ORACLE customer support.

O2I-00118: This user-defined type was not found in the database
Cause: A user-defined type specified in the INTYPE file was not found in the database.

Action: Make sure the name of the type is spelled correctly. Make sure the type is actually declared in the database.

O2I-00119: Warning reported by subsystem:\n
Cause: A subsystem invoked by OTT reported a warning. This warning immediately follows the "Warning reported by subsystem" message.

Action: Examine the warning reported by the subsystem to determine its cause.

O2I-00120: Error reported by subsystem:\n
Cause: A subsystem invoked by OTT reported an error. This error immediately follows the "Error reported by subsystem" message.

Action: Examine the error message reported by the sybsystem to determine its cause.

O2I-00121: No value was specified for the CODE option
Cause: The required CODE option was not specified on the command line or in a configuration file.

Action: Specify the CODE option on the command line or in a configuration file. Currently, the following values of the CODE option are supported: CODE=ANSI_C, CODE=KR_C, CODE=C

O2I-00122: Invalid filename for the INITFILE file
Cause: The filename specified for the INITFILE file is not syntactically correct.

Action: Make sure the filename of the INITFILE file is spelled correctly.

O2I-00123: Unable to close the INITFILE file
Cause: An operating system error occurred while attempting to close the INITFILE file.

Action: Try opening the INITFILE file with an editor to make sure the file can be accessed.

O2I-00124: Error opening the INITFILE file for writing
Cause: An operating system error occurred while attempting to open the INITFILE file for writing.

Action: Make sure the INITFILE filename is spelled correctly. Try creating or modifying the INITFILE file to make sure you have write access to the file.

O2I-00125: Error writing to the INITFILE file
Cause: An operating system error occurred when attempting to write to the INITFILE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00126: You must specify an INTYPE file with SCHEMA_NAMES=FROM_INTYPE
Cause: The option SCHEMA_NAMES=FROM_INTYPE requests that schema names be written to the OUTTYPE file as given in the INTYPE file. However, an INTYPE file was not specified.

Action: Either supply the name of an INTYPE file, or specify the SCHEMA_NAMES option ALWAYS or IF_NEEDED.

O2I-00127: Illegal INITFUNC name
Cause: The name of the INITFUNC function is not a legal C or C++ identifier.

Action: Specify the name of the INITFUNC function as a legal C or C++ identifier. This name may be given in the INTYPE file, given on the command line, or derived from the INITFILE name.

O2I-00128: Unable to write to the Java file
Cause: An operating system error occurred when attempting to write to a Java source file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00129: No Java file specified
Cause: The file to which Java declarations generated by OTT are written was not specified.

Action: This message should never be seen, because Java files are named after the classes declared within them. Contact ORACLE customer support.

O2I-00130: Invalid Java file name
Cause: A Java file name was specified that is not syntactically correct.

Action: Make sure the Java filename is spelled correctly.

O2I-00131: Error opening a Java file
Cause: An operating system error occurred while attempting to open a Java file for writing.

Action: Make sure the filename is spelled correctly. Try creating or modifying the file to make sure you have write access to the file.

O2I-00132: Unable to close a Java file
Cause: An operating system error occurred while attempting to close a Java file.

Action: Try creating or modifying the Java file to make sure you are able to access the file.

O2I-00133: An error occurred for which no message is available
Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

66
O2U-00200 to O2U-00212

O2U-00200: Internal error in OTT facility O2U
Cause: An internal OTT error occurred in the O2U facility of OTT.

Action: Contact ORACLE customer support.

O2U-00201: Illegal arguments to function o2upt()
Cause: Illegal arguments were passed to the function o2upt(). This is an internal error that should not be encountered by an end user.

Action: Contact ORACLE customer support.

O2U-00202: Invalid data passed to function
Cause: Arguments with incorrect values were passed to the function o2upt(). This is an internal error that should not be encountered by the end user.

Action: Contact ORACLE customer support.

O2U-00203: Type to be declared must be an object type or a named collection type
Cause: You have asked OTT to generate code for a type it does not support. When generating Java code, OTT will only generate code for object types. When generating C declarations, OTT will only generate declarations for object types and named collection types.

Action: You are probably asking OTT to declare a built-in type, or, if you are generating Java code, a named collection type. Do not ask OTT to generate a declaration for this type.

O2U-00204: Unable to convert from the database character set to the compiler character set
Cause: The name of a type, attribute, or method cannot be converted from the client character set in effect when OTT was invoked to the compiler character set (typically ASCII or EBCDIC).

Action: A name is translated first from the database character set to the client character set, and then from the client character set to the compiler character set. The client character set is specified in a platform-dependent manner (On UNIX platforms, the client character set is specified by setting the NLS_LANG environment variable.) Use a client character set that includes the character set of the INTYPE file and can be translated to the compiler character set. The database character set is one such character set. Specify synonyms in the INTYPE file for any names of database objects that cannot be successfully translated to the client character set.

O2U-00205: None of the characters in a type name were legal identifier characters
Cause: None of the characters in the name of a user-defined type could be translated to a character that can begin a C or C++ identifier, such as a letter or an underscore.

Action: Specify an explicit translation for the type name in the INTYPE file.

O2U-00206: Some characters in a type name were not legal identifier characters
Cause: One or more characters in the name of a user-define type could not be translated to a character that can appear in a C or C++ identifier, such as a letter, an underscore, or a digit. The characters that could not be translated were replaced with underscores.

Action: Specify an explicit translation for the type name in the INTYPE file, or just use the translated type name with added underscores.

O2U-00207: None of the characters in an attribute name were legal identifier characters
Cause: None of the characters in the name of an attribute of a type could be translated to a character that can begin a C or C++ identifier, such as a letter or an underscore. To find the affected attribute, look in the declaration generated for this type for data member names that are obviously incorrect.

Action: Specify an explicit translation for the attribute name in the INTYPE file.

O2U-00208: One or more characters in an attribute name were not legal identifier characters
Cause: If an attribute name contains one or more characters that can not be translated to a legal C or C++ identifier character, the characters that can not be translated are replaced with underscores. To find the affected attribute or attributes, look in the declaration generated for this type for data member names that have extra underscores not present in the original attribute names.

Action: Specify explicit translations for the affected attribute names in the INTYPE file, or just use the translated attribute names with added underscores.

O2U-00209: Attribute or function name to be translated was not found
Cause: This name, for which a translation was requested, is not the name of an attribute or a function of the current type.

Action: Make sure that the name is spelled correctly, and is the name of an attribute or function defined in the current type.

O2U-00210: Unable to allocate memory
Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2U-00211: A type without attributes was translated
Cause: OTT translated a type without attributes. The corresponding C-type will be a struct without any components, which is not legal C. The empty type in the database may be the result of an error during type creation. Additionally, incomplete types may be used temporarily in the creation of types that reference one another.

Action: Re-create a full version of the type in the database and then re-run OTT.

O2U-00212: An error occurred for which no message is available
Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

67

OCI-00601 to OCI-64495

OCI-00601: cleanup lock conflict
Cause: PMON process runs into lock conflict trying to recover processes.

Action: This is trapped internally, no action necessary.

OCI-00602: internal programming exception
Cause: Internal programming exception.

Action: Report as a bug. Caution: The following error code is not relocatable.

OCI-00972: identifier is too long
Cause: An identifier with more than 30 characters was specified.

Action: Specify at most 30 characters.

OCI-01841: (full) year must be between -4713 and +9999, and not be 0
Cause: Illegal year entered

Action: Input year in the specified range

OCI-01854: julian date must be between 1 and 5373484
Cause: An invalid Julian date was entered.

Action: Enter a valid Julian date between 1 and 5373484.

OCI-01858: a non-numeric character was found where a numeric was expected
Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a number where a number was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

OCI-01859: a non-alphabetic character was found where an alphabetic was expected
Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a letter where a letter was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

OCI-01861: literal does not match format string
Cause: Literals in the input must be the same length as literals in the format string (with the exception of leading whitespace). If the "FX" modifier has been toggled on, the literal must match exactly, with no extra whitespace.

Action: Correct the format string to match the literal.

OCI-01862: wrong number of digits for this format item
Cause: The number of digits used for this format item is not equal to the number necessary for this format when specifying Format eXact ("FX") for this item.

Action: Fill out this format item with leading zeros to the number necessary for this format. (This is generally the number of characters in the format code--DD needs 2 digits, for example. The exceptions are HH24 & HH12, which both need 2, and J, which needs 9.)

OCI-01864: the date is out of range for the current calendar
Cause: Your calendar doesn't extend to the specified date.

Action: Specify a date which is legal for this calendar.

OCI-01865: not a valid era
Cause: Era input does not match a known era.

Action: Provide a valid era on input.

OCI-01867: the interval was invalid
Cause: The character string you specified is not a valid interval.

Action: Please specify a valid interval.

OCI-01868: the leading precision of the interval was too small
Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

OCI-01870: the intervals or datetimes were not mutually comparable
Cause: The intervals or datetimes are not mutually comparable.

Action: Specify a pair of intervals or datetimes that are mutually comparable.

OCI-01871: the number of seconds must be less than 60
Cause: The number of seconds specified was greater than 59.

Action: Specify a value for seconds that is 59 or smaller.

OCI-01873: the leading precision of the interval was too small
Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

OCI-01874: time zone hour must be between -12 and 14
Cause: The time zone hour specified was not in the valid range.

Action: Specify a time zone hour between -12 and 14.

OCI-01875: time zone minute must be between -59 and 59
Cause: The time zone minute specified was not in the valid range.

Action: Specify a time zone minute between -59 and 59.

OCI-01876: year must be at least -4713
Cause: The specified year was not in range.

Action: Specify a year that is greater than or equal to -4713.

OCI-01878: specified field not found in datetime or interval
Cause: The specified field was not found in the datetime or interval.

Action: Make sure that the specified field is in the datetime or interval.

OCI-01879: the hh25 field must be between 0 and 24
Cause: The specified hh25 field was not in the valid range.

Action: Specify an hh25 field between 0 and 24.

OCI-01880: the fractional seconds must be between 0 and 999999999
Cause: The specified fractional seconds were not in the valid range.

Action: Specify a value for fractional seconds between 0 and 999999999.

OCI-01881: time zone region ID is invalid
Cause: The region ID referenced an invalid region.

Action: Contact Oracle Support Services.

OCI-01882: time zone region not found
Cause: The specified region name was not found.

Action: Contact Oracle Support Services.

OCI-01883: overlap was disabled during a region transition
Cause: The region was changing state and the overlap flag was disabled.

Action: Contact Oracle Support Services.

OCI-01884: divisor is equal to zero
Cause: An attempt was made to divide by zero.

Action: Avoid zero divisor.

OCI-01890: NLS error detected
Cause: An NLS error was detected.

Action: Look for additional error messages and take appropriate action. If there are no additional errors, call Oracle Support Services.

OCI-01898: too many precision specifiers
Cause: While trying to truncate or round dates, extra data was found in the date format picture

Action: Check the syntax of the date format picture and retry.

OCI-02083: database name has illegal character '*string*'
Cause: Supplied database name can contain only A-Z, 0-9, '_', '#', '$' '.' and '@' characters.

Action: n/a

OCI-02084: database name is missing a component
Cause: Supplied database name cannot contain a leading '.', trailing '.' or '@', or two '.' or '@' in a row.

Action: n/a

OCI-04020: deadlock detected while trying to lock object *stringstringstringstringstring*
Cause: While trying to lock a library object, a deadlock is detected.

Action: Retry the operation later.

OCI-04021: timeout occurred while waiting to lock object *stringstringstringstringstring*
Cause: While waiting to lock a library object, a timeout is occurred.

Action: Retry the operation later.

OCI-04022: nowait requested, but had to wait to lock dictionary object
Cause: Had to wait to lock a library object during a nowait request.

Action: Retry the operation later.

OCI-04028: cannot generate diana for object *stringstringstringstringstring*
Cause: Cannot generate diana for an object because of lock conflict.

Action: Please report this error to your support representative.

OCI-04029: error ORA-*string* occurred when querying *stringstringstring*
Cause: The table or view being queried might be missing. The error number indicates the error.

Action: Fix the error.

OCI-04030: out of process memory when trying to allocate *string* bytes (*string*,*string*)
Cause: Operating system process private memory has been exhausted

Action: n/a

OCI-04031: unable to allocate *string* bytes of shared memory ("*string*","*string*","*string*")
Cause: More shared memory is needed than was allocated in the shared pool.

Action: Either use the dbms_shared_pool package to pin large packages, reduce your use of shared memory, or increase the amount of available shared memory by increasing the value of the init.ora parameter "shared_pool_size".

OCI-04054: database link *string* does not exist
Cause: During compilation of a PL/SQL block, an attempt was made to use a non-existent database link.

Action: Either use a different database link or create the database link.

OCI-04060: insufficient privileges to execute *string*
Cause: Attempt to execute a stored procedure without sufficient privileges.

Action: Get necessary privileges.

OCI-04061: existing state of *string* has been invalidated
Cause: Attempt to resume the execution of a stored procedure using the existing state which has become invalid or inconsistent with the stored procedure because the procedure has been altered or dropped.

Action: Try again; this error should have caused the existing state of all packages to be re-initialized.

OCI-04062: timestamp of *string* has been changed
Cause: Attempt to execute a stored procedure to serve an RPC stub which specifies a timestamp that is different from the current timestamp of the procedure.

Action: Recompile the caller in order to pick up the new timestamp.

OCI-04063: *string* has errors
Cause: Attempt to execute a stored procedure or use a view that has errors. For stored procedures, the problem could be syntax errors or references to other, non-existent procedures. For views, the problem could be a reference in the view's defining query to a non-existent table.

Action: Fix the errors and/or create referenced objects as necessary.

OCI-04064: not executed, invalidated *string*
Cause: Attempt to execute a stored procedure that has been invalidated.

Action: Recompile it.

OCI-04065: not executed, altered or dropped *string*
Cause: Attempt to execute a stored procedure that has been altered or dropped thus making it not callable from the calling procedure.

Action: Recompile its dependents.

OCI-04066: non-executable object, *string*
Cause: Attempt to execute a non-procedure.

Action: Make sure that a correct name is given.

OCI-04067: not executed, *string* does not exist
Cause: Attempt to execute a non-existent stored procedure.

Action: Make sure that a correct name is given.

OCI-04068: existing state of packages*stringstringstring* has been discarded
Cause: One of errors 4060 - 4067 when attempt to execute a stored procedure.

Action: Try again after proper re-initialization of any application's state.

OCI-19200: Invalid column specification
Cause: All input arguments must be valid columns

Action: Specify a valid list of columns

OCI-19201: Datatype not supported
Cause: The particular datatype is not supported in the XMLGEN operator

Action: Specify only supported datatypes as arguments to the XMLGEN operator

OCI-19202: Error occurred in XML processing*string*
Cause: An error occurred when processing the XML function

Action: Check the given error message and fix the appropriate problem

OCI-19203: Error occurred in DBMS_XMLGEN processing*string*
Cause: An error occurred when processing the DBMS_XMLGEN functions

Action: Check the given error message and fix the appropriate problem

OCI-19204: Non-scalar value '*string*' is marked as XML attribute
Cause: Only scalar values (i.e. values which are not of object or collection type) can be marked as XML attribute,i.e. is prefixed by '@'. In this case, a non-scalar value was prefixed with '@'

Action: Remove the '@' sign, or make the value a scalar.

OCI-19205: Attribute '*string*' qualifies a non-scalar value in the select list
Cause: The attribute immediately follows a value of object or collection type in the select list or type definition.

Action: Remove the '@' sign, or make the previous value a scalar.

OCI-19206: Invalid value for query or REF CURSOR parameter
Cause: The queryString argument passed to DBMS_XMLGEN.newContext was not a valid query, or REF CURSOR.

Action: Rewrite the query so that the queryString argument is a valid query or REF CURSOR.

OCI-19207: scalar parameter *string* of XMLELEMENT cannot have an alias.
Cause: The scalar parameter to XMLELEMENT has been qualified with an alias.

Action: Remove the AS clause of the scalar element.

OCI-19208: parameter *string* of function *string* must be aliased
Cause: The indicated parameter of the XML generation function has not been aliased, although it is an expression.

Action: Specify an alias for the expression using the AS clause.

OCI-19209: invalid or unsupported formatting argument
Cause: An invalid or unsupported formatting argument was supplied

Action: Change the formatting argument to legal supported values

OCI-19210: column '*string*', specified to be a key or update column for DBMS_XMLSTORE, does not not exist in table '*string*'
Cause: The column specified using setKeyColumn()/setUpdateColumn() did not exist in the table.

Action: Change the column specified to be a column in the table

OCI-19211: column '*string*', specified as key using DBMS_XMLSTORE.setKeyColumn() , must be of scalar type
Cause: The column specified using setKeyColumn() was a non-scalar type column.

Action: Change the column specified to be a scalar column in the table

OCI-19212: no key columns specified before call to DBMS_XMLSTORE.updateXML()
Cause: No columns were specified as key columns before the call to DBMS_XMLSTORE.updateXML.

Action: Use DBMS_XMLSTORE.setKeyColumn() to specify key columns

OCI-21300: objects option not installed
Cause: The objects option is not installed at this site. Object types and other object features are, therefore, unavailable.

Action: Install the objects option. The objects option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle sales representative if the objects option needs to be purchased.

OCI-21301: not initialized in object mode
Cause: This function requires the oci process to be initialized in object mode.

Action: Specify OCI_OBJECT mode when calling OCIInitialize().

OCI-21500: internal error code, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]
Cause: This is the generic error number for the OCI environment (client-side) internal errors. This indicates that the OCI environment has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

OCI-21501: program could not allocate memory
Cause: The operating system has run out of memory.

Action: Take action to make more memory available to the program.

OCI-21503: program terminated by fatal error
Cause: A program is in an unrecoverable error state.

Action: Report as a bug.

OCI-21520: database server driver not installed
Cause: User attempted to access a database server through an object-mode OCI environment but the necessary driver for supporting such access to the database server is not installed or linked in.

Action: Check if the driver corresponding to the database server has been installed/linked in and entered in the server driver table.

OCI-21521: exceeded maximum number of connections in OCI (object mode only)
Cause: User exceeded the maximum number of connections (255) that can be supported by an OCI environment in object mode.

Action: Close some of existing and unused connections before opening more connections.

OCI-21522: attempted to use an invalid connection in OCI (object mode only)
Cause: User attempted to use an invalid connection or a connection that has been terminated in an OCI environment (object mode), or user attempted to dereference a REF obtained from a connection which has been terminated.

Action: Ensure that the connection exists and is still valid.

OCI-21523: functionality not supported by the server (object mode only)
Cause: User attempted to use a functionality that the server does not support.

Action: Upgrade the server

OCI-21524: object type mismatch
Cause: The object type of the object is different from what is specified.

Action: Check the type of the object and correct it.

OCI-21525: attribute number (or collection element at index) *string* violated its constraints
Cause: Attribute value or collection element value violated its constraint.

Action: Change the value of the attribute or collection element such that it meets its constraints. The constraints are specified as part of the attribute or collection element's schema information.

OCI-21526: initialization failed
Cause: The initialization sequence failed. This can happen, for example, if an environment variable such as NLS_DATE_FORMAT is set to an invalid value.

Action: Check that all NLS environment variables are well-formed.

OCI-21527: internal OMS driver error
Cause: A process has encountered an exceptional condition. This is the generic internal error number for Oracle object management services exceptions.

Action: Report this as a bug to Oracle Support Services.

OCI-21560: argument *string* is null, invalid, or out of range
Cause: The argument is expecting a non-null, valid value but the argument value passed in is null, invalid, or out of range. Examples include when the LOB/FILE positional or size argument has a value outside the range 1 through (4GB - 1), or when an invalid open mode is used to open a file, etc.

Action: Check your program and correct the caller of the routine to not pass a null, invalid or out-of-range argument value.

OCI-21562: column *string* has unsupported data type *string*
Cause: A data type was specified which is currently unsupported.

Action: Choose another data type which is supported.

OCI-21563: Error *string* while calling *string* for column *string* with datatype *string*
Cause: OCI Error encountered while performing data type conversion.

Action: Check the OCI Error code

OCI-21570: current *string* LCR has unreceived chunk data
Cause: The client did not receive all the chunk data for the current LCR.

Action: If OCIXStreamOutLCRCallbackReceive is used in your program then modify your callback functions to return OCI_CONTINUE while OCI_XSTREAM_MORE_ROW_DATA flag is set; otherwise, modify your program to call OCIXStreamOutChunkReceive until all the chunks are received (that is, the flag

returned by OCIXStreamOutChunkReceive API does not have OCI_XSTREAM_MORE_ROW_DATA bit set).

OCI-21571: must provide a LOB WRITE, LOB TRIM or LOB ERASE LCR in *string* call (input LCR=*string*)
Cause: An attempt was made to invoke the specified function without providing a piece-wise LOB LCR (for example, LOB WRITE, LOB TRIM or LOB ERASE LCR).

Action: Correct the 'row_lcrp' argument in the call.

OCI-21572: Invalid LCR type (*string*) in *string* call
Cause: An attempt was made to invoke the specified function with an incorrect logical change record (LCR) type.

Action: Provide an LCR of the correct type.

OCI-21573: Invalid command type (*string*) when sending a chunk.
Cause: An attempt was made to send a chunk when the command type for the current LCR was not INSERT, UPDATE, or LOB WRITE.

Action: Check your program and provide an LCR with a valid command type to OCIXStreamInChunkSend call or to OCICallbackXStreamInChunkCreate callback.

OCI-21574: Invalid data type (*string*) specified for LOB chunk.
Cause: Invalid data type specified for LOB chunk in OCIXStreamInChunkSend call.

Action: Check your program and provide either SQLT_CHR or SQLT_BIN for 'coldty' argument to OCIXStreamInChunkSend call.

OCI-21577: Input *string* LCR has no LOB column.
Cause: An attempt was made to invoke OCILCRLobInfoGet call with an LCR that had no LOB column.

Action: Replace the input LCR to OCILCRLobInfoGet call.

OCI-21578: Only one LOB column allowed per *string* LCR.
Cause: An attempt was made to set multiple LOB columns on a piece-wise LOB LCR.

Action: Check your program and make sure OCIXStreamInChunkSend is called for only one column per piece-wise LOB LCR.

OCI-21579: Input LCR must have at least one old or new column.
Cause: An attempt was made to call OCIXStreamInChunkSend with an LCR that had empty column lists.

Action: Use OCILCRRowColumnInfoSet to add one or more columns to the input LCR before calling OCIXStreamInChunkSend.

OCI-21580: The LOB operation length (value=*string*) for column (*string*) must be an even number of bytes.
Cause: An attempt was made to call OCIXStreamInChunkSend with an odd number of bytes for a column flagged as AL16UTF16 or NCLOB.

Action: Correct either the LOB column length or 'column_flag' argument to OCIXStreamInChunkSend call.

OCI-21583: invalid XStream server name '*string*'
Cause: An attempt was made to attach to an XStream server with a nonexistent server name.

Action: Correct the server name in the attach call.

OCI-21600: path expression too long
Cause: The path expression that is supplied by the user is too long. The path expression is used to specify the position of an attribute in an object. This error occurs when one of the intermediate elements in the path expression refers to an attribute of a built-in type. Thus, the OCI function cannot proceed on to process the rest of the elements in the path expression.

Action: User should pass in the correct path expression to locate the attribute.

OCI-21601: attribute is not an object
Cause: The user attempts to perform an operation (that is valid only for an object) to an attribute of a built-in type. An example of such an illegal operation is to dynamically set a null structure to an attribute of a built-in type.

Action: User should avoid performing such operation to an attribute of built-in type.

OCI-21602: operation does not support the specified typecode
Cause: The user attempts to perform an operation that does not support the specified typecode.

Action: User should use the range of valid typecodes that are supported by this operation.

OCI-21603: property id [*string*] is invalid
Cause: The specified property id is invalid.

Action: User should specify a valid property id. Valid property ids are enumerated by OCIObjectPropId.

OCI-21604: property [*string*] is not a property of transient or value instances
Cause: Trying to get a property which applies only to persistent objects.

Action: User should check the lifetime and only get this property for persistent objects.

OCI-21605: property [*string*] is not a property of value instances
Cause: Trying to get a property which applies only to persistent and transient objects.

Action: User should check the lifetime and only get this property for persistent and transient objects.

OCI-21606: can not free this object
Cause: Trying to free an object that is persistent and dirty and the OCI_OBJECTFREE_FORCE flag is not specified.

Action: Either flush the persistent object or set the flag to OCI_OBJECTFREE_FORCE

OCI-21607: memory cartridge service handle not initialized
Cause: Attempt to use the handle without initializing it.

Action: Initialize the memory cartridge service handle.

OCI-21608: duration is invalid for this function
Cause: Attempt to use a duration not valid for this function.

Action: Use a valid duration - a previously created user duration or OCI_DURATION_STATEMENT or OCI_DURATION_SESSION. For callout duration or external procedure duration, use OCIExtProcAllocCallMemory.

OCI-21609: memory being resized without being allocated first
Cause: Attempt to resize memory without allocating it first.

Action: Allocate the memory first before resizing it.

OCI-21610: size [*string*] is invalid
Cause: Attempt to resize memory with invalid size.

Action: Pass in a valid size (must be a positive integer).

OCI-21611: key length [*string*] is invalid
Cause: Attempt to use an invalid key length.

Action: Key length is invalid and valid range is 0 to 64

OCI-21612: key is already being used
Cause: Attempt to use a key that is already used.

Action: Use a new key that is not yet being used.

OCI-21613: key does not exist
Cause: Attempt to use a non-existent key

Action: Use a key that already exists.

OCI-21700: object does not exist or is marked for delete
Cause: User attempted to perform an inappropriate operation to an object that is non-existent or marked for delete. Operations such as pinning, deleting and updating cannot be applied to an object that is non-existent or marked for delete.

Action: User needs to re-initialize the reference to reference an existent object or the user needs to unmark the object.

OCI-21701: attempt to flush objects to different servers
Cause: User attempted to flush objects to different servers in one function call. These objects are obtained by calling a callback functions provided by the program.

Action: User should avoid performing such operation.

OCI-21702: object is not instantiated or has been de-instantiated in cache
Cause: User attempted to perform an inappropriate operation to a transient object that is not instantiated in the object cache. Operations that cannot be applied to a not-instantiated transient object include deleting or pinning such an object.

Action: User should check their code to see if they are performing such an operation without instantiating the object first, or performing such an operation after the allocation duration of the object has expired.

OCI-21703: cannot flush an object that is not modified
Cause: See the error message.

Action: The object should not be flushed.

OCI-21704: cannot terminate cache or connection without flushing first
Cause: See the error message.

Action: The transaction should be aborted or committed before terminating the cache or connection.

OCI-21705: service context is invalid
Cause: The service context that is supplied by the user is not valid.

Action: User needs to establish the service context.

OCI-21706: duration does not exist or is invalid
Cause: The duration number that is supplied by the user is not valid.

Action: User needs to establish the duration or use a correct predefined duration.

OCI-21707: pin duration is longer than allocation duration
Cause: The pin duration supplied by the user is longer than the allocation duration. This affects operations such as pinning and setting default parameters.

Action: User should use a shorter pin duration or use the null duration.

OCI-21708: inappropriate operation on a transient object
Cause: User attempted to perform an inappropriate operation on a transient object. Operations that cannot be applied to a transient object include flushing and locking.

Action: User should avoid performing such operation on a transient object.

OCI-21709: cannot refresh an object that has been modified
Cause: User attempted to refresh an object that has been marked for delete, update or insert (new).

Action: User should unmark the object before refreshing it.

OCI-21710: argument is expecting a valid memory address of an object
Cause: The object memory address that is supplied by the user is invalid. The user may have passed in a bad memory address to a function that is expecting a valid memory address of an object.

Action: User should pass in a valid memory address of an object to the function.

OCI-21779: duration not active
Cause: User is trying to use a duration that has been terminated.

Action: User should avoid performing such operation.

OCI-22053: overflow error
Cause: This operation's result is above the range of Oracle number.

Action: Decrease the input value(s) so that the result is in the range of Oracle number.

OCI-22054: underflow error
Cause: This operation's result is below the range of Oracle number.

Action: Increase the input value(s) so that the result is in the range of Oracle number.

OCI-22055: unknown sign flag value [*string*]
Cause: Signed flag used is not OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED.

Action: Use either OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED as sign flag.

OCI-22056: value [*string*] is divided by zero
Cause: Given value is divied by zero.

Action: Modify divisor value to be non-zero.

OCI-22057: bad integer length [*string*]
Cause: The length of the integer (ie number of bytes) to be converted to or from an Oracle number is invalid.

Action: Use integer length 1, 2, 4 or 8 bytes only.

OCI-22059: buffer size [*string*] is too small - [*string*] is needed
Cause: The buffer to hold the resulting text string is too small.

Action: Provide a buffer of the required size.

OCI-22060: argument [*string*] is an invalid or uninitialized number
Cause: An invalid or uninitialized number is passed in.

Action: Use a valid number. To initialize number call OCINumberSetZero().

OCI-22061: invalid format text [*string*]
Cause: The numeric format string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

OCI-22062: invalid input string [*string*]
Cause: The text string for converting to numbers is invalid.

Action: Use a valid input string as documented in OCI Programmer's Guide.

OCI-22063: reading negative value [*string*] as unsigned
Cause: Attempt to convert a negative number to an unsigned integer.

Action: Use the sign flag ORLTSB to convert a signed number.

OCI-22064: invalid NLS parameter string [*string*]
Cause: The NLS parameter string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

OCI-22065: number to text translation for the given format causes overflow
Cause: Rounding done due to the given string format causes overflow.

Action: Change the format such that overflow does not occur.

OCI-22130: buffer size [*string*] is less than the required size [*string*]
Cause: The size of the buffer into which the hexadecimal REF string is to be written is too small.

Action: Provide a buffer of the required size.

OCI-22131: hexadecimal string length is zero
Cause: The given hexadecimal string length must be greater than zero.

Action: Specify a length greater than zero.

OCI-22132: hexadecimal string does not correspond to a valid REF
Cause: The given hexadecimal string is invalid.

Action: Provide a valid hexadecimal string which was previously returned by a call to OCIRefToHex().

OCI-22140: given size [*string*] must be in the range of 0 to [*string*]
Cause: The given resize size is invalid.

Action: Ensure that the given size is in the required range.

OCI-22141: given size [*string*] must be even in UTF-16 environment
Cause: The given resize size is odd. In a UTF-16 environment, all characters are 2 bytes in length.

Action: Ensure that the given size is even.

OCI-22150: variable-length array has not been initialized
Cause: An un-initialized variable-length array is being operated upon.

Action: Initialize the variable-length array prior to calling this function.

OCI-22151: cannot resize non-zero variable-length array to zero elements
Cause: Trying to resize a non-zero variable-length array to 0 elements.

Action: Specify a non-zero size.

OCI-22152: destination variable-length array is not initialized
Cause: The variable-length array on the right-hand-side of an assignment or the destination array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

OCI-22153: source variable-length array is not initialized
Cause: The variable-length array on the left-hand-side of an assignment or the source array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

OCI-22160: element at index [*string*] does not exist
Cause: Collection element at the given index does not exist.

Action: Specify the index of an element which exists.

OCI-22161: type code [*string*] is not valid
Cause: Given type code is not valid.

Action: Use one of the typecodes enumerated in OCITypeCode.

OCI-22162: element at index [*string*] has been previously deleted
Cause: Trying to delete a non-existent collection element.

Action: Check for the existence of the element prior to calling this function.

OCI-22163: left hand and right hand side collections are not of same type
Cause: Left hand and right side collections are not of same type.

Action: Ensure that the same collection type is passed for both left hand and right hand side of this function.

OCI-22164: delete element operation is not allowed for variable-length array
Cause: Trying to delete an element of a variable-length array.

Action: Ensure that the collection is not a variable-length array prior to calling this function.

OCI-22165: given index [*string*] must be in the range of [*string*] to [*string*]
Cause: Given index is not in the required range.

Action: Ensure that the given index is in the required range.

OCI-22166: collection is empty
Cause: Given collection is empty.

Action: Test if collection is empty prior to invoking this function.

OCI-22167: given trim size [*string*] must be less than or equal to [*string*]
Cause: Given trim size is greater than the current collection size.

Action: Ensure that the given size is less than or equal to the collection size prior to calling this function.

OCI-22275: invalid LOB locator specified
Cause: There are several causes: (1) the LOB locator was never initialized; (2) the locator is for a BFILE and the routine expects a BLOB/CLOB/NCLOB locator; (3) the locator is for a BLOB/CLOB/NCLOB and the routine expects a BFILE locator; (4) trying to update the LOB in a trigger body -- LOBs in trigger bodies are read only.

Action: For (1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For (2) and (3), pass the correct type of locator into the routine. For (4), remove the trigger body code that updates the LOB value.

OCI-22276: invalid locator for LOB buffering
Cause: There are several causes: (1) the locator was never enabled for buffering (2) it is not an updated locator but is being used for a write/flush operation

Action: For (1) enable the locator for buffering; (2) ensure that only an updated locator is used for a LOB update operation

OCI-22277: cannot use two different locators to modify the same LOB
Cause: LOB buffering is enabled and an attempt was made to modify the LOB using two different LOB locators.

Action: When using LOB buffering, modify the LOB through one LOB locator only.

OCI-22278: must update the LOB only through the LOB buffers
Cause: LOB buffering is enabled for this LOB and there are buffers for this LOB in the buffer pool. Thus, updating the LOB through means other than the LOB buffers is not allowed.

Action: Update the LOB through the LOB buffers using the locator that has LOB buffering enabled. If this operation is required, buffers associated with this LOB should either be flushed as necessary or buffering should be disabled. Once this is done, reissue the command.

OCI-22279: cannot perform operation with LOB buffering enabled
Cause: The operation attempted is not allowed when LOB buffering is enabled.

Action: If the operation is required, LOB buffering should not be used. In this case, flush buffers associated with the input LOB locator as necessary, disable buffering on the input LOB locator and reissue the command.

OCI-22280: no more buffers available for operation
Cause: There are two causes: (1) All buffers in the buffer pool have been used up by previous operations (2) Attempt to flush a LOB without any previous buffered update operations.

Action: For (1), flush the LOB(s) through the locator that is being used to update the LOB. For (2), write to the LOB through a locator enabled for buffering before attempting to flush buffers.

OCI-22281: cannot perform operation with an updated locator
Cause: The input locator has buffering enabled and was used to update the LOB value through the LOB buffering subsystem. The modified buffer has not been flushed since the write that was performed by the the input locator; thus, the input locator is considered an updated locator. Updated locators cannot be the source of a copy operation. Only one locator per LOB may be used to modify the LOB value through the LOB buffering subsystem.

Action: Depending on whether the modifications made through the input locator to the LOB buffering subsystem should be written to the server, either flush the buffer to write the modifications, or, disable buffering on the locator to discard the modifications. Then, reissue the command.

OCI-22282: non-contiguous append to a buffering enabled LOB not allowed
Cause: The buffered write operation has an input offset value more than one byte or character past the end of the LOB.

Action: Specify an input offset value which is exactly one character or byte greater than the length of the LOB that you are attempting to update through a buffered write operation.

OCI-22285: non-existent directory or file for *string* operation
Cause: Attempted to access a directory that does not exist, or attempted to access a file in a directory that does not exist.

Action: Ensure that a system object corresponding to the specified directory exists in the database dictionary, or make sure the name is correct.

OCI-22286: insufficient privileges on directory or file to perform *string* operation
Cause: The user does not have the necessary access privileges on the directory alias and/or the file for the operation.

Action: Ask the database/system administrator to grant the required privileges on the directory alias and/or the file.

OCI-22287: invalid or modified directory occurred during *string* operation
Cause: The directory alias used for the current operation is not valid if being accessed for the first time, or has been modified by the DBA since the last access.

Action: If you are accessing this directory for the first time, provide a valid directory name. If you have been already successful in opening a file under this directory before this error occured, then close the file and retry the operation with a valid directory alias as modified by your DBA. Oracle recommends that directories should be modified only during quiescent periods.

OCI-22288: file operation *string* failed\n*string*
Cause: The operation attempted on the file failed.

Action: See the next error message for more detailed information. Also, verify that the file exists and that the necessary privileges are set for the specified operation. If the error still persists, report the error to the DBA.

OCI-22289: cannot perform *string* operation on an unopened file
Cause: The file is not open for the required operation to be performed.

Action: Check that the current operation is preceded by a successful file open operation.

OCI-22290: operation would exceed the maximum number of opened files
Cause: The number of open files has reached the maximum limit.

Action: Close some of the opened files and retry the operation.

OCI-22303: type "*string*"."*string*" not found
Cause: The user is trying to obtain information for a type that cannot be found.

Action: Check that the schema is correct and that the type has been created correctly.

OCI-22305: attribute/method/parameter "*string*" not found
Cause: Type element with the given name is not found in the type.

Action: Check to make sure that the type element exists.

OCI-22306: type "*string*"."*string*" already exists
Cause: The user is trying to create a type that already exists.

Action: Check to make sure that the type has not been created prior to this.

OCI-22307: type to alter is not a user-defined type
Cause: The user is trying to alter a built-in type.

Action: Check to make sure that only user-defined types are being altered.

OCI-22309: attribute with name "*string*" already exists
Cause: The user is attempting to create an object type where more than one attributes have the same name.

Action: Check to make sure that all attribute names are unique.

OCI-22311: type for attribute "*string*" does not exist
Cause: The type of the attribute does not exist.

Action: No types were created/modified for this DDL transaction. Redo the DDL transaction and add the creation of the attribute's type in the DDL transaction.

OCI-22313: cannot use two versions of the same type "*string*"
Cause: The version of this type conflicts with the version of this type used by another library that was linked in with the application. An application may only use one version of a type.

Action: Check that the libraries being linked with this application and use the same versions of the type.

OCI-22314: method information mismatch in ALTER TYPE
Cause: The number of methods or the method signature do not match that of the original type declaration. This is not supported.

Action: Make sure the method signature stay identical for the previously declared method. Do not drop existing methods.

OCI-22315: type "*string*" does not contain a map or order function
Cause: The input type does not contain a map or order function so one cannot be returned.

Action: Add a map or order function to the type or catch this error.

OCI-22316: input type is not a collection type
Cause: The user is trying to obtain information for collection types on a non-named collection type.

Action: Use a named collection type for the function.

OCI-22317: typecode *number* is not legal as a number type
Cause: The user is trying to use a number typecode that is not valid.

Action: Use only OCI_TYPECODE_SMALLINT, OCI_TYPECODE_INTEGER, OCI_TYPECODE_REAL, OCI_TYPECODE_DOUBLE, OCI_TYPECODE_FLOAT, OCI_TYPECODE_NUMBER, or OCI_TYPECODE_DECIMAL.

OCI-22318: input type is not an array type
Cause: The user is trying to obtain the number of elements for a non-array type.

Action: Pass in only a named collection type which is an array.

OCI-22319: type attribute information altered in ALTER TYPE
Cause: The type attribute information does not match that of the original type declaration when altering type. Attributes cannot be altered during ALTER TYPE. Only new methods can be added.

Action: Check that all type alterations are legal.

OCI-22321: method does not return any result
Cause: OCITypeResult() was called on a method that does not return any results.

Action: Check that you are passing in the correct method descriptor, or that your method creation was done correctly.

OCI-22337: the type of accessed object has been evolved
Cause: The type of the accessed object has been altered and the client's object is based on an earlier type definition.

Action: The user needs to exit application and modify application to accommodate the type change. From SQL/PLUS, reconnect and resubmit statement.

OCI-22351: This API is not supported by the ORACLE server.
Cause: An attempt was made to call an API which is not supported by the Oracle server.

Action: Do not call the unsupported API when connected to this Oracle server.

OCI-22352: Type is unsupported or contains an unsupported attribute or element.
Cause: A PL/SQL package type was not supported on the client or contained an attribute or element that was not supported on the client. Unsupported types include index by VARCHAR2 collections, remote types and MLSLABELs.

Action: Do not attempt to use unsupported PL/SQL package types or types that contain unsupported attributes or elements on the client.

OCI-22369: invalid parameter encountered in method *string*
Cause: An invalid parameter is being passed to this method of SYS.RowType or SYS.RowSet.

Action: Check the parameters being passed to this method and make sure that the parameters are allowed.

OCI-22370: incorrect usage of method *string*
Cause: This method of SYS.RowType or SYS.RowSet is being used inappropriately.

Action: Check the documentation for correct usage.

OCI-22600: encountered 8.0.2 (Beta) VARRAY data that cannot be processed
Cause: Production Oracle8 (8.0.3 and beyond) encounters some VARRAY data which was created and stored by Oracle8 8.0.2 (Beta 2). Production Oracle8 cannot understand or process such VARRAY data.

Action: Delete the VARRAY data from the table by dropping the table, deleting the rows, or nulling out the VARRAY columns, and then re-insert the VARRAY data. There is no provided script or tool to help automate this conversion.

OCI-22601: pickler TDS context [*string*] is not initialized
Cause: Attempt to use the pickler TDS context without initializing it.

Action: Use OCIPicklerTdsCtxInit to initialize the context.

OCI-22602: pickler TDS handle [*string*] is not well-formed
Cause: Attempt to use the pickler TDS handle without initializing/ constructing it.

Action: Use OCIPicklerTdsInit to initialize the handle before it is constructed. Use OCIPicklerTdsGenerate to generate the TDS before its attributes can be accessed.

OCI-22603: cannot add an attribute to the already generated TDS handle
Cause: Attempt to add an attribute to the already constructed TDS.

Action: Use a TDS handle that is initialized but not yet constructed.

OCI-22604: TDS handle already generated
Cause: Attempt to geneate TDS that is already genearated.

Action: Use a TDS handle that is initialized but not yet generated.

OCI-22605: FDO handle [*string*] is not initialized
Cause: Attempt to use an uninitialized FDO handle.

Action: Use OCIPicklerFdoInit to initialize FDO handle".

OCI-22606: pickler image handle [*string*] is not well-formed
Cause: Attempt to use the image handle without initializing/ constructing it.

Action: Use OCIPicklerImageInit to initialize the handle before it is constructed. Use OCIPicklerImageGenerate to generate the image before its attributes can be accessed.

OCI-22607: image handle already generated
Cause: Attempt to geneate image that is already genearated.

Action: Use a image handle that is initialized but not yet generated.

OCI-22608: cannot add an attribute to the already generated image handle
Cause: Attempt to add an attribute to the already constructed image.

Action: Use an image handle that is initialized but not yet constructed.

OCI-22609: error *string* during initialization of FDO
Cause: Error during FDO initialization.

Action: Take an action based on the specified error.

OCI-22626: Type Mismatch while constructing or accessing OCIAnyData
Cause: Type supplied is not matching the type of the AnyData. If piece wise construction or access is being attempted, the type supplied is not matching the type of the current attribute.

Action: Make sure the type supplied matches the type of object to to be constucted or accessed.

OCI-22700: object access trace event number
Cause: N/A

Action: If the trace event number is set to a level greater than 0 then all the dangling REFs are dumped. *Note: THIS IS NOT A USER ERROR NUMBER/MESSAGE. THIS DOES NOT NEED TO BE TRANSLATED OR DOCUMENTED.

OCI-22975: cannot create a PRIMARY KEY-based REF to this object view
Cause: The object view specified in the MAKE_REF function does not have a PRIMARY KEY-based object identifier. A PRIMARY KEY-based REF cannot be created for such a view.

Action: Specify an object view that has a PRIMARY KEY-based object identifier in the MAKE_REF function.

OCI-22976: incorrect number of arguments to MAKE_REF
Cause: Number of arguments for MAKE_REF is different from the number of PRIMARY KEY attributes of the object view.

Action: Specify all the necessary arguments for MAKE_REF.

OCI-29783: GPnP attribute SET failed with error [*string*]
Cause: An attempt to set the Grid Plug and Play (GPnP) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

OCI-29785: GPnP attribute GET failed with error [*string*]
Cause: An attempt to get the Grid Plug and Play (GPnP) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

OCI-29786: SIHA attribute GET failed with error [*string*]
Cause: An attempt to get the Single-Instance High Availability (SIHA) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

OCI-29787: SIHA attribute SET failed with error [*string*]
Cause: An attempt to set the Single-Instance High Availability (SIHA) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

OCI-30100: internal error [*number*]
Cause: An internal error has occurred.

Action: Contact Oracle Worldwide Support and report the error.

OCI-30101: unknown parameter name '*string*'
Cause: You have misspelled the parameter name.

Action: Spell the parameter name correctly.

OCI-30102: '*string*' is not in the legal range for '*string*'
Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

OCI-30103: '*string*' contains an illegal integer radix for '*string*'
Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

OCI-30104: '*string*' is not a legal integer for '*string*'
Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

OCI-30105: '*string*' is not a legal boolean for '*string*'
Cause: The value is not a valid boolean.

Action: Refer to the manual for allowable boolean values.

OCI-30106: reserved for future use
Cause: None.

Action: None

OCI-30107: parameter name abbreviation '*string*' is not unique
Cause: The abbreviation given was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

OCI-30108: invalid positional parameter value '*string*'
Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

OCI-30109: could not open parameter file '*string*'
Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

OCI-30110: syntax error at '*string*'
Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

OCI-30111: no closing quote for value '*string*'
Cause: A quoted string was begun but not finished.

Action: Put a closing quote in the proper location.

OCI-30112: multiple values not allowed for parameter '*string*'
Cause: You attempted to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

OCI-30113: error when processing file '*string*'
Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

OCI-30114: error when processing from command line
Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

OCI-30115: error when processing an environment variable
Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

OCI-30116: syntax error at '*string*' following '*string*'
Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

OCI-30117: syntax error at '*string*' at the start of input
Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

OCI-30118: syntax error at '*string*' at the end of input
Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

OCI-30119: unable to obtain a valid value for '*string*'
Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

OCI-30120: '*string*' is not a legal oracle number for '*string*'
Cause: The value is not a valid oracle number.

Action: Refer to the manual for allowable oracle number values.

OCI-30121: '*string*' is not an allowable value for '*string*'
Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

OCI-30122: value '*string*' for '*string*' must be between '*number*' and '*number*'
Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

OCI-30129: invalid function argument received
Cause: A function received an invalid argument

Action: Check function calls, make sure correct arguments are being passed.

OCI-30130: invalid parameter key type received
Cause: A function received an invalid parameter key type

Action: Check parameter key types in function calls

OCI-30131: number of keys being set exceeds allocation
Cause: Number of parameter keys being set exceeds allocation

Action: Reduce the number of keys being set or increase allocation

OCI-30132: invalid key index supplied
Cause: The key index specified was not within bounds

Action: Change key index to ensure it lies within bounds

OCI-30133: reserved for future use
Cause: None.

Action: None

OCI-30134: reserved for future use
Cause: None.

Action: None

OCI-30135: OCI Thread operation fails
Cause: An OCI Thread function call has failed.

Action: Check the function call to make sure that the correct parameters are being passed and take the apropriate action.

OCI-30150: Invalid argument passed to OCIFile function
Cause: An invalid argument is passed to the OCIFile function. The most common cause is that a NULL pointer is passed where a non-NULL pointer is expected.

Action: Make sure that the values passed as arguments are valid. Esp check for NULL pointers.

OCI-30151: File already exists
Cause: Tried to open a file with OCI_FILE_EXCL flag and the file already exists.

Action: OCIFile is supposed throw this exception in this case.

OCI-30152: File does not exist
Cause: The OCIFile function requires the file to exist, but it does not.

Action: Make sure that the file exists.

OCI-30153: An invalid File Object is passed to the OCIFile function
Cause: An invalid File Object is passed to the OCIFile function.

Action: Make sure that the file object is a valid one. Create a new file object by calling OCIFileOpen if needed.

OCI-30154: The memory address given as buffer for OCIFileRead/Write is invalid
Cause: An invalid memory address is given as the buffer pointer for OCIFileRead/Write.

Action: Make sure that the required memory is allocated and pass a valid memory address as buffer pointer.

OCI-30155: An I/O Error occured during an OCIFile function call
Cause: An I/O error occurred at the system level.

Action: This is a system error and the action will depnd on the error.

OCI-30156: Out of disk space
Cause: The disks associated with the underlying file system are full.

Action: Create more disk space.

OCI-30157: An invalid argument was given to operating system call
Cause: The OS call was called with an invalid argument.

Action: Check the values passed. If unsuccessful to solve the problem contact ORACLE support.

OCI-30158: The OCIFileWrite causes the file to exceed the maximum allowed size
Cause: There is no space to write to the file. Its size is at the maximum limit.

Action: Up to the user.

OCI-30159: OCIFileOpen: Cannot create the file or cannot open in the requested mode
Cause: The create flag was specified in OCIFileOpen such that the file was to be created. But unable to do so. Or the file already exists and the permissions on it doesn't allow the file to be opened in in the requested open mode

Action: Check whether the user has permissions to create the specified file or if the file exists whether the permissions on it allow the requested open mode.

OCI-30160: Unable to access the file
Cause: The function was unable to access the existing the file.

Action: Check if the user has the required permissions on the file.

OCI-30161: A system error occurred during the OCIFile function call
Cause: A system error occured while executing the OCIFile function.

Action: Depend on the error.

OCI-30162: The OCIFile context is not initialzed
Cause: The function OCIFileInit need to be called before calling any other OCIFile function to initialize the OCIFile context.

Action: Call the function OCIFileInit need to be called before calling any other OCIFile function.

OCI-30163: The thread safety initialization failed
Cause: The call to SlgInit failed in OCIFileInit.

Action: Contact support

OCI-30175: invalid type given for an argument
Cause: There is an argument with an invalid type in the argument list.

Action: Use the correct type wrapper for the argument.

OCI-30176: invalid format code used in the format string
Cause: There is an invalid format code in the format string.

Action: Replace the invalid format code with a valid one.

OCI-30177: invalid flag used in a format specification
Cause: There is an invalid flag in a format specification.

Action: Replace the invalid flag with a valid one.

OCI-30178: duplicate flag used in a format specification
Cause: There is a duplicate flag in a format specification.

Action: Remove the duplicate flag.

OCI-30179: invalid argument index used in a format code
Cause: Zero or negative argument index or index not following ("

Action: Replace the invalid argument index with a valid one.

OCI-30180: argument index is too large
Cause: An argument index exceeds actual number of arguments supplied.

Action: Fix format string or pass additional arguments.

OCI-30181: integer in argument index is not immediately followed by)
Cause: Missing closing parenthesis in argument index.

Action: Fix the format specification.

OCI-30182: invalid precision specifier
Cause: Period in format specification not followed by valid format.

Action: Replace the invalid precision specifier with a valid one.

OCI-30183: invalid field width specifier
Cause: Invalid field width supplied.

Action: Replace the invalid field width with a valid one.

OCI-30184: argument type not compatible with a format code
Cause: Bad argument type given for a format code.

Action: Make format and arguments be compatible.

OCI-30185: output too large to fit in the buffer
Cause: The buffer is not large enough to hold the entire output string.

Action: Fix the buffer size and length passed in.

OCI-30186: reserved for future use
Cause: None.

Action: None

OCI-30187: reserved for future use
Cause: None.

Action: None

OCI-30188: reserved for future use
Cause: None.

Action: None

OCI-30189: reserved for future use
Cause: None.

Action: None

OCI-30190: reserved for future use
Cause: None.

Action: None

OCI-30191: missing argument list
Cause: No argument list supplied.

Action: Modify the argument list to have at least OCIFormatEnd in it.

OCI-30192: reserved for future use
Cause: None.

Action: None

OCI-30193: reserved for future use
Cause: None.

Action: None

OCI-30194: reserved for future use
Cause: None.

Action: None

OCI-30195: reserved for future use
Cause: None.

Action: None

OCI-30196: reserved for future use
Cause: None.

Action: None

OCI-30197: reserved for future use
Cause: None.

Action: None

OCI-30198: reserved for future use
Cause: None.

Action: None

OCI-30199: reserved for future use
Cause: None.

Action: None

OCI-30930: XML node '*string*' (type=*string*) does not support this operation
Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

OCI-30931: Element '*string*' cannot contain mixed text
Cause: XML elements must be declared mixed to contain multiple text nodes

Action: Declare this element type as mixed in its schema

OCI-30932: Reference node '*string*' not contained in specified parent node '*string*'
Cause: When using a reference node, it must have the specified parent node

Action: Use a node in the specified parent as the reference

OCI-30933: Element '*string*' may not appear at this point within parent '*string*'
Cause: The ordering specified by the content model of the parent does not allow for this element to occur at this position.

Action: Reorder the child elements to conform with the content model of the parent element

OCI-30934: '*string*' (*string* node) cannot be inserted in parent '*string*' (*string* node)
Cause: The schema does not allow a child node of this type to be inserted into a parent node of this type. For example, only element nodes may only be inserted into a document

Action: Insert only child nodes that make sense for this node type

OCI-30935: XML maxoccurs value (*string*) exceeded
Cause: An attempt was made to insert more than maxoccurs values into a schema-based XML document.

Action: Do not insert more than maxoccurs values into the document.

OCI-30936: Maximum number (*string*) of '*string*' XML node elements exceeded
Cause: An attempt was made to insert more than the allowed number of elements (specified by the maxoccurs facet) into an XML document.

Action: Do not attempt to add more than the maximum number of elements to XML documents.

OCI-30937: No schema definition for '*string*' (namespace '*string*') in parent '*string*'
Cause: The schema definition for the parent node being processed does not allow for the specified child node in its content model. Note that any typecasting via xsi:type must occur before the schema definitions for the new type can be used.

Action: Only insert elements and attributes declared in the schema. Check to make sure that xsi:type (if used) is specified first.

OCI-30938: No prefix defined for namespace '*string*' (particle *string*)
Cause: An XML namespace mapping (xmlns:*prefix=namespace URL*) must be defined for each particle (element or attribute) stored in an schema-constrained XMLType document.

Action: Add an xmlns attribute definition (attribute name="xmlns:prefix" and value="namespace URL") to the current XMLType document. The safest place to add

this attribute is in the root node of the document to ensure that the mapping will be in scope.

OCI-30939: Order violation: Element '*string*' may not follow element '*string*'
Cause: The XML schema specifies a content model that is sequential, where the order of nodes in the instance must follow the order specified by the schema, and this instance relies on the schema validity to avoid maintaining instance order information

Action: Insert elements only in the order specified in the schema

OCI-30940: Cannot resolve prefix '*string*' for QName node '*string*'
Cause: An attempt was made to store a QName value without having a valid namespace in scope for that prefix.

Action: Declare the namespace for the prefix used

OCI-30941: Cannot specify empty URI for non-default namespace '*string*'
Cause: An attempt was made to insert a namespace declaration for a non-default namespace using an empty URI string.

Action: Specify a non-empty URI for namespace declarations other than the default namespace.

OCI-30942: XML Schema Evolution error for schema '*string*' table *string* column '*string*'
Cause: The given XMLType table/column which conforms to the given schema had errors during evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

OCI-30943: XML Schema '*string*' is dependent on XML schema '*string*'
Cause: Not all dependent schemas were specified and/or the schemas were not specified in dependency order, i.e., if schema S1 is dependent on schema S, S must appear before S1.

Action: Include the previously unspecified schema in the list of schemas and/or correct the order in which the schemas are specified. Then retry the operation.

OCI-30944: Error during rollback for XML schema '*string*' table *string* column '*string*'
Cause: The given XMLType table/column which conforms to the given schema had errors during a rollback of XML schema evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

OCI-30945: Could not create mapping table '*string*'
Cause: A mapping table could not be created during XML schema evolution. For more information, see the more specific error below this one

Action: Ensure that a table with the given name does not exist and retry the operation

OCI-30946: XML Schema Evolution warning: temporary tables not cleaned up
Cause: An error occurred after the schema was evolved while cleaning up temporary tables. The schema evolution was successful

Action: If the user needs to remove the temporary tables, use the mapping table to get the temporary table names and drop them.

OCI-30951: Element or attribute at Xpath *string* exceeds maximum length
Cause: An attempt was made to insert a node of length exceeding the maximum length (specified by the maxLength facet) into an XML document.

Action: Do not attempt to add a node exceeding the maximum length to XML documents.

OCI-30990: insufficient privileges to change owner of resource *string*
Cause: An attempt was made to change the *Owner* field of an XML DB resource without sufficient privileges to do so.

Action: Switch to SYS before performing the ownership change, or have the intended recipient of the resource perform the transfer.

OCI-30991: cannot use DOM to add special attribute to schema-based parent
Cause: An attempt was made to add or remove an xsi:schemaLocation, xsi:noNamespaceSchemaLocation, xsi:type, or xsi:nil attribute to or from a schema-based XML node using DOM.

Action: Use the updateXML operator instead of DOM.

OCI-31000: Resource '*string*' is not an XDB schema document
Cause: The given schema URL does not refer to a registered XDB schema

Action: Make sure the specified schema has been registered in XDB

OCI-31001: Invalid resource handle or path name "*string*"
Cause: An invalid resource handle or path name was passed to the XDB hierarchical resolver.

Action: Pass a valid resouce handle or path name to the hierarchical resolver.

OCI-31002: Path name *string* is not a container
Cause: XDB expected the given path name to represent a container.

Action: Pass a path name or resource handle that represents a container.

OCI-31003: Parent *string* already contains child entry *string*
Cause: An attempt was made to insert a duplicate child into the XDB hierarchical resolver.

Action: Insert a unique name into the container.

OCI-31004: Length *string* of the BLOB in XDB$H_INDEX is below the minimum *string*
Cause: In the XDB$H_INDEX table, the CHILDREN column, a BLOB, must have a certain minimum length without being chained. The calculated length of the LOB was less than the stated minimum.

Action: Set the value of the init.ora parameter db_block_size to at least 2K. For XDB to run at its fastest, set db_block_size to 8K.

OCI-31005: Path name length *string* exceeds maximum length *string*
Cause: The length of a path name passed to the XDB hierarchical resolver exceeded the maximum length.

Action: Choose a shorter path name.

OCI-31006: Path name segment length *string* exceeds maximum length *string*
Cause: The length of a path name segment passed to the XDB hierarchical resolver exceeded the maximum length of a path name segment.

Action: Choose a shorter path name segment.

OCI-31007: Attempted to delete non-empty container *string*/*string*
Cause: An attempt was made to delete a non-empty container in the XDB hierarchical resolver.

Action: Either perform a recursive deletion, or first delete the contents of the container.

OCI-31009: Access denied for property *string*
Cause: An attempt was made to access a property you don't have access to

Action: Check the ACL to see what privileges you have for this property

OCI-31010: XML element index *string* exceeds maximum insertion index *string*
Cause: An attempt was made to insert an XML element at an invalid index location in the node.

Action: Choose a new index that falls within the allowed range.

OCI-31011: XML parsing failed
Cause: XML parser returned an error while trying to parse the document.

Action: Check if the document to be parsed is valid.

OCI-31012: Given XPATH expression not supported
Cause: XPATH expression passed to the function is currently unsupported.

Action: Check the xpath expression and change it to use a supported expression.

OCI-31013: Invalid XPATH expression
Cause: XPATH expression passed to the function is invalid.

Action: Check the xpath expression for possible syntax errors.

OCI-31014: Attempted to delete the root container
Cause: An attempt was made to delete the root container in the hierarchical index.

Action: Do not delete the root container.

OCI-31015: Attempted to insert entry without name
Cause: An attempt was made to insert an entry into the hierarchical resolver without a child name.

Action: Supply a child name and try inserting again.

OCI-31016: Attempted to delete entry without name
Cause: An attempt was made to delete an entry from the hierarchical resolver without a child name.

Action: Supply a child name and try deleting again.

OCI-31017: Error generating unique OID for XML document
Cause: An error occurred while generating a globally unique OID for storing an XML document.

Action: n/a

OCI-31018: Error deleting XML document
Cause: The XMLType object pointed to by the given REF could not be deleted because either the REF was invalid or it pointed to a non-existent table.

Action: Either use FORCE deletion or supply a valid REF.

OCI-31019: Recursive deletion snapshot too old for *string*/*string*
Cause: Changes were made to the structure of a directory while it was being recursively deleted.

Action: Try deleting the directory again.

OCI-31020: The operation is not allowed, Reason: *string*
Cause: The operation attempted is not allowed

Action: See reason and change to a valid operation.

OCI-31021: Element definition not found
Cause: The element definition was not found.

Action: Supply the definition for the element or use a defined element.

OCI-31022: Element not found
Cause: The element was not found.

Action: Make sure the specified element exists.

OCI-31023: Index size error
Cause: The index is greater than the allowed value.

Action: Make sure the index is less than allowed value.

OCI-31025: Invalid document element
Cause: An attempt was made to replace the data at an invalid index number in the XML document

Action: Supply a correct occurrence number and try again.

OCI-31027: Path name or handle *string* does not point to a resource
Cause: An attempt was made to retrieve a resource based on a path name or resource handle that points to an entity other than a resource.

Action: Do not attempt to retrieve a resource based on that path name or resource handle.

OCI-31028: Resource metadata length *string* exceeded maximum length *string*
Cause: An attempt was made to insert resource metadata that exceeded the maximum length of that type of metadata.

Action: Keep resource metadata within its allowed length.

OCI-31029: Cannot bind to unsaved resource
Cause: An attempt was made to bind to a resource that had not been saved to disk.

Action: Bind only to saved resources.

OCI-31030: Unable to retrieve XML document
Cause: The resource had an invalid (dangling) REF to an XML document.

Action: Rebind the resource using a valid XMLType REF.

OCI-31033: Requested number of XML children *string* exceeds maximum *string*
Cause: An attempt was made to add more than the maximum number of allowable children in an XML element.

Action: Redefine the schema to allow breaking up of the children among siblings.

OCI-31035: Could not bind locked resource to path *string*/*string*
Cause: An attempt was made to bind an existing resource to a new location in the hierarchy, but a lock could not be obtained on the resource.

Action: Commit or roll back the transaction that has the lock on the resource.

OCI-31037: Invalid XML attribute name *string*
Cause: The attribute name in the XML document did not match anything in the associated schema.

Action: Supply only schema-defined or XML standard attributes.

OCI-31038: Invalid *string* value: "*string*"
Cause: The text in the XML document did not represent a valid value given the datatype and other constraints in the schema.

Action: Ensure that the specified value in XML documents is valid with respect to the datatype and other constraints in the schema.

OCI-31039: XML namespace length *string* exceeds maximum *string*
Cause: The length of the disk-formatted XML namespace exceeded the maximum.

Action: Keep XML namespace declarations below the maximum length.

OCI-31040: Property *string*: XML type (*string*) not compatible with internal memory type (*string*)
Cause: The XML datatype given is inconsistent with the database datatype, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

OCI-31041: Property *string*: Memory type (*string*) not compatible with database type (*string*)
Cause: The memory type associated with this property is mapped to an incompatible database type, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

OCI-31042: Too many properties in type '*string*'
Cause: The type can only have the same number of properties (elements and attributes) as a table can have columns.

Action: Modify the XML schema to move properties into subelements that are not inlined.

OCI-31043: Element '*string*' not globally defined in schema '*string*'
Cause: The specified element name has not been defined at the top level of the XML schema (i.e. globally). Elements must be defined globally to be the root of an XMLType object.

Action: Check the XML schema definition to make sure the specified element name has been defined at the top level.

OCI-31044: Top-level prefix length *string* exceeds maximum *string*
Cause: An attempt was made to save to disk a top-level XML namespace prefix whose length exceeded the maximum.

Action: Do not define XML namespace prefixes that exceed the maximum length.

OCI-31045: Cannot store more than *string* extras outside the root XML node
Cause: An attempt was made to store more than the maximum number of XML extras (e.g. comments and processing instructions) either before or after the document's root node.

Action: Keep the number of extras outside the root node below the maximum.

OCI-31046: Incorrect argument(s) specified in the operator
Cause: One or more of the arguments specified in the operator in the query are incorrect

Action: Correct the arguments specified in the operator

OCI-31047: Could not retrieve resource data at path *string*
Cause: An error occurred while retrieving the contents and/or metadata of a resource.

Action: Contact Oracle customer support.

OCI-31048: Unsaved resources cannot be updated
Cause: An attempt was made to update a resource that was never saved to disk.

Action: Perform a resource insertion instead.

OCI-31050: Access denied
Cause: The requested access privileges have not been granted to the current user. User must be granted privileges prior to resource access.

Action: Check the set of requested access privileges to make sure that they are included in the set of access privilges granted to the user.

OCI-31051: Requested access privileges not supported
Cause: The requested access privileges are not supported for the specified resource.

Action: Ensure that the set of requested access privileges are valid access privileges for the specified resource.

OCI-31052: Cannot delete ACL with other references
Cause: The requested deletion of an ACL resource cannot proceed. The ACL is in use by other resources.

Action: Remove the resources that are making reference to the ACL in question and try again.

OCI-31053: The value of the depth argument in the operator cannot be negative
Cause: The value of the depth argument passed to the primary operator is not a positive integer

Action: Pass a positive value of the depth argument

OCI-31054: The *string* operator cannot have an ancillary operator
Cause: An ancillary operator was used with an operator which does not does not support ancillary operators

Action: Remove the ancillary operator in the query

OCI-31055: A null XMLType element cannot be inserted into RESOURCE_VIEW
Cause: The element which is being inserted into the RESOURCE_VIEW is NULL

Action: Specify a non-null XMLType element to insert into RESOURCE_VIEW

OCI-31056: The document being inserted does not conform to *string*
Cause: The XMLType element being inserted into the RESOURCE_VIEW does not conform to the specified Schema

Action: Insert an element which conforms to the specified Schema

OCI-31057: Display Name of the element being inserted is null
Cause: The Display Name of the element which is being inserted into the RESOURCE_VIEW is null

Action: Specify the Display Name and insert the element into RESOURCE_VIEW

OCI-31058: cannot modify read-only XOBs
Cause: Read-Only XOBs cannot be modified.

Action: Use only read operations on such a XOB.

OCI-31059: Cannot insert root XML document node if it already exists
Cause: An attempt was made to insert a root node into an XML document that already had a root node.

Action: Call the appropriate replace function to replace the node instead of inserting it anew.

OCI-31060: Resource at path *string* could not be deleted
Cause: An error occurred while deleting the named resource. The specific error can be found one lower on the error stack.

Action: Look at the next error on the stack and take approprate action.

OCI-31061: XML event error
Cause: The specified error occurred in XDB.

Action: Correct the error or contact Oracle Support Services.

OCI-31062: Cannot delete an unsaved resource
Cause: An attempt was made to delete a resource that had not been saved to disk.

Action: Delete only saved resources.

OCI-31065: Cannot modify read-only property [*string*]
Cause: An attempt was made to modify an immutable XML node.

Action: Use only read operations on such properties.

OCI-31066: Insertion of *string* into *string* creates a cycle
Cause: An attempt was made to insert a link into the XDB hierarchy that would create a cycle in the tree.

Action: Ensure that links to existing resources do not cause cycles.

OCI-31067: XML nodes must be updated with nodes of the same type
Cause: An attempt was made to use updateXML to update an XML node with a node of another type.

Action: Ensure that the node specified by the XPath matches the type of new data provided.

OCI-31068: updateXML expected data format [*string*] instead of [*string*]
Cause: An attempt was made to use updateXML to update data with a node of the incorrect type. Text and attribute nodes must be updated with string data, whereas element nodes must be updated with XMLType data.

Action: Use CREATEXML or getStringVal to coerce the new data to the proper format.

OCI-31069: Cannot apply typed changes to non-schema-based XMLType nodes
Cause: An attempt was made to insert, delete, or update a non-schema-based XMLType node using an XML schema definition.

Action: Make changes to non-typed nodes only by referencing their tag names.

OCI-31070: Invalid database user ID *string*
Cause: An attempt was made set an invalid user ID into an XDB resource metadata property.

Action: Verify the validity of the user ID and try again.

OCI-31071: Invalid database username or GUID *string*
Cause: An attempt was made to set an invalid username or GUID into an XDB resource metadata property.

Action: Verify the validity of the username or GUID and try again.

OCI-31072: Too many child nodes in XMLType fragment for updateXML
Cause: An attempt was made to pass an XMLType fragment with multiple children as new data for the updateXML operator.

Action: Extract the desired child from the XMLType before passing it to updateXML as the desired new XML node.

OCI-31073: Resource not retrieved using path name
Cause: An attempt was made to access the path name of a resource that was either never saved to disk or was loaded using a method other than with its path name.

Action: Perform path name operations only on resources obtained using a path name.

OCI-31075: invalid *string* declaration in XML Schema
Cause: The XML schema contains an invalid declaration identified by the message.

Action: Fix the identified error and try again.

OCI-31076: required attribute "*string*" not specified
Cause: The XML schema does not specify a required attribute.

Action: Specify a value for the required attribute.

OCI-31077: invalid attribute "*string*" specified
Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

OCI-31078: error in SQL mapping information
Cause: There is an error in the SQL type and table specification within the XML Schema.

Action: Ensure that all specified SQL types and tables are valid and compatible with the corresponding XML types.

OCI-31079: unable to resolve reference to *string* "*string*"
Cause: The identified type or attribute or element could not be resolved.

Action: Make sure that the name corresponds to a valid XML (simple/complex) type or attribute or element and try again.

OCI-31080: type not specified for attribute or element "*string*"
Cause: The identified attribute or element does not have a type.

Action: Make sure that every attribute and element has a valid type specification.

OCI-31081: name not specified for global declaration
Cause: The XML schema does not specify the name for the global declaration of attribute or element or simpleType or complexType.

Action: Specify names for all global declarations.

OCI-31082: invalid attribute "*string*" specified in declaration of "*string*"
Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

OCI-31083: error while creating SQL type "*string*"."*string*"
Cause: An error occurred while trying to create the SQL type based on the specification of a complex type.

Action: Fix the identified error and try again.

OCI-31084: error while creating table "*string*"."*string*" for element "*string*"
Cause: An error occurred while trying to create the table based on the declaration for the identified element.

Action: Fix the identified error and try again.

OCI-31085: schema "*string*" already registered
Cause: An attempt was made to register a schema with the same URL as a previously registered schema.

Action: Register the schema with a different URL.

OCI-31086: insufficient privileges to register global schema "*string*"
Cause: An attempt was made to register a global schema without sufficient privileges.

Action: Make sure that the user has sufficient privileges to register a global schema.

OCI-31087: insufficient privileges to delete schema "*string*"
Cause: An attempt was made to delete a schema resource without sufficient privileges.

Action: Make sure that the user has sufficient privileges to delete the schema.

OCI-31088: object "*string*"."*string*" depends on the schema
Cause: An attempt was made to delete a schema which has dependent objects.

Action: Either drop the dependent objects prior to deleting the schema or use the CASCADE or FORCE options.

OCI-31089: schema "*string*" does not target namespace "*string*"
Cause: The schema document contains references (via include and import definitions) to other schemas that do not belong to valid namespaces.

Action: Make sure that all schemas referenced via include definitions target the same namespace as the parent schema. Further make sure that the namespace specified in the import definition matches the actual target namespace of the specified schema.

OCI-31090: invalid database schema name "*string*"
Cause: The XML schema document contains an invalid database schema name For example, the value of attribute SQLSchema

Action: Make sure that all database user/schema names specified in the XML schema document refer to existing database users/schemas.

OCI-31091: empty string specified as a SQL name
Cause: The XML schema document contains a null SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. Otherwise, remove such attributes from the schema and try again.

OCI-31092: invalid SQL name "*string*"
Cause: The XML schema document contains an invalid SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. This implies that the database length and other restrictions on names be satisfied.

OCI-31093: null or invalid value specified for parameter : *string*
Cause: The argument value passed for the given parameter is null or invalid.

Action: Make sure that all the input argument values are valid.

OCI-31094: incompatible SQL type "*string*" for attribute or element "*string*"
Cause: The SQL type information provided in the XML schema is not compatible with the XML datatype for the specified attribute or element.

Action: Make sure that the specified SQL types are compatible with the declared XML datatypes.

OCI-31095: cannot generate *string* : "*string*.*string*" already exists
Cause: The type/table name specified in the XML schema document cannot be generated because it is already being used.

Action: Use different names for types/tables or use the NOGEN mode so that schema compiler does not generate new types/tables.

OCI-31096: validation failed for schema
Cause: The XML Schema could not be validated.

Action: Make sure that the SQLType and other datatype mapping is valid.

OCI-31097: Hierarchical Index not empty
Cause: An attempt was made to rebuild the hierarchical index which is not empty.

Action: Delete all rows in the hierarchical index and then rebuild it.

OCI-31099: XDB Security Internal Error
Cause: An XDB Security internal error has occurred.

Action: Contact Oracle Support.

OCI-31100: XDB Locking Internal Error
Cause: An XDB Locking Internal error has occurred.

Action: Contact Oracle Support.

OCI-31101: Token "*string*" not given while locking resource "*string*"
Cause: Locking attempted on resource when the pricipal already owns a lock given by the token above.

Action: Reattempt the lock with the token.

OCI-31102: Already locked in exclusive mode. Cannot add lock.
Cause: The resource is already locked in exclusive mode. Cannot add another lock.

Action: Unlock the existing lock.

OCI-31103: Resource locked in shared mode. Cannot add exclusive lock
Cause: The resource is locked in shared mode. Cannot add a shared lock.

Action: Try locking in shared mode or unlocking the existing lock.

OCI-31104: Cannot find lock with token "*string*" on "*string*" for unlock
Cause: The lock may have been unlock or it may have expired.

Action: No action needed. Unlock already successful.

OCI-31105: User does not own lock "*string*"
Cause: The lock to be unlocked is not owned by the user.

Action: n/a

OCI-31107: Action failed as resource "*string*" is locked by name lock
Cause: Lock requests cause the whole request URI to be locked

Action: Supply lock token or unlock the lock

OCI-31108: Action failed as resource *string* is locked
Cause: Delete/Rename failed because of an existing lock

Action: Do lockdiscovery to find the lock and delete it.

OCI-31109: Action failed as parent resource *string* is locked
Cause: Delete/Rename failed because of an lock on parent resource

Action: Do lockdiscovery to find the lock and delete it.

OCI-31110: Action failed as resource *string* is locked by name
Cause: Delete/Rename failed because one of the children is locked.

Action: Do lockdiscovery to find the lock and delete it.

OCI-31111: table *string* cannot be hierarchically enabled
Cause: Trigger *tabname*_xdb_pitrigger already exists

Action: Either the table is already hierarchically enabled or the user trigger *tabname*_xdb_pitrigger needs to be dropped. Delete all rows in the hierarchical index and then rebuild it.

OCI-31112: fail to *string* for *string* port using xdb configuration
Cause: port number for the defined presentation is not valid

Action: Either the port number is already in use or it is protected. Specify another port number.

OCI-31113: XDB configuration may not be updated with non-schema compliant data
Cause: An attempt was made to update the XDB configuration resource with non-schema or non-schema compliant data.

Action: Check the document to make sure it is schema based and schema compliant.

OCI-31114: XDB configuration has been deleted or is corrupted
Cause: The XDB configuration resource has been deleted or corrupted.

Action: Reinstall XDB, or reinsert a valid configuration document.

OCI-31115: XDB configuration error: *string*
Cause: An error related to XDB configuration has occurred.

Action: Make sure the configuration resource contains valid data.

OCI-31116: Tablespace not specified correctly
Cause: XDB cannot be moved to the specified tablespace.

Action: Specify a valid tablespace.

OCI-31121: The *string* operator can not be FALSE
Cause: The value of the operator that is specified is FALSE

Action: Specify an operator that evaluates to TRUE

OCI-31122: The *string* operator has incorrect RHS value
Cause: The right hand side value that has been specified for the operator does not evaluate to TRUE

Action: Specify value on the right hand side that evaluate to TRUE

OCI-31151: Cyclic definition encountered for *string*: "*string*"
Cause: The schema definition for this type has cycles.

Action: Remove cyclic definition and re-compile schema.

OCI-31153: Cannot create schema URL with reserved prefix "http://xmlns.oracle.com/xdb/schemas/"
Cause: This prefix is reserved for XDB extended schema URLs and cannot be used in a user specified URL.

Action: Modify the prefix to a different one.

OCI-31154: invalid XML document
Cause: The XML document is invalid with respect to its XML Schema.

Action: Fix the errors identified and try again.

OCI-31155: attribute *string* not in XDB namespace
Cause: The specified attribute should be prefixed with XDB's namespace.

Action: Ensure that all XDB specified attributes are prefixed with XDB's namespace and try again.

OCI-31157: Invalid Content-Type charset
Cause: HTTP Content-Type header had a charset that Oracle does not understand.

Action: Fix the Content-Type header in the HTTP request.

OCI-31158: schema "*string*" currently being referenced
Cause: The specified schema URL is currently being referenced by the same session. This could happen because of PLSQL XMLType variables still in scope.

Action: Ensure all references to this schema in this session are released and try the operation again.

OCI-31159: XML DB is in an invalid state
Cause: XML DB's internal tables are in an invalid state, probably because the database was not upgraded or the upgrade was not successful

Action: Ensure that the database is upgraded successfully. If the problem persists, contact Oracle Support

OCI-31160: max substitution group size *string* exceeded by "*string*" (*string*) for head element "*string*" (*string*)
Cause: The maximum limit on nested substitution groups has been exceeded by an element.

Action: Delete specified schema and re-register it after removing the offending substitution element.

OCI-31161: element or attribute "*string*" cannot be stored out of line
Cause: An element or attribute of a simple type has SQLInline=false

Action: Remove the SQLInline=false qualification for the offending element or attribute

OCI-31162: element or attribute "*string*" has no SQLType specified
Cause: Schema registration was invoked with GENTYPES=false without specifying a SQLType for some element or attribute

Action: Specify a SQLType for the offending element or attribute and register the schema again

OCI-31163: element or attribute "*string*" has invalid attribute value "*string*" (should be "*string*")
Cause: An element or attribute for a complextype derived by restriction has an attribute whose value is different from that in the base type

Action: Remove the mismatched attribute values from the offending element or attribute

OCI-31164: cannot load object-relational XML attribute using direct path \n
Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column contains a type with subtypes. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

OCI-31165: cannot load object-relational XML attribute using direct path \n
Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column either contains an out-of-line partitioned table or the table itself is partitioned by one of the attributes of xmltype. This type of table cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

OCI-31167: XML nodes over 64K in size cannot be inserted
Cause: An attempt was made to insert an XML Text Node with a size greater than 64K. This is not supported.

Action: Create text nodes under 64K.

OCI-31168: Node localname and namespace values should be less than 64K
Cause: An attempt was made to specify an XML Node with localname or namespace value greater than or equal to 64K. This is not supported.

Action: Node localnames and namespace values should be under 64K.

OCI-31180: DOM Type mismatch in invalid PL/SQL DOM handle
Cause: The specified PL/SQL DOM handle is referencing a DOM Node whose DOM Type that does not match the one available in the session. This could happen because the pl/sql handle was reused, or the original document is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

OCI-31181: PL/SQL DOM handle accesses node that is no longer available
Cause: The specified pl/sql handle is referencing a node in a DOM Document that is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

OCI-31182: Too many PL/SQL DOM handles specified
Cause: An attempt was made to create a PL/SQL DOM handle that exceeded the maximum allowable number of PL/SQL DOM handles.

Action: Free PL/SQL DOM handles and try the operation again.

OCI-31185: DOM Nodes do not belong to the same DOM Document
Cause: The specified PL/SQL DOM Node does not belong to the parent DOM Document of the referring DOM Node.

Action: Ensure that both the DOM Nodes are part of the same DOM Document.

OCI-31190: Resource *string* is not a version-controlled resource
Cause: Either one of the following is the cause: - Checkout is requested for a resource that isn't under version control". Only version-controlled resource can be checked out. - Checkout is requested for a row of a non-versioned table.

Action: put the resource under version-control before checking out.

OCI-31191: Resource *string* is already checked out
Cause: Either one of the following is the cause: - Checkout is requested for a resource that is already checked out to the workspace by the same of different user.

Action: checked in the resource from the workspace before checking out

OCI-31192: Resource *string* has not been checked out
Cause: Either one of the following is the cause: - Checkin or uncheckout is requested for a resource that has not been checked out to the workspace by any user in a workspace

Action: checked in the resource from the workspace before checking out

OCI-31193: This versioning feature isn't supported for resource *string*
Cause: Either one of the following is the cause: - Container cannot be put under version-controlled.

Action: Avoid using these features.

OCI-31194: Resource *string* is already deleted
Cause: Access a version-controlled resource that is already deleted.

Action: Recreate the resource. Remove the cyclic definitions in the type and retry compilation.

OCI-31195: XML node '*string*' (type=*string*) does not support this operation
Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

OCI-31196: XML nodes over *string* in size cannot be printed
Cause: An attempt was made to use an XML Text Node with a size greater than 64K, or an XML Comment Node with a size greater than 4K. These cannot be printed. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use getClobVal() or getStringVal() to print the Document.

OCI-31197: Error in processing file *string*
Cause: An error occurred while operating on the specifed file. The possible causes are the file header is corrupt or check the next error on stack

Action: Ensure that the specified file is correct. Look at the next error on the stack and take appropriate action.

OCI-31198: Mismatch in number of bytes transferred due to non-binary mode
Cause: An error occurred while reading the specifed file. The most probable cause is that the transfer was initiated in ASCII mode.

Action: Ensure that the transfer mode is set to BINARY

OCI-31199: Warning in processing file *string*
Cause: A warning was raised while operating on the specifed file. However, the current operation was completed successfully.

Action: This is primarily an informational message. Look at the next error on the stack to obtain further information.

OCI-64495: XQuery data model has to be allowed.
Cause: XQuery data model was not allowed.

Action: Ensure that the XQuery data model is allowed.

68
ODIG-00000 to ODIG-00013

ODIG-00000: No error.
Cause: Operation was successful.

Action: No action needed.

ODIG-00001: no value specified for option '*string*'
Cause: No value was specified for an option.

Action: Specify a value.

ODIG-00002: invalid argument: '*string*'
Cause: An invalid argument was specified.

Action: Specify a valid argument.

ODIG-00003: invalid option: '*string*'
Cause: An invalid option was specified.

Action: Specify a valid option.

ODIG-00004: invalid value specified for option '*string*': '*string*'
Cause: The value specified for an option was not the expected type.

Action: Specify a valid value.

ODIG-00005: Invalid query type: '*string*'. Supported types: *string*.
Cause: The type of query is invalid.

Action: Specify a valid query type.

ODIG-00007: thread spawn failed.
Cause: The spawn of a thread used for a query failed.

Action: This error should not be seen in ordinary use. Contact Oracle Customer Support if it appears.

ODIG-00008: invalid server address or name '*string*': *string*
Cause: The address or name specified for the DNS server was not valid.

Action: Specify a valid DNS name. See RFC 1034 for details.

ODIG-00009: No name specified.
Cause: A name was not specified to be queried for.

Action: Specify a name.

ODIG-00010: Internal error: *string*
Cause: An unexpected error occurred.

Action: Contact Oracle Support Services.

ODIG-00011: Invalid value specified for option '*string*': *number*
Cause: The value specified for the option must be greater than zero.

Action: Specify a valid value.

ODIG-00012: failed to get the name of the GNS domain
Cause: An error occurred when trying to get the name of the Grid Naming Service (GNS) domain.

Action: Examine the accompanying error messages for further information about the error.

ODIG-00013: Options '*string*' and '*string*' are incompatible.
Cause: A query specified both the the DNSSEC option and the DNS query option, which is not allowed.

Action: Specify either the DNSSEC option or the DNS query option, but not both.

69
OKA-00116 to OKA-09389

OKA-00116: Internal error.
Cause: An Oracle internal error.

Action: Contact Oracle Support Services.

OKA-00618: OKA is not supported on this operating system: '*string*'
Cause: OKA device drivers have not been ported to this operating system.

Action: None

OKA-00619: The '*string*' machine architecture not supported.
Cause: OKA device drivers have not yet been ported to this CPU type or operating system. This occurs when you try to load the drivers on an architecture or operating system type that OKA is not supported.

Action: Contact Oracle Support Services to determine if an updated driver is available for this operating system and architecture, or install OKA on a supported architecture and operating system.

OKA-00620: OKA is not supported on this operating system version: '*string*'
Cause: OKA device drivers have not been ported to this operating system version.

Action: None

OKA-00621: The user executing this command does not have permission to execute Perl in '*string*'.
Cause: Perl permissions are read/write/execute owner (0700). The user this command is executing as is not the owner of the perl binary.

Action: Enter the db home as an argument to -orahome. Ensure that the user executing the command has execute permission on the perl binary in that db home.

OKA-00623: Root access required
Cause: The user executing this command does not have sufficient privileges to run the command.

Action: Run this command as a user with administrative privileges.

OKA-00628: OKA installation cannot proceed:
Cause: Previous errors have caused the installation to reach a point where it cannot continue.

Action: Resolve the issues reporting in preceding messages, then restart the installation.

OKA-00629: Failed to unload OKA drivers. A system reboot is recommended.
Cause: An unexpected condition has been detected for which a system reboot is the best course of action.

Action: Reboot the system.

OKA-00630: Installation cannot proceed: Failed to unload OKA drivers.
Cause: The installation found that one or more applications is using the drivers.

Action: Terminate applications that may be using the drivers, and retry the installation.

OKA-00642: OKA not installed
Cause: No OKA drivers or commands have been found on the system.

Action: Install components using 'okaroot install *options*'.

OKA-00644: OKA drivers not correct for this operating system - cannot load.
Cause: The device drivers installed are not compatible with the operating system

Action: run "okaroot install *options*" to install the correct drivers.

OKA-00645: Not all OKA drivers have been loaded.
Cause: OKA device drivers have been started but not all of them are detected as running.

Action: Try 'okaload stop' followed by 'okaload start'. If that does not start all drivers, then contact Oracle Support Services.

OKA-00647: The OKA drivers are supported but have not been verified on this Operating System version.
Cause: The drivers have not been explicitly tested on this operating system version but are expected to work properly.

Action: This message is informational.

OKA-00650: Failed to load OKA drivers. A system reboot is recommended.
Cause: An unexpected condition has been detected for which a system reboot is the best course of action.

Action: Reboot the system.

OKA-00651: usage: *string* {installed | loaded | version | supported} [-s]
Cause: Syntax error or help [-h] option was passed.

Action: Use syntax as specified in the 'Usage' message.

OKA-00653: Failed to load OKA drivers.
Cause: An attempt to load OKA drivers failed.

Action: Reboot the system and run 'okaroot load'.

OKA-05062: cannot query CRS resource
Cause: The application failed to communicate with Oracle Clusterware.

Action: Verify that the Oracle Clusterware stack is running. Refer to the Clusterware alert log for error messages or problem indicators.

OKA-09109: *string* driver failed to load.
Cause: The driver failed to load.

Action: View the system specific operating system kernel log (for instance, /var/log/messages on Linux, Event Log on Windows). If the drivers have not previously been unloaded ('crsctl stop crs', 'okaload stop', 'okaroot uninstall'), it is not possible to

reload them. If a specific error has occurred, than clear the error condition and try again. If the operating system and/or architecture is not supported by the drivers, then contact Oracle Support Services for an updated driver package.

OKA-09118: Driver *string* in use - cannot unload.
Cause: This may be seen during 'crsctl stop crs', 'okaload stop', or 'okaroot uninstall'. It was found that one more applications is using the drivers.

Action: Terminate applications that may be using the driver and retry.

OKA-09119: Driver *string* failed to unload.
Cause: An unknown error has occurred when trying to unload the driver.

Action: Check system specific logs (/var/adm/messages on Linux, Event Log on Windows) and clear any error conditions that are preventing the unload.

OKA-09121: Failed to detect control device '*string*'.
Cause: OKA device drivers have been started but the devices that should have been created have not been.

Action: Try 'okaload stop' followed by 'okaload start' or restarting the crs stack - 'crsctl stop crs', 'crsctl start crs'. If the control devices still do not exist, contact Oracle Support Services.

OKA-09130: Root access required
Cause: The user executing this command does not have sufficient privileges to run the command.

Action: Run this command as a user with administrative privileges.

OKA-09135: *string* installation aborted.
Cause: Informational

Action: See preceding error message for more information.

OKA-09154: Loading '*string*' driver.
Cause: Informational.

Action: None

OKA-09155: Checking for existing '*string*' driver installation.
Cause: Informational.

Action: None

OKA-09156: Detecting control device '*string*'.
Cause: Informational.

Action: None

OKA-09158: Configuration file '*string*' in the /boot directory does not exist.
Cause: A populated /boot directory, which contains static files required to install kernel modules, was not detected on the system.

Action: After restoring the /boot directory and the kernel configuration files, re-run 'okaroot install'.

OKA-09160: Can not use the silent and verbose options at the same time.
Cause: The -s and -v options were used in the command. These options are mutually exclusive.

Action: Re-execute the command with one of the options or neither.

OKA-09164: okaroot enable: Enable OKA CRS resources.
Cause: Informational.

Action: None

OKA-09165: okasroot disable: Disable OKA CRS resources.
Cause: Informational.

Action: None

OKA-09167: OKA is not installed or loaded. Run 'okaroot install'.
Cause: An operation was requested that requires OKA to be running.

Action: Run 'okaroot install' and then run the requested operation.

OKA-09176: Entering '*string*'
Cause: Informational.

Action: None

OKA-09177: Return from '*string*'
Cause: Informational.

Action: None

OKA-09178: Return code = *string*
Cause: Informational.

Action: None

OKA-09179: Command executed: '*string*', output = '*string*'
Cause: Informational.

Action: None

OKA-09182: Variable '*string*' has value '*string*'
Cause: Informational.

Action: None

OKA-09184: *string* [-h] [-s | -v]
Cause: Either a syntax error or unknown option was specified, or the help (-h) option was specified.

Action: Use syntax as specified in the 'Usage' message.

OKA-09200: Supported
Cause: OKA device drivers have been ported to this operating system or CPU type.

Action: None - Informational.

OKA-09201: Not Supported
Cause: OKA device drivers have not yet been ported to this operating system or CPU type.

Action: None

OKA-09203: true
Cause: OKA device drivers were installed/loaded.

Action: None

OKA-09204: false
Cause: OKA device drivers were not installed/loaded.

Action: None

OKA-09226: OKA drivers not correct for this operating system - cannot load.
Cause: The device drivers installed are not compatible with the currently running operating system.

Action: run "okaroot install *options*" to install the correct drivers.

OKA-09295: failed to open file *string*
Cause: A requested action failed to complete because the indicated file could not be opened.

Action: Verify the file exists and is accessible by the current user, examine previous error messages, address issues, and retry the command.

OKA-09296: New drivers have been detected for the kernel update, updating drivers from *string* to *string*.
Cause: The kernel was updated, triggering a driver update.

Action: None

OKA-09303: No installation files found for OS kernel version *string*.
Cause: If '-l' (distribution directory) was specified, the directory may not be valid.

Action: Choose a proper distribution location version.

OKA-09306: Failed to uninstall previous installation.
Cause: Failed to remove OKA commands and/or drivers.

Action: Commands and/or drivers are likely in use. Wait for operations to finish, unload the drivers, and retry the installation.

OKA-09319: Unknown operating system kernel version '*string*' detected.
Cause: This is an internal error.

Action: Contact Oracle Support Services.

OKA-09320: Missing file: '*string*'.
Cause: A required command or driver is not found on the installation media (pre install) or system (post install).

Action: If post install, try running okaroot again. Otherwise, contact Oracle Support Services.

OKA-09321: Creating udev for OKA.
Cause: Informational.

Action: None

OKA-09322: completed
Cause: Informational.

Action: None

OKA-09323: Creating module dependencies - this may take some time.
Cause: Informational.

Action: None

OKA-09324: Alternate drivers installed.
Cause: Informational.

Action: None

OKA-09327: Verifying OKA devices.
Cause: Informational.

Action: None

OKA-09343: Unable to retrieve operating system kernel version from module *string*.
Cause: Running modinfo against the OKA driver failed.

Action: None - the current operating system kernel version will be used instead.

OKA-09344: Missing directory: '*string*'.
Cause: A required directory was not found on the system.

Action: Contact Oracle Support Services.

OKA-09345: Unable to create directory: '*string*'.
Cause: Creation of a required directory failed.

Action: Contact Oracle Support Services.

OKA-09346: Unable to install file: '*string*'.
Cause: Copying to the given destination failed.

Action: Correct the error indicated by the accompanying messages and rerun 'okaroot install'.

OKA-09347: Unable to set permissions (octal *string*) on: '*string*'.
Cause: Setting the given permission bits failed.

Action: Manually set the permissions to the required level and rerun 'okaroot install'.

OKA-09348: Unable to remove '*string*'.
Cause: A previously installed file could not be removed.

Action: Attempt to manually remove the file and rerun 'okaroot'.

OKA-09349: Unable to configure driver '*string*'.
Cause: A driver was installed but 'add_drv' failed to write a configuration file.

Action: Correct the error indicated by the accompanying messages and rerun 'okaroot install'.

OKA-09350: Failed to create a symbolic link from '*string*' to '*string*'.
Cause: Creating a symbolic link failed.

Action: Correct the error indicated by the accompanying messages and rerun 'okaroot'.

OKA-09351: Unable to remove default device table file entry for '*string*'.
Cause: An entry for the driver was found in /etc/devlink.tab but it was not possible to remove the entry.

Action: Manually remove the entry from /etc/devlink.tab and rerun 'okaroot uninstall'.

OKA-09352: Unable to write to file '*string*'.
Cause: A file required modifications but it was not possible to write to it.

Action: Ensure that the file ownership and permissions allow you to write to the file.

OKA-09365: The directory '*string*' is not being removed.
Cause: The directory was scheduled to be uninstalled, but it contained files that were not installed by okaroot.

Action: Manually remove the directory.

OKA-09381: Modification of OKA drivers resource failed.
Cause: An attempt to modify the OKA drivers resource resulted in an error.

Action: Contact Oracle Support Services.

OKA-09382: Modification of OKA drivers resource succeeded.
Cause: Informational.

Action: None

OKA-09384: Invalid operating system kernel variation '*string*'.
Cause: The command found an operating system kernel variation (e.g., "el5", etc) that it did not recognize as a valid OKA supported kernel.

Action: Boot a supported kernel.

OKA-09388: An absolute path name must be specified for the alternate location.
Cause: A relative path name to the distribution files was specified.

Action: Enter the absolute path name instead.

OKA-09389: ORACLE_HOME is not set to the location of the Grid Infrastructure home.
Cause: The ORACLE_HOME environment variable was not set correctly.

Action: Make sure that the ORACLE_HOME environment variable is set to the location of the Grid Infrastructure home and that it is properly exported.

70
OKSK-00000 to OKSK-00049

OKSK-00000: %2 %3
Cause: Informational.

Action: None

OKSK-00001: %2 %3
Cause: Informational.

Action: None

OKSK-00002: %2 %3
Cause: Informational.

Action: None

OKSK-00003: %2 %3
Cause: Informational.

Action: None

OKSK-00004: Module load succeeded. Build information: %2 %3 %4
Cause: Informational.

Action: None

OKSK-00005: Module failed to load and start with status %2. Build information: %3 %4 %5
Cause: Informational.

Action: None

OKSK-00006: Module unloaded.
Cause: Informational.

Action: None

OKSK-00007: Information has been saved in the file %2 . Include the contents of this file if reporting a problem to Oracle.
Cause: Informational.

Action: None

OKSK-00008: Cluster Membership Change starting - Incarnation %2.
Cause: Informational.

Action: None

OKSK-00009: Cluster Membership Change complete.
Cause: Informational.

Action: n/a

OKSK-00010: Persistent OKS log opened at %2.
Cause: Informational.

Action: None

OKSK-00011: Failed to allocate kernel memory for %2.
Cause: Unable to allocate memory for a required function.

Action: Contact Oracle Support Services.

OKSK-00012: Failed to open %2.
Cause: Unable to open a persistent OKS log file. Likely an invalid file path was specified or there was an internal error.

Action: Ensure that the file or directory exists else. If it does, contact Oracle Support Services.

OKSK-00013: Terminating Persistent OKS log.
Cause: Persistent OKS logging terminated due to the previous message.

Action: Informational.

OKSK-00014: Unable to generate an persistent OKS log file name.
Cause: Failed to generate an persistent OKS log fime name.

Action: Internal error.

OKSK-00015: Persistent log thread creation failed.
Cause: Failed to create a kernel thread.

Action: Internal error.

OKSK-00016: Configuration error: buffer size %2 bytes is out of range.
Cause: The user selected an invalid buffer size.

Action: Select a different buffer size.

OKSK-00017: Configuration error: interval timer of %2 ms is out of range.
Cause: The user selected an invalid timer interval.

Action: Select a different timer value.

OKSK-00018: Configuration error: low water level of %2 bytes isout of range.
Cause: The user selected an invalid low water value.

Action: Select a different low water value.

OKSK-00019: Configuration error: high water level of %2 bytes is out of range.
Cause: The user selected an invalid high water value.

Action: Select a different high water value.

OKSK-00020: Configuration error: maximum number of log files (%2) is out of range.
Cause: The user selected an invalid maximum file number value.

Action: Select a different file number value.

OKSK-00021: Configuration error: The maximum file size of %2 bytes is out of range.
Cause: The user selected an invalid maximum log file size value.

Action: Select a different maximum log file size value.

OKSK-00022: File write error: File name '*string*'.
Cause: A write to the persistent OKS log file failed - possibly due to a full file system. Otherwise, it is an internal error. The in-memory OKS log will contain details regarding the error.

Action: Free up file systems space and restart the OKS persistent log ('acfsutil plogconfig -d *dir*'). If freeing up file system space does not resolve the problem, contact Oracle Support Services.

OKSK-00023: Cluster membership node list:
Cause: Informational.

Action: None

OKSK-00024: Node %2 (Interconnect address: %3.%4.%5.%6) %7
Cause: Informational.

Action: None

OKSK-00025: Cluster membership node count: %2, Local Node Number: %3, Rebuild Master: %4
Cause: Informational.

Action: None

OKSK-00026: Cluster membership rebuild manager failed to initialize.
Cause: Informational.

Action: Contact Oracle Support.

OKSK-00027: Oracle kernel distributed lock manager hash size is %2
Cause: Informational.

Action: None

OKSK-00028: In memory kernel log buffer address: %2, size: %3
Cause: Informational.

Action: None

OKSK-00029: Unable to extend the log buffer.
Cause: Informational.

Action: None

OKSK-00030: persistent OKS log buffer flush failure on OKS driver exit
Cause: The OKS driver failed to write the final log buffer to disk in a timely manner. The log file may be incomplete.

Action: None

OKSK-00031: Number of active kernel threads in Oracle ACFS drivers at driver unload time: %2 - reboot is recommended for driver cleanup
Cause: Kernel threads in Oracle ACFS drivers should have been terminated during driver unloading. However, some of those kernel threads were still active at the end of the unloading.

Action: Continued operation with the remaining active threads is possible. However, reboot is recommended to properly cleanup driver resources. For root cause analysis, a core dump should be generated.

OKSK-00032: Unable to allocate the log buffer.
Cause: Informational.

Action: None

OKSK-00033: WARNING. Possible hung thread tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7
Cause: A potential ACFS thread hang has been detected. This message is accompanied by message(s) OKSK-00034 which also provides details on this warning. This message may also be accompanied by other message(s) providing details on this warning.

Action: Contact Oracle Support Services.

OKSK-00035: %2
Cause: Follow up message to OKSUS-0033 and OKSUS-0034.

Action: See the preceeding message Contact Oracle Support.

OKSK-00036: Warning: A possible ACFS thread hang has been detected:%2 pid:%3 tid:%4
Cause: A potential ACFS thread hang has been detected.

Action: See the OKS persistent log for more detailed information describing this potentially hung thread using the specified pid and tid numbers. Contact Oracle Support.

OKSK-00037: Module failed to load, mismatch between compiled thread size (%2) and kernel thread size (%3).
Cause: An attempt to load the OKS driver failed because the kernel thread size compiled into the driver was incompatible with the currently running kernel.

Action: Contact Oracle Support.

OKSK-00038: unable to open /proc/meminfo (error %2)
Cause: An attempt to load the OKS driver failed because an attempt to open the /proc/meminfo file to ascertain the current kernel stack size failed with the indicated error.

Action: Ensure that the file exists and is accessible, address the indicated error and retry. If the problem persists, contact Oracle Support Services.

OKSK-00039: WARNING. Possible lock contention. tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7
Cause: A different thread was hung and blocked on a lock that this thread was holding. This message is accompanied by at least 3 more messages. OKSK-00033 and OKSK-00034 provide information about the related hung thread. OKSK-00040

provides more information about this thread. Additional OKSK-00039 and OKSK-00040 messages may identify other threads which held the same lock.

Action: Contact Oracle Support Services.

OKSK-00041: WARNING. Hung thread on node %2. thread:%3 tid:%4 pid:%5 lock_id1:%6 lock_id2:%7
Cause: A remote thread was hung on a DLM lock and was blocked on a lock that a local thread was holding. This message describes the remote thread and its DLM lock. This message is accompanied by at least 3 more messages. OKSK-00042 provides more information about the remote thread and its DLM lock instance. OKSK-0043 and OKSK-00044 provide information about local thread(s) that were holding the same DLM lock.

Action: Contact Oracle Support Services.

OKSK-00042: WARNING. Hung thread on node %2. thread:%3 tid:%4 record_type:%5 lock_mode:%6 state:%7
Cause: A remote thread was hung on a DLM lock and was blocked on this lock that a local thread was holding. This message is accompanied by message OKSK-00041 which provides more information about this remote thread and lock.

Action: Contact Oracle Support Services.

OKSK-00043: WARNING. Possible DLM lock contention. tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7
Cause: This message provides information about local thread(s) that might have been blocking a remote DLM lock. This message is accompanied by at least 3 additional messages. OKSK-00044 provides additional information about the local DLM lock instance. OKSK-00041 and OKSK-00042 provide information about the remote node's hung thread and blocked DLM lock instance.

Action: Contact Oracle Support Services.

OKSK-00045: WARNING. syscall HM timeout. tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7
Cause: A potential ACFS thread hang has been detected due to a user mode thread accessing USM kernel modules for too long via a single instance of a system call. This message is accompanied by message OKSK-00046 which also provides details on this warning. This message may also be accompanied by other message(s) providing details on this warning.

Action: Contact Oracle Support Services.

OKSK-00047: Additional build information: [devmsg: %2] [optimized: %3] [DNS: %4] [k_cflags: %5] [t_cflags: %6]
Cause: Informational.

Action: None

OKSK-00048: Tunable '%2' %3 (%4) changed to %5 (%6)
Cause: Informational.

Action: None

OKSK-00049: Failed to move Oracle driver binary logs
Cause: Error detected while attempting to move Oracle driver binary logs. The most likely cause is insufficient space at the target directory. If so, repeat the operation to another directory.

Action: For other errors, Contact Oracle Support Services.

71

ORA-00000 to ORA-00877

ORA-00000: normal, successful completion
Cause: Normal exit.

Action: None

ORA-00001: unique constraint (*string*.*string*) violated
Cause: An UPDATE or INSERT statement attempted to insert a duplicate key. For Trusted Oracle configured in DBMS MAC mode, you may see this message if a duplicate entry exists at a different level.

Action: Either remove the unique restriction or do not insert the key.

ORA-00017: session requested to set trace event
Cause: The current session was requested to set a trace event by another session.

Action: This is used internally; no action is required.

ORA-00018: maximum number of sessions exceeded
Cause: All session state objects are in use.

Action: Increase the value of the SESSIONS initialization parameter.

ORA-00019: maximum number of session licenses exceeded
Cause: All licenses are in use.

Action: Increase the value of the LICENSE MAX SESSIONS initialization parameter.

ORA-00020: maximum number of processes (*string*) exceeded
Cause: All process state objects are in use.

Action: Increase the value of the PROCESSES initialization parameter.

ORA-00021: session attached to some other process; cannot switch session
Cause: The user session is currently used by others.

Action: Do not switch to a session attached to some other process.

ORA-00022: invalid session ID; access denied
Cause: Either the session specified does not exist or the caller does not have the privilege to access it.

Action: Specify a valid session ID that you have privilege to access, that is either you own it or you have the CHANGE_USER privilege.

ORA-00023: session references process private memory; cannot detach session
Cause: An attempt was made to detach the current session when it contains references to process private memory.

Action: A session may contain references to process memory (PGA) if it has an open network connection, a very large context area, or operating system privileges. To allow the detach, it may be necessary to close the session's database links and/or cursors. Detaching a session with operating system privileges is always disallowed.

ORA-00024: logins from more than one process not allowed in single-process mode
Cause: Trying to login more than once from different processes for ORACLE started in single-process mode.

Action: Logoff from the other process.

ORA-00025: failed to allocate *string*
Cause: Out of memory.

Action: Restart with larger sga heap.

ORA-00026: missing or invalid session ID
Cause: Missing or invalid session ID string for the current operation.

Action: Retry with a valid session ID.

ORA-00027: cannot kill current session
Cause: Attempted to use ALTER SYSTEM KILL SESSION to kill the current session.

Action: None

ORA-00028: your session has been killed
Cause: A privileged user has killed your session and you are no longer logged on to the database.

Action: Login again if you wish to continue working.

ORA-00029: session is not a user session
Cause: The session ID specified in the current operation was not a user session (for example, recursive, etc.).

Action: Retry with a user session ID.

ORA-00030: User session ID does not exist.
Cause: The user session ID no longer exists, probably because the session was logged out.

Action: Use a valid session ID.

ORA-00031: session marked for kill
Cause: The session specified in an ALTER SYSTEM KILL SESSION command cannot be killed immediately (because it is rolling back or blocked on a network operation), but it has been marked for kill. This means it will be killed as soon as possible after its current uninterruptable operation is done.

Action: No action is required for the session to be killed, but further executions of the ALTER SYSTEM KILL SESSION command on this session may cause the session to be killed sooner.

ORA-00032: invalid session migration password
Cause: The session migration password specified in a session creation call was invalid (probably too long).

Action: Retry with a valid password (less than 30 chars).

ORA-00033: current session has empty migration password
Cause: An attempt was made to detach or clone the current session and it has an empty migration password. This is not allowed.

Action: Create the session with a non-empty migration password.

ORA-00034: cannot *string* in current PL/SQL session
Cause: An attempt was made to issue a commit or rollback from a PL/SQL object (procedure, function, package) in a session that has this disabled (by 'alter session disable commit in procedure')

Action: Enable commits from PL/SQL in this session, or do not attempt to use commit or rollback in PL/SQL when they are disabled in the current session.

ORA-00035: LICENSE_MAX_USERS cannot be less than current number of users
Cause: Specified values for LICENSE_MAX_USERS was less than the current number of users.

Action: Check the license limit and drop extra users or purchase more licenses.

ORA-00036: maximum number of recursive SQL levels (*string*) exceeded
Cause: An attempt was made to go more than the specified number of recursive SQL levels.

Action: Remove the recursive SQL, possibly a recursive trigger.

ORA-00037: cannot switch to a session belonging to a different server group
Cause: An attempt was made to switch to a session in a different server group. This is not allowed.

Action: Make sure the server switches to a session that belongs to its server group.

ORA-00038: Cannot create session: server group belongs to another user
Cause: An attempt was made to create a non-migratable session in a server group that is owned by a different user.

Action: A server group is owned by the first user who logs into a server in the server group in non-migratable mode. All subsequent non-migratable mode logins must be made by the user who owns the server group. To have a different user login in non-migratable mode, the ownership of the server group will have to be changed. This can be done by logging off all current sessions and detaching from all existing servers in the server group and then having the new user login to become the new owner.

ORA-00039: error during periodic action
Cause: An unexpected error occurred while executing a periodically invoked action.

Action: Check the error stack for detailed error information.

ORA-00040: active time limit exceeded - call aborted
Cause: The Resource Manager SWITCH_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-00041: active time limit exceeded - session terminated
Cause: The Resource Manager SWITCH_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-00042: Unknown Service name *string*
Cause: An attempt was made to use an invalid application service.

Action: Use a valid service name from SERVICE$ or add a new service using the DBMS_SERVICE package.

ORA-00043: remote operation failed
Cause: Execution of the inter-instance operation failed.

Action: Check the status of the target instance. The operation may have partially executed. Verify the result of the intended operation.

ORA-00044: timed_statistics must be TRUE when statistics_level is not BASIC
Cause: The user attempted to set timed_statistics to FALSE when statistics_level was not BASIC. timed_statistics is required to be TRUE to collect meaningful statistics when statistics_level is set to TYPICAL or ALL.

Action: Either set timed_statistics to TRUE or set statistics_level to BASIC.

ORA-00045: Your session has been terminated with no replay.
Cause: A privileged user terminated your session and you were no longer logged on to the database. Your session will not be replayed by Application Continuity or Transparent Application Failover (TAF).

Action: Log in again if you wish to continue working.

ORA-00046: cannot modify sessions parameter
Cause: An attempt was made to alter the sessions parameter in the root container or non-consolidated database.

Action: The sessions parameter behaves like a static parameter in root containers and non-consolidated databases and hence cannot be altered. It can only be altered from a pluggable database.

ORA-00047: cannot set sessions parameter to this value
Cause: An attempt was made to alter the sessions parameter to a value greater than the root container's session value.

Action: The sessions parameter can only be set to a value less than or equal to the root container's session value.

ORA-00049: maximum number of DB_FILES exceeded for the PDB
Cause: The value of the DB_FILES initialization parameter was exceeded for the pluggable database (PDB).

Action: Increase the value of the DB_FILES parameter for the PDB and close and reopen the PDB.

ORA-00050: operating system error occurred while obtaining an enqueue
Cause: Could not obtain the operating system resources necessary to cover an oracle enqueue. This is normally the result of an operating system user quota that is too low.

Action: Look up the operating system error in your system documentation and perform the needed action.

ORA-00051: timeout occurred while waiting for a resource
Cause: Usually due to a dead instance.

Action: Check for any dead, unrecovered instances and recover them.

ORA-00052: maximum number of enqueue resources (*string*) exceeded
Cause: Ran out of enqueue resources.

Action: Increase the value of the ENQUEUE_RESOURCES initialization parameter.

ORA-00053: maximum number of enqueues exceeded
Cause: Ran out of enqueue state objects.

Action: Increase the value of the ENQUEUES initialization parameter.

ORA-00054: resource busy and acquire with NOWAIT specified or timeout expired
Cause: Interested resource is busy.

Action: Retry if necessary or increase timeout.

ORA-00055: maximum number of DML locks exceeded
Cause: Ran out of DML lock state objects.

Action: Increase the value of the DML_LOCKS initialization parameter and warm start.

ORA-00056: DDL lock on object '*string*.*string*' is already held in an incompatible mode
Cause: An attempt was made to acquire a DDL lock that is already locked.

Action: This happens if you attempt to drop a table that has parse locks on it.

ORA-00057: maximum number of temporary table locks exceeded
Cause: The number of temporary tables equals or exceeds the number of temporary table locks. Temporary tables are often created by large sorts.

Action: Increase the value of the TEMPORARY_TABLE_LOCKS initialization parameter and warm start.

ORA-00058: DB_BLOCK_SIZE must be *string* to mount this database (not *string*)
Cause: DB_BLOCK_SIZE initialization parameter is wrong for the database being mounted. It does not match the value used to create the database.

Action: Fix the value of the DB_BLOCK_SIZE parameter or mount a database that matches the value.

ORA-00059: maximum number of DB_FILES exceeded
Cause: The value of the DB_FILES initialization parameter was exceeded.

Action: Increase the value of the DB_FILES parameter and warm start.

ORA-00060: deadlock detected while waiting for resource
Cause: Transactions deadlocked one another while waiting for resources.

Action: Look at the trace file to see the transactions and resources involved. Retry if necessary.

ORA-00061: another instance has a different DML_LOCKS setting
Cause: The shared instance being started is using DML locks, and the running instances are not, or vice-versa.

Action: Ensure that all instances' INIT.ORA files specify the DML_LOCKS parameter as 0 or all as non-zero.

ORA-00062: DML full-table lock cannot be acquired; DML_LOCKS is 0
Cause: The instance was started with DML_LOCKS = 0, and the statement being executed needs a full-table lock (S, X, or SSX).

Action: Restart the instance with DML_LOCKS not equal to zero, and reexecute the statement.

ORA-00063: maximum number of log files exceeded *string*
Cause: The number of log files specificied exceeded the maximum number of log files supported in this release.

Action: Re-create the control file with the highest number of log files no greater than the maximum supported in this release.

ORA-00064: object is too large to allocate on this O/S (*string*,*string*,*string*)
Cause: An initialization parameter was set to a value that required allocating more contiguous space than can be allocated on this operating system.

Action: Reduce the value of the initialization parameter.

ORA-00065: initialization of FIXED_DATE failed
Cause: The FIXED_DATE string was not in date format yyyy-mm-dd:hh24:mi:ss.

Action: Make sure the initialization parameter is in the correct date format.

ORA-00066: SID '*string*' contains an illegal character or is too long
Cause: The specified SID contained an illegal character or the SID specified was too long, which cannot occur in an SPFILE setting. Illegal characters include ,#'"=() and whitespace.

Action: Use a SID that does not contain a special character or whitespace. Check platform specific documentation for the maximum length of SID.

ORA-00067: invalid value *string* for parameter *string*; must be at least *string*
Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00068: invalid value *string* for parameter *string*, must be between *string* and *string*
Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00069: cannot acquire lock -- table locks disabled for *string*
Cause: A command was issued that tried to lock the table indicated in the message. Examples of commands that can lock tables are: LOCK TABLE, ALTER TABLE ... ADD (...), and so on.

Action: Use the ALTER TABLE ... ENABLE TABLE LOCK command, and retry the command.

ORA-00070: command *string* is not valid
Cause: An invalid debugger command was specified.

Action: Type HELP to see the list of available commands.

ORA-00071: process number must be between 1 and *string*
Cause: An invalid process number was specified.

Action: Specify a valid process number.

ORA-00072: process "*string*" is not active
Cause: An invalid process was specified.

Action: Specify a valid process.

ORA-00073: command *string* takes between *string* and *string* argument(s)
Cause: An incorrect number of arguments was specified.

Action: Specify the correct number of arguments. Type HELP to see the list of commands and their syntax.

ORA-00074: no process has been specified
Cause: No debug process has been specified.

Action: Specify a valid process.

ORA-00075: process "*string*" not found in this instance
Cause: The specified process was not logged on to the current instance.

Action: Specify a valid process.

ORA-00076: dump *string* not found
Cause: An attempt was made to invoke a dump that does not exist.

Action: Type DUMPLIST to see the list of available dumps.

ORA-00077: dump *string* is not valid
Cause: An attempt was made to invoke an invalid dump.

Action: Try another dump.

ORA-00078: cannot dump variables by name
Cause: An attempt was made to dump a variable by name on a system that does not support this feature.

Action: Try the PEEK command.

ORA-00079: variable *string* not found
Cause: An attempt was made to dump a variable that does not exist.

Action: Use a valid variable name.

ORA-00080: invalid global area specified by level *string*
Cause: An attempt was made to dump an invalid global area.

Action: Use level 1 for the PGA, 2 for the SGA, and 3 for the UGA. Use <extra + level> to dump global area *level* as well as *extra* bytes for every pointer; *extra* must be a multiple of 4.

ORA-00081: address range [*string*, *string*) is not readable
Cause: An attempt was made to read/write an invalid memory address range.

Action: Try another address or length.

ORA-00082: memory size of *string* is not in valid set of [1], [2], [4]*stringstringstringstringstring*
Cause: An invalid length was specified for the POKE command.

Action: Use a valid length (either 1, 2, 4, or possibly 8).

ORA-00083: warning: possibly corrupt SGA mapped
Cause: Even though there may be SGA corruptions, the SGA was mapped.

Action: Use the DUMPSGA command to dump the SGA.

ORA-00084: global area must be PGA, SGA, or UGA
Cause: An attempt was made to dump an invalid global area.

Action: Specify either PGA, SGA, or UGA.

ORA-00085: current call does not exist
Cause: An invalid attempt was made to dump the current call heap.

Action: Wait until the process starts a call.

ORA-00086: user call does not exist
Cause: An invalid attempt was made to dump the user call heap.

Action: Wait until the process starts a call.

ORA-00087: command cannot be executed on remote instance
Cause: Cluster database command issued for non cluster database ORADEBUG command.

Action: Issue the command without the cluster database syntax.

ORA-00088: command cannot be executed by shared server
Cause: Debug command issued on shared server.

Action: Reissue the command using a dedicated server.

ORA-00089: invalid instance number in ORADEBUG command
Cause: An invalid instance number was specified in a cluster database ORADEBUG command.

Action: Reissue the command with valid instance numbers.

ORA-00090: failed to allocate memory for cluster database ORADEBUG command
Cause: Could not allocate memory needed to execute cluster database oradebug.

Action: Reissue the command on each instance with single-instance oradebug.

ORA-00091: LARGE_POOL_SIZE must be at least *string*
Cause: The value of LARGE_POOL_SIZE is below the minimum size.

Action: Increase the value of LARGE_POOL_SIZE past the minimum size.

ORA-00092: LARGE_POOL_SIZE must be greater than LARGE_POOL_MIN_ALLOC
Cause: The value of LARGE_POOL_SIZE is less than the value of LARGE_POOL_MIN_ALLOC.

Action: Increase the value of LARGE_POOL_SIZE past the value of LARGE_POOL_MIN_ALLOC.

ORA-00093: *string* must be between *string* and *string*
Cause: The parameter value is not in a valid range.

Action: Modify the parameter value to be within the specified range.

ORA-00094: *string* requires an integer value
Cause: The parameter value is not an integer.

Action: Modify the parameter value to be an integer.

ORA-00096: invalid value *string* for parameter *string*, must be from among *string*
Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00097: use of Oracle SQL feature not in SQL92 *string* Level
Cause: Usage of Oracle's SQL extensions.

Action: Do not use the feature or use the ALTER SESSION SET FLAGGER command to set the appropriate level of SQL92 compliance.

ORA-00098: creating or mounting the database requires a parameter file
Cause: An attempt was made to create or mount the database when the instance was started without a parameter file.

Action: Restart the instance with a parameter file.

ORA-00099: warning: no parameter file specified for *string* instance
Cause: Even though no parameter file was specified, the instance was started with all default values.

Action: None

ORA-00100: no data found
Cause: An application made reference to unknown or inaccessible data.

Action: Handle this condition within the application or make appropriate modifications to the application code. NOTE: If the application uses Oracle-mode SQL instead of ANSI-mode SQL, ORA-01403 will be generated instead of ORA-00100.

ORA-00101: invalid specification for system parameter DISPATCHERS
Cause: The syntax for the DISPATCHERS parameter is incorrect.

Action: Refer to the manual for correct syntax.

ORA-00102: network protocol *string* cannot be used by dispatchers
Cause: The network specified in DISPATCHERS does not have the functionality required by the dispatchers.

Action: Refer to the manual on network protocols supported by the dispatchers.

ORA-00103: invalid network protocol; reserved for use by dispatchers
Cause: The network specified in the SQL*Net connect string is reserved for use by the dispatchers.

Action: Specify other network protocols in the connection string.

ORA-00104: deadlock detected; all public servers blocked waiting for resources
Cause: All available public servers are servicing requests that require resources locked by a client which is unable to get a public server to release the resources.

Action: Increase the limit for the system parameter MAX_SHARED_SERVERS as the system will automaticaly start up new servers to break the deadlock until the number of servers reaches the value specified in MAX_SHARED_SERVERS.

ORA-00105: too many dispatcher configurations
Cause: Too many dispatcher configurations have been specified. No more can be added.

Action: Consolidate the dispatcher configurations if possible.

ORA-00106: cannot startup/shutdown database when connected to a dispatcher
Cause: An attempt was made to startup/shutdown database when connected to a shared server via a dispatcher.

Action: Re-connect as user INTERNAL without going through the dispatcher. For most cases, this can be done by connect to INTERNAL without specifying a network connect string.

ORA-00107: failed to connect to ORACLE listener process
Cause: Most likely due to the fact that ORACLE listener has not been started.

Action: Start ORACLE listener if it has not been started. Or else contact your ORACLE representative.

ORA-00108: failed to set up dispatcher to accept connection asynchronously
Cause: Most likely due to the fact that the network protocol used by the the dispatcher does not support aynchronous operations.

Action: Contact your ORACLE representative.

ORA-00109: invalid value for attribute *string*: *string*
Cause: The value specified for the attribute was incorrect.

Action: Refer to the manual for the proper values.

ORA-00110: invalid value *string* for attribute *string*, must be between *string* and *string*
Cause: The value specified for the attribute was incorrect.

Action: Specify a value within the range allowed.

ORA-00111: invalid attribute *string*
Cause: The specified attribute was not recognized.

Action: Refer to the manual for the proper keyword to use to specify a dispatcher attribute.

ORA-00112: value of *string* is null
Cause: The attribute was specified with no value.

Action: Specify a non-null value.

ORA-00113: protocol name *string* is too long
Cause: A protocol name specified in the DISPATCHERS system parameter is too long.

Action: Use a valid protocol name for the DISPATCHERS value.

ORA-00114: missing value for system parameter SERVICE_NAMES
Cause: No value was specified for the SERVICE_NAMES system parameter, nor for the DB_NAME parameter.

Action: Add an SERVICE_NAMES or DB_NAME definition to the INIT.ORA file. By default, SERVICE_NAMES is the value of DB_NAME unless SERVICE_NAMES is explicitly specified.

ORA-00115: connection refused; dispatcher connection table is full
Cause: A connection request was refused by a dispatcher because the dispatcher cannot support any more connections.

Action: Connect to a different dispatcher, or use a dedicated server.

ORA-00116: SERVICE_NAMES name is too long
Cause: A service name specified in the SERVICE_NAMES system parameter is too long.

Action: Use a shorter name in the SERVICE_NAMES value (<= 255 chars).

ORA-00117: PROTOCOL, ADDRESS or DESCRIPTION must be specified
Cause: PROTOCOL, ADDRESS or DESCRIPTION was not specified.

Action: Use one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

ORA-00118: Only one of PROTOCOL, ADDRESS or DESCRIPTION may be specified
Cause: More than one of PROTOCOL, ADDRESS or DESCRIPTION was specified.

Action: Use only one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

ORA-00119: invalid specification for system parameter *string*
Cause: The syntax for the specified parameter is incorrect.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00120: invalid 'shared_servers' value for the PDB
Cause: 'shared_servers' cannot be set to a non-zero value in a non-ROOT pluggable database (PDB).

Action: In a multitenant container database (CDB) setup, shared servers can be configured only in ROOT. A non-ROOT PDB can disable shared servers for the PDB by setting 'shared_servers' to 0. No other values are allowed. To reenable within the PDB, use 'alter system reset shared_servers'.

ORA-00122: cannot initialize network configuration
Cause: ORACLE could not initialize SQL*Net version 2.

Action: Check the error stack for detailed information.

ORA-00123: idle public server terminating
Cause: Too many idle servers were waiting on the common queue.

Action: This error is used internally, no action is required.

ORA-00125: connection refused; invalid presentation
Cause: The PRESENTATION in the CONNECT_DATA of the TNS address DESCRIPTION is not correct or is not supported.

Action: Correct the PRESENTATION specified in the TNS address.

ORA-00126: connection refused; invalid duplicity
Cause: The DUPLICITY in the CONNECT_DATA of the TNS address DESCRIPTION is not correct or is not supported.

Action: Correct the DUPLICITY specified in the TNS address.

ORA-00127: dispatcher *string* does not exist
Cause: There is currently no dispatcher running with the specified name.

Action: Retry with a name of the form "D###" denoting an existing dispatcher process.

ORA-00128: this command requires a dispatcher name
Cause: Wrong syntax for ALTER SYSTEM SHUTDOWN

Action: Use correct syntax: ALTER SYSTEM SHUTDOWN [IMMEDIATE] 'dispatcher name'

ORA-00129: listener address validation failed '*string*'
Cause: An error was encountered while validating the listener address.

Action: Resolve error or contact your ORACLE representative.

ORA-00130: invalid listener address '*string*'
Cause: The listener address specification is not valid.

Action: Make sure that all fields in the listener address (protocol, port, host, key, ...) are correct.

ORA-00131: network protocol does not support registration '*string*'
Cause: The specified protocol does not support async notification.

Action: Refer to the manual for information on supported network protocols.

ORA-00132: syntax error or unresolved network name '*string*'
Cause: Listener address has syntax error or cannot be resolved.

Action: If a network name is specified, check that it corresponds to an entry in TNSNAMES.ORA or other address repository as configured for your system. Make sure that the entry is syntactically correct.

ORA-00133: value of *string* is too long
Cause: The value specified for the attribute was too long.

Action: Use shorter names and keywords or remove unneeded blanks.

ORA-00134: invalid DISPATCHERS specification #*string*
Cause: The syntax for the n-th DISPATCHERS specification was incorrect.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00135: missing attribute *string*
Cause: The indicated mandatory attribute was not specified.

Action: Specify a non-null value for the attribute.

ORA-00136: invalid LISTENER_NETWORKS specification #*string*
Cause: The syntax for the nth LISTENER_NETWORKS specification was invalid.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00137: invalid LISTENER_NETWORKS specification with NAME=*string*
Cause: The syntax for the LISTENER_NETWORKS specification with the indicated NAME was invalid.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00138: all addresses specified for attribute *string* are invalid
Cause: All of the specified addresses or aliases for the attribute were invalid.

Action: Specify at least one valid address or alias.

ORA-00139: duplicate attribute *string*
Cause: The indicated attribute was specified more than once.

Action: Specify the attribute at most once.

ORA-00140: LISTENER_NETWORKS specification with NAME=*string* not allowed
Cause: An internal network name has been specified.

Action: Specify a different network name.

ORA-00141: all addresses specified for parameter *string* are invalid
Cause: All of the specified addresses or aliases for the parameter were invalid.

Action: Specify at least one valid address or alias.

ORA-00142: FORWARD_LISTENER and LOCAL_LISTENER are on the same network.
Cause: FORWARD_LISTENER was used with LOCAL_LISTENER for the same network.

Action: Do not use FORWARD_LISTENER with LOCAL_LISTENER in the same network.

ORA-00143: The registration of a remote port is not supported without the registration of a local port.
Cause: The remote HTTP/HTTPS port could not be registered without the local HTTP/HTTPS port.

Action: Register the local HTTP/HTTPS port first.

ORA-00150: duplicate transaction ID
Cause: Attempted to start a new transaction with an ID already in use by an existing transaction.

Action: Check your application.

ORA-00151: invalid transaction ID
Cause: The specified transaction ID does not correspond to an existing valid transaction.

Action: Check your application.

ORA-00152: current session does not match requested session
Cause: The current session is not the same as the session that was passed into a upixado() call.

Action: Check your application.

ORA-00153: internal error in XA library
Cause: The XA library could not access thread-specific pointers.

Action: Contact customer support.

ORA-00154: protocol error in transaction monitor
Cause: The transaction monitor returned TMJOIN on an AX_REG call but the transaction was locally suspended.

Action: Contact the transaction monitor customer support.

ORA-00155: cannot perform work outside of global transaction
Cause: The application tried to perform some work on either an Oracle 7.3 server or an Oracle8 server with local transactions disabled while outside of a global transaction.

Action: Check if the application is connected to an Oracle 7.3 server. The Transaction monitor must not return a NULL XID on an AX_REG call when the resource manager is Oracle 7.3. If the application is connected to an Oracle8 server, either set nolocal=f in the xa_open string or start a global transaction prior to attempting the work.

ORA-00160: global transaction length *string* is illegal (maximum allowed *string*)
Cause: An external global transaction ID with a length either too large or 0 was passed in in a distributed transaction.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00161: transaction branch length *string* is illegal (maximum allowed *string*)
Cause: An external transaction branch ID with a length either too large or 0 was passed in.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00162: external dbid length *string* is greater than maximum (*string*)
Cause: An external database name with too large a length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00163: internal database name length *string* is greater than maximum (*string*)
Cause: An internal database name with a too large length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00164: distributed autonomous transaction disallowed within migratable distributed transaction
Cause: A request was made by the application to start a distributed autonomous transaction when the application was in a migratable distributed transaction.

Action: Roll back or commit the current distributed transaction first.

ORA-00165: migratable distributed autonomous transaction with remote operation is not allowed
Cause: A request was made by the application to start a migratable distributed autonomous transaction with remote operation.

Action: n/a

ORA-00166: remote/local nesting level is too deep
Cause: Too many remote table operations required a reverse trip back to the local site, for example to execute a local function on a remote table.

Action: Rearrange the query or co-locate the functions with the tables.

ORA-00200: control file could not be created
Cause: It was not possible to create the control file.

Action: Check that there is sufficient disk space and no conflicts in filenames and try to create the control file again.

ORA-00201: control file version *string* incompatible with ORACLE version *string*
Cause: The compatible parameter was set to a lower version than in the control file or the control file was created by incompatible software.

Action: Restart with a correct definition of the compatible parameter or restart with a compatible software release or use CREATE CONTROLFILE to create a new control file that is compatible with this release.

ORA-00202: control file: '*string*'
Cause: This message reports the name file involved in other messages.

Action: See associated error messages for a description of the problem.

ORA-00203: using the wrong control files
Cause: The mount ID in the control file is not the same as the mount ID in the control file used by the first instance to mount this database. The control files are for the same database but they are not the same files. Most likely one instance is using a backup control file.

Action: Check that the correct control files were specified.

ORA-00204: error in reading (block *string*, # blocks *string*) of control file
Cause: A disk I/O failure was detected on reading the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

ORA-00205: error in identifying control file, check alert log for more info
Cause: The system could not find a control file of the specified name and size.

Action: Check that ALL control files are online and that they are the same files that the system created at cold start time.

ORA-00206: error in writing (block *string*, # blocks *string*) of control file
Cause: A disk I/O failure was detected on writing the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

ORA-00207: control files are not for the same database
Cause: The database ID in the control file is not the same as the database ID in the control file used by the first instance to mount this database. Most likely one of the mounts used the wrong control file or there are two databases with the same name.

Action: Check that the control file is for the correct database and is not an old version.

ORA-00208: number of control file names exceeds limit of *string*
Cause: An attempt was made to use more control files than Oracle supports.

Action: Shut down Oracle. Reduce the number of control files specified in the CONTROL_FILES parameter in the initialization parameter file, and restart Oracle. Delete usused files.

ORA-00209: control file blocksize mismatch, check alert log for more info
Cause: The block size in the control file header does not match the size specified in the DB_BLOCK_SIZE parameter.

Action: Look at the alert log for more information.

ORA-00210: cannot open the specified control file
Cause: Cannot open the control file.

Action: Check to make sure the control file exists and is not locked by some other program.

ORA-00211: control file does not match previous control files
Cause: A control file was specified that belongs to another database.

Action: Find and install the correct control file.

ORA-00212: block size *string* below minimum required size of *string* bytes
Cause: The block size specified was too small. Space for the system overhead is required.

Action: Specify a larger block size and retry the operation.

ORA-00213: cannot reuse control file; old file size *string*, *string* required
Cause: To reuse a control file, it must be the same size as the one previously used.

Action: Either do not specify REUSE, or specify a matching combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses in the CREATE DATABASE or CREATE CONTROLFILE statement.

ORA-00214: control file '*string*' version *string* inconsistent with file '*string*' version *string*
Cause: An inconsistent set of control files, datafiles/logfiles, and redo files was used.

Action: Use a consistant set of control files, datafiles/logfiles, and redo log files. That is, all the files must be for the same database and from the same time period.

ORA-00215: must be at least one control file
Cause: No control file is specified or the control file specified does not exist.

Action: Specify at least one valid control file and retry the operation.

ORA-00216: control file could not be resized for migration from 8.0.2
Cause: The control file created by release 8.0.2 was missing some record types. These record types are automatically added by resizing the control file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

ORA-00217: control file could not be resized for new record types
Cause: The control file was missing some new record types supported by this release. These record types are automatically added by resizing the contol file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

ORA-00218: block size *string* of control file '*string*' does not match DB_BLOCK_SIZE (*string*)
Cause: The block size as stored in the control file header is different from the value of the initialization parameter DB_BLOCK_SIZE. This might be due to an incorrect setting of DB_BLOCK_SIZE, or else might indicate that the control file has either been corrupted or belongs to a different database.

Action: Restore a good copy of the control file. If the control file is known to be clean set the DB_BLOCK_SIZE to match control file headers block size value.

ORA-00219: required control file size (*string* logical blocks) exceeds maximum allowable size (*string* logical blocks)
Cause: An invocation of CREATE DATABASE or CREATE CONTROLFILE was executed specifying a combination of parameters that would require the control file size in blocks to exceed the maximum allowable value.

Action: In the case of CREATE DATABASE or CREATE CONTROLFILE, use a different combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses.

ORA-00220: control file not mounted by first instance, check alert log for more info
Cause: The specified control file has a different mount ID than the other control files that are being mounted. This means that the first instance to mount the database did not use this control file.

Action: Find and install the correct control file.

ORA-00221: error on write to control file
Cause: An error occurred when writing to one or more of the control files.

Action: See accompanying messages.

ORA-00222: operation would reuse name of a currently mounted control file
Cause: The filename supplied as a parameter to the ALTER DATABASE BACKUP CONTROLFILE command or to cfileSetSnapshotName matches the name of the specified currently mounted control file.

Action: Retry the operation with a different filename.

ORA-00223: convert file is invalid or incorrect version
Cause: An Oracle7 to Oracle8 convert file contains invalid data or was created with an different version of the migration utility. This error can also be caused by incorrect ORACLE_HOME environment variable when ALTER DATABASE CONVERT command is issued.

Action: Use a correct version of the convert file or regenerate it with the migration utility. Make sure that the migration utility is the same version as the Oracle8 RDBMS executable and that the ORACLE_HOME environment variable is properly set.

ORA-00224: control file resize attempted with illegal record type (*string*)
Cause: An attempt was made to expand or shrink the control file by calling cfileResizeSection using an invalid value for the RECORD_TYPE parameter.

Action: Use a value for the RECORD_TYPE parameter that specifies a valid record type other than type 0 (valid range is 1-16).

ORA-00225: expected size *string* of control file differs from actual size *string*
Cause: The expected size of the control file as stored in its header was different than the actual operating system file size. This usually indicates that the control file was corrupted.

Action: Restore a good copy of the control file.

ORA-00226: operation disallowed while alternate control file open
Cause: The attempted operation could not be executed at this time because this process had an alternate control file open for fixed table access.

Action: Retry the operation after calling cfileUseCurrent.

ORA-00227: corrupt block detected in control file: (block *string*, # blocks *string*)
Cause: A block header corruption or checksum error was detected on reading the control file.

Action: Use the CREATE CONTROLFILE or RECOVER DATABASE USING BACKUP CONTROLFILE command.

ORA-00228: length of alternate control file name exceeds maximum of *string*
Cause: The specified filename, which was supplied as a parameter to cfileSetSnapshotName or cfileUseCopy, exceeds the maximum filename length for this operating system.

Action: Retry the operation with a shorter filename.

ORA-00229: operation disallowed: already hold snapshot control file enqueue
Cause: The attempted operation cannot be executed at this time because this process currently holds the snapshot control file enqueue.

Action: Retry the operation after calling cfileUseCurrent to release the snapshot control file enqueue.

ORA-00230: operation disallowed: snapshot control file enqueue unavailable
Cause: The attempted operation cannot be executed at this time because another process currently holds the snapshot control file enqueue.

Action: Retry the operation after the concurrent operation that is holding the snapshot control file enqueue terminates.

ORA-00231: snapshot control file has not been named
Cause: During an invocation of cfileMakeAndUseSnapshot or cfileUseSnapshot it was detected that no filename for the snapshot control file had previously been specified.

Action: Specify a name for the snapshot control file by calling cfileSetSnapshotName.

ORA-00232: snapshot control file is nonexistent, corrupt, or unreadable
Cause: The snapshot control file was found to be nonexistent, corrupt, or unreadable during an invocation of cfileUseSnapshot.

Action: Call cfileMakeAndUseSnapshot again (or for the first time).

ORA-00233: copy control file is corrupt or unreadable
Cause: The specified copy control file was found to be corrupt or unreadable during an invocation of cfileUseCopy.

Action: Before retrying cfileUseCopy, use the ALTER DATABASE BACKUP CONTROLFILE command and specify the same filename that was specified for cfileUseCopy.

ORA-00234: error in identifying or opening snapshot or copy control file
Cause: A snapshot or copy control file of the specified name could not be found or opened during an invocation of cfileUseSnapshot, cfileMakeAndUseSnapshot, or cfileUseCopy.

Action: Re-create the snapshot or copy control file using cfileMakeAndUseSnapshot or ALTER DATABASE BACKUP CONTROLFILE, respectively.

ORA-00235: control file read without a lock inconsistent due to concurrent update
Cause: Concurrent update activity on a control file caused a process to read inconsistent information from the control file without a lock.

Action: Retry the operation.

ORA-00236: snapshot operation disallowed: mounted control file is a backup
Cause: Attempting to invoke cfileSetSnapshotName, cfileMakeAndUseSnapshot, or cfileUseSnapshot when the currently mounted control file is a backup control file.

Action: Mount a current control file and retry the operation.

ORA-00237: snapshot operation disallowed: control file newly created
Cause: An attempt to invoke cfileMakeAndUseSnapshot with a currently mounted control file that was newly created with CREATE CONTROLFILE was made.

Action: Mount a current control file and retry the operation.

ORA-00238: operation would reuse a filename that is part of the database
Cause: The filename supplied as a parameter to the ALTER DATABASE BACKUP CONTROLFILE command or to cfileSetSnapshotName matches the name of a file that is currently part of the database.

Action: Retry the operation with a different filename.

ORA-00239: timeout waiting for control file enqueue: held by '*string*' for more than *string* seconds
Cause: The specified process waited the maximum allowed time for the control file enqueue.

Action: Restart the blocking instance indicated in the incident trace file or reboot the blocking node.

ORA-00240: control file enqueue held for more than *string* seconds
Cause: The current process did not release the control file enqueue within the maximum allowed time.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-00241: operation disallowed: control file is not yet checked against data dictionary
Cause: Either the control file was recently created by using CREATE CONTROLFILE, an incomplete recovery was done, or some previous operations require the control file to be re-checked against the data dictionary.

Action: Shut down and restart the database or the pluggable database so that the check is performed, and then retry the operation.

ORA-00242: maximum allowed filename records used up in control file
Cause: Failed to create a new filename record entry in the control file because the maximum allowed filename records have been allocated and are in use.

Action: Free up controlfile filename section entries by dropping unwanted tablespaces/ datafiles/redofiles.

ORA-00243: failed to expand control file filename section by *string* records
Cause: Failed to expand control file filename section. See alert log for more details.

Action: Retry the operation after increasing disk space for controlfile expansion.

ORA-00244: concurrent control file backup operation in progress
Cause: Failed to create a control file backup because concurrent control file backup operation was in progress.

Action: Retry backup creation later.

ORA-00245: control file backup failed; in Oracle RAC, target might not be on shared storage
Cause: Failed to create a control file backup because some process signaled an error during backup creation. This is likely caused by the backup target (i.e., RMAN snapshot controlfile) being on a local file system so it could not be accessed by other instances. It can also be caused by other I/O errors to the backup target. Any process of any instance that starts a read/write control file transaction must have access to the backup control file during backup creation.

Action: Check whether RMAN snapshot controlfile is on shared storage. Also, check alert files of all instances for further information.

ORA-00246: control file backup failed; error accessing backup target
Cause: An attempt to create a control file backup failed because some process signaled an I/O error when accessing the backup target.

Action: Check alert and trace files for further information.

ORA-00250: archiver not started
Cause: An attempt was made to stop automatic archiving, but the archiver process was not running.

Action: No action required.

ORA-00251: LOG_ARCHIVE_DUPLEX_DEST cannot be the same destination as string *string*
Cause: The destination specified by the LOG_ARCHIVE_DUPLEX_DEST parameter is the same as the destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command.

Action: Specify a different destination for parameter LOG_ARCHIVE_DUPLEX_DEST, or specify a different destination with the ALTER SYSTEM command.

ORA-00252: log *string* of thread *string* is empty, cannot archive
Cause: A log must be used for redo generation before it can be archived. The specified redo log was not been used since it was introduced to the database. However it is possible that instance death during a log switch left the log empty.

Action: Empty logs do not need to be archived. Do not attempt to archive the redo log file.

ORA-00253: character limit *string* exceeded by archive destination string *string*
Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command was too long.

Action: Retry the ALTER SYSTEM command using a string shorter than the limit specified in the error message.

ORA-00254: error in archive control string '*string*'
Cause: The specified archive log location is invalid in the archive command or the LOG_ARCHIVE_DEST initialization parameter.

Action: Check the archive string used to make sure it refers to a valid online device.

ORA-00255: error archiving log *string* of thread *string*, sequence # *string*
Cause: An error occurred during archiving.

Action: Check the accompanying message stack for more detailed information. If the online log is corrupted, then the log can be cleared using the UNARCHIVED option. This will make any existing backups useless for recovery to any time after the log was created, but will allow the database to generate redo.

ORA-00256: cannot translate archive destination string *string*
Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command could not be translated.

Action: Check the accompanying message stack for more detailed information. Then, retry the ALTER SYSTEM command using a different string.

ORA-00257: Archiver error. Connect AS SYSDBA only until resolved.
Cause: The archiver process received an error while trying to archive a redo log. If the problem is not resolved soon, the database will stop executing transactions. The most likely cause of this message is that the destination device is out of space to store the redo log file. Another possible cause is that a destination marked as MANDATORY has failed.

Action: Check the alert log and trace files for detailed error information.

ORA-00258: manual archiving in NOARCHIVELOG mode must identify log
Cause: The database is in NOARCHIVELOG mode and a command to manually archive a log did not specify the log explicitly by sequence number, group number or filename.

Action: Specify log by filename, by group number or by thread and sequence number.

ORA-00259: log *string* of open instance *string* (thread *string*) is the current log, cannot archive
Cause: An attempt was made to archive the current log of an open thread. This is not allowed because the redo log file may still be in use for the generation of redo entries.

Action: Force a log switch in the instance where the thread is open. If no instances are open, open the database so that instance recovery can recover the thread.

ORA-00260: cannot find online log sequence *string* for thread *string*
Cause: The log sequence number supplied to the archival command does not match any of the online logs for the thread. The log might have been reused for another

sequence number, it might have been dropped, the sequence number might be greater than the current log sequence number, or the thread might not have any logs.

Action: Check the ARCHIVE statement, then specify a valid log sequence number. Specify a valid log sequence number.

ORA-00261: log *string* of thread *string* is being archived or modified
Cause: The log is either being archived by another process or an administrative command is modifying the log. Operations that modify the log include clearing, adding a member, dropping a member, renaming a member, and dropping the log.

Action: Wait for the current operation to complete and try again.

ORA-00262: current log *string* of closed thread *string* cannot switch
Cause: The log cannot be cleared or manually archived because it is the current log of a closed thread, and it is not possible to switch logs so another log is current. All other logs for the thread need to be archived, or cleared, and cannot be reused.

Action: Archive another log in the same thread first, or complete the clearing. See attached errors for the reason the switch cannot be completed.

ORA-00263: there are no logs that need archiving for thread *string*
Cause: An attempt was made to manually archive the unarchived logs in this thread but no logs needed archiving.

Action: No action required.

ORA-00264: no recovery required
Cause: An attempt was made to perform media recovery on files that do not // need any type of recovery.

Action: Do not attempt to perform media recovery on the selected files. Check to see that the filenames were entered properly. If not, retry the command with the proper filenames.

ORA-00265: instance recovery required, cannot set ARCHIVELOG mode
Cause: The database either crashed or was shutdown with the ABORT option. Media recovery cannot be enabled because the online logs may not be sufficient to recover the current datafiles.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

ORA-00266: name of archived log file needed
Cause: During media recovery, the name of an archived redo log file was requested, but no name was entered.

Action: Mount the correct redo log file and enter its name when it is requested.

ORA-00267: name of archived log file not needed
Cause: During media recovery, the name of an archived redo log file was entered, but no name was requested.

Action: Continue media recovery, but do not enter a new log name.

ORA-00268: specified log file does not exist '*string*'
Cause: The given redo log file does not exist.

Action: Check the spelling and capitalization of the filename and retry the command.

ORA-00269: specified log file is part of thread *string* not *string*
Cause: The given redo log file is not part of the given thread

Action: Check that the thread of the redo log file matches the thread on the command line. If not, use a redo log file from the appropriate thread. Retry the command after correcting the error.

ORA-00270: error creating archive log *string*
Cause: An error was encountered when either creating or opening the destination file for archiving.

Action: Check that the archive destination is valid and that there is sufficient space on the destination device.

ORA-00271: there are no logs that need archiving
Cause: An attempt was made to archive the unarchived redo log files manually, but there are no files that need to be archived.

Action: No action required.

ORA-00272: error writing archive log *string*
Cause: An I/O error occurred while archiving a redo log file.

Action: Check that the output device is still available and correct any device errors that may have occurred. Also, make certain that sufficient space for archiving is available on the output device.

ORA-00273: media recovery of direct load data that was not logged
Cause: A media recovery session encountered a table that was loaded by the direct loader without logging any redo information. Some or all of the blocks in this table are now marked as corrupt.

Action: The table must be dropped or truncated so that the corrupted blocks can be reused. If a more recent backup of the file is available, try to recover this file to eliminate this error.

ORA-00274: illegal recovery option *string*
Cause: An illegal option was specified for a recovery command.

Action: Correct the syntax and retry the command.

ORA-00275: media recovery has already been started
Cause: An attempt was made to start a second media recovery operation in the same session.

Action: Complete or cancel the first media recovery session or start another session to perform media recovery.

ORA-00276: CHANGE keyword specified but no change number given
Cause: The CHANGE keyword was specified on the command line, but no change number was given.

Action: Retry the command using a valid change number after the CHANGE keyword.

ORA-00277: illegal option to the UNTIL recovery flag *string*
Cause: Only CANCEL, CHANGE, CONSISTENT and TIME can be used with the UNTIL keyword.

Action: Correct the syntax.

ORA-00278: log file '*string*' no longer needed for this recovery
Cause: The specified redo log file is no longer needed for the current recovery.

Action: No action required. The archived redo log file may be removed from its current location to conserve disk space, if needed. However, the redo log file may still be required for another recovery session in the future.

ORA-00279: change *string* generated at *string* needed for thread *string*
Cause: The requested log is required to proceed with recovery.

Action: Please supply the requested log with "ALTER DATABASE RECOVER LOGFILE <file_name>" or cancel recovery with "ALTER DATABASE RECOVER CANCEL".

ORA-00280: change *string* for thread *string* is in sequence #*string*
Cause: This message helps to locate the redo log file with the specified change number requested by other messages.

Action: Use the information provided in this message to specify the required archived redo log files for other errors.

ORA-00281: media recovery may not be performed using dispatcher
Cause: An attempt was made to use a dispatcher process for media recovery. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform media recovery.

ORA-00282: UPI *string* call not supported, use ALTER DATABASE RECOVER
Cause: The given UPI call is no longer supported.

Action: Use the ALTER DATABASE RECOVER command for all recovery actions.

ORA-00283: recovery session canceled due to errors
Cause: An error during recovery was determined to be fatal enough to end the current recovery session.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

ORA-00284: recovery session still in progress
Cause: An error during recovery was determined to be minor enough to allow the current recovery session to continue.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

ORA-00285: TIME not given as a string constant
Cause: TIME was not followed by a string constant for the time.

Action: Enter the time enclosed in single quotation marks.

ORA-00286: no members available, or no member contains valid data
Cause: None of the members of a redo log file group are available, or the available members do not contain complete data.

Action: If a member is temporarily offline, attempt to make it available. Make sure that the correct filenames are being used, especially if the redo log file is being accessed from a remote location.

ORA-00287: specified change number *string* not found in thread *string*
Cause: The given change number does not appear in any of the online redo logs for the given thread.

Action: Check the statement to make certain a valid change number is given. Perhaps try to use the NEXT option for archiving logs.

ORA-00288: to continue recovery type ALTER DATABASE RECOVER CONTINUE
Cause: During media recovery, a new log is not required but the continuation command is necessary to do a checkpoint and report errors.

Action: Type ALTER DATABASE RECOVER CONTINUE and recovery will resume.

ORA-00289: suggestion : *string*
Cause: This message reports the next redo log filename that is needed, according to the initialization parameters LOG_ARCHIVE_DEST and LOG_ARCHIVE_FORMAT. This message assumes that LOG_ARCHIVE_DEST and LOG_ARCHIVE_FORMAT are the same now as when the required redo log file was archived.

Action: Consider using this filename for the next log needed for recovery.

ORA-00290: operating system archival error occurred. See error below
Cause: While attempting to archive to a redo log file, the server encountered an unexpected operating system error.

Action: Correct the operating system error given in the messages and retry the operation. See also your operating system-specific Oracle documentation.

ORA-00291: numeric value required for PARALLEL option
Cause: A recovery command was specified incorrectly. The PARALLEL option must be followed by a numeric argument that specifies the degree of parallelism.

Action: Re-enter the command with a numeric argument specifying the degree of parallelism desired.

ORA-00292: parallel recovery feature not installed
Cause: A parallel recovery was requested when the parallel recovery option is not installed.

Action: Delete the PARALLEL clause from the RECOVER command. Also, delete the RECOVERY_PARALLELISM parameter in the initialization file.

ORA-00293: control file out of sync with redo log
Cause: The redo log file and control file are out of sync because a non-current controle file was specified when the instance was started.

Action: Retry the RECOVER command using the current control file, or retry the RECOVER command using the USING BACKUP CONTROLFILE clause.

ORA-00294: invalid archivelog format specifier '*string*'
Cause: An invalid format specifier was found in the LOG_ARCHIVE_FORMAT initialization parameter. The only characters permitted following the % symbol are s, S, t, and T.

Action: Correct the initialization file and re-start the instance.

ORA-00295: datafile/tempfile number *string* is invalid, must be between 1 and *string*
Cause: An invalid file number was specified.

Action: Specify a valid datafile or tempfile number and retry the operation.

ORA-00296: maximum number of files (*string*) exceeded for RECOVER DATAFILE LIST
Cause: The RECOVER DATAFILE LIST command specified more datafiles than are allowed by the DB_FILES initialization parameter. This error occurs when doing recovery with Recovery Manager, and the instance has been started with a DB_FILES parameter specifying fewer datafiles than recovery manager needs to recover to satisfy the user's RECOVER command.

Action: Re-start the instance with a higher value for DB_FILES.

ORA-00297: must specify RECOVER DATAFILE LIST before RECOVER DATAFILE START
Cause: The RECOVER DATAFILE START command was issued, but no RECOVER DATAFILE LIST commands had been issued. This only happens when doing recovery with Recovery Manager, and is an internal error in Recovery Manager, because Recovery Manager should always issue RECOVER DATAFILE LIST before RECOVER DATAFILE START.

Action: Contact customer support

ORA-00298: Missing or invalid attribute value
Cause: A non-zero integer value is required when the following keyword attributes are specified: TIMEOUT, EXPIRE, DELAY, NEXT

Action: Correct the syntax and retry the command.

ORA-00299: must use file-level media recovery on data file *string*
Cause: The control file does not contain an entry for this file, so block media recovery cannot be done.

Action: Restore the data file and perform file-level media recovery.

ORA-00300: illegal redo log block size *string* specified - exceeds limit of *string*
Cause: The specified block size of the redo log is greater than the maximum block size for the operating system.

Action: Create the redo log on a device with a smaller block size

ORA-00301: error in adding log file '*string*' - file cannot be created
Cause: The creation of the redo log file failed

Action: Check: 1) there is enough storage space on the device 2) the name of the file is valid 3) the device is online 4) an IO error occurred Also, it is possible REUSE was specified on the command line and a file of the incorrect size exists. Either do not specify REUSE or use a file of the correct size.

ORA-00302: limit of *string* logs exceeded
Cause: The maximum number of redo log files has been exceeded.

Action: Use the CREATE CONTROLFILE command with a larger value for MAXLOGFILES if the compatibility is lower than 10.2.0. Otherwise, allocate more storage space for the control file.

ORA-00303: cannot process Parallel Redo
Cause: A redo log containing Parallel Redo has been detected. The current Oracle release cannot process this format of redo.

Action: Use a later release that supports Parallel Redo. to process this log.

ORA-00304: requested INSTANCE_NUMBER is busy
Cause: An instance tried to start by using a value of the initialization parameter INSTANCE_NUMBER that is already in use.

Action: Either a) specify another INSTANCE_NUMBER, b) shut down the running instance with this number c) wait for instance recovery to complete on the instance with this number.

ORA-00305: log *string* of thread *string* inconsistent; belongs to another database
Cause: The database ID in the redo log file does not match the database ID in the control file. This redo log file is not from the current database.

Action: Specify the correct redo log file, then retry the operation.

ORA-00306: limit of *string* instances in this database
Cause: Starting this instance would exceed the maximum number of instances allowed for this database. This message occurs only with STARTUP shared and multiple instances.

Action: You cannot start more than the lower of a) port-specific limit as to the number of instances b) the number of instances specified at create-database time

ORA-00307: requested INSTANCE_NUMBER out of range, maximum is *string*
Cause: The initialization parameter INSTANCE_NUMBER specified a number that was out of range.

Action: Change INSTANCE_NUMBER to a valid range and restart the instance. The minimum value is one and the maximum value is the lower of the operating system-specific maximum or the MAXINSTANCES option specified in the CREATE DATABASE statement. See also your operating system-specific Oracle documentation.

ORA-00308: cannot open archived log '*string*'
Cause: The system cannot access a required archived redo log file.

Action: Check that the off line log exists, the storage device is online, and the archived file is in the correct location. Then attempt to continue recovery or restart the recovery session.

ORA-00309: log belongs to wrong database
Cause: The system cannot access the archived redo log because it belongs to another database.

Action: Specify the correct redo log file, then retry the operation.

ORA-00310: archived log contains sequence *string*; sequence *string* required
Cause: The archived log was out of sequence, probably because it was corrupt or the wrong redo log file name was specified during recovery.

Action: Specify the correct redo log file; then retry the operation.

ORA-00311: cannot read header from archived log
Cause: An I/O error occurred when attempting to read the log file header from the specified archived redo log file.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-00312: online log *string* thread *string*: '*string*'
Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-00313: open failed for members of log group *string* of thread *string*
Cause: The online log cannot be opened. May not be able to find file.

Action: See accompanying errors and make log available.

ORA-00314: log *string* of thread *string*, expected sequence# *string* doesn't match *string*
Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00315: log *string* of thread *string*, wrong thread # *string* in header
Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00316: log *string* of thread *string*, type *string* in header is not log file
Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00317: file type *string* in header is not log file
Cause: This is not an archived log file.

Action: Find the correct file and try again.

ORA-00318: log *string* of thread *string*, expected file size *string* doesn't match *string*
Cause: On header read the file size indicated in the control file did not match the file size contained in the log file.

Action: Restore correct file or reset logs.

ORA-00319: log *string* of thread *string* has incorrect log reset status
Cause: Check of log file header at database open found that an online log has log reset data that is different from the control file. The log is probably an incorrectly restored backup.

Action: Restore correct file or reset logs.

ORA-00320: cannot read file header from log *string* of thread *string*
Cause: The file is not available.

Action: Restore the log file.

ORA-00321: log *string* of thread *string*, cannot update log file header
Cause: Cannot write to the log file.

Action: Restore the access to the file.

ORA-00322: log *string* of thread *string* is not current copy
Cause: Check of log file header at database open found that an online log appears to be an incorrectly restored backup.

Action: Restore correct file or reset logs.

ORA-00323: Current log of thread *string* not useable and all others need archiving
Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs need to be archived before they can be used.

Action: Archive the logs for the thread then retry open.

ORA-00324: log file '*string*' translated name '*string*' too long, *string* characters exceeds *string* limit
Cause: the translated name for a log file is too long.

Action: Choose a untranslated name that yields a shorter translated name.

ORA-00325: archived log for thread *string*, wrong thread # *string* in header
Cause: The archived log is corrupted or for another thread. Can not use the log for applying redo.

Action: Find correct archived log.

ORA-00326: log begins at change *string*, need earlier change *string*
Cause: The archived log supplied for recovery was generated after the log that is needed. Can not yet use the log for applying redo.

Action: Find correct archived log.

ORA-00327: log *string* of thread *string*, physical size *string* less than needed *string*
Cause: A log file has shrunk in size. This is likely to have been caused by operator or operating system error.

Action: Restore the log file from backup. If backup is not available, drop this log and re-create. If the database was shut down cleanly, no further action should be required; otherwise incomplete recovery may be required.

ORA-00328: archived log ends at change *string*, need later change *string*
Cause: The archived log supplied for recovery was generated before the log that is needed. Can not use the log for applying redo.

Action: Find correct archived log.

ORA-00329: archived log begins at change *string*, need change *string*
Cause: The archived log is not the correct log. An earlier log is needed.

Action: Restore the correct log file.

ORA-00330: archived log ends at change *string*, need change *string*
Cause: The archived log is not the correct log. A later log is needed.

Action: Restore the correct log file.

ORA-00331: log version *string* incompatible with ORACLE version *string*
Cause: The log was written by incompatible version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

ORA-00332: archived log is too small - may be incompletely archived
Cause: The log is smaller than the space allocated in it. May be the result of a shutdown abort while it was being written by the archiver.

Action: Get a complete version of this log and use it for recovery. There should either be an online version of it or a copy that was successfully archived.

ORA-00333: redo log read error block *string* count *string*
Cause: An IO error occurred while reading the log described in the accompanying error.

Action: Restore accessibility to file, or get another copy of the file.

ORA-00334: archived log: '*string*'
Cause: Reporting filename for details of another error

Action: See associated error messages

ORA-00335: online log *string*: No log with this number, log does not exist
Cause: Reporting filename for details of another error

Action: See associated error messages

ORA-00336: log file size *string* blocks is less than minimum *string* blocks
Cause: The log file size as specified in create database is too small.

Action: Increase the log file size.

ORA-00337: log file '*string*' does not exist and no size specified
Cause: An attempt to add a log found neither an existing file nor a size for creating the file.

Action: Specify a size for the log file.

ORA-00338: log *string* of thread *string* is more recent than control file
Cause: The control file change sequence number in the log file is greater than the number in the control file. This implies that the wrong control file is being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: Use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

ORA-00339: archived log does not contain any redo
Cause: The archived log is not the correct log. It is a copy of a log file that has never been used for redo generation, or was an online log being prepared to be the current log.

Action: Restore the correct log file.

ORA-00340: IO error processing online log *string* of thread *string*
Cause: An IO error occurred on the named online log.

Action: Restore accessibility to file, or restore file from backup.

ORA-00341: log *string* of thread *string*, wrong log # *string* in header
Cause: The internal information in an online log file does not match the control file.

Action: Restore correct file or reset logs.

ORA-00342: archived log does not have expected resetlogs SCN *string*
Cause: Recovery was given a log that does not belong to current incarnation or one of the parent incarnation. There should be another log that contains the correct redo.

Action: Supply the correct log file.

ORA-00344: unable to re-create online log '*string*'
Cause: An I/O failure occurred when attempting to re-create an online as part of either ALTER DATABASE OPEN RESETLOGS or ALTER DATABASE CLEAR LOGFILE command.

Action: Correct the file/device as indicated by accompanying errors.

ORA-00345: redo log write error block *string* count *string*
Cause: An IO error has occurred while writing the log

Action: Correct the cause of the error, and then restart the system. If the log is lost, apply media/incomplete recovery.

ORA-00346: log member marked as STALE and closed
Cause: A log file member was no longer complete.

Action: Correct the underlying problem by referring to the other error messages found with this one.

ORA-00347: log *string* of thread *string*, expected block size *string* doesn't match *string*
Cause: On header read the blocksize indicated in the control file did not match the blocksize contained in the log file.

Action: Restore correct file or reset logs.

ORA-00348: single-process redo failure. Must abort instance
Cause: A failure occurred during a critical portion of the log code during single process operation. This error does not occur during normal multi-process operation.

Action: Shutdown abort and warmstart the database.

ORA-00349: failure obtaining block size for '*string*'
Cause: The operating system was unable to determine the blocksize for the given filename.

Action: Consult the accompanying error message, and correct the device or specify another filename.

ORA-00350: log *string* of instance *string* (thread *string*) needs to be archived
Cause: The command cannot be done because the log has not been archived, and media recovery has been enabled.

Action: Archive the log or disable media recovery. If the command supports an UNARCHIVED option then it can be used. However this may result in making backups unuseable, and forcing the drop of some offline files.

ORA-00351: recover-to time invalid
Cause: The time specified in a recover-until statement must be after January 1st 1988.

Action: Specify a time after January 1st 1988.

ORA-00352: all logs for thread *string* need to be archived - cannot enable
Cause: Attempting to enable a thread with all logs needing to be archived, and media recovery has been enabled. There is no log that can be made the new current log for the thread.

Action: Archive a log for the thread or disable media recovery.

ORA-00353: log corruption near block *string* change *string* time *string*
Cause: Some type of redo log corruption has been discovered. This error describes the location of the corruption. Accompanying errors describe the type of corruption.

Action: Do recovery with a good version of the log or do incomplete recovery up to the indicated change or time.

ORA-00354: corrupt redo log block header
Cause: The block header on the redo block indicated by the accompanying error, is not reasonable.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database.

ORA-00355: change numbers out of order
Cause: A change number found in the redo log is lower than a previously encountered change number. The log is corrupted in some way. The corruption may be at the earlier change or at this one.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00356: inconsistent lengths in change description
Cause: A change record in the redo log contains lengths that do not add up to a consistent value. The log is corrupted in some way.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00357: too many members specified for log file, the maximum is *string*
Cause: An add logfile or add logfile member command would result in a log with too many members. The number of members is set when the database is created.

Action: Use fewer log file members.

ORA-00358: Too many file members specified, the maximum is *string*
Cause: A create or alter statement specified too many members in a parenthesised file list.

Action: Specify a number of file members that is within the port-defined limit.

ORA-00359: logfile group *string* does not exist
Cause: An add logfile member or drop logfile request specified a logfile group number that does not exist.

Action: Check the configuration of the log files and reissue the command.

ORA-00360: not a logfile member: *string*
Cause: A filename was given to drop logfile member that is not a part of the database, or which is a data file.

Action: Supply a valid logfile member name.

ORA-00361: cannot remove last log member *string* for group *string*
Cause: An attempt has been made to remove the last member of a log file group.

Action: If desired, delete the entire log, by using DROP LOGFILE.

ORA-00362: member is required to form a valid logfile in group *string*
Cause: A request to drop a logfile member was denied because it would remove data required to form a complete logfile.

Action: If desired, delete the entire log (after archiving if required), by using DROP LOGFILE;

ORA-00363: log is not the archived version
Cause: The log given to recovery is a backup of the online version from the time it was the current log. The archived version of the log would not be marked as end of thread. This error can also be caused by failing to list the current log of an enabled thread in a CREATE CONTROLFILE command.

Action: Find the archived version of the log and supply its name. If this is media recovery immediately following a CREATE CONTROLFILE, be sure the current log for this thread was included.

ORA-00364: cannot write header to new log member
Cause: An i/o error occurred when attempting to write the header to a log member that is being added to an existing group.

Action: See accompanying errors. Fix problem or use another file.

ORA-00365: the specified log is not the correct next log
Cause: The specified log failed to pass checks to ensure it corresponds to the log that was just applied. This is probably the result of using a log that was generated against a cold backup image of the database.

Action: Find the log that was generated by this copy of the database and give that filename to recovery.

ORA-00366: log *string* of thread *string*, checksum error in the file header
Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find and install correct version of log or reset logs.

ORA-00367: checksum error in log file header
Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find the correct file and try again.

ORA-00368: checksum error in redo log block
Cause: The redo block indicated by the accompanying error, is not vaild. It has a checksum that does not match the block contents.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database. Restore correct file or reset logs.

ORA-00369: Current log of thread *string* not useable and other log being cleared
Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs are being cleared or need to be archived before they can be used.

Action: If the ALTER DATABASE CLEAR LOGFILE command is still active then wait for it to complete. Otherwise reissue the CLEAR command. If there are other online logs for the thread, that are not being cleared, then archive the logs.

ORA-00370: potential deadlock during kcbchange operation
Cause: Error code used internally by software. Should never be reported

Action: Treat as internal error. See error 600.

ORA-00371: not enough shared pool memory, should be at least *string* bytes
Cause: The SHARED_POOL_SIZE initialization parameter was too small.

Action: Increase the parameter value.

ORA-00372: file *string* cannot be modified at this time
Cause: attempting to modify the contents of a file that cannot be modified. The file is most likely part of a read only tablespace but may be in the process of going offline, or the database may be in the process of closing.

Action: check the status of the file and its tablespace

ORA-00373: online log version *string* incompatible with ORACLE version *string*
Cause: The online log was written by incompatible version of Oracle. Can occur when the log file was created by either a new or older version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

ORA-00374: parameter db_block_size = *string* invalid; must be power of 2 in the range [*string*..*string*]
Cause: invalid value for db_block_size parameter

Action: adjust parameter and restart

ORA-00376: file *string* cannot be read at this time
Cause: attempting to read from a file that is not readable. Most likely the file is offline.

Action: Check the state of the file. Bring it online

ORA-00377: Frequent backups of file *string* causing write operation to stall
Cause: Backups are occurring too frequently on this file. Each time a new backup is started for a file, any writes which have been previously issued (but not completed) have to be re-issued. If hot backups are started very, very frequently, it is possible that some writes will be re-issued repeatedly and never complete.

Action: Increase the interval between begin hot-backup commands for this file.

ORA-00378: buffer pools cannot be created as specified
Cause: Either the number of buffers or the number of lru latches is too small to satisfy the specified buffer pool configuration.

Action: Either increase the number of buffers and/or number of lru latches or configure smaller buffer pools.

ORA-00379: no free buffers available in buffer pool *string* for block size *string*K
Cause: All buffers in the specified buffer pool for the specified block size are in use and no free buffers are available.

Action: Increase the number of buffers in the specified pool for the specified block size

ORA-00380: cannot specify db_*string*k_cache_size since *string*K is the standard block size
Cause: User specified the parameter db_nk_cache_size (where n is one of 2,4,8,16,32), while the standard block size for this database is equal to n Kbytes. This is illegal.

Action: Specify the standard block size cache using db_cache_size (DEFAULT pool) (and db_recycle_cache_size, db_keep_cache_size if additional buffer pools are required). Do NOT use the corresponding db_nk_cache_size parameter for the standard block size.

ORA-00381: cannot use both new and old parameters for buffer cache size specification
Cause: User specified one or more of { db_cache_size , db_recycle_cache_size, db_keep_cache_size, db_nk_cache_size (where n is one of 2,4,8,16,32), db_cache_advice } AND one or more of { db_block_buffers, buffer_pool_keep , buffer_pool_recycle }. This is illegal.

Action: Use EITHER the old (pre-Oracle_8.2) parameters OR the new ones. Don't specify both. If old size parameters are specified in the parameter file, you may want to replace them with new parameters since the new parameters can be modified dynamically and allow you to configure additional caches for additional block sizes. Cache advisory can only be enabled with the new cache parameters.

ORA-00382: *string* not a valid block size, valid range [*string*..*string*]
Cause: User specified a value for db_nk_cache_size where n is one of {2, 4, 8, 16, 32}, but nk is not a valid block size for this platform.

Action: Remove corresponding parameter from the "init.ora" file and restart the instance.

ORA-00383: DEFAULT cache for blocksize *string* cannot be reduced to zero
Cause: User attempted to reduce db_cache_size to zero, or attempted to to reduce db_*n*K_cache_size to zero while there were still online tablespaces with blocksize *n*K. Note that since the SYSTEM tablespace cannot be taken offline, it is always illegal to set db_cache_size to zero.

Action: Offline any tablespaces with the corresponding blocksize and then perform the operation again.

ORA-00384: Insufficient memory to grow cache
Cause: The system could not allocate sufficient memory to grow the cache to the specified size.

Action: Attempt a smaller increase in the value of the parameter.

ORA-00388: dependent redo for buffers is lost
Cause: The instance contained buffers that had non-durable changes and depended on redo in another thread that was lost because of that thread crash. No data are lost because changes to such buffers cannot be commited while they are non-durable.

Action: Restart the instance.

ORA-00390: log *string* of thread *string* is being cleared, cannot become current log
Cause: An attempt to switch to a new online log for the redo thread failed because no reusable log could be found. This log is being cleared and will be useable when the clearing completes. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

ORA-00391: All threads must switch to new log format at the same time
Cause: An attempt to switch the current log of a single thread is not allowed because the compatiblity requirements force a new log format version number. When changing log formats, all threads must switch to the new format at the same time.

Action: Open the database to cause the coordinated log switch. If that is not possible then return to the same software version and compatibility setting last used to open the database.

ORA-00392: log *string* of thread *string* is being cleared, operation not allowed
Cause: An operation encountered this online log in the middle of being cleared. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

ORA-00393: log *string* of thread *string* is needed for recovery of offline datafiles
Cause: Log cannot be cleared because the redo in it is needed to recover offline datafiles. It has not been archived so there is no other copy available. If the log is cleared the tablespaces containing the files will have to be dropped.

Action: Archive the log then repeat the clear command. If archiving is not possible, and dropping the tablespaces is acceptible, then add the clause UNRECOVERABLE DATAFILE at the end of the clear command.

ORA-00394: online log reused while attempting to archive it
Cause: It has been detected that an online log that is being archived has been reused

Action: Cannot archive the logfile anymore since it has been overwritten

ORA-00395: online logs for the clone database must be renamed
Cause: A clone database open forces logfile renaming to avoid overwriting the primary logfiles

Action: Rename the logfiles manually or using the log_file_name_convert initialization parameter

ORA-00396: error *string* required fallback to single-pass recovery
Cause: The indicated error caused two-pass instance or crash recovery to fail. Recovery was retried with an alternate (slower) method to avoid the error.

Action: Correct the cause of the indicated error (also recorded) so that future instance or crash recovery can succeed with the two-pass algorithm. This usually requires making more main memory available to the recovery process.

ORA-00397: instance recovery process terminated with error
Cause: The foreground process doing instance recovery died.

Action: Check the foreground trace file for the cause of recovery failure.

ORA-00398: abort thread recovery due to reconfiguration
Cause: Global enqueue service reconfiguration occurred during instance/crash recovery.

Action: This is used internally, no action is required.

ORA-00399: corrupt change description in redo log
Cause: A change vector in the redo log failed validation checks.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00400: invalid release value *string* for parameter *string*
Cause: The release level given for the specified init parameter is invalid.

Action: Correct the parameter value in the parameter file and retry.

ORA-00401: the value for parameter *string* is not supported by this release
Cause: The value specified cannot be supported by this release of the software.

Action: Choose an appropriate value, or remove the parameter value to use the default value.

ORA-00402: database changes by release *string* cannot be used by release *string*
Cause: Changes have been made to the database that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the init file.

ORA-00403: *string* (*string*) is not the same as other instances (*string*)
Cause: Another instance has set the compatible or compatible no recovery parameters differently than this instance.

Action: Change the parameters of the current instance to match other instances already running.

ORA-00404: Convert file not found: '*string*'
Cause: The file used for converting the database from V7 to V8 could not be found.

Action: Verify that the migration process has been started on this database and that the convert filename is accessable.

ORA-00405: compatibility type "*string*"
Cause: Reporting a type associated with another error.

Action: See accompanying error

ORA-00406: COMPATIBLE parameter needs to be *string* or greater
Cause: The COMPATIBLE initialization parameter is not high enough to allow the operation. Allowing the command would make the database incompatible with the release specified by the current COMPATIBLE parameter.

Action: Shutdown and startup with a higher compatibility setting.

ORA-00407: rolling upgrade from release *string*.*string* to *string*.*string* is not allowed
Cause: Another instance executing software at a different point release already has the database mounted.

Action: Shutdown all instances then startup with the new software.

ORA-00408: parameter *string* is set to TRUE
Cause: Reporting the parameter that resulted in the compatibility error.

Action: Shutdown and startup with a higher compatibility setting.

ORA-00409: COMPATIBLE needs to be *string* or higher to use AUTO SEGMENT SPACE MANAGEMENT
Cause: This is due to migrating from an older release of Oracle with tablespaces created using AUTO SEGMENT SPACE MANAGEMENT. To open the database, the COMPATIBLE parameter needs to be set to the specified value.

Action: Shutdown and startup with the specified compatibility setting.

ORA-00421: failure in creating the required number of sessions for *string* processes
Cause: The required number of sessions for the PROCESSES parameter was greater than the maximum supported value.

Action: Decrease the required number of processes and start the instance.

ORA-00436: ORACLE is not licensed. Contact Oracle Corp. for assistance
Cause: The installed Oracle software was not licensed to run on this CPU. This occurred if the Oracle software was installed incorrectly.

Action: Check if the Oracle software is installed correctly. Then contact Oracle Support Services.

ORA-00437: ORACLE feature is not licensed. Contact Oracle Corp. for assistance
Cause: ORACLE feature is not licensed.

Action: Contact ORACLE for assistance.

ORA-00438: *string* Option not installed
Cause: The specified option is not installed.

Action: Purchase and install the option.

ORA-00439: feature not enabled: *string*
Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

ORA-00442: Oracle Database Express Edition (XE) single instance violation error
Cause: An attempt was made to start more than one Oracle Database Express Edition (XE) instance.

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) if you want to run more than one instance.

ORA-00443: background process "*string*" did not start
Cause: The specified process did not start.

Action: Ensure that the executable image is in the correct place with the correct protections, and that there is enough memory.

ORA-00444: background process "*string*" failed while starting
Cause: Usually due to a bad (or non-existent) background process image.

Action: Get a good background process image.

ORA-00445: background process "*string*" did not start after *string* seconds
Cause: The specified process did not start after the specified time.

Action: Ensure that the background did not die and leave a trace file.

ORA-00446: background process started when not expected
Cause: The background process specified started up AFTER the RDBMS was already running.

Action: If nobody at your site started the process, then this is an internal error.

ORA-00447: fatal error in background process
Cause: One of the background processes died unexpectedly.

Action: Warm start the system.

ORA-00448: normal completion of background process
Cause: One of the background processes completed normally (i.e. exited). The background process thinks that somebody asked it to exit.

Action: Warm start the system.

ORA-00449: background process '*string*' unexpectedly terminated with error *string*
Cause: A foreground process needing service from a background process has discovered the process died.

Action: Consult the error code, and the trace file for the process.

ORA-00450: background process '*string*' did not start
Cause: The specified process did not start.

Action: Consult the error code, and the trace file for the process.

ORA-00451: foreground process died unexpectedly
Cause: The foreground process for the new connection did not start.

Action: Reconnect to Oracle.

ORA-00452: foreground process unexpectedly terminated with error *string*
Cause: The foreground process for the new connection did not start.

Action: Reconnect to Oracle.

ORA-00453: backgroud process '*string*' is dead
Cause: The background process that was being messaged was dead or its incarnation was invalid.

Action: Restart the background process.

ORA-00454: The background process '*string*' is running
Cause: An attempt to spawn a background process that was already running failed.

Action: None

ORA-00455: timeout waiting for background process '*string*' cleanup
Cause: The state of the background process was not cleaned up.

Action: None

ORA-00456: prespawn not enabled
Cause: Prespawn was not enabled.

Action: None

ORA-00457: process pool not found
Cause: The process pool was not found.

Action: Verify the process pool name.

ORA-00458: process pool is already started
Cause: The process pool was already started.

Action: None

ORA-00459: process pool is not started
Cause: The process pool was not started.

Action: None

ORA-00460: process pool invalid configuration value(s)
Cause: Invalid configuration values were specified for the process pool.

Action: Verify the configuration values.

ORA-00461: MGA namespace already opened.
Cause: Managed Global Area(MGA) namespace was already opened.

Action: None

ORA-00462: MGA namespace shared handle not valid.
Cause: Managed Global Area(MGA) namespace shared handle was not valid.

Action: None

ORA-00463: MGA namespace private handle not valid.
Cause: Managed Global Area(MGA) namespace private handle was not valid.

Action: None

ORA-00464: Processes are still attached to MGA namespace.
Cause: Processes were still attached to Managed Global Area(MGA) namespace.

Action: None

ORA-00465: Segments are still attached to MGA namespace.
Cause: Segments were still attached to Managed Global Area(MGA) namespace.

Action: None

ORA-00466: MGA invalid segment information.
Cause: Managed Global Area(MGA) segment information was not valid.

Action: None

ORA-00467: Already attached to MGA handle.
Cause: There was already an attachement to the Managed Global Area(MGA) handle.

Action: None

ORA-00468: Not attached to MGA handle.
Cause: There was no attachement to the Managed Global Area(MGA) handle.

Action: None

ORA-00469: CKPT process terminated with error
Cause: The checkpoint process died

Action: Warm start instance

ORA-00470: LGWR process terminated with error
Cause: The log writer process died

Action: Warm start instance

ORA-00471: DBWR process terminated with error
Cause: The database writer process died

Action: Warm start instance

ORA-00472: PMON process terminated with error
Cause: The process cleanup process died

Action: Warm start instance

ORA-00473: ARCH process terminated with error
Cause: The archive process died

Action: Warm start instance

ORA-00474: SMON process terminated with error
Cause: The system cleanup process died

Action: Warm start instance

ORA-00475: TRWR process terminated with error
Cause: The system tracing process died

Action: Warm start instance

ORA-00476: RECO process terminated with error
Cause: The distributed transaction (two-phase commit) recovery process died.

Action: Warm start instance

ORA-00477: SNP* process terminated with error
Cause: A materialized view refresh process died

Action: PMON will restart SNP process shortly. If SNP process does not get started, contact Oracle support.

ORA-00478: SMON process terminated due to error *string*
Cause: SMON was unable to service the requests due to error in cleanup of resources

Action: Warm start instance

ORA-00479: RVWR process terminated with error *string*
Cause: The RVWR process died

Action: Warm start instance

ORA-00480: LCK* process terminated with error
Cause: A system lock process died

Action: Warm start instance

ORA-00481: LMON process terminated with error
Cause: The global enqueue service monitor process died

Action: Warm start instance

ORA-00482: LMD* process terminated with error
Cause: A global enqueue service daemon process died

Action: Warm start instance

ORA-00483: During shutdown a process abnormally terminated
Cause: One of the background processes did not exit normally at or near the time of shutdown.

Action: Use shutdown abort.

ORA-00484: LMS* process terminated with error
Cause: A global cache service process died

Action: Warm start instance

ORA-00485: DIAG process terminated with error *string*
Cause: A global diagnostic process died

Action: Wait for process to restart

ORA-00486: ASMB process terminated with error
Cause: An ASM background process died.

Action: Warm start instance. Also check that ASM Instance is running.

ORA-00487: CTWR process terminated with error
Cause: The change tracking process died

Action: Warm start instance

ORA-00488: RBAL process terminated with error
Cause: The ASM rebalance coordinator process died.

Action: Warm start instance.

ORA-00489: ARB* process terminated with error
Cause: An ASM rebalance worker process died.

Action: Wait for process to restart.

ORA-00490: PSP process terminated with error
Cause: The process spawner died

Action: Warm start instance

ORA-00491: RMS0 process terminated with error
Cause: The RAC Management Process died

Action: n/a

ORA-00492: GTX* process terminated with error
Cause: A global transaction background process died.

Action: Warm start instance

ORA-00493: GMON process terminated with error
Cause: The ASM disk group monitor process died

Action: Warm start instance

ORA-00494: enqueue *string* held for too long (more than *string* seconds) by 'inst *string*, osid *string*'
Cause: The specified process did not release the enqueue within the maximum allowed time.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-00495: GEN0 process terminated with error
Cause: The generic background processing process died.

Action: Warm start the instance.

ORA-00496: LMHB process terminated with error
Cause: The LM heartbeat monitor process died.

Action: Warm start the instance.

ORA-00497: XDMG process terminated with error
Cause: The Cell automation manager process terminated with error.

Action: PMON will restart XDMG process shortly. If XDMG process does not restart, contact Oracle Support Services.

ORA-00498: XDWK process terminated with error
Cause: The Cell automation worker actions process terminated with error.

Action: PMON will restart XDWK process shortly. If XDWK process does not restart, contact Oracle Support Services.

ORA-00499: XDMG repeatedly failed to initialize terminating the instance.
Cause: The Cell automation manager process repeatedly failed to initialize.

Action: Examine the alert log for the reason prior attempts to start XDMG failed. If it is due to user error or bad configuration, fix it and restart the instance. Otherwise, contact Oracle Support Services.

ORA-00500: Listener registration process terminated with an error.
Cause: The listener registration process died.

Action: Warm start the instance.

ORA-00501: CLMN process terminated with error
Cause: The cleanup process died.

Action: Warm start the instance.

ORA-00502: PMAN process terminated with error
Cause: The manager process died.

Action: Warm start the instance.

ORA-00503: CL process terminated with error**
Cause: A cleanup slave died.

Action: Warm start the instance.

ORA-00504: Service monitor background process terminated with error
Cause: The service monitor background process died.

Action: PMON will restart the background process shortly.

ORA-00505: GEN1 process terminated with error
Cause: The generic background processing process 1 died.

Action: Warm start the instance.

ORA-00506: GEN2 process terminated with error
Cause: The generic background processing process 2 terminated.

Action: Warm start the instance.

ORA-00510: not a valid MGA heap index
Cause: The given Managed Global Area (MGA) index was not of the heap type.

Action: None

ORA-00511: Cluster flash cache background process terminated with error
Cause: The cluster flash cache process died.

Action: Warm start the instance.

ORA-00512: attempted to kill an operating system process that has multiple threads
Cause: A kill request was attempted on an operating system process that had multiple threads but the process was not marked as one that could be killed as a group.

Action: This is an internal error.

ORA-00566: cannot request processor group - NUMA not enabled
Cause: Cannot start process in a requested processor group when the NUMA feature is disabled.

Action: Start the process without requesting a NUMA processor group.

ORA-00567: Requested processor group *string* is too large (maximum *string*)
Cause: The process could not be started in the requested processor group.

Action: Start the process in another processor group.

ORA-00568: Maximum number of interrupt handlers exceeded
Cause: User specified too many ^c handlers

Action: Remove some old handlers.

ORA-00569: Failed to acquire global enqueue.
Cause: A prior error occurred on one of the instances in the cluster. Typically errors are caused by shared pool resource contention.

Action: Check for and resolve prior errors on all instances in the cluster. If there is shared pool resource contention, increase the SHARED_POOL_SIZE, DML_LOCKS, PROCESSES, TRANSACTIONS, CLUSTER_DATABASE_INSTANCES and PARALLEL_MAX_SERVERS initialization parameters.

ORA-00574: osndnt: $CANCEL failure (break)

ORA-00575: osndnt: $QIO failure (send out-of-band break)

ORA-00576: in-band break protocol error

ORA-00577: out-of-band break protocol error

ORA-00578: reset protocol error

ORA-00579: osndnt: server received malformed connection request

ORA-00580: protocol versions do not match

ORA-00581: osndnt: cannot allocate context area

ORA-00582: osndnt: cannot deallocate context area

ORA-00583: osndnt: $TRNLOG failure

ORA-00584: cannot close connection

ORA-00585: host name has incorrect form

ORA-00586: osndnt: LIB$ASN_WTH_MBX failure

ORA-00587: cannot connect to remote host

ORA-00588: message from host was too short

ORA-00589: message from host had incorrect data length

ORA-00590: message from host had incorrect message type

ORA-00591: incorrect number of bytes written

ORA-00592: osndnt: $QIO failure (mailbox queue)

ORA-00593: osndnt: $DASSGN failure (network device)

ORA-00594: osndnt: $DASSGN failure (mailbox)

ORA-00595: osndnt: $QIO failure (receive)

ORA-00596: osndnt: $QIO failure (send)

ORA-00597: osndnt: $QIO failure (mailbox requeue)

ORA-00598: osndnt: $QIO failure (mailbox read)

ORA-00600: internal error code, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]
Cause: This is the generic internal error number for Oracle program exceptions. It indicates that a process has encountered a low-level, unexpected condition. The first argument is the internal message number. This argument and the database version number are critical in identifying the root cause and the potential impact to your system.

Action: Visit My Oracle Support to access the ORA-00600 Lookup tool (reference Note 600.1) for more information regarding the specific ORA-00600 error encountered. An Incident has been created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

ORA-00601: cleanup lock conflict
Cause: The process monitor (PMON) database process ran into a lock conflict while trying to recover the processes.

Action: This is an internal issue. No action required.

ORA-00602: internal programming exception: [PC:*string*] [ADDR:*string*]
Cause: An address violation was encountered.

Action: Report the issue as a bug.

ORA-00603: ORACLE server session terminated by fatal error
Cause: An Oracle server session was in an unrecoverable state.

Action: Log in to Oracle again so a new server session will be created automatically. Examine the session trace file for more information.

ORA-00604: error occurred at recursive SQL level *string*
Cause: An error occurred while processing a recursive SQL statement (a statement applying to internal dictionary tables).

Action: If the situation described in the next error on the stack can be corrected, do so; otherwise contact Oracle Support.

ORA-00606: Internal error code
Cause: A call to deferred upi functions was made in non deferred mode

Action: Report as a bug.

ORA-00607: Internal error occurred while making a change to a data block
Cause: An internal error or memory exception occurred while Oracle was applying redo to a data block.

Action: call Oracle Support

ORA-00608: testing error [*string*] [*string*] [*string*] [*string*] [*string*]
Cause: Internal error reserved for testing.

Action: call Oracle Support

ORA-00609: could not attach to incoming connection
Cause: Oracle process could not answer incoming connection

Action: If the situation described in the next error on the stack can be corrected, do so; otherwise contact Oracle Support.

ORA-00614: quarantine limit has been reached
Cause: A quarantine limit was reached and the instance was aborted.

Action: Restart the instance.

ORA-00625: Internal error code within PDB: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]
Cause: This is the generic PDB-specific internal error number for Oracle program exceptions. It indicates that a process encountered a low-level, unexpected condition within a PDB. The PDB was closed (abort). The first argument in the message is the internal message. This argument and the database version number are critical in identifying the root cause and the potential impact to your system.

Action: Visit My Oracle Support to access the ORA-00600 Lookup tool (reference Note 600.1) for more information regarding the specific ORA-00625 error encountered. An Incident is created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

ORA-00700: soft internal error, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]
Cause: Internal inconsistency that will not crash a process

Action: Report as a bug - the first argument is the internal error.

ORA-00701: object necessary for warmstarting database cannot be altered
Cause: Attempt to alter or drop a database object (table, cluster, or index) which are needed for warmstarting the database.

Action: None

ORA-00702: bootstrap verison '*string*' inconsistent with version '*string*'
Cause: The reading version of the boostrap is incompatible with the current bootstrap version.

Action: Restore a version of the software that is compatible with this bootstrap version.

ORA-00703: maximum number of row cache instance locks exceeded
Cause: There are not enough row cache enqueues.

Action: Increase the row cache enqueue parameter and warm start the system.

ORA-00704: bootstrap process failure
Cause: Failure in processing bootstrap data - see accompanying error.

Action: Contact your customer support representative.

ORA-00705: inconsistent state during start up; shut down the instance, then restart it
Cause: A previous attempt to start an instance was terminated.

Action: Shut down the instance completely, then restart it.

ORA-00706: error changing format of file '*string*'
Cause: An attempt to change the block0 format of the specified file failed because the file is read-only or offline.

Action: Make the file read-write or bring the file online and set the BLK0_FMTCHG event.

ORA-00710: new tablespace name is the same as the old tablespace name
Cause: An attempt to rename a tablespace failed because the new name is the same as the old name.

Action: No action required.

ORA-00711: new tablespace name is invalid
Cause: An attempt to rename a tablespace failed because the new name is invalid.

Action: Choose a valid new name and retry the command.

ORA-00712: cannot rename system tablespace
Cause: An attempt to rename the system tablespace failed.

Action: No action required.

ORA-00720: ALTER DATABASE RESET COMPATIBILITY command has been de-supported
Cause: ALTER DATABASE RESET COMPATIBILITY command has been de-supported since Oracle 10i.

Action: No action required.

ORA-00721: changes by release *string* cannot be used by release *string*
Cause: An attempt to import a tablespace failed because the tablespace contains changes that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the initialization parameter file.

ORA-00722: Feature "*string*"
Cause: Reporting name of the feature for details of another error.

Action: See associated error message.

ORA-00723: Initialization parameter COMPATIBLE must be explicitly set
Cause: Oracle detected that the initialization parameter COMPATIBLE was not explicitly specified, and the compatibility of the database is lower than the default value of the COMPATIBLE parameter. In order to use the new compatible setting, the intialization parameter must be explicitly set by the user.

Action: Explicitly set the value of COMPATIBLE parameter either in PFILE or SPFILE, whichever is used.

ORA-00724: ALTER DATABASE CONVERT command has been de-supported
Cause: ALTER DATABASE CONVERT command has been de-supported since Oracle 10i.

Action: No action required.

ORA-00725: Desupported ALTER DATABASE SET STANDBY clause specified: *string*
Cause: A deprecated ALTER DATABASE SET STANDBY was specified.

Action: No action required.

ORA-00740: datafile size of (*string*) blocks exceeds maximum file size
Cause: The user specified datafile size exceeded maximum file size.

Action: Please check REFERENCE for maximum size. Reduce the size and retry.

ORA-00741: logfile size of (*string*) blocks exceeds maximum logfile size
Cause: The user specified logfile size exceeded maximum logfile size.

Action: Please check REFERENCE for maximum size. Reduce the size and retry.

ORA-00742: Log read detects lost write in thread *string* sequence *string* block *string*
Cause: Either a write issued by Oracle was lost by the underlying operating system or storage system or an Oracle internal error occurred.

Action: The trace file shows the lost write location. Dump the problematic log file to see whether it is a real lost write. Contact Oracle Support Services.

ORA-00750: database has been previously mounted and dismounted
Cause: The instance has already mounted and dismounted the database, which is only allowed once in its lifetime.

Action: Shut down the database.

ORA-00751: could not obtain resilvering status for file
Cause: An error occurred while obtaining the mirror resilvering status of a file.

Action: Refer to other error messages shown for additional details of the problem.

ORA-00752: recovery detected a lost write of a data block
Cause: A data block write to storage was lost during normal database operation on the primary database.

Action: Shutdown the primary database and activate the physical standby database to failover. Call Oracle Support Services. See the Data Guard documentation for details. Unless directed by Oracle Support Services, do not attempt to bypass this error by copying blocks or data files from the primary database to the standby database because that would propagate the lost write from the primary to the standby database.

ORA-00753: recovery detected a lost write of a data block
Cause: A data block write to storage was lost during normal redo database operation on the standby database or during recovery on a primary database.

Action: Close the database and try the RECOVER MANAGED STANDBY DATABASE (on the standby database) or RECOVER DATABASE ... FORCE START AT (on the primary database) statement starting at the SCN of the bad block that was printed already. See the Administrator's Guide for details.

ORA-00754: recovery detected a data block with invalid SCN
Cause: An error caused a data block mismatch with a log record.

Action: If running on a primary database in recovery mode, you may perform a point-in-time recovery to an earlier time. Otherwise, call Oracle Support Services. See the Administrator's Guide for details.

ORA-00756: recovery detected a lost write of a data block
Cause: A data block write to storage was lost during normal redo database operation on the standby database or during recovery on a primary database.

Action: Close the database and try the RECOVER MANAGED STANDBY DATABASE (on the standby database) or RECOVER DATABASE ... FORCE START AT (on the primary database) statement starting at the SCN of the bad block that was printed already. See the Administrator's Guide for details.

ORA-00758: recovery detected a block with inconsistent flag values set
Cause: An internal error occurred.

Action: If running on a primary database in recovery mode, you may perform a point-in-time recovery to an earlier time. Otherwise, call Oracle Support Services. See the Administrator's Guide for details.

ORA-00759: session suspension timed out during switchover or failover
Cause: The standby database was going through a role transition and the new primary database was not reopened in the configured timeout duration after switchover.

Action: Open the new primary database and try to connect again.

ORA-00760: could not remove lost write tracking from data file - check log
Cause: An error occurred while trying to remove lost write tracking.

Action: Check the system log for ERROR: or WARNING: for further information.

ORA-00761: could not suspend lost write tracking for data file - check log
Cause: An error occurred while trying to suspend lost write tracking.

Action: Check the alert log for ERROR: or WARNING: for further information.

ORA-00762: could not change lost write protection - out of memory
Cause: Memory allocation failed.

Action: Ensure that enough memory including stack memory is available

ORA-00763: could not add lost write tracking to data file
Cause: An error occurred while trying to add lost write tracking; could not lookup the target data file or there was insufficient space in the shadow tablespace.

Action: This may be an internal error if the target data file exists. Also, check to see if the shadow tablespaces have sufficient space.

ORA-00764: The current transaction started on standby database and attempted to make an update after role transition.
Cause: The session, which started a transaction on the standby database and stayed alive after a role transition, attempted to do an update.

Action: The client should catch the exception and retry the transaction.

ORA-00800: soft external error, arguments: [*string*], [*string*], [*string*], [*string*], [*string*]
Cause: An improper system configuration or setting resulted in failure. This failure is not fatal to the instance at the moment, however, this might result in an unexpected behavior during query execution.

Action: Check the database trace files and rectify system settings or the configuration. For additional information, refer to Oracle database documentation or refer to My Oracle Support (MOS) notes.

ORA-00816: error message translation failed
Cause: There is an internal error where a routine was unable to translate a message code.

Action: Contact Oracle Support Services.

ORA-00820: Specified value of sga_max_size is too small, needs to be at least *string*M
Cause: The specified value of sga_max_size is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga_max_size to the recommended value or reduce the values of any SGA component size parameters you have specified.

ORA-00821: Specified value of sga_target *string*M is too small, needs to be at least *string*M
Cause: The specified value of sga_target is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga_target to the recommended value or reduce the values of any SGA component size parameters you have specified.

ORA-00822: MMAN process terminated with error
Cause: The Memory Management process died.

Action: Warm start instance

ORA-00823: Specified value of sga_target greater than sga_max_size
Cause: The specified value of sga_target is greater than sga_max_size.

Action: Increase sga_max_size to match up with sga_target or decrease sga_target to match up with sga_maxsize.

ORA-00824: cannot set SGA_TARGET or MEMORY_TARGET due to existing internal settings
Cause: Could not set SGA_TARGET or MEMORY_TARGET due to current parameter settings.

Action: Check the other error messages for additional information.

ORA-00825: cannot set DB_BLOCK_BUFFERS if SGA_TARGET or MEMORY_TARGET is set
Cause: SGA_TARGET or MEMORY_TARGET set with DB_BLOCK_BUFFERS set.

Action: Do not set SGA_TARGET, MEMORY_TARGET or use new cache parameters, and do not use DB_BLOCK_BUFFERS which is an old cache parameter.

ORA-00826: cannot set SGA_TARGET or MEMORY_TARGET for an ASM instance
Cause: SGA_TARGET or MEMORY_TARGET set for an ASM instance.

Action: Do not set SGA_TARGET or MEMORY_TARGET.

ORA-00827: could not shrink sga_target to specified value
Cause: Attempted to shrink the SGA to the specified value but did not succeed because the SGA components could not be shrunk as they were already at their minimum sizes.

Action: Do not set sga_target to a value below the current value without first shrinking the individual SGA components.

ORA-00828: specified value of shared_pool_reserved_size inconsistent with internal settings
Cause: Unable to set shared_pool_reserved_size to specified value if SGA_TARGET set, either because the specified value is too small, or because it is too large for the current internal size of shared pool. More details can be found in the alert log.

Action: If possible, do not set shared_pool_reserved_size without setting shared_pool_size if SGA_TARGET set. Examine the alert log for information about current internal size of shared pool, and valid range of values for shared_pool_reserved_size.

ORA-00830: cannot set statistics_level to BASIC with auto-tune SGA enabled
Cause: The user attempted to set statistics_level to BASIC with auto-tune SGA enabled which cannot be done because auto-tune SGA cannot work with statistics_level set to BASIC.

Action: Disable auto-tune SGA and try setting the statistics_level to BASIC again.

ORA-00832: no streams pool created and cannot automatically create one
Cause: A database feature which needs STREAMS SGA was being used, however, the streams_pool_size parameter was not defined and the value of db_cache_size was too small to permit an automatic transfer of SGA to the streams pool from the buffer cache.

Action: Please set the parameter streams_pool_size or set SGA_TARGET.

ORA-00837: Specified value of MEMORY_TARGET greater than MEMORY_MAX_TARGET
Cause: The specified value of MEMORY_TARGET was greater than MEMORY_MAX_TARGET.

Action: Set MEMORY_TARGET less than or equal to MEMORY_MAX_TARGET.

ORA-00838: Specified value of MEMORY_TARGET is too small, needs to be at least *string*M
Cause: The specified value of MEMORY_TARGET was less than the sum of the specified values for SGA_TARGET and PGA_AGGREGATE_TARGET.

Action: Set MEMORY_TARGET to at least the recommended value.

ORA-00839: SGA_TARGET cannot be modified to the specified value
Cause: The specified value of SGA_TARGET was not compatible with current settings of PGA_AGGREGATE_TARGET and MEMORY_TARGET/MEMORY_MAX_TARGET.

Action: Set SGA_TARGET to be no more than the difference of MEMORY_TARGET/MEMORY_MAX_TARGET and PGA_AGGREGATE_TARGET. Also ensure that the current PGA memory used for non-auto workareas is low.

ORA-00840: PGA_AGGREGATE_TARGET cannot be modified to the specified value
Cause: The specified value of PGA_AGGREGATE_TARGET was not compatible with current settings of SGA_TARGET and MEMORY_TARGET/MEMORY_MAX_TARGET.

Action: Set PGA_AGGREGATE_TARGET to be no more than the difference of MEMORY_TARGET/MEMORY_MAX_TARGET and SGA_TARGET.

ORA-00841: MEMORY_TARGET not supported on this system
Cause: MEMORY_TARGET parameter was not supported on this system as shmfs was disabled.

Action: Refer to documentation for a list of supported systems.

ORA-00842: DB_BLOCK_BUFFERS cannot be set with SGA_TARGET or MEMORY_TARGET
Cause: DB_BLOCK_BUFFERS was incompatible with SGA_TARGET and MEMORY_TARGET.

Action: Remove the incompatible parameter setting.

ORA-00843: Parameter not taking MEMORY_MAX_TARGET into account
Cause: The parameter was larger than MEMORY_MAX_TARGET.

Action: Check the other error messages for additional information about the parameter. Set the parameter to a lower value than MEMORY_MAX_TARGET.

ORA-00844: Parameter not taking MEMORY_TARGET into account
Cause: The parameter was larger than MEMORY_TARGET.

Action: Check the other error messages for additional information about the parameter. Set the parameter to a lower value than MEMORY_TARGET.

ORA-00845: MEMORY_TARGET not supported on this system
Cause: The MEMORY_TARGET parameter was not supported on this operating system or /dev/shm was not sized correctly on Linux.

Action: Refer to documentation for a list of supported operating systems. Or, size /dev/shm to be at least the SGA_MAX_SIZE on each Oracle instance running on the system.

ORA-00846: could not shrink MEMORY_TARGET to specified value
Cause: Attempted to shrink MEMORY_TARGET to the specified value but did not succeed because the PGA and SGA components could not be shrunk.

Action: Do not set MEMORY_TARGET to a value below the current value without first shrinking the individual memory components.

ORA-00847: MEMORY_TARGET/MEMORY_MAX_TARGET and LOCK_SGA cannot be set together
Cause: MEMORY_TARGET/MEMORY_MAX_TARGET was set to a non-zero value and LOCK_SGA was also set

Action: Do not set MEMORY_TARGET or MEMORY_MAX_TARGET if LOCK_SGA is set to TRUE.

ORA-00848: STATISTICS_LEVEL cannot be set to BASIC with SGA_TARGET or MEMORY_TARGET
Cause: STATISTICS_LEVEL of BASIC was incompatible with SGA_TARGET and MEMORY_TARGET.

Action: Fix the incompatible parameter setting. Set STATISTICS_LEVEL to TYPICAL or ALL to use SGA_TARGET or MEMORY_TARGET.

ORA-00849: SGA_TARGET *string* cannot be set to more than MEMORY_MAX_TARGET *string*.
Cause: SGA_TARGET value was more than MEMORY_MAX_TARGET value.

Action: Set SGA_TARGET to be less than MEMORY_MAX_TARGET.

ORA-00850: PGA_AGGREGATE_TARGET *string* cannot be set to more than MEMORY_MAX_TARGET *string*.
Cause: PGA_AGGREGATE_TARGET value was more than MEMORY_MAX_TARGET value.

Action: Set PGA_AGGREGATE_TARGET to be less than MEMORY_MAX_TARGET.

ORA-00851: SGA_MAX_SIZE *string* cannot be set to more than MEMORY_TARGET *string*.
Cause: SGA_MAX_SIZE value was more than MEMORY_TARGET value.

Action: Set SGA_MAX_SIZE to be less than MEMORY_TARGET.

ORA-00852: Rolling migration monitor process terminated.
Cause: The ASM rolling migration monitor process died.

Action: Warm start the instance.

ORA-00853: SGA_MAX_SIZE *string* cannot be set to more than MEMORY_MAX_TARGET *string*.
Cause: SGA_MAX_SIZE value was more than MEMORY_MAX_TARGET value.

Action: Set SGA_MAX_SIZE to be less than MEMORY_MAX_TARGET.

ORA-00854: ASM IOServer Instance Fence monitor process terminated.
Cause: The ASM IOServer Fence monitor process died.

Action: Warm start the instance.

ORA-00855: PGA_AGGREGATE_TARGET cannot be set because of insufficient physical memory.
Cause: PGA_AGGREGATE_TARGET value was too high for the current system global area (SGA) size and amount of physical memory available.

Action: Reduce the SGA size or increase the physical memory size.

ORA-00856: PGA_AGGREGATE_TARGET cannot be set higher 50 percent of PGA_AGGREGATE_LIMIT.
Cause: PGA_AGGREGATE_TARGET value was greater than 50 percent the current value of PGA_AGGREGATE_LIMIT.

Action: Increase PGA_AGGREGATE_LIMIT or use a lower PGA_AGGREGATE_TARGET.

ORA-00857: SGA_TARGET increase not a multiple of SGA file size in hugetlbfs (per-granule) setup
Cause: The increased SGA_TARGET value was not a multiple of the file size used for creating the system global area(SGA).

Action: Review alert log for more information and set the proper value for SGA_TARGET increase.

ORA-00865: cannot perform the current operation on the same session
Cause: The current operation could not be performed on the same session.

Action: None

ORA-00866: invalid or non-existent SQL ID
Cause: The SQL ID specified was invalid or did not exist.

Action: Retry with a valid SQL ID.

ORA-00867: invalid instance ID
Cause: The instance ID specified was invalid.

Action: Retry with a valid instance ID.

ORA-00875: failed to *string* the dedicated connection broker
Cause: The dedicated connection broker could not be enabled or disabled.

Action: Check the process trace file for the reason for failure.

ORA-00876: invalid CONNECTION_BROKERS specification #*string*
Cause: The syntax for the nth CONNECTION_BROKERS specification was invalid.

Action: See the additional errors that were reported. Refer to the Oracle Database Reference manual for the correct syntax.

ORA-00877: TYPE=*string* appears in multiple CONNECTION_BROKERS specifications
Cause: Multiple CONNECTION_BROKER specifications contained the same TYPE.

Action: Specify only one specification for each TYPE.

72

ORA-00900 to ORA-01499

ORA-00900: invalid SQL statement
Cause: The statement was not recognized as a valid SQL statement. This error can occurred if the Procedural Option was not installed and a SQL statement was issued that requires this option (for example, a CREATE PROCEDURE statement). You can determine if the Procedural Option was installed by starting SQL*Plus. If the PL/SQL banner was not displayed, then the option was not installed.

Action: Correct the syntax or install the Procedural Option.

ORA-00901: invalid CREATE command
Cause: The CREATE command was not followed by a valid CREATE option.

Action: Correct the syntax.

ORA-00902: invalid datatype
Cause: The datatype entered in the CREATE or ALTER TABLE statement is not valid.

Action: Correct the syntax.

ORA-00903: invalid table name
Cause: A table or cluster name was invalid or does not exist. This message was also issued if an invalid cluster name or no cluster name was specified in an ALTER CLUSTER or DROP CLUSTER statement.

Action: Check spelling. A valid table name or cluster name must begin with a letter and may contain only alphanumeric characters and the special characters $, _, and #. The name must be less than or equal to 30 characters and cannot be a reserved word.

ORA-00904: *string*: invalid identifier
Cause: The column name entered was either missing or invalid.

Action: Enter a valid column name. A valid column name must begin with a letter, be less than or equal to 30 characters, and consist of only alphanumeric characters and the special characters $, _, and #. If it contains other characters, then it must be enclosed in double quotation marks. It may not be a reserved word.

ORA-00905: missing keyword
Cause: A required keyword was missing.

Action: Correct the syntax.

ORA-00906: missing left parenthesis
Cause: A required left parenthesis has been omitted. Certain commands, such as CREATE TABLE, CREATE CLUSTER, and INSERT, require a list of items enclosed in parentheses. Parentheses also are required around subqueries in WHERE clauses and in UPDATE table SET column = (SELECT...) statements.

Action: Correct the syntax, inserting a left parenthesis where required, and retry the statement.

ORA-00907: missing right parenthesis
Cause: A left parenthesis has been entered without a closing right parenthesis, or extra information was contained in the parentheses. All parentheses must be entered in pairs.

Action: Correct the syntax and retry the statement.

ORA-00908: missing NULL keyword
Cause: Either of the following: In a CREATE TABLE or ALTER TABLE statement, NOT was entered to specify that no null values are allowed in that column, but the keyword NULL was omitted. In the IS [NOT] NULL logical operator, the keyword NULL was not found. For example, the following statement generates this message: SELECT * FROM EMP WHERE DEPTNO IS NOT; The keyword NULL must follow the keywords IS NOT.

Action: Correct the syntax.

ORA-00909: invalid number of arguments
Cause: An Oracle function was referenced with an incorrect number of arguments. All Oracle functions, except for SYSDATE, required at least one argument.

Action: Correct the syntax of the function by entering the required number of arguments.

ORA-00910: specified length too long for its datatype
Cause: for datatypes CHAR and RAW, the length specified was > 2000; otherwise, the length specified was > 4000.

Action: use a shorter length or switch to a datatype permitting a longer length such as a VARCHAR2, LONG CHAR, or LONG RAW

ORA-00911: invalid character
Cause: The identifier name started with an ASCII character other than a letter or a number. After the first character of the identifier name, ASCII characters are allowed including "$", "#" and "_". Identifiers enclosed in double quotation marks may contain any character other than a double quotation. Alternate quotation marks (q'#...#') cannot use spaces, tabs, or carriage returns as delimiters. For all other contexts, consult the SQL Language Reference Manual.

Action: Check the Oracle identifier naming convention. If you are attempting to provide a password in the IDENTIFIED BY clause of a CREATE USER or ALTER USER statement, then it is recommended to always enclose the password in double quotation marks because characters other than the double quotation are then allowed.

ORA-00912: input parameter too long
Cause: one of your input strings was too long

Action: shorten the input parameter length

ORA-00913: too many values
Cause: The SQL statement requires two sets of values equal in number. This error occurs when the second set contains more items than the first set. For example, the

subquery in a WHERE or HAVING clause may return too many columns, or a VALUES or SELECT clause may return more columns than are listed in the INSERT.

Action: Check the number of items in each set and change the SQL statement to make them equal.

ORA-00914: missing ADD keyword
Cause: The keyword ADD does not precede one of the following: - The keyword log file in an ALTER DATABASE statement - A column element or table constraint in an ALTER TABLE statement - The keyword DATAFILE in an ALTER TABLESPACE statement

Action: Specify the keyword ADD in the ALTER statement.

ORA-00915: network access of dictionary table not currently allowed
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-00917: missing comma
Cause: A required comma has been omitted from a list of columns or values in an INSERT statement or a list of the form ((C,D),(E,F), ...).

Action: Correct the syntax.

ORA-00918: column ambiguously defined
Cause: A column name used in a join exists in more than one table and was thus referenced ambiguously. In a join, any column name that occurs in more than one of the tables must be prefixed by its table name when referenced. The column should be referenced as TABLE.COLUMN or TABLE_ALIAS.COLUMN. For example, if tables EMP and DEPT are being joined and both contain the column DEPTNO, then all references to DEPTNO should be prefixed with the table name, as in EMP.DEPTNO or E.DEPTNO.

Action: Prefix references to column names that exist in multiple tables with either the table name or a table alias and a period (.), as in the examples above.

ORA-00919: invalid function
Cause: An entry was formatted like a function call, but it was not recognizable as an Oracle function.

Action: Correct the syntax.

ORA-00920: invalid relational operator
Cause: A search condition was entered with an invalid or missing relational operator.

Action: Include a valid relational operator such as =, !=, ^=, , >, <, >=, <=, ALL, ANY, [NOT] BETWEEN, EXISTS, [NOT] IN, IS [NOT] NULL, or [NOT] LIKE in the condition.

ORA-00921: unexpected end of SQL command
Cause: The SQL command was not complete. Part of a valid command was entered, but at least one major component was omitted.

Action: Correct the syntax.

ORA-00922: missing or invalid option
Cause: An invalid option was specified in defining a column or storage clause. The valid option in specifying a column was NOT NULL to specify that the column cannot contain any

NULL values. Only constraints may follow the datatype. Specifying a maximum length on a DATE or LONG datatype also causes this error.

Action: Correct the syntax. Remove the erroneous option or length specification from the column or storage specification.

ORA-00923: FROM keyword not found where expected
Cause: In a SELECT or REVOKE statement, the keyword FROM was either missing, misplaced, or misspelled. The keyword FROM must follow the last selected item in a SELECT statement or the privileges in a REVOKE statement.

Action: Correct the syntax. Insert the keyword FROM where appropriate. The SELECT list itself also may be in error. If quotation marks were used in an alias, check that double quotation marks enclose the alias. Also, check to see if a reserved word was used as an alias.

ORA-00924: missing BY keyword
Cause: The keyword BY was omitted in a GROUP BY, ORDER BY, or CONNECT BY clause. In a GRANT statement, the keyword IDENTIFIED must also be followed by the keyword BY.

Action: Correct the syntax. Insert the keyword BY where required and then retry the statement.

ORA-00925: missing INTO keyword
Cause: An INSERT statement has been entered without the keyword INTO.

Action: Correct the syntax. Insert the keyword INTO where required and then retry the statement.

ORA-00926: missing VALUES keyword
Cause: An INSERT statement has been entered without the keyword VALUES or SELECT. Either a VALUES clause or a SELECT subquery must follow the INSERT INTO clause.

Action: Correct the syntax. Enter either a VALUES clause or a subquery after the INSERT INTO clause.

ORA-00927: missing equal sign
Cause: An equal sign has been omitted in one of the following places: - In the SET clause of an UPDATE statement - Following "!" in a search condition to signify not equal

Action: Correct the syntax. Insert the equal sign where required and retry the statement.

ORA-00928: missing SELECT keyword
Cause: A SELECT subquery must be included in a CREATE VIEW statement.

Action: Correct the syntax. Insert the required SELECT clause after the CREATE VIEW clause and then retry the statement.

ORA-00929: missing period
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-00930: missing asterisk
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-00931: missing identifier
Cause: The specified string does not contain an identifier.

Action: Correct the string argument.

ORA-00932: inconsistent datatypes: expected *string* got *string*
Cause: One of the following: - An attempt was made to perform an operation on incompatible datatypes. For example, adding a character field to a date field (dates may only be added to numeric fields) or concatenating a character field with a long field. - An attempt was made to perform an operation on a database object (such as a table or view) that was not intended for normal use. For example, system tables cannot be modified by a user. Note that on rare occasions this error occurs because a misspelled object name matched a restricted object's name. - An attempt was made to use an undocumented view.

Action: If the cause is - different datatypes, then use consistent datatypes. For example, convert the character field to a numeric field with the TO_NUMBER function before adding it to the date field. Functions may not be used with long fields. - an object not intended for normal use, then do not access the restricted object.

ORA-00933: SQL command not properly ended
Cause: The SQL statement ends with an inappropriate clause. For example, an ORDER BY clause may have been included in a CREATE VIEW or INSERT statement. ORDER BY cannot be used to create an ordered view or to insert in a certain order.

Action: Correct the syntax by removing the inappropriate clauses. It may be possible to duplicate the removed clause with another SQL statement. For example, to order the rows of a view, do so when querying the view and not when creating it. This error can also occur in SQL*Forms applications if a continuation line is indented. Check for indented lines and delete these spaces.

ORA-00934: group function is not allowed here
Cause: One of the group functions, such as AVG, COUNT, MAX, MIN, SUM, STDDEV, or VARIANCE, was used in a WHERE or GROUP BY clause.

Action: Remove the group function from the WHERE or GROUP BY clause. The desired result may be achieved by including the function in a subquery or HAVING clause.

ORA-00935: group function is nested too deeply
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-00936: missing expression
Cause: A required part of a clause or expression has been omitted. For example, a SELECT statement may have been entered without a list of columns or expressions or with an incomplete expression. This message was also issued in cases where a reserved word was misused, as in SELECT TABLE.

Action: Check the statement syntax and specify the missing component.

ORA-00937: not a single-group group function
Cause: A SELECT list cannot include both a group function, such as AVG, COUNT, MAX, MIN, SUM, STDDEV, or VARIANCE, and an individual column expression, unless the individual column expression was included in a GROUP BY clause.

Action: Drop either the group function or the individual column expression from the SELECT list or add a GROUP BY clause that includes all individual column expressions listed.

ORA-00938: not enough arguments for function
Cause: The function was referenced with too few arguments.

Action: Check the function syntax and specify the required number of arguments.

ORA-00939: too many arguments for function
Cause: The function was referenced with too many arguments.

Action: Check the function syntax and specify only the required number of arguments.

ORA-00940: invalid ALTER command
Cause: An invalid ALTER option was specified.

Action: Correct the syntax.

ORA-00941: missing cluster name
Cause: The cluster name was either missing or invalid.

Action: Specify a valid cluster name. A valid cluster name must start with a letter, be less than or equal to 30 characters, and contain only alphanumeric characters or the special characters $, _, and #. It may not be a reserved word. The name must be specified immediately following the keywords CREATE CLUSTER.

ORA-00942: table or view does not exist
Cause: The table or view entered did not exist, a synonym that was not allowed here was used, or a view was referenced where a table was required. Existing user tables and views can be listed by querying the data dictionary. Certain privileges may be required to access the table. If an application returned this message, the table the application tried to access did not exist in the database, or the application did not have access to it.

Action: Check each of the following: - the spelling of the table or view name. - that a view is not specified where a table is required. - that an existing table or view name exists. Contact the database administrator if the table needs to be created or if user or application privileges are required to access the table. Also, if attempting to access a table or view in another schema, make certain the correct schema is referenced and that access to the object is granted.

ORA-00943: cluster does not exist
Cause: The current user owns no cluster by the specified name.

Action: Specify a valid cluster name following the keyword CLUSTER, then retry the statement.

ORA-00944: insufficient number of clustered columns
Cause: An attempt was made to create a table with fewer cluster columns than were specified in the CREATE CLUSTER statement. The CLUSTER clause of a CREATE

TABLE statement must specify all cluster columns that were defined when the cluster was created.

Action: Specify all cluster columns in the CREATE TABLE statement, then retry it.

ORA-00945: specified clustered column does not exist
Cause: A column specified in the cluster clause of a CREATE TABLE statement was not a column in this table.

Action: Re-execute the statement, using the names of columns defined for the table.

ORA-00946: missing TO keyword
Cause: A GRANT statement was specified without the keyword TO, or an invalid form of the GRANT command was entered.

Action: Check the syntax for the GRANT command, insert the keyword TO where required, and retry the statement.

ORA-00947: not enough values
Cause: This error occurs when a SQL statement requires two sets of values equal in number, but the second set contains fewer items than the first set. This can occur in a WHERE or HAVING clause in which a nested SELECT returns too few columns as in: WHERE (A,B) IN (SELECT C FROM ...) Another common cause of this error is an INSERT statement in which the VALUES or SELECT clause does not contain enough values needed for the INSERT, as in INSERT INTO EMP(EMPNO,ENAME) VALUES('JONES')

Action: Check the number of items in each set and change the SQL statement to make them equal.

ORA-00948: ALTER CLUSTER statement no longer supported
Cause: The ALTER CLUSTER statement has been withdrawn.

Action: To add data to a cluster from an existing table, use the following series of SQL statements: CREATE TABLE newtable SELECT * FROM oldtable CLUSTER clustername; DROP oldtable; RENAME TABLE newtable oldtable;

ORA-00949: illegal reference to remote database
Cause: This was an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-00950: invalid DROP option
Cause: A DROP command was not followed by a valid DROP option, such as CLUSTER, DATABASE LINK, INDEX, ROLLBACK SEGMENT, SEQUENCE, SYNONYM, TABLE, TABLESPACE, or VIEW.

Action: Check the command syntax, specify a valid DROP option, then retry the statement.

ORA-00951: cluster not empty
Cause: A DROP CLUSTER statement specified a cluster that was not empty. A cluster may not be dropped if it contains any tables, unless the optional INCLUDING TABLES clause was specified. Tables may also be removed from a cluster by using the DROP TABLE command.

Action: Either specify the INCLUDING TABLES clause in the DROP CLUSTER statement or remove all tables from the cluster with the DROP TABLE command before issuing the DROP CLUSTER command.

ORA-00952: missing GROUP keyword
Cause: Groups were not implemented.

Action: No user action required.

ORA-00953: missing or invalid index name
Cause: An index name of the form [*identifier* .] *identifier* was expected but not present. If OIDINDEX clause, index name must be *identifier*.

Action: Enter an appropriate index name.

ORA-00954: missing IDENTIFIED keyword
Cause: A GRANT CONNECT statement was issued without the keyword IDENTIFIED.

Action: Check the syntax and insert the keyword IDENTIFIED after the last username. The format is GRANT CONNECT TO user-list IDENTIFIED BY password-list;

ORA-00955: name is already used by an existing object
Cause: An attempt was made to create a database object (such as a table, view, cluster, index, or synonym) that already existed. A user's database objects must have distinct names.

Action: Enter a unique name for the database object or modify or drop the existing object so it can be reused.

ORA-00956: missing or invalid auditing option
Cause: AUDIT or NOAUDIT statement contains an invalid auditing option.

Action: Use a valid option.

ORA-00957: duplicate column name
Cause: A column name was specified twice in a CREATE or INSERT statement. Column names must be unique within a table, view, or cluster.

Action: In a CREATE statement, change one of the column names to a new, unique column name. In an INSERT statement, remove one of the duplicate names.

ORA-00958: missing CHECK keyword
Cause: The keyword CHECK should follow the keyword WITH in the WITH OPTION clause of the CREATE VIEW statement.

Action: Check the statement syntax and insert the keyword CHECK where required. Then retry the statement.

ORA-00959: tablespace '*string*' does not exist
Cause: A statement specified the name of a tablespace that did not exist.

Action: Enter the name of an existing tablespace. For a list of tablespace names, query the data dictionary.

ORA-00960: ambiguous column naming in select list
Cause: A column name in the order-by list matched more than one select list columns.

Action: Remove duplicate column naming in select list.

ORA-00961: bad datetime/interval value

ORA-00962: too many group-by / order-by expressions
Cause: The group-by or order-by column list contain more than 1000 expressions.

Action: Use 1000 or less expressions in the group-by or order-by list.

ORA-00963: unsupported interval type
Cause: An unsupported interval type was encountered.

Action: Use a valid interval type.

ORA-00964: table name not in FROM list
Cause: The table name referred in the select list is not specified in the from list.

Action: Make sure the name is correctly specified and matches one of the names in the from list.

ORA-00965: column aliases not allowed for '*'
Cause: The statement is trying to alias the * expression in the select list which is not legal.

Action: Remove the alias.

ORA-00966: missing TABLE keyword
Cause: A LOCK statement was specified and the keyword TABLE was missing, misspelled, or misplaced. A LOCK statement must begin with LOCK TABLE tablename.

Action: Correct the syntax.

ORA-00967: missing WHERE keyword
Cause: The keyword WHERE in a SELECT statement was missing, misspelled, or misplaced.

Action: Correct the syntax.

ORA-00968: missing INDEX keyword
Cause: The keyword INDEX in a CREATE UNIQUE INDEX or VALIDATE INDEX statement was missing, misspelled, or misplaced.

Action: Correct the syntax.

ORA-00969: missing ON keyword
Cause: The keyword ON in a GRANT, REVOKE, or CREATE INDEX statement was missing, misspelled, or misplaced.

Action: Check syntax and spelling, and use the keyword ON where required.

ORA-00970: missing WITH keyword
Cause: The keyword START was specified without the keyword WITH. Both keywords were necessary if a START WITH clause is desired in a tree-structured query.

Action: Change the keyword START to the keywords START WITH. Then retry the statement.

ORA-00971: missing SET keyword
Cause: The keyword SET in an UPDATE statement is missing, misspelled, or misplaced.

Action: Check syntax and spelling, and use the keyword SET after the name of the table to be updated.

ORA-00972: identifier is too long
Cause: An identifier with more than 128 bytes was specified, or a password identifier longer than 30 bytes was specified.

Action: Specify at most 128 bytes for identifiers, and at most 30 bytes for password identifiers.

ORA-00973: invalid row count estimate

ORA-00974: invalid PCTFREE value (percentage)
Cause: The percentage of free space specified in a CREATE INDEX statement was not between 0 and 100. A PCTFREE value of 0 means the entire block was available. The value 100 was not useful because it means that no data may be inserted. The default was 10.

Action: Specify a PCTFREE value between 0 and 100. Then retry the statement.

ORA-00975: date + date not allowed
Cause: An attempt was made to add two date fields together. Dates may be added only to numeric fields, not to other dates.

Action: Use the Oracle function TO_NUMBER to convert one of the date fields to a numeric field before adding it to the other date field.

ORA-00976: Specified pseudocolumn or operator not allowed here.
Cause: LEVEL, PRIOR, ROWNUM, CONNECT_BY_ROOT, CONNECT_BY_ISLEAF or CONNECT_BY_ISCYCLE was specified at an illegal location.

Action: Remove LEVEL, PRIOR, ROWNUM, CONNECT_BY_ROOT, CONNECT_BY_ISLEAF or CONNECT_BY_ISCYCLE.

ORA-00977: duplicate auditing option
Cause: AUDIT or NOAUDIT statement specifies an option more than once

Action: Either use ALL with no other auditing options or make sure no option is listed more than once.

ORA-00978: nested group function without GROUP BY
Cause: A group function, such as AVG, COUNT, MAX, MIN, SUM, STDDEV, or VARIANCE, was used within another group function, as in MAX(COUNT(*)), without a corresponding GROUP BY clause.

Action: Either add a GROUP BY clause or remove the extra level of nesting.

ORA-00979: not a GROUP BY expression
Cause: The expression did not match any of the expressions in the GROUP BY clause and was not a constant or an aggregate function or an expression involving these elements.

Action: Ensure that the expression matches one of the expressions in the GROUP BY clause, or use an aggregate function to specify which value of the expression to use for each group. For more information, consult the GROUP BY section in the chapter about SELECT in the SQL Language Reference manual.

ORA-00980: synonym translation is no longer valid
Cause: A synonym did not translate to a legal target object. This could happen for one of the following reasons: 1. The target schema does not exist. 2. The target object does not exist. 3. The synonym specifies an incorrect database link. 4. The synonym is not versioned but specifies a versioned target object.

Action: Change the synonym definition so that the synonym points at a legal target object.

ORA-00981: cannot mix table and system auditing options
Cause: Table and system-wide auditing options were specified in the same AUDIT or NOAUDIT statement.

Action: You must issue table and system options in separate statements.

ORA-00982: missing plus sign
Cause: A left parenthesis appeared in a join condition, but a plus sign (+) did not follow. A left parenthesis in a join condition usually signals an outer-join specification and so a plus sign was expected to follow. To specify an outer join on a column in a join operation, follow the column reference in the join condition with a plus sign (+) enclosed in parentheses.

Action: Correct the SQL syntax and retry the statement.

ORA-00983: cannot audit or noaudit SYS user actions
Cause: An attempt was made to AUDIT or NOAUDIT SYS user actions.

Action: Execute the statement again with a valid user.

ORA-00984: column not allowed here
Cause: A column name was used in an expression where it was not permitted, such as in the VALUES clause of an INSERT statement.

Action: Check the syntax of the statement and use column names only where appropriate.

ORA-00985: invalid program name
Cause: Probably a syntax error.

Action: Correct syntax.

ORA-00986: missing or invalid group name(s)
Cause: Probably a syntax error.

Action: Correct syntax.

ORA-00987: missing or invalid username(s)
Cause: No username was specified in a GRANT statement or one of the specified usernames was invalid. Valid usernames must be specified following the keyword TO in a GRANT statement to define a user. A username must begin with a letter, consisted only of alphanumeric characters and the special characters $, _, and #, and be less than or equal to 30 characters. If it contained other characters, it must be enclosed in double quotation marks. It may not be a reserved word.

Action: Specify a valid username, or list of usernames, following the keyword TO in the GRANT statement.

ORA-00988: missing or invalid password(s)
Cause: More usernames than passwords were specified in a GRANT statement. A valid password must be specified for each username listed in the GRANT statement.

Action: Enter a valid password for each username.

ORA-00989: too many passwords for usernames given
Cause: More passwords than usernames were specified in a GRANT statement. Only one password may be entered for each username listed in the GRANT statement.

Action: Enter an equal number of usernames and passwords.

ORA-00990: missing or invalid privilege
Cause: No privileges were specified in a GRANT privilege statement, or one of the specified privileges is invalid.

Action: Enter one or more valid privileges such as SELECT, INSERT, DELETE, UPDATE, ALTER, INDEX, REFERENCES, or ALL. More than one privilege may be granted by entering the privileges in a list separated by commas (,) or by specifying the keyword ALL to grant all privileges.

ORA-00991: only MAC privileges may be granted to procedures
Cause: Object privileges or non-MAC system privileges were granted to the procedure.

Action: Only grant MAC privileges using the PROCEDURE clause.

ORA-00992: invalid format for REVOKE command
Cause: An invalid form of the REVOKE command was entered. There are two forms of the REVOKE command. The first form was used to revoke a user's database access privileges. The second form was used to revoke a user's object privileges.

Action: Check the command syntax and retry the statement.

ORA-00993: missing GRANT keyword
Cause: The keyword WITH was specified at the end of a GRANT statement without the keyword GRANT. To grant privileges to a user and the permission to grant those privileges to another user, you must specify the keywords WITH GRANT OPTION at the end of the GRANT statement.

Action: Change the keyword WITH to the keywords WITH GRANT OPTION, then retry the statement.

ORA-00994: missing OPTION keyword
Cause: The keywords WITH GRANT were specified at the end of a GRANT statement without the keyword OPTION.

Action: Change the keywords WITH GRANT to the keywords WITH GRANT OPTION. Then retry the statement.

ORA-00995: missing or invalid synonym identifier
Cause: In a CREATE or DROP SYNONYM statement, the synonym name was either missing or invalid.

Action: Check syntax and spelling. A valid synonym name must be specified immediately following the keyword SYNONYM in both statements. Valid synonym

names must begin with a letter, consist of alphanumeric characters and the special characters $, _, and #, and be less than or equal to 30 characters. They may not be reserved words.

ORA-00996: the concatenate operator is ||, not |
Cause: A single bar (|) was interpreted as an attempt to specify concatenation, but the concatenation operator was a double bar (||).

Action: Enter a double bar (||) for concatenation or remove the single bar (|) if concatenation was not intended.

ORA-00997: illegal use of LONG datatype
Cause: A value of datatype LONG was used in a function or in a DISTINCT, WHERE, CONNECT BY, GROUP BY, or ORDER BY clause. A LONG value can only be used in a SELECT clause.

Action: Remove the LONG value from the function or clause.

ORA-00998: must name this expression with a column alias
Cause: An expression or function was used in a CREATE VIEW statement, but no corresponding column name was specified. When expressions or functions are used in a view, all column names for the view must be explicitly specified in the CREATE VIEW statement.

Action: Enter a column name for each column in the view in parentheses after the view name.

ORA-00999: invalid view name
Cause: In a CREATE VIEW statement, the view name was missing or invalid.

Action: Enter a valid view name following CREATE VIEW. Valid view names must begin with a letter, consist of only alphanumeric characters and the special characters $, _, and #, be less than or equal to 30 characters, and may not be reserved words. If the view name contains other characters, it must be enclosed in double quotation marks.

ORA-01000: maximum open cursors exceeded
Cause: A host language program attempted to open too many cursors. The initialization parameter OPEN_CURSORS determined the maximum number of cursors per user.

Action: Modify the program to use fewer cursors. If this error occurs often, shut down Oracle, increase the value of OPEN_CURSORS, and then restart Oracle.

ORA-01001: invalid cursor
Cause: Either a host language program call specified an invalid cursor or the value of the MAXOPENCURSORS option in the precompiler command were too small. All cursors must be opened using the OOPEN call before being referenced in any of the following calls: SQL, DESCRIBE, NAME, DEFINE, BIND, EXEC, FETCH, and CLOSE. The Logon Data Area (LDA) must be defined by using OLON or OLOGON. If the LDA was not defined, this message was issued for the following calls: OPEN, COM, CON, ROL, and LOGOFF.

Action: Check the erroneous call statement. Specify a correct LDA area or open the cursor as required. If there is no problem with the cursor, it may be necessary to increase the MAXOPENCURSORS option value before precompiling.

ORA-01002: fetch out of sequence
Cause: This error means that a fetch has been attempted from a cursor which is no longer valid. Note that a PL/SQL cursor loop implicitly does fetches, and thus may also cause this error. There are a number of possible causes for this error, including: 1) Fetching from a cursor after the last row has been retrieved and the ORA-1403 error returned. 2) If the cursor has been opened with the FOR UPDATE clause, fetching after a COMMIT has been issued will return the error. 3) Rebinding any placeholders in the SQL statement, then issuing a fetch before reexecuting the statement.

Action: 1) Do not issue a fetch statement after the last row has been retrieved - there are no more rows to fetch. 2) Do not issue a COMMIT inside a fetch loop for a cursor that has been opened FOR UPDATE. 3) Reexecute the statement after rebinding, then attempt to fetch again.

ORA-01003: no statement parsed
Cause: A host language program call referenced a cursor with no associated parsed SQL statement. A SQL call (for example, OSQL3) must be used to pass a SQL statement to Oracle and to associate the statement with an open cursor. A cursor must already have an associated SQL statement if referenced in any of the following calls: DESCRIBE, NAME, DEFINE, BIND, EXECUTE, and FETCH.

Action: Do the SQL call, for example, OSQL, to pass the required SQL statement before referencing the cursor.

ORA-01004: default username feature not supported; logon denied
Cause: An attempt was made to use automatic logon on a system not supporting this feature.

Action: Provide the complete username and password to log on to Oracle.

ORA-01005: null password given; logon denied
Cause: An invalid password was given when logging on.

Action: Provide a valid password.

ORA-01006: bind variable does not exist
Cause: A program issued a BIND call for a variable not listed in the associated SQL statement. Only those variables prefixed by either a colon (:) or ampersand (&) in the SQL statement may be referenced in a BIND call, OBIND or OBINDN. This error may also be caused by a mismatch between a Precompiler program and the related library, SQLLIB.

Action: Modify the BIND call to reference one of the substitute variables specified in the associated SQL statement.

ORA-01007: variable not in select list
Cause: A reference was made to a variable not listed in the SELECT clause. In OCI, this can occur if the number passed for the position parameter was less than one or greater than the number of variables in the SELECT clause in any of the following calls: DESCRIBE, NAME, or DEFINE. In SQL*Forms or SQL*Report, specifying more variables in an INTO clause than in the SELECT clause also causes this error.

Action: Determine which of the problems listed caused the problem and take appropriate action.

ORA-01008: not all variables bound
Cause: A SQL statement containing substitution variables was executed without all variables bound. All substitution variables must have a substituted value before the SQL statement was executed.

Action: In OCI, use an OBIND or OBINDN call to substitute the required values.

ORA-01009: missing mandatory parameter
Cause: A host language program call did not pass all required parameters.

Action: Check the syntax for the call and enter all required parameters.

ORA-01010: invalid OCI operation
Cause: One of the following: 1) You attempted an invalid OCI operation. 2) You are using an Oracle client application linked with version 7.1 (or higher) libraries, the environment variable ORA_ENCRYPT_LOGIN is set to TRUE, and you attempted to connect to a version 7.0 (or lower) Oracle Server. 3) You are connected to a version 7.1 (or higher) Oracle Server, the initialization parameter DBLINK_ENCRYPT_LOGIN is set to TRUE, and you attempted to use a database link pointing to a version 7.0 (or lower) Oracle Server. 4) You are connected to a version 9.0.2(or higher) Oracle Server and you attempted to use a database link pointing to a version 9.0.1(or lower) Oracle Server for distributed autonomous transaction.

Action: For the above causes: 1) Do not use the invalid OCI operation. 2) If you do not wish to use encrypted connect passwords in your distributed database, set ORA_ENCRYPT_LOGIN to FALSE. If you wish to use encrypted connect passwords, you must upgrade all Oracle Servers to version 7.1 (or higher). 3) If you do not wish to use encrypted database links in your distributed database, set DBLINK_ENCRYPT_LOGIN to FALSE. If you wish to use encrypted database links, you must upgrade all Oracle Servers to version 7.1 (or higher). 4) Do not attempt distributed autonomous transaction on version 9.0.1(or lower) Oracle Server.

ORA-01011: Cannot use v7 compatibility mode when talking to v6 server
Cause: An attempt was made to use Oracle7 compatibility mode when accessing Oracle version 6.

Action: Use v6 sql language type. You may need to use the 'SET COMPATIBILITY V6' command

ORA-01012: not logged on
Cause: A host language program issued an Oracle call, other than OLON or OLOGON, without being logged on to Oracle. This occurred when a user process attempts to access the database after the instance it was connected to terminates, forcing the process to disconnect.

Action: Log on to Oracle, by calling OLON or OLOGON, before issuing any Oracle calls. When the instance has been restarted, retry the action.

ORA-01013: user requested cancel of current operation
Cause: The user interrupted an Oracle operation by entering CTRL-C, Control-C, or another canceling operation. This forces the current operation to end. This is an informational message only.

Action: Continue with the next operation.

ORA-01014: ORACLE shutdown in progress
Cause: A user tried to log on to Oracle while an instance shutdown was in progress. Oracle logons were disabled while Oracle was being shut down.

Action: Wait until Oracle is brought back up before attempting to log on.

ORA-01015: logon called recursively
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-01016: This function can be called only after a fetch
Cause: Cursor in an invalid state.

Action: Make sure that the oci/upi function is called after fetch.

ORA-01017: invalid username/password; logon denied
Cause: An invalid username or password was entered in an attempt to log on to Oracle. The username and password must be the same as was specified in a GRANT CONNECT statement. If the username and password were entered together, the format was: username/password.

Action: Enter a valid username and password combination in the correct format.

ORA-01018: column does not have a LONG datatype
Cause: An attempt was made to fetch data using the LONG fetch option, but the specified column was not LONG.

Action: Re-execute the fetch without the LONG fetch option or create the table with a LONG column.

ORA-01019: unable to allocate memory in the user side
Cause: The user side memory allocator returned error.

Action: Increase the processes heap size or switch to the old set of calls.

ORA-01020: unknown context state
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-01021: invalid context size specified
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-01022: database operation not supported in this configuration
Cause: The attempted database operation does not conform to the user programming interface (UPI) for the two communicating ORACLE servers.

Action: You may need to upgrade one or more of your ORACLE servers or re-link your user side application with new libraries. Report the problem to Worldwide Customer Support.

ORA-01023: Cursor context not found (Invalid cursor number)
Cause: The cursor number is not a valid open cursor.

Action: Make sure that the cursor is open.

ORA-01024: invalid datatype in OCI call
Cause: An OCI program call specified an invalid datatype. In OCI calls, Oracle datatypes were specified as numbers between 1 and 7.

Action: Check the datatype description and enter the correct number for the datatype.

ORA-01025: UPI parameter out of range
Cause: An integer parameter to a upi function is out of range.

Action: This usually indicates an error in a tool built on top of the oracle dbms. Report the error to your customer support representative.

ORA-01026: multiple buffers of size > 4000 in the bind list
Cause: More than one long buffer in the bind list.

Action: Change the buffer size to be less than 4000 for the bind variable bound to a normal column.

ORA-01027: bind variables not allowed for data definition operations
Cause: An attempt was made to use a bind variable in a SQL data definition operation.

Action: Such bind variables are not allowed.

ORA-01028: internal two task error
Cause: Received send long message but don't have the cursor context.

Action: Report as a bug.

ORA-01029: internal two task error
Cause: Received a request to send the long again when there is no long

Action: Report as a bug

ORA-01030: SELECT ... INTO variable does not exist
Cause: The SELECT... INTO specified in the bind call does not correspond to a variable in the SQL statement.

Action: If it is not possible to correct the statement, call customer support.

ORA-01031: insufficient privileges
Cause: An attempt was made to perform a database operation without the necessary privileges.

Action: Ask your database administrator or designated security administrator to grant you the necessary privileges

ORA-01032: no such userid
Cause: This is an internal error message related to Export/Import.

Action: Contact customer support.

ORA-01033: ORACLE initialization or shutdown in progress
Cause: An attempt was made to log on while Oracle is being started up or shutdown.

Action: Wait a few minutes. Then retry the operation.

ORA-01034: ORACLE not available
Cause: Oracle was not started up. Possible causes include the following: - The SGA requires more space than was allocated for it. - The operating-system variable pointing to the instance is improperly defined.

Action: Refer to accompanying messages for possible causes and correct the problem mentioned in the other messages. If Oracle has been initialized, then on some operating systems, verify that Oracle was linked correctly. See the platform specific Oracle documentation.

ORA-01035: ORACLE only available to users with RESTRICTED SESSION privilege
Cause: Logins are disallowed because an instance started in restricted mode. Only users with RESTRICTED SESSION system privilege can log on.

Action: Request that Oracle be restarted without the restricted option or obtain the RESTRICTED SESSION system privilege.

ORA-01036: illegal variable name/number
Cause: Unable to find bind context on user side

Action: Make sure that the variable being bound is in the sql statement.

ORA-01037: maximum cursor memory exceeded
Cause: Attempting to process a complex sql statement which consumed all available memory of the cursor.

Action: Simplify the complex sql statement.

ORA-01038: cannot write database file version *string* with ORACLE version *string*
Cause: Attempting to write datafile headers in an old format. The new format can not be used until after the database has been verified as being compatible with this software version.

Action: Open the database to advance to the new file formats, then repeat the operation. If the operation is required before the database can be opened, then use the previous software release to do the operation.

ORA-01039: insufficient privileges on underlying objects of the view
Cause: Attempting to explain plan on other people's view without the necessary privileges on the underlying objects of the view.

Action: Get necessary privileges or do not perform the offending operation.

ORA-01040: invalid character in password; logon denied
Cause: There are multibyte characters in the password or some characters in the password are not in US7ASCII range.

Action: Resubmit password with valid characters.

ORA-01041: internal error. hostdef extension doesn't exist
Cause: Pointer to hstdef extension in hstdef is null.

Action: Report as a bug

ORA-01042: detaching a session with open cursors not allowed
Cause: An attempt was made to detach a seesio n which had open cursors.

Action: Close all the cursors before detaching the session.

ORA-01043: user side memory corruption [*string*], [*string*], [*string*], [*string*]
Cause: The application code corrupted some of the usr memory used by oracle

Action: Make sure that the application code is not overwriting memory.

ORA-01044: size *string* of buffer bound to variable exceeds maximum *string*
Cause: An attempt was made to bind a buffer whose total size would exceed the maximum size allowed. Total array size for arrays is calculated as: (element_size)*(number of elements)

Action: Reduce buffer size.

ORA-01045: user *string* lacks CREATE SESSION privilege; logon denied
Cause: A connect was attempted to a userid which does not have create session privilege.

Action: Grant the user CREATE SESSION privilege.

ORA-01046: cannot acquire space to extend context area
Cause: Oracle could not extend the current area any further because the operating system would not supply any more space. A system-specific message should appear following this message.

Action: Close some cursors and try again or check operating system quotas to use more virtual memory. See your operating system-specific Oracle documentation.

ORA-01047: The above error occurred in schema=*string*, package=*string*, procedure=*string*
Cause: This message was displayed after a previous message to provide more specific information.

Action: Informational message

ORA-01048: Couldn't find the specified procedure in the given context
Cause: The procedure user specified in deferred RPC doesn't exist.

Action: Check to make sure that the procedure exists and is visible to the replication process.

ORA-01049: Bind by name is not spupportted in streamed RPC
Cause: A newer version of server is talking with this version requesting an operation not supported in this version.

Action: You may need to upgrade one or more of your Oracle servers or relink your user application with new libraries.

ORA-01050: cannot acquire space to open context area
Cause: Oracle could not open a new context area because the operating system would not supply any more space. A system-specific message should appear following this message.

Action: Close some cursors and try again or check operating system quotas to use more virtual memory. See your operating system-specific Oracle documentation.

ORA-01051: deferred rpc buffer format invalid
Cause: The deferred rpc data in sys.def$_call is corrupted.

Action: Contact your customer support representive.

ORA-01052: required destination LOG_ARCHIVE_DUPLEX_DEST is not specified
Cause: A valid destination for parameter LOG_ARCHIVE_DUPLEX_DEST was not specified when parameter LOG_ARCHIVE_MIN_SUCCEED_DEST was set to two.

Action: Either specify a value for parameter LOG_ARCHIVE_DUPLEX_DEST, or reduce the value for parameter LOG_ARCHIVE_MIN_SUCCEED_DEST to one.

ORA-01053: user storage address cannot be read
Cause: A bind variable or other user area could not be read by Oracle.

Action: Check that binds are done correctly on valid user buffers, then retry the operation.

ORA-01054: user storage address cannot be written
Cause: A define, FETCH... INTO or SELECT... INTO, variable or other user area could not be written to by Oracle.

Action: Check that INTO variables and indicators are correctly specified. Then retry the operation.

ORA-01055: Object datatypes not supported for bind or define in this mode
Cause: Bind or Define used for objects with an invalid mode

Action: Change the mode.

ORA-01057: invalid or ambiguous block.field reference in user exit
Cause: The reference to a block.field identifier in a user exit was incorrect or ambiguous, probably because it was misspelled or incomplete.

Action: Check syntax and identifier spelling. Then correct the reference.

ORA-01058: internal New Upi interface error
Cause: Attempt to delete nonexistent hstdef extension.

Action: Report as a bug.

ORA-01059: parse expected before a bind or execute
Cause: The client application attempted to bind a variable or execute a cursor opened in a PL/SQL block before the statement was parsed.

Action: Ensure the statement is parsed before a bind or execute.

ORA-01060: array binds or executes not allowed
Cause: The client application attempted to bind an array of cursors or attempted to repeatedly execute against a PL/SQL block with a bind variable of type cursor.

Action: Bind a single cursor or execute the PL/SQL block once.

ORA-01061: cannot start up a V8 server using a V7 client application
Cause: You are using an Oracle client application linked with version 7 (or lower) libraries and you attempted to start up a V8 (or higher) server.

Action: Use a client application linked with V8 (or higher) libraries.60

ORA-01062: unable to allocate memory for define buffer
Cause: Exceeded the maximum buffer size for current plaform

Action: Use piecewise fetch with a smaller buffer size

ORA-01063: fetch row count exceeds MINSWORDMAXVAL
Cause: The total number of rows requested from the server exceeded the maximum specified in MINSWORDMAXVAL.

Action: Fix the number of rows to fetch or prefetch for the fetch interface call.

ORA-01064: invalid value '*string*' for parameter INSTANCE_TYPE in XE Edition
Cause: A value other than RDBMS was specified for the INSTANCE_TYPE parameter in Oracle Database Express Edition (XE).

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) to bring up any other instance type.

ORA-01070: Using an old version of Oracle for the server
Cause: Using pre 7.0.10.1 version of oracle for server

Action: Upgrade server to post 7.0.10.1 version

ORA-01071: cannot perform operation without starting up ORACLE
Cause: An attempt was made to perform an operation before Oracle was started.

Action: Start Oracle. Then retry the operation.

ORA-01072: cannot stop ORACLE; ORACLE not running
Cause: An attempt was made to stop Oracle, but Oracle was not running.

Action: No action required.

ORA-01073: fatal connection error: unrecognized call type
Cause: An illegal internal operation was attempted.

Action: Contact your customer support representative.

ORA-01074: cannot shut down ORACLE; inside a login session - log off first
Cause: An attempt was made to shut down Oracle inside a logon session.

Action: Log off before shutting down Oracle.

ORA-01075: you are currently logged on
Cause: Attempt to login while logged in.

Action: No action required.

ORA-01076: multiple logons per process not yet supported
Cause: Oracle did not support multiple logons per process.

Action: No action required.

ORA-01077: background process initialization failure
Cause: Failure during initialization of ORACLE background processes.

Action: Further diagnostic information should be in the error stack or in the trace file.

ORA-01078: failure in processing system parameters
Cause: Failure during processing of INIT.ORA parameters during system startup.

Action: Further diagnostic information should be in the error stack.

ORA-01079: ORACLE database was not properly created, operation aborted
Cause: There was an error when the database or control file was created.

Action: Check what error was signaled when the database was first created or when the control file was recreated. Take appropriate actions to recreate the database or a new control file.

ORA-01080: error in shutting down ORACLE
Cause: Failure during system shutdown.

Action: Further diagnostic information should be in the error stack.

ORA-01081: cannot start already-running ORACLE - shut it down first
Cause: An attempt was made to start Oracle while it was already running.

Action: Shut down Oracle first, if you want to restart it.

ORA-01082: 'row_locking = always' requires the transaction processing option
Cause: "row_locking = always" is specified in INIT.ORA file. This feature is not supported by ORACLE without the transaction processing option.

Action: Remove it from INIT.ORA file or set it to "default" or "intent".

ORA-01083: value of parameter "*string*" is inconsistent with that of other instances
Cause: The value of the given parameter is required to be the same for all instances in the cluster database configuration. ROW_LOCKING and SERIALIZABLE are 2 examples.

Action: Change the value of the parameter in INIT.ORA file to match that of other cluster database instances.

ORA-01084: invalid argument in OCI call
Cause: The failing OCI call contains an argument with an invalid value.

Action: Use valid argument values. For more information, see the Programmer's Guide to the Oracle Call Interfaces and the appropriate programming language supplement.

ORA-01085: preceding errors in deferred rpc to "*string*.*string*.*string*"
Cause: Errors were encountered when the named procedure was executed as a deferred remoted procedure call.

Action: Correct the cause of the preceding errors.

ORA-01086: savepoint '*string*' never established in this session or is invalid
Cause: An attempt was made to roll back to a savepoint that was never established in this session, or was invalid.

Action: Try rolling back to the savepoint from the session where it is established.

ORA-01087: cannot start up ORACLE - currently logged on
Cause: An attempt was made to start up Oracle by a user who was currently logged on.

Action: Logoff and then issue the STARTUP command.

ORA-01088: shutdown in progress - operation not permitted until restart
Cause: The SHUTDOWN command was used to shut down a running Oracle instance but the shutdown operation was not complete.

Action: Wait for the instance to be restarted or contact your database administrator.

ORA-01089: immediate shutdown or close in progress - no operations are permitted
Cause: The SHUTDOWN IMMEDIATE command was used to shut down a running Oracle instance, or CLOSE IMMEDIATE was used to shut down a pluggable database, so your operations have been terminated.

Action: Wait for the instance to be restarted, or contact your DBA.

ORA-01090: shutdown in progress - connection is not permitted
Cause: The SHUTDOWN command was used to shut down a running ORACLE instance, so you cannot connect to ORACLE.

Action: Wait for the instance to be restarted, or contact your DBA.

ORA-01091: failure during startup force
Cause: Unable to destroy the old SGA.

Action: Manually remove the old SGA and reissue the STARTUP command

ORA-01092: ORACLE instance terminated. Disconnection forced
Cause: The instance this process was connected to was terminated abnormally, probably via a shutdown abort. This process was forced to disconnect from the instance.

Action: Examine the alert log for more details. When the instance has been restarted, retry action.

ORA-01093: ALTER DATABASE CLOSE only permitted with no sessions connected
Cause: There is at least one more session other than the current one logged into the instance. ALTER DATABASE CLOSE is not permitted.

Action: Find the other sessions and log them out and resubmit the command

ORA-01094: ALTER DATABASE or ALTER PLUGGABLE DATABASE CLOSE in progress. Connections not permitted
Cause: An attempt was made to connect while the database was being closed with the ALTER DATABASE CLOSE statement.

Action: Attempt to connect again when the database is open. Contact the database administrator to find out when the database will be open.

ORA-01095: DML statement processed zero rows
Cause: During a call to OTEX, an update, delete, or insert statement being executed processed zero rows. The execution of statements by OTEX was halted at this point.

Action: Caller can either do a rollback or ignore the message and execute the rest of the cursors in the cursor array.

ORA-01096: program version (*string*) incompatible with instance (*string*)
Cause: A program is trying to connect to an instance using a different version of code than the database was started with. This is not allowed.

Action: Either relink the program with the same version as the database or restart the database using the old version of code.

ORA-01097: cannot shutdown while in a transaction - commit or rollback first
Cause: An attempt was made to shut down the database while a transaction was in progress.

Action: Either commit or rollback the current transaction and then attempt to shut down the database.

ORA-01098: program Interface error during Long Insert
Cause: The application program interface could not insert or update a LONG column because of an internal error when a TTCGETV call fails. For example, a network read error or one of the parameters passed to the call is invalid.

Action: Retry the insert or update.

ORA-01099: cannot mount database in SHARED mode if started in single process mode
Cause: An attempt was made to mount a database in parallel mode with the initialization parameter SINGLE_PROCESS set to TRUE.

Action: Either mount the database in EXCLUSIVE mode or set the initialization parameter SINGLE_PROCESS to FALSE before starting the instance in parallel (shared) mode.

ORA-01100: database already mounted
Cause: A database is already mounted in this instance.

Action: No action is required.

ORA-01101: database being created currently mounted by some other instance
Cause: Some other instance has the database of same name currently mounted and you are trying to create it.

Action: Either change the database name or shutdown the other instance.

ORA-01102: cannot mount database in EXCLUSIVE mode
Cause: Some other instance has the database mounted exclusive or shared.

Action: Shutdown other instance or mount in a compatible mode.

ORA-01103: database name '*string*' in control file is not '*string*'
Cause: The database name in the control file does not match your database name.

Action: Either find the correct control file or change your database name.

ORA-01104: number of control files (*string*) does not equal *string*
Cause: The number of control files used by this instance disagrees with the number of control files in an existing instance.

Action: Check to make sure that all control files are listed.

ORA-01105: mount is incompatible with mounts by other instances
Cause: An attempt to mount the database discovered that another instance mounted a database by the same name, but the mount is not compatible. Additional errors are reported explaining why.

Action: See accompanying errors.

ORA-01106: database must be closed before dismounting
Cause: An attempt was made to dismount a database before it was closed.

Action: Close the database, then retry the operation.

ORA-01107: database must be mounted for media recovery
Cause: An attempt to perform media recovery was made but the database is not mounted.

Action: Mount the database.

ORA-01108: file *string* is in backup or media recovery
Cause: Either media recovery is actively being applied to the file, or it is being backed up while the database is in NOARCHIVELOG mode. It cannot be used for normal database access or crash recovery.

Action: Complete or cancel the media recovery session or backup.

ORA-01109: database not open
Cause: A command was attempted that requires the database to be open.

Action: Open the database and try the command again

ORA-01110: data file *string*: '*string*'
Cause: Reporting file name for details of another error. The reported name can be of the old file if a data file move operation is in progress.

Action: See associated error message.

ORA-01111: name for data file *string* is unknown - rename to correct file
Cause: The data file was missing from a CREATE CONTROLFILE command or backup control file recovery was done with a control file that was saved before the file was created.

Action: Rename the MISSING file to the name of the real file.

ORA-01112: media recovery not started
Cause: An attempt to continue media recovery is being made but media recovery was not started.

Action: None

ORA-01113: file *string* needs media recovery
Cause: An attempt was made to online or open a database with a file that is in need of media recovery.

Action: First apply media recovery to the file.

ORA-01114: IO error writing block to file *string* (block # *string*)
Cause: The device on which the file resides is probably offline. If the file is a temporary file, then it is also possible that the device has run out of space. This could happen because disk space of temporary files is not necessarily allocated at file creation time.

Action: Restore access to the device or remove unnecessary files to free up space.

ORA-01115: IO error reading block from file *string* (block # *string*)
Cause: Device on which the file resides is probably offline

Action: Restore access to the device

ORA-01116: error in opening database file *string*
Cause: Usually the file is not accessible.

Action: Restore the database file.

ORA-01117: adding file '*string*' with illegal block size: *string*; max limit is *string*; min limit is *string*
Cause: An attempt was made to add a database file with a block size that was greater than the maximum block size allowed or less than the minimum block size allowed or an invalid value (that is, not power of 2) in the allowed range.

Action: Retry the DDL command with a valid block size.

ORA-01118: cannot add any more database files: limit of *string* exceeded
Cause: There is no more room in the control file for adding database files.

Action: Resize the control file or drop other tablespaces.

ORA-01119: error in creating database file '*string*'
Cause: Usually due to not having enough space on the device.

Action: Decrease the size of the requested file or allocate a file on another device with more available space. If a file size was not specified in the statement, then specify a file size smaller than the available space on the device.

ORA-01120: cannot remove online database file *string*
Cause: Attempting to drop a datafile when it is online

Action: Take file offline before dropping.

ORA-01121: cannot rename database file *string* - file is in use or recovery
Cause: Attempted to use ALTER DATABASE RENAME to rename a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions.

ORA-01122: database file *string* failed verification check
Cause: The information in this file is inconsistent with information from the control file. See accompanying message for reason.

Action: Make certain that the db files and control files are the correct files for this database.

ORA-01123: cannot start online backup; media recovery not enabled
Cause: An attempt to start backup of an on-line tablespace failed because media recovery is not enabled.

Action: Enable media recovery and retry this operation.

ORA-01124: cannot recover data file *string* - file is in use or recovery
Cause: An attempt to do media recovery found that the file was not available for recovery. Either it is online and the database is open in some instance, or another process is curently doing media recovery on the file.

Action: Do not do media recovery.

ORA-01125: cannot disable media recovery - file *string* has online backup set
Cause: An attempt to disable media recovery found that an online backup is still in progress.

Action: End the backup of the offending tablespace and retry this command.

ORA-01126: database must be mounted in this instance and not open in any instance
Cause: An operation failed because the database was not mounted in exclusive mode.

Action: Shut down Oracle and mount the database in exclusive mode.

ORA-01127: database name '*string*' exceeds size limit of *string* characters
Cause: The specified database name was too long.

Action: Shorten the database name to eight characters or fewer, then retry the operation.

ORA-01128: cannot start online backup - file *string* is offline
Cause: An attempt to start an online backup found that one of the files is offline.

Action: Bring the offending files online and retry this command or do a cold backup.

ORA-01129: user's default or temporary tablespace does not exist
Cause: The user's default or temporary tablespace was dropped.

Action: Reassign the default or temporary tablespace.

ORA-01130: database file version *string* incompatible with ORACLE version *string*
Cause: The named datafile was created under an incompatible version of Oracle, or the file was invalid or non-existent.

Action: Shut down and restart the correct version of Oracle or check the references to the datafile and make sure it exists.

ORA-01131: DB_FILES system parameter value *string* exceeds limit of *string*
Cause: The specified value of the initialization parameter DB_FILES was too large.

Action: Reduce the value of the DB_FILES parameter and retry the operation.

ORA-01132: length of database file name '*string*' exceeds limit of *string* characters
Cause: The specified datafile name was too long.

Action: Shorten the file name and retry the operation.

ORA-01133: length of log file name '*string*' exceeds limit of *string* characters
Cause: The specified redo log file name was too long.

Action: Shorten the file name and retry the operation.

ORA-01134: database mounted exclusive by another instance
Cause: An attempt to access a database failed because it was mounted in exclusive mode by another instance.

Action: Either shut down the other instance or wait for the other instance to either close the database or mount it in parallel mode, before retrying the operation.

ORA-01135: file *string* accessed for DML/query is offline
Cause: Attempted to access a data file that was offline.

Action: Bring the data file back online

ORA-01136: specified size of file *string* (*string* blocks) is less than original size of *string* blocks
Cause: A file size was specified in the AS clause of ALTER DATABASE CREATE DATAFILE, and the size was smaller the the size needed

Action: Create the file with a larger size.

ORA-01137: data file *string* is still in the middle of going offline
Cause: It was not possible to get the lock for a file that is offline when attempting to bring it online. The most likely cause is that the lock is still held by the instance that is took it offline.

Action: Wait a bit and try to online the file again.

ORA-01138: database must either be open in this instance or not at all
Cause: The requested operation can not be done when the database is mounted but not open in this instance, and another instance has the database open.

Action: Execute the operation in an open instance, open the datbase in this instance, or close the database in the other instances.

ORA-01139: RESETLOGS option only valid after an incomplete database recovery
Cause: The RESETLOGS option was given in ALTER DATABASE OPEN, but there has been no incomplete recovery session.

Action: Retry the ALTER DATABASE OPEN without specifying RESETLOGS

ORA-01140: cannot end online backup - all files are offline or readonly
Cause: All the files were found to be offline or readonly when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

ORA-01141: error renaming data file *string* - new file '*string*' not found
Cause: An attempt to change a data file's name in the control file failed because no file was found with the new name.

Action: Make sure that the data file has been properly renamed by the operating system and retry.

ORA-01142: cannot end online backup - none of the files are in backup
Cause: None of the files were found to be in online backup when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

ORA-01143: cannot disable media recovery - file *string* needs media recovery
Cause: An attempt to disable media recovery found a file that needs media recovery, thus media recovery cannot be disabled.

Action: Recover the offending file or drop the tablespace it belongs to and retry this command.

ORA-01144: File size (*string* blocks) exceeds maximum of *string* blocks
Cause: Specified file size is larger than maximum allowable size value.

Action: Specify a smaller size.

ORA-01145: offline immediate disallowed unless media recovery enabled
Cause: ALTER TABLESPACE ... OFFLINE IMMEDIATE or ALTER DATABASE DATAFILE ... OFFLINE is only allowed if database is in ARCHIVELOG mode.

Action: Take tablespace offline normally or shutdown abort. Reconsider your backup strategy. You could do this if you were archiving your logs.

ORA-01146: cannot start online backup - file *string* is already in backup
Cause: When starting an online backup it was noticed that an online backup was already started for one of the data files.

Action: End the first backup before beginning another.

ORA-01147: SYSTEM tablespace file *string* is offline
Cause: A file belonging to the SYSTEM tablespace has been marked offline by the DBA. The database cannot be started until all SYSTEM tablespace files are online and openable.

Action: Bring the file online.

ORA-01148: cannot refresh file size for datafile *string*
Cause: An operating system or device error occurred when retrieving the file's size. The device on which the file resides may have been offline.

Action: Restore access to the device.

ORA-01149: cannot shutdown - file *string* has online backup set
Cause: An attempt to shutdown normally found that an online backup is still in progress.

Action: End the backup of the offending tablespace and retry this command.

ORA-01150: cannot prevent writes - file *string* has online backup set
Cause: An attempt to make a tablespace read only or offline normal found that an online backup is still in progress. It will be necessary to write the file header to end the backup, but that would not be allowed if this command succeeded.

Action: End the backup of the offending tablespace and retry this command.

ORA-01151: use media recovery to recover block, restore backup if needed
Cause: Error 1172 occurred.

Action: This is additional information for error 1172.

ORA-01152: file *string* was not restored from a sufficiently old backup
Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the database consistent. This file is still in the future of the last log applied. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the database is consistent or restore the database file from an older backup and repeat recovery.

ORA-01153: an incompatible media recovery is active
Cause: Attempted to start an incompatible media recovery or open resetlogs during media recovery or RMAN backup . Media recovery sessions are incompatible if they attempt to recover the same data file. Incomplete media recovery or open resetlogs is incompatible with any media recovery. Backup or restore by RMAN is incompatible with open resetlogs

Action: Complete or cancel the other media recovery session or RMAN backup

ORA-01154: database busy. Open, close, mount, and dismount not allowed now
Cause: Some operation is in progress that expects the opened/mounted state of this instance to remain the same.

Action: Wait for the operation to complete then retry. If attempting to do a shutdown, SHUTDOWN ABORT will work. If this is a shutdown of a standby database that is operating in NO DATA LOSS mode, you must shutdown the primary database first.

ORA-01155: the database is being opened, closed, mounted or dismounted
Cause: The requested operation needs the instance to be in a particular state but the state is being changed.

Action: Wait for the open, close, mount, or dismount to complete then retry the operation. If necessary, a SHUTDOWN ABORT will always work.

ORA-01156: recovery or flashback in progress may need access to files
Cause: Either media recovery, instance recovery, or flashback was in progress. The recovery or flashback in progress may need the files to which this operation is being applied.

Action: Wait for recovery or flashback to complete.

ORA-01157: cannot identify/lock data file *string* - see DBWR trace file
Cause: The background process was either unable to find one of the data files or failed to lock it because the file was already in use. The database will prohibit access to this file but other files will be unaffected. However the first instance to open the database will need to access all online data files. Accompanying error from the operating system describes why the file could not be identified.

Action: Have operating system make file available to database. Then either open the database or do ALTER SYSTEM CHECK DATAFILES.

ORA-01158: database *string* already mounted
Cause: Another instance has a database by this name mounted.

Action: Find which instance is still running. Perhaps you have not lost the control files after all.

ORA-01159: file is not from same database as previous files - wrong database id
Cause: Not all of the files specified in CREATE CONTROLFILE are from the same database. The database ID of this file does not match that from the first file specified.

Action: Please double check the list of files provided to the CREATE

ORA-01160: file is not a *string*
Cause: The named file in the DATAFILE or LOGFILE section of the CREATE CONTROLFILE command does not appear to be as stated.

Action: Please double check the mentioned file.

ORA-01161: Database name *string* in the file header does not match *string* in the DATABASE clause.
Cause: The database name provided in the DATABASE clause did not match the database name found in the file header.

Action: Ensure consistency of database names. Use the SET DATABASE clause if you are renaming the database.

ORA-01162: block size *string* in file header does not match configured block sizes
Cause: CREATE CONTROLFILE discovered that the block size for this file is incompatible with any of the configured cache blocksizes in the INIT.ORA file.

Action: Configure the appropriate cache for this block size using one of the various (db_2k_cache_size, db_4k_cache_size, db_8k_cache_size, db_16k_cache_size, db_32K_cache_size) parameters.

ORA-01163: SIZE clause indicates *string* (blocks), but should match header *string*
Cause: The size specified in bytes in the SIZE clause of the CREATE CONTROLFILE statement does not equate to the number of blocks recorded in the header.

Action: Specify the correct filename and size (in bytes).

ORA-01164: MAXLOGFILES may not exceed *string*
Cause: MAXLOGFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGFILES

ORA-01165: MAXDATAFILES may not exceed *string*
Cause: MAXDATAFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXDATAFILES

ORA-01166: file number *string* is larger than *string* (*string*)
Cause: File mentioned in CREATE CONTROLFILE has a file number which is larger than that specified for MAXDATAFILES or MAXLOGFILES.

Action: Increase the maximum specified on the command line.

ORA-01167: two files are the same file/group number or the same file
Cause: There is an overlap of file numbers in the files specified on the command line or the same file is specified twice. If they are not the exact same file then one is likely to be a backup of the other. If they are two members of the same log they must be specified together in a group file spec. This message will also appear if the same control file appears more than once in the control_files parameter in the init.ora file. If this happens, check for additional error messages.

Action: Confirm that the file mentioned is not a repeat of a file already mentioned in the command. If they are different files then omit the earlier backup. If they are members of the same log, insure they are in the same group file specification. If this message appears because of a duplicate control file, check the control_files parameter in the init.ora file and see if a file is specified more than once. If all files names appear to be unique, check to make sure that the actual control files themselves are unique. For example, in UNIX check for a symbolic or a hard link to another control file in the list.

ORA-01168: physical block size *string* does not match size *string* of other members
Cause: The file is located on a device with a different physical block size than the other members in the group

Action: Use a physical device with matching block size.

ORA-01169: DATAFILE number 1 not found. Must be present
Cause: Datafile number 1 was not specified in a CREATE CONTROLFILE command.

Action: Locate datafile number 1 and resubmit the CREATE CONTROLFILE command.

ORA-01170: file not found '*string*'
Cause: ALL datafiles and, if NORESETLOGS, ALL logfiles MUST be accessible by the process for CREATE CONTROLFILE.

Action: The file specified probably contains a typing error. Double check command and the existance of all files and then resubmit.

ORA-01171: datafile *string* going offline due to error advancing checkpoint
Cause: The checkpoint in the file header could not be advanced. See accompanying errors for the reason. The datafile will be taken offline the same as for a write error of a data block.

Action: See accompanying errors for details. Restore access to the file, do media recovery, and bring it back online.

ORA-01172: recovery of thread *string* stuck at block *string* of file *string*
Cause: Crash recovery or instance recovery could not apply a change to a block because it was not the next change. This can happen if the block was corrupted and then repaired during recovery.

Action: Do a RECOVER DATAFILE for the file containing the block. If this does not resolve the problem then restore the file from a backup and recover it.

ORA-01173: data dictionary indicates missing data file from system tablespace
Cause: Either the database has been recovered to a point in time in the future of the control file or a datafile from the system tablespace was omitted from the create control file command previously issued.

Action: For the former problem you need to recover the database from a more recent control file. For the latter problem, simply recreate the control file checking to be sure that you include all the datafiles in the system tablespace.

ORA-01174: DB_FILES is *string* buts needs to be *string* to be compatible
Cause: The maximum number of database files supported by this instance is not the same as for the other instances. All instances must be able to open all the files any instance can open.

Action: Change the value of the DB_FILES parameter to be compatible

ORA-01175: data dictionary has more than the *string* files allowed by the instance
Cause: The data dictionary is found to have more files than that which can be supported by this instance.

Action: Shutdown the instance and restart with a larger number of db_files

ORA-01176: data dictionary has more than the *string* files allowed by the controlfile
Cause: After a CREATE CONTROLFILE, the data dictionary was found to have more data files than that supported by the control file.

Action: Re-create the control file with a larger MAXDATAFILES.

ORA-01177: data file does not match dictionary - probably old incarnation
Cause: When comparing the control file with the data dictionary after a CREATE CONTROLFILE or OPEN RESETLOGS, it was noted that this datafile was inconsistent with the dictionary. Most likely the file is a backup of a file that was dropped from the database, and the same file number was reused for a new file. It may also be that an incomplete recovery stopped at a time when this file number was used for another datafile.

Action: Do a CREATE CONTROLFILE with the correct file or none at all.

ORA-01178: file *string* created before last CREATE CONTROLFILE, cannot recreate
Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed at the last CREATE CONTROLFILE command. The information needed to recreate the file was lost with the control file that existed when the file was added to the database.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

ORA-01179: file *string* does not exist
Cause: During datafile recovery, a file was listed which was not part for the database.

Action: Recheck the datafile name. Remember to use double quotes at the SQLDBA command line and remember that the file name is translated in the environment of the SQLDBA.

ORA-01180: can not create datafile 1
Cause: Attempting to create datafile 1 using ALTER DATABASE CREATE DATAFILE.

Action: Recover file from a backup or recreate database.

ORA-01181: file *string* created before last known RESETLOGS, cannot recreate
Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed before the last known RESETLOGS.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

ORA-01182: cannot create database file *string* - file is in use or recovery
Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions

ORA-01183: cannot mount database in SHARED mode
Cause: Some other instance has the database mounted exclusive.

Action: Shutdown other instance then mount shared.

ORA-01184: logfile group *string* already exists
Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is already in use.

Action: Specify a different logfile number, or let the database choose an unused value.

ORA-01185: logfile group number *string* is invalid
Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is too large.

Action: Specify a correct logfile number.

ORA-01186: file *string* failed verification tests
Cause: The data file did not pass the checks to insure it is part of the database. See the accompanying error messages for the reason the verification failed.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01187: cannot read from file *string* because it failed verification tests
Cause: The data file did not pass the checks to insure it is part of the database. Reads are not allowed until it is verified.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01188: The block size specified *string* does not match header block size *string*
Cause: The block size specified in the BLOCKSIZE clause of the CREATE CONTROLFILE statement does not equate to the block size recorded in the log file header.

Action: Specify the correct block size.

ORA-01189: file is from a different RESETLOGS than previous files
Cause: In a CREATE CONTROLFILE command either this file or all previous files were backups from before the last RESETLOGS. This may also occur if this is a file that is offline and has been offline since before the last RESETLOGS.

Action: If the file was taken offline normal before the last RESETLOGS, and is still offline, omit it from the CREATE CONTROLFILE command. Rename and online the file after the database is open. Otherwise find the version of the mentioned file consistent with the rest of the datafiles and resubmit the command.

ORA-01190: control file or data file *string* is from before the last RESETLOGS
Cause: Attempting to use a data file when the log reset information in the file does not match the control file. Either the data file or the control file is a backup that was made before the most recent ALTER DATABASE OPEN RESETLOGS.

Action: Restore file from a more recent backup.

ORA-01191: file *string* is already offline - cannot do a normal offline
Cause: When attempting to do a normal tablespace offline it was discovered that one of the files in the tablespace was already offline.

Action: Either bring the datafile online first, or use another tablespace offline option.

ORA-01192: must have at least one enabled thread
Cause: You must specify at least two logfiles from at least one thread at the create contolfile command line.

Action: Find the missing logfiles and resubmit the command with the newly found logfiles included in the command line.

ORA-01193: file *string* is not the same file seen at start of recovery
Cause: A different copy of the file was accessed the last time media recovery looked at the file header. A backup of the file was restored or the meaning of the file name changed during recovery.

Action: Ensure the correct file is available, then retry recovery.

ORA-01194: file *string* needs more recovery to be consistent
Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file was not closed cleanly when it was last opened by the database. It must be recovered to a time when it was not being updated. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the file is consistent or restore the file from an older backup and repeat recovery.

ORA-01195: online backup of file *string* needs more recovery to be consistent
Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file is an online backup which must be recovered to the time the backup ended.

Action: Either apply more logs until the file is consistent or restore the database files from an older backup and repeat recovery.

ORA-01196: file *string* is inconsistent due to a failed media recovery session
Cause: The file was being recovered but the recovery did not terminate normally. This left the file in an inconsistent state. No more recovery was successfully completed on this file.

Action: Either apply more logs until the file is consistent or restore the backup again and repeat recovery.

ORA-01197: thread *string* only contains one log
Cause: During CREATE CONTROLFILE all threads represented in the logs must be represented by at least two logs. A "last log" and a second log. The named thread does not contain two such logs.

Action: Either find more logs from the named thread. Or use the RESETLOGS option to CREATE CONTROLFILE.

ORA-01198: must specify size for log file if RESETLOGS
Cause: File sizes must be given for all logfiles if doing a CREATE CONTROLFILE with the RESETLOGS option.

Action: Resubmit the command with the appropriate logfile size.

ORA-01199: file *string* is not in online backup mode
Cause: Attempting to end an online backup for a file that is not in online backup.

Action: Do not enter command since it is not needed.

ORA-01200: actual file size of *string* is smaller than correct size of *string* blocks
Cause: The size of the file as returned by the operating system is smaller than the size of the file as indicated in the file header and the control file. Somehow the file has been truncated. Maybe it is the result of a half completed copy.

Action: Restore a good copy of the data file and do recovery as needed.

ORA-01201: file *string* header failed to write correctly
Cause: An I/O error was reported for the file header. The error was trapped and a second attempt will be made.

Action: The file probably will require recovery. Further error messages will indicate what is needed.

ORA-01202: wrong incarnation of this file - wrong creation time
Cause: The creation time in the file header is not the same as the creation time in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

ORA-01203: wrong incarnation of this file - wrong creation SCN
Cause: The creation SCN in the file header is not the same as the creation SCN in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

ORA-01204: file number is *string* rather than *string* - wrong file
Cause: The file number in the file header is not correct. This is probably a restored backup of the wrong file, but from the same database.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01205: not a data file - type number in header is *string*
Cause: The file type in the header is not correct for a data file. This is probably a log file or control file. If the type is not a small non-zero positive number then the header is corrupted.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01206: file is not part of this database - wrong database id
Cause: The database ID in the file header does not match the database id in the control file. The file may be from a different database, or it may not be a database file at all. If the database was rebuilt, this may be a file from before the rebuild. Note that if you see this error when the file is supposed to be plugged in from another database via the Transportable Tablespace feature, it means the database ID in the file header does not match the one expected.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01207: file is more recent than control file - old control file
Cause: The control file change sequence number in the data file is greater than the number in the control file. This implies that the wrong control file is being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: Use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

ORA-01208: data file is an old version - not accessing current version
Cause: The checkpoint in the file header is less recent than in the control file. If opening a database that is already open by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01209: data file is from before the last RESETLOGS
Cause: The reset log data in the file header does not match the control file. If the database is closed or the file is offline, the backup is old because it was taken before the last ALTER DATABASE OPEN RESETLOGS command. If opening a database that is open already by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01210: data file header is media corrupt
Cause: The file header block is internally inconsistent. The beginning of the block has a header with a checksum and other data for insuring the consistancy of the block. It is possible that the last disk write did not operate correctly. The most likely problem is that this is not a datafile for any database.

Action: Have operating system make correct file available to database. If the trace file dump indicates that only the checksum is wrong, restore from a backup and do media recovery.

ORA-01211: Oracle7 data file is not from migration to Oracle8
Cause: The file is not a copy of the file LAST used under Oracle7. This datafile is either a backup taken from before the migration, or the database was opened by Oracle7 after the migration utility was run. When converting a database from Oracle7 to Oracle8, the migration

program MUST be the LAST utility to access the database under Oracle7. Only the datafiles that were current when the migration was done may be accessed by Oracle8.

Action: Have operating system make correct data file available to database, or repeat the Oracle7 to Oracle8 migration. Make sure that database is NOT opened after migration utility is run.

ORA-01212: MAXLOGMEMBERS may not exceed *string*
Cause: MAXLOGMEMBERS specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGMEMBERS

ORA-01213: MAXINSTANCES may not exceed *string*
Cause: MAXINSTANCES specified on the command line too large.

Action: Resubmit the command with a smaller MAXINSTANCES

ORA-01214: MAXLOGHISTORY may not exceed *string*
Cause: MAXLOGHISTORY specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGHISTORY

ORA-01215: enabled thread *string* is missing after CREATE CONTROLFILE
Cause: A CREATE CONTROLFILE statement was given which did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

ORA-01216: thread *string* is expected to be disabled after CREATE CONTROLFILE
Cause: A thread that was given during CREATE CONTROLFILE is enabled, but the datafiles indicate that it should be disabled. This is probably because the logs supplied to the CREATE CONTROLFILE are old (from before the disabling of the thread).

Action: This thread is not required to run the database. The CREATE CONTROLFILE statement can be reissued without the problem thread, and, if desired, the thread can be recreated after the database is open.

ORA-01217: logfile member belongs to a different logfile group
Cause: A member of a multiple-member logfile group specified in a CREATE CONTROLFILE is not part of the same group as previous members.

Action: Group together the correct members for the CREATE CONTROLFILE command.

ORA-01218: logfile member is not from the same point-in-time
Cause: A member of a multiple-member logfile group is from a different point in time. One of the members specified may be an older (backup) copy of the log.

Action: Find the correct version of the log, or leave it out of the CREATE CONTROLFILE command.

ORA-01219: database or pluggable database not open: queries allowed on fixed tables or views only
Cause: A query was issued against an object not recognized as a fixed table or fixed view before the database or pluggable database has been opened.

Action: Re-phrase the query to include only fixed objects, or open the database or pluggable database.

ORA-01220: file based sort illegal before database is open
Cause: A query issued against a fixed table or view required a temporary segment for sorting before the database was open. Only in-memory sorts are supported before the database is open.

Action: Re-phrase the query to avoid a large sort, increase the values of the SORT_AREA_SIZE and/or SORT_AREA_RETAINED_SIZE initialization parameters to enable the sort to be done in memory.

ORA-01221: data file *string* is not the same file to a background process
Cause: When the database writer opens the data file, it is accessing a different physical file than the foreground doing the recovery. The timestamp set in the file header by the foreground was not found by the background. It may be that the background process could not read the file at all.

Action: Look in the DBWR trace file for the error it recieved when attempting to read the file header. Reconfigure the operating system as needed to have the file name successfully access the same file when opened by a background process.

ORA-01222: MAXINSTANCES of *string* requires MAXLOGFILES be at least *string*, not *string*
Cause: Attemping to create a database or control file that does not have room for at least two logs per thread of redo. A thread of redo must have two online logs in order to be enabled. It does not make sense to allow more redo threads than can be supported by the logs.

Action: Either reduce the MAXINSTANCES argument or increase MAXLOGFILES.

ORA-01223: RESETLOGS must be specified to set a new database name
Cause: The SET database name option was specified to CREATE CONTROLFILE, but RESETLOGS was not specified. The database name can only be changed when opening the database with RESETLOGS.

Action: Either add the RESETLOGS option or drop the SET option to CREATE CONTROLFILE.

ORA-01224: group number in header *string* does not match GROUP *string*
Cause: Group number specified at CREATE CONTROLFILE does not match the group number stored in the header. Most likely the specification is wrong.

Action: Omit the GROUP option or give the correct one.

ORA-01225: thread number *string* is greater than MAXINSTANCES *string*
Cause: The log is for a thread greater than the MAXINSTANCES argument.

Action: Increase the value for MAXINSTANCES and resubmit the command.

ORA-01226: file header of log member is inconsistent with other members
Cause: The log file member in the accompanying error is for the same group as the previous members, but other fields in the header are different. Either a file header is corrupted, or some file is a member of a deleted log.

Action: Find the correct log member or omit this member from the command.

ORA-01227: log *string* is inconsistent with other logs
Cause: The log file in the accompanying error is inconsistent with the contents of other logs given in the CREATE CONTROLFILE command. Either a file header is corrupted, or some file is an old copy rather than the current version. The problem may not be with the log listed since all that can be detected is that there is an inconsistancy. All log files listed in the command must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

ORA-01228: SET DATABASE option required to install seed database
Cause: The SET DATABASE option was not included in the CREATE CONTROLFILE command when installing a seed database. The database does not have a database ID because it is intended to be installed at multiple sites, and each site needs to be a different database with its own database id. Both the SET DATABASE and RESETLOGS options must be specified to create the control file for this database.

Action: Resubmit command with the SET DATABASE and RESETLOGS options.

ORA-01229: data file *string* is inconsistent with logs
Cause: The data file in the accompanying error is inconsistent with the contents of the logs given in the CREATE CONTROLFILE command. The most likely cause is that one or more of the online logs was missing from the command. It is also possible that one or more of the logs is an old copy rather than the current version. All online log files must be listed in the command and must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

ORA-01230: cannot make read only - file *string* is offline
Cause: An attempt to make a tablespace read only found that one of its files is offline.

Action: Bring the file online and retry this command.

ORA-01231: cannot make read write - file *string* is offline
Cause: An attempt to make a tablespace read write found that one of its files is offline.

Action: Bring the file online and retry this command.

ORA-01232: cannot start online backup - file *string* is being made read-only
Cause: An attempt to start an online backup found that one of the files is in transition to read-only mode.

Action: Wait for the transition to complete and then retry the command, if this is an ALTER DATABASE BEGIN BACKUP command, or take the backup without any begin or end commands, if this is an ALTER TABLESPACE BEGIN BACKUP command.

ORA-01233: file *string* is read only - cannot recover using backup control file
Cause: An attempt to do media recovery using a backup control file found that one of the files is marked read only. Read only files do not normally need to be recovered, but recovery with a backup control file must recover all online files.

Action: If the file really is read only, take it offline before the recovery, and bring the read only tablespace online after the database is open. If the file does need recovery use a control file from the time the file was read-write. If the correct control file is not available, use CREATE CONTROLFILE to make one.

ORA-01234: cannot end backup of file *string* - file is in use or recovery
Cause: Attempted to end an online backup of file when the file is busy. Some operation such as recovery or rename may be active, or there may still be some instance that has the database open with this file online.

Action: If there is an instance with the database open then the backup can be ended there by using the ALTER TABLESPACE command. Otherwise wait for the completion of the other operation.

ORA-01235: END BACKUP failed for *string* file(s) and succeeded for *string*
Cause: One or more of the files in an end backup command failed. Some other files given in the same command may have succeeded.

Action: See the accompanying error messages for the reason the backups could not be ended. Any files not listed in the error messages were successful.

ORA-01236: Error *string* occurred during initialization of file header access
Cause: The indicated error occurred while doing initialization processing of file headers.

Action: The error indicated should be corrected. An attempt is made to recover from this error by using a slower access algorithm.

ORA-01237: cannot extend datafile *string*
Cause: An operating system error occurred during the resize.

Action: Fix the cause of the operating system error and retry the command.

ORA-01238: cannot shrink datafile *string*
Cause: An operating system error occurred during the resize.

Action: The error is ignored, operation continues normally.

ORA-01239: database must be in ARCHIVELOG mode to use external cache
Cause: An online file uses an external cache, but the database is in NOARCHIVELOG mode. Since an external cache may require media recovery this can not be allowed.

Action: Change database to be in ARCHIVELOG mode or do not use an external cache.

ORA-01240: too many data files to add in one command
Cause: The command specifies adding more data files than can be done in one command. It is necessary to fit all the file names into one log entry, but that would make the entry too large.

Action: If this is a CREATE TABLESPACE command, create with fewer files then add the other files later. If this is an ADD DATAFILE command, break it up into multiple commands.

ORA-01241: an external cache has died
Cause: The external cache may have been restarted.

Action: Take the file mentioned in the error stack offline, perform media recovery, bring the file online, and retry the attempted operation. You may also restart all instances to make sure they access all data files through consistent external caches.

ORA-01242: data file suffered media failure: database in NOARCHIVELOG mode
Cause: The database is in NOARCHIVELOG mode and a database file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-01243: system tablespace file suffered media failure
Cause: A system tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-01244: unnamed datafile(s) added to control file by media recovery
Cause: Media recovery with a backup control file or a control file that was rebuilt, encountered the creation of a datafile that was not in the control file. An entry has been added to the control file for the new datafiles, but with the file name UNNAMEDnnnn, where nnnn is the file number. Attached errors describe the file names that were originally used to create the files.

Action: Rename the files to valid file names and resume recovery. If necessary the command ALTER DATABASE CREATE DATAFILE may be used to create a file suitable for recovery and do the rename. If the file is not going to be recovered then take it offline with the FOR DROP option.

ORA-01245: offline file *string* will be lost if RESETLOGS is done
Cause: Attempting to do an OPEN RESETLOGS with a file that will be lost because it is offline. The file was not taken offline with the FOR DROP option.

Action: Either bring the file online and recover it, or take it offline with the FOR DROP option.

ORA-01246: recovering files through TSPITR of tablespace *string*
Cause: The files named in the accompanying errors are backups that were made before a tablespace point in time recovery of this tablespace. They cannot be recovered to a time after the point in time recovery.

Action: Restore more recent backups and recover them.

ORA-01247: database recovery through TSPITR of tablespace *string*
Cause: Recovery of the whole database encountered redo indicating there was a point in time recovery of the tablespace. The new version of the files in the tablespace should be included in the recovery, but that was not done.

Action: If the tablespace should not be recovered, take its file offline for drop. If it should be recovered, then restore or rename as needed and restart the recovery.

ORA-01248: file *string* was created in the future of incomplete recovery
Cause: Attempting to do a RESETLOGS open with a file entry in the control file that was originally created after the UNTIL time of the incomplete recovery. Allowing such an entry may hide the version of the file that is needed at this time. The file number may be in use for a different file which would be lost if the RESETLOGS was allowed.

Action: If more recovery is desired then apply redo until the creation time of the file is reached. If the file is not wanted and the same file number is not in use at the stop time of the recovery, then the file can be taken offline with the FOR DROP option. Otherwise a different control file is needed to allow the RESETLOGS. Another backup can be restored and recovered, or a control file can be created via CREATE CONTROLFILE.

ORA-01249: archiving not allowed in a clone database
Cause: Attempting to archive an online redo log or enable archiving for a clone database.

Action: Do not attempt to archive from a clone. The archive log destination could easily be the same as the primary database destroying its archived logs. If archiving is needed then recreate database as not a clone.

ORA-01250: Error *string* occurred during termination of file header access
Cause: The indicated error occurred while terminating the processing of file headers. The error was other than a write error.

Action: The indicated error should be corrected.

ORA-01251: Unknown File Header Version read for file number *string*
Cause: Read of the file header returned a record but its version cannot be identified. Either the header has been corrupted, or the file is not a valid database file.

Action: Have the operating system make the correct file available to the database, or recover the file.

ORA-01252: cannot prevent writes - file *string* in recovery manager backup
Cause: An attempt to make a tablespace read only or offline normal found that a recovery manager proxy backup is in progress. If the file is made offline or read-only, then the file header cannot be updated when the backup is complete.

Action: Wait for the Recovery Manager backup to complete and retry this command.

ORA-01253: cannot start online backup - file *string* in recovery manager backup
Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete before starting another backup.

ORA-01254: cannot end online backup - file *string* in recovery manager backup
Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete. Recovery Manager backup mode cannot be initiated or terminated manually.

ORA-01255: cannot shutdown - file *string* in recovery manager backup
Cause: An attempt to shutdown normally found that a Recovery Manager backup is still in progress.

Action: Wait for the Recovery Manager proxy backup to complete and retry this command.

ORA-01256: error in locking database file *string*
Cause: The file is in use by another database instance.

Action: Determine which database instance legitimately owns the file.

ORA-01257: cannot reuse database file *string*, unknown file size
Cause: The size of the raw partion cannot be determined

Action: Add the datafile/logfile by specifying the size parameter.

ORA-01258: unable to delete temporary file *string*
Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES or ALTER DATABASE TEMPFILE DROP INCLUDING DATAFILES operation was not able to delete a temporary file in the database.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

ORA-01259: unable to delete datafile *string*
Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES operation was not able to delete a datafile in the tablespace.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

ORA-01260: warning: END BACKUP succeeded but some files found not to be in backup mode
Cause: END BACKUP completed successfully for all files that were in online backup mode. However one or more modifiable files were found not to be in online backup mode. Backup of those files (if it was done) can be invalid and, if restored, can result in an inconsistent database.

Action: Check the alert log for a list of the files that were found not to be in backup mode. If there is a possibility that those files have been modified during online backup, then replace their backups with new ones.

ORA-01261: Parameter *string* destination string cannot be translated
Cause: The value for the specified parameter contained a destination string that could not be translated.

Action: Use a valid destination string in the specified parameter.

ORA-01262: Stat failed on a file destination directory
Cause: Unable to get information about an Oracle managed files destination directory.

Action: Check the permissions on the directory or use a different directory name.

ORA-01263: Name given for file destination directory is invalid
Cause: The name given for an Oracle managed files destination does not correspond to a directory.

Action: Use a different name.

ORA-01264: Unable to create *string* file name
Cause: Unable to create an Oracle managed file name.

Action: Check previous error messages for the reason Oracle was unable to create the file name. Take corrective action, if possible, and retry the command.

ORA-01265: Unable to delete *string string*
Cause: An error prevented the file from being deleted.

Action: See the subsequent error messsages that describe the operating system error that prevented the file from being deleted. If possible, fix the problem and manually delete the file.

ORA-01266: Unable to create unique file name
Cause: Unable to create a unique file name for an Oracle managed file. Oracle tried several names but each file name was already in use in the default destination directory for the file type.

Action: Retry the operation. If that fails, also, it may be necessary to change the default destination directory for the file type and then retry.

ORA-01267: Failure getting date/time
Cause: Could not get date/time when trying to create unique file name.

Action: Internal error - contact Oracle Customer Support.

ORA-01268: invalid TEMPFILE clause for alter of permanent TABLESPACE
Cause: A TEMPFILE clause was specified for an ALTER TABLESPACE for a permanent tablespace.

Action: Retry with a DATAFILE clause.

ORA-01269: Destination parameter string is too long
Cause: The value for DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter was too long.

Action: Replace the destination value for the specified parameter with a shorter character string.

ORA-01270: *string* operation is not allowed if STANDBY_PRESERVES_NAMES is true
Cause: An operation that renames or adds/drops a file was attempted at a standby database and STANDBY_PRESERVES_NAMES is true.

Action: Set STANDBY_PRESERVES_NAMES false if the operation must be performed.

ORA-01271: Unable to create new file name for file *string*
Cause: During standby database recovery an error occurred when trying to create a new file name for the indicated file.

Action: Use the ALTER DATABASE CREATE DATAFILE command with a new unique name and then resume the standby database recovery.

ORA-01272: REUSE only allowed when a file name is provided.
Cause: The REUSE parameter was specified in a command without a file name.

Action: Either supply a file name or remove the REUSE parameter.

ORA-01273: STANDBY_FILE_MANAGEMENT = AUTO needs COMPATIBLE = *string* or higher
Cause: Automated standby file management was disabled, so an added file

Action: Restart the instance with COMPATIBLE set to the correct release.

ORA-01274: cannot add data file that was originally created as '*string*'
Cause: The recovery failed to add the specified data file either because the recovery tried to create the specified data file but automated standby file management was disabled, or the recovery tried to look for the specified data file but the data file did not exist. In the former case, the recovery added a control file entry as 'UNNAMEDnnnnn'.

Action: Either use the ALTER DATABASE CREATE DATAFILE statement to create the file, or set STANDBY_FILE_MANAGEMENT to AUTO, or restore the data file to the location specified by the corresponding control file entry, and restart standby recovery.

ORA-01275: Operation *string* is not allowed if standby file management is automatic.
Cause: An operation that renames, adds, or drops a file was attempted at a standby database and STANDBY_FILE_MANAGEMENT was set to AUTO.

Action: Set STANDBY_FILE_MANAGEMENT to MANUAL if the operation must be performed.

ORA-01276: Cannot add file *string*. File has an Oracle Managed Files file name.
Cause: An attempt was made to add to the database a datafile, log file, control file, snapshot control file, backup control file, datafile copy, control file copy or backuppiece with an Oracle Managed Files file name.

Action: Retry the operation with a new file name.

ORA-01277: file '*string*' already exists
Cause: An ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS 'filename' command specified a file name which is already in use.

Action: Either specify a different file name, or add the REUSE parameter to the command to overwrite the existing file.

ORA-01278: error creating file '*string*'
Cause: An operating system error occurred while attempting to create a trace file specified in the command ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS 'filename'.

Action: Check the error stack for more detailed information.

ORA-01279: db_files too large
Cause: db_files has been set too high to be supported by the system.

Action: Decrease the number of db_files.

ORA-01280: Fatal LogMiner error.
Cause: An internal error occurred inside LogMiner.

Action: Check the alert log and trace files for further information.

ORA-01281: SCN range specified is invalid
Cause: StartSCN may be greater than EndSCN, or the SCN specified may be invalid.

Action: Specify a valid SCN range.

ORA-01282: date range specified is invalid
Cause: startTime may be greater than endTime. startTime or endTime may be greater than year 2110. startTime may be less than year 1988.

Action: Specify a valid date range.

ORA-01283: Options specified is invalid
Cause: The specified options parameter is invalid for the procedure.

Action: Specify valid Options parameter.

ORA-01284: file *string* cannot be opened
Cause: The file or directory may not exist or may be inaccessible. Pathname exceeds 256 characters.

Action: Ensure that the file and the directory exist and are accessible.

ORA-01285: error reading file *string*
Cause: The file or directory may not exist or is inaccessible.

Action: Specify valid file or directory. Make sure that file and directory are accessible.

ORA-01286: start interval required
Cause: Options were supplied which require a starting time or starting SCN

Action: Specify a starting interval (time or SCN).

ORA-01287: file *string* is from a different database incarnation
Cause: The logfile is produced by a different incarnation of the database.

Action: Add a logfile that is produced by the same incarnation.

ORA-01288: cannot apply this DDL to the Logminer Dictionary
Cause: A command that is not supported by Logminer was present in a logfile. Commands that change the character set of the database are not supported by Logminer. "ALTER DATABASE SET TIME_ZONE" is not supported by Logminer.

Action: Do not execute unsupported commands when using Streams, Logical Standby, or Logminer. Turn off DDL tracking in order for Logminer to skip unsupported commands.

ORA-01289: cannot add duplicate logfile *string*
Cause: The logfile specified has already been added to the list of logfiles.

Action: Specify a different logfile.

ORA-01290: cannot remove unlisted logfile *string*
Cause: The user attempted to remove a logfile that is not present in the list.

Action: Specify a valid logfile.

ORA-01291: missing log file
Cause: Not all log files corresponding to the time or SCN range specified had been added to the LogMiner session.

Action: Check the system.logmnr_log$ table for Logical Standby or Downstream Capture, or v$logmnr_logs view for adhoc query to determine the missing SCN range, and add the relevant log files.

ORA-01292: LogMiner for upstream capture cannot find log file
Cause: A log file needed by LogMiner could not be found in v$archived_log.

Action: Check the alert log and trace files to identify the thread and SCN of the missing log. Restore the files if it was deleted or expired from v$archived_log.

ORA-01293: mounted database required for specified LogMiner options
Cause: Options were specified which required the database to be mounted

Action: Specify different options or mount the database.

ORA-01294: error occurred while processing information in dictionary file *string*, possible corruption
Cause: The dictionary file is corrupt.

Action: Get a new dictionary file.

ORA-01295: DB_ID mismatch between dictionary *string* and logfiles
Cause: The dictionary file is produced by a database that is different from that produced the logfiles.

Action: Specify a compatible dictionary file.

ORA-01296: character set mismatch between dictionary *string* and logfiles
Cause: The character set of the database that produced the dictionary file is different from the charatcter set of the database that produced the logfiles.

Action: Specify a dictionary file with the same character set.

ORA-01297: redo version mismatch between dictionary *string* and logfiles
Cause: The redo version of the database generating the dictionary is different from the one generating the logfiles.

Action: n/a

ORA-01298: conflicting dictionary option
Cause: More than one dictionary source was specified or DDL_DICT_TRACKING was specified with DICT_FROM_ONLINE_CATALOG.

Action: n/a

ORA-01299: dictionary *string* corresponds to a different database incarnation
Cause: The dictionary file was extracted from a different incarnation of the database.

Action: Specify a dictionary file extracted from the correct database incarnation.

ORA-01300: writable database required for specified LogMiner options
Cause: Options were specified which required the database to be writable.

Action: Specify different options or open the database for write access.

ORA-01301: error writing to file during flat file build
Cause: Error writing to file during flat file build

Action: n/a

ORA-01302: dictionary build options missing or incorrect
Cause: Missing dictionary build options or incorrectly specified options

Action: Specify either a build to redo log or to flat file. If build to flat file, specify filename and directory.

ORA-01303: subordinate process error: *string*. Check alert and trace logs
Cause: A process subordinate to this Logminer process has exited with this error status.

Action: Search for this error in the alert log and trace files for additional information.

ORA-01304: subordinate process error. Check alert and trace logs
Cause: A process subordinate to this Logminer process has exited with an error condition.

Action: Look in the alert log and trace files for additional information.

ORA-01305: incompatible database character set
Cause: The database character set of the mining database was not a superset of the source database character set.

Action: Perform the mining operation on a database having a compatible database character set.

ORA-01306: dbms_logmnr.start_logmnr() must be invoked before selecting from v$logmnr_contents
Cause: A select was issued from v$logmnr_contents without first invoking the dbms_logmnr.start_logmnr() procedure.

Action: Invoke the dbms_logmnr.start_logmnr() procedure before issuing a select from the v$logmnr_contents view.

ORA-01307: no LogMiner session is currently active
Cause: A select was issued from v$logmnr_contents without first invoking the dbms_logmnr.start_logmnr() procedure. Otherwise, dbms_logmnr.end_logmnr() was called without a prior call to dbms_logmnr.start_logmnr() or dbms_logmnr.add_logfile()

Action: Invoke the dbms_logmnr.start_logmnr() procedure before issuing a select from the v$logmnr_contents view.

ORA-01308: dictionary directory is not set
Cause: The dictionary directory was not valid.

Action: Set the dictionary directory to an appropriate value.

ORA-01309: invalid session
Cause: The specified Logminer session ID or session handle is invalid.

Action: Use a valid Logminer session ID or session handle.

ORA-01310: requested return type not supported by the lcr_mine function
Cause: The return type requested by the user is not supported by lcr_mine"

Action: Pick a return type supported by the lcr_mine function"

ORA-01311: Illegal invocation of the mine_value function
Cause: An attempt was made to use mine_value function on a column other than redo_value or undo_value columns of SYS.X$LOGMNR_CONTENTS or SYS.V$LOGMNR_CONTENTS fixed table/view.

Action: Rewrite the SQL statement with a legal invocation of mine_value

ORA-01312: Specified table/column does not exist
Cause: The table/column specified in the lcr_mine call does not exist at the the specified SCN. The table/column definition has to exist at the start SCN specified for lcr_mine to be able to identify the table/column correctly.

Action: Create a LogMiner session at a start SCN at which the table definition is available.

ORA-01313: LogMiner dictionary column type different from specified type
Cause: The return type specified for the column in lcr_mine call is different from the actual type of the column.

Action: Rewrite the lcr_mine invocation with the right return type.

ORA-01314: Name of the column to be mined should be a string literal
Cause: The fully qualified name of the column to be mined by the LogMiner functions should be string literal.

Action: If the fully qualified name of the column to be mined is a.b.c.d, enclose the column name in quotes as in 'a.b.c.d'.

ORA-01315: Log file has been added or removed during select
Cause: A redo log file has been added or removed while selecting on the v$logmnr_logs fixed view.

Action: Re-issue the SQL select statement on the v$logmnr_logs view.

ORA-01316: Already attached to a Logminer session
Cause: A Logminer attach session was issued while already attached to a Logminer session.

Action: Detach from the current Logminer session and attach to the requested session.

ORA-01317: Not attached to a Logminer session
Cause: A command or procedure was issued which requires an attached Logminer session.

Action: Attach to a Logminer session before issuing the command or procedure.

ORA-01318: incompatible national character set
Cause: The national character set of the mining database was not a superset of the source database national character set.

Action: Perform the mining operation on a database having a compatible national character set.

ORA-01319: Invalid Logminer session attribute
Cause: A session attribute was supplied which is invalid.

Action: Re-issue with valid session attribute.

ORA-01320: Invalid Logminer dictionar attribute
Cause: A Logminer dictionary attribute was supplied which is invalid.

Action: Re-issue with valid dictionary attribute.

ORA-01321: No Logminer Dictionary for requested start SCN
Cause: The requested session start SCN is less than the SCN of any available Logminer Dictionary build. It is not possible to unwind a Logminer Dictionary to the requested start SCN.

Action: Re-issue the start_logminer request with a start SCN for which a Logminer Dictionary is available.

ORA-01322: No such table
Cause: An non-existent table was supplied to Logminer include_src_tbl() or exclude_src_table().

Action: Re-issue with valid table name.

ORA-01323: Invalid state
Cause: A Logminer routine was called from the wrong state.

Action: n/a

ORA-01324: cannot add file *string* due to DB_ID mismatch
Cause: The logfile is produced by a different database than other logfiles already added to the list.

Action: Specify a logfile produced by the same database.

ORA-01325: archive log mode must be enabled to build into the logstream
Cause: Database does not have archivelog mode enabled.

Action: Mount the database, then issue commands to enable archivelog mode. startup pfile=init.ora mount alter database archivelog alter database open

ORA-01326: compatability of 9.0 or greater required to build into the logstream
Cause: Compatibility mode set to some value less than 9.0

Action: Ensure that init.ora parameter establishing a compatability of 9.0 or greater is set. For example: compatible=9.0.0.0.0

ORA-01327: failed to exclusively lock system dictionary as required by build
Cause: Other users are performing DDL operations.

Action: n/a

ORA-01328: only one build operation may occur at one time
Cause: Another processes is simultaneously attempting to run build();

Action: Wait until the other processes completes.

ORA-01329: unable to truncate required build table
Cause: The table may be missing, or locked by another user.

Action: This error should not occur. If it does occur and there is reason to believe that required tables are missing, then as a last resort the package dbmslmd.sql may be reinstalled. Doing so will delete all existing Logminer Dictionary data.

ORA-01330: problem loading a required build table

ORA-01331: general error while running build

ORA-01332: internal Logminer Dictionary error
Cause: Unexpected error condition

Action: Check trace and/or alert logs

ORA-01333: failed to establish Logminer Dictionary
Cause: No previously established Logminer Dictionary is available and a complete gather of a source system data dictionary was not found in the logstream. build() may not have been run to force the gathering of a source system data dictiony. Or add_log_file() may not have been called to add all log files which contain the complete gathered system data dictionary.

Action: If build() was not employed prior to this mining session the Logminer Ad Hoc user may elect to employ an alternate dictionary such as the current system catalog or a previously built flat file dictionary. Other Logminer clients must run build() prior to mining. If build() has been run, ensure that all logfiles which comprise the gathered system dictionary have beed added. The following query, run on the system which build() was run, can be helpful in identifying the requried files. select DICTIONARY_BEGIN, DICTIONARY_END, name from v$archived_log; Minimally a set of files beginning with one which has DICTIONARY_BEGIN = 'YES' and all following log files through one marked DICTIONARY_END = 'YES' must be added.

ORA-01334: invalid or missing logminer dictionary processes context
Cause: Unexpected internal error condition

Action: n/a

ORA-01335: feature not yet implemented

ORA-01336: specified dictionary file cannot be opened
Cause: The dictionary file or directory does not exist or is inaccessible.

Action: Make sure that the dictionary file and directory exist and are accessible.

ORA-01337: log file has a different compatibility version
Cause: The logfile has a different compatibility version then the rest of the logfile in the session"

Action: Make sure that the logfile has the same compatibility version as the rest of the logfiles in the session.

ORA-01338: Other process is attached to LogMiner session
Cause: Can not do this when other process is attached to LogMiner session.

Action: n/a

ORA-01339: LogMiner BUILD: Error copying system catalog metadata to LogMiner dictionary
Cause: Unexpected result while accessing system catalog metadata.

Action: Check the alert log.

ORA-01340: NLS error
Cause: Could not load NLS package.

Action: n/a

ORA-01341: LogMiner out-of-memory
Cause: The LogMiner session requires more system resources than is currently available.

Action: Allocate more SGA for LogMiner.

ORA-01342: LogMiner can not resume session due to inability of staging checkpointed data
Cause: Logmnr can not resume session because there is not enough SGA memory available to read in checkpointed data. Logminer periodically checkpoints data to enable faster crash recovery.

Action: Specify a bigger max_sga for the given LogMiner session and try again.

ORA-01343: LogMiner encountered corruption in the logstream
Cause: Log file is missing a range of scn values.

Action: Verify the contiguity of the scn range reprented by the log files added to LogMiner.

ORA-01344: LogMiner coordinator already attached
Cause: A coordinator process is already attached to the specified logminer context.

Action: Detach from the active coordinator session and retry the attach.

ORA-01345: Must be a LogMiner coordinator process
Cause: A LogMiner client attempted to perform a privileged operation.

Action: Issue the operation from the coordinator process.

ORA-01346: Oracle LogMiner processed redo beyond primary reset log SCN *string*
Cause: Oracle LogMiner detected a new branch with reset log SCN information prior to redo already mined.

Action: If running inside SQL Apply, retrieve standby reset SCN by executing DBMS_LOGSTDBY.MAP_PRIMARY_SCN (primary reset log SCN). And, execute FLASHBACK STANDBY DATABASE [<database_name>] TO BEFORE SCN *standby reset SCN*. Note: If the primary reset log SCN is 0, then intermediary log files are missing. Check the primary database for missing log files. In other scenarios, contact Oracle Support Services.

ORA-01347: Supplemental log data no longer found
Cause: The source database instance producing log files for this LogMiner session was altered to no longer log supplemental data.

Action: Destroy this Logminer session. Re-enable supplemental log data on the source system and create a new LogMiner session.

ORA-01348: LogMiner testing event

ORA-01349: LogMiner tracing event

ORA-01350: must specify a tablespace name
Cause: Invocation failed to specify a valid tablespace

Action: Reformat invocation of DBMS_LOGMNR_D.SET_TABLESPACE to include the name of a valid tablespace.

ORA-01351: tablespace given for Logminer dictionary does not exist
Cause: The tablespace name given as a parameter to DBMS_LOGMNR_D.SET_TABLESPACE does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created.
DBMS_LOGMNR_D.SET_TABLESPACE does not create a tablespace.

ORA-01352: tablespace given for Logminer spill does not exist
Cause: The tablespace name given as the parameter to DBMS_LOGMNR_D.SET_TABLESPACE does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created.
DBMS_LOGMNR_D.SET_TABLESPACE does not create a tablespace.

ORA-01353: existing Logminer session
Cause: An attempt was made to execute DBMS_LOGMNR_D.SET_TABLESPACE while a Logminer session(s) was active.

Action: First cause all Logminer sessions to be closed. A Logminer session can exist as a result of executing DBMS_LOGMNR.START_LOGMNR or as the result of using Oracle features such as Data Guard SQL Apply or Streams which use Logminer. Next, execute DBMS_LOGMNR_D.SET_TABLESPACE.

ORA-01354: Supplemental log data must be added to run this command
Cause: An attempt was made to perform an operation that required that supplemental log data be enabled.

Action: Execute a command such as ALTER DATABASE ADD SUPPLEMENTAL LOG DATA; and then reissue the command that failed with this error.

ORA-01355: logminer tablespace change in progress
Cause: The tables used by logminer are in the process of being moved to another tablespace.

Action: Wait until the move is complete and try again.

ORA-01356: active logminer sessions found
Cause: Logminer sessions are currently active.

Action: End all logminer sessions and retry.

ORA-01357: LogMiner transaction queue is full
Cause: LogMiner ran out of space in the transaction queue.

Action: Increase the LogMiner transaction queue size and LogMiner system global area (SGA) parameters.

ORA-01358: LogMiner version is less than mined dictionary version
Cause: An attempt was made to mine a LogMiner dictionary from redo logs. The version of the Oracle database that created the logs was higher than the Oracle database version that attempted to mine the logs.

Action: Mine the logs using a newer version of the Oracle database having a version number that is equal to or greater than the dictionary version.

ORA-01360: invalid token

ORA-01361: global name mismatch
Cause: The database global name where the log file was generated did not match the user-specified global name of the Streams Capture process.

Action: Start a new capture process and ensure that the user-specified global name matches that of the database that generated the log file.

ORA-01362: Specified SQL_REDO_UNDO parameter is invalid
Cause: The specified input value for the parameter was not a valid number.

Action: Specify a valid number and try again.

ORA-01363: Specified COLUMN_NAME parameter is NULL
Cause: NULL was specified for input value of parameter.

Action: Specify a non-NULL value and try again.

ORA-01364: waiting for branch at SCN *string*
Cause: LogMiner reader process has completed mining of physical standby terminal logs up to the stop SCN. LogMiner reader is now waiting for logs from the new branch.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. If there is a problem with log transport, the files can be registered manually using the ALTER DATABASE REGISTER LOGICAL LOGFILE statement.

ORA-01365: waiting for new branch registration
Cause: LogMiner reader process has completed mining of physical standby terminal logs up to the stop SCN. The builder process is now waiting for logs from the new branch to be registered before continuing.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. If there is a problem with log transport, the files may be registered manually using the ALTER DATABASE REGISTER LOGICAL LOGFILE statement.

ORA-01366: failed to find redo logs required for terminal apply
Cause: LogMiner failed to find all the expected log files required to complete the terminal apply, requested using the FINISH APPLY clause. During terminal apply, LogMiner does not wait for logs to be registered. It expects all logs between the starting point and the last log on any redo branch that it will or could mine through, to be present at the mining site.

Action: Examine system.logmnr_log$ to see which logs are known to LogMiner. Then, locate or restore any missing logs and use the ALTER DATABASE REGISTER LOGICAL LOGFILE statement to register them. Alternatively, do not use the FINISH APPLY clause, but if activating a logical standby, only do this when you are sure that the missing log files can not be located and registered as this can lead to data loss.

ORA-01370: Specified restart SCN is too old
Cause: specified restart scn is too old, logmnr could not find a proper checkpoint.

Action: Specify a bigger restart SCN to try again

ORA-01371: Complete LogMiner dictionary not found
Cause: One or more log files containing the LogMiner dictionary was not found.

Action: Add into LogMiner all log files containing the dictionary.

ORA-01372: Insufficient processes for specified LogMiner operation
Cause: The number of processes requested by the caller can not be allocated

Action: Increase number of parallel servers allocated to the instance

ORA-01373: insufficient memory for staging persistent LogMiner session
Cause: The maximum number of concurrent persistent LogMiner sessions allowed is limited by LOGMNR_MAX_PERSISTENT_SESSIONS parameter. Not enough memory has been set aside at instance startup to allocate the new LogMiner session.

Action: Increase LOGMNR_MAX_PERSISTENT_SESSIONS and restart instance.

ORA-01374: _log_parallelism_max greater than 1 not supported in this release
Cause: LogMiner does not mine redo records generated with _log_parallelism_max set to a value greater than 1.

Action: n/a

ORA-01375: Corrupt logfile *string* recovered
Cause: A corrupt logfile has been recovered by RFS

Action: None. Logical Standby should automatically restart. If logfile is still corrupt, may need to manually copy and reregister the logfile on the standby.

ORA-01376: cannot add file *string* due to unsupported redo compatibility setting
Cause: The redo compatibility setting of the log file was unsupported by LogMiner.

Action: Specify a log file produced with a redo compatibility setting supported by LogMiner.

ORA-01377: Invalid log file block size
Cause: An invalid value was specified in the BLOCKSIZE clause.

Action: Use correct syntax.

ORA-01378: The logical block size (*string*) of file *string* is not compatible with the disk sector size (media sector size is *string* and host sector size is *string*)
Cause: One of the following occurred: (1) An attempt was made to create a file. (2) A file was moved to disks with different sector size.

Action: Create file or move file to the proper disk.

ORA-01379: LogMiner testing event

ORA-01380: Instance *string* (thread *string*) has less than two *string* block size log files
Cause: One of the following occurred: (1) An attempt was made to switch to specified block size logs for all threads. (2) An attemp was made to open a thread.

Action: Add log files to the thread that signals error, and try again.

ORA-01381: Dropping log *string* would leave less than two log files with block size *string* for instance *string* (thread *string*)
Cause: The database was migrated to use a specified log block size. Dropping all the logs specified would leave fewer than the required two log files with the specified block size per enabled thread.

Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

ORA-01382: Thread *string* failed to open log file *string*. The log file's block size (*string*) is larger than the disk sector size (*string*)
Cause: Log file was created on bigger sector disks, and moved to smaller sector disks.

Action: Move the log file back to bigger sector disks.

ORA-01383: Thread *string* failed to open *string* block size log file '*string*' on *string* sector native-mode disks
Cause: Log file was copied from smaller sector disks to larger sector native-mode disks.

Action: Move the log file back to smaller sector disks.

ORA-01397: file name too long to shrink without truncation
Cause: An attempt was made to automatically convert the control file created with maximum file name size value of 512 to 256. This could result in truncation of file names leading to loss of uniqueness among file names.

Action: One of the following can be done: 1) Change the _kccacb parameter value to 'reject' which will ignore the automatic conversion without returning this error. 2) Shorten the file names in the system where the control file was created to conform to the maximum file name length in the current system.

ORA-01398: LogMiner public event

ORA-01399: LogMiner public event

ORA-01400: cannot insert NULL into (*string*)
Cause: An attempt was made to insert NULL into previously listed objects.

Action: These objects cannot accept NULL values.

ORA-01401: inserted value too large for column
Cause: The value inserted was too large for the given column.

Action: Do not insert a value greater than what the column can hold.

ORA-01402: view WITH CHECK OPTION where-clause violation
Cause: An INSERT or UPDATE statement was attempted on a view created with the CHECK OPTION. This would have resulted in the creation of a row that would not satisfy the view's WHERE clause.

Action: Examine the view's WHERE clause in the dictionary table VIEWS. If the current view does not have the CHECK OPTION, then its FROM clause must reference a second view that is defined using the CHECK OPTION. The second view's WHERE clause must also be satisfied by any INSERT or UPDATE statements. To insert the row, it may be necessary to insert it directly into the underlying table, rather than through the view.

ORA-01403: no data found
Cause: No data was found from the objects.

Action: There was no data from the objects which may be due to end of fetch.

ORA-01404: ALTER COLUMN will make an index too large
Cause: Increasing the length of a column would cause the combined length of the columns specified in a previous CREATE INDEX statement to exceed the maximum index length (255). The total index length was computed as the sum of the width of all indexed columns plus the number of indexed columns. Date fields were calculated as a length of 7, character fields were calculated at their defined width, and numeric fields were length 22.

Action: The only way to alter the column is to drop the affected index. The index cannot be re-created if to do so would exceed the maximum index width.

ORA-01405: fetched column value is NULL
Cause: The INTO clause of a FETCH operation contained a NULL value, and no indicator was used. The column buffer in the program remained unchanged, and the cursor return code was +2. This was an error unless you are running Oracle with DBMS=6, emulating version 6, in which case it was only a warning.

Action: You may do any of the following: - Use the NVL function to convert the retrieved NULL to another value, such as zero or blank. This is the simplest solution. - Use an indicator to record the presence of the NULL. You probably should use this option when you want a specific action to be taken when a NULL arises. - Revise the cursor definition so that no columns possibly containing NULL values are retrieved.

ORA-01406: fetched column value was truncated
Cause: The fetched column values were truncated.

Action: Use the right data types to avoid truncation.

ORA-01407: cannot update (*string*) to NULL
Cause: An attempt was made to update a table column "USER"."TABLE"."COLUMN" with a NULL value. For example, if you enter: connect scott/tiger update table a (a1 number not null); insert into a values (null); Oracle returns: ORA-01407 cannot update ("SCOTT"."A"."A1") to NULL which means you cannot update the column "SCOTT"."A"."A1" to NULL.

Action: Retry the operation with a value other than NULL.

ORA-01408: such column list already indexed
Cause: A CREATE INDEX statement specified a column that was already indexed. A single column may be indexed only once. Additional indexes may be created on the column if it was used as a portion of a concatenated index, that was, if the index consists of multiple columns.

Action: Do not attempt to re-index the column, as it is unnecessary. To create a concatenated key, specify one or more additional columns in the CREATE INDEX statement.

ORA-01409: NOSORT option may not be used; rows are not in ascending order
Cause: Creation of index with NOSORT option when rows were not ascending. For non-unique indexes the rowid is considered part of the index key. Therefore, if you create an index nosort and two of the rows in the table have the same key and are stored in ascending order, but get split accross two extents where the dba of the first block in the second extent is less than the dba of the last block in the first extent, then the create index nosort may fail.

Action: Create the index without the NOSORT option, or ensure table is stored in one extent.

ORA-01410: invalid ROWID
Cause: A ROWID was entered incorrectly. ROWIDs must be entered as formatted hexadecimal strings using only numbers and the characters A through F. A typical ROWID format is '000001F8.0001.0006'.

Action: Check the format, then enter the ROWID using the correct format. ROWID format: block ID, row in block, file ID.

ORA-01411: cannot store the length of column in the indicator
Cause: Tried to fetch a column of size more than 64K and couldn't store the length of the column in the given indicator of size 2 bytes.

Action: Use the new bind type with call backs to fetch the long column.

ORA-01412: zero length not allowed for this datatype
Cause: The length for type 97 is 0

Action: Specify the correct length.

ORA-01413: illegal value in packed decimal number buffer
Cause: The user buffer bound by the user as packed decimal number contained an illegal value.

Action: Use a legal value.

ORA-01414: invalid array length when trying to bind array
Cause: An attempt was made to bind an array without either a current array length pointer or a zero maximum array length.

Action: Sepcify a valid length.

ORA-01415: too many distinct aggregate functions
Cause: The query contains more distinct aggregates than can be processed. The current limit is 255.

Action: Reduce the number of distinct aggregate functions in the query.

ORA-01416: two tables cannot be outer-joined to each other
Cause: Two tables in a join operation specified an outer join with respect to each other. If an outer join was specified on one of the tables in a join condition, it may not be specified on the other table.

Action: Remove the outer join specification (+) from one of the tables, then retry the operation.

ORA-01417: a table may be outer joined to at most one other table
Cause: a.b (+) = b.b and a.c (+) = c.c is not allowed

Action: Check that this is really what you want, then join b and c first in a view.

ORA-01418: specified index does not exist
Cause: An ALTER INDEX, DROP INDEX, or VALIDATE INDEX statement specified the name of an index that did not exist. Only existing indexes can be altered, dropped, or validated. Existing indexes may be listed by querying the data dictionary.

Action: Specify the name of an existing index in the ALTER INDEX, DROP INDEX, or VALIDATE INDEX statement.

ORA-01419: datdts: illegal format code
Cause: An attempt was made to use an incorrect format.

Action: Inspect the format, correct it if necessary, then retry the operation.

ORA-01420: datstd: illegal format code
Cause: An attempt was made to use an invalid format.

Action: Inspect the format, correct it if necessary, then retry the operation.

ORA-01421: datrnd/dattrn: illegal precision specifier
Cause: An attempt was made to use an invalid precision specifier.

Action: Inspect the precision specifier, correct it if necessary, then retry the operation.

ORA-01422: exact fetch returns more than requested number of rows
Cause: The number specified in exact fetch is less than the rows returned.

Action: Rewrite the query or change number of rows requested

ORA-01423: error encountered while checking for extra rows in exact fetch
Cause: An error was encountered during the execution of an exact fetch. This message will be followed by more descriptive messages.

Action: See the following error and take appropriate action.

ORA-01424: missing or illegal character following the escape character
Cause: The character following the escape character in LIKE pattern is missing or not one of the escape character, '%', or '_'.

Action: Remove the escape character or specify the missing character.

ORA-01425: escape character must be character string of length 1
Cause: Given escape character for LIKE is not a character string of length 1.

Action: Change it to a character string of length 1.

ORA-01426: numeric overflow
Cause: Evaluation of an value expression causes an overflow/underflow.

Action: Reduce the operands.

ORA-01427: single-row subquery returns more than one row
Cause: The outer query must use one of the keywords ANY, ALL, IN, or NOT IN to specify values to compare because the subquery returned more than one row.

Action: Use ANY, ALL, IN, or NOT IN to specify which values to compare or reword the query so only one row is retrieved.

ORA-01428: argument '*string*' is out of range
Cause: An illegal value for a mathematical function argument was specified. For example: SELECT SQRT(-1) "Square Root" FROM DUAL;

Action: See the Oracle9i SQL Reference for valid input and ranges of the mathematical functions.

ORA-01429: Index-Organized Table: no data segment to store overflow row-pieces
Cause: No overflow segment defined.

Action: Add overflow segment.

ORA-01430: column being added already exists in table
Cause: An ALTER TABLE ADD statement specified the name of a column that was already in the table. All column names must be unique within a table.

Action: Specify a unique name for the new column, then re-execute the statement.

ORA-01431: internal inconsistency in GRANT command
Cause: An internal error occurred while attempting to execute a GRANT statement.

Action: Contact Oracle Support Services.

ORA-01432: public synonym to be dropped does not exist
Cause: The synonym specified in DROP PUBLIC SYNONYM was not a valid public synonym. It may be a private synonym.

Action: Correct the synonym name or use DROP SYNONYM if the synonym is not public.

ORA-01433: synonym to be created is already defined
Cause: A CREATE SYNONYM statement specified a synonym name that was the same as an existing synonym, table, view, or cluster. Synonyms may not have the same name as any other synonym, table, view, or cluster available to the user creating the synonym.

Action: Specify a unique name for the synonym, then re-execute the statement.

ORA-01434: private synonym to be dropped does not exist
Cause: A DROP SYNONYM statement specified a synonym that did not exist. Existing synonym names may be listed by querying the data dictionary.

Action: Specify the name of an existing synonym in the DROP SYNONYM statement.

ORA-01435: user does not exist
Cause: This message is caused by any reference to a non-existent user. For example, it occurs if a SELECT, GRANT, or REVOKE statement specifies a username that did not exist. Only a GRANT CONNECT statement may specify a new username. All other GRANT and REVOKE statements must specify existing usernames. If specified in a SELECT statement, usernames must already exist.

Action: Specify only existing usernames in the SELECT, GRANT, or REVOKE statement or ask the database administrator to define the new username.

ORA-01436: CONNECT BY loop in user data
Cause: The condition specified in a CONNECT BY clause caused a loop in the query, where the next record to be selected was a descendent of itself. When this happens, there could be no end to the query.

Action: Check the CONNECT BY clause and remove the circular reference.

ORA-01437: cannot have join with CONNECT BY
Cause: A join operation was specified with a CONNECT BY clause. If a CONNECT BY clause was used in a SELECT statement for a tree-structured query, only one table may be referenced in the query.

Action: Remove either the CONNECT BY clause or the join operation from the SQL statement.

ORA-01438: value larger than specified precision allowed for this column
Cause: When inserting or updating records, a numeric value was entered that exceeded the precision defined for the column.

Action: Enter a value that complies with the numeric column's precision, or use the MODIFY option with the ALTER TABLE command to expand the precision.

ORA-01439: column to be modified must be empty to change datatype
Cause: An ALTER TABLE MODIFY statement attempted to change the datatype of a column containing data. A column whose datatype was to be altered must contain only NULL values.

Action: To alter the datatype, first set all values in the column to NULL.

ORA-01440: column to be modified must be empty to decrease precision or scale
Cause: An ALTER TABLE MODIFY statement attempted to decrease the scale or precision of a numeric column containing data. In order to decrease either of these values, the column must contain only NULL values. An attempt to increase the scale without also increasing the precision caused this message.

Action: Set all values in the column to NULL before decreasing the numeric precision or scale. If attempting to increase the scale, increase the precision in accordance with the scale or set all values in the column to NULL first.

ORA-01441: cannot decrease column length because some value is too big
Cause: An ALTER TABLE MODIFY statement attempted to decrease the size of a character field containing data. A column whose maximum size was decreased must contain only NULL values.

Action: Set all values in column to NULL before decreasing the maximum size.

ORA-01442: column to be modified to NOT NULL is already NOT NULL
Cause: An ALTER TABLE MODIFY statement attempted to change a column specification unnecessarily, from NOT NULL to NOT NULL.

Action: No action required.

ORA-01443: internal inconsistency; illegal datatype in resultant view column
Cause: An internal error occurred in referencing a view.

Action: Contact Oracle Support Services.

ORA-01444: internal inconsistency; internal datatype maps to invalid external type
Cause: This is an internal error message not normally issued.

Action: Contact Oracle Support Services.

ORA-01445: cannot select ROWID from, or sample, a join view without a key-preserved table
Cause: A SELECT statement attempted to select ROWIDs from a view derived from a join operation. Because the rows selected in the view did not correspond to underlying physical records, no ROWIDs can be returned.

Action: Remove ROWID from the view selection clause, then re-execute the statement.

ORA-01446: cannot select ROWID from, or sample, a view with DISTINCT, GROUP BY, etc.
Cause: A SELECT statement attempted to select ROWIDs from a view containing columns derived from functions or expressions. Because the rows selected in the view did not correspond to underlying physical records, no ROWIDs can be returned.

Action: Remove ROWID from the view selection clause, then re-execute the statement.

ORA-01447: ALTER TABLE does not operate on clustered columns
Cause: An ALTER TABLE MODIFY statement specified a column used to cluster the table. Clustered columns may not be altered.

Action: To alter the column, first re-create the table in non-clustered form. The column's size can be increased at the same time.

ORA-01448: index must be dropped before changing to desired type
Cause: An ALTER TABLE MODIFY statement attempted to change an indexed character column to a LONG column. Columns with the datatype LONG may not be indexed, so the index must be dropped before the modification.

Action: Drop all indexes referencing the column before changing its datatype to LONG.

ORA-01449: column contains NULL values; cannot alter to NOT NULL
Cause: An ALTER TABLE MODIFY statement attempted to change the definition of a column containing NULL values to NOT NULL. The column may not currently contain any NULL values if it was to be altered to NOT NULL.

Action: Set all NULL values in the column to values other than NULL before ALTERING the column to NOT NULL.

ORA-01450: maximum key length (*string*) exceeded
Cause: The combined length of all the columns specified in a CREATE INDEX statement exceeded the maximum index length. The maximum index length varies by operating system. The total index length was computed as the sum of the width of all indexed columns plus the number of indexed columns. Date fields have a length of 7, character fields have their defined length, and numeric fields have a length of 22. Numeric length = (precision/2) + 1. If negative, add +1.

Action: Select columns to be indexed so the total index length does not exceed the maximum index length for the operating system. See also your operating system-specific Oracle documentation.

ORA-01451: column to be modified to NULL cannot be modified to NULL
Cause: the column may already allow NULL values, the NOT NULL constraint is part of a primary key or check constraint.

Action: if a primary key or check constraint is enforcing the NOT NULL constraint, then drop that constraint.

ORA-01452: cannot CREATE UNIQUE INDEX; duplicate keys found
Cause: A CREATE UNIQUE INDEX statement specified one or more columns that currently contained duplicate values. All values in the indexed columns must be unique by row to create a UNIQUE INDEX.

Action: If the entries need not be unique, remove the keyword UNIQUE from the CREATE INDEX statement, then re-execute the statement. If the entries must be unique, as in a primary key, then remove duplicate values before creating the UNIQUE index.

ORA-01453: SET TRANSACTION must be first statement of transaction
Cause: self-evident

Action: commit (or rollback) transaction, and re-execute

ORA-01454: cannot convert column into numeric datatype
Cause: A non-numeric value could not be converted into a number value.

Action: Check the value to make sure it contains only numbers, a sign, a decimal point, and the character "E" or "e", then retry the operation.

ORA-01455: converting column overflows integer datatype
Cause: The converted form of the specified expression was too large for the specified datatype.

Action: Define a larger datatype or correct the data.

ORA-01456: may not perform insert/delete/update operation inside a READ ONLY transaction
Cause: A non-DDL insert, delete, update or select for update operation was attempted.

Action: commit (or rollback) transaction, and re-execute

ORA-01457: converting column overflows decimal datatype
Cause: The converted form of the specified expression was too large for the specified type. The problem also occurred in COBOL programs when using COMP-3 in the

picture clause, which was acceptable to the Pro*COBOL Precompiler and to COBOL but results in this error.

Action: Define a larger datatype or correct the data.

ORA-01458: invalid length inside variable character string
Cause: An attempt was made to bind or define a variable character string with a buffer length less than the minimum requirement.

Action: Increase the buffer size or use a different type.

ORA-01459: invalid length for variable character string
Cause: The buffer length was less than the minimum required or greater than its length at bind time minus two bytes.

Action: Make sure the string size is long enough to hold the buffer.

ORA-01460: unimplemented or unreasonable conversion requested
Cause: The requested format conversion was not supported.

Action: Remove the requested conversion from the SQL statement. Check the syntax for the TO_CHAR, TO_DATE, and TO_NUMBER functions to see which conversions are supported.

ORA-01461: can bind a LONG value only for insert into a LONG column
Cause: An attempt was made to insert a value from a LONG datatype into another datatype. This is not allowed.

Action: Do not try to insert LONG datatypes into other types of columns.

ORA-01462: cannot insert string literals longer than 4000 characters
Cause: The longest literal supported by Oracle consisted of 4000 characters.

Action: Reduce the number of characters in the literal to 4000 characters or fewer or use the VARCHAR2 or LONG datatype to insert strings exceeding 4000 characters.

ORA-01463: cannot modify column datatype with current constraint(s)
Cause: An attempt was made to modify the datatype of column which has referential constraints; or has check constraints which only allows changing the datatype from CHAR to VARCHAR or vise versa.

Action: Remove the constraint(s) or do not perform the offending operation.

ORA-01464: circular grant (granting to grant ancestor) of table or view
Cause: The user in the TO clause of the GRANT statement had already been GRANTed privileges on this table.

Action: Do not GRANT privileges on a table to the user who originally GRANTed privileges on that table. The statement in error is probably unnecessary.

ORA-01465: invalid hex number
Cause: In an UPDATE statement following a SELECT FOR UPDATE, part of the ROWID contained invalid characters. ROWID must be expressed in the proper and expected format for ROWID and within quotes.

Action: Enter the ROWID just as it was returned in the SELECT FOR UPDATE.

ORA-01466: unable to read data - table definition has changed
Cause: Query parsed after tbl (or index) change, and executed w/old snapshot

Action: commit (or rollback) transaction, and re-execute

ORA-01467: sort key too long
Cause: A DISTINCT, GROUP BY, ORDER BY, or SET operation requires a sort key longer than that supported by Oracle. Either too many columns or too many group functions were specified in the SELECT statement.

Action: Reduce the number of columns or group functions involved in the operation.

ORA-01468: a predicate may reference only one outer-joined table
Cause: A predicate in the WHERE clause had two columns from different tables with "(+)".

Action: Change the WHERE clause so that each predicate has a maximum of one outer-join table.

ORA-01469: PRIOR can only be followed by a column name
Cause: Attempting to specify "PRIOR *something*" where *something* is not a column name.

Action: Only a column name can follow PRIOR. Replace with a column name.

ORA-01470: In-list iteration does not support mixed operators
Cause: Constants of different types are specified in an in-list.

Action: Use constants of same type for in-lists.

ORA-01471: cannot create a synonym with same name as object
Cause: An attempt was made to create a private synonym with the same name as the object to which it refers. This error typically occurred when a user attempts to create a private synonym with the same name as one of their objects.

Action: Choose a different synonym name or create the synonym under a different username.

ORA-01472: cannot use CONNECT BY on view with DISTINCT, GROUP BY, etc.
Cause: CONNECT BY could not be used on a view where there was not a correspondence between output rows and rows of the underlying table.

Action: Remove the DISTINCT or GROUP BY from the view or move the CONNECT BY clause into the view.

ORA-01473: cannot have subqueries in CONNECT BY clause
Cause: Subqueries could not be used in a CONNECT BY clause.

Action: Remove the subquery or move it to the WHERE clause.

ORA-01474: cannot have START WITH or PRIOR without CONNECT BY
Cause: START WITH and PRIOR are meaningful only in connection with CONNECT BY.

Action: Check the syntax for the SQL statement and add a CONNECT BY clause, if necessary.

ORA-01475: must reparse cursor to change bind variable datatype
Cause: After executing a statement, an attempt was made to rebind a bind variable with a datatype different from that of the original bind.

Action: Re-parse the cursor before rebinding with a different datatype.

ORA-01476: divisor is equal to zero
Cause: An expression attempted to divide by zero.

Action: Correct the expression, then retry the operation.

ORA-01477: user data area descriptor is too large
Cause: This is an internal error message not normally issued.

Action: Contact Oracle Support Services.

ORA-01478: array bind may not include any LONG columns
Cause: User is performing an array bind with a bind variable whose maximum size is greater than 2000 bytes.

Action: Such bind variables cannot participate in array binds. Use an ordinary bind operation instead.

ORA-01479: last character in the buffer is not Null
Cause: A bind variable of type 97 does not contain null at the last position

Action: Make the last character null

ORA-01480: trailing null missing from STR bind value
Cause: A bind variable of type 5 (null-terminated string) does not contain the terminating null in its buffer.

Action: Terminate the string with a null character

ORA-01481: invalid number format model
Cause: The user is attempting to either convert a number to a string via TO_CHAR or a string to a number via TO_NUMBER and has supplied an invalid number format model parameter.

Action: Consult your manual.

ORA-01482: unsupported character set
Cause: The character set used to perform the operation, such as the CONVERT function, is not a supported character set.

Action: Use one of the supported character sets.

ORA-01483: invalid length for DATE or NUMBER bind variable
Cause: A bind variable of type DATE or NUMBER is too long.

Action: Consult your manual for the maximum allowable length.

ORA-01484: arrays can only be bound to PL/SQL statements
Cause: You tried to bind an array to a non-PL/SQL statement.

Action: Rewrite the offending code being careful to bind arrays only to PL/SQL statements.

ORA-01485: compile bind length different from execute bind length
Cause: You bound a buffer of type DTYVCS (VARCHAR with the two byte length in front) and at execute time the length in the first two bytes is more than the maximum buffer length (given in the bind call). The number of elements in the array and the current number of elements in the array cannot be more than the maximum size of the array.

Action: Ensure that the buffer size is sufficiently large to contain the array plus two bytes for the buffer length.

ORA-01486: size of array element is too large
Cause: You tried to bind a data value which was either too large for the datatype (for example, NUMBER) or was greater than 4000 bytes (for example, VARCHAR or LONG).

Action: Find a way to convert or truncate the data value so that its length is acceptable.

ORA-01487: packed decimal number too large for supplied buffer
Cause: An impossible request for decimal to oracle number conversion was made

Action: This conversion cannot be performed

ORA-01488: invalid nibble or byte in the input data
Cause: An impossible request for decimal to oracle number conversion was made

Action: This conversion cannot be performed

ORA-01489: result of string concatenation is too long
Cause: String concatenation result is more than the maximum size.

Action: Make sure that the result is less than the maximum size.

ORA-01490: invalid ANALYZE command
Cause: Incorrect syntax specified

Action: Retry the command

ORA-01491: CASCADE option not valid
Cause: The CASCADE option is only valid for tables or clusters.

Action: Do not specify CASCADE

ORA-01492: LIST option not valid
Cause: The LIST option is only valid for tables or clusters.

Action: Do not specify LIST

ORA-01493: invalid SAMPLE size specified
Cause: The specified SAMPLE size is out of range

Action: Specify a value within the proper range.

ORA-01494: invalid SIZE specified
Cause: The specified histogram SIZE value was out of range.

Action: Specify a value within the proper range.

ORA-01495: specified chain row table not found
Cause: The specified table either does not exist or user does not have the proper privleges.

Action: Specify the correct table to use.

ORA-01496: specified chain row table form incorrect
Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

ORA-01497: illegal option for ANALYZE CLUSTER
Cause: The FOR COLUMNS *column-list* clause may not be used with ANALYZE CLUSTER.

Action: Retry with a legal syntax.

ORA-01498: block check failure - see trace file
Cause: An error occurred while checking a block with the ANALYZE command.

Action: Check the trace file for more descriptive messages about the problem. Correct these errors. The name of the trace file is operating system-specific, for example, ORAxxxx.TRC. It is found in the directory specified by the initialization parameter USER_DUMP_DEST. If USER_DUMP_DEST is not set, trace files are not created. It may be necessary to re-create the object. See also your operating system-specific Oracle documentation.

ORA-01499: table/index cross reference failure - see trace file
Cause: An error occurred when validating an index or a table using the ANALYZE command. One or more entries did not point to the appropriate cross-reference.

Action: Check the trace file for more descriptive messages about the problem. Correct these errors. The name of the trace file is operating system-specific, for example, ORAxxxx.TRC. It is found in the directory specified by the USER_DUMP_DEST initialization parameter. If USER_DUMP_DEST is not set, trace files are not created. It may be necessary to re-create the object. See also your operating system-specific Oracle documentation.

73

ORA-01500 to ORA-02098

ORA-01500: failure in getting date/time
Cause: During create database or alter tablespace, there was a failure in getting the date and time.

Action: Contact your customer support representative.

ORA-01501: CREATE DATABASE failed
Cause: An error occurred during create database

Action: See accompanying errors.

ORA-01502: index '*string*.*string*' or partition of such index is in unusable state
Cause: An attempt has been made to access an index or index partition that has been marked unusable by a direct load or by a DDL operation

Action: DROP the specified index, or REBUILD the specified index, or REBUILD the unusable index partition

ORA-01503: CREATE CONTROLFILE failed
Cause: An error occurred during CREATE CONTROLFILE

Action: See accompanying errors.

ORA-01504: database name '*string*' does not match parameter db_name '*string*'
Cause: The name in a database create or mount does not match the name given in the INIT.ORA parameter db_name.

Action: correct or omit one of the two names.

ORA-01505: error in adding log files
Cause: During create or alter database, error(s) occurred when adding new log files.

Action: Check error stack for detailed error information.

ORA-01506: missing or illegal database name
Cause: No db_name INIT.ORA aprameter was specified.

Action: The database name must be given in the db_name INIT.ORA parameter.

ORA-01507: database not mounted
Cause: A command was attempted that requires the database to be mounted.

Action: If you are using the ALTER DATABASE statement via the SQLDBA startup command, specify the MOUNT option to startup; else if you are directly doing an ALTER DATABASE DISMOUNT, do nothing; else specify the MOUNT option to ALTER DATABASE. If you are doing a backup or copy, you must first mount the desired database. If you are doing a FLASHBACK DATABASE, you must first mount the desired database.

ORA-01508: cannot create database; error in file '*string*' at line *string*
Cause: CREATE DATABASE was unable to process the specified file.

Action: Check the offending line in the specified file.

ORA-01509: specified name '*string*' does not match actual '*string*'
Cause: The database name specified in ALTER DATABASE does not match the name of the currently mounted database.

Action: Correct the database name spelling or DISMOUNT the mounted database.

ORA-01510: error in deleting log files
Cause: During ALTER DATABASE, an error occurred while dropping log files.

Action: Check the error stack for detailed error information.

ORA-01511: error in renaming log/data files
Cause: An error occurred during the ALTER DATABASE RENAME FILE command.

Action: Check the error stack for detailed error information.

ORA-01512: error renaming log file *string* - new file *string* not found
Cause: An attempt to change a log file's name in the control file failed because no file was found with the new name.

Action: Make sure that the log file has been properly renamed by the operating system and retry.

ORA-01513: invalid current time returned by operating system
Cause: The operating system returned a time that was not between 1988 and 2121.

Action: Correct the time kept by the operating system.

ORA-01514: error in log specification: no such log
Cause: A log file name, or list of member names, did not correspond to an existing log.

Action: Specify an existing log file.

ORA-01515: error dropping log group *string*: no such log
Cause: ALTER DATABASE is attempting to drop a log file which is not known to the database control file.

Action: Specify the name of an existing log file.

ORA-01516: nonexistent log file, data file, or temporary file "*string*" in the current container
Cause: An attempt was made to use ALTER DATABASE to rename a log file, data file, or temporary file; or to change attributes of a data file or temporary file (for example, resize, autoextend, online or offline); or to re-create or move a data file. The attempt failed because the specified file is not known to the database's control file or the current container or is not of a type supported by the request.

Action: Specify the name or number of an existing file of the correct type, as appropriate. Check the relevant V$ table for a list of possible files.

ORA-01517: log member: '*string*'
Cause: Used to print member names

Action: See top level error for information

ORA-01518: CREATE DATABASE must specify more than one log file
Cause: Only one log file was specified in the CREATE DATABASE statement.

Action: Specify at least two log files.

ORA-01519: error while processing file '*string*' near line *string*
Cause: CREATE DATABASE encountered a problem while processing specified file. The specified file is bad.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01520: number of data files to add (*string*) exceeds limit of *string*
Cause: CREATE TABLESPACE statement specifies more files than is permitted for this database.

Action: Use fewer files or re-create the database with a larger value of MAXDATAFILES.

ORA-01521: error in adding data files
Cause: During CREATE or ALTER TABLESPACE, an error was detected while adding data files.

Action: Check the error stack for detailed error information.

ORA-01522: file '*string*' to be renamed does not exist
Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the database control file.

Action: Specify the correct file name.

ORA-01523: cannot rename data file to '*string*' - file already part of database
Cause: During ALTER DATABASE RENAME or ALTER TABLESPACE RENAME, the new name of a file is already present in the control file.

Action: Rename the file to a name not already being used as part of the database.

ORA-01524: cannot create data file as '*string*' - file already part of database
Cause: During ALTER DATABASE CREATE DATAFILE, the new name of a file is already present in the control file.

Action: Create the file as a name not already being used as part of the database.

ORA-01525: error in renaming data files
Cause: An error occurred when renaming files as part of ALTER TABLESPACE.

Action: Check the error stack for detailed information. All files are renamed except for those mentioned in the error stack.

ORA-01526: error in opening file '*string*'
Cause: CREATE DATABASE was not able to open the specified file. This is probably due to a system installation error.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01527: error while reading file
Cause: CREATE DATABASE was not able to read the specified file. This is probably due to a system installation error.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01528: EOF while processing SQL statement
Cause: CREATE DATABASE unexpectedly hit EOF while reading the specified file. The sql.bsq file is bad.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01529: error closing file '*string*'
Cause: CREATE DATABASE was not able to close the specified file.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01530: a database already mounted by the instance
Cause: During ALTER DATABASE MOUNT, an attempt is being made to mount a database on an instance in which a database is or has previously been mounted.

Action: If you wish to mount the database, shutdown the instance and then startup the instance and retry the operation.

ORA-01531: a database already open by the instance
Cause: During ALTER DATABASE, an attempt was made to open a database on an instance for which there is already an open database.

Action: If you wish to open a new database on the instance, first shutdown the instance and then startup the instance and retry the operation.

ORA-01532: cannot create database; instance being started elsewhere
Cause: During CREATE DATABASE, another user appears to be simultaneously altering the instance.

Action: Make sure no one else is simultaneously altering the instance. If no one is, contact your customer support representative; otherwise, retry the operation.

ORA-01533: cannot rename file '*string*'; file does not belong to tablespace
Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the argument tablespace.

Action: Specify the correct file name or the correct tablespace name.

ORA-01534: rollback segment '*string*' doesn't exist
Cause: During ALTER or DROP ROLLBACK SEGMENT, the specified rollback segment name is unknown.

Action: Use the correct rollback segment name.

ORA-01535: rollback segment '*string*' already exists or given name has prefix _SYSSMU
Cause: Specified rollback segment already exists or given name starts with _SYSSMU.

Action: Use a different name. Note that _SYSSMU is an illegal prefix to an RBU segment.

ORA-01536: space quota exceeded for tablespace '*string*'
Cause: The space quota for the segment owner in the tablespace has been exhausted and the operation attempted the creation of a new segment extent in the tablespace.

Action: Either drop unnecessary objects in the tablespace to reclaim space or have a privileged user increase the quota on this tablespace for the segment owner.

ORA-01537: cannot add file '*string*' - file already part of database
Cause: During CREATE or ALTER TABLESPACE, a file being added is already part of the database.

Action: Use a different file name.

ORA-01538: failed to acquire any rollback segment
Cause: Failed to acquire any rollback segment during startup in shared mode

Action: Startup in exclusive mode to create one more public segment or specify available private segments in the INIT.ORA parameter rollback_segments_required, then startup in shared mode

ORA-01539: tablespace '*string*' is not online
Cause: Failed to either make a tablespace read-only or offline because it is not online. A tblespace must be online before it can become read-only or offline normal.

Action: Check the status of the tablespace. Use IMMEDIATE or TEMPORARY options to force all files offline. Bring the tablespace online before making it read-only.

ORA-01540: tablespace '*string*' is not offline
Cause: Failed to bring a tablespace online because it is not offline

Action: Check the status of the tablespace

ORA-01541: system tablespace cannot be brought offline; shut down if necessary
Cause: Tried to bring system tablespace offline

Action: Shutdown if necessary to do recovery

ORA-01542: tablespace '*string*' is offline, cannot allocate space in it
Cause: Tried to allocate space in an offline tablespace

Action: Bring the tablespace online or create the object in other tablespace

ORA-01543: tablespace '*string*' already exists
Cause: Tried to create a tablespace which already exists

Action: Use a different name for the new tablespace

ORA-01544: cannot drop system rollback segment
Cause: Tried to drop system rollback segment

Action: None

ORA-01545: rollback segment '*string*' specified not available
Cause: Either: 1) An attempt was made to bring a rollback segment online that is unavailable during startup; for example, the rollback segment is in an offline tablespace. 2) An attempt was made to bring a rollback segment online that is already online. This is because the rollback segment is specified twice in the ROLLBACK_SEGMENTS parameter in the initialization parameter file or the rollback segment is already online by another instance. 3) An attempt was made to drop a rollback segment that is currently online. 4) An attempt was made to alter a rollback segment that is currently online to use unlimited extents. 5) An attempt was made to online a rollback segment that is corrupted. This is because the rollback is specified in _corrupted_rollback_segments parameter in initialization parameter file.

Action: Either: 1) Make the rollback segment available; for example, bring an offline tablespace online. 2) Remove the name from the ROLLBACK_SEGMENTS parameter if the name is a duplicate or if another instance has already acquired the rollback segment. 3) Bring the rollback segment offline first. This may involve waiting for the active transactions to finish, or, if the rollback segment needs recovery, discover which errors are holding up the rolling back of the transactions and take appropriate actions. 4) Same as 3). 5) Remove the name from the _corrupted_rollback_segments parameter.

ORA-01546: tablespace contains active rollback segment '*string*'
Cause: Tried to make a tablespace that contains active rollback segment(s) offline or read-only

Action: Shutdown instances that use the active rollback segments in the tablespace and then make the tablespace offline or read-only

ORA-01547: warning: RECOVER succeeded but OPEN RESETLOGS would get error below
Cause: Media recovery with one of the incomplete recovery options ended without error. However, if the ALTER DATABASE OPEN RESETLOGS command were attempted now, it would fail with the specified error. The most likely cause of this error is forgetting to restore one or more datafiles from a sufficiently old backup before executing the incomplete recovery.

Action: Rerun the incomplete media recovery using different datafile backups, a different control file, or different stop criteria.

ORA-01548: active rollback segment '*string*' found, terminate dropping tablespace
Cause: Tried to drop a tablespace that contains active rollback segment(s)

Action: Shutdown instances that use the active rollback segments in the tablespace and then drop the tablespace

ORA-01549: tablespace not empty, use INCLUDING CONTENTS option
Cause: Tried to drop a non-empty tablespace

Action: To drop all the objects in the tablespace, use the INCLUDING CONTENTS option

ORA-01550: cannot drop system tablespace
Cause: Tried to drop system tablespace

Action: None

ORA-01551: extended rollback segment, pinned blocks released
Cause: Doing recursive extent of rollback segment, trapped internally by the system

Action: None

ORA-01552: cannot use system rollback segment for non-system tablespace '*string*'
Cause: Tried to use the system rollback segment for operations involving non-system tablespace. If this is a clone database then this will happen when attempting any data modification outside of the system tablespace. Only the system rollback segment can be online in a clone database.

Action: Create one or more private/public segment(s), shutdown and then startup again. May need to modify the INIT.ORA parameter rollback_segments to acquire private rollback segment. If this is a clone database being used for tablspace point in time recovery then this operation is not allowed. If the non-system tablespace has AUTO segment space management, then create an undo tablespace.

ORA-01553: MAXEXTENTS must be no smaller than the *string* extents currently allocated
Cause: The number of extents allocated is greater than the MAXEXTENTS specified.

Action: Specify a larger MAXEXTENTS value.

ORA-01554: transaction concurrency limit reached reason:*string* params:*string*, *string*
Cause: Too many concurrent transactions

Action: Shutdown the system, modify the INIT.ORA parameters transactions, rollback_segments or rollback_segments_required, then startup again.

ORA-01555: snapshot too old: rollback segment number *string* with name "*string*" too small
Cause: rollback records needed by a reader for consistent read are overwritten by other writers

Action: If in Automatic Undo Management mode, increase undo_retention setting. Otherwise, use larger rollback segments

ORA-01556: MINEXTENTS for rollback segment must be greater than 1
Cause: Specified MINEXTENTS of less than 2 for rollback segment

Action: Specify larger MINEXTENTS

ORA-01557: rollback segment extents must be at least *string* blocks
Cause: Specified extent of less than minimum size for rollback segment

Action: Specify larger extents

ORA-01558: out of transaction ID's in rollback segment *string*
Cause: All the available transaction id's have been used

Action: Shutdown the instance and restart using other rollback segment(s), then drop the rollback segment that has no more transaction id's.

ORA-01559: MAXEXTENTS for rollback segment must be greater than 1
Cause: Specified MAXEXTENTS of less than 2 for rollback segment

Action: Specify larger MAXEXTENTS

ORA-01560: LIKE pattern contains partial or illegal character
Cause: like pattern is not formed correctly

Action: make sure like pattern is specified correctly

ORA-01561: failed to remove all objects in the tablespace specified
Cause: Failed to remove all objects when dropping a tablespace

Action: Retry the drop tablespace until all objects are dropped

ORA-01562: failed to extend rollback segment number *string*
Cause: Failure occurred when trying to extend rollback segment

Action: This is normally followed by another error message that caused the failure. You may take the rollback segment offline to perform maintainence. Use the alter rollback segment offline command to take the rollback segment offline.

ORA-01563: rollback segment is PUBLIC, need to use the keyword PUBLIC
Cause: Did not use the keyword PUBLIC to identified public rollback segment

Action: Use the keyword PUBLIC when identifying public rollback segment

ORA-01564: rollback segment is not PUBLIC
Cause: The rollback segment segment identified is not public

Action: Do not use the keyword PUBLIC when identifying private rollback segment

ORA-01565: error in identifying file '*string*'
Cause: An error occurred while trying to identify a file.

Action: Check the error stack for detailed information.

ORA-01566: file specified more than once in ALTER DATABASE
Cause: The list of files supplied to the command contained at least one duplicate.

Action: Remove the duplicate file specification and retry.

ORA-01567: dropping log *string* would leave less than 2 log files for instance *string* (thread *string*)
Cause: Dropping all the logs specified would leave fewer than the required two log files per enabled thread.

Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

ORA-01568: cannot set space quota on PUBLIC
Cause: Trying to set space quota on a tablespace for PUBLIC.

Action: If trying to grant system-wide or tablespace-wide space priviledges to all users, use GRANT RESOURCE [ON *tablespace*] TO PUBLIC.

ORA-01569: data file too small for system dictionary tables
Cause: The datafile specified during creation of the database is too small to hold the system dictionary tables.

Action: Recreate the database by specifying a larger file or more files.

ORA-01570: MINEXTENTS must be no larger than the *string* extents currently allocated
Cause: The number of extents allocated is smaller than the MINEXTENTS specified.

Action: Specify a smaller MINEXTENTS value.

ORA-01571: redo version *string* incompatible with ORACLE version *string*
Cause: This software version can not read the current redo logs, and either crash recovery is required or there are offline database files that need media recovery. If a file name is listed then it needs media recovery.

Action: Shutdown and startup using the compatible software. Do any required media recovery, and open the database. Shutdown and then startup using current software. If the file is going to be dropped then take it offline with the DROP option to skip this check.

ORA-01572: rollback segment '*string*' cannot be brought online, *string* extents exceeded
Cause: The number of extents in the rollback segment exceeds the hard limit. It cannot be brought online for writing.

Action: Drop and recreate the rollback segment.

ORA-01573: shutting down instance, no further change allowed
Cause: Some process tries to make changes while the db is being shutdown

Action: None

ORA-01574: maximum number of concurrent transactions exceeded
Cause: the limit on the number of concurrent transactions has been hit

Action: shutdown the system, increase the INIT.ORA parameter 'transactions' , and then restart the system.

ORA-01575: timeout waiting for space management resource
Cause: failed to acquire necessary resource to do space management.

Action: Retry the operation.

ORA-01576: The instance *string* is not enabled
Cause: The thread associated with instance is not enabled.

Action: Enable the thread associated with the instance using ALTER DATABASE ENABLE INSTANCE command.

ORA-01577: cannot add log file '*string*' - file already part of database
Cause: During CREATE or ALTER DATABASE, a file being added is already part of the database.

Action: Use a different file name.

ORA-01578: ORACLE data block corrupted (file # *string*, block # *string*)
Cause: The data block indicated was corrupt. This was a physical corruption, also called a media corruption. The cause is unknown but is most likely external to the database. If ORA-26040 is also signaled, the corruption is due to NOLOGGING or UNRECOVERABLE operations.

Action: The general method to repair a media corrupt block is to restore a backup and recover the backup. For databases in ARCHIVELOG mode, use block media recovery or media recovery. In some situations, you can also drop the segment and re-create it. For example, you can drop an index and re-create the index.

ORA-01579: write error occurred during recovery
Cause: A write error occurred during recovery

Action: Consult trace files for the nature of the write error, and correct error.

ORA-01580: error creating control backup file *string*
Cause: An operating system error occurred while attempting to create a control file backup.

Action: Check the error stack for more detailed information

ORA-01581: attempt to use rollback segment (*string*) new extent (*string*) which is being allocated
Cause: Undo generated to extend a rollback segment run out of current undo block space and is attempting to write into the new extent which has not been completely allocated.

Action: The rollback segment extending will be rollbacked by the system, no more extension will be possible untill the next extent is freed up by rolling back or committing other transactions.

ORA-01582: unable to open control file for backup
Cause: An operating system error occurred while attempting to open a control file for backup.

Action: Check the error stack for more detailed information

ORA-01583: unable to get block size of control file to be backed up
Cause: An operating system error occurred while attempting to get the block size of a control file for backup.

Action: Check the error stack for more detailed information

ORA-01584: unable to get file size of control file to be backed up
Cause: An operating system error occurred while attempting to get the file size of a control file for backup.

Action: Check the error stack for more detailed information

ORA-01585: error identifying backup file *string*
Cause: An operating system error occurred when attempting to identify the file to be used for control file backup.

Action: Check the error stack for more detailed information

ORA-01586: database must be mounted EXCLUSIVE and not open for this operation
Cause: Attempting to DROP DATABASE when the database is not mounted EXCLUSIVE.

Action: Mount the database in EXCLUSIVE mode.

ORA-01587: error during control file backup file copy

ORA-01588: must use RESETLOGS option for database open
Cause: An earlier attempt to open the database with the RESETLOGS option did not complete, or recovery was done with a control file backup, or a FLASHBACK DATABASE was done.

Action: Use the RESETLOGS option when opening the database.

ORA-01589: must use RESETLOGS or NORESETLOGS option for database open
Cause: Either incomplete or backup control file recovery has been performed. After these types of recovery you must specify either the RESETLOGS option or the NORESETLOGS option to open your database.

Action: Specify the appropriate option.

ORA-01590: number of segment free list (*string*) exceeds maximum of *string*
Cause: storage parameter FREELIST GROUPS is too large.

Action: Reduce storage parameters FREELIST GROUPS

ORA-01591: lock held by in-doubt distributed transaction *string*
Cause: Trying to access resource that is locked by a dead two-phase commit transaction that is in prepared state.

Action: DBA should query the pending_trans$ and related tables, and attempt to repair network connection(s) to coordinator and commit point. If timely repair is not possible, DBA should contact DBA at commit point if known or end user for correct outcome, or use heuristic default if given to issue a heuristic commit or abort command to finalize the local portion of the distributed transaction.

ORA-01592: error converting Version 7 rollback segment (*string*) to Oracle 8 format
Cause: Look at the accompanying internal error; Version 7 database may not have shutdown cleanly.

Action: Investigate the internal error; may have to reload the Version 7 Investigate the internal error; may have to reload the Version 7 database (from backup) and shutdown the database cleanly.

ORA-01593: rollback segment optimal size (*string* blks) is smaller than the computed initial size (*string* blks)
Cause: Specified OPTIMAL size is smaller than the cumulative size of the initial extents during create rollback segment.

Action: Specify a larger OPTIMAL size.

ORA-01594: attempt to wrap into rollback segment (*string*) extent (*string*) which is being freed
Cause: Undo generated to free a rollback segment extent is attempting to write into the same extent due to small extents and/or too many extents to free

Action: The rollback segment shrinking will be rollbacked by the system; increase the optimal size of the rollback segment.

ORA-01595: error freeing extent (*string*) of rollback segment (*string*))
Cause: Some error occurred while freeing inactive rollback segment extents.

Action: Investigate the accompanying error.

ORA-01596: cannot specify system in *string* parameter
Cause: The system rollback segment is specified in the INIT.ORA parameter referred to in the error message

Action: change the INIT.ORA parameter

ORA-01597: cannot alter system rollback segment online or offline
Cause: Tried to online or offline the system rollback segment

Action: None

ORA-01598: rollback segment '*string*' is not online
Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo$ or dba_rollback_segs to make sure the rollback segment is actually online.

ORA-01599: failed to acquire rollback segment (*string*), cache space is full
Cause: the amount statically allocated is not enough based on max_rollback_segments parameter.

Action: For now take another rollback segment offline or increase the parameter max_rollback_segments

ORA-01600: at most one "*string*" in clause "*string*" of *string*
Cause: The INIT.ORA parameter was mis-specified.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01601: illegal bucket size in clause "*string*" of *string*
Cause: The bucket size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01603: illegal grouping size in clause "*string*" of *string*
Cause: The grouping size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01604: illegal number range in clause "*string*" of *string*
Cause: The number range was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01605: missing numbers in clause "*string*" of *string*
Cause: The numbers were missing for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01606: parameter not identical to that of another mounted instance
Cause: A parameter was different on two instances.

Action: Modify the initialization parameter and restart.

ORA-01607: cannot add logfile to the specified instance
Cause: The limit on the number of instances supported by the control file has been reached.

Action: Use an instance name supported by the control file, or resize the thread record and/or checkpoint progress record secions of the control file.

ORA-01608: cannot bring rollback segment '*string*' online, its status is (*string*)
Cause: Could have been brought online before by DBA or left as a result of process crash.

Action: Check the status of rollback segment in undo$ or dba_rollback_segs

ORA-01609: log *string* is the current log for thread *string* - cannot drop members
Cause: A member of the current log for a thread cannot be dropped.

Action: If the thread is opened, request a log switch by the instance that is using it. If it is not open, disable the thread, manually archive the log, or clear it.

ORA-01610: recovery using the BACKUP CONTROLFILE option must be done
Cause: Either an earlier database recovery session specified BACKUP CONTROLFILE, or the control file was recreated with the RESETLOGS option, or the control file being used is a backup control file. After that only BACKUP CONTROLFILE recovery is allowed and it must be followed by a log reset at the next database open.

Action: Perform recovery using the BACKUP CONTROFILE option.

ORA-01611: thread number *string* is invalid - must be between 1 and *string*
Cause: A thread number in a command is greater than the number of threads supported by the control file.

Action: Use a thread number that is valid, or resize the thread record and/or checkpoint progress record sections of the control file.

ORA-01612: instance *string* (thread *string*) is already enabled
Cause: An attempt was made to enable a thread that is already enabled.

Action: Either use this thread or enable another thread.

ORA-01613: instance *string* (thread *string*) only has *string* logs - at least 2 logs required to enable.
Cause: The thread cannot be enabled because it only has two online log files associated with it.

Action: Add logs to the thread or pick another thread to enable

ORA-01614: instance *string* (thread *string*) is busy - cannot enable
Cause: The mount enqueue for the thread could not be acquired when attempting to enable the thread. This probably means that another process has already started enabling this thread.

Action: Wait and try again, or find another thread to enable.

ORA-01615: instance *string* (thread *string*) is mounted - cannot disable
Cause: Some instance, possibly this one, has allocated the thread for its use. The thread can not be disabled while in use.

Action: Shut the instance down cleany using the thread.

ORA-01616: instance *string* (thread *string*) is open - cannot disable
Cause: The thread is not closed. The last instance to use the thread died leaving the thread open. A thread cannot be disabled until it is closed. It is still required for crash or instance recovery.

Action: If the database is open, instance recovery should close the thread soon - wait a few minutes. Otherwise open the database - crash recovery will close the thread.

ORA-01617: cannot mount: *string* is not a valid thread number
Cause: The INIT.ORA parameter "thread" is not between 1 and the number of threads allowed by the control file.

Action: Shut down the instance, change the INIT.ORA parameter and startup, or resize the thread record and/or checkpoint progress record sections of the control file.

ORA-01618: redo thread *string* is not enabled - cannot mount
Cause: The INIT.ORA parameter "thread" requests a thread that is not enabled. A thread must be enabled before it can be mounted.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread. If the database is open in another instance then the thread may be enabled.

ORA-01619: thread *string* is mounted by another instance
Cause: The INIT.ORA parameter "thread" requests a thread that has been mounted by another instance. Only one instance may use a thread.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread.

ORA-01620: no public threads are available for mounting
Cause: The INIT.ORA parameter "thread" is zero, its default value. There are no threads which have been publicly enabled, and not mounted.

Action: Shutdown the instance, change the INIT.ORA parameter to a thread which is privately enabled and not mounted. If the database is open in another instance, then a thread may be publicly enabled.

ORA-01621: cannot rename member of current log if database is open
Cause: This is a rename command for a member of the current log for an open thread. If the database is open anywhere, the log may be in use, so the rename cannot be done.

Action: Wait until the log is not current, or mount the database exclusively.

ORA-01622: thread number must be specified - default not specific
Cause: The thread was not specified when adding a log, and the currently mounted thread was chosen by default at mount time. Since the current thread was not specified explicitly the user cannot know which thread the log will be added to.

Action: Explicitly specify the thread number either in the INIT.ORA parameter "thread", or in the add command.

ORA-01623: log *string* is current log for instance *string* (thread *string*) - cannot drop
Cause: A thread's current log cannot be dropped even if the thread is closed. A disabled thread usually does not have a current log, but a half completed disable may need to be disabled again.

Action: If the database is not open then disable the thread. If the database is open and an instance has the thread open, then the instance can be requested to switch logs. If the database is closed the log can be archived or cleared to force a switch.

ORA-01624: log *string* needed for crash recovery of instance *string* (thread *string*)
Cause: A log cannot be dropped or cleared until the thread's checkpoint has advanced out of the log.

Action: If the database is not open, then open it. Crash recovery will advance the checkpoint. If the database is open force a global checkpoint. If the log is corrupted so that the database cannot be opened, it may be necessary to do incomplete recovery until cancel at this log.

ORA-01625: rollback segment '*string*' does not belong to this instance
Cause: Trying to shrink or take a rollback segment offline that does not belong to this instance.

Action: Take only those rollback segments offline that belong to the current instance. To take the rollback segment offline, connect to the instance containing it.

ORA-01626: rollback segment number '*string*' cannot handle more transactions
Cause: Too many transactions in this segment.

Action: Choose a different rollback segment, or reduce the number of concurrent transactions.

ORA-01627: rollback segment number '*string*' is not online
Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo$ or dba_rollback_segs to make sure the rollback segment is actually online.

ORA-01628: max # extents (*string*) reached for rollback segment *string*
Cause: An attempt was made to extend a rollback segment that was already at the MAXEXTENTS value.

Action: If the value of the MAXEXTENTS storage parameter is less than the maximum allowed by the system, raise this value.

ORA-01629: max # extents (*string*) reached saving undo for tablespace *string*
Cause: Save undo for the offline tablespace at max extents

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied .

ORA-01630: max # extents (*string*) reached in temp segment in tablespace *string*
Cause: A temp segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

ORA-01631: max # extents (*string*) reached in table *string*.*string*
Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01632: max # extents (*string*) reached in index *string*.*string*
Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01633: Real Application Clusters Option needed for this operation
Cause: System doesn't have Real Application Clusters configured

Action: Obtain Real Application Clusters option

ORA-01634: rollback segment number '*string*' is about to go offline
Cause: The rollback segment specified was marked to go offline by DBA.

Action: Bring the rollback segment online first.

ORA-01635: rollback segment #*string* specified not available
Cause: (same as 1545)

Action: (same as 1545)

ORA-01636: rollback segment '*string*' is already online
Cause: The instance is trying to online an already online RS

Action: Check that the values set in the initialization parameter file for parameters ROLLBACK_SEGMENTS, ROLLBACK_SEGMENT_INITIAL, and ROLLBACK_SEGMENT_COUNT are correctly set for the instance with the problem. Also check that the instance is using the correct initialization parameter file. Make sure you are not confused about the difference between private and public rollback segments. See the Oracle9i Database Administrator's Guide for more information about using rollback segments in parallel mode.

ORA-01637: rollback segment '*string*' is being used by another instance (#*string*)
Cause: The instance is trying to online a RS already in use by another instance

Action: Check that the values set in the initialization parameter file for parameters ROLLBACK_SEGMENTS, ROLLBACK_SEGMENT_INITIAL, and ROLLBACK_SEGMENT_COUNT are correctly set for the instance with the problem. Also check that the instance is using the correct initialization parameter file. Make sure you are not confused about the difference between private and public rollback segments. See the Oracle9i Database Administrator's Guide for more information about using rollback segments in parallel mode.

ORA-01638: parameter *string* does not allow ORACLE version *string* to mount cluster database
Cause: The recovery compatible parameter is set too low to allow this software version to mount in cluster database mode.

Action: Either use an earlier software release or advance the recovery_compatible parameter. If this happens when no recovery_compatible parameter has been specified then set it to the current software release.

ORA-01639: instance *string* has no thread assigned to it
Cause: There is no mapping from instance to thread for this instance in the control file.

Action: Make sure that this instance has a thread assigned to it by adding logfiles to this instance or by starting the instance with an existing thread which will automatically create a mapping.

ORA-01640: cannot make tablespace read-only with changes by in-doubt transactions
Cause: An attempt was made to alter a tablespace read-only while there were changes in the tablespace made by in-doubt distributed transactions. The in-doubt transactions must commit or rollback to ensure that there is no undo for a tablespace before it can be made read-only.

Action: Any in-doubt transactions that made changes to the tablespace must be resolved.

ORA-01641: tablespace '*string*' is not online - cannot add data file
Cause: Attempting to add a datafile to a tablespace that has been set to read-only or offline.

Action: Make the tablespace online and read write then add the datafile.

ORA-01642: begin backup not needed for read-only tablespace '*string*'
Cause: Attempting to begin or end a backup for a tablespace that has been set to read-only.

Action: Take the backup without any begin or end commands. The files are not being modified so the backup will be consistent.

ORA-01643: system tablespace can not be made read-only
Cause: Attempting to set the system tablespace to read-only. The system tablespace must remain read write for database operation.

Action: Leave system tablespace read write.

ORA-01644: tablespace '*string*' is already read-only
Cause: Attempting to make tablespace read-only that is already read-only.

Action: Leave tablespace read-only, or make read write then make read-only again.

ORA-01645: previous attempt to make read write is half complete
Cause: A failure while making the tablespace read write left it read only, but the checkpoint was advanced. The tablespace will not be useable after a resetlogs if its files are offline.

Action: Repeat the command to make the tablespace read write.

ORA-01646: tablespace '*string*' is not read-only - cannot make read write
Cause: Attempting to make a tablespace read write that is not read-only. It may be either online or offline.

Action: Leave tablespace read write.

ORA-01647: tablespace '*string*' is read-only, cannot allocate space in it
Cause: Tried to allocate space in a read-only tablespace

Action: Create the object in another tablespace

ORA-01648: log *string* is the current log of disabled instance *string* (thread *string*)
Cause: An attempt to enable the thread failed after it was half completed. This log was left as the current log even though the thread is still disabled. Since a log switch cannot be done until the thread is enabled, the log can not be cleared or archived.

Action: Complete the thread enable by issuing the enable command again.

ORA-01649: operation not allowed with a backup control file
Cause: An attempt is being made to perform a command that does not make sense when the control file is a restored backup.

Action: Wait until after the database has been opened and try again.

ORA-01650: unable to extend rollback segment *string* by *string* in tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for a rollback segment in the tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01651: unable to extend save undo segment by *string* for tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for saving undo entries for the indicated offline tablespace.

Action: Check the storage parameters for the SYSTEM tablespace. The tablespace needs to be brought back online so the undo can be applied.

ORA-01652: unable to extend temp segment by *string* in tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for a temporary segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01653: unable to extend table *string*.*string* by *string* in tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for a table segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01654: unable to extend index *string*.*string* by *string* in tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for an index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01655: unable to extend cluster *string*.*string* by *string* in tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for a cluster segment in tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01656: max # extents (*string*) reached in cluster *string.string*
Cause: A cluster tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01657: invalid SHRINK option value
Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-01658: unable to create INITIAL extent for segment in tablespace *string*
Cause: Failed to find sufficient contiguous space to allocate INITIAL extent for segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with a smaller value for INITIAL

ORA-01659: unable to allocate MINEXTENTS beyond *string* in tablespace *string*
Cause: Failed to find sufficient contiguous space to allocate MINEXTENTS for the segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with smaller value for MINEXTENTS, NEXT or PCTINCREASE

ORA-01660: tablespace '*string*' is already permanent
Cause: Attempting to make tablespace permanent that is already permanent.

Action: Leave tablespace permanent.

ORA-01661: tablespace '*string*' is already temporary
Cause: Attempting to make tablespace temporary that is already temporary.

Action: Leave tablespace permanent.

ORA-01662: tablespace '*string*' is non-empty and cannot be made temporary
Cause: Tried to convert a non-empty tablespace to a temporary tablespace

Action: To drop all the objects in the tablespace.

ORA-01663: the contents of tablespace '*string*' is constantly changing
Cause: The contents of the tablespace is always changing between PERMANENT and TEMPORARY.

Action: To decide what the tablespace contents should be and stay with it.

ORA-01664: Transaction which has expanded the Sort Segment has aborted
Cause: Internal Error.

Action: Contact Oracle Support.

ORA-01665: control file is not a standby control file
Cause: Attempting to mount, recover or activate a standby database without a standby control file.

Action: Create a standby control file before attempting to use the database as a standby database.

ORA-01666: control file is for a standby database
Cause: Attempting to mount, recover, or open a standby database without the appropriate command option to designate a standby database.

Action: Use the standby option or appropriate commands, or mount with the primary control file.

ORA-01667: cannot add any more tablespaces: limit of *string* exceeded
Cause: There is no more room in the control file for adding tablespaces.

Action: Resize the control file or drop other tablespaces.

ORA-01668: standby database requires DROP option for offline of data file
Cause: Attempting to take a datafile offline in a standby database without specifying the DROP option. Files that are offline in a standby database are not recovered, and are likely to be unusable if the standby is activated. Note that specifying DROP does not prevent bringing the file online later.

Action: Specify the DROP option or leave the file online.

ORA-01669: standby database control file not consistent
Cause: Attempting to activate a standby database with a control file that has not been recovered to the same point as the data files. Most likely the control file was just copied from the primary database and has not been used for recovery.

Action: Recover the standby database until all the files are consistent.

ORA-01670: new datafile *string* needed for standby database recovery
Cause: Standby database recovery noticed that a file was added to the primary database, but is not available on the standby.

Action: Either copy the file from the primary database or do an ALTER DATABASE CREATE DATAFILE command on the standby to create a file to recover.

ORA-01671: control file is a backup, cannot make a standby control file
Cause: The currently mounted control file is a backup control file, and attempting to create a control file for a standby database.

Action: Complete any needed recovery and open the database with the resetlogs option.

ORA-01672: control file may be missing files or have extra ones
Cause: Attempting to create a standby control file, but the control file was either recently created via CREATE CONTROLFILE or an incomplete recovery has been done. Thus the datafiles in the control file and the ones in the data dictionary may not match.

Action: Open the database, then retry the operation.

ORA-01673: data file *string* has not been identified
Cause: This data file was not in the control file after an incomplete recovery or CREATE CONTROLFILE. Since information from its header is needed for standby database recovery, we can not create a standby control file.

Action: Find the file and bring it online. If desired it may be taken offline again. If you intend to drop this file, then taking it offline with the DROP option will avoid this error.

ORA-01674: data file *string* is an old incarnation rather than current file
Cause: Recovery encountered redo that indicates this file was dropped from the database and another file was added using the same file number. This implies that a CREATE CONTROLFILE command was given the old file which was dropped rather than the latest file.

Action: Rebuild the control file using CREATE CONTROLFILE, and give the correct file.

ORA-01675: max_commit_propagation_delay inconsistent with other instances
Cause: The max_commit_propagation_delay INIT.ORA parameter is inconsistent with those in other instances.

Action: Make sure all instances have the same max_commit_propagation_delay.

ORA-01676: standby file name conversion of '*string*' exceeds maximum length of *string*
Cause: When the given file name was converted to the name used for the standby database, the converted name was bigger than the maximum allowed file name.

Action: Change initialization parameter DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT to convert to a valid file name.

ORA-01677: standby file name conversion parameters differ from other instance
Cause: The DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT initialization parameters were not the same as in other instances that already had the database mounted.

Action: Change initialization parameters DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT to match other instances.

ORA-01678: parameter *string* must be pairs of pattern and replacement strings
Cause: The initialization parameter does not have even number of strings for its value. The odd numbered strings are patterns to be found in file names. The even numbered strings are used to replace the corresponding patterns when found in file names.

Action: Specify even number of strings for the parameter, or omit the parameter.

ORA-01679: database is being opened
Cause: An attempt was made to activate a standby database when the database was in the middle of being opened.

Action: Wait for database open to finish and retry the ACTIVATE command.

ORA-01680: unable to extend LOB segment by *string* in tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for a LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01681: max # extents (*string*) reached in LOB segment in tablespace *string*
Cause: A LOB segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

ORA-01682: read-only DB cannot allocate temporary space in tablespace *string*
Cause: Temporary space (usually for sorting) could not be allocated in either main storage or a tempfile. An attempt was made to allocate the space from the tablespace named, but the database is opened read-only. The database open requires a sort work space.

Action: Either allow sufficient workspace in main storage (SORT_AREA_SIZE initialization parameter), or create a temporary tablespace before making the database read-only. Use ALTER TABLESPACE ADD TEMPFILE statement to add temporary files to the temporary tablespace.

ORA-01683: unable to extend index *string.string* partition *string* by *string* in tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01684: max # extents (*string*) reached in table *string.string* partition *string*
Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01685: max # extents (*string*) reached in index *string.string* partition *string*
Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01686: max # files (*string*) reached for the tablespace *string*
Cause: The number of files for a given tablespace has reached its maximum value

Action: Resize existing files in the tablespace, or partition the objects among multiple tablespaces, or move some objects to a different tablespace.

ORA-01687: specified logging attribute for tablespace '*string*' is same as the existing
Cause: Attempting to change the tablespace default logging attribute (LOGGING or NOLOGGING) to be the same as the existing logging attribute

Action: Change the specified logging attribute

ORA-01688: unable to extend table *string.string* partition *string* by *string* in tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for table segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01689: syntax error in clause "*string*" of *string*
Cause: There was a syntax in the INIT.ORA parameter.

Action: Fix the syntax error and restart the instance.

ORA-01690: sort area size too small
Cause: sort area size too small to fit two records in memory

Action: increase sort_area_size

ORA-01691: unable to extend lob segment *string*.*string* by *string* in tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01692: unable to extend lob segment *string*.*string* partition *string* by *string* in tablespace *string*
Cause: Failed to allocate an extent of the required number of blocks for LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01693: max # extents (*string*) reached in lob segment *string*.*string*
Cause: A LOB segment tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01694: max # extents (*string*) reached in lob segment *string*.*string* partition *string*
Cause: A LOB segment tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01695: error converting rollback segment *string* to version 8.0.2
Cause: Version 8.0.1 database may not have shutdown cleanly

Action: May have to reload the 8.0.1 database and shutdown cleanly

ORA-01696: control file is not a clone control file
Cause: Attempting to mount, a database as a clone when it is already mounted by another instance not as a clone or attempting to use a current control file for a clone.

Action: Mount without the clone option or use a backup control file and shutdown the other instances before mounting as a clone.

ORA-01697: control file is for a clone database
Cause: Attempting to mount a clone database without the appropriate command option to designate a clone database.

Action: Use the clone option or appropriate commands, or mount with the primary control file.

ORA-01698: a clone database may only have SYSTEM rollback segment online
Cause: Attempting to online a rollback segment in a clone database.

Action: Do not use this command.

ORA-01699: tablespace '*string*' is being imported for point in time recovery
Cause: Attempting to online a tablespace or begin another point in time import while a point in time import is already in progress

Action: Wait until the import complets

ORA-01700: duplicate username in list

ORA-01701: a cluster is not appropriate here

ORA-01702: a view is not appropriate here
Cause: Among other possible causes, this message will be produced if an attempt was made to define an Editioning View over a view.

Action: An Editioning View may only be created over a base table.

ORA-01703: missing SYNONYM keyword

ORA-01704: string literal too long
Cause: The string literal is longer than 4000 characters.

Action: Use a string literal of at most 4000 characters. Longer values may only be entered using bind variables.

ORA-01705: an outer join cannot be specified on a correlation column

ORA-01706: user function result value was too large

ORA-01707: missing LIST keyword

ORA-01708: ACCESS or SESSION expected

ORA-01709: program does not exist

ORA-01710: missing OF keyword

ORA-01711: duplicate privilege listed

ORA-01712: you cannot grant a privilege which you do not have

ORA-01713: GRANT OPTION does not exist for that privilege

ORA-01714: error in execution of user function

ORA-01715: UNIQUE may not be used with a cluster index
Cause: An attempt was made to create a cluster index with the UNIQUE attribute.

Action: Remove UNIQUE from the CREATE INDEX statement.

ORA-01716: NOSORT may not be used with a cluster index
Cause: An attempt was made to create a cluster index using the NOSORT option.

Action: Remove NOSORT from the CREATE INDEX statement.

ORA-01717: seccta: invalid access mode token passed

ORA-01718: BY ACCESS | SESSION clause not allowed for NOAUDIT
Cause: Attempt to specify BY ACCESS | SESSION in a NOAUDIT statement.

Action: Remove BY ACCESS | SESSION.

ORA-01719: outer join operator (+) not allowed in operand of OR or IN
Cause: An outer join appears in an or clause.

Action: If A and B are predicates, to get the effect of (A(+) or B), try (select where (A(+) and not B)) union all (select where (B)).

ORA-01720: grant option does not exist for '*string*.*string*'
Cause: A grant was being performed on a view or a view was being replaced and the grant option was not present for an underlying object.

Action: Obtain the grant option on all underlying objects of the view or revoke existing grants on the view.

ORA-01721: USERENV(COMMITSCN) invoked more than once in a transaction
Cause: The USERENV('COMMITSCN') function can only be used once in a transaction.

Action: Re-write the transactioin to use USERENV('COMMITSCN') only once

ORA-01722: invalid number
Cause: The specified number was invalid.

Action: Specify a valid number.

ORA-01723: zero-length columns are not allowed
Cause: Columns with zero length were not allowed.

Action: Correct the use of the column.

ORA-01724: floating point precision is out of range (1 to 126)
Cause: The specified number had an invalid range.

Action: Use a floating point precision that is in the correct precision.

ORA-01725: USERENV('COMMITSCN') not allowed here
Cause: The function USERENV('COMMITSCN') is only allowed as a top-level expression in the VALUES clause of an INSERT statement, and on the right-hand side of an assignment in an UPDATE statement.

Action: Correct the use of the function.

ORA-01726: a table is not appropriate here
Cause: A table name was used in a statement in which tables were not permitted.

Action: Enter a valid table statement or use the current statement on the appropriate object.

ORA-01727: numeric precision specifier is out of range (1 to 38)
Cause: The precision specified for a number column in a CREATE or ALTER TABLE or CREATE CLUSTER statement must be a digit between 1 and 38. If no precision was specified, a default precision of 22 digits was used.

Action: Specify numeric precision between 1 and 38 and retry the statement.

ORA-01728: numeric scale specifier is out of range (-84 to 127)
Cause: The scale specified for a numeric field in a CREATE or ALTER TABLE or CREATE CLUSTER statement was not in the valid range. It should be between -84 and 127.

Action: Specify a numeric scale between -84 and 127. If a number is not specified, the default scale of the column is 0 decimal places.

ORA-01729: database link name expected
Cause: A database link name did not follow the at-sign (@) in a reference to a table in a remote database.

Action: Correct the reference and retry the operation. The correct syntax for denoting a table in a remote database follows: username.table_name@ database_name Spaces before and after the at-sign (@) are optional.

ORA-01730: invalid number of column names specified
Cause: The number of column names specified in a CREATE VIEW statement did not correspond to the number of columns listed in the SELECT clause. If column names were specified in a CREATE VIEW statement, exactly one name must be specified for each column or expression in the SELECT clause.

Action: Specify one view column name for each column in the SELECT clause.

ORA-01731: circular view definition encountered
Cause: Through a series of CREATE and DROP VIEW statements, a view was defined that referred to itself. For example, VIEW1 might include a column from VIEW2 that was defined as a column in VIEW1. View definitions may be seen by querying the data dictionary.

Action: Check the view definitions, remove any circular references, and retry the statements.

ORA-01732: data manipulation operation not legal on this view
Cause: An attempt was made to use an UPDATE, INSERT, or DELETE statement on a view that contains expressions or functions or was derived from more than one table. If a join operation was used to create the view or the view contains virtual columns derived from functions or expressions, then the view may only be queried.

Action: UPDATE, INSERT, or DELETE rows in the base tables instead and restrict the operations on the view to queries.

ORA-01733: virtual column not allowed here
Cause: An attempt was made to use an INSERT, UPDATE, or DELETE statement on an expression in a view.

Action: INSERT, UPDATE, or DELETE data in the base tables, instead of the view.

ORA-01734: illegal parameters - EXTENT MIN higher than EXTENT MAX
Cause: A wrong value is specified for the parameter.

Action: Correct the parameter and reissue the statement.

ORA-01735: invalid ALTER TABLE option
Cause: An invalid option was specified in an ALTER TABLE statement.

Action: Check the statement syntax, specify a valid option, and retry the statement.

ORA-01736: [NOT] SUCCESSFUL expected
Cause: An AUDIT or NOAUDIT statement contained WHENEVER followed by something other than SUCCESSFUL or NOT SUCCESSFUL.

Action: Correct the WHENEVER clause and retry the statement.

ORA-01737: valid modes: [ROW] SHARE, [[SHARE] ROW] EXCLUSIVE, SHARE UPDATE
Cause: The lock mode entered was not recognized.

Action: Valid lock modes are SHARE, ROW SHARE, EXCLUSIVE, ROW EXCLUSIVE, SHARE ROW EXCLUSIVE, and SHARE UPDATE.

ORA-01738: missing IN keyword
Cause: In a LOCK TABLE statement, the keyword IN was missing.

Action: Place the keyword IN and lock mode directly after the table name in the LOCK TABLE statement and retry the statement.

ORA-01739: missing MODE keyword
Cause: In a LOCK TABLE statement, the keyword MODE was missing. The keyword MODE must directly follow the specified lock mode.

Action: Check the statement syntax, insert the keyword MODE where required, and retry the statement.

ORA-01740: missing double quote in identifier
Cause: An initial double quote (") was found without a closing quote. If an identifier contains a blank or special characters other than $, #, or _, it must be enclosed in double quotes.

Action: Add a closing double quote (") to the end of the identifier.

ORA-01741: illegal zero-length identifier
Cause: An attempt was made to use two double quotes ("") as an identifier. An identifier must be at least one character long.

Action: Insert at least one character between the double quotes in the identifier. If a blank identifier is required, specify a blank space between the double quotes (" ").

ORA-01742: comment not terminated properly
Cause: The indicated comment or hint begun with the /* token did not have the terminating */.

Action: Properly terminate the comment or hint with a */.

ORA-01743: only pure functions can be indexed
Cause: The indexed function uses SYSDATE or the user environment.

Action: PL/SQL functions must be pure (RNDS, RNPS, WNDS, WNPS). SQL expressions must not use SYSDATE, USER, USERENV(), or anything else dependent on the session state. NLS-dependent functions are OK.

ORA-01744: inappropriate INTO
Cause: The INTO clause may not be used in a subquery.

Action: Check the syntax, place the INTO clause in the top-level query, and retry the statement.

ORA-01745: invalid host/bind variable name
Cause: A colon in a bind variable or INTO specification was followed by an inappropriate name, perhaps a reserved word.

Action: Change the variable name and retry the operation.

ORA-01746: indicator variable not permitted here
Cause: An indicator variable was not permitted in this context.

Action: Remove the indicator variable and retry the operation.

ORA-01747: invalid user.table.column, table.column, or column specification
Cause: A column name was specified improperly in the current SQL statement.

Action: Check the statement's syntax, especially references to column names, and retry the statement.

ORA-01748: only simple column names allowed here
Cause: This SQL statement did not allow a qualified column name, such as username.table.column or table.column.

Action: Remove the qualifications from the column and retry the operation.

ORA-01749: you may not GRANT/REVOKE privileges to/from yourself
Cause: Grantor was not allowed to grant or revoke object or system privileges to self.

Action: Issue the GRANT or REVOKE of system privileges from another database administrator account.

ORA-01750: UPDATE/REFERENCES may only be REVOKEd from the whole table, not by column
Cause: Although it was possible to GRANT update privileges on a column-by-column basis, it was only possible to REVOKE them for an entire table.

Action: Do not identify specific columns. To revoke update privileges for certain columns, use REVOKE for the entire table and GRANT the user privileges for specific columns.

ORA-01751: Invalid dump undo option
Cause: An invalid option is specified in the ALTER DUMP UNDO command.

Action: Correct and reissue the command.

ORA-01752: cannot delete from view without exactly one key-preserved table
Cause: The deleted table had - no key-preserved tables, - more than one key-preserved table, or - the key-preserved table was an unmerged view.

Action: Redefine the view or delete it from the underlying base tables.

ORA-01753: column definition incompatible with clustered column definition
Cause: An attempt was made to create a table in a cluster and one of the table's clustered columns is not compatible with the corresponding cluster key column.

Action: Make sure that all table columns specified in the CLUSTER clause of the CREATE TABLE statement are compatible with the corresponding columns of the cluster key, as documented. For example, the data type and the declared collation of

a clustered table column must be the same as those of the corresponding cluster key column.

ORA-01754: a table may contain only one column of type LONG
Cause: An attempt was made to add a LONG column to a table which already had a LONG column. Note that even if the LONG column currently in the table has already been marked unused, another LONG column may not be added until the unused columns are dropped.

Action: Remove the LONG column currently in the table by using the ALTER TABLE command.

ORA-01755: Must specify an extent number or block number
Cause: Expecting an extent or block number but something else was specified.

Action: Correct the error and reissue the command.

ORA-01756: quoted string not properly terminated
Cause: A quoted string must be terminated with a single quote mark (').

Action: Insert the closing quote and retry the statement.

ORA-01757: Must specify an object number
Cause: Expecting an object number but something else was specified.

Action: Correct the error and reissue the command.

ORA-01758: table must be empty to add mandatory (NOT NULL) column
Cause: It was not possible to define a new column as NOT NULL if rows already existed in the table being modified.

Action: Retry the statement without the NOT NULL specification.

ORA-01759: user function is incorrectly defined
Cause: A user function was improperly defined.

Action: Contact Oracle Support Services.

ORA-01760: illegal argument for function
Cause: The argument or arguments specified for the function were not valid in this context.

Action: Check the definition of the function and correct the arguments.

ORA-01761: DML operation does not map to a unique table in the join
Cause: The primary table is the base table against which the update, insert or delete operation is finally being done. For delete either there is no primary table in the join query or there is more than one. For update or insert the columns specified map to more than one base table.

Action: Change the join specification.

ORA-01762: vopdrv: view query block not in FROM
Cause: This is an internal error message not normally issued.

Action: Contact Oracle Support Services.

ORA-01763: update or delete involves outer joined table
Cause: For deletes, the table being deleted from is outer joined to some other table. For updates, either the table being updated is outer joined to some other table, or some table reachable from the primary table is being outer joined to a table not reachable from the primary table, or the underlying table being updated in a join view is referenced on the right side of an outer join or full outer join in the view.

Action: Change the join specification.

ORA-01764: new update value of join is not guaranteed to be unique
Cause: A row of a join query table is being updated using a row of a table that is not guaranteed to have exactly one value for the row being updated.

Action: Change the join specification.

ORA-01765: specifying owner's name of the table is not allowed
Cause: An attempt was made to rename the object with dotted object name.

Action: Do not specify username.tablename in query for table name.

ORA-01766: dictionary table not allowed in this context
Cause: The name of a data dictionary object was used outside the FROM clause of a SELECT statement. The only operation allowed on a data dictionary object was to SELECT from it.

Action: Restrict operations on data dictionary objects to queries.

ORA-01767: UPDATE ... SET expression must be a subquery
Cause: An attempt was made to use a single expression without a subquery to update a list of columns.

Action: Check the syntax for using subqueries to update data and add the necessary subquery.

ORA-01768: number string too long
Cause: A number entered exceeded the limit of 255 characters, including digits, sign, decimal point, and exponent.

Action: Shorten the number string, perhaps by expressing it in scientific notation, for example, 1.85E9 instead of 1,850,000,000.

ORA-01769: duplicate CLUSTER option specifications
Cause: During a CREATE of a clustered table, the user attempted to specify more than one CLUSTER option.

Action: Remove the extra CLUSTER option.

ORA-01770: CLUSTER option not allowed in CREATE CLUSTER command
Cause: An attempt was made to use the CLUSTER option within a CREATE CLUSTER statement.

Action: Remove the CLUSTER clause and try again.

ORA-01771: illegal option for a clustered table
Cause: During a CREATE or ALTER of a clustered table, the user attempted to enter one or more of the following options: INITRANS, MAXTRANS, PCTFREE, PCTUSED, STORAGE, TABLESPACE. These options may only be specified for the cluster itself.

Action: Remove the illegal option(s).

ORA-01772: Must specify a value for LEVEL
Cause: Expecting the value of LEVEL but something else was specified.

Action: Correct the error and reissue the command.

ORA-01773: may not specify column datatypes in this CREATE TABLE
Cause: Column data types or virtual columns were specified in a SELECT statement used to create and load a table directly.

Action: Remove the column data types and virtual columns. The data types of the SELECT list expressions are automatically used as the column data types.

ORA-01774: Dump undo option specified more than once
Cause: The same option for ALTER DUMP UNDO was specified twice.

Action: Remove the redundant options and reissue the command.

ORA-01775: looping chain of synonyms
Cause: Through a series of CREATE synonym statements, a synonym was defined that referred to itself. For example, the following definitions are circular: CREATE SYNONYM s1 for s2 CREATE SYNONYM s2 for s3 CREATE SYNONYM s3 for s1

Action: Change one synonym definition so that it applies to a base table or view and retry the operation.

ORA-01776: cannot modify more than one base table through a join view
Cause: Columns belonging to more than one underlying table were either inserted into or updated.

Action: Phrase the statement as two or more separate statements.

ORA-01777: WITH GRANT OPTION not allowed in this system
Cause: This version of Oracle did not support the WITH GRANT OPTION.

Action: Remove the WITH GRANT option.

ORA-01778: maximum subquery nesting level exceeded
Cause: An attempt was made to use more than 255 levels of nested subqueries.

Action: Merge some of the subqueries into their containing queries, until there are less than 255 levels of nesting.

ORA-01779: cannot modify a column which maps to a non key-preserved table
Cause: An attempt was made to insert or update columns of a join view which map to a non-key-preserved table.

Action: Modify the underlying base tables directly.

ORA-01780: string literal required
Cause: In a COMMENT statement, the Comment following the keyword IS must be a quoted string literal.

Action: Check that the Comment is a string literal.

ORA-01781: UNRECOVERABLE cannot be specified without AS SELECT
Cause: UNRECOVERABLE was specified in a CREATE TABLE statement without also specifying a populating subquery with an AS clause.

Action: Do not specify UNRECOVERABLE.

ORA-01782: UNRECOVERABLE cannot be specified for a cluster or clustered table
Cause: A CREATE CLUSTER, or clustered CREATE TABLE statement specified UNRECOVERABLE.

Action: Do not specify UNRECOVERABLE.

ORA-01783: only one RECOVERABLE or UNRECOVERABLE clause may be specified
Cause: RECOVERABLE was specified more than once, UNRECOVERABLE was specified more than once, or both RECOVERABLE and UNRECOVERABLE were specified in a CREATE TABLE or CREATE INDEX or ALTER INDEX REBUILD statement.

Action: Remove all but one of the RECOVERABLE or UNRECOVERABLE clauses and reissue the statement.

ORA-01784: RECOVERABLE cannot be specified with database media recovery disabled
Cause: A CREATE TABLE or CREATE INDEX statement specified RECOVERABLE when the database was running in NOARCHIVELOG mode. Since logs are not being archived, they will be overwritten and the object being created cannot be recovered from a backup taken before the object was created.

Action: Do not specify RECOVERABLE, or restart the database with media recovery enabled.

ORA-01785: ORDER BY item must be the number of a SELECT-list expression
Cause: Either an ORDER BY item for a set expression was not a column number, or the ORDER BY item was not the number of a SELECT list column.

Action: The ORDER BY item must be a number between 1 and the number of columns in the SELECT list. Check the column number and retry the statement.

ORA-01786: FOR UPDATE of this query expression is not allowed
Cause: An attempt was made to use a FOR UPDATE clause on the result of a set expression involving GROUP BY, DISTINCT, UNION, INTERSECT, or MINUS.

Action: Check the syntax, remove the FOR UPDATE clause, and retry the statement.

ORA-01787: only one clause allowed per query block
Cause: An attempt was made to use more than one WHERE, GROUP BY, CONNECT BY, or HAVING clause in the query.

Action: Combine the duplicate clauses into a single clause and retry the statement.

ORA-01788: CONNECT BY clause required in this query block
Cause: A START WITH clause was specified without a CONNECT BY clause.

Action: Check the syntax, specify a CONNECT BY clause, and retry the statement.

ORA-01789: query block has incorrect number of result columns
Cause: All of the queries participating in a set expression do not contain the same number of SELECT list columns.

Action: Check that all the queries in the set expression have the same number of SELECT list columns.

ORA-01790: expression must have same datatype as corresponding expression
Cause: A SELECT list item corresponds to a SELECT list item with a different datatype in another query of the same set expression.

Action: Check that all corresponding SELECT list items have the same datatypes. Use the TO_NUMBER, TO_CHAR, and TO_DATE functions to do explicit data conversions.

ORA-01791: not a SELECTed expression
Cause: There was an incorrect ORDER BY item. The query was a SELECT DISTINCT query with an ORDER BY clause. In this context, all ORDER BY items must be constants, SELECT list expressions, or expressions whose operands were constants or SELECT list expressions.

Action: Remove the inappropriate ORDER BY item from the SELECT list and retry the statement.

ORA-01792: maximum number of columns in a table or view is 1000
Cause: An attempt was made to create a table or view with more than 1000 columns, or to add more columns to a table or view which pushes it over the maximum allowable limit of 1000. Note that unused columns in the table are counted toward the 1000 column limit.

Action: If the error is a result of a CREATE command, then reduce the number of columns in the command and resubmit. If the error is a result of an ALTER TABLE command, then there are two options: 1) If the table contained unused columns, remove them by executing ALTER TABLE DROP UNUSED COLUMNS before adding new columns; 2) Reduce the number of columns in the command and resubmit.

ORA-01793: maximum number of index columns is 32
Cause: While creating an index, more than 32 columns were specified.

Action: Remove some columns from the index definition. If all the columns indexed are required, split them into two indexes.

ORA-01794: maximum number of cluster columns is 32
Cause: More than 32 columns were specified in the cluster key.

Action: Remove some of the columns from the cluster key definition. Consider concatenating multiple character strings into a single column.

ORA-01795: maximum number of expressions in a list is 1000
Cause: Number of expressions in the query exceeded than 1000. Note that unused column/ expressions are also counted Maximum number of expressions that are allowed are 1000.

Action: Reduce the number of expressions in the list and resubmit.

ORA-01796: this operator cannot be used with lists
Cause: A relational operator was not allowed in this context. When comparing lists, use only an operator that tests for equivalence, such as =, !=, or IN.

Action: Rephrase the query so that it only compares lists for equivalence. For example, the following clause is invalid: WHERE (A,B) > ((C,D), (E,F)) It may be necessary to compare individual columns separately. For example, to see if A and B are respectively greater than C and D, use WHERE A>B AND C>D instead of WHERE (A,B)>(C,D).

ORA-01797: this operator must be followed by ANY or ALL
Cause: The keyword ANY or ALL was missing.

Action: Check the statement syntax and add ANY or ALL where appropriate.

ORA-01798: missing EXCEPTION keyword
Cause: The EXCEPTION keyword was missing from the ENABLE clause.

Action: Correct the syntax.

ORA-01799: a column may not be outer-joined to a subquery
Cause: *expression*(+) *relop* (*subquery*) is not allowed.

Action: Either remove the (+) or make a view out of the subquery. In V6 and before, the (+) was just ignored in this case.

ORA-01800: a literal in the date format was too large to process
Cause: A literal specified in a date format was too large. If a literal was entered as a date, it must be less than 220 characters long.

Action: Use only literals less than 220 characters long in the date format.

ORA-01801: date format is too long for internal buffer
Cause: The date format string was too long to process. This occurred only if several long literals are specified as part of a date.

Action: Remove long literals from the date format string.

ORA-01802: Julian date is out of range
Cause: An invalid Julian date was entered. Valid Julian dates ran from 1 to 3,442,447.

Action: Enter a valid Julian date between 1 and 3,442,447.

ORA-01803: failure in getting date/time
Cause: This was an internal error message that was not likely to occur. It was caused by a failure in the system clock.

Action: Investigate the system clock and the process that requested the date or time. If necessary, contact Oracle Support Services.

ORA-01804: failure to initialize timezone information
Cause: The timezone information file was not properly read.

Action: Please contact Oracle Customer Support.

ORA-01805: possible error in date/time operation
Cause: The timezone files on client and server do not match. Operation can potentially result in incorrect results based on local timezone file.

Action: Please ensure client and server timezone versions are same.

ORA-01810: format code appears twice
Cause: A format code was listed twice in a date specification. Each format code may be specified only once in the function TO_DATE.

Action: Remove the duplicate format code from the date specification, then retry the operation.

ORA-01811: Julian date precludes use of day of year
Cause: Both a Julian date and a day of the year were specified in the TO_DATE function. If a Julian date is specified, the day of the year (DDD) may not be specified, as it is contained in the Julian date.

Action: Remove the day of the year or the Julian date from the specification, then retry the operation.

ORA-01812: year may only be specified once
Cause: More than one year format code was listed in a date specification. Only one of the following year format codes may be specified in a date: YYYY, YYY, YY, Y.

Action: Remove all but one year format from the date specification.

ORA-01813: hour may only be specified once
Cause: More than one hour format code was listed in a date specification. Only one of the following hour format codes may be specified in a date: HH, HH12, HH24.

Action: Remove all but one hour format from the date specification.

ORA-01814: AM/PM conflicts with use of A.M./P.M.
Cause: Both types of meridian indicators, AM and PM, were listed in a date specification. If one of the meridian indicator format masks, such as AM or A.M., is specified in the date, the other may not be specified.

Action: Use one meridian indicator format, with or without periods, consistently.

ORA-01815: BC/AD conflicts with use of B.C./A.D.
Cause: Both types of BC/AD indicators were listed in a date specification. If one of the BC/AD indicator format masks, such as BC or B.C., was specified in the date, the other may not be specified.

Action: Use one BC/AD indicator format, with or without periods, consistently.

ORA-01816: month may only be specified once
Cause: More than one month format code was listed in a date specification. Only one of the following month format codes may be specified in a date: MM, MON, MONTH.

Action: Remove all but one month format from the date specification.

ORA-01817: day of week may only be specified once
Cause: More than one day-of-the-week format code was listed in a date specification. Only one of the following day-of-the-week format codes may be specified in a date: D, DY, DAY.

Action: Remove all but one day-of-the-week format from the date specification.

ORA-01818: 'HH24' precludes use of meridian indicator
Cause: A date specification contained both a 24-hour time format code and a meridian indicator code. If hours are specified using the 24-hour time format (HH24), a meridian indicator, AM or PM, may not be specified.

Action: Remove the meridian indicator format code, AM/PM or A.M./P.M., or the 24-hour time format code, HH24, from the date specification.

ORA-01819: signed year precludes use of BC/AD
Cause: A date specification contained both a signed year and a B.C./A.D. indicator. If the year is specified with a sign, such as SYYYY, then B.C. or A.D. is implicit in the date and must not be entered.

Action: Remove the B.C./A.D. indicator from the date specification.

ORA-01820: format code cannot appear in date input format
Cause: A date specification contained an invalid format code. Only the following may be specified when entering a date: year, month, day, hours, minutes, seconds, Julian day, A.M./P.M. and B.C./A.D.

Action: Remove the invalid format code from the date specification.

ORA-01821: date format not recognized
Cause: A date specification contained an invalid format code.

Action: Check that only valid date format codes are specified.

ORA-01822: era format code is not valid with this calendar
Cause: An era format code, E or EE, was specified with a calendar which did not use era information.

Action: Retry the operation using a date format mask which does not contain era format codes.

ORA-01830: date format picture ends before converting entire input string
Cause: A valid date format picture included extra data. The first part of the format picture was converted into a valid date, but the remaining data was not required.

Action: Check the specifications for date format pictures and correct the statement.

ORA-01831: year conflicts with Julian date
Cause: The wrong year was specified with a Julian day. If a year was specified with a Julian date, it must be the year in which the Julian date occurred.

Action: Remove the year value from the date specification or enter the correct year for the Julian date.

ORA-01832: day of year conflicts with Julian date
Cause: A Julian date was specified with the day of the year but the day did not correspond to the Julian date. If the day of the year was specified with a Julian date, it must be the same day as the Julian date.

Action: Remove the day of the year value from the date specification or enter the correct day for the Julian date.

ORA-01833: month conflicts with Julian date
Cause: The wrong month was specified with a Julian date. If a month is specified with a Julian date, it must be the month in which the Julian date occurs.

Action: Remove the month value from the date specification or enter the correct month for the Julian date.

ORA-01834: day of month conflicts with Julian date
Cause: A Julian date was specified with the day of the month, but the month day did not correspond to the Julian date. If the day of the month was specified with a Julian date, it must be the same day of the month as the Julian date.

Action: Remove the day of the month value from the date specification or enter the correct day of the month for the Julian date.

ORA-01835: day of week conflicts with Julian date
Cause: A Julian date was specified with the day of the week, but the weekday did not correspond to the Julian date. If the day of the week was specified with a Julian date, it must be the same day of the week as the Julian date.

Action: Remove the day of the week value from the date specification or enter the correct day of the week for the Julian date.

ORA-01836: hour conflicts with seconds in day
Cause: The wrong hour was specified with seconds in the day. If an hour was specified with seconds past midnight (SSSSS), it must be the hour in which the seconds value fell.

Action: Remove the hour value from the date specification or specify the correct hour for the seconds past midnight.

ORA-01837: minutes of hour conflicts with seconds in day
Cause: A date specification contained both minutes of the hour and seconds in the day but the values did not correspond. If both minutes in the hour (MI) and seconds past midnight (SSSSS) are specified, the minutes value must be the minute in which the seconds value occurred.

Action: Remove the minutes value from the date specification or enter the correct minute value for the specified seconds value.

ORA-01838: seconds of minute conflicts with seconds in day
Cause: A date specification contained both seconds of the minute and seconds in the day but the values did not correspond. If both types of seconds are specified, the seconds of the minute value (SS) must be the second in which the seconds past midnight value (SSSSS) fell.

Action: Remove the seconds of the minute value from the date specification or enter a value that corresponds to the given seconds in the day.

ORA-01839: date not valid for month specified
Cause: The day of the month specified in the date was invalid for the given month. The day of the month (DD) must be between 1 and the number of days in the month.

Action: Enter a valid day of the month for the specified month.

ORA-01840: input value not long enough for date format
Cause: The data to be converted to date format was incomplete; the date format picture was longer than the input data.

Action: Either add more input or shorten the date picture format, then retry the operation.

ORA-01841: (full) year must be between -4713 and +9999, and not be 0
Cause: Illegal year entered

Action: Input year in the specified range

ORA-01842: quarter must be between 1 and 4
Cause: An invalid value was specified for the quarter of the year in a date. The quarter (Q) must be between 1 and 4.

Action: Enter a value for quarter between 1 and 4.

ORA-01843: not a valid month
Cause: A date specified an invalid month. Valid months were: January-December, for format code MONTH, and Jan-Dec, for format code MON.

Action: Enter a valid month value in the correct format.

ORA-01844: week of year must be between 1 and 52
Cause: An invalid value was specified for the week of the year in a date. Week of the year (WW) must be between 1 and 52.

Action: Enter a week of the year value between 1 and 52.

ORA-01845: week of month must be between 1 and 5
Cause: An invalid value was specified for the week of the month in a date. Week of the month (W) must be between 1 and 5.

Action: Enter a week of the month value between 1 and 5.

ORA-01846: not a valid day of the week
Cause: A date specified an invalid day of the week. Valid days are: - Monday-Sunday, for format code DAY - Mon-Sun, for format code DY - 1-7, for format code D

Action: Enter a valid day of the week value in the correct format.

ORA-01847: day of month must be between 1 and last day of month
Cause: The day of the month listed in a date was invalid for the specified month. The day of the month (DD) must be between 1 and the number of days in that month.

Action: Enter a valid day value for the specified month.

ORA-01848: day of year must be between 1 and 365 (366 for leap year)
Cause: An invalid day of the year was specified in a date. Day of the year (DDD) must be between 1 and 365 for a non-leap year or 1 and 366 for a leap year.

Action: Enter a day of the year value between 1 and 365 (or 366).

ORA-01849: hour must be between 1 and 12
Cause: An invalid hour was specified for a date using the 12-hour time format. If a 12-hour format code (HH or HH12) is used, the specified hour must be between 1 and 12.

Action: Enter an hour value between 1 and 12.

ORA-01850: hour must be between 0 and 23
Cause: An invalid hour was specified for a date using the 24-hour time format. If the 24-hour format code (HH24) was listed, the specified hour must be between 0 and 23.

Action: Enter an hour value between 0 and 23.

ORA-01851: minutes must be between 0 and 59
Cause: An invalid minute value was specified in a date. Minutes must be between 0 and 59.

Action: Enter a minute value between 0 and 59.

ORA-01852: seconds must be between 0 and 59
Cause: An invalid seconds value was specified in a date. Seconds must be between 0 and 59 if the seconds format code (SS) was used.

Action: Enter a seconds value between 0 and 59.

ORA-01853: seconds in day must be between 0 and 86399
Cause: An invalid value for seconds in the day was specified in a date. Seconds must be between 0 and 86399 if the seconds past midnight format code (SSSSS) was used.

Action: Specify a seconds value between 0 and 86399.

ORA-01854: julian date must be between 1 and 5373484
Cause: An invalid Julian date was entered.

Action: Enter a valid Julian date between 1 and 5373484.

ORA-01855: AM/A.M. or PM/P.M. required
Cause: A date specification contained a meridian indicator format code but a valid meridian indicator was not specified. If a meridian indicator code, A.M., P.M., AM or PM, was included in a date format, the date must include a valid meridian indicator.

Action: Specify the meridian indicator in the correct format, A.M./AM or P.M./PM.

ORA-01856: BC/B.C. or AD/A.D. required
Cause: A date specification contained a BC/AD format code but a valid BC/AD indicator was not specified. If one of the BC/AD format codes, BC/AD or B.C./A.D., is specified in a date format, the date must include BC/B.C. or AD/A.D.

Action: Specify the BC/AD indicator in the date using the correct format.

ORA-01857: not a valid time zone
Cause: An incorrect time zone code was specified for the NEW_TIME function.

Action: Correct the invalid time zone code, then retry the operation.

ORA-01858: a non-numeric character was found where a numeric was expected
Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a number where a number was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

ORA-01859: a non-alphabetic character was found where an alphabetic was expected
Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a letter where a letter was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

ORA-01860: week of year must be between 1 and 53
Cause: A week number outside the range 1 to 53 was specified.

Action: Use only a value within the valid range for the week number.

ORA-01861: literal does not match format string
Cause: Literals in the input must be the same length as literals in the format string (with the exception of leading whitespace). If the "FX" modifier has been toggled on, the literal must match exactly, with no extra whitespace.

Action: Correct the format string to match the literal.

ORA-01862: the numeric value does not match the length of the format item
Cause: When the FX and FM format codes are specified for an input date, then the number of digits must be exactly the number specified by the format code. For example, 9 will not match the format specifier DD but 09 will.

Action: Correct the input date or turn off the FX or FM format specifier in the format string.

ORA-01863: the year is not supported for the current calendar
Cause: The year is not supported for the current calendar.

Action: Please check the documentation to find out what years are supported for the current calendar.

ORA-01864: the date is out of range for the current calendar
Cause: Your calendar doesn't extend to the specified date.

Action: Specify a date which is legal for this calendar.

ORA-01865: not a valid era
Cause: Era input does not match a known era.

Action: Provide a valid era on input.

ORA-01866: the datetime class is invalid
Cause: This is an internal error.

Action: Please contact Oracle Worldwide Support.

ORA-01867: the interval is invalid
Cause: The character string you specified is not a valid interval.

Action: Please specify a valid interval.

ORA-01868: the leading precision of the interval is too small
Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

ORA-01869: reserved for future use
Cause: Not an error.

Action: No action required.

ORA-01870: the intervals or datetimes are not mutually comparable
Cause: The intervals or datetimes are not mutually comparable.

Action: Specify a pair of intervals or datetimes that are mutually comparable.

ORA-01871: the number of seconds must be less than 60
Cause: The number of seconds specified was greater than 59.

Action: Specify a value for seconds that is 59 or smaller.

ORA-01872: reserved for future use
Cause: Not an error.

Action: No action required.

ORA-01873: the leading precision of the interval is too small
Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

ORA-01874: time zone hour must be between -15 and 15
Cause: The time zone hour specified was not in the valid range.

Action: Specify a time zone hour between -15 and 15.

ORA-01875: time zone minute must be between -59 and 59
Cause: The time zone minute specified was not in the valid range.

Action: Specify a time zone minute between -59 and 59.

ORA-01876: year must be at least -4713
Cause: The specified year was not in range.

Action: Specify a year that is greater than or equal to -4713.

ORA-01877: string is too long for internal buffer
Cause: This is an internal error.

Action: Please contact Oracle Worldwide Support.

ORA-01878: specified field not found in datetime or interval
Cause: The specified field was not found in the datetime or interval.

Action: Make sure that the specified field is in the datetime or interval.

ORA-01879: the hh25 field must be between 0 and 24
Cause: The specified hh25 field was not in the valid range.

Action: Specify an hh25 field between 0 and 24.

ORA-01880: the fractional seconds must be between 0 and 999999999
Cause: The specified fractional seconds were not in the valid range.

Action: Specify a value for fractional seconds between 0 and 999999999.

ORA-01881: timezone region ID is invalid
Cause: The region ID referenced an invalid region.

Action: Contact Oracle Support Services.

ORA-01882: timezone region not found
Cause: The specified region name was not found.

Action: Contact Oracle Support Services.

ORA-01883: overlap was disabled during a region transition
Cause: The region was changing state and the overlap flag was disabled.

Action: Please contact Oracle Customer Support.

ORA-01884: divisor is equal to zero
Cause: An attempt was made to divide by zero.

Action: Avoid zero divisor.

ORA-01885: public synonym collides with Oracle-supplied schema name
Cause: The public synonym was the same as the Oracle-supplied schema name.

Action: Use either a different synonym or a different schema name.

ORA-01890: NLS error detected
Cause: An NLS error was detected.

Action: Look for additional error messages and take appropriate action. If there are no additional errors, call Oracle Worldwide Support.

ORA-01891: Datetime/Interval internal error
Cause: Internal error.

Action: Please contact Oracle Worldwide Support.

ORA-01898: too many precision specifiers
Cause: While trying to truncate or round dates, extra data was found in the date format picture

Action: Check the syntax of the date format picture and retry.

ORA-01899: bad precision specifier
Cause: An invalid precision code was specified in a date.

Action: Enter a valid precision code in the date format. Valid precision types are: century, year, month, day, Julian date, hours, minutes, and seconds.

ORA-01900: LOGFILE keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01901: ROLLBACK keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01902: SEGMENT keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01903: EVENTS keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01904: DATAFILE keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01905: STORAGE keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01906: BACKUP keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01907: TABLESPACE keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01908: EXISTS keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01909: REUSE keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01910: TABLES keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01911: CONTENTS keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01912: ROW keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01913: EXCLUSIVE keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01914: invalid auditing option for sequence numbers
Cause: AUDIT or NOAUDIT on a sequence number specifies an auditing option that is not legal for sequence numbers.

Action: The following options may not be used for sequence numbers and should be removed: COMMENT, DELETE, INDEX, INSERT, LOCK, RENAME, UPDATE, REFERENCES, EXECUTE

ORA-01915: invalid auditing option for views
Cause: AUDIT or NOAUDIT on a view specifies an auditing option that is not legal for views.

Action: The following options may not be used for views and should be removed: ALTER, INDEX, REFERENCES, EXECUTE

ORA-01916: keyword ONLINE, OFFLINE, RESIZE, AUTOEXTEND, END, DROP, ENABLE, REMOVE, SUSPEND, ENCRYPT, or DECRYPT expected
Cause: An expected keyword was not used for the data file or the temporary file clause. Note the ENCRYPT and DECRYPT keywords are only applicable to the data file.

Action: Use the correct syntax.

ORA-01917: user or role '*string*' does not exist
Cause: There is not a user or role by that name.

Action: Re-specify the name.

ORA-01918: user '*string*' does not exist
Cause: User does not exist in the system.

Action: Verify the user name is correct.

ORA-01919: role '*string*' does not exist
Cause: Role by that name does not exist.

Action: Verify you are using the correct role name.

ORA-01920: user name '*string*' conflicts with another user or role name
Cause: There is already a user or role with that name.

Action: Specify a different user name.

ORA-01921: role name '*string*' conflicts with another user or role name
Cause: There is already a user or role with that name.

Action: Specify a different role name.

ORA-01922: CASCADE must be specified to drop '*string*'
Cause: Cascade is required to remove this user from the system. The user own's object which will need to be dropped.

Action: Specify cascade.

ORA-01923: CASCADE aborted, objects locked by another user
Cause: Cannot drop the user's objects; someone has them locked.

Action: Use the lock monitor to determine who has the objects locked.

ORA-01924: role '*string*' not granted or does not exist
Cause: Either the role was not granted to the user, or the role did not exist.

Action: Create the role or grant the role to the user and retry the operation.

ORA-01925: unused error

ORA-01926: cannot GRANT to a role WITH GRANT OPTION
Cause: Role cannot have a privilege with the grant option.

Action: Perform the grant without the grant option.

ORA-01927: cannot REVOKE privileges you did not grant
Cause: You can only revoke privileges you granted.

Action: Don't revoke these privileges.

ORA-01928: GRANT option not granted for all privileges
Cause: In order to grant a privilege, you must first have the privilege with the grant option.

Action: Obtain the privilege with the grant option and try again.

ORA-01929: no privileges to GRANT
Cause: "ALL" was specified but the user doesn't have any privileges with the grant option.

Action: Don't grant privileges on that object.

ORA-01930: auditing the object is not supported
Cause: AUDIT or NOAUDIT was specified for an object that cannot be audited.

Action: Don't attempt to AUDIT the object.

ORA-01931: cannot grant *string* to a role
Cause: An attempt to grant privileges to a role failed. UNLIMITED TABLESPACE, REFERENCES, INDEX, Administrative Privileges like SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG, SYSKM, and SYSRAC cannot be granted to a role.

Action: Grant privilege directly to the user. For administrative privilege grants, some additional restrictions apply : * SYSBACKUP, SYSDG or SYSKM administrative privileges can be granted only when the password file is in format "12" or higher. * SYSASM administrative privilege can be granted, only when connected to an ASM instance. * SYSRAC administrative privilege cannot be granted to a user because only operating system authentication is supported for SYSRAC privilege.

ORA-01932: ADMIN option not granted for role '*string*'
Cause: The operation requires the admin option on the role.

Action: Obtain the grant option and re-try.

ORA-01933: cannot create a stored object using privileges from a role
Cause: An attempt was made to create a stored object using privileges from a role. Stored objects cannot use privileges from roles.

Action: Grant the privileges required to the user directly.

ORA-01934: circular role grant detected
Cause: Roles cannot be granted circularly. Also, a role cannot be granted to itself.

Action: Do not perform the grant.

ORA-01935: missing user or role name
Cause: A user or role name was expected.

Action: Specify a user or role name.

ORA-01936: cannot specify owner when creating users or roles
Cause: Users and roles do not have owners.

Action: Don't specify an owner.

ORA-01937: missing or invalid role name
Cause: A valid role name was expected.

Action: Specify a valid role name.

ORA-01938: IDENTIFIED BY must be specified for CREATE USER
Cause: Cannot create a user without specifying a password or "IDENTIFIED EXTERNALLY" for ASM instance.

Action: Specify one of the password clauses.

ORA-01939: only the ADMIN OPTION can be specified
Cause: System privileges and roles can only be granted with the admin option. The grant option cannot be used with system privileges and roles. The delegate option cannot be used with system privileges.

Action: Specify the admin option.

ORA-01940: cannot drop a user that is currently connected
Cause: Attempt was made to drop a user that is currently logged in.

Action: Make sure user is logged off, then repeat command.

ORA-01941: SEQUENCE keyword expected
Cause: keyword missing

Action: supply missing keyword

ORA-01942: IDENTIFIED BY and EXTERNALLY cannot both be specified
Cause: A user cannot be specified to have and not have a password.

Action: Specify only one of the options.

ORA-01943: IDENTIFIED BY already specified
Cause: The identified clause has been given twice.

Action: Use only one identified by clause.

ORA-01944: IDENTIFIED EXTERNALLY already specified
Cause: The identified externaly clause has been given twice.

Action: Use only one identified clause.

ORA-01945: DEFAULT ROLE[S] already specified
Cause: The default roles clause has been given twice.

Action: Use only on default role clause.

ORA-01946: DEFAULT TABLESPACE already specified
Cause: The default tablespace clause has been given twice.

Action: Use only one default tablespace clause.

ORA-01947: TEMPORARY TABLESPACE already specified
Cause: The temporary tablespace clause has been given twice.

Action: Use only one temporary tablespace clause.

ORA-01948: identifier's name length (*string*) exceeds maximum (*string*)
Cause: A name has been specified that is too long. For example, dbms_session.is_role_enabled() specifies a role name that is too long.

Action: Change the application or command to use a correct identifier.

ORA-01949: ROLE keyword expected
Cause: The role keyword is required here.

Action: Specify the role keyword.

ORA-01950: no privileges on tablespace '*string*'
Cause: User does not have privileges to allocate an extent in the specified tablespace.

Action: Grant the user the appropriate system privileges or grant the user space resource on the tablespace.

ORA-01951: ROLE '*string*' not granted to '*string*'
Cause: The role you tried to revoke was not granted to the user.

Action: Don't try to revoke a privilege which is not granted.

ORA-01952: system privileges not granted to '*string*'
Cause: A system privilege you tried to revoke was not granted to the user.

Action: Make sure the privileges you are trying to revoke are granted.

ORA-01953: command no longer valid, see ALTER USER
Cause: The syntax for assigning quotas on tablespaces has changed. The ALTER USER command is now used to perform the functionality

Action: Use the alter user command instead.

ORA-01954: DEFAULT ROLE clause not valid for CREATE USER
Cause: Default roles cannot be specified for create user.

Action: Grant and alter the user's default roles after creating the user.

ORA-01955: DEFAULT ROLE '*string*' not granted to user
Cause: The user being altered does not have the specified role granted directly to the user. Note, sub-roles cannot be used in the default role clause.

Action: Grant the role to the user.

ORA-01956: invalid command when OS_ROLES are being used
Cause: This command cannot be used when the INIT.ORA parameter OS_ROLES is TRUE.

Action: Grant the role to the user in the operating system.

ORA-01957: Keyword MIN or MAX expected, not found
Cause: The keyword MIN or MAX was expected as an argument.

Action: Enter the keyword MIN or MAX and retry the operation.

ORA-01958: Must supply an integer for the LAYER option
Cause: An item other than an integer was entered for the LAYER option.

Action: Enter an integer for the LAYER option and retry the operation.

ORA-01959: Must supply an integer for the OPCODE option
Cause: An item other than an integer was entered for the OPCODE option. The value in ALTER SYSTEM DUMP ... OPCODE value must be an integer.

Action: Enter an integer for the OPCODE option and retry the operation. For more information on the OPCODE option, see the Oracle9i SQL Reference.

ORA-01960: Invalid dump logfile option
Cause: An invalid option was entered for the ALTER SYSTEM DUMP LOGFILE option command.

Action: For a list of valid options for DUMP LOGFILE, see the Oracle9i SQL Reference.

ORA-01961: Invalid dump option
Cause: An invalid option was entered for the ALTER SYSTEM DUMP statement.

Action: Enter a valid option for ALTER SYSTEM DUMP. Examples of valid options are LOGFILE and UNDO. For more information on the DUMP option, see the Oracle9i SQL Reference.

ORA-01962: Must specify a file number or log sequence number
Cause: An invalid file number or log sequence number was specified.

Action: Enter a valid file number or log sequence number and retry the operation. For more information on valid file and log sequence numbers, see the Oracle9i SQL Reference.

ORA-01963: Must specify a block number
Cause: An invalid block number was specified.

Action: Enter a valid block number and retry the operation. For more information on valid block numbers, see the Oracle9i SQL Reference.

ORA-01964: Must specify a time for the TIME option
Cause: A value was entered for the TIME option that could not be interpreted as a date.

Action: Enter a valid date. For more information on the TIME option, see the Oracle9i SQL Reference.

ORA-01965: Must specify a PERIOD
Cause: A period was missing between the file number and the block number.

Action: Enter a period between the file number and the block number, then retry the operation. For more information on file numbers and block numbers, see the Oracle9i SQL Reference.

ORA-01966: DEFAULT COLLATION already specified
Cause: The default collation clause was specified twice.

Action: Use only one default collation clause.

ORA-01967: invalid option for CREATE CONTROLFILE
Cause: An invalid CREATE CONTROLFILE option is present.

Action: Specify only valid CREATE CONTROLFILE options.

ORA-01968: Only specify RESETLOGS or NORESETLOGS once
Cause: The keyword RESETLOGS or NORESETLOGS has appeared more than once

Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

ORA-01969: You must specify RESETLOGS or NORESETLOGS
Cause: Missing a RESETLOGS or a NORESETLOGS

Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

ORA-01970: You must specify a database name for CREATE CONTROLFILE
Cause: Missing a database name

Action: Retype CREATE CONTROLFILE command with the DATABASE keyword.

ORA-01971: Illegal ALTER TRACING option
Cause: An invalid ALTER TRACING option was present.

Action: Specify only valid ALTER TRACING options. Examples of valid options are ENABLE and DISABLE. For more information, see the Oracle9i SQL Reference.

ORA-01972: Must specify a string for ALTER TRACING ENABLE or DISABLE
Cause: Something other than a valid identifier was specified for ALTER TRACING ENABLE or DISABLE.

Action: Specify a valid identifier for ALTER TRACING ENABLE or DISABLE and retry the operation. For more information on valid identifiers, see the Oracle9i SQL Reference.

ORA-01973: Missing change number
Cause: Keyword "CHANGE" found but change number not specified.

Action: Fix command line and resubmit

ORA-01974: Illegal archive option
Cause: Not a valid option to the "ALTER SYSTEM ARCHIVE" command

Action: Check the syntax of the command and retry it.

ORA-01975: Illegal character in change number *string*
Cause: An invalid change number was supplied.

Action: Resubmit the command with a valid change number.

ORA-01976: Missing change number
Cause: A change number was required, but not supplied.

Action: Check the syntax of the command, supply a change number where needed, then retry the command.

ORA-01977: Missing thread number
Cause: Keyword "THREAD" found but thread number not specified.

Action: Fix command line and resubmit

ORA-01978: Missing sequence number
Cause: Keyword "SEQUENCE" found but sequence number not specified.

Action: Fix command line and resubmit

ORA-01979: missing or invalid password for role '*string*'
Cause: An attempt was made to enable a role without giving the proper password.

Action: Use the IDENTIFIED BY clause in SET ROLE to specify the correct password.

ORA-01980: error during OS ROLE initialization
Cause: An OS error occurred while loading a users OS ROLES.

Action: Check the OS error.

ORA-01981: CASCADE CONSTRAINTS must be specified to perform this revoke
Cause: During this revoke some foreign key contraints will be removed. In order to perform this automatically, CASCADE CONSTRAINTS must be specified.

Action: Remove the constraints or specify CASCADE CONSTRAINTS.

ORA-01982: invalid auditing option for tables
Cause: AUDIT or NOAUDIT on a table specifies an auditing option that is not legal for tables.

Action: The following options may not be used for tables and should be removed: REFERENCES, EXECUTE

ORA-01983: invalid auditing option for DEFAULT
Cause: AUDIT or NOAUDIT on a DEFAULT specifies an auditing option that is not legal for DEFAULT.

Action: The following options may not be used for DEFAULT and should be removed: REFERENCES

ORA-01984: invalid auditing option for procedures/packages/functions
Cause: AUDIT or NOAUDIT on a DEFAULT specifies an auditing option that is not legal for procedures, packages, or functions.

Action: The following options may not be used for procedures, packages, and functions and should be removed: all but EXECUTE

ORA-01985: cannot create user as LICENSE_MAX_USERS parameter exceeded
Cause: Maximum users in the database license limit exceeded.

Action: Increase license limit.

ORA-01986: OPTIMIZER_GOAL is obsolete
Cause: An obsolete parameter, OPTIMIZER_GOAL, was referenced.

Action: Use the OPTIMIZER_MODE parameter.

ORA-01987: client os username is too long
Cause: A client's os username is too long for the os logon to succeed.

Action: Use a shorter os username.

ORA-01988: remote os logon is not allowed
Cause: Remote os login attempted when not allowed.

Action: Use a local client, or use the remote_os_authent system parameter to turn on remote os logon.

ORA-01989: role '*string*' not authorized by operating system
Cause: The os role does not exist, is not granted to you, or you did not provide the correct password.

Action: Re-attempt the SET ROLE with a valid os role and password, if necessary.

ORA-01990: error opening password file '*string*'
Cause: The password file either did not exist or was inaccessible.

Action: Ensure that the file exists and is accessible.

ORA-01991: invalid password file '*string*'
Cause: The specified password file name is invalid.

Action: Specify a correct password file name.

ORA-01992: error closing password file '*string*'
Cause: The password file could not be closed because of an operating system error or because an authentication action failed.

Action: Check for the above causes and correct as necessary.

ORA-01993: error writing password file '*string*'
Cause: The password file could not be written to because of an operating system error or because an authentication action failed.

Action: Check for the above causes and correct as necessary.

ORA-01994: Password file missing or disabled
Cause: The operation failed either because the INIT.ORA parameter REMOTE_LOGIN_PASSWORDFILE was set to NONE or else because the password file was missing.

Action: Create the password file using the orapwd tool and set the INIT.ORA parameter REMOTE_LOGIN_PASSWORDFILE to EXCLUSIVE.

ORA-01995: error reading password file '*string*'
Cause: An operating system error occurred when trying to read the password file.

Action: Fix the operating system error.

ORA-01996: GRANT failed: password file '*string*' is full
Cause: The grant failed when a user could not be added to the password file, because all available slots in it were used already.

Action: Either create a larger password file or free up slots in the password file by revoking the SYSOPER and SYSDBA privileges from some of the remote users. You can determine which remote users are valid and their privileges by issuing the following query in SQL*DBA: SELECT * FROM V$REMOTE_USERS;

ORA-01997: GRANT failed: user '*string*' is IDENTIFIED GLOBALLY
Cause: An attempt was made to grant administrative privileges to a user account, which was created as IDENTIFIED GLOBALLY. This is only allowed in an ASM; not in a database instance.

Action: When connected to a database instance, try granting the administrative privilege to a user whose account is managed by the database (as opposed to managed by a directory server, as is the case with accounts which are IDENTIFIED GLOBALLY).

ORA-01998: REVOKE failed: user SYS always has SYSOPER and SYSDBA
Cause: An attempt was made to revoke SYSOPER or SYSDBA administrative privileges from the SYS user which is not allowed.

Action: Try revoking administrative privilege from users other than SYS.

ORA-01999: password file cannot be updated in SHARED mode
Cause: An attempt was made to perform one of the following operations, but none of these operations are allowed while the INIT.ORA parameter REMOTE_LOGIN_PASSWORDFILE is set to SHARED and password file is in READ ONLY mode. - Attempting to change password for an administrative privileged user either using ALTER USER DDL statement or SQL*Plus PASSWORD command, or OCIPasswordChange API. - Attempting to grant administrative privileges to a user. - Attempting to revoke administrative privileges from a user. - Attempting to drop an administrative privileged user. If the password file was created in 12.2 format, then the following additional operations are disallowed when REMOTE_LOGIN_PASSWORDFILE parameter is set to SHARED. - An ALTER USER DDL statement making changes to an administrative privileged user's account status, password profile assignment, identification type, password expiration timestamp. - An ALTER PROFILE or DROP PROFILE CASCADE DDL statement for a password profile, which is assigned to an administrative privileged user.

Action: Set the INIT.ORA parameter to EXCLUSIVE, shutdown and restart the database instance and retry the operation.

ORA-02000: missing *string* keyword
Cause: The statement entered requires the missing keyword.

Action: Use the specified keyword.

ORA-02001: user SYS is not permitted to create indexes with freelist groups
Cause: user tried to create an index while running with sys authorization.

Action: Indexes cannot be created with SYS authorization. Either do not create the index or switch to USER authorization.

ORA-02002: error while writing to audit trail
Cause: The auditing facility was unable to write to the AUDIT_TRAIL table. If this error occurs, SQL statements that are currently being audited may also fail. This error occurred if the SYSTEM tablespace ran out of disk space.

Action: Add space to the SYSTEM tablespace or delete rows from the AUDIT_TRAIL table. If these operations fail or do not eliminate the problem, shut down and restart Oracle with auditing disabled. This is done by setting the initialization parameter AUDIT_TRAIL to FALSE.

ORA-02003: invalid USERENV parameter
Cause: An invalid parameter was specified for the USERENV function.

Action: Specify one of the allowable parameters TERMINAL, SESSIONID, ENTRYID, or NLS_LANG.

ORA-02004: security violation
Cause: This error code is never returned to a user. It is used as a value for column, audit_trail.returncode, to signal that a security violation occurred.

Action: None

ORA-02005: implicit (-1) length not valid for this bind or define datatype
Cause: A negative length for the define variable was passed to a define function.

Action: An explicit, non-negative, length parameter must be passed.

ORA-02006: invalid packed decimal format string
Cause: A packed decimal datatype was passed to a bind or define function, and the format string parameter was either not present or invalid.

Action: A valid format string parameter must be passed for a packed decimal variable. Check the programming manual for the definition of a packed decimal format string.

ORA-02007: can't use ALLOCATE or DEALLOCATE options with REBUILD
Cause: Allocate or deallocate storage and rebuild index are not compatible.

Action: Choose one or the other.

ORA-02008: non-zero scale specified for nonnumeric column
Cause: A scale factor was specified for a bind or define of a non-numeric variable.

Action: Set the scale factor to zero, then retry the operation.

ORA-02009: the size specified for a file must not be zero
Cause: A value of zero was specified in a SIZE or RESIZE clause of a file specification.

Action: Use correct syntax, or, if allowed, omit the SIZE or RESIZE clause.

ORA-02010: missing host connect string
Cause: A quoted character string did not follow the keyword USING in the USING clause of a CREATE DATABASE LINK statement.

Action: Specify the host connect string, then retry the operation.

ORA-02011: duplicate database link name
Cause: The database link name specified in a CREATE DATABASE LINK statement already existed.

Action: Either specify a new name or drop the existing link.

ORA-02012: missing USING keyword
Cause: The keyword USING did not follow the CONNECT TO clause in a CREATE DATABASE LINK statement.

Action: Specify the USING clause after the CONNECT TO clause.

ORA-02013: missing CONNECT keyword
Cause: The keyword CONNECT did not follow the database link name in a CREATE DATABASE LINK statement.

Action: Specify the CONNECT clause after the database link name.

ORA-02014: cannot select FOR UPDATE from view with DISTINCT, GROUP BY, etc.
Cause: An attempt was made to select FOR UPDATE from a view which had not been merged because the view used syntax (for example, DISTINCT or GROUP BY) preventing the merge, or because of initialization file parameter settings.

Action: Determine the reason the view will not merge and, if possible, make changes so that it can.

ORA-02015: cannot select FOR UPDATE from remote table
Cause: An attempt was made to select FOR UPDATE on a remote table (directly, or via a view) that had abstract data type columns, and the view or select list contained abstract data type columns or non-column items.

Action: To attempt a select FOR UPDATE, use a view or select list that consists only of base columns from the remote table, none of which may be abstract data type columns.

ORA-02016: cannot use a subquery in a START WITH on a remote database
Cause: An attempt was made to use a subquery in a START WITH clause. Such a subquery is not currently permitted if the table in the FROM clause of the tree query is in a remote database.

Action: It is necessary to connect directly to the remote database before using a subquery in the START WITH clause.

ORA-02017: integer value required
Cause: The specified value must be an integer.

Action: Specify an appropriate integer value, then retry the operation.

ORA-02018: database link of same name has an open connection
Cause: The user was currently connected to a PUBLIC database link with the same name as the database link name specified in a CREATE or DROP DATABASE LINK statement.

Action: Close the cursors that use the PUBLIC database link.

ORA-02019: connection description for remote database not found

ORA-02020: too many database links in use
Cause: The current session has exceeded the INIT.ORA open_links maximum.

Action: Increase the open_links limit, or free up some open links by committing or rolling back the transaction and canceling open cursors that reference remote databases.

ORA-02021: DDL operations are not allowed on a remote database
Cause: An attempt was made to use a DDL operation on a remote database. For example, "CREATE TABLE tablename@remotedbname ...".

Action: To alter the remote database structure, you must connect to the remote database with the appropriate privileges.

ORA-02022: remote statement has unoptimized view with remote object
Cause: The local view is unoptimized and contains references to objects at the remote database and the statement must be executed at the remote database.

Action: Create a similar view on the remote database and modify the violating view in the SQL statement with the new view@remote.

ORA-02023: START WITH or CONNECT BY predicate cannot be evaluated by remote data base
Cause: The statement contained a tree query on a remote database, and the tree query's START WITH or CONNECT BY predicate contained a term that could not be evaluated at the remote database. Such terms included calls to user functions, calls to USERENV, and references to ROWID.

Action: Remove the disallowed term, directly connect, or log on to the remote database.

ORA-02024: database link not found
Cause: Database link to be dropped is not found in dictionary

Action: Correct the database link name

ORA-02025: all tables in the SQL statement must be at the remote database
Cause: The user's SQL statement references tables from multiple databases. The remote database is not Oracle V7 or above, and can perform updates only if it can reference all tables in the SQL statement.

Action: Remote updates can be performed only if all databases in the SQL statement are Oracle Servers. Update the earlier version databases in a separate statement.

ORA-02026: missing LINK keyword
Cause: keyword missing

Action: supply missing keyword

ORA-02027: multi-row UPDATE of LONG column is not supported
Cause: A bind variable with length greater than 4000 bytes is being used to update a column, and the update statement updates more than one row.

Action: You may only update a single row with such a bind variable.

ORA-02028: fetching an exact number of rows is not supported by the server
Cause: The server does not support UPIALL, so the fetch of an exact number of rows cannot be emulated on the user side.

Action: Connect to a valid server or do not use an exact fetch.

ORA-02029: missing FILE keyword
Cause: keyword missing

Action: supply missing keyword

ORA-02030: can only select from fixed tables/views
Cause: An attempt is being made to perform an operation other than a retrieval from a fixed table/view.

Action: You may only select rows from fixed tables/views.

ORA-02031: no ROWID for fixed tables or for external-organized tables
Cause: An attempt is being made to access rowid from a fixed table or from a external-organized table.

Action: Do not access ROWID from a fixed table or from a external-organized table.

ORA-02032: clustered tables cannot be used before the cluster index is built
Cause: User attempted to perform a DML statement on a clustered table for which no cluster index has yet been created.

Action: Create the cluster index.

ORA-02033: a cluster index for this cluster already exists
Cause: A cluster index already exists for the cluster.

Action: None

ORA-02034: speed bind not permitted
Cause: Speed bind not allowed with supplied bind variables. Trapped internally by the system.

Action: None

ORA-02035: illegal bundled operation combination
Cause: User requested that the UPI bundled execution call perform an an illegal combination of operations.

Action: See documentation for legal operation combinations.

ORA-02036: too many variables to describe with automatic cursor open
Cause: User requested that the UPI bundled execution call perform automatic cursor open and close on a describe operation. There were too many select-list items or bind variables to do this.

Action: open and close cursor explicitly

ORA-02037: uninitialized speed bind storage
Cause: User attempted a UPI bundled execution call containing a standalone execute operation without first performing a UPI bundled execution call containing a bind operation.

Action: perform a UPI bundled execution call with bind before performing a bundled execution call with execute

ORA-02038: define is not allowed for array type
Cause: User attempted to define a select list variable of type "array". Arrays may only serve as host bind variables.

Action: Correct the offending code.

ORA-02039: bind by value is not allowed for array type
Cause: User attempted to bind an array host variable by value. Arrays may only be bound by reference.

Action: Correct the offending code.

ORA-02040: remote database *string* does not support two-phase commit
Cause: the database was potentially updated but does not support prepare to commit (as determined by its logon transaction traits). The transaction was rolled back.

Action: Do not attempt to update the remote database unless it is the only database updated in one transaction.

ORA-02041: client database did not begin a transaction
Cause: internal error

Action: contact support

ORA-02042: too many distributed transactions
Cause: the distributed transaction table was full because too many distributed transactions were active.

Action: Run fewer transactions. If you are sure you don't have too many concurrent distributed transactions, this indicates an internal error and support should be notified. Instance shutdown/restart would be a work-around.

ORA-02043: must end current transaction before executing *string*
Cause: a transaction is in progress and one of the following commands commands is issued: COMMIT FORCE, ROLLBACK FORCE, or ALTER SYSTEM ENABLE DISTRIBUTED RECOVERY in single process mode.

Action: COMMIT or ROLLBACK the current transaction and resubmit command.

ORA-02044: transaction manager login denied: transaction in progress
Cause: a remote transaction manager tried to log in while a distributed transaction is in progress.

Action: end the current transaction (this is a protocol error from a remote transaction manager)

ORA-02045: too many local sessions participating in global transaction
Cause: too many sessions at this site for this transaction.

Action: use an existing link so another session need not be created.

ORA-02046: distributed transaction already begun
Cause: internal error or error in external transaction manager. A server session received a begin_tran RPC before finishing with a previous distributed tran.

Action: Contact Oracle Support Services.

ORA-02047: cannot join the distributed transaction in progress
Cause: Either a transaction is in progress against a remote database that does not fully support two phase commit, and an update is attempted on another database, or updates are pending and and an attempt is made to update a different database that does not fully support two phase commit.

Action: complete the current transaction and then resubmit the update request.

ORA-02048: attempt to begin distributed transaction without logging on
Cause: client program must issue a distributed transaction login.

Action: contact support.

ORA-02049: timeout: distributed transaction waiting for lock
Cause: "The number of seconds specified in the distributed_lock_timeout initialization parameter were exceeded while waiting for a lock or for a begin transaction hash collision to end."

Action: Treat this timeout as a deadlock. Roll back the transaction and try again.

ORA-02050: transaction *string* rolled back, some remote DBs may be in-doubt
Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

ORA-02051: another session or branch in same transaction failed or finalized
Cause: A session at the same site with the same global transaction ID failed. The failure could also be caused by an application error if an attempt was made to update the database while another tightly coupled transaction branch with the same global transaction ID was finalized or aborted.

Action: No action necessary as the transaction will be automatically recovered. In the case of an application error, make sure there are no more updates to the database once the transaction manager has started two-phase commit for tightly coupled distributed transaction.

ORA-02052: remote transaction failure at *string*
Cause: error in remote transaction at given DBLINK

Action: retry

ORA-02053: transaction *string* committed, some remote DBs may be in-doubt
Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

ORA-02054: transaction *string* in-doubt
Cause: network or remote failure in 2PC.

Action: Notify operations; DBs will automatically re-sync when the failure is repaired. Monitor pending_trans$ for final outcome.

ORA-02055: distributed update operation failed; rollback required
Cause: a failure during distributed update operation may not have rolled back all effects of the operation. Since some sites may be inconsistent, the transaction must roll back to a savepoint or entirely

Action: rollback to a savepoint or rollback transaction and resubmit

ORA-02056: 2PC: *string*: bad two-phase command number *string* from *string*
Cause: two-phase commit protocol error.

Action: recovery of transaction attempted. Monitor pending_trans$ table to ensure correct resolution. Contact support.

ORA-02057: 2PC: *string*: bad two-phase recovery state number *string* from *string*
Cause: internal error in two-phase recovery protocol

Action: contact support

ORA-02058: no prepared transaction found with ID *string*
Cause: no transaction with local_tran_id or global_tran_id found in the pending_trans$ table in prepared state.

Action: check the pending_trans$ table.

ORA-02059: ORA-2PC-CRASH-TEST-*string* in commit comment
Cause: This is a special comment used to test the two phase commit.

Action: Don't use this special comment (%s a number 1-10)

ORA-02060: select for update specified a join of distributed tables
Cause: tables in a join with the for update clause must reside at the same DB.

Action: Joined tables in a SELECT statement with the FOR UPDATE clause must reside at the same database. Simplify the SELECT... FOR UPDATE statement so that it joins only tables in the same database.

ORA-02061: lock table specified list of distributed tables
Cause: tables in a lock table statement must reside at the same DB.

Action: issue multiple lock table commands.

ORA-02062: distributed recovery received DBID *string*, expected *string*
Cause: a database link at a coordinator no longer points to the expected database. Link may have been redefined, or a different DB mounted.

Action: restore link definition or remote database.

ORA-02063: preceding *stringstring* from *stringstring*
Cause: an Oracle error was received from a remote database link.

Action: refer to the preceding error message(s)

ORA-02064: distributed operation not supported
Cause: One of the following unsupported operations was attempted: 1. array execute of a remote update with a subquery that references a dblink, or 2. an update of a long column with bind variable and an update of a second column with a subquery that both references a dblink and a bind variable, or 3. a commit is issued in a coordinated session from an RPC procedure call with OUT parameters or function call.

Action: simplify remote update statement

ORA-02065: illegal option for ALTER SYSTEM
Cause: The option specified for ALTER SYSTEM is not supported

Action: refer to the user manual for option supported

ORA-02066: missing or invalid DISPATCHERS text
Cause: A character string literal was expected, but not found, following ALTER SYSTEM SET DISPATCHERS

Action: place the string literal containing the dispatcher's specification after ALTER SYSTEM SET DISPATCHERS

ORA-02067: transaction or savepoint rollback required
Cause: A failure (typically a trigger or stored procedure with multiple remote updates) occurred such that the all-or-nothing execution of a previous Oracle call cannot be guaranteed.

Action: rollback to a previous savepoint or rollback the transaction and resubmit.

ORA-02068: following severe error from *stringstring*
Cause: A severe error (disconnect, fatal Oracle error) received from the indicated database link. See following error text.

Action: Contact the remote system administrator.

ORA-02069: global_names parameter must be set to TRUE for this operation
Cause: A remote mapping of the statement is required but cannot be achieved because global_names should be set to TRUE for it to be achieved

Action: Issue alter session set global_names = true if possible

ORA-02070: database *stringstring* does not support *string* in this context
Cause: The remote database does not support the named capability in the context in which it is used.

Action: Simplify the SQL statement.

ORA-02071: error initializing capabilities for remote database *string*
Cause: Could not load a remote-specified capability table.

Action: Contact support for the remote SQL*Connect product.

ORA-02072: distributed database network protocol mismatch
Cause: This should never happen between different PRODUCTION releases of ORACLE, but may happen between alpha and beta releases, for example.

Action: Upgrade the older release.

ORA-02073: sequence numbers not supported in remote updates
Cause: Sequence numbers may not be used in INSERTS, UPDATES, or DELETES on remote tables.

Action: Perform the operation without specifying a sequence number.

ORA-02074: cannot *string* in a distributed transaction
Cause: A commit or rollback was attempted from session other than the parent of a distributed transaction.

Action: Only commit or rollback from the parent session.

ORA-02075: another instance changed state of transaction *string*
Cause: A commit force or rollback force was issued from a session in another instance.

Action: Check if another Oracle instance is performing recovery of pending transactions. Query DBA_2PC_PENDING to determine the new state of the transaction.

ORA-02076: sequence not co-located with updated table or long column
Cause: all referenced sequences must be co-located with the table with the long column.

Action: Correct the problem and then reissue the statement.

ORA-02077: selects of long columns must be from co-located tables
Cause: if a select returns long columns from multiple tables, all the tables must be co-located

Action: Correct the problem, then reissue the statement.

ORA-02078: invalid setting for ALTER SYSTEM FIXED_DATE
Cause: An invalid value was used.

Action: n/a

ORA-02079: cannot join a committing distributed transaction
Cause: Once a transaction branch is prepared, no more new transaction branches are allowed to start, nor is the prepared transaction branch allowed to be joined.

Action: Check the application code as this is an XA protocol violation.

ORA-02080: database link is in use
Cause: a transaction is active or a cursor is open on the database link given in the alter session close database link *link* command.

Action: commit or rollback, and close all cursors

ORA-02081: database link is not open
Cause: dblink given is not currently open.

Action: Resolve network problems or contact the remote database administrator to determine if the remote database's problem has been fixed. Contact the local database administrator to determine if network problems have been resolved. Wait until the link is open and try the operation again.

ORA-02082: a loopback database link must have a connection qualifier
Cause: An attempt was made to create a database link with the same name as the current database.

Action: a loopback database link needs a trailing qualifier, for example MYDB.EXAMPLE.COM@INST1 - the '@INST1' is the qualifier

ORA-02083: database name has illegal character '*string*'
Cause: supplied database name can contain only A-Z, 0-9, '_', '#', '$' '.' and '@' characters.

Action: Specify a valid database name.

ORA-02084: database name is missing a component
Cause: supplied database name cannot contain a leading '.', trailing '.' or '@', or two '.' or '@' in a row.

Action: Specify the full database name.

ORA-02085: database link *string* connects to *string*
Cause: a database link connected to a database with a different name. The connection is rejected.

Action: create a database link with the same name as the database it connects to, or set global_names=false.

ORA-02086: database (link) name is too long
Cause: database/database link name can have at most 128 characters.

Action: Specify the correct database or database link name or specify a name with fewer characters.

ORA-02087: object locked by another process in same transaction
Cause: A database link is being used in the cluster database environment that loops back to the same instance. One session is trying to convert a lock that was obtained by the other session.

Action: Get the more restrictive lock first. For example, if session 1 gets a share lock and session 2 gets an exclusive lock on the same object, get the exclusive lock first. Or, simply use the same session to access the object.

ORA-02088: distributed database option not installed
Cause: Remote and distributed updates and transactions are a separately priced option in ORACLE V7.

Action: Contact Oracle Support Services about obtaining the distributed database option.

ORA-02089: COMMIT is not allowed in a subordinate session
Cause: COMMIT was issued in a session that is not the two-phase commit global coordinator.

Action: Issue commit at the global coordinator only.

ORA-02090: network error: attempted callback+passthru
Cause: internal error.

Action: Contact Oracle Support Services.

ORA-02091: transaction rolled back
Cause: Also see error 2092. If the transaction is aborted at a remote site then you will only see 2091; if aborted at host then you will see 2092 and 2091.

Action: Add rollback segment and retry the transaction.

ORA-02092: out of transaction table slots for distributed transaction
Cause: The transaction is assigned to the system rollback segment and is trying to get into the PREPARED state, but the required number of non-PREPARED slots are not available, hence the transaction is rolled back.

Action: Add a rollback segment and retry the transaction.

ORA-02093: TRANSACTIONS_PER_ROLLBACK_SEGMENT(*string*) more than maximum possible(*string*)
Cause: Value of parameter specified is greater than allowed on this port.

Action: Use default or reduce it to less than max.

ORA-02094: replication option not installed
Cause: The replication option was not installed at this site. Updatable materialized views, deferred RPCs, and other replication features were, therefore, unavailable.

Action: Install the replication option. The replication option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle Sales representative if the replication option needs to be purchased.

ORA-02095: specified initialization parameter cannot be modified
Cause: The specified initialization parameter is not modifiable

Action: Check the Oracle9i Database Administrator's Guide for information about under what scope the parameter may be modified. For more information about modifying an initialization parameter, see the Oracle9i Database Reference.

ORA-02096: specified initialization parameter is not modifiable with this option
Cause: Though the initialization parameter is modifiable, it cannot be modified using the specified command.

Action: Check the DBA guide for information about under what scope the parameter may be modified

ORA-02097: parameter cannot be modified because specified value is invalid
Cause: Though the initialization parameter is modifiable, the modified value is not acceptable to the parameter.

Action: Check the DBA guide for range of acceptable values for this parameter.

ORA-02098: error parsing index-table reference (:I)
Cause: An incorrect index-table (:I) syntax was encountered.

Action: This syntax is for oracle internal use only.

74

ORA-02100 to ORA-04099

ORA-02100: PCC: out of memory (i.e., could not allocate)
Cause: SQLLIB was unable to allocate enough memory to execute the program.

Action: Allocate more memory to the user session and then rerun the program. If the error persists, contact Oracle Support Services for assistance.

ORA-02101: PCC: inconsistent cursor cache (uce/cuc mismatch)
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02102: PCC: inconsistent cursor cache (no cuc entry for this uce)
Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02103: PCC: inconsistent cursor cache (out-of-range cuc ref)
Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02104: PCC: inconsistent host cache (no cuc available)
Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02105: PCC: inconsistent cursor cache (no cuc entry in cache)
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02106: PCC: inconsistent cursor cache (OraCursor nr is bad)
Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02107: PCC: this pgm too old for run-time library: please re-PCC it
Cause: The program was precompiled by an older version of the Oracle Precompilers, which was incompatible with this release of the Oracle runtime library (SQLLIB).

Action: Precompile the program with a newer version of the Oracle Precompilers.

ORA-02108: PCC: invalid descriptor passed to run-time library
Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02109: PCC: inconsistent host cache (out-of-range sit ref)
Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02110: PCC: inconsistent host cache (invalid sqi type)
Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02111: PCC: heap consistency error
Cause: This internal error typically indicated a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

ORA-02112: PCC: SELECT..INTO returns too many rows
Cause: A SELECT...INTO statement returned more rows than can be stored in the host variable provided.

Action: There are three possible solutions: - Use the precompiler option SELECT_ERROR=NO. - Declare a host variable with a larger array dimension. - Declare a cursor or cursor variable for the select statement.

ORA-02140: invalid tablespace name
Cause: An identifier does not follow ALTER TABLESPACE.

Action: Specify a tablespace name following ALTER TABLESPACE.

ORA-02141: invalid OFFLINE option
Cause: An option other than NORMAL or IMMEDIATE follows OFFLINE.

Action: The user must either specify no option following OFFLINE or one of the options NORMAL or IMMEDIATE.

ORA-02142: missing or invalid ALTER TABLESPACE option
Cause: A valid option was not present.

Action: Use one of the valid options: add, rename, default, online, offline, read only, read write, begin, end, no, force, retention guarantee and retention noguarantee.

ORA-02143: invalid STORAGE option
Cause: An option other than INITIAL, NEXT, MINEXTENTS, MAXEXTENTS, or PCTINCREASE was specified in the STORAGE clause.

Action: Specify only valid options.

ORA-02144: no option specified for ALTER CLUSTER
Cause: No ALTER CLUSTER options are specified.

Action: Specify one or more of the following options: pctfree, pctused, size, storage.

ORA-02145: missing STORAGE option
Cause: No STORAGE options were specified following STORAGE (

Action: Specify one or more STORAGE option between the parentheses.

ORA-02146: SHARED specified multiple times
Cause: The SHARED option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the SHARED option once.

ORA-02147: conflicting SHARED/EXCLUSIVE options
Cause: Both the SHARED and EXCLUSIVE options were specified in a CREATE DATABASE statement.

Action: Specify SHARED or EXCLUSIVE, but not both.

ORA-02148: EXCLUSIVE specified multiple times
Cause: The EXCLUSIVE option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the EXCLUSIVE option once.

ORA-02149: Specified partition does not exist *string*
Cause: Partition not found for the object.

Action: Retry with correct partition name.

ORA-02150: invalid new tablespace name
Cause: The new tablespace name specified in ALTER TABLESPACE RENAME TO statement was invalid.

Action: Retry with a valid new tablespace name.

ORA-02151: invalid tablespace name: *string*
Cause: Oracle cannot create a tablespace whose name starts with '_$deleted$'.

Action: Try a different tablespace name.

ORA-02152: Invalid ALTER TABLESPACE ... RENAME option
Cause: An option other than DATAFILE or TO follows by ALTER TABLESPACE ... RENAME.

Action: The user must specify either DATAFILE or TO following ALTER TABLESPACE ... RENAME.

ORA-02153: invalid VALUES password string
Cause: An encoded password string does not follow the VALUES clause.

Action: Place a proper encoded password string after the VALUES clause.

ORA-02154: a tablespace with the name '*string*' is found
Cause: An attempt to rename a tablespace to a new name failed because the new name is already used by some other tablespace.

Action: Retry with a different new name.

ORA-02155: invalid DEFAULT tablespace identifier
Cause: An identifier does not follow DEFAULT TABLESPACE.

Action: Place a tablespace name after DEFAULT TABLESPACE.

ORA-02156: invalid TEMPORARY tablespace identifier
Cause: An identifier does not follow TEMPORARY TABLESPACE.

Action: Place a tablespace name after TEMPORARY TABLESPACE.

ORA-02157: no options specified for ALTER USER
Cause: No options were specified.

Action: Specify at least one ALTER USER option.

ORA-02158: invalid CREATE INDEX option
Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified.

Action: Choose one of the valid CREATE INDEX options.

ORA-02159: installed DLM does not support releasable locking mode
Cause: The parameter file specified gc_* parameters that allow locks to be release by the LCK process when not in use. This mode requires additional support from the DLM that is not available.

Action: Specify configuration parameters that do not require the additional function.

ORA-02160: index-organized table can not contain columns of type LONG
Cause: A column of type LONG defined for index-organized table.

Action: Do not use columns of type LONG in index-organized tables.

ORA-02161: invalid value for MAXLOGFILES
Cause: A number does not follow MAXLOGFILES.

Action: Specify a number after MAXLOGFILES.

ORA-02162: invalid value for MAXDATAFILES
Cause: A number does not follow MAXDATAFILES.

Action: Specify a number after MAXDATAFILES.

ORA-02163: invalid value for FREELIST GROUPS
Cause: A number does not follow FREELIST GROUPS.

Action: Specify a number after FREELIST GROUPS.

ORA-02164: DATAFILE clause specified more than once
Cause: The CREATE DATABASE command contains more than one DATAFILE clause.

Action: Specify at most one DATAFILE clause.

ORA-02165: invalid option for CREATE DATABASE
Cause: An invalid CREATE DATABASE option is present.

Action: Specify only valid CREATE DATABASE options.

ORA-02166: ARCHIVELOG and NOARCHIVELOG specified
Cause: Both ARCHIVELOG and NOARCHIVELOG are specified in a CREATE DATABASE statement.

Action: Specify at most one of these two options.

ORA-02167: LOGFILE clause specified more than once
Cause: The CREATE DATABASE command contains more than one LOGFILE clause.

Action: Specify at most one LOGFILE clause.

ORA-02168: invalid value for FREELISTS
Cause: A number does not follow FREELISTS

Action: Specify a number after FREELISTS

ORA-02169: FREELISTS storage option not allowed
Cause: The user attempted to specify the FREELISTS storage option. This option may only be specified during create table or create index.

Action: Remove these options and retry the statement.

ORA-02170: FREELIST GROUPS storage option not allowed
Cause: The user attempted to specify the FREELIST GROUPS storage option. This option may only be specified during create table and when allow_freelist_groups INIT.ORA is specified.

Action: Remove this option and retry the statement or set the allow_freelist_groups INIT.ORA parameter.

ORA-02171: invalid value for MAXLOGHISTORY
Cause: A number does not follow MAXLOGHISTORY

Action: Specify a number after MAXLOGHISTORY

ORA-02172: The PUBLIC keyword is not appropriate for a disable thread
Cause: The PUBLIC keyword was specified for a disable.

Action: Remove the keyword and resubmit.

ORA-02173: invalid option for DROP TABLESPACE
Cause: Either a token other than INCLUDING was found following the tablespace name or some text was found following INCLUDING CONTENTS.

Action: Place nothing or only INCLUDING CONTENTS after the tablespace name.

ORA-02174: Missing required thread number
Cause: Must specify thread number after THREAD keyword

Action: Use correct syntax.

ORA-02175: invalid rollback segment name
Cause: In the CREATE or DROP ROLLBACK SEGMENT statements, an identifier was not found following ROLLBACK SEGMENT.

Action: Place the segment name following ROLLBACK SEGMENT.

ORA-02176: invalid option for CREATE ROLLBACK SEGMENT
Cause: An invalid option was specified in a CREATE ROLLBACK SEGMENT statement.

Action: Specify one of the valid options: TABLESPACE and STORAGE.

ORA-02177: Missing required group number
Cause: Must specify group number after GROUP keyword

Action: Check the syntax of the command, specify a group number after GROUP, and retry it.

ORA-02178: correct syntax is: SET TRANSACTION READ { ONLY | WRITE }
Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02179: valid options: ISOLATION LEVEL { SERIALIZABLE | READ COMMITTED }
Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02180: invalid option for CREATE TABLESPACE
Cause: An invalid option appeared.

Action: Specify one of the valid options: DATAFILE, DEFAULT STORAGE, ONLINE, OFFLINE, FORCE, RETENTION, IN SHARD.

ORA-02181: invalid option to ROLLBACK WORK
Cause: A token other than TO follows ROLLBACK [WORK].

Action: Place nothing or TO SAVEPOINT *name* after ROLLBACK [WORK].

ORA-02182: savepoint name expected
Cause: An identifier does not follow ROLLBACK [WORK] TO [SAVEPOINT].

Action: Place a savepoint name following TO [SAVEPOINT].

ORA-02183: valid options: ISOLATION_LEVEL { SERIALIZABLE | READ COMMITTED }
Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02184: resource quotas are not allowed in REVOKE
Cause: In a revoke statement, a resource quota was specified.

Action: Specify resource privilege without the quota.

ORA-02185: a token other than WORK follows COMMIT
Cause: A token other than WORK follows COMMIT.

Action: Place either nothing or WORK after COMMIT.

ORA-02186: tablespace resource privilege may not appear with other privileges
Cause: An attempt was made to grant or revoke a resource quota in the same statement in which other privileges are granted or revoked.

Action: Use a separate grant or revoke statement for the resource quota privilege.

ORA-02187: invalid quota specification
Cause: The user attempted to grant a tablespace quota above the upper limit.

Action: Grant a smaller tablespace quota.

ORA-02188: Cannot enable instance publicly
Cause: An attempt was made to publicly enable a thread associated with an instance.

Action: Leave out the PUBLIC keyword.

ORA-02189: ON *tablespace* required
Cause: In a grant or revoke statement, the user specified a tablespace quota but did not follow it with the ON *tablespace* clause.

Action: Specify the tablespace on which the quota is to be applied with the ON *tablespace* clause.

ORA-02190: keyword TABLES expected
Cause: The keyword TABLES is expected following DROP CLUSTER *name* INCLUDING.

Action: Place TABLES after INCLUDING.

ORA-02191: correct syntax is: SET TRANSACTION USE ROLLBACK SEGMENT *rbs*
Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02192: PCTINCREASE not allowed for rollback segment storage clauses
Cause: pctincrease was specified in a create or alter rollback segment

Action: reissue statement without the pctincrease clause

ORA-02194: event specification syntax error *string* (minor error *string*) near '*string*'
Cause: There is a syntax error in an event specification.

Action: Fix the error.

ORA-02195: Attempt to create *string* object in a *string* tablespace
Cause: The object type is inconsistent with a tablespace contents.

Action: Create an object in a different tablespace, or change the user defaults.

ORA-02196: PERMANENT/TEMPORARY option already specified
Cause: In CREATE TABLESPACE, the PERMANENT and/or TEMPORARY options were specified more than once.

Action: Specify at least one of REBUILD, INITRANS, MAXTRANS, or STORAGE. For more information about the parameters of CREATE TABLESPACE, see the Oracle9i SQL Reference.

ORA-02197: file list already specified
Cause: In CREATE TABLESPACE, more than one DATAFILE/TEMPFILE clause was specified.

Action: Merge the DATAFILE/TEMPFILE clauses into a single clause.

ORA-02198: ONLINE/OFFLINE option already specified
Cause: In CREATE TABLESPACE, the ONLINE and/or OFFLINE options were specified more than once.

Action: Specify at most one of ONLINE or OFFLINE.

ORA-02199: missing DATAFILE/TEMPFILE clause
Cause: A CREATE TABLESPACE statement has no DATAFILE/TEMPFILE clause.

Action: Specify a DATAFILE/TEMPFILE clause.

ORA-02200: WITH GRANT OPTION not allowed for PUBLIC
Cause: An attempt was made to GRANT to PUBLIC WITH GRANT OPTION.

Action: Remove the WITH GRANT OPTION clause.

ORA-02201: sequence not allowed here
Cause: An attempt was made to reference a sequence in a from-list.

Action: A sequence can only be referenced in a select-list.

ORA-02202: no more tables permitted in this cluster
Cause: An attempt was made to create a table in a cluster which already contains 32 tables.

Action: Up to 32 tables may be stored per cluster.

ORA-02203: INITIAL storage options not allowed
Cause: The user attempted to alter the INITIAL storage option of a table, cluster, index, or rollback segment. These options may only be specified when the object is created.

Action: Remove these options and retry the statement.

ORA-02204: ALTER, INDEX and EXECUTE not allowed for views
Cause: An attempt was made to grant or revoke an invalid privilege on a view.

Action: Do not attempt to grant or revoke any of ALTER, INDEX, or EXECUTE privileges on views.

ORA-02205: only SELECT and ALTER privileges are valid for sequences
Cause: An attempt was made to grant or revoke an invalid privilege on a sequence.

Action: Do not attempt to grant or revoke DELETE, INDEX, INSERT, UPDATE, REFERENCES or EXECUTE privilege on sequences.

ORA-02206: duplicate INITRANS option specification
Cause: INITRANS is specified more than once.

Action: Specify INITRANS at most once.

ORA-02207: invalid INITRANS option value
Cause: The INITRANS value is not an integer between 1 and 255 and less than or equal to the MAXTRANS value.

Action: Choose a valid INITRANS value.

ORA-02208: duplicate MAXTRANS option specification
Cause: MAXTRANS is specified more than once.

Action: Specify MAXTRANS at most once.

ORA-02209: invalid MAXTRANS option value
Cause: The MAXTRANS value is not an integer between 1 and 255 and greater than or equal to the INITRANS value.

Action: Choose a valid MAXTRANS value.

ORA-02210: no options specified for ALTER TABLE
Cause: No ALTER TABLE option was specified.

Action: Specify at least one alter table option.

ORA-02211: invalid value for PCTFREE or PCTUSED
Cause: The specified value for PCTFREE or PCTUSED is not an integer between 0 and 100.

Action: Choose an appropriate value for the option.

ORA-02212: duplicate PCTFREE option specification
Cause: PCTFREE option specified more than once.

Action: Specify PCTFREE at most once.

ORA-02213: duplicate PCTUSED option specification
Cause: PCTUSED option specified more than once.

Action: Specify PCTUSED at most once.

ORA-02214: duplicate BACKUP option specification
Cause: The BACKUP option to ALTER TABLE is specified more than once.

Action: Specify the option at most once.

ORA-02215: duplicate tablespace name clause
Cause: There is more than one TABLESPACE clause in the CREATE TABLE, CREATE INDEX, or CREATE ROLLBACK SEGMENT statement.

Action: Specify at most one TABLESPACE clause.

ORA-02216: tablespace name expected
Cause: A tablespace name was not present where required by the syntax for the failing statement.

Action: Specify a tablespace name where required by the syntax.

ORA-02217: duplicate storage option specification
Cause: A storage option (INIITAL, NEXT, MINEXTENTS, MAXEXTENTS, PCTINCREASE) is specified more than once.

Action: Specify all storage options at most once.

ORA-02218: invalid INITIAL storage option value
Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02219: invalid NEXT storage option value
Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02220: invalid MINEXTENTS storage option value
Cause: The specified value must be a positive integer less than or equal to MAXEXTENTS.

Action: Specify an appropriate value.

ORA-02221: invalid MAXEXTENTS storage option value
Cause: The specified value must be a positive integer greater than or equal to MINEXTENTS.

Action: Specify an appropriate value.

ORA-02222: invalid PCTINCREASE storage option value
Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

ORA-02223: invalid OPTIMAL storage option value
Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02224: EXECUTE privilege not allowed for tables
Cause: An attempt was made to grant or revoke an invalid privilege on a table.

Action: Do not attempt to grant or revoke EXECUTE privilege on tables.

ORA-02225: only EXECUTE and DEBUG privileges are valid for procedures
Cause: An attempt was made to grant or revoke an invalid privilege on a procedure, function or package.

Action: Do not attempt to grant or revoke any privilege besides EXECUTE or DEBUG on procedures, functions or packages.

ORA-02226: invalid MAXEXTENTS value (max allowed: *string*)
Cause: The MAXEXTENTS specified is too large for the database block size. This applies only to SYSTEM rollback segment.

Action: Specify a smaller value.

ORA-02227: invalid cluster name
Cause: A cluster name of the form [*identifier* .] *identifier* is expected but not present.

Action: Enter an appropriate cluster name.

ORA-02228: duplicate SIZE specification
Cause: The SIZE option is specified more than once.

Action: Specify the SIZE option at most once.

ORA-02229: invalid SIZE option value
Cause: The specified value must be an integer number of bytes.

Action: Specify an appropriate value.

ORA-02230: invalid ALTER CLUSTER option
Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or SIZE is specified in an ALTER CLUSTER statement.

Action: Specify only legal options.

ORA-02231: missing or invalid option to ALTER DATABASE
Cause: An option other than ADD, DROP, RENAME, ARCHIVELOG, NOARCHIVELOG, MOUNT, DISMOUNT, OPEN, or CLOSE is specified in the statement.

Action: Specify only legal options.

ORA-02232: invalid MOUNT mode
Cause: A mode other than SHARED or EXCLUSIVE follows the MOUNT keyword in an ALTER DATABASE statement.

Action: Specify either SHARED, EXCLUSIVE, or nothing following MOUNT.

ORA-02233: invalid CLOSE mode
Cause: A mode other than NORMAL or IMMEDIATE follows the CLOSE keyword in an ALTER DATABASE statement.

Action: Specify either NORMAL, IMMEDIATE, or nothing following CLOSE.

ORA-02234: changes to this table are already logged
Cause: the log table to be added is a duplicate of another

Action: Don't add this change log to the system; check that the replication product's system tables are consistent

ORA-02235: this table logs changes to another table already
Cause: the table to be altered is already a change log for another table

Action: Don't log changes to the specified base table to this table; check that the replication product's system tables are consistent

ORA-02236: invalid file name
Cause: A character string literal was not used in the filename list of a LOGFILE, DATAFILE, or RENAME clause.

Action: Use correct syntax.

ORA-02237: invalid file size
Cause: A non-integer value was specified in the SIZE or RESIZE clause.

Action: Use correct syntax.

ORA-02238: filename lists have different numbers of files
Cause: In a RENAME clause in ALTER DATABASE or TABLESPACE, the the number of existing filenames does not equal the number of new filenames.

Action: Make sure there is a new filename to correspond to each existing filename.

ORA-02239: there are objects which reference this sequence
Cause: the sequence to be dropped is still referenced

Action: Make sure the sequence name is correct, or drop the referencing constraint/ object

ORA-02240: invalid value for OBJNO or TABNO
Cause: A number does not follow either OBJNO or TABNO.

Action: Specify a number after OBJNO or TABNO.

ORA-02241: must of form EXTENTS (FILE *n* BLOCK *n* SIZE *n*, ...)
Cause: bad extent storage clause

Action: respecify

ORA-02242: no options specified for ALTER INDEX
Cause: No options specified.

Action: Specify at least one of REBUILD, INITRANS, MAXTRANS, or STORAGE.

ORA-02243: invalid ALTER INDEX or ALTER MATERIALIZED VIEW option
Cause: An option other than INITRANS, MAXTRANS,or STORAGE is specified in an ALTER INDEX statement or in the USING INDEX clause of an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

ORA-02244: invalid ALTER ROLLBACK SEGMENT option
Cause: The STORAGE option is expected but not found.

Action: Specify the STORAGE option.

ORA-02245: invalid ROLLBACK SEGMENT name
Cause: An identifier was expected, but not found, following ALTER [PUBLIC] ROLLBACK SEGMENT.

Action: Place a rollback segment name following SEGMENT.

ORA-02246: missing EVENTS text
Cause: A character string literal was expected, but not found, following ALTER SESSION SET EVENTS.

Action: Place the string literal containing the events text after EVENTS.

ORA-02247: no option specified for ALTER SESSION
Cause: The option SET EVENTS was expected, but not found, following ALTER SESSION.

Action: Place the SET EVENTS option after ALTER SESSION.

ORA-02248: invalid option for ALTER SESSION
Cause: Obvious.

Action: see SQL Language Manual for legal options.

ORA-02249: missing or invalid value for MAXLOGMEMBERS
Cause: A valid number does not follow MAXLOGMEMBERS. The value specified must be between 1 and the port-specific maximum number of log file members.

Action: Specify a valid number after MAXLOGMEMBERS.

ORA-02250: missing or invalid constraint name
Cause: The constraint name is missing or invalid.

Action: Specify a valid identifier name for the constraint name.

ORA-02251: subquery not allowed here
Cause: Subquery is not allowed here in the statement.

Action: Remove the subquery from the statement.

ORA-02252: check constraint condition not properly ended
Cause: The specified search condition for the check constraint is not properly ended.

Action: End the condition properly.

ORA-02253: constraint specification not allowed here
Cause: Constraint specification is not allowed here in the statement.

Action: Remove the constraint specification from the statement.

ORA-02254: DEFAULT *expression* not allowed here
Cause: Default value expression is not allowed for the column here in the statement.

Action: Remove the default value expression from the statement.

ORA-02255: obsolete 7.1.5
Cause: Was that defaults must not conflict with not null constraints

Action: n/a

ORA-02256: number of referencing columns must match referenced columns
Cause: The number of columns in the foreign-key referencing list is not equal to the number of columns in the referenced list.

Action: Make sure that the referencing columns match the referenced columns.

ORA-02257: maximum number of columns exceeded
Cause: The number of columns in the key list exceeds the maximum number.

Action: Reduce the number columns in the list.

ORA-02258: duplicate or conflicting NULL and/or NOT NULL specifications
Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02259: duplicate UNIQUE/PRIMARY KEY specifications
Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02260: table can have only one primary key
Cause: Self-evident.

Action: Remove the extra primary key.

ORA-02261: such unique or primary key already exists in the table
Cause: Self-evident.

Action: Remove the extra key.

ORA-02262: ORA-*string* occurs while type-checking column default value expression
Cause: New column datatype causes type-checking error for existing column default value expression.

Action: Remove the default value expression or don't alter the column datatype.

ORA-02263: need to specify the datatype for this column
Cause: The required datatype for the column is missing.

Action: Specify the required datatype.

ORA-02264: name already used by an existing constraint
Cause: The specified constraint name has to be unique.

Action: Specify a unique constraint name for the constraint.

ORA-02265: cannot derive the datatype of the referencing column
Cause: The datatype of the referenced column is not defined as yet.

Action: Make sure that the datatype of the referenced column is defined before referencing it.

ORA-02266: unique/primary keys in table referenced by enabled foreign keys
Cause: An attempt was made to truncate a table with unique or primary keys referenced by foreign keys enabled in another table. Other operations not allowed are dropping/truncating a partition of a partitioned table or an ALTER TABLE EXCHANGE PARTITION.

Action: Before performing the above operations the table, disable the foreign key constraints in other tables. You can see what constraints are referencing a table by

issuing the following command: SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";

ORA-02267: column type incompatible with referenced column type
Cause: The data type or collation of the referencing column was incompatible with the data type or collation of the referenced column.

Action: Select a compatible data type for the referencing column. Also, the collation of a character column in a foreign key must match the collation of the corresponding column in the primary key.

ORA-02268: referenced table does not have a primary key
Cause: The referenced table does not have a primary key.

Action: Specify explicitly the referenced table unique key.

ORA-02269: key column cannot be of LONG datatype
Cause: Self-evident.

Action: Change the datatype of the column, or remove the column from the key.

ORA-02270: no matching unique or primary key for this column-list
Cause: A REFERENCES clause in a CREATE/ALTER TABLE statement gives a column-list for which there is no matching unique or primary key constraint in the referenced table.

Action: Find the correct column names using the ALL_CONS_COLUMNS catalog view

ORA-02271: table does not have such constraint
Cause: Self-evident.

Action: Make sure the specified constraint name is correct.

ORA-02272: constrained column cannot be of LONG datatype
Cause: Self-evident.

Action: Change the datatype of the column, or remove the constraint on the column.

ORA-02273: this unique/primary key is referenced by some foreign keys
Cause: Self-evident.

Action: Remove all references to the key before the key is to be dropped.

ORA-02274: duplicate referential constraint specifications
Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02275: such a referential constraint already exists in the table
Cause: Self-evident.

Action: Remove the extra constraint.

ORA-02276: default value type incompatible with column type
Cause: The type of the evaluated default expression is incompatible with the datatype of the column.

Action: Change the type of the column, or modify the default expression.

ORA-02277: invalid sequence name
Cause: The specified sequence name is not a valid identifier name.

Action: Specify a valid identifier name for the sequence name.

ORA-02278: duplicate or conflicting MAXVALUE/NOMAXVALUE specifications
Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02279: duplicate or conflicting MINVALUE/NOMINVALUE specifications
Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02280: duplicate or conflicting CYCLE/NOCYCLE specifications
Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02281: duplicate or conflicting CACHE/NOCACHE specifications
Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02282: duplicate or conflicting ORDER/NOORDER specifications
Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02283: cannot alter starting sequence number
Cause: Self-evident.

Action: Don't alter it.

ORA-02284: duplicate INCREMENT BY specifications
Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02285: duplicate START WITH specifications
Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02286: no options specified for ALTER SEQUENCE
Cause: Self-evident.

Action: The statement is meaningless without any options.

ORA-02287: sequence number not allowed here
Cause: The specified sequence number (CURRVAL or NEXTVAL) is inappropriate here in the statement.

Action: Remove the sequence number.

ORA-02288: invalid OPEN mode
Cause: A token other than RESETLOGS appears following ALTER DATABASE *name* OPEN.

Action: Either nothing or RESETLOGS should be placed following OPEN.

ORA-02289: sequence does not exist
Cause: The specified sequence does not exist, or the user does not have the required privilege to perform this operation.

Action: Make sure the sequence name is correct, and that you have the right to perform the desired operation on this sequence.

ORA-02290: check constraint (*string*.*string*) violated
Cause: The values being inserted do not satisfy the named check constraint.

Action: do not insert values that violate the constraint.

ORA-02291: integrity constraint (*string*.*string*) violated - parent key not found
Cause: A foreign key value has no matching primary key value.

Action: Delete the foreign key or add a matching primary key.

ORA-02292: integrity constraint (*string*.*string*) violated - child record found
Cause: attempted to delete a parent key value that had a foreign key dependency.

Action: delete dependencies first then parent or disable constraint.

ORA-02293: cannot validate (*string*.*string*) - check constraint violated
Cause: an alter table operation tried to validate a check constraint to a populated table that had nocomplying values.

Action: Obvious

ORA-02294: cannot enable (*string*.*string*) - constraint changed during validation
Cause: While one DDL statement was attempting to enable this constraint, another DDL changed this same constraint.

Action: Try again, with only one DDL changing the constraint this time.

ORA-02295: found more than one enable/disable clause for constraint
Cause: a create or alter table specified more than one enable and/or disable clause for a given constraint.

Action: only one enable or disable may be specified for a given constraint.

ORA-02296: cannot enable (*string*.*string*) - null values found
Cause: an alter table enable constraint failed because the table contains values that do not satisfy the constraint.

Action: Obvious

ORA-02297: cannot disable constraint (*string*.*string*) - dependencies exist
Cause: an alter table disable constraint failed becuase the table has foriegn keys that are dpendent on this constraint.

Action: Either disable the foreign key constraints or use disable cascade

ORA-02298: cannot validate (*string*.*string*) - parent keys not found
Cause: an alter table validating constraint failed because the table has orphaned child records.

Action: Obvious

ORA-02299: cannot validate (*string*.*string*) - duplicate keys found
Cause: an alter table validating constraint failed because the table has duplicate key values.

Action: Obvious

ORA-02300: invalid value for OIDGENERATORS
Cause: A number was not specified for the value of OIDGENERATORS.

Action: Specify a number for OIDGENERATORS.

ORA-02301: maximum number of OIDGENERATORS is 255
Cause: A number greater than 255 was specified for the value of OIDGENERATORS.

Action: Make sure the number specified for OIDGENERATORS does not exceed 255.

ORA-02302: invalid or missing type name
Cause: An invalid or missing type name was entered in a statement.

Action: Enter a valid type name in the statement and retry the operation.

ORA-02303: cannot drop or replace a type with type or table dependents
Cause: An attempt was made to drop or replace a type that has type or table dependents.

Action: For DROP TYPE, drop all type(s) and table(s) depending on the type and then retry the operation, or use the FORCE option. For CREATE TYPE, drop all type(s) and table(s) depending on the type and then retry the operation, or drop all table(s) depending on the type and retry with the FORCE option.

ORA-02304: invalid object identifier literal
Cause: An attempt was made to enter an object identifier literal for CREATE TYPE that is either: - not a string of 32 hexadecimal characters - an object identifier that already identifies an existing object - an object identifier different from the original object identifier already assigned to the type

Action: Do not specify the object identifier clause or specify a 32 hexadecimal-character object identifier literal that is unique or identical to the originally assigned object identifier. Then retry the operation.

ORA-02305: only EXECUTE, DEBUG, and UNDER privileges are valid for types
Cause: An attempt was made to GRANT or REVOKE an invalid privilege (not EXECUTE, DEBUG, or UNDER) on a type.

Action: GRANT or REVOKE only the EXECUTE, DEBUG, or UNDER privilege on types.

ORA-02306: cannot create a type that already has valid dependent(s)
Cause: An attempt was made to create a type that already has some valid dependent(s) (these dependents depend on the fact that the type does not exist).

Action: Drop the dependents first before creating the type, or do not create the type.

ORA-02307: cannot alter with REPLACE option a type that is not valid
Cause: An attempt was made to ALTER with REPLACE option a type that is not valid.

Action: Use the CREATE OR REPLACE TYPE command to modify the type.

ORA-02308: invalid option *string* for object type column
Cause: An attempt was made to specify an invalid option, such as PACKED or UNPACKED, for the object type column.

Action: Remove the invalid option from column specification and retry the operation.

ORA-02309: atomic NULL violation
Cause: An attempt was made to acess the attributes of a NULL object instance.

Action: Ensure that the object instance is non-NULL before accessing.

ORA-02310: exceeded maximum number of allowable columns in table
Cause: The attributes in the object type column exceeded the maximum number of columns allowed in a table.

Action: Specify fewer attributes for the object type and retry the operation.

ORA-02311: cannot alter with COMPILE option a valid type with type or table dependents
Cause: An attempt was made to ALTER with COMPILE option a type that is valid and has type or table dependents.

Action: No need to perform this operation.

ORA-02313: object type contains non-queryable type *string* attribute
Cause: The specified object type contains a nested attribute whose type is non-queryable.

Action: Use an object type with queryable attribute types.

ORA-02314: illegal use of type constructor
Cause: The statement contains an illegal use of a type constructor.

Action: Refer to the SQL Reference manual for the correct statement syntax.

ORA-02315: incorrect number of arguments for default constructor
Cause: The number of arguments specified for the default constructor doesn't match the number of attributes of the object type.

Action: Specify the correct number of arguments for the default constructor and retry the operation.

ORA-02320: failure in creating storage table for nested table column *string*
Cause: An error occurred while creating the storage table for the specified nested table column.

Action: See the messages that follow for more details. If the situation they describe can be corrected, do so; otherwise contact Oracle Support.

ORA-02322: failure in accessing storage table of the nested table column
Cause: An error occured while performing DML on the storage table of the nested table column.

Action: If the situation described in the following messages can be corrected, do so; otherwise contact Oracle Support.

ORA-02324: more than one column in the SELECT list of THE subquery
Cause: More than one column was selected in the THE subquery.

Action: Specify only one column in the SELECT list of the THE subquery and retry the operation.

ORA-02327: cannot create index on expression with datatype *string*
Cause: An attempt was made to create an index on a non-indexable expression.

Action: Change the column datatype or do not create the index on an expression whose datatype is one of VARRAY, nested table, object, LOB, or REF.

ORA-02329: column of datatype *string* cannot be unique or a primary key
Cause: An attempt was made to place a UNIQUE or a PRIMARY KEY constraint on a column of datatype VARRAY, nested table, object, LOB, FILE or REF.

Action: Change the column datatype or remove the constraint. Then retry the operation.

ORA-02330: datatype specification not allowed
Cause: An attempt was made to specify the data type in the column constraint specification of an object table.

Action: Remove data type specification and retry the operation.

ORA-02331: cannot create constraint on column of datatype *string*
Cause: An attempt was made to create a constraint on a column posessing a non-constrainable datatype -- VARRAY, nested table, object, LOB, FILE, or REF.

Action: Change the column datatype, or remove the constraint.

ORA-02332: cannot create index on attributes of this column
Cause: An attempt was made to create an index on an attributes of an object type column.

Action: Do not specify the index on the attribute.

ORA-02333: cannot create constraints on attributes of this column
Cause: An attempt was made to create a constraint on an attribute of an object type column.

Action: Remove the constraint or change the object type.

ORA-02334: cannot infer type for column
Cause: A datatype was not declared for this column (in the CREATE TABLE) and an attempt was made to create a constraint on an attribute of this column.

Action: Declare a datatype for the column.

ORA-02335: invalid datatype for cluster column
Cause: An attempt was made to declare a CLUSTER column of datatype object, REF, nested table, VARRAY, LOB, or FILE.

Action: Remove the CLUSTER column or change the datatype of the column.

ORA-02336: column attribute cannot be accessed
Cause: An attempt was made to extract an attribute of an object type column.

Action: Change the object type for the column and retry the operation.

ORA-02337: not an object type column
Cause: An attempt was made to use dotted notation on a non-ADT column; that is, "a.b.c" where "a" is not an object type.

Action: Either change the column type to an object type or do not perform this operation.

ORA-02338: missing or invalid column constraint specification
Cause: A column constraint was not specified.

Action: Remove the column specification or specify a column constraint. Then retry the operation.

ORA-02339: invalid column specification
Cause: An attempt was made to specify the PACKED or UNPACKED keyword for a non-object type column.

Action: Remove the PACKED or UNPACKED keyword in the column specification and retry the operation.

ORA-02340: invalid column specification
Cause: An attempt was made to specify an UNPACKED column within a packed table.

Action: Remove the UNPACKED keyword in the column specification.

ORA-02342: replacement type has compilation errors
Cause: The use of the ALTER...REPLACE statement on a valid type caused a compilation error.

Action: Use the ALTER...REPLACE statement to replace the type with a valid type which does not cause compilation errors.

ORA-02344: cannot revoke execute on a type with table dependents
Cause: An attempt was made to revoke execute on a type that has dependents.

Action: Drop all table(s) depending on the type, then retry the operation, or use the FORCE option.

ORA-02345: cannot create a view with column based on CURSOR operator
Cause: A CURSOR operator was used as one of the SELECT elements in the subquery of a CREATE VIEW or CREATE TABLE ... AS SELECT statement.

Action: Remove the CURSOR operator and replace it with the CAST operator.

ORA-02347: cannot grant privileges on columns of an object table
Cause: An attempt was made to grant privileges on the columns of an object table.

Action: Choose another table. Privileges cannot be granted on columns of an object table.

ORA-02348: cannot create VARRAY column with embedded LOB
Cause: An attempt was made to create a column of a VARRAY type which has an embedded LOB attribute. The LOB could be an attribute of a subtype of the declared type of VARRAY's element.

Action: Remove offending attribute from type. If it is a subtype attribute then declare the VARRAY column NOT SUBSTITUTABLE.

ORA-02349: invalid user-defined type - type is incomplete
Cause: An attempt was made to use an incomplete type definition as a column or table datatype.

Action: Complete the type definition and retry the operation.

ORA-02351: internal error: *string*\n
Cause: An unexpected error condition was detected.

Action: Make a note of the error number and message and contact Oracle Support Services.

ORA-02352: error setting an OCI attribute: *string*\n
Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02353: error fetching an OCI attribute: *string*\n
Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02354: error in exporting/importing data\n*string*
Cause: An error has occurred in a stream export or import operation. This message will be followed by another message giving more details about this error.

Action: See export/import documentation for an explanation of the second error message.

ORA-02355: error opening file: *string*\n
Cause: An attempt to open the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02356: The database is out of space. The load cannot continue
Cause: The load was discontinued due to space exhaustion in the database.

Action: Add space for the specified table.

ORA-02357: header in file *string* may not contain correct information\n
Cause: The header may be corrupted.

Action: Contact Oracle Support Services.

ORA-02358: error in exporting or importing data\n
Cause: An error has occurred in a stream export or import operation.

Action: Contact Oracle Support Services.

ORA-02359: database version in file *string* is not valid\n
Cause: The specified file could not be used for this load because its database version was not compatible with the database version in the other files in the DUMPFILE clause.

Action: Verify all the files in the DUMPFILE clause are from the same unload operation.

ORA-02360: fatal error during data export/import initialization\n
Cause: An unexpected error occurred during initialization for data export/import.

Action: Contact Oracle Support Services.

ORA-02361: error while attempting to allocate *number* bytes of memory\n
Cause: An error occurred while trying to allocate memory. This is likely caused by insufficient memory.

Action: Reconnect to the instance and retry the operation.

ORA-02362: error closing file: *string*\n
Cause: An attempt to close the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02363: error reading from file: *string*\n
Cause: An attempt to read from the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02364: error writing to file: *string*\n
Cause: An attempt to write to the specified file for data export or import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02365: error seeking in file: *string*\n
Cause: An attempt to seek to the specified position in file failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02366: The following index(es) on table *string* were processed:
Cause: The table had some indexes which were loaded if there were no errors.

Action: None

ORA-02367: read ended but had expected more data from file *string*\n
Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully and that the files had not been accidentally truncated.

ORA-02368: the following file is not valid for this load operation\n
Cause: A file could not be used for this load. See the following message for more information.

Action: Verify all the files in the DUMPFILE clause are from the same unload operation and that the unload was successful.

ORA-02369: internal number in header in file *string* is not valid\n
Cause: The specified file could not be used for this load because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

ORA-02370: internal metadata in file *string* is not valid\n
Cause: The specified file could not be used for this load because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the DUMPFILE clause are from the same unload operation.

ORA-02371: Loader must be at least version *string.string.string.string.string* for direct path
Cause: The loader being used is incompatible with this version of the kernel.

Action: Upgrade your loader to at least the specified version or use the conventional path.

ORA-02372: data for row: *string* \n
Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

ORA-02373: Error parsing insert statement for table *string*.
Cause: self-evident.

Action: Check the error given below this one.

ORA-02374: conversion error loading table *string.string*
Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

ORA-02375: conversion error loading table *string*.*string* partition *string*
Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

ORA-02376: invalid or redundant resource
Cause: a create, or alter profile command which names a resource not yet defined, or try to specify same resource twice.

Action: define resource first

ORA-02377: invalid profile limit *string*
Cause: A value of 0 or lower was specified for the limit or the specified limit for PASSWORD_REUSE_MAX or FAILED_LOGIN_ATTEMPTS was greater than 65535.

Action: Specify a limit greater than 0. For password profile parameters, some additional restrictions apply: * The specified limit of the PASSWORD_ROLLOVER_TIME profile parameter cannot exceed either 60 days, or the current value of the PASSWORD_GRACE_TIME limit of the profile, or the current value of the PASSWORD_LIFE_TIME limit of the profile; whichever value is lowest. * When the PASSWORD_ROLLOVER_TIME profile parameter is non-zero (the password rollover feature is enabled), the specified limit cannot be less than 1 hour, to give the application time to switch over to the new password. * The PASSWORD_LIFE_TIME and PASSWORD_GRACE_TIME limits cannot be less than the PASSWORD_ROLLOVER_TIME limit. * For the INACTIVE_ACCOUNT_TIME profile parameter, the specified limit cannot be less than 15 days. * For the PASSWORD_GRACE_TIME profile parameter, 0 is allowed as a permissible value. * The limit for PASSWORD_REUSE_MAX or FAILED_LOGIN_ATTEMPTS cannot exceed 65535.

ORA-02378: duplicate resource name *string*
Cause: The same resource was specified twice in a CREATE or ALTER PROFILE statement.

Action: Issue the statement again, carefully checking that each resource is used only once.

ORA-02379: profile *string* already exists
Cause: Try to create a profile which already exist

Action: Create the profile with a name not already used by another profile.

ORA-02380: profile *string* does not exist
Cause: Try to assign a user to a non-existant profile

Action: Assign the user to an existing profile.

ORA-02381: cannot drop PUBLIC_DEFAULT profile
Cause: Try to drop PUBLIC_DEFAULT profile

Action: If you are trying to drop the PUBLIC_DEFAULT profile, try dropping it during migration mode. If you are trying to drop a mandatory profile, check the MANDATORY_USER_PROFILE system parameter setting in the root container (CDB$ROOT) or in a Pluggable Database (PDB) and retry the operation after resetting the

MANDATORY_USER_PROFILE system parameter by executing ALTER SYSTEM RESET DDL statement.

ORA-02382: profile *string* has users assigned, cannot drop without CASCADE
Cause: An attempt was made to drop a profile that had users assigned to it without using the CASCADE option of the DROP PROFILE statement. A profile that had users assigned to it cannot be dropped, unless the CASCADE option was specified. CASCADE reassigns users to the PUBLIC_DEFAULT profile before dropping the profile.

Action: To reassign all users to the PUBLIC_DEFAULT profile, issue the DROP PROFILE statement with the CASCADE option.

ORA-02383: illegal cost factor
Cause: Negative or UNLIMITED cost for this resource

Action: Only positive integer values can be specified for resources in the ALTER RESOURCE COST statement. Issue the statement again, using a positive integer value for each resource specified.

ORA-02384: cannot drop an oracle maintained profile
Cause: An attempt was made to drop an oracle maintained profile. An oracle maintained profile can be dropped only by SYS during migration mode.

Action: Drop the oracle maintained profile during migration mode.

ORA-02390: exceeded COMPOSITE_LIMIT, you are being logged off
Cause: The COMPOSITE_LIMIT for the profile is exceeded. That is, the weighted sum of the connection time, logical reads per session, CPU usage per session, and private SGA space used during the session exceeded the limit set by the COMPOSITE_LIMIT clause set in the user profile.

Action: If this happens often, ask the database administrator to raise the COMPOSITE_LIMIT of the user profile, or determine which resource is used the most and raise the limit on that resource.

ORA-02391: exceeded simultaneous SESSIONS_PER_USER limit
Cause: An attempt was made to exceed the maximum number of concurrent sessions allowed by the SESSION_PER_USER clause of the user profile.

Action: End one or more concurrent sessions or ask the database administrator to increase the SESSION_PER_USER limit of the user profile.

ORA-02392: exceeded session limit on CPU usage, you are being logged off
Cause: An attempt was made to exceed the maximum CPU usage allowed by the CPU_PER_SESSION clause of the user profile.

Action: If this happens often, ask the database administrator to increase the CPU_PER_SESSION limit of the user profile.

ORA-02393: exceeded call limit on CPU usage
Cause: An attempt was made to exceed the maximum CPU time for a call, a parse, execute, or fetch, allowed by the CPU_PER_CALL clause of the user profile.

Action: If this happens often, ask the database administrator to increase the CPU_PER_CALL limit of the user profile.

ORA-02394: exceeded session limit on IO usage, you are being logged off
Cause: An attempt was made to exceed the maximum I/O allowed by the LOGICAL_READS_PER_SESSION clause of the user profile.

Action: If this happens often, ask the database administrator to increase the LOGICAL_READS_PER_SESSION limit of the user profile.

ORA-02395: exceeded call limit on IO usage
Cause: An attempt was made to exceed the maximum I/O for a call, a parse, execute, or fetch, allowed by the LOGICAL_READS_PER_CALL clause of the user profile.

Action: If this happens often, ask the database administrator to increase the LOGICAL_READS_PER_CALL limit of the user profile.

ORA-02396: exceeded maximum idle time, please connect again
Cause: as stated

Action: The user must reconnect to the database.

ORA-02397: exceeded PRIVATE_SGA limit, you are being logged off
Cause: Only when using TP monitor

Action: expand limit

ORA-02398: exceeded procedure space usage
Cause: Stored procedured used up too much space in SYSTEM Tablespace

Action: Use less stored procedure

ORA-02399: exceeded maximum connect time, you are being logged off
Cause: As stated

Action: The user must reconnect to the database.

ORA-02401: cannot EXPLAIN view owned by another user
Cause: The view specified in the SQL statement belongs to another user and cannot be explained.

Action: Create a view with the same definition that belongs to current user.

ORA-02402: PLAN_TABLE not found
Cause: The table used by EXPLAIN to store row source information does not exist in the current schema.

Action: Create a plan table in the current schema or use the INTO clause of the statement to put the results of the explain command in an existing plan table.

ORA-02403: plan table does not have correct format
Cause: The explicit plan table does not have the appropriate field definitions.

Action: Redefine the plan table to have the appropriate field definitions.

ORA-02404: specified plan table not found
Cause: The specified plan table does cannot be found.

Action: Create the specified plan table or use an existing plan table.

ORA-02405: invalid sql plan object provided
Cause: The user provided a NULL, empty, or malformed object of type SQL_PLAN_TABLE_TYPE

Action: Provide a new, properly formed object to the function

ORA-02420: missing schema authorization clause
Cause: the AUTHORIZATION clause is missing from a create schema statement.

Action: Preceed the schema authorization identifier with the AUTHORIZATION keyword.

ORA-02421: missing or invalid schema authorization identifier
Cause: the schema name is missing or is incorrect in an authorization clause of a create schema statement.

Action: If the name is present, it must be the same as the current schema.

ORA-02422: missing or invalid schema element
Cause: A statement other than a create table, create view, or grant privilege appears in a create schema statement.

Action: Self-evident.

ORA-02423: schema name does not match schema authorization identifier
Cause: a table definition with a schema name prepended to the table name does not match the schema name provided in the authorization clause of a create schema statement.

Action: make sure the schema names match.

ORA-02424: potential circular view references or unknown referenced tables
Cause: the create schema statement contains views that depend on other views in the containing create schema statement or they contain references to unknown tables.

Action: create the dependent views in a separate create schema statement and make sure all referenced tables are either defined in the create schema statement or exist outside the statement.

ORA-02425: create table failed
Cause: a create table statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02426: privilege grant failed
Cause: a grant privilege statement failed inthe create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02427: create view failed
Cause: a create view statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02428: could not add foreign key reference
Cause: could not add a foreign key reference because of error in declaration. Either referenced table does not exist or table does not have an unique key.

Action: make sure referenced table exists and/or has unique key

ORA-02429: cannot drop index used for enforcement of unique/primary key
Cause: user attempted to drop an index that is being used as the enforcement mechanism for unique or primary key.

Action: drop the constraint instead of the index.

ORA-02430: cannot enable constraint (*string*) - no such constraint
Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-02431: cannot disable constraint (*string*) - no such constraint
Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-02432: cannot enable primary key - primary key not defined for table
Cause: Attempted to enable a primary key that is not defined for the table.

Action: Need to add a primary key definition for the table.

ORA-02433: cannot disable primary key - primary key not defined for table
Cause: Attempted to disable a primary key tht is not defined for the table.

Action: None

ORA-02434: cannot enable unique(*string*) - unique key not defined for table
Cause: attempted to enable a unique key that is not defined for the table.

Action: None

ORA-02435: cannot disable unique(*string*) - unique key not defined for table
Cause: attempted to disable a unique key that is not deined for the table.

Action: None

ORA-02436: date or system variable wrongly specified in CHECK constraint
Cause: An attempt was made to use a date constant or system variable, such as USER, in a check constraint that was not completely specified in a CREATE TABLE or ALTER TABLE statement. For example, a date was specified without the century.

Action: Completely specify the date constant or system variable. Setting the event 10149 allows constraints like "a1 > '10-MAY-96'", which a bug permitted to be created before version 8.

ORA-02437: cannot validate (*string.string*) - primary key violated
Cause: attempted to validate a primary key with duplicate values or null values.

Action: remove the duplicates and null values before enabling a primary key.

ORA-02438: Column check constraint cannot reference other columns
Cause: attempted to define a column check constraint that references another column.

Action: define it as a table check constriant.

ORA-02439: Unique index on a deferrable constraint is not allowed
Cause: attempted to enable a deferrable primary key/unique constraint that has an existing unique index on the constraint columns.

Action: Drop the index on the constraint columns or make the constraint not deferrable.

ORA-02440: Create as select with referential constraints not allowed
Cause: create table foo (... ref. con. ...) as select ...;

Action: Create the table as select, then alter the table to add the constraints afterwards.

ORA-02441: Cannot drop nonexistent primary key
Cause: alter table drop primary key - primary key does not exist.

Action: None

ORA-02442: Cannot drop nonexistent unique key
Cause: alter table drop unique (*col list*) - unique specification does not exist.

Action: make sure column list for unique constraint is correct.

ORA-02443: Cannot drop constraint - nonexistent constraint
Cause: alter table drop constraint <constraint_name>

Action: make sure you supply correct constraint name.

ORA-02444: Cannot resolve referenced object in referential constraints
Cause: attempted to define foreign key referencing an object which cannot be resolved to a base table reference

Action: referential constraints can only be defined on objects which can be resolve to base table reference

ORA-02445: Exceptions table not found
Cause: the explicity or implicity declared exceptions table does not exist.

Action: Create the table then issue the enable command again.

ORA-02446: CREATE TABLE ... AS SELECT failed - check constraint violated
Cause: An attempt was made to use a CREATE TABLE ... AS SELECT statement when some rows violated one or more CHECK constraints.

Action: Do not select rows that violate constraints.

ORA-02447: cannot defer a constraint that is not deferrable
Cause: An attempt was made to defer a nondeferrable constraint

Action: Drop the constraint and create a new one that is deferrable

ORA-02448: constraint does not exist
Cause: The named constraint does not exist

Action: Stop trying to do something with a nonexistant constraint

ORA-02449: unique/primary keys in table referenced by foreign keys
Cause: An attempt was made to drop a table with unique or primary keys referenced by foreign keys in another table.

Action: Before performing the above operations the table, drop the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";

ORA-02450: Invalid hash option - missing keyword IS
Cause: Missing IS keyword.

Action: Specify HASH IS option.

ORA-02451: duplicate HASHKEYS specification
Cause: The HASHKEYS option is specified more than once.

Action: Only specify the HASHKEYS option once.

ORA-02452: invalid HASHKEYS option value
Cause: The specified HASHKEYS option must be an integer value.

Action: Specify an appropriate value.

ORA-02453: duplicate HASH IS specification
Cause: The HASH IS option is specified more than once.

Action: only specify the HASH IS option once.

ORA-02454: Number of hash keys per block (*string*) exceeds maximum of *string*
Cause: The SIZE argument is too small.

Action: Increase the SIZE argument.

ORA-02455: The number of cluster key column must be 1
Cause: When specifing the HASH IS option, the number of key columns must be 1.

Action: Either do not specify the HASH IS option or reduce the number of key columns.

ORA-02456: The HASH IS column specification must be NUMBER(*,0)
Cause: The column specification must specify an integer.

Action: Specify the column definition as type NUMBER(precision, 0).

ORA-02457: The HASH IS option must specify a valid column
Cause: The HASH IS column name is not specified in the cluster definition.

Action: Specify a valid column name.

ORA-02458: HASHKEYS must be specified for a HASH CLUSTER
Cause: The HASHKEYS option must be specified when creating a HASH CLUSTER.

Action: Specify the HASHKEYS option.

ORA-02459: Hashkey value must be a positive integer
Cause: The value of the hash key was not a positive number.

Action: Specify a positive integer.

ORA-02460: Inappropriate index operation on a hash cluster
Cause: An attempt to create a cluster index was issued on a hash cluster.

Action: Do not attempt to create such an index.

ORA-02461: Inappropriate use of the INDEX option
Cause: This option is only valid for non hash clusters.

Action: Do not specify this option.

ORA-02462: Duplicate INDEX option specified
Cause: The INDEX option is specified more than once.

Action: Only specify the INDEX option once.

ORA-02463: Duplicate HASH IS option specified
Cause: The HASH IS option is specified more than once.

Action: Only specify the HASH IS option once.

ORA-02464: Cluster definition can not be both HASH and INDEX
Cause: The cluster can either be a hash or indexed cluster - not both.

Action: Remove either the HASH IS or INDEX options.

ORA-02465: Inappropriate use of the HASH IS option
Cause: This option is only valid for clusters

Action: Do not specify this option

ORA-02466: The SIZE and INITRANS options cannot be altered for HASH CLUSTERS.
Cause: An attempt was made to change the SIZE and INITRANS options after the hash cluster was created.

Action: Do not specify this option.

ORA-02467: Column referenced in expression not found in cluster definition
Cause: A column in the hash is expression was not present in cluster definition.

Action: Recreate the cluster and correct the error in hash expression.

ORA-02468: Constant or system variable wrongly specified in expression
Cause: A constant or system variable was specified in the hash expression.

Action: Recreate the cluster and correct the error in hash expression.

ORA-02469: Hash expression does not return an Oracle Number.
Cause: Result of evaluating hash expression is not an Oracle Number.

Action: Recreate the cluster and correct the error in hash expression.

ORA-02470: TO_DATE, USERENV, or SYSDATE incorrectly used in hash expression.
Cause: An attempt was made to specify SYSDATE, UID, USER, ROWNUM, or LEVEL in hash expression.

Action: Re-create the cluster and correct the error in hash expression.

ORA-02471: SYSDATE, UID, USER, ROWNUM, or LEVEL incorrectly used in hash expression.
Cause: SYSDATE, UID, USER, ROWNUM, or LEVEL are not allowed in hash expressions.

Action: Recreate the cluster and remove the offending keywords.

ORA-02472: PL/SQL functions not allowed in hash expressions
Cause: A PL/SQL function was used in the hash expression.

Action: Recreate the cluster and remove the PL/SQL function.

ORA-02473: Error while evaluating the cluster's hash expression.
Cause: An error occurred while evaluating the clusters hash expression.

Action: Correct the query and retry.

ORA-02474: Fixed hash area extents used (*string*) exceeds maximum allowed (*string*)
Cause: The number of extents required for creating the fixed hash area exceeds the maximum number allowed.

Action: Reduce the number of extents required by increasing the extent allocation sizes within the STORAGE clause.

ORA-02475: maximum cluster chain block count of *string* has been exceeded
Cause: The number of blocks in a cluster chain exceeds the maximum number allowed.

Action: Increase SIZE parameter in CREATE CLUSTER statement or reconsider suitability of cluster key.

ORA-02476: can not create index due to parallel direct load on table
Cause: A parallel direct load is occurring to the specified table.

Action: Retry statement after load is complete.

ORA-02477: can not perform parallel direct load on object *string*
Cause: A parallel direct load is not possible because an index is is being created on the table.

Action: Retry load after index creation is complete.

ORA-02478: merge into base segment would overflow MAXEXTENTS limit
Cause: Merge of temporary segment into base segment failed because MAXEXTENTS was larger than the total in the temp and base segments

Action: Use a larger value for MAXEXTENTS on the base segment or make the extents in the temporary segments larger

ORA-02479: error while translating file name for parallel load
Cause: An invalid file name was specified to load data into.

Action: Specify a valid database file.

ORA-02481: Too many processes specified for events (max *string*)
Cause: Too many processes specified than allowed per event.

Action: Enter fewer processes by using ranges or wildcards if possible.

ORA-02482: Syntax error in event specification (*string*)
Cause: Illegal event string

Action: Enter a legal event string

ORA-02483: Syntax error in process specification (*string*)
Cause: Illegal process string

Action: Enter a legal process string

ORA-02484: Invalid _trace_buffers parameter specification (*string*)
Cause: Bad process or size in _trace_buffers INIT.ORA parameter.

Action: n/a

ORA-02485: Invalid _trace_options parameter specification (*string*)
Cause: Bad syntax for _trace_options INIT.ORA parameter.

Action: n/a

ORA-02486: Error in writing trace file *string*
Cause: Error occurred in creating/writing the file.

Action: Check file name and make sure it is constructed properly. Also, check permissions for directories.

ORA-02487: Error in converting trace data
Cause: Incompatible binary trace data was specified.

Action: Check the format of the input data.

ORA-02488: Error encountered when accessing file [*string*] for trace conversion
Cause: An attempt was made to open or access the trace file during a trace conversion.

Action: Check the permissions for both input and output files. Also, check the file compatibility for the trace conversion.

ORA-02490: missing required file size in RESIZE clause
Cause: No value was specified for the RESIZE clause.

Action: Use correct syntax.

ORA-02491: missing required keyword ON or OFF in AUTOEXTEND clause
Cause: The keyword ON or OFF was not specified for the AUTOEXTEND clause.

Action: Use correct syntax.

ORA-02492: missing required file block increment size in NEXT clause
Cause: No value was specified for the NEXT clause.

Action: Use correct syntax.

ORA-02493: invalid file increment size in NEXT clause
Cause: A non-integer value was used for the NEXT clause of the DATAFILE list.

Action: Use correct syntax.

ORA-02494: invalid or missing maximum file size in MAXSIZE clause
Cause: UNLIMITED was not specified, or an invalid integer value was specified, for the MAXSIZE clause in the DATAFILE file list. The MAXSIZE value cannot be smaller than the SIZE value.

Action: Use correct syntax.

ORA-02495: cannot resize file *string*, tablespace *string* is read only
Cause: An attempt was made to resize a data file in a tablespace that is read only.

Action: Change the tablespace to read/write and retry the resize operation.

ORA-02496: cannot alter or drop an individual chunk tablespace
Cause: An attempt was made to alter or drop an individual chunk tablespace which is part of a tablespace set.

Action: Use alter or drop only on the tablespace set.

ORA-02500: IN SHARD option already specified
Cause: In the CREATE TABLESPACE, the IN SHARD option was specified more than once.

Action: Remove all but one of the IN SHARD options.

ORA-02501: invalid option for CREATE TABLESPACE SET
Cause: An invalid option IN SHARD was specified for the CREATE TABLESPACE SET statement.

Action: Remove the invalid option.

ORA-02502: USING TEMPLATE can only be used in CREATE TABLESPACE SET
Cause: An attempt to specify the TEMPLATE option without the CREATE TABLESPACE SET statement failed.

Action: Specify the USING TEMPLATE option in the CREATE TABLESPACE SET statement.

ORA-02503: USING TEMPLATE option already specified
Cause: In the CREATE TABLESPACE SET, the USING TEMPLATE option was specified more than once.

Action: Remove all but one of the USING TEMPLATE options.

ORA-02504: SHARDSPACE *string* does not exist
Cause: A nonexistent SHARDSPACE was specified in the CREATE TABLESPACE or CREATE TABLESPACE SET statement.

Action: Reissue the CREATE TABLESPACE or CREATE TABLESPACE SET statement with valid SHARDSPACE name.

ORA-02505: IN SHARDSPACE option already specified
Cause: In the CREATE TABLESPACE SET, the IN SHARDSPACE option was specified more than once.

Action: Remove all but one of the IN SHARDSPACE options.

ORA-02506: CREATE TABLESPACE SET statement requires the SHARDSPACE keyword
Cause: The SHARDSPACE option was not specified in the CREATE TABLESPACE SET statement.

Action: Correct the syntax. Insert the missing keyword where required and then retry the statement.

ORA-02507: missing SHARDSPACE keyword
Cause: The SHARDSPACE keyword was omitted in the IN SHARDSPACE option.

Action: Correct the syntax. Insert the keyword SHARDSPACE where required and then retry the statement.

ORA-02508: attempted to create a shard tablespace in a non-shard database
Cause: An attempt was made to create a shard tablespace in a non-shard database.

Action: Deploy the sharding environment before creating a shard tablespace.

ORA-02509: A SHARDSPACE cannot handle several PARTITIONSETS.
Cause: An attempt was made to define multiple PARTITIONSETS in the SHARDSPACE.

Action: Specify the different PARTITIONSETS in different SHARDSPACES.

ORA-02510: A tablespace set cannot be referenced at the table level.
Cause: An attempt was made to reference a tablespace set at the table level.

Action: Remove the reference to the tablespace set at the table level.

ORA-02511: SQL query not allowed; the shard DDL is disabled.
Cause: An attempt was made to run a shard DDL on a nondeployed shard or with the shard DDL option disabled.

Action: Deploy the shards or enable shard DDL before executing the DDL.

ORA-02512: only one PARTITIONSET option may be specified
Cause: The CREATE TABLE statement contained more than one PARTITIONSET option.

Action: Specify PARTITIONSET option at most once in the CREATE SHARDED TABLE statement.

ORA-02513: invalid sharded table PARTITIONSET method
Cause: An invalid PARTITIONSET method was specified in the CREATE TABLE statement. A table may be partitioned by RANGE or LIST.

Action: Modify PARTITIONSET method to RANGE or LIST in the CREATE SHARDED TABLE statement.

ORA-02514: list PARTITIONSET method expects a single partitioning column
Cause: The number of columns in a PARTITIONSET column list exceeded the legal limit of one for list partitioned tables.

Action: Modify PARTITIONSET column list so that it consists of at most one column.

ORA-02515: cannot interval partition set a sharded table
Cause: Interval PARTITIONSET was not supported for a sharded table.

Action: Use a LIST or RANGE PARTITIONSET instead.

ORA-02516: invalid SHARDED type specified
Cause: Only tables can have the SHARDED type.

Action: Remove the SHARDED option.

ORA-02517: PARTITIONSET and CLUSTER clauses are mutually exclusive
Cause: definition of a table with both PARTITIONSET and CLUSTER clauses which is illegal.

Action: Remove the PARTITIONSET or the CLUSTER clause.

ORA-02518: invalid PARTITIONSET clause specified in a non sharded table
Cause: definition of a non sharded table with PARTITIONSET clause is illegal.

Action: remove the PARTITIONSET clause.

ORA-02519: cannot perform cross-shard operation. Chunk "*string*" is unavailable
Cause: All shards where this chunk is stored were unavailable.

Action: Rerun the command when the shards become avalaible.

ORA-02520: Shard data object number exceeds UB4MAXVAL
Cause: All shards where this chunk is stored were unavailable.

Action: Rerun the command when the shards become available.

ORA-02521: attempted to enable shard DDL in a non-shard database
Cause: An attempt was made to enable shard DDL in a non-shard database.

Action: Deploy the sharding environment before enabling shard DDL.

ORA-02522: cannot get a new data object number range from the Global Data Services (GDS) catalog
Cause: An attempt was made to get a new range of data object numbers which resulted in a failure.

Action: Check that the shard can connect to the catalog.

ORA-02523: The table being created is not SHARDED.
Cause: PARENT clause was specified on a non-sharded table.

Action: Create a SHARDED table or remove the PARENT clause.

ORA-02524: Invalid parent table specified.
Cause: The parent table specified was not a valid identifier.

Action: Check that the parent table specified is valid.

ORA-02525: child and parent table owner mismatch.
Cause: The child and parent tables did not have the same owner.

Action: Check the owner of the child table.

ORA-02526: child and parent table sharding method mismatch.
Cause: The child and parent tables did not have the same sharding method.

Action: Ensure the sharding method for the two tables is the same.

ORA-02527: child and parent table shard key columns mismatch.
Cause: The child and parent tables did not have the same shard key columns.

Action: Ensure the shard key for the two tables is the same.

ORA-02528: child and table partition set key columns mismatch.
Cause: The child and parent tables did not have the same partition set key columns.

Action: Ensure the partition set key for the two tables is the same.

ORA-02529: invalid parent table.
Cause: The table name specified was not the one of the root table.

Action: Check the root table name specified.

ORA-02530: parent table not specified
Cause: An attempt was made to create a child table without specifying the PARENT clause.

Action: Specify the PARENT clause in the CREATE SHARDED TABLE command.

ORA-02531: shard name not found
Cause: An attempt was made to create a sharded table on a non-sharded database.

Action: Ensure that the sharded database was deployed correctly.

ORA-02532: sharding columns must form a subset key of key columns of a UNIQUE index
Cause: An attempt was made to create a PRIMARY KEY or UNIQUE constraint in a table whose sharding columns do not form a subset of the key columns of the UNIQUE index.

Action: Include all sharding columns in the list of key columns of the UNIQUE index. This is required because UNIQUE constraint cannot be enforced across shards.

ORA-02533: missing PARTITION clause
Cause: The PARTITION clause was expected but was not supplied.

Action: Add a PARTITION clause to the CREATE SHARDED TABLE command.

ORA-02534: invalid PARTITION clause
Cause: The PARTITION clause was supplied with CONSISTENT HASH sharding.

Action: Remove the PARTITION specification.

ORA-02535: missing TABLESPACE SET clause
Cause: The TABLESPACE SET clause was expected but was not supplied.

Action: Add the TABLESPACE SET clause to the CREATE SHARDED TABLE command.

ORA-02536: invalid TABLESPACE SET name: *string*
Cause: The TABLESPACE SET supplied did not exist.

Action: Supply a valid TABLESPACE SET.

ORA-02537: Data file name specified but not supported by tablespace set template
Cause: Data file explicit name was specified as part of the tablespace set template. Only Oracle Managed Files are supported by a tablespace set.

Action: Remove the file name from the data file definition.

ORA-02538: invalid TABLESPACE SET clause
Cause: The TABLESPACE SET clause was not expected.

Action: Remove the keyword SET to specify just TABLESPACE.

ORA-02539: the operation is not supported across shards
Cause: An attempt was made to perform an operation with shard DDL enabled, which is not supported for propagation from catalog to shards.

Action: Disable the shard DDL to perform the operation on the catalog and go to each individual shard to perform the operation locally.

ORA-02540: global indexes are not supported for sharded tables
Cause: An attempt was made to create a global index on a sharded table, which is not supported.

Action: Create a local index instead.

ORA-02541: TABLESPACE SET is required
Cause: The TABLESPACE SET clause was not supplied when creating an index on a system-managed sharded table.

Action: Add the TABLESPACE SET clause to the CREATE INDEX command, or use the same tablespace set as the table by not specifying the TABLESPACE SET clause.

ORA-02542: invalid partitioning method specified with user-defined sharding
Cause: The partitioning method specified was not compatible with user-defined sharding.

Action: Choose a supported partitioning method.

ORA-02543: invalid partitioning method specified with system-managed or composite sharding
Cause: The partitioning method specified was not compatible with system-managed or composite sharding.

Action: Choose a supported partitioning method.

ORA-02544: sharding or partition set column datatype is not supported
Cause: Supported data types were not used for the sharding or partition set columns.

Action: Use the supported data types for sharding or partition set columns.

ORA-02545: sharding or partition set column can not be a virtual column
Cause: Virtual column was used in the sharding or partition set key, which is not supported.

Action: Remove the virtual column from the sharding or partition set key.

ORA-02546: The LONG data type is not supported for duplicated tables.
Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-02547: Option *string* is not supported for duplicated tables
Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-02548: Option *string* is not supported for duplicated tables
Cause: An invalid option was specified while altering duplicated tables.

Action: Verify the specified option.

ORA-02549: cannot create a sharded table with index organization
Cause: An attempt was made to create an index-organized sharded table under system-managed sharding or composite sharding, which is not supported.

Action: Create a heap-organized table and the primary key, or create the index-organized table with user-defined sharding.

ORA-02550: Creating duplicated table not allowed when shard DDL is disabled
Cause: Duplicated tables were created when shard DDL was disabled.

Action: Enable shard DDL.

ORA-02551: Truncate table for duplicated tables is not supported
Cause: Invalid operation was specified on a duplicated table.

Action: Use "delete from *table*" instead.

ORA-02552: invalid shard name
Cause: The shard name specified was not valid.

Action: Choose a valid shard.

ORA-02553: TABLESPACE is required
Cause: The TABLESPACE clause was not supplied when specifying a partition of a user-defined sharded table.

Action: Add the TABLESPACE clause.

ORA-02554: invalid DROP TABLESPACE SET
Cause: The DROP TABLESPACE SET command was not compatible with user-defined sharding.

Action: Choose a supported sharding method.

ORA-02555: Online redefinition is not supported for sharded and duplicated tables.
Cause: An attempt was made to perform online redefinition on a sharded table or a duplicated table for sharding, which is not supported.

Action: Use the ALTER TABLE statement instead.

ORA-02556: Only sharded or duplicated tables are supported across shards.
Cause: An attempt was made to create a non-sharded, non-duplicated table across shards, which is not supported.

Action: Connect to each shard and create the table locally.

ORA-02557: cannot operate on sharded objects when shard DDL is disabled
Cause: An attempt was made to operate on a sharded or a duplicated object across shards when the shard DDL was not enabled.

Action: Enable shard DDL to perform the operation.

ORA-02558: cannot operate on non-sharded objects when shard DDL is enabled
Cause: An attempt was made to ALTER or DROP a non-sharded object when the shard DDL was enabled.

Action: Disable shard DDL to perform the operation.

ORA-02559: The TABLESPACE SET *string* does not belong to the shardspace of the table.
Cause: The TABLESPACE SET supplied existed in a different shardspace from the one to which the table belonged.

Action: Supply a valid TABLESPACE SET in the shardspace of the table.

ORA-02560: cannot modify partitions for system-managed or composite sharded tables.
Cause: An attempt was made to modify partitions on system-managed or composite sharded tables.

Action: Use the 'gdsctl split chunk' or 'move chunk' commands instead.

ORA-02561: maximum number of columns in a duplicated table without primary key is 999
Cause: An attempt was made to create a duplicated table with 1000 columns when there was no primary key defined. Note that unused columns in the table are counted toward the 1000 column limit.

Action: Reduce the number of columns in the command and resubmit.

ORA-02562: cannot create a duplicated table in a non-shard schema
Cause: An attempt was made to create a duplicated table in a non-shard schema.

Action: Try creating the duplicated table in a sharded schema.

ORA-02563: XMLType column in a duplicated table cannot be used in non-ASSM tablespace "*string*"
Cause: XMLType column in a duplicated table required an automatic segment space management (ASSM) tablespace.

Action: Specify an ASSM tablespace for the XMLType column in a duplicated table.

ORA-02564: rebuild outline is not supported across shards.
Cause: An attempt was made to rebuild an outline with shard DDL enabled, which is not supported.

Action: Connect to each shard and rebuild the outline locally.

ORA-02565: cannot use individual chunk tablespace
Cause: An individual chunk tablespace which was part of a tablespace set was used.

Action: Use a normal tablespace.

ORA-02566: cannot create duplicated table - insufficient privileges
Cause: An attempt was made to create a duplicated table when the user did not have sufficient privileges.

Action: Ensure that the user has CREATE DATABASE LINK and CREATE MATERIALIZED VIEW privileges before creating a duplicated table.

ORA-02567: cannot create a sharded table with empty columns
Cause: An attempt was made to create a sharded table without any columns.

Action: Use valid columns to create a sharded table.

ORA-02568: cannot create an identity column in a sharded table
Cause: An attempt was made to create a sharded table with an identity column.

Action: Create a sharded table without an identity column.

ORA-02569: cannot drop a system tablespace *string* when sharding environment is deployed
Cause: An attempt was made to drop a system tablespace part of the sharding environment when the sharding environment was deployed.

Action: Do not drop a tablespace created by the system.

ORA-02570: cannot alter user password - insufficient privileges
Cause: An attempt was made to alter the password for a user who created duplicated tables but did not have the privilege to execute the ALTER DATABASE LINK statement.

Action: Ensure that the user, whose password has to be changed, has the ALTER DATABASE LINK privilege and try again.

ORA-02571: ALTER TABLE TRUNCATE PARTITION for duplicated tables is not supported
Cause: An invalid operation was specified on a duplicated table.

Action: Use DELETE FROM table_name PARTITION (partition_name) instead.

ORA-02572: A non all-shard user cannot operate on schema objects that are sharded or duplicated on all shards.
Cause: An attempt was made to operate on a sharded or duplicated schema object by a non all-shard user.

Action: Operate on such objects as an all-shard user.

ORA-02573: cannot enable shard DDL when current_schema has been changed
Cause: Shard DDL is not supported after a session's current schema has been altered.

Action: Reconnect as the correct user to perform shard DDL operations.

ORA-02574: Sharded table cannot be a nested table.
Cause: An attempt was made to create a nested sharded table, which is not supported.

Action: Create a non-nested sharded table.

ORA-02575: Invalid sharding method for a deployed sharded database
Cause: An invalid sharding method was set for a sharded database.

Action: Check the database configuration and correct the settings.

ORA-02576: number of partition set specifications is not equal to the number of shardspaces
Cause: Fewer or more number of partition set specifications were specified than the number of shardspaces in the composite sharding environment.

Action: Specify one partition set specification for each shardspace in the composite sharding environment.

ORA-02577: cannot specify PARTITIONSET in a non-composite sharding environment
Cause: PARTITIONSETS were specified while creating a sharded table in non-composite sharding environment.

Action: Remove the PARTITION SET specifications in the create sharded table statement.

ORA-02578: missing PARTITIONSET specification
Cause: PARTITIONSET specifications were missing.

Action: Specify PARTITIONSETS for the sharded table.

ORA-02579: cannot create a tablespace set with SMALLFILE option
Cause: An attempt was made to create a tablespace set with the SMALLFILE option.

Action: Create a tablespace set with the default BIGFILE option.

ORA-02580: cannot add or drop data files from a tablespace set
Cause: An attempt was made to add or drop a data file from a tablespace set.

Action: Do not add or drop a data file from a tablespace set.

ORA-02581: cannot create foreign key constraints on columns referencing a duplicated table
Cause: An attempt was made to create a foreign key constraint in a sharded table on a column referencing a duplicated table.

Action: Remove the foreign key constraint referencing a column in the duplicated table.

ORA-02582: invalid tablespace set name specified for the partition set
Cause: The tablespace set name specified for the partition set was either invalid or belonged to a different shardspace.

Action: Specify a tablespace set name that belongs to the same shardspace.

ORA-02583: option PARALLEL not supported when creating duplicated table as select from another table
Cause: An attempt was made to create a duplicated table as select from another table in parallel mode.

Action: Create a duplicated table as select without the PARALLEL clause.

ORA-02584: INMEMORY options not supported for duplicated tables
Cause: An attempt was made to create or alter a duplicated table by enabling INMEMORY options.

Action: Verify the specified option.

ORA-02585: create tablepsace set failure, one of its tablespaces not created
Cause: One of the tablespaces in the tablespace set was not created.

Action: Verify the creation of the tablespaces.

ORA-02586: cannot change duplicated table refresh rate in a non-catalog database
Cause: An attempt was made to change the dupl_table_refresh_rate in the non-catalog database.

Action: Connect to the catalog database to change the refresh rate of duplicated tables.

ORA-02587: create duplicated table of Object Type is not supported
Cause: An attempt was made to create a duplicated table of object type.

Action: Create a duplicated table without specifying the object type.

ORA-02588: minimum refresh rate for duplicated table is 20 seconds
Cause: An attempt was made to change the dupl_table_refresh_rate to less than 20 seconds.

Action: Set the refresh rate for duplicated tables to atleast 20 seconds.

ORA-02589: invalid partition set name
Cause: An invalid partition set name was specified.

Action: Specify a valid partition set name.

ORA-02590: invalid sequence of partition sets
Cause: The sequence used to specify partition sets was invalid.

Action: Specify the partition sets in an increasing order.

ORA-02591: cannot specify a common tablespace set for indexes on a sharded table in composite sharding
Cause: An attempt was made to specify a common tablespace set for indexes on a sharded table in a composite sharding environment which is not supported.

Action: Create an index on sharded tables without the TABLESPACE SET clause or use the PARTITIONSET clause to specify tablespace sets for each partition set.

ORA-02592: cannot drop user until all shard databases are up and all gsm_requests are completed
Cause: An attempt was made to drop a user who owns a duplicated table when the shard database was down or the gsm_requests were pending execution.

Action: Ensure that all gsm_requests are completed and all shards are up before dropping a user with duplicated table.

ORA-02593: cannot drop duplicated table until all shard databases are up and all gsm_requests are completed
Cause: An attempt was made to drop a duplicated table when the shard database was down or the gsm_requests were pending execution.

Action: Ensure that all gsm_requests are completed and all shards are up before dropping a duplicated table.

ORA-02594: cannot alter shard user password until all shard databases are up and all gsm_requests are completed
Cause: An attempt was made to alter shard user password when the shard database was down or the gsm_requests were pending execution.

Action: Ensure that all gsm_requests are completed and all shards are up before altering a shard user password.

ORA-02595: Abstract data type is not supported for duplicated tables.
Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-02596: cannot truncate duplicated table on a shard database
Cause: An attempt was made to truncate a duplicated table on a shard database.

Action: Connect to the catalog database to truncate the duplicated table.

ORA-02597: The read-only option is not supported for sharded tables.
Cause: An invalid option was specified while creating a sharded table.

Action: Verify the specified option.

ORA-02598: tablespace specified in the SQL command does not exist in the shard
Cause: A DROP or ALTER TABLESPACE operation was attempted on a shard where the tablespace does not exist.

Action: Create the tablespace in the shard first.

ORA-02599: cannot drop partitionset column
Cause: An attempt was made to drop a column used as the super-partitioning key for a sharded table.

Action: This action is not allowed.

ORA-02600: credential name is invalid: *string*
Cause: An invalid credential name was specified.

Action: Verify credential name and retry the operation.

ORA-02601: credential already exists: *string*
Cause: Credential name specified already used by an existing object.

Action: Verify credential name and retry the operation.

ORA-02602: credential does not exist: *string*
Cause: The specified credential does not exist.

Action: Verify credential name and retry the operation.

ORA-02603: file name is invalid: *string*
Cause: An invalid file name was specified.

Action: Verify credential name and retry operation.

ORA-02604: file already exists: *string*
Cause: File name specified already used by an existing object.

Action: Verify file name and retry the operation.

ORA-02605: file does not exist: *string*
Cause: The specified file does not exist.

Action: Verify file name and retry the operation.

ORA-02606: destination name is invalid: *string*
Cause: An invalid destination name was specified.

Action: Verify destination name and retry the operation.

ORA-02607: destination not specified
Cause: A destination must be specified in the command.

Action: Provide destination and retry the operation.

ORA-02608: destination does not exist: *string*
Cause: The specified destination does not exist.

Action: Verify destination and retry the operation.

ORA-02609: remote scheduler agent not running
Cause: The specified remote scheduler agent cannot be contacted.

Action: Confirm that the agent is running and retry the operation.

ORA-02610: Remote job failed with error: *string*
Cause: Unable to successfully run specified job.

Action: Check errors returned and retry the operation.

ORA-02611: shardgroup name is invalid: *string*
Cause: An invalid shardgroup name was specified.

Action: Verify the shardgroup name and retry the operation.

ORA-02612: shardgroup does not exist: *string*
Cause: The specified shardgroup did not exist.

Action: Verify the shardgroup name and retry the operation.

ORA-02613: shardspace name is invalid: *string*
Cause: An invalid shardspace name was specified.

Action: Verify the shardspace name and retry the operation.

ORA-02614: shardspace does not exist: *string*
Cause: The specified shardspace did not exist.

Action: Verify the shardspace name and retry the operation.

ORA-02615: Neither a shardgroup nor a shardspace name was specified.
Cause: A shardgroup or shardspace name was not specified.

Action: Update the parameters and retry the operation.

ORA-02616: Both a shardgroup and a shardspace name were specified.
Cause: A shardgroup and a shardspace name were both specified. For this command, either a shardgroup or shardspace name may be specified, but not both.

Action: Update the parameters and retry the operation.

ORA-02617: Neither a credential nor login information was specified
Cause: Either a credential or login information must be specified.

Action: Update the parameters and retry the operation.

ORA-02618: Both a credential and login information was specified
Cause: For this command, either a credential or login information may be specified, not both.

Action: Update the parameters and retry the operation.

ORA-02619: Both a file name and file contents were specified.
Cause: A file name and file contents were both specified.

Action: Update the parameters and retry the operation.

ORA-02620: db_domain value too long: *string*
Cause: The value specified for db_domain exceeded the 128 character limit.

Action: Modify the value specified for db_domain and retry the operation.

ORA-02621: file in use by shard '*string*'
Cause: The specified file was in use by an undeployed shard.

Action: Drop the undeployed shard and retry the operation.

ORA-02622: Shard is not open in write mode.
Cause: The shard was not opened in the correct mode.

Action: Open the shard in write mode and retry the operation.

ORA-02623: Failed to create broker configuration with error *string*.
Cause: A request to create the broker configuration failed.

Action: Check the broker logs for details.

ORA-02624: Failed to enable broker configuration with error *string*.
Cause: A request to enable the broker configuration failed.

Action: Check the broker logs for details.

ORA-02625: Failed to add standby shard *string* to the broker configuration with error *string*.
Cause: A request to add the shard to the broker configuration failed.

Action: Check the broker logs for details.

ORA-02626: Failed to enable standby shard *string* for the broker configuration with error *string*.
Cause: A request to enable the shard for the broker configuration failed.

Action: Check the broker logs for details.

ORA-02627: Shardspace '*string*' does not exist.
Cause: The requested shardspace did not exist.

Action: Check the name and try again.

ORA-02628: invalid shardgroup name '*string*'
Cause: The shardgroup name was invalid.

Action: Use a different name for the shardgroup.

ORA-02629: cannot modify deployed shardgroup *string*
Cause: The shardgroup was already deployed and could no longer be modified.

Action: Do not modify a deployed shardgroup. Delete it and add it again.

ORA-02630: cannot modify primary or standby status of shardgroup *string*
Cause: The shardgroup already contained a shard and could not be converted from a primary shard to a standby shard or from a standby shard to a primary shard.

Action: Do not modify the primary or standby status of this shardgroup.

ORA-02631: The shardspace name '*string*' is invalid.
Cause: An invalid shardspace name was provided.

Action: Check the name and try again.

ORA-02632: cannot modify deployed shardspace '*string*'
Cause: The shardspace was already deployed and could no longer be modified.

Action: Do not modify deployed shardspaces.

ORA-02633: The shardspace '*string*' is invalid.
Cause: An invalid shardpsace name was provided.

Action: Check the name and try again.

ORA-02634: Oracle XML DB is not installed.
Cause: Oracle XML DB was required for remote scheduler agent configuration but was not installed.

Action: Install Oracle XML DB in the catalog database.

ORA-02635: The value of chunks must be greater than one.
Cause: An invalid value of chunks was passed.

Action: Set chunks to a value greater than one.

ORA-02636: Shard is already in shardspace *string*.
Cause: The shard was already in a shardspace.

Action: Remove the shard from the sharding schema before adding it to another shardspace.

ORA-02637: The source and target shards are in different shardgroups.
Cause: The source and target shards for a chunk move operation were in different shardgroups.

Action: Chunks cannot be moved across shardgroups. Specify a source and target shard that are in the same shardgroup.

ORA-02638: The shardgroup *string* is not deployed.
Cause: The containing shardgroup for the source and target shards was not yet deployed.

Action: Chunks cannot be moved until the shardgroup has been deployed. Deploy the shardgroup before moving chunks.

ORA-02639: Source and target shards are the same.
Cause: The source and target shards for a chunk move were the same.

Action: Chunks cannot be moved to the same shard. Specify a different source and target.

ORA-02640: Shardspace already has a primary shardgroup.
Cause: An attempt was made to add a primary shardgroup to a shardspace that already had a primary shardgroup. When Oracle Data Guard replication is used, only one primary shardgroup is allowed in each shardspace.

Action: Do not add another primary shardgroup to this shardspace.

ORA-02641: Shard *string* was not deployed because it does not contain a corresponding shard in all shardgroups.
Cause: The shard did not have a corresponding shard in all shardgroups in an Oracle Data Guard configuration, therefore it was not deployed.

Action: This is only a warning and the deployment will continue without this shard. In order to make use of this shard, either remove shardgroups, or add shards to other shardgroups so that there are the same number of shards in all shardgroups.

ORA-02642: There were no new shards to deploy.
Cause: The 'deploy' command was issued, but there were no new shards to deploy.

Action: This is only a warning. Deploy may continue to recover previous deployment attempts, if any exist, but no new shards will be deployed.

ORA-02643: failed to enable fast-start failover with error *string*
Cause: A request to enable fast-start failover failed.

Action: Check the broker logs for details.

ORA-02644: Shard '*string*' already exists in specified rack '*string*'.
Cause: The specified rack already contained another shard in the same Oracle Data Guard configuration.

Action: Specify a different value for the rack parameter.

ORA-02645: only one primary shard allowed per shardspace
Cause: The specified shardspace already contained a primary shard.

Action: Specify a different shardspace or create a standby shard instead.

ORA-02646: Standby shards not allowed in Oracle GoldenGate configurations.
Cause: The Oracle GoldenGate configurations contained standby shards.

Action: Create a primary shard instead of a standby shard.

ORA-02647: The rack name '*string*' is invalid.
Cause: An invalid rack name was provided.

Action: Check the name and try again.

ORA-02648: Password for SYS account was not specified.
Cause: A SYS password was not specified when creating a new shard using Oracle Database Configuration Assistant (DBCA).

Action: Retry the operation and specify a SYS password.

ORA-02649: cannot change region for a system-managed or composite shard
Cause: An attempt was made to change the region value for a system-managed or composite shard.

Action: Change the region value at the shardgroup level instead.

ORA-02650: remote scheduler agent error: *string*
Cause: An operation failed when performed using the remote scheduler agent.

Action: Correct the error specified in the remote scheduler agent output.

ORA-02651: The specified pool '*string*' is not sharded.
Cause: The specified pool was not sharded.

Action: Specify a sharded pool and retry the operation.

ORA-02652: The maximum number of sharded GDS pools has been reached.
Cause: The maximum number of Global Data Services (GDS) sharded pools had been reached.

Action: No more Global Data Services (GDS) sharded pools can be added without first removing a pool.

ORA-02653: shardgroup already exists: *string*
Cause: The specified shardgroup was already in existence.

Action: Verify the shardgroup name and retry the operation.

ORA-02654: Shards and shardgroups cannot exist in the same database pool.
Cause: The specified database pool already contained either a conflicting shard or shardgroup.

Action: Verify the database pool name and retry the operation.

ORA-02655: not a sharded catalog
Cause: The catalog was not enabled for sharding and a sharding command was executed.

Action: Re-create the catalog with 'create shardcatalog' or verify the command issued.

ORA-02656: shardspace already exists: *string*
Cause: The specified shardspace was already in existence.

Action: Verify the shardspace name and retry the operation.

ORA-02657: too few chunks specified for shardspace
Cause: The number of chunks in the specified shardspace was less than twice the number of shards in one of its shardgroups.

Action: If the shardspace is not deployed, modify the shardspace to increase the number of chunks it contains.

ORA-02658: shardspace already exists: *string*
Cause: The specified shardspace was already in existence.

Action: Verify the shardspace name and retry the operation.

ORA-02659: cannot remove a shard which contains chunks
Cause: An attempt was made to remove a shard which currently contains chunks.

Action: Move the chunks to another shard and then retry the operation.

ORA-02660: Shard '*string*' was also removed.
Cause: When a shard was removed, all other shards in the same Oracle Data Guard configuration were also removed.

Action: This is an informational message only.

ORA-02661: shardspace and shardgroup parameters are mutually exclusive
Cause: A command was issued that included both the shardspace and and shardgroup parameters.

Action: Remove one of the conflicting parameters from the command.

ORA-02662: Chunk number '*string*' does not exist on the source database.
Cause: An invalid chunk number or source database was provided.

Action: Check the number and try again.

ORA-02663: Remote scheduler agents may be listening on previously specified port.
Cause: The '-agent_port' parameter specified a new agent port value. The already registered scheduler agents must re-register with the catalog database to use this new value.

Action: This is only a warning. Re-register the existing scheduler agents as necessary.

ORA-02664: Specified port may be in use.
Cause: The '-agent_port' parameter specified a new agent port value. The port specified may already have been in use by another process in the system.

Action: This is only a warning. Confirm that there is no port conflict before continuing the operation.

ORA-02665: shardspace not specified
Cause: A command was issued that did not include shardspace".

Action: Specify shardspace.

ORA-02666: Tablespace set required to perform this operation was not found.
Cause: An attempt was made to perform a chunk management operation before creating a tablespace set.

Action: Create a tablespace set before issuing the command.

ORA-02667: Root table required to perform this operation was not found.
Cause: An attempt was made to perform a chunk management operation before creating a sharded table.

Action: Create a sharded table before issuing the command.

ORA-02668: Observer cannot be started for database "*string*"
Cause: One or more conditions required by Data Guard observer were not met.

Action: Confirm that Data Guard technology is used for replication, the database belongs to disaster recovery group with FSFO enabled, and there is an online primary database in that group.

ORA-02669: data type or length of a partitionset column in a sharded table cannot be changed
Cause: An attempt was made to issue an ALTER TABLE statement to modify the data type or length of a column used to super-partition the specified sharded table.

Action: Do not modify the data type or length of a sharded table super- partitioning column or columns.

ORA-02670: unsupported SQL construct: *string*
Cause: The query had a construct that was not supported for inter shard query.

Action: Rewrite the query to avoid using an unsupported construct. Consult Oracle documentation for details.

ORA-02671: DML are not allowed on more than one shard
Cause: The DML was applied to more than one shard.

Action: Rewrite the DML to limit operation to a single shard.

ORA-02672: cannot update sharding key
Cause: An attempt was made to update the sharding key value using the UPDATE command.

Action: Drop and re-create the sharding key.

ORA-02673: *string* maps to multiple shards
Cause: The aggregate, group by, semi-join, or anti-join subquery was mapped to multiple shards.

Action: Rewrite the query so that subqueries map to a single shard.

ORA-02674: illegal join predicate on sharding key
Cause: The query had illegal or no join predicate on the sharding key.

Action: Rewrite the query to include join on sharding columns.

ORA-02675: sharded table *string* outer joined with replicated table *string*
Cause: The query had a sharded table outer joined to the replicated table.

Action: Rewrite the query to remove the outer join.

ORA-02676: non-equality join on sharding key
Cause: The query had a non-equality join on the sharding key.

Action: Rewrite the query to remove the non-equality join.

ORA-02677: queries not supported on objects with user-specified sharding
Cause: The query had an object defined by user-specified sharding.

Action: None

ORA-02678: cross shard queries not supported on composite sharding
Cause: The query had an object defined under composite sharding.

Action: None

ORA-02679: queries involving private and sharded tables not supported
Cause: The query referenced a private and a sharded table.

Action: Rewrite the query to refer to either private tables or sharded tables, but not both.

ORA-02680: unsupported construct referred in the query
Cause: The query referenced unsupported constructs which could not be fetched from the shard.

Action: Rewrite the query to avoid using unsupported constructs.

ORA-02681: array DML not supported on a sharded table
Cause: The statement attempts an array DML operation on a sharded table.

Action: Rewrite the array DML statement as separate DML statements.

ORA-02682: shard key missing in INSERT statement
Cause: The INSERT statement was used to insert a row in the sharded table without inserting a value for the shard column.

Action: Insert a value for the shard key column.

ORA-02683: inconsistent shard schema
Cause: The schema definition on the shard and the coordinator did not match.

Action: Verify and fix the schema inconsistency between the shard and the coordinator.

ORA-02684: invalid partition for the chunk *string*
Cause: A valid partition was not found for the chunk number passed to the shard database.

Action: Check the chunks handled by the shard database.

ORA-02685: cannot rename a duplicated table on a shard database
Cause: An attempt was made to rename a duplicated table on a shard database.

Action: Rename the duplicated table in the shard catalog database, if required.

ORA-02686: query returned data from *string* percent of total chunks
Cause: Some of the chunks were not accessible in the system.

Action: Ensure that all shards are online and accessible from the query coordinator.

ORA-02687: target partition key does not map to any partition
Cause: An attempt was made to update or delete a record of a range or list-based sharded table with a partition key that did not belong to any of the partition.

Action: Use the correct partition key that belongs to a defined partition.

ORA-02688: sharded table *string* does not exist
Cause: An attempt was made to add a partition set to a sharded table that did not exist.

Action: Create the sharded table with the partition sets.

ORA-02689: cannot alter duplicated table until GSM_REQUEST to CREATE DUPLICATED TABLE are completed on all shards
Cause: An attempt was made to alter a duplicated table when the GSM_REQUEST to create duplicated table materialized view was pending execution.

Action: Ensure that GSM_REQUEST to create the duplicated table materialized view is completed on all shards before altering the duplicated table.

ORA-02690: cannot add existing value to partition sets
Cause: The value added to the list partition set already existed for the table.

Action: Add new value to the partition set.

ORA-02691: duplicate partition set name
Cause: The name of a partition set of a sharded table being created was not unique.

Action: Rename the partition set to ensure that their names are unique among partitions of the sharded table being created.

ORA-02700: osnoraenv: error translating ORACLE_SID
Cause: Two-task driver could not find the value of ORACLE_SID in the environment.

Action: Make sure that the ORACLE_SID environment variable has been properly set and exported.

ORA-02701: osnoraenv: error translating oracle image name
Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-02702: osnoraenv: error translating orapop image name
Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-02703: osnpopipe: pipe creation failed
Cause: The pipe driver failed to create pipes for communications with the orapop process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-02704: osndopop: fork failed
Cause: The two-task driver could not fork orapop.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02705: osnpol: polling of communication channel failed
Cause: The pipe driver failed while polling the communications channel.

Action: Contact your customer support representative.

ORA-02706: osnshs: host name too long
Cause: The length of your host-string specified by the TWO_TASK environment variable exceeds the ORACLE system-imposed limit.

Action: Contact your customer support representative.

ORA-02707: osnacx: cannot allocate context area
Cause: The invoked Unix two-task driver could not allocate heap space for the context area.

Action: Contact your customer support representative.

ORA-02708: osnrntab: connect to host failed, unknown ORACLE_SID
Cause: The invoked Unix two-task driver failed to find an entry in oratab for the sid you supplied.

Action: First, check whether you have read access to oratab, and see if the desired sid is there. Add an entry to oratab for the desired sid, if necessary.

ORA-02709: osnpop: pipe creation failed
Cause: The pipe driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-02710: osnpop: fork failed
Cause: The pipe driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02711: osnpvalid: write to validation channel failed
Cause: The pipe driver failed to write to the orapop process.

Action: Contact your customer support representative.

ORA-02712: osnpop: malloc failed
Cause: The pipe driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

ORA-02713: osnprd: message receive failure
Cause: The pipe driver failed to read a message from the communications channel.

Action: Contact your customer support representative.

ORA-02714: osnpwr: message send failure
Cause: The pipe driver failed to write a message to the communications channel.

Action: Contact your customer support representative.

ORA-02715: osnpgetbrkmsg: message from host had incorrect message type
Cause: The pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

ORA-02716: osnpgetdatmsg: message from host had incorrect message type
Cause: The Pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

ORA-02717: osnpfs: incorrect number of bytes written
Cause: The Pipe driver sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes furnished to the driver.

Action: Contact your customer support representative.

ORA-02718: osnprs: reset protocol error
Cause: The two-task driver could not reset the connection.

Action: Contact your customer support representative.

ORA-02719: osnfop: fork failed
Cause: The fast driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02720: osnfop: shmat failed
Cause: When the fast driver was invoked, processes failed to attach to the shared memory buffer. You probably supplied an illegal shared memory attach address, or the system ran out of data space to accomodate the buffer.

Action: Try invoking the Fast driver later, or use the default attach address.

ORA-02721: osnseminit: cannot create semaphore set
Cause: The Fast driver failed to get a semaphore set.

Action: The system-imposed limit on semaphores or semaphore identifiers may have been exceeded. Read the returned operating system error code and check with your system administrator.

ORA-02722: osnpui: cannot send break message to orapop
Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

ORA-02723: osnpui: cannot send break signal
Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Contact your customer support representative.

ORA-02724: osnpbr: cannot send break message to orapop
Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

ORA-02725: osnpbr: cannot send break signal
Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Kill system call failed. Check errno and contact customer support.

ORA-02726: osnpop: access error on oracle executable
Cause: The Pipe driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-02727: osnpop: access error on orapop executable
Cause: The Pipe driver could not access the orapop executable.

Action: Check the permissions on the orapop executable and each component of the ORACLE_HOME/bin path.

ORA-02728: osnfop: access error on oracle executable
Cause: The Fast driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-02729: osncon: driver not in osntab
Cause: The driver you have specified is not supported.

Action: Check with your database administrator which drivers are supported.

ORA-02730: osnrnf: cannot find user logon directory
Cause: The driver you have specified could not find your logon directory while searching for your local .sqlnet file.

Action: Set and export the HOME environment variable to identify your home directory. Check with your system administrator to make sure that your uid and home directory are correct in the /etc/passwd file.

ORA-02731: osnrnf: malloc of buffer failed
Cause: The specified driver could not find enough heap space to malloc a buffer.

Action: Contact your customer support representative.

ORA-02732: osnrnf: cannot find a matching database alias
Cause: Database alias specified was not identified in either $HOME/.sqlnet or /etc/sqlnet.

Action: Create the alias in a file called .sqlnet in your home directory for personal use or ask your system administrator to create the alias in /etc/sqlnet for system-wide use.

ORA-02733: osnsnf: database string too long
Cause: While converting a database alias to a database ID, the resulting database ID string exceeded the ORACLE system-imposed limit.

Action: Contact your customer support representative.

ORA-02734: osnftt: cannot reset shared memory permission
Cause: The Fast driver was unable to reset shared memory permissions.

Action: Contact your customer support representative.

ORA-02735: osnfpm: cannot create shared memory segment
Cause: The Fast driver failed to create a shared memory segment for two-task communication.

Action: Check whether the system-imposed limit on shared memory identifiers has already been reached for your system.

ORA-02736: osnfpm: illegal default shared memory address
Cause: The Fast driver failed to establish a default shared memory address.

Action: Contact your customer support representative.

ORA-02737: osnpcl: cannot tell orapop to exit
Cause: The Pipe driver failed to send orapop the command to exit.

Action: Contact your customer support representative.

ORA-02738: osnpwrtbrkmsg: incorrect number of bytes written
Cause: The pipe driver apparently sent an imcomplete break message.

Action: Contact your customer support representative.

ORA-02739: osncon: host alias is too long
Cause: The alias used for a sqlnet host is longer than 161 characters.

Action: Use a shorter alias.

ORA-02750: osnfsmmap: cannot open shared memory file ?/dbs/ftt_*pid*.dbf
Cause: The Fast driver failed to create a shared memory file for two-task communication.

Action: Check the permissions on the directory ?/dbs

ORA-02751: osnfsmmap: cannot map shared memory file
Cause: The Fast driver failed to map a shared memory file for two-task communication.

Action: Contact your customer support representative.

ORA-02752: osnfsmmap: illegal shared memory address
Cause: The Fast driver failed to attach shared memory at the expected location.

Action: Contact your customer support representative.

ORA-02753: osnfsmmap: cannot close shared memory file
Cause: The Fast driver cannot close the shared memory file.

Action: Contact your customer support representative.

ORA-02754: osnfsmmap: cannot change shared memory inheritence
Cause: The Fast driver could not alter the inheritence attributes of the shared memory.

Action: Contact your customer support representative.

ORA-02755: osnfsmcre: cannot create chared memory file ?/dbs/ftt_*pid*.dbf
Cause: The Fast driver failed to create a file for shared memory.

Action: Check the permissions on the directory ?/dbs

ORA-02756: osnfsmnam: name translation failure
Cause: The Fast driver encountered an error translating the shared memory filename ?/dbs/ftt_*pid*.dbf.

Action: Contact your customer support representative.

ORA-02757: osnfop: fork_and_bind failed
Cause: The Fast driver failed to fork a process onto the desired cluster and node number.

Action: Check the desired node number in sercose[0] and cluster ID in sercose[1]. If these seem valid, contact customer support.

ORA-02758: Allocation of internal array failed
Cause: The package was unable to allocate memory for an array because the system ran out of memory.

Action: Either reclaim memory by killing other processes or reboot the machine with more memory.

ORA-02759: Not enough request descriptors available
Cause: All of the package's request descriptors are in use performing other requests.

Action: Either wait until enough requests are done, or shut the package down and re-initialize it with more request descriptors.

ORA-02760: Client close of file failed.
Cause: The client was unable to close a file after forking the servers.

Action: This is a system problem - contact your System Administrator.

ORA-02761: File number to be canceled is negative.
Cause: The file number contained with the sfiov structure is less than zero.

Action: This may be a programming error. If it is not, contact ORACLE support.

ORA-02762: file number to be cancelled is greater than the maximum.
Cause: The file number contained with the sfiov structure is greater than the maximum.

Action: This may be a programming error. If it is not, contact ORACLE support.

ORA-02763: Unable to cancel at least one request
Cause: No requests were found that could be cancelled.

Action: This error can occur if all the requests dealing with that file number have already been filled.

ORA-02764: Invalid package mode
Cause: The mode of the package can only be parallel or duplex.

Action: See sfa.h for the correct values.

ORA-02765: Invalid maximum number of servers
Cause: The number of servers given was less than or equal to zero.

Action: Use a number greater than zero.

ORA-02766: Invalid maximum of request descriptors
Cause: The number of request descriptors was less than or equal to zero.

Action: Use a number greater than zero.

ORA-02767: Less than one request descriptor was allocated per server
Cause: The package requires that the number of request descriptors be greater than or equal to the number of servers used.

Action: Use a higher number

ORA-02768: Maximum number of files is invalid
Cause: The maximum number of files to be used by the package was less than or equal to zero.

Action: Use a positive number.

ORA-02769: Setting of handler for SIGTERM failed
Cause: The package was unable to set up handling by the server for the termination signal. This is an internal error.

Action: Contact ORACLE support.

ORA-02770: Total number of blocks is invalid
Cause: The total number of blocks to be allocated for use by the package was not greater than zero.

Action: Use a positive number.

ORA-02771: Illegal request time out value
Cause: The number was not a positive number.

Action: Use a positive number.

ORA-02772: Invalid maximum server idle time
Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02773: Invalid maximum client wait time
Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02774: Invalid request list latch time out value
Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02775: Invalid request done signal
Cause: The signal number was not a positive number.

Action: Use a positive number.

ORA-02776: Value for request done signal exceeds maximum
Cause: The value sent to the package for use as the "request done" signal exceeds the maximum allowed by the operating system.

Action: Contact your system administrator.

ORA-02777: Stat failed on log directory
Cause: The package was unable to get information about the directory in which the log files are to reside.

Action: Check the permissions on the directory or use a different directory name.

ORA-02778: Name given for the log directory is invalid
Cause: The name given for the directory in which the logs are to be kept does not correspond to a directory.

Action: Use a different name.

ORA-02779: Stat failed on core dump directory
Cause: The package was unable to get information about the directory into which the servers are to dump core in the event of an exception.

Action: Check the permissions on the directory or use a different directory name.

ORA-02780: Name given for the core dump directory is invalid
Cause: The name given for the directory in which the server processes are to dump core in the event of an exception does not correspond to a directory.

Action: Use a different name.

ORA-02781: Invalid value given for the timing wanted flag
Cause: The value given was not TRUE or FALSE.

Action: Specify TRUE or FALSE for the timing wanted flag.

ORA-02782: Both read and write functions were not specified
Cause: To ensure that the functions act symmetrically, pointers to both the read and write functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

ORA-02783: Both post and wait functions were not specified
Cause: To ensure that the functions act symmetrically, pointers to both the posting and waiting functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

ORA-02784: Invalid shared memory ID specified
Cause: The ID of the segment specified for use as the shared buffer region was invalid.

Action: Use a different ID, or let the package specify its own.

ORA-02785: Invalid shared memory buffer size
Cause: The size given for the shared memory segment to be used as the shared buffer region was less than or equal to zero.

Action: Use a positive number.

ORA-02786: Size needed for shared region is greater than segment size
Cause: The size of the shared segment that was specified for the shared buffer region is less than the number of bytes required. The first field of the "additional information" field is the size needed. The second is the size of the segment.

Action: Use a larger size segment or let the package allocate its own.

ORA-02787: Unable to allocate memory for segment list
Cause: The package cannot allocate memory for an internal segment list because the system has run out of memory. The "additional information" field is the amount of memory that the package attempted to allocate.

Action: Close some processes or contact your system administrator.

ORA-02788: Unable to find kernel process pointer in async process array
Cause: Internal error - Contact ORACLE support.

Action: Contact Oracle Support Services.

ORA-02789: Maximum number of files reached
Cause: The maximum number of files that can be used for asynchronous I/O has been reached.

Action: Shut down the servers and re-initialize the package with a higher number.

ORA-02790: File name is too long
Cause: The length of the name of a file that is being opened for asynchronous I/O is longer than the maximum. The "additional information" field is the maximum length.

Action: Use a shorter name.

ORA-02791: Unable to open file for use with asynchronous I/O
Cause: The package could not open file for some reason.

Action: Check the file name.

ORA-02792: Unable to fstat() a file being used for asynchronous I/O.
Cause: The fstat(2) call on a file being used for asynchronous I/O failed.

Action: Check the file name.

ORA-02793: Close of asynchronous I/O failed.
Cause: The client was unable to close a file being used for asynchronous I/O.

Action: Contact ORACLE support - this should not happen.

ORA-02794: Client unable to get key for shared memory
Cause: The client was unable to get a key so that it obtain shared memory for use with shared memory.

Action: Contact ORACLE support - this is an internal error.

ORA-02795: Request list is empty
Cause: The client was signalled by a server that it was done with a request but the "done" list was empty.

Action: Internal error - contact ORACLE support.

ORA-02796: Done request is not in correct state
Cause: A request is not in the right state.

Action: Internal error - contact ORACLE support.

ORA-02797: No requests available
Cause: No free request descriptors are available.

Action: Wait until some requests are filled and then retry the request, or shutdown the servers and initialize the package with a higher number of requests.

ORA-02798: Invalid number of requests
Cause: The number of operations sent to either sfard() or sfawrite() is less than zero.

Action: This is a user programming error.

ORA-02799: Unable to arm signal handler
Cause: The arming of a signal handler for the "done" signal failed.

Action: Internal error - contact ORACLE support.

ORA-02800: Requests timed out
Cause: Some of the requests for asynchronous input or output were not serviced in the required amount of time.

Action: If the load on the system is high, it is possible that the timeout limit is too low. Reset it with sfainit(). If the server processes are dying due to unexpected signals, this is an internal error, and ORACLE support should be contacted.

ORA-02801: Operations timed out
Cause: Some asynchronous operations timed out in kernel mode.

Action: Internal error - contact ORACLE support.

ORA-02802: No idle servers available in parallel mode
Cause: Internal error.

Action: Contact ORACLE support.

ORA-02803: Retrieval of current time failed
Cause: Internal error.

Action: Contact ORACLE support.

ORA-02804: Allocation of memory failed for log file name
Cause: The client was unable to allocated a buffer for the name of the log file.

Action: Contact your System Administrator.

ORA-02805: Unable to set handler for SIGTPA
Cause: Internal error.

Action: Contact ORACLE support.

ORA-02806: Unable to set handler for SIGALRM
Cause: Internal error.

Action: Contact ORACLE support.

ORA-02807: Allocation of memory for I/O vectors failed.
Cause: The client was unable to allocate memory for the array of I/O vectors that the servers are to use.

Action: Contact your System Administrator.

ORA-02808: Allocation of memory of open files array failed.
Cause: The client was unable to allocate memory for an array of flags that the servers are to use.

Action: Contact your System Administrator.

ORA-02809: Jump buffer not valid
Cause: Internal error.

Action: Contact ORACLE support.

ORA-02810: Unable to make temporary file name for memory mapped file
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-02811: Unable to attach shared memory segment
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-02812: Bad attach address
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-02813: Unable to make temporary file name in order to get key
Cause: Internal error.

Action: Contact ORACLE support.

ORA-02814: Unable to get shared memory
Cause: Shmget(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

ORA-02815: Unable to attach shared memory
Cause: Shmat(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

ORA-02816: Unable to kill a process
Cause: A server did not die after being sent a kill signal.

Action: The process may be a runaway - contact ORACLE customer support.

ORA-02817: Read failed
Cause: A server could not read a requested amount of data.

Action: Check the call to sfard(). An incorrect file descriptor may have been sent to sfard(). The number in the "additional information" field is the starting block number of the data segment being read in.

ORA-02818: Less than the number of blocks requested was read in
Cause: A server could not read in the request amount of data. The first number in the "additional information" field is the block number being read in. The second is the actual number of bytes that was read in.

Action: This is a programming error.

ORA-02819: Write failed
Cause: A server was unable to perform a write. The number in the "additional information" field is the starting block number of the data segment being written out. The first number in the "additional information" field is the block number being written out. The second is the actual number of bytes that was written out. The disk may have filled up.

Action: Check the UNIX error number.

ORA-02820: Unable to write the requested number of blocks
Cause: A server could not write the requested amount of data out to disk. The disk may have run out of space.

Action: Check the UNIX error number.

ORA-02821: Unable to read the requested number of blocks.
Cause: A server could not read the number of blocks that was requested. The end of the file may have been read.

Action: Check the file on disk.

ORA-02822: Invalid block offset
Cause: A server was unable to seek to the designated block.

Action: Check the UNIX error number.

ORA-02823: Buffer is not aligned.
Cause: The buffer on which an I/O is being done is not on the correct boundary.

Action: Check the calling program.

ORA-02824: Request free list is empty
Cause: The list from which the package allocates request descriptors is empty because all of the descriptors is in use.

Action: Wait until some become free, or initialize the package with a higher number of request descriptors.

ORA-02825: Request on free list was not free
Cause: Internal error.

Action: Contact ORACLE support.

ORA-02826: Illegal block size
Cause: A negative number was given for the I/O block size to be used by the asynchronous I/O package.

Action: This is a programming error - use either a positive number or zero to get the default value.

ORA-02827: Invalid file number
Cause: The file number upon which an operation is to done is either less than zero or greater than the maximum number of files than can be open.

Action: This is a programming error. Since the calling program should not touch this number, this is a programming error.

ORA-02828: Segment free list is empty
Cause: No segments are available to allocated.

Action: Free some segments or shut down the package and re-initialize it with a higher number of segments.

ORA-02829: No segment of the proper size is available
Cause: No segment of the proper size is ready for use by the caller.

Action: Free some segments and try again.

ORA-02830: Segment could not be split - no free segments available
Cause: A segment that is larger than that desired could not be split because no free segment was available.

Action: Free some segments and try again.

ORA-02831: Segment deallocation failed - empty segment list
Cause: The caller attempted to deallocate a segment but the "in use" list was empty. This is a programming error.

Action: Check the calling program.

ORA-02832: Segment deallocation failed - segment not on list
Cause: The caller attempted to deallocate a segment that was not on the "in use" list. This is a programming error.

Action: Check the calling program.

ORA-02833: Server was unable to close file
Cause: A server was unable to close a file being used for asynchronous I/O.

Action: See the UNIX error number for more information.

ORA-02834: Server unable to open file
Cause: The server was unable to open a file for use with asynchronous I/O.

Action: Check the UNIX error number for more information.

ORA-02835: Server unable to send signal to client
Cause: Internal error.

Action: Contact ORACLE support.

ORA-02836: Unable to create temporary key file
Cause: Internal error.

Action: Contact ORACLE support.

ORA-02837: Unable to unlink temporary file
Cause: Internal error.

Action: Contact ORACLE support.

ORA-02838: Unable to arm signal handler for the alarm signal
Cause: The arming of a signal handler for the alarmsignal failed.

Action: Internal error - contact ORACLE support.

ORA-02839: Sync of blocks to disk failed.
Cause: The server was unable to flush its writes out to disk.

Action: Check the UNIX error number.

ORA-02840: Open of log file by client failed
Cause: The client process was unable to open its log file.

Action: Check the UNIX error number for more information.

ORA-02841: Server died on start up
Cause: A server exited during its initialization process.

Action: Check the servers' logs for more information.

ORA-02842: Client unable to fork a server
Cause: The client could not spawn a server. A possible reason is that the operating system has reached its limit on the number of processes that it can spawn.

Action: Either reduce the number of servers that are to be used, or reconfigure the operating system so that it can handle more processes.

ORA-02843: Invalid value for kernel flag
Cause: An illegal value was given for the kernel flag in the information structure. Only TRUE and FALSE are permitted.

Action: This is a programming error - check the calling routine.

ORA-02844: Invalid value for the leave open flag
Cause: A value was given for the flag that determines whether a file is to be left open after the client checks it to see if the servers can use it. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

ORA-02845: Invalid value for the timing wanted flag
Cause: A value was given for the flag that indicates that operations are to be timed out. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

ORA-02846: Unkillable server
Cause: A server would not respond to the termination signal. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: This is an operating system problem.

ORA-02847: Server did not terminate when posted
Cause: A server did not respond to a posted request to shutdown. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: Contact ORACLE support.

ORA-02848: Asynchronous I/O package is not running
Cause: An operation using the asynchronous I/O package was attempted without first initializing the package using sfainit().

Action: Call sfainit() before using the package.

ORA-02849: Read failed because of an error
Cause: A server could not read the requested amount of data from disk.

Action: Check the UNIX error number.

ORA-02850: File is closed
Cause: A file upon which an asynchronous I/O operation is to be performed has already been closed by the package.

Action: This is a programming error.

ORA-02851: Request list is empty when it should not be
Cause: This is an internal problem.

Action: Contact ORACLE support.

ORA-02852: Invalid critical-section time out value
Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02853: Invalid server list latch time out value
Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02854: Invalid number of request buffers
Cause: The value given for "db_slave_buffers" in your INIT.ORA file is less than 0.

Action: Use a number that is greater than or equal to 0.

ORA-02855: Number of requests is less than the number of slaves
Cause: The value given for 'db_slave_buffers' in the initialization parameter file was less than the number specified for the number of slaves, 'db_slaves.'

Action: Specify a number that is greater than that given for 'db_slaves.' Alternatively, specify 0. The kernel will supply the appropriate number.

ORA-02875: smpini: Unable to get shared memory for PGA
Cause: Stated in errno.

Action: Resolve the problem.

ORA-02876: smpini: Unable to attach to shared memory for PGA
Cause: Stated in errno.

Action: Resolve the problem.

ORA-02877: smpini: Unable to initialize memory protection
Cause: The adspcinit program has not been executed.

Action: Execute the adscpinit program as shown in your Installation and Users' Guide. If the problem persists, try rebooting your computer.

ORA-02878: sou2o: Variable smpdidini overwritten
Cause: The variable smpdidini was overwritten, probably by client code.

Action: Verify client code, e.g. Pro*C, for illegal memory access. If the problem occurs outside Single Task operation, contact your customer support representative.

ORA-02879: sou2o: Could not gain access to protected memory
Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02880: smpini: Could not register PGA for protection
Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02881: sou2o: Could not revoke access to protected memory
Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02882: sou2o: Could not register SGA for protection
Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02899: smscre: Cannot create SGA with Extended Shared Memory feature
Cause: The environment variable EXTSHM was set before starting oracle.

Action: Unset the environment variable EXTSHM and startup oracle.

ORA-03001: unimplemented feature
Cause: This feature is not implemented.

Action: None

ORA-03002: operator not implemented
Cause: This is an internal error.

Action: Contact your customer support representative.

ORA-03007: obsolete feature
Cause: User attempted to use a feature which is no longer supported.

Action: None

ORA-03009: Incompatible OCI function call
Cause: An incompatible OCI function call was issued for new functionality.

Action: Do not use V7 OCI calls for this functionality.

ORA-03100: communication area cannot be allocated; insufficient memory
Cause: An attempt to allocate stack space for communication purposes failed. This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-03101: invalid input data for *string*
Cause: Invalid input data was detected for the specified data type.

Action: Pass a valid value for the specified data type.

ORA-03102: TTC detects an invalid character set.
Cause: A malformed TTC (Two-Task Common) packet was received.

Action: Contact Oracle Support Services.

ORA-03103: malformed TTC packet from client rejected for TTC RPC (*string*): Reason: *number*
Cause: An invalid input was detected for the specified Two-Task Common (TTC) remote procedural call (RPC).

Action: Contact Oracle Support Services.

ORA-03105: internal protocol error

ORA-03106: fatal two-task communication protocol error
Cause: The communication path between Oracle and the user task has stopped. This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-03107: oranet buffer underflow
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-03108: oranet: ORACLE does not support this interface version
Cause: The version of Oracle connected to via Net8 does not support this version of the Net8 protocol.

Action: Upgrade the older version of Oracle and try again.

ORA-03109: oranet buffer overflow
Cause: Data being transferred between the user program and Oracle overflowed the buffer space available. This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-03110: oranet: ORACLE does not support this SQL version
Cause: The version of Oracle connected to via Net8 does not support the version of the Net8 protocol.

Action: Upgrade the older version of Oracle and try again.

ORA-03111: break received on communication channel
Cause: A break was processed on the communications channel, but was not properly handled by Net8 software. This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-03112: a server linked as single-task cannot use SQL*Net
Cause: A statement containing a SQL*Net connect string was issued to the single-task server. For example, a database link was used in a SQL statement.

Action: Do not use SQL*Net connect strings in a single-task environment.

ORA-03113: end-of-file on communication channel
Cause: The connection between Client and Server process was broken.

Action: There was a communication error that requires further investigation. First, check for network problems and review the SQL*Net setup. Also, look in the alert.log file for any errors. Finally, test to see whether the server process is dead and whether a trace file was generated at failure time.

ORA-03114: not connected to ORACLE

ORA-03115: unsupported network datatype or representation
Cause: A user bind or define, or an Oracle function, is not supported by this heterogeneous Net8 connection.

Action: Upgrade the older version of Oracle and try again.

ORA-03116: invalid buffer length passed to a conversion routine
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-03117: two-task save area overflow
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-03118: two-task coroutine has invalid state
Cause: This is an internal error message not usually issued.

Action: Contact Oracle Support Services.

ORA-03119: two-task detected inconsistent datatype specification
Cause: There was both a datatype, and an anonymous datatype declaration found.

Action: Correct the specification.

ORA-03120: two-task conversion routine: integer overflow
Cause: An integer value in an internal Oracle structure overflowed when being sent or received over a heterogeneous connection. This can happen when an invalid buffer length or too great a row count is specified. It usually indicates a bug in the user application.

Action: Check parameters to Oracle calls. If the problem recurs, reduce all integer parameters, column values not included, to less than 32767.

ORA-03121: no interface driver connected - function not performed
Cause: This message occurred usually because the Net8 driver was not loaded into memory or there was a mismatch of the version of the driver. A user program linked with an obsolete library may also cause this message. Only programs provided by Oracle Corporation should use this interface.

Action: If the message occurred during use of a program provided by Oracle Corporation, contact Oracle Support Services. If a user program caused the message, relink the program with current versions of the Oracle libraries.

ORA-03122: attempt to close ORACLE-side window on user side
Cause: This is an internal error.

Action: Contact your customer support representative.

ORA-03123: operation would block
Cause: This is a status code that indicates that the operation cannot complete now.

Action: None; this is not an error. The operation should be retried again for completion.

ORA-03124: two-task internal error
Cause: Internal error.

Action: Contact your customer support representative.

ORA-03125: client-server protocol violation
Cause: The application received a bad escape sequence from the server and may indicate a problem with the client application user code.

Action: Contact your customer support representative.

ORA-03126: network driver does not support non-blocking operations
Cause: A non-blocking operation was attempted and the network driver does not support non-blocking operations.

Action: Use default blocking operations or use a driver supporting non-blocking operations.

ORA-03127: no new operations allowed until the active operation ends
Cause: An attempt was made to execute a new operation before the active non-blocking operation completed or a new operation was attempted before all the pieces of a column were inserted or fetched.

Action: Execute the new operation after the non-blocking operation completes. If piecewise binds/defines were done, execute the new operation after all the pieces have been inserted or fetched.

ORA-03128: connection is in blocking mode
Cause: The OCI test for non-blocking mode on a connection indicates that the connection is in blocking mode.

Action: If non-blocking mode is required use appropriate OCI calls to change the mode.

ORA-03129: the next piece to be inserted is required
Cause: The application performed a piecewise bind on a column.

Action: Provide the next piece of this bind variable.

ORA-03130: the buffer for the next piece to be fetched is required
Cause: The application performed a piecewise define on the column.

Action: Provide the next buffer for the next piece to be retrieved.

ORA-03131: an invalid buffer was provided for the next piece
Cause: The application either provided the length of the buffer for the next piece to be zero or provided a null pointer.

Action: Verify if the buffer pointer for the next piece is null or if the length is zero.

ORA-03132: two-task default value overflow
Cause: The default value specified for a record field was too large.

Action: Change the default value to fit the field size.

ORA-03134: Connections to this server version are no longer supported.
Cause: An attempt was made to connect to an Oracle server of older version.

Action: Please refer to documentation for more details.

ORA-03135: connection lost contact
Cause: 1) Server unexpectedly terminated or was forced to terminate. 2) Server timed out the connection.

Action: 1) Check if the server session was terminated. 2) Check if the timeout parameters are set properly in sqlnet.ora.

ORA-03136: inbound connection timed out
Cause: 1) The inbound connection was timed out by the server because user authentication was not completed within the given time specified by SQLNET.INBOUND_CONNECT_TIMEOUT or its default value.

Action: 1) Check the SQL*NET and RDBMS logs for traces of suspicious connections. 2) Configure SQL*NET with a proper inbound connect timeout value, if necessary.

ORA-03137: malformed TTC packet from client rejected: [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]
Cause: A malformed TTC (Two-Task Common) packet was received from the client.

Action: Contact Oracle Support Services.

ORA-03138: Connection terminated due to security policy violation
Cause: Connection was terminated due to a security policy violation.

Action: Contact the Database Administrator

ORA-03139: This OCI call has been disabled by the DBA
Cause: The SEC_DISABLE_OLDER_ORACLE_RPCS initialization parameter was enabled.

Action: Contact the Database Administrator

ORA-03140: I/O operation in progress
Cause: The current I/O operation was not complete. The error is typically returned from vectored and/or asynchronous I/O calls.

Action: Perform the necessary operation to complete or abort the current I/O.

ORA-03141: I/O request queue full
Cause: The I/O request queue was full and no more requests could be queued.

Action: Perform the proper operations to complete part or all of the current in-progress I/O requests.

ORA-03142: Session ID: *number* Serial number: *number*
Cause: Connection was lost for the specified session and serial number. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

ORA-03143: Process ID: *string* Thread ID: *string*
Cause: Connection was lost for the specified process ID and thread ID. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

ORA-03144: Process ID: *string*
Cause: Connection was lost for the specified process ID. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

ORA-03145: I/O streaming direction error
Cause: Attempted to PUT data when GET streaming was in progress or attempted to GET data when PUT streaming was in progress.

Action: Complete current stream read or write I/O before attempting I/O in reverse direction.

ORA-03146: invalid buffer length for TTC field
Cause: A malformed TTC (Two-Task Common) packet was received.

Action: Contact Oracle Support Services.

ORA-03147: missing mandatory TTC field
Cause: A malformed TTC (Two-Task Common) packet was received.

Action: Contact Oracle Support Services.

ORA-03148: OCI_ATTR_ROW_COUNT cannot return a row count exceeding UB4MAXVAL. The actual row count is [*string*]
Cause: The row count was larger than UB4MAXVAL. OCI clients using OCI_ATTR_ROW_COUNT cannot see row counts larger than UB4MAXVAL.

Action: Upgrade Oracle client to version 12 client libraries or higher and use OCI_ATTR_UB8_ROW_COUNT instead.

ORA-03149: invalid Oracle error code
Cause: An invalid Oracle error code was received by the server.

Action: Contact Oracle Support Services.

ORA-03150: end-of-file on communication channel for database link
Cause: The connection between the client and the remote server process was broken.

Action: Look in the alert.log file of the remote server for any errors. Also, check to see whether the remote server process is dead and whether a trace file was generated at failure time.

ORA-03151: schema name length exceeding UB1MAXVAL
Cause: The schema name length was larger than UB1MAXVAL, and clients older than Release 12.2 were unable to process longer names.

Action: Upgrade the client to Release 12.2 or higher.

ORA-03152: object name length exceeding UB1MAXVAL
Cause: The object name length was larger than UB1MAXVAL, and clients older than Release 12.2 wree unable to process longer names.

Action: Upgrade the client to Release 12.2 or higher.

ORA-03153: column name length exceeding UB1MAXVAL
Cause: The column name length was larger than UB1MAXVAL, and clients older than Release 12.2 were unable to process longer names.

Action: Upgrade the client to Release 12.2 or higher.

ORA-03154: Deprecated TTC operation is disallowed.
Cause: A Deprecated Two-Task Common (TTC) remote procedural call (RPC) was invoked.

Action: Check the 'allow_deprecated_rpcs' parameter setting and set it to the desired configuration.

ORA-03155: SQL statement not supported for remote execution
Cause: Statement execution could not proceed because the rewritten statement that was issued to the remote had a different ordering (or number) of bind variables as compared to the original statement issued locally.

Action: Rewrite the statement issued locally to more closely match the rewritten statement issued to the remote (especially in terms of order and number of bind variables). Contact Oracle Support Services for further assistance.

ORA-03156: OCI call timed out
Cause: The OCI call was timed out because it was not completed within the timeout specified by OCI_ATTR_CALL_TIMEOUT.

Action: Check the current value of OCI_ATTR_CALL_TIMEOUT and increase it to an appropriate value.

ORA-03160: An invalid client operation was requested by the server
Cause: You are using an Oracle client application linked with libraries with lower version than the current server version.

Action: Upgrade client libraries to be same as or higher than the server version.

ORA-03170: deadlocked on readable physical standby (undo segment *string*)
Cause: A new undo segment was added. A query can occasionally deadlock when issued around the time an undo segment is added and used immediately on the primary.

Action: Retry the query. Avoid creating new undo segments when using standby as a regular part of operation.

ORA-03171: Recovery was terminated during query execution
Cause: Recovery was terminated. A query can ocassionally deadlock when recovery is terminated because it needs a block with changes that are made after the point at which recovery was terminated.

Action: Retry the query. Avoid cancelling recovery on standby.

ORA-03172: STANDBY_MAX_DATA_DELAY of *string* seconds exceeded
Cause: Standby recovery fell behind the STANDBY_MAX_DATA_DELAY requirement.

Action: Tune recovery and retry the query later, or switch to another standby database within the data delay requirement.

ORA-03173: Standby may not be synced with primary
Cause: ALTER SESSION SYNC WITH PRIMARY did not work because either the standby was not synchronous or in a data-loss mode with regard to the primary, or the standby recovery was terminated.

Action: Make the standby synchronous and no-data-loss with regard to the primary. Make the standby recovery active.

ORA-03174: STANDBY_MAX_DATA_DELAY does not apply to SYS users
Cause: ALTER SESSION SET STANDBY_MAX_DATA_DELAY did not work for SYS users.

Action: Issue ALTER SESSION SET STANDBY_MAX_DATA_DELAY for non-SYS users.

ORA-03175: parameter *string* mismatch
Cause: The value of the %s parameter was not the same in all instances.

Action: Check %s in all instances.

ORA-03176: *string* only works on an open physical standby database
Cause: The database was not an open physical standby database.

Action: Issue the command on an open physical standby database.

ORA-03177: enable read-only violation logging

ORA-03178: duplicate SESSION or GLOBAL specifications
Cause: Duplicate SESSION or GLOBAL specifications were specified.

Action: Remove the duplicate specification.

ORA-03179: NOCACHE or ORDER sequences cannot be accessed from Active Data Guard standby
Cause: NOCACHE or ORDER sequences were not supported for Active Data Guard standby.

Action: Alter the sequence properties.

ORA-03180: Sequence values cannot be allocated for Oracle Active Data Guard standby.
Cause: Connection to the corresponding primary database failed. The primary database might be down.

Action: Try again later.

ORA-03181: Sequence object no longer exists for Oracle Active Data Guard standby.
Cause: The sequence object might have been dropped by the primary database.

Action: Check the sequence status on the primary database.

ORA-03182: The sequence object is no longer a global sequence for Oracle Active Data Guard standby database.
Cause: The sequence object might have been altered by the primary database.

Action: Check the sequence status on the primary database.

ORA-03183: Parameter *string* value change failed.
Cause: The parameter could not be changed during Oracle Active Data Guard (Oracle ADG) recovery.

Action: Stop the Oracle ADG recovery and then change the parameter value.

ORA-03185: The value change failed for parameter *string*.
Cause: An attempt was made to enable the parameter on a non-Engineered system or it was not on a Platform as a Service.

Action: Contact Oracle Support Services.

ORA-03186: Cannot start Oracle ADG recovery on a non-Oracle Cloud database on a server that is not a primary server.
Cause: An attempt was made to start Oracle Active Data Guard (Oracle ADG) recovery on a non-Oracle Cloud database that was not on the primary server.

Action: Contact Oracle Support Services.

ORA-03187: Preplugin recovery cannot start from a backup belonging to a prior PDB incarnation.
Cause: An attempt was made to start preplugin recovery from a backup prior to the current pluggable database (PDB) incarnation.

Action: Contact Oracle Support Services.

ORA-03200: the segment type specification is invalid
Cause: segment type is not TABLE, INDEX, or CLUSTER

Action: use a correct segment type

ORA-03201: the group number specification is invalid
Cause: the freelist group number was either negative or larger than the the number of freelist groups in the segment

Action: use a correct group number

ORA-03202: the scan limit specification is invalid
Cause: the scan limit did not have a positive integer value the number of freelist groups in the segment

Action: use a correct scan limit

ORA-03203: concurrent update activity makes space analysis impossible
Cause: high volume of user updates interfere with the space analysis

Action: retry the command or lock the underlying objects

ORA-03204: the segment type specification should indicate partitioning
Cause: partition name is specified for the space analysis, but the object type does not indicate parttitioning

Action: specify PARTITION in the segment type, if the object is partitioned, otherwise, omit the partition name

ORA-03205: partition name is required when partitioned type is specified
Cause: partition name is not specified for the space analysis, but the object type indicates parttitioning

Action: specify partition name, if the object is partitioned, otherwise, specify a non-partitioned type

ORA-03206: maximum file size of (*string*) blocks in AUTOEXTEND clause is out of range
Cause: The maximum file size for an autoextendable file has exceeded the maximum number of blocks allowed.

Action: Reduce the size and retry.

ORA-03207: subpartitioned type must be specified for composite object
Cause: partition type is specified for the space analysis, but the object type indicates composite partitioning

Action: specify subpartition name and subpartition type

ORA-03208: partitioned type must be specified for a non-composite object
Cause: subpartition type is specified for the space analysis, but the object type indicates non-composite partitioning

Action: specify partition name and partition type

ORA-03209: DBMS_ADMIN_PACKAGE invalid file/block specification
Cause: The value of file number or block number is outside of limits or inconsistent

Action: Fix the file number/block number value

ORA-03210: DBMS_ADMIN_PACKAGE invalid option specification
Cause: The value of one of the option parameters is incorrect

Action: Fix the option value

ORA-03211: The segment does not exist or is not in a valid state
Cause: The segment specified in the DBMS_SPACE_ADMIN or DBMS_SPACE operation does not exist or is not in a state appropriate for this operation

Action: Fix the segment specification, or put the segment in the appropriate state.

ORA-03212: Temporary Segment cannot be created in locally-managed tablespace
Cause: Attempt to create a temporary segment for sort/hash/lobs in in permanent tablespace of kind locally-managed

Action: Alter temporary tablespace of user to a temporary tablespace or a dictionary-managed permanent tablespace

ORA-03213: Invalid Lob Segment Name for DBMS_SPACE package
Cause: The Lob Segment specified in the DBMS_SPACE operation does not exist.

Action: Fix the Segment Specification

ORA-03214: File Size specified is smaller than minimum required
Cause: File Size specified for add/resize datafile/tempfile does not allow for the minimum required of one allocation unit.

Action: Increase the specification for file size

ORA-03215: File Size specified for resize is too small
Cause: File Size specified for resize datafile/tempfile causes bitmap control structures to overlap

Action: Increase the specification for file size

ORA-03216: Tablespace/Segment Verification cannot proceed
Cause: Corruptions detected during verification whch cannot be dealt with

Action: Do manual verification

ORA-03217: invalid option for alter of TEMPORARY TABLESPACE
Cause: invalid option for alter of temporary tablespace was specified

Action: Specify one of the valid options: ADD TEMPFILE, TEMPFILE ONLINE, TEMPFILE OFFLINE

ORA-03218: invalid option for CREATE/ALTER TABLESPACE
Cause: invalid option for create/alter tablespace of type locally-managed

Action: Specify one of the valid options.

ORA-03219: Tablespace '*string*' is dictionary-managed, offline or temporary
Cause: Operation which is only applicable to permanent, online, locally-managed tablespaces is specified for a tablespace which is either dictionary-managed, offline or temporary

Action: Reissue operation for a different tablespace, mount the tablespace or do not issue it at all, since it does not apply for the given tablespace

ORA-03220: DBMS_ADMIN_PACKAGE required parameter is NULL or missing
Cause: Some of the procedures was called with missing or NULL parameters

Action: Specify the missing parameter

ORA-03221: Temporary tablespaces and temporary segments must have standard block size
Cause: An attempt was made to do one of the following : (1) create a temporary tablespace with a non-standard block size or, (2) alter an existing permanent tablespace of non-standard block size to a temporary tablespace or, (3) issue a DDL statement that would result in the creation of a temporary segment in a tablespace of non-standard block size.

Action: (1) If creating a temporary tablespace, do not specify a block size different from the standard block size. (2) If altering an existing permanent tablespace to a temporary tablespace, ensure that it is of standard block size. (3) Ensure that the user's temporary tablespace is a tablespace having the standard block size.

ORA-03222: average row size and row count must be greater than zero
Cause: Either a bad value passed to dbms_space.create_table_cost() or explain plan did not pass through size information.

Action: Check the row size parameter in dbms_space.create_table_cost(). For explain plan, make sure statistics have been computed for all source tables in the CREATE TABLE AS SELECT statement.

ORA-03223: Bitmap index block addressable limitation reached
Cause: The limitation of addressability of BMIB (Bitmap Index Block) was reached for the current blocksize.

Action: If the segment size has grown greater than addressability of BMIB (Bitmap Index Block), do the following: (1) Partition the table. (2) Move the segment to a tablespace having bigger blocksize.

ORA-03230: segment only contains *string* blocks of unused space above high water mark
Cause: Attempt to preserve too many blocks.

Action: reduce the KEEP amount.

ORA-03231: the INITIAL extent may not be deallocated
Cause: Attempt to deallocate space from the segment which was truncated prior to the 7.3 release.

Action: increase the KEEP amount, or truncate the segment, and reissue the command.

ORA-03233: unable to extend table *string*.*string* subpartition *string* by *string* in tablespace *string*
Cause: Failed to allocate an extent for table subpartition segment in tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-03234: unable to extend index *string*.*string* subpartition *string* by *string* in tablespace *string*
Cause: Failed to allocate an extent for index subpartition segment in tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-03235: max # extents (*string*) reached in table *string*.*string* subpartition *string*
Cause: A table subpartition tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-03236: max # extents (*string*) reached in index *string*.*string* subpartition *string*
Cause: An index subpartition tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-03237: Initial Extent of specified size cannot be allocated in tablespace (*string*)
Cause: Too large a size for an initial extent due to freelist group specification

Action: Reduce number of freelist groups specified for segment

ORA-03238: unable to extend LOB segment *string.string* subpartition *string* by *string* in tablespace *string*
Cause: An attempt was made to allocate an extent for LOB subpartition segment in tablespace, but the extent could not be allocated because there is not enough space in the tablespace indicated.

Action: Use the ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-03239: maxextents (*string*) reached in LOB segment *string.string* subpartition *string*
Cause: A LOB subpartition segment tried to extend past maxextents.

Action: If maxextents is less than the system maximum, raise it. Otherwise, recreate the subpartition with larger INITIAL, NEXT, or PCTINCREASE parameters.

ORA-03240: User's temporary tablespace same as tablespace being migrated
Cause: Users default temporary tablespace must be different from the tablespace being migrated.

Action: alter users default temporary tablespace to be different.

ORA-03241: Invalid unit size
Cause: User specified an invalid unit size for the tablespace

Action: Specify the correct unit size. To estimate unit size please refer to Oracle Server Administrator's Guide.

ORA-03242: Tablespace migration retried 500 times
Cause: For migration to complete, temporary segments should not be present in the tablespace at the time of migration.

Action: Avoid migrating the tablespace when there is heavy temporary segment creation going on as with object drops.

ORA-03243: destination dba overlaps with existing control information
Cause: Cannot overlap control information during relocation

Action: Please chose another destination address

ORA-03244: No free space found to place the control information
Cause: During migration of tablespace found no place to put the control information. If during bitmaps relocation, found no space at the specified destination.

Action: If during migration, add more space to the tablespace and retry migration. If during bitmaps relocation, specify a destination address where there is enough free space.

ORA-03245: Tablespace has to be dictionary managed, online and permanent to be able to migrate
Cause: Tablespace was not dictionary managed or online or permanent.

Action: Make sure the tablespace is online, permanent and dictionary managed

ORA-03246: Invalid block number specified
Cause: Control information cannot be placed at the specified dba either because the block number specified is beyond the file end or the file is not large enough to accomodate the control information at that location

Action: specify a correct block number

ORA-03247: Invalid block number specified
Cause: Relocation of bitmaps to the said destination will make the tablespace self descriptive

Action: Choose another destination dba.

ORA-03248: Too much of segment creation activity during migration
Cause: Temporary segments were attempted to be created during migration

Action: The error is signalled after retrying migration for 500 times. Run migration when there is less of segment creation activity is going on.

ORA-03249: Uniform size for auto segment space managed tablespace should have atleast *string* blocks
Cause: For the given blocksize, uniform size specified is insufficient

Action: Specify larger extent size and retry

ORA-03250: Cannot mark this segment corrupt
Cause: This segment cannot be marked corrupt because it contains data dictionary objects

Action: Check the segment information and reissue the command.

ORA-03251: Cannot issue this command on SYSTEM tablespace
Cause: It is not permitted to migrate SYSTEM tablespace from locally managed format to dictionary managed format or relocate bitmaps.

Action: Check the tablespace name and procedure name

ORA-03252: initial extent size not enough for LOB segment
Cause: Fatblock size of LOB segment is too big to fit into the initial extent.

Action: Specify a smaller fatblock size or create the LOB segment in other tablespaces with bigger initial extent size.

ORA-03254: unable to execute the sql in read only database
Cause: Unable to create a consistent snapshot of the object in a read only database. Transaction recovery must be performed before opening the database read only.

Action: Open the database read write, allow dead transaction recovery to complete and then open the database read only.

ORA-03261: the tablespace *string* has only one file
Cause: Dropping file from ts which has a single file extent.

Action: Cannot make a tablespace fileless

ORA-03262: the file is non-empty
Cause: Trying to drop a non-empty datafile

Action: Cannot drop a non empty datafile

ORA-03263: cannot drop the first file of tablespace *string*
Cause: Trying to drop the first datafile with which ts is created

Action: Cannot drop the first datafile with which ts is created

ORA-03264: cannot drop offline datafile of locally managed tablespace
Cause: Trying to drop offline datafile in lmts

Action: Try to drop file afetr making it online

ORA-03274: both ALLOCATE EXTENT and DEALLOCATE UNUSED options are specified
Cause: The DEALLOCATE option and the ALLOCATE option are specified in the same command.

Action: Choose one of the options or issue two separate commands.

ORA-03275: duplicate DEALLOCATE option specification
Cause: The DEALLOCATE UNUSED option to ALTER TABLE or ALTER INDEX is specified more than once.

Action: Specify the option at most once.

ORA-03276: duplicate ALLOCATE EXTENT option specification
Cause: The ALLOCATE EXTENT option to ALTER TABLE or ALTER INDEX is specified more than once.

Action: Specify the option at most once.

ORA-03277: invalid SIZE specified
Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-03278: duplicate ALLOCATE EXTENT option specification
Cause: An option (DATAFILE, SIZE or INSTANCE) was specified more than once.

Action: Specify each option at most once.

ORA-03279: invalid INSTANCE specified
Cause: The specified value is not recognized as a valid instance name.

Action: Use a valid name.

ORA-03280: invalid DATAFILE filename specified
Cause: A character string literal is expected, but not found.

Action: Specify filenames using character string literals.

ORA-03281: invalid ALLOCATE EXTENT option
Cause: An option other than DATAFILE, SIZE or INSTANCE was specified.

Action: Remove invalid option and retry the command.

ORA-03282: missing ALLOCATE EXTENT option
Cause: No ALLOCATE EXTENT options were specified.

Action: Specified one or more of the following options: DATAFILE, SIZE or INSTANCE.

ORA-03283: specified datafile *string* does not exist
Cause: The datafile does not exist

Action: Retry the option with the correct datafile

ORA-03284: datafile or tempfile *string* is not a member of tablespace *string*
Cause: The specified datafile or tempfile did not belong to the tablespace that the object resides in.

Action: Retry the option with the correct datafile or tempfile.

ORA-03286: ALLOCATE EXTENT not valid for HASH CLUSTERS
Cause: The cluster is a hash cluster, and can not use the allcoate extent option.

Action: n/a

ORA-03287: invalid FREELIST GROUP specified
Cause: The specified FREELIST GROUP number is invalid

Action: Choose a number between 1 and # freelist groups for this object

ORA-03288: both FREELIST GROUP and INSTANCE parameters may not be specified
Cause: Both FREELIST GROUP and INSTANCE were specified in clause

Action: Remove one of the two parameters

ORA-03289: partition name and segment type do not match
Cause: Partition name and segment type specified for space analysis do not match

Action: Specify type PARTITION if the object is partitioned, specify SUBPARTITION if the object is composite

ORA-03290: Invalid truncate command - missing CLUSTER or TABLE keyword
Cause: Invalid object specification given.

Action: Either specify TRUNCATE CLUSTER or TRUNCATE TABLE

ORA-03291: Invalid truncate option - missing STORAGE keyword
Cause: Expected STORAGE keyword

Action: Either specify DROP STORAGE or REUSE STORAGE

ORA-03292: Table to be truncated is part of a cluster
Cause: The table being truncated is a member of a cluster.

Action: Either use TRUNCATE CLUSTER or DROP TABLE

ORA-03293: Cluster to be truncated is a HASH CLUSTER
Cause: Only INDEX CLUSTERS can be truncated.

Action: Drop and recreate the HASH CLUSTER instead of using truncate.

ORA-03296: cannot resize datafile - file *string* not found
Cause: The specified datafile is not available for resizing.

Action: Ensure that the datafile name is valid, and if so, ensure the file is accessible.

ORA-03297: file contains used data beyond requested RESIZE value
Cause: Some portion of the file in the region to be trimmed is currently in use by a database object

Action: Drop or move segments containing extents in this region prior to resizing the file, or choose a resize value such that only free space is in the trimmed.

ORA-03298: cannot shrink datafile - file *string* is under hot backup
Cause: Attempt to shrink a datafile while it is under hot backup. This is not allowed.

Action: Retry shrinking the file after the hot backup completes.

ORA-03299: cannot create dictionary table *string*
Cause: A dictionary table is created upon the first execution of the command 'alter database datafile autoextend on' for a database. This operation did not succeed. The most probable cause for this is insufficient space in the system tablespace.

Action: See action for next error message in error stack.

ORA-03700: More than one shardspace not allowed with system-managed sharding.
Cause: An attempt to add a shardspace to the catalog was attempted when a shardspace already existed.

Action: Only one shardspace is allowed per system-managed catalog. Use the existing shardspace or re-create the catalog with a different sharding type.

ORA-03701: invalid parameter combination: *string* and *string*
Cause: Mutually exclusive parameters were specified in a command.

Action: Verify the parameters and retry command.

ORA-03702: reserved word used as object name: *string*
Cause: A reserved word was used as the name of an object.

Action: Verify the parameters and retry command.

ORA-03703: no sharded database pools exist
Cause: A command was issued which required a sharded database pool, but none existed.

Action: Add a sharded database pool and retry the command.

ORA-03704: too many sharded database pools exist
Cause: A command was issued which required a sharded database pool, but more than one existed.

Action: Remove a sharded database pool and retry the command.

ORA-03705: must explicitly specify shardgroup name because there could be multiple candidates
Cause: A command was issued without specifying a shardgroup and a default shardgroup could not be determined.

Action: Do not omit '-shardgroup' when multiple shardgroups exist.

ORA-03706: must explicitly specify shardspace name because there could be multiple candidates
Cause: A command was issued without specifying a shardspace and a default shardspace could not be determined.

Action: Do not omit '-shardspace' when multiple shardspaces exist.

ORA-03707: mandatory environment variable not set at destination: *string*
Cause: An environment variable required for the operation was not set at the specified destination.

Action: Provide a value for the variable and retry operation.

ORA-03708: shard '*string*' does not exist
Cause: The requested shard did not exist.

Action: Check the name and try again.

ORA-03709: invalid format for input parameter file
Cause: The input file contained a parameter that was too long or the input file was not in the correct format.

Action: Consult the documentation and confirm that the file contents and parameters being used are valid and retry the operation.

ORA-03710: directory does not exist or is not writeable at destination: *string*
Cause: A directory required for successful operation did not exist or was not writeable at the destination.

Action: Confirm that the directory exists and that permissions allow for the creation of files.

ORA-03711: A shard with the same database identifier is a member of a different shardgroup.
Cause: A shard with the same database identifier was a member of a shardgroup in another shardspace.

Action: All shards with the same database identifier must be members of the same shardgroup. Specify a different shardroup and retry the operation.

ORA-03712: A shard with the same database identifier is already in the shardgroup.
Cause: A shard with the same database identifier was a member of the specified shardgroup.

Action: All shards in a shardgroup must have unique database identifiers. Specify a different shardroup and retry the operation.

ORA-03713: Shard '*string*' contained *string* chunks.
Cause: A shard that contained chunks was removed from the catalog. Those chunks are no longer available.

Action: This is an informational message only.

ORA-03714: errors found during chunk recovery
Cause: The chunk recovery procedure was not able to automatically recover corrupted chunks.

Action: Examine the trace files and manually fix the problems by altering shard tablespaces.

ORA-03715: invalid user *string*
Cause: The specified user did not exist on this shard.

Action: Ensure that the shard DDL is up to date and re-try.

ORA-03716: statement too long
Cause: The statement was too long.

Action: Reduce the size of the statement to 3800 bytes or less.

ORA-03717: Shard *string* does not exist in the shard pool.
Cause: A nonexistent shard was provided for execution.

Action: Ensure that the shard exists and try again.

ORA-03718: Service management is not available at this time because broker configuration *string* does not have a registered primary database.
Cause: The primary database was not registered. Service management requires registration of all primary databases.

Action: Wait for new primary database to be registered and try again.

ORA-03719: Shard character set does not match catalog character set.
Cause: The specified shard character set did not match the catalog character set.

Action: Ensure that the character sets match and try again.

ORA-03720: Shard national character set does not match catalog national character set.
Cause: The specified shard national character set did not match the catalog national character set.

Action: Ensure that the national character sets match and try again.

ORA-03736: Database *string* is not a part of the sharded schema.
Cause: The specified database was not in the sharded schema.

Action: Ensure that the name is correct and try again.

ORA-03737: cannot suspend move for chunk number *string*
Cause: The specified chunk move could not be suspended.

Action: Either the move has already started or is no longer in the the queue. Check the status and try again.

ORA-03738: cannot remove chunk number *string* from the move queue
Cause: The specified chunk could not be removed from the queue.

Action: Either the move has already started or is no longer in the queue. Check the status and try again.

ORA-03739: The specified database is not configured to be a catalog.
Cause: The specified database was not configured to be a catalog.

Action: Specify a valid catalog database and retry the operation.

ORA-03740: Deployment failed with error: *string*
Cause: Unable to successfully complete shard deployment.

Action: Check error returned and retry the operation.

ORA-03741: Could not retrieve default template from shard.
Cause: Unable to retrieve default Oracle Database Configuration Assistant (DBCA) template from shard.

Action: Verify that General_Purpose.dbc exists on shard and retry the operation. Alternately, explicity provide a template via 'create shard' command options.

ORA-03742: Move chunk conditions are not met.
Cause: Chunk migration pre-check failed because one of the transporting tablespaces was either read-only or in hot backup mode.

Action: Alter the tablespace to fulfill chunk migration requirements.

ORA-03743: cannot create service, sharded services must use preferred_all option
Cause: An attempt was made to create a service in a sharded pool that specified preferred and available databases.

Action: Use only preferred_all option for sharded services.

ORA-03744: Shard DDL state is not up-to-date.
Cause: The requested operation required one or more involved shards to be up-to-date with the DDL state of the sharded system.

Action: Recover shards, which are in DDL Error state, wait for DDL execution to finish on every shard, then retry executing the operation.

ORA-03745: global service manager not running
Cause: The master global service manager was no longer connected to the catalog.

Action: Restart the global service manager and retry operation.

ORA-03746: The GSMUSER account does not have SYSDG and SYSBACKUP privileges.
Cause: The GSMUSER account was not granted SYSDG and SYSBACKUP privileges.

Action: Grant the necessary privileges and retry the operation.

ORA-03747: root table already exists
Cause: New shardspaces could not be added because a root table already existed in the sharded database.

Action: Drop the root table and retry operation.

ORA-03748: A deploy operation is already in progress.
Cause: A previous request for deploy operation was still in progress.

Action: Wait for the previous deploy operation to complete and check if another deploy operation is required before resubmitting the request.

ORA-03749: Chunk move cannot be performed at this time.
Cause: A database condition that prevents chunk move was detected.

Action: Refer to the following error message for additional information. Correct the error, if possible, and try the move again.

ORA-03750: flashback database not enabled
Cause: The flashback database was not enabled on the database being configured.

Action: Enable flashback database and retry the operation.

ORA-03751: user-defined sharding not supported
Cause: User-defined sharding was not supported on the database being configured.

Action: Use either system-managed or composite sharding.

ORA-03752: specified VNCR in use
Cause: The specified valid node check for registration (VNCR) was in use by at least one database or shard.

Action: Remove any databases or shards that use the VNCR and retry the operation.

ORA-03753: The procedure cannot be propagated.
Cause: SYS.EXEC_SHARD_PLSQL can only execute a limited set of PL/SQL procedures.

Action: Execute a procedure manually on each shard.

ORA-03754: shardgroups not allowed with user-defined sharding
Cause: An attempt was made to create a shardgroup with user-defined sharding.

Action: Use either system-managed or composite sharding.

ORA-03755: current database role is incorrect: *string*
Cause: An attempt was made to create a primary shard from a standby database or a standby shard from a primary database.

Action: Validate the current database role and confirm that it matches the role of the specified shardgroup (for system-managed or composite sharding) or that it matches the -deploy_as parameter specified in the 'add shard' command (for user-defined sharding).

ORA-03756: The chunk *string* is already being split.
Cause: There was an incomplete split operation on the same chunk ID.

Action: Wait until the split finishes and try again.

ORA-03757: cannot skip or ignore shard DDL
Cause: An attempt was made to skip a system DDL request such as SPLITCHUNK.

Action: Fix the error at the shard, which cause the DDL to fail, and then recover.

ORA-03758: cannot schedule split during an ongoing move
Cause: There was an incomplete move operation.

Action: Wait until the move finishes and try again.

ORA-03759: This procedure cannot be used to set database parameter *string*.
Cause: An attempt was made to set a database parameter that cannot be set using this procedure.

Action: Do not set this parameter using this procedure.

ORA-03760: Oracle RAC affinity is supported only on a non-sharded Oracle RAC database.
Cause: An attempt to enable affinity was made on an Oracle database that was either non-RAC, or shard, or shard catalog.

Action: Enable affinity on the Oracle RAC non-sharded database.

ORA-03761: Table is not found.
Cause: The table specification was not correct.

Action: Specify a valid table name in the ALTER SYSTEM ENABLE AFFINITY statement.

ORA-03762: Partitioned table with this name does not exist.
Cause: The specified table was not partitioned.

Action: Enable affinity for a partitioned table.

ORA-03763: Partitioned type '*string*' is not supported.
Cause: The specified table was not partitioned by either RANGE, LIST or HASH.

Action: Enable affinity for a partitioned table.

ORA-03764: Affinity is already enabled for a different table or service.
Cause: A table affinity was already specified. Multiple table affinities are currently not supported.

Action: Disable affinity for existing table.

ORA-03765: Service *string* has already been deleted by another session.
Cause: An attempt was made to delete a service that was already deleted.

Action: None. The previous delete request completes and the service is removed.

ORA-03766: Cannot modify service *string* because it is being deleted.
Cause: An attempt was made to modify a service that was already deleted.

Action: None. The previous delete request completes and the service is removed.

ORA-03767: The database to be replaced is not deployed: *string*
Cause: An attempt was made to replace a database that was not deployed.

Action: Verify that the database to be replaced is in a deployed state.

ORA-03768: The database to be replaced is still up: *string*
Cause: An attempt was made to replace a database that was still running.

Action: Verify that the database is down and try again.

ORA-03769: job_queue_processes setting must be greater than one
Cause: The job_queue_processes initialization parameter was set to zero or one.

Action: Set job_queue_processes to a larger value and retry the operation.

ORA-03770: incorrect shard is given for replace: *string*
Cause: An attempt was made to replace a shard with another shard that did not have the same data as the original shard.

Action: Copy the data correctly before attempting to replace. The RMAN utility can be used for this purpose.

ORA-03771: parameter parsing failed with error: *string*
Cause: The parameter values passed to SET DATAGUARD_PROPERTY were invalid.

Action: Verify the parameter values and retry the operation.

ORA-03772: attempt to set Oracle Data Guard property failed with error: *string*
Cause: The values passed to SET DATAGUARD_PROPERTY were invalid.

Action: Verify the input values and retry the operation.

ORA-03773: SPLIT CHUNK is not supported on a user-defined sharding environment.
Cause: A SPLIT CHUNK command was attempted on a user-defined sharding environment.

Action: This operation is not supported.

ORA-03774: Cannot replace shard with OGG replication setup: *string*
Cause: An attempt was made to replace a shard with Oracle GoldenGate (OGG) as replication setup.

Action: None. The operation is not supported.

ORA-03775: The new DBID of the standby database does not match the old DBID.
Cause: An attempt was made to replace a standby database shard having a different database identifier (DBID) than the original shard. All members of the Oracle Data Guard configuration must have same DBID.

Action: Ensure that the correct shard is specified and that it has the same DBID.

ORA-03776: maximum number of shards exceeded
Cause: A maximum of three primary shards are supported on this platform.

Action: Do not attempt to use more than three primary shards.

ORA-03777: A move operation is already in progress.
Cause: A move was already in progress. Multiple concurrent user-requested move operations are not permitted.

Action: Wait until the current move operation completes before starting another.

ORA-03778: Chunk *string* was already being moved to or from another location.
Cause: The chunk was already being moved. The current move request cannot be superceded.

Action: Wait until the existing move completes, or cancel it, before trying to move the chunk again.

ORA-03779: failed to update broker configuration with error: *string*
Cause: A request to update the broker configuration failed.

Action: Check the broker logs for details.

ORA-03780: failed to stop fast-start failover observers with error: *string*
Cause: A request to stop observers failed during an attempt to modify the Oracle Data Guard broker configuration.

Action: Ensure that the primary database shard can connect to the observer. Check the broker logs for details.

ORA-03781: error, 'error while executing some of the DDL statements'
Cause: There was an error while executing some of the DDL statements.

Action: Check the status of the DDL execution on shards and fix the problem.

ORA-03782: error, 'time out while waiting for the DDL statement execution'
Cause: The specified timeout was reached while waiting for the completion of the DDL statement execution.

Action: Check the status of the DDL execution on shards and try again.

ORA-03783: no new shard to deploy
Cause: No new shard was added to deploy.

Action: Add a new shard and try again.

ORA-03784: failed to disable fast-start failover with error: *string*
Cause: A request to disable fast-start failover failed.

Action: Check the broker logs for details.

ORA-03785: database not open
Cause: An operation was attempted that requires the database to be open.

Action: Open the database and retry the operation.

ORA-03786: failed to replace primary database shard: *string*
Cause: An attempt was made to replace a primary database shard when standby databases are alive. This is now allowed.

Action: Do not replace a primary when standbys are alive. Replacing a primary database is only allowed when all the standby databases are down. If this database was the primary before failure, one of the standbys need to transition to a primary role by a failover. This database can then be replaced as a standby database.

ORA-03787: failed to remove standby shard *string* from the broker configuration with error: *string*
Cause: A request to remove the shard from the broker configuration failed.

Action: Check the broker logs for details.

ORA-03788: Shardspace '*string*' does not contain a primary shard group.
Cause: An attempt was made to add a standby shard group or modify an existing shard group resulting in no primary shard groups being present.

Action: Add a primary shard group to the shardspace before adding a standby shard group.

ORA-03789: cannot move chunk when sharded tables are in inconsistent state
Cause: An attempt was made to move chunk when one or more of the sharded tables are in inconsistent state.

Action: Alter the tables that are inconsistent to make them consistent with the root table and then try to move chunk.

ORA-03790: multitenant container database (CDB) already exists: *string*
Cause: The specified multitenant container database (CDB) was already in existence.

Action: Verify the multitenant container database (CDB) name and retry the operation.

ORA-03791: CDB for this PDB is not found
Cause: An attempt was made to add a pluggable database (PDB) shard, but its container database (CDB) was not part of the sharding configuration or did not match the database identifier (DBID).

Action: Add the CDB using ADD CBD command before adding the PDB. Ensure that the PDB and the CDB have the same DBID.

ORA-03792: CDB already has one of the PDBs as a shard
Cause: One of the pluggable databases (PDB) in a container database (CDB) was already added as a shard.

Action: Do not add multiple PDBs of the same CDB as shards.

ORA-03793: CDB name is invalid: *string*
Cause: An invalid multitenant container database (CDB) name was specified.

Action: Verify the multitenant container database (CDB) name and retry the operation.

ORA-03794: CDB does not exist: *string*
Cause: The specified multitenant container database (CDB) did not exist.

Action: Verify the multitenant container database (CDB) name and retry the operation.

ORA-03795: The tablespace set *string* is read-only or offline.
Cause: Chunk operation was requested while the tablespace set was not online.

Action: Ensure that all tablespace sets are online and repeat the operation.

ORA-03796: database already contains sharding metadata
Cause: The specified database already contained sharding metadata and could not be added as a new shard.

Action: Create a new database and retry the operation.

ORA-03797: cannot deploy this shard for user-defined sharding because database version is not compatible
Cause: The database version was older than version 18.0 and did not support user-defined sharding.

Action: Upgrade the database version to deploy the shard in user-defined sharding.

ORA-03798: Source database version is higher than target database version.
Cause: Target database was a lower version than the source database.

Action: Upgrade the target database so that both databases have the same version.

ORA-03799: invalid table family name specified: *string*
Cause: The table family name specified for the service was invalid.

Action: Verify that the table family name is in the format of <schema_name>.<root_table_name> and retry the operation.

ORA-03800: cannot drop values from partitions and subpartitions of a user-defined sharded table
Cause: An attempt was made to modify a partition or a subpartition of a user-defined sharded table to drop one or more values.

Action: Perform a split partition followed by a drop partition to remove the value from the partition.

ORA-03801: incomplete PARTITION or SUBPARTITION maintenance command
Cause: The ALTER TABLE ... SPLIT or MERGE PARTITION or SUBPARTITION command did not contain an UPDATE INDEXES clause for a user-defined sharded table.

Action: Specify the UPDATE INDEXES clause and try again.

ORA-03803: Only REFRESH COMPLETE ON DEMAND USING TRUSTED CONSTRAINTS option is supported for materialized views on sharded tables created on the catalog.
Cause: An attempt was made to create a materialized view on a sharded table on the shard catalog using the unsupported REFRESH options.

Action: Specify the supported option to create such materialized views.

ORA-03804: cannot alter the root table when there are child tables in inconsistent state
Cause: An attempt was made to alter a root table when one or more of its child tables were in inconsistent state.

Action: Alter the child tables that are in the inconsistent state to make them consistent with the root table and then alter the root table.

ORA-03805: missing tablespace clause for LOB column or columns in one or more partitions
Cause: An attempt was made to split a table partition with LOB columns without specifying tablespaces for all LOB columns in each resulting partition after the split.

Action: Use LOB(*column names*) STORE AS clause in each partition to specify tablespaces for all the LOB columns in the table.

ORA-03807: An all shard GRANT command cannot contain any local objects.
Cause: A GRANT command that contained local objects was issued with shard DDL enabled.

Action: Remove the local objects from the command, or issue it with shard DDL disabled.

ORA-03808: shard key or partition set key columns cannot be columns that accept NULL values
Cause: An attempt was made to create a sharded table with shard key or partition set key columns that accept NULL values.

Action: Create the sharded table with shard key or partition set key columns having a NOT NULL constraint.

ORA-03812: cannot specify NULL as partition bound or partitionset bound in sharding
Cause: An attempt was made to create a sharded table partition or partitionset with NULL value bound.

Action: Create the sharded table partition or partitionset with bound values that is not NULL.

ORA-03813: list partition method expects a single partitioning column in user-defined sharding
Cause: An attempt was made to create a sharded table with multiple columns as partitioning key.

Action: Create the sharded table with a single column as the partitioning key.

ORA-03814: cannot set a column as UNUSED in sharded tables
Cause: An attempt was made to alter a sharded table and set a column as UNUSED.

Action: Do not alter the sharded table to set a column as UNUSED.

ORA-03816: cannot drop the parent of a sharded child table
Cause: An attempt was made to drop the parent of a sharded child table.

Action: Drop all sharded child tables before dropping the parent table.

ORA-03817: cannot merge partitions that belong to different shardspaces
Cause: An attempt was made to merge partitions that are created in different shardspaces.

Action: Do not merge partitions that are created in different shardspaces.

ORA-03830: sharding columns must form a subset key of key columns of a foreign key
Cause: An attempt was made to create a foreign key constraint in a sharded table whose sharding key columns do not form a subset of the foreign key columns.

Action: Include all sharding key columns in the list of foreign key columns. This is required because foreign key constraint cannot be enforced across shards.

ORA-03839: foreign key constraint must be on a table in the same table family
Cause: A foreign key constraint was specified with the referenced table belonging to a different table family.

Action: Specify foreign key reference on a table in the same table family.

ORA-03850: The tablespace set *string* is already associated with a table family.
Cause: The specified tablespace set could not be used for this command because it was already associated with another table family.

Action: Specify a different tablespace set for the command.

ORA-03854: A CDB must be specified when adding a PDB shard.
Cause: An attempt was made to add a pluggable database (PDB) shard to the configuration without specifying its multitenant container database (CDB).

Action: Use the -cdb parameter in the 'add shard' command to specify a CDB.

ORA-03855: root container (CDB$ROOT) cannot be used as a shard
Cause: An attempt was made to add the root container (CDB$ROOT) to the configuration.

Action: Validate the connect string provided and specify a pluggable database (PDB) instead.

ORA-03856: root container (CDB$ROOT) must be specified when adding a CDB
Cause: An attempt was made to add a pluggable database (PDB) as a multitenant container database (CDB).

Action: Validate the connect string provided and specify the root container (CDB$ROOT) instead.

ORA-03857: A listener.ora file already exists in the shard host Oracle home.
Cause: An attempt was made to create a new TNS listener on the shard host, but a listener.ora file already existed in the $ORACLE_HOME/network/admin directory.

Action: Stop any listeners running from the target Oracle home, delete the listener.ora file and retry the operation.

ORA-03858: The specified CDB already contains a PDB shard from the current sharded database.
Cause: An attempt was made to add a pluggable database (PDB) shard to a multitenant container database (CDB) that already contained a PDB shard from the same sharded database.

Action: Use the -cdb parameter in the 'add shard' command to specify a different CDB.

ORA-03859: Moving all chunks is not allowed in user-defined sharding.
Cause: An attempt was made to move all chunks from a source database. This operation is not allowed for user defined sharding.

Action: Move only numbered chunks from the source database. Do not use the -all flag.

ORA-03860: Creating a shard catalog is not allowed in the root of a multitenant container database (CDB).
Cause: An attempt was made to create a shard catalog in the root of a CDB.

Action: Connect to a pluggable database (PDB) to create the shard catalog.

ORA-03861: Pluggable database (PDB) name cannot be modified for a service.
Cause: An attempt was made to modify the pluggable database (PDB) name for a service.

Action: Do not modify the pluggable database (PDB) name for a service. If necessary, remove the service and re-create it in another pluggable database (PDB).

ORA-03862: A common user cannot run sharded DDL statements.
Cause: An attempt was made to run sharded DDL statements as a common user.

Action: Common users cannot run sharded DDL stetements. Connect as a Pluggable Database user and try again.

ORA-03863: There is no deployed database named *string*.
Cause: The named database either did not exist or was not deployed.

Action: Check the database name and deploy the database before attempting to sync it.

ORA-03864: cannot move chunk when there are no partition sets
Cause: Move chunk operation was attempted in a shardspace that did not have any partition set for sharded tables.

Action: Add partition set to sharded tables before running the move chunk operation.

ORA-03866: The GSMROOTUSER account does not have SYSDG and SYSBACKUP privileges.
Cause: The GSMROOTUSER account was not granted SYSDG and SYSBACKUP privileges.

Action: Grant the necessary privileges and retry the operation.

ORA-03867: maximum number of table families reached
Cause: An attempt was made to create a new table family when the maximum supported number of table families was reached.

Action: Do not create more table families than the maximum allowed.

ORA-03870: Parameter *string* passed to function *string* has invalid value *string*.
Cause: A sharding function was called with an invalid value.

Action: This is an internal error, contact Oracle Support Services.

ORA-03877: Chunk is put online on migration destination shard
Cause: Chunk migration information message.

Action: n/a

ORA-03893: The passed DDL with ID *number* is invalid.
Cause: The passed DDL was not valid.

Action: Validate the DDL against the catalog database.

ORA-03900: shard internal database link cannot be altered or dropped
Cause: An attempt was made to directly alter or drop an internal database link for sharding, which is not allowed.

Action: Do not alter or drop shard internal database links.

ORA-03901: shard key or partition set key column cannot be renamed
Cause: An attempt was made to rename a shard key column or a partition set key column of a sharded table, which is not allowed.

Action: Do not rename shard key or partition set key column of a sharded table.

ORA-03902: cannot shrink a system-managed or composite sharded table with primary key or any sharded table with functional index
Cause: An attempt was made to shrink a system-managed or composite sharded table with primary key or a sharded table with functional index, which is not allowed.

Action: Do not perform shrink such tables.

ORA-03903: The Flashback Table operation is not supported on sharded or duplicated tables.
Cause: An attempt was made to perform the Flashback Table operation on a sharded or duplicated table, which is not allowed.

Action: Do not perform a Flashback Table operation on sharded or duplicated tables.

ORA-03904: The sharding virtual columnn cannot be modified.
Cause: An attempt was made to modify the sharding virtual column, SYS_HASHVAL, which is not allowed.

Action: Do not modify the sharding virtual column.

ORA-03905: cannot use the same tablespace for multiple partitions of a user-defined sharded table
Cause: An attempt was made to use a tablespace for multiple partitions of a user-defined sharded table.

Action: Use different tablespaces for different partitions in a user-defined sharded table.

ORA-03906: invalid tablespace name *string* specified for the partition *string*
Cause: An attempt was made to specify a tablespace name for a partition, subpartition, or LOBs that did not belong to the shardspace.

Action: Specify a tablespace name that belongs to the same shardspace.

ORA-03907: REF data type is not supported for duplicated tables.
Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-03908: cannot drop duplicated table materialized views on shards
Cause: An attempt was made to manually drop materialized views of a duplicated table on shard databases.

Action: Drop the duplicated table on the catalog database, if required.

ORA-03909: cannot set parameter SHRD_DUPL_TABLE_REFRESH_RATE in SPFILE
Cause: An attempt was made to set parameter SHRD_DUPL_TABLE_REFRESH_RATE in SPFILE.

Action: Set the parameter with SCOPE = MEMORY.

ORA-03910: cannot drop duplicated table materialized view log
Cause: An attempt was made to drop materialized view logs created on duplicated tables.

Action: Drop the duplicated table, if required.

ORA-03911: column *string* is not supported for duplicated tables
Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-03912: option *string* is not supported for duplicated tables
Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-03913: A tablespace cannot be referenced at the table level.
Cause: An attempt was made to reference a tablespace at the table level.

Action: Verify the specified option.

ORA-03914: cannot use tablespace *string* for partition *string*
Cause: At attempt was made to specify a tablespace that was used for a different chunk or partition in the tables already created.

Action: Verify the specified option.

ORA-03915: cannot purge an individual chunk tablespace
Cause: An attempt was made to purge an individual chunk tablespace which is a part of a tablespace set.

Action: Verify the specified option.

ORA-03916: The creation of Information Lifecycle Management (ILM) policy is not supported for duplicated tables.
Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-03917: invalid partition set value
Cause: The attempt to update or insert into a partition set column failed.

Action: Ensure that inserted partition set values are within the shard partition set values.

ORA-03918: invalid number of partitions specified for the child table
Cause: An attempt was made to create a child table with a number of partitions not equal to the number of partitions in the parent table.

Action: Create the child table with a number of partitions that equal the number of partitions in the parent table.

ORA-03919: invalid list value or values specified for the partition *string*
Cause: The list values specified for a partition of the table could not exactly be matched with the list values of the corresponding partition of the parent table.

Action: Create the child table with the list values of a partition that matches the list values of the corresponding partition in the parent table.

ORA-03920: invalid range value specified for the partition *string*
Cause: The range value specified for a partition of the table could not be matched with the range value of the corresponding partition of the parent table.

Action: Create the child table with the range values of a partition that match the range values of the corresponding partition in the parent table.

ORA-03921: invalid number of list values specified for the partition *string*
Cause: The number of list values specified for a partition of the table was not equal to the number of list values specified for the corresponding partition of the parent table.

Action: Create the child table with partitions that have the same number of list values as the corresponding partition in the parent table.

ORA-03922: invalid range or list value specified for the partitionset *string*
Cause: The value specified for the range or list of the partitionset did not exactly match the value specified for the partitionset in the parent table.

Action: Create the child table with partitionsets whose values for range or list exactly matches the values specified for the partitionset in the parent table.

ORA-03923: cannot drop a tablespace set used for a composite sharded table
Cause: The tablespace was used for a composite sharded table and cannot be dropped unless the contents are dropped manually.

Action: Drop the contents of the tablespace set first and then drop the tablespace set.

ORA-03924: cannot alter a user-defined sharded table directly in the shard database
Cause: An attempt was made to alter a user-defined sharded table directly on the shard database.

Action: All alter operations on a user-defined sharded table must be executed on the catalog database to maintain consistency in the shards.

ORA-03925: duplicate partitionset name
Cause: Name of a partitionset of a table being created is not unique.

Action: rename partitionset(s) to ensure that their names are unique among partitionsets of the table being created.

ORA-03926: DEFAULT tablespace is not supported for sharded tables or indexes.
Cause: An attempt was made to use DEFAULT tablespaces for sharded tables or indexes.

Action: Use valid tablespace or tablespace set names for sharded tables and indexes on sharded tables.

ORA-03927: invalid use of STORE IN clause for a sharded table or index
Cause: The STORE IN (tablespace list) clause was used to specify tablespaces for partitions of a sharded table or for partitions of an index where the sharded table did not have subpartitions or the subpartition method was not hash.

Action: Use the TABLESPACE SET clause or SUBPARTITION TEMPLATE clause to specify tablespaces for table and index partitions or table subpartitions, respectively.

ORA-03929: CREATE TABLE...AS SELECT statement is not supported for sharded tables.
Cause: An attempt was made to create a sharded table AS SELECT from another table, which is not supported.

Action: Do not create any sharded table AS SELECT from other tables.

ORA-03930: Editions are not supported for sharded tables.
Cause: An attempt was made to create a sharded table using editions, which is not supported.

Action: Do not create any sharded table using editions.

ORA-03931: maximum number of sharding columns for consistent hash is 15.
Cause: The number of columns in a sharding key column list exceeded the legal limit of 15.

Action: Modify the sharding key column list so that it consists of at most 15 columns.

ORA-03932: cannot create the default shard tablespace on the catalog when shard DDL is enabled
Cause: An attempt was made to create a tablespace in the catalog which is created on the shards by default in user-defined sharding.

Action: Disable shard DDL on the catalog if the tablespace has to be created on the catalog.

ORA-03933: An all-shard object cannot depend on any local objects.
Cause: An attempt was made to create or alter an all-shard object to depend on a local user object, which is not allowed.

Action: Do not create or alter an all-shard object to depend on any local user objects.

ORA-03934: An all-shard index cannot be created on local tables.
Cause: An attempt was made to create an all-shard index on a local user table, which is not allowed.

Action: Do not create such indices.

ORA-03935: A sharded table cannot have columns that depend on local objects.
Cause: An attempt was made to create or alter a sharded table to contain columns that depend on local objects, which is not allowed.

Action: Do not create or alter sharded tables to have such columns.

ORA-03936: cannot use a sharded tablespace for non-sharding purposes
Cause: An attempt was made to use a sharded tablespace for non-sharding purposes.

Action: Use a normal tablespace instead of a sharded tablespace.

ORA-03937: The creation of Information Lifecycle Management (ILM) policy is not supported for duplicated tables.
Cause: An invalid option was specified while altering duplicated tables.

Action: Verify the specified option.

ORA-03938: cannot create duplicated tables on a shard database
Cause: An attempt was made to create a duplicated table on a shard database, which is not supported.

Action: Connect to each shard and create the table locally.

ORA-03939: cannot specify a data file name for a tablespace in a sharding setup
Cause: The data file name was specified during creation of the tablespace. Only Oracle Managed Files are supported by a tablespace used in a sharding setup.

Action: Remove the file name from the data file definition.

ORA-03940: A trigger cannot be created on any sharded table.
Cause: An attempt was made to create a trigger on a sharded table, which is not allowed.

Action: Do not create such triggers.

ORA-03941: A shard key or partition set key column cannot be a sequence.
Cause: An attempt was made to create a sharded table having a shard key or a partition set key column based on a sequence, which is not allowed.

Action: Do not use sequences for shard key or partition set key columns.

ORA-03942: cannot create temporary tablespace sets
Cause: An attempt was made to create a temporary tablespace set, which is not allowed.

Action: Do not create temporary tablespace sets.

ORA-03943: zone maps are not supported on sharded tables
Cause: An attempt was made to create a materialized zone map on a sharded table, which is not supported.

Action: Do not create materialized zone maps on sharded tables.

ORA-03944: cannot specify PARENT clause for duplicated tables
Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-03945: Cannot perform the operation on the child table before performing the same operation on the root table
Cause: An attempt was made to alter the child table to add or drop or split a partition whose root partition has not been added or dropped or split yet.

Action: Alter the root table to add or drop or split the partition before trying to add or drop or split the partition in the child table.

ORA-03946: Operation is not supported on a user-defined sharded table
Cause: An attempt was made to perform an unsupported partition operation on a user-defined sharded table.

Action: Do not perform the operation.

ORA-03947: cannot create an autolist or interval partitioned sharded table
Cause: An attempt was made to create an autolist or interval partitioned sharded table.

Action: Create a sharded table that is not an autolist or interval partitioned.

ORA-03948: A DEFAULT partition or partition set cannot be specified for a sharded table.
Cause: An attempt was made to create a partition or partition set with a DEFAULT high value on a sharded table.

Action: Do not create a partition or partition set with a DEFAULT high value.

ORA-03949: password is required for encypted columns in a sharded table
Cause: An attempt was made to create a sharded table containing an encrypted column without specifying a password.

Action: Provide a password for the encrypted column(s) in the CREATE

ORA-03950: GoldenGate error: *string*
Cause: An operation failed when performed using Oracle GoldenGate.

Action: Correct the error specified in Oracle GoldenGate output.

ORA-03951: Invalid OGG service descriptor - OGG message: *string*
Cause: One or more components of the Oracle GoldenGate (OGG) service descriptor could not be verified.

Action: Refer to the Oracle GoldenGate message for the required action.

ORA-03952: OGG *string* URI: *string* is not reachable - HTTP message: *string*
Cause: Oracle GoldenGate (OGG) AdminService or DistributionService could not be reached.

Action: Refer to the HTTP message for the required action.

ORA-03953: OGG *string* URI: *string* failed to *string string*: *string* - OGG message: *string*
Cause: Oracle GoldenGate (OGG) AdminService or DistributionService operation failed.

Action: Refer to the Oracle GoldenGate message for the required action.

ORA-03954: OGG sharding function called in an invalid context: *string* function called in *string*
Cause: Internal error. An Oracle GoldenGate (OGG) sharding functionality was called in an invalid context, for example, catalog function in shard or vice versa.

Action: Contact Oracle Support Services.

ORA-03955: Invalid combination of OGG deployment parameters specified for shardgroup: *string* (S=*string*, C=*string*, R=*string*)
Cause: The values specified for Oracle GoldenGate (OGG) deployment parameters (number of shards - S, number of chunks - C and replication factor - R) for the shardgroup were not compatible with each other.

Action: Ensure that the following invariants hold for the shardgroup: number of chunks >= number of shards number of shards >= replication factor

ORA-03956: Invalid entry in the OGG command payload: *string*
Cause: Internal error. The payload for Oracle GoldenGate (OGG) command sent from the sharding catalog to the shard database contained an invalid entry.

Action: Contact Oracle Support Services.

ORA-03957: Sharding configuration parameter '*string*' is not set in the shard database.
Cause: Internal error. A database initialization parameter required by the shard database was not set during deployment.

Action: Contact Oracle Support Services.

ORA-03958: Failure to remove shard: *string* - *string*
Cause: A request to remove a shard database failed.

Action: Check the shard error message for details.

ORA-03959: chunk allocation error in shardgroup: *string* - *string*
Cause: Internal error. Chunk allocation algorithm for Oracle GoldenGate (OGG) detected inconsistencies in the sharding configuration.

Action: Contact Oracle Support Services.

ORA-03960: Chunk number '*string*' already exists on the target shard.
Cause: An invalid chunk number or target shard name was provided.

Action: Check the chunk number, shard name and try again.

ORA-03961: A move chunk request already exists for chunk number '*string*' from the source shard.
Cause: An invalid chunk number or source shard name was provided.

Action: Check the chunk number, shard name and try again.

ORA-03962: invalid SPLIT PARTITION command for a user-defined sharded object
Cause: Tablespaces for resulting partitions in a SPLIT PARTITION command were either unspecified or in use.

Action: An unused tablespace should be provided for each resulting partition of the SPLIT PARTITION command.

ORA-03964: updated or deleted row of duplicated table is not synchronized with catalog
Cause: An attempt was made to update or delete the row of a duplicated table that was recently inserted on this shard database. This table did not have primary key; therefore, any modifications of the inserted row cannot be performed until after the next duplicated table refresh (the default timeout is 1 minute).

Action: Wait until the duplicated table is refreshed and repeat the operation.

ORA-03965: updated or deleted row of duplicated table is not found on catalog
Cause: An attempt was made to update or delete the row of a materialized view on a shard database but the materialized view was not synchronized with the catalog and the affected rows were already deleted from the catalog by another shard database.

Action: Wait until the duplicated table is refreshed and repeat the operation.

ORA-03966: cannot alter duplicated table materialized views on shards
Cause: An attempt was made to manually alter materialized views of a duplicated table on shard databases.

Action: Alter the duplicated table on the catalog database, if required.

ORA-03967: failed to rename the materialized view log when renaming duplicated table
Cause: An attempt was made to rename the duplicated table, and the internal statement to rename the materialized view log failed.

Action: Drop the duplicated table, and re-create it.

ORA-03968: Invisible column is not supported for duplicated tables.
Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

ORA-04000: the sum of PCTUSED and PCTFREE cannot exceed 100
Cause: the sum of PCTUSED and PCTFREE for a cluster or table exceeds 100

Action: create the table/cluster specifying values whose sum is <= 100

ORA-04001: sequence parameter *string* must be an integer
Cause: %s (a sequence parameter) specified was not an integer

Action: create the sequence, giving the specified parameter an integer value

ORA-04002: INCREMENT must be a non-zero integer
Cause: a sequence increment was specified to be zero

Action: specify the increment to be a non-zero value

ORA-04003: sequence parameter *string* exceeds maximum size allowed (*string* digits)
Cause: %s (a sequencer parameter) had too many digits

Action: specify the parameter with the allowed number of digits

ORA-04004: MINVALUE must be less than MAXVALUE
Cause: MINVALUE was specified to be greater than or equal to MAXVALUE

Action: specify a MINVALUE that is less than MAXVALUE

ORA-04005: INCREMENT must be less than MAXVALUE minus MINVALUE
Cause: the INCREMENT specified is >= MAXVALUE-MINVALUE

Action: specify an INCREMENT that is < MAXVALUE-MINVALUE

ORA-04006: START WITH cannot be less than MINVALUE
Cause: the given starting value is less than MINVALUE

Action: make sure that the starting value is >= MINVALUE

ORA-04007: MINVALUE cannot be made to exceed the current value
Cause: the given MINVALUE would be greater than the current value

Action: always make sure that MINVALUE is <= the current value

ORA-04008: START WITH cannot be more than MAXVALUE
Cause: the starting value would be larger than MAXVALUE

Action: make sure that the starting value is less than MAXVALUE

ORA-04009: MAXVALUE cannot be made to be less than the current value
Cause: the current value exceeds the given MAXVALUE

Action: make sure that the new MAXVALUE is larger than the current value

ORA-04010: the number of values to CACHE must be greater than 1
Cause: the value in the CACHE clause was one

Action: specify NOCACHE, or a value larger than one

ORA-04011: sequence *string* must range between *string* and *string*
Cause: the value specified for one of the sequence parameters exceeds limits

Action: specify parameter within these limits

ORA-04012: object is not a sequence
Cause: the object specified cannot have sequence ddl's performed on it

Action: re-enter the statement being careful with the spelling of the name

ORA-04013: number to CACHE must be less than one cycle
Cause: number to CACHE given is larger than values in a cycle

Action: enlarge the cycle, or cache fewer values

ORA-04014: descending sequences that CYCLE must specify MINVALUE
Cause: sequences that cycle must have their wrap-wrap specified

Action: re-create the sequence, specifying its wrap-value

ORA-04015: ascending sequences that CYCLE must specify MAXVALUE
Cause: sequences that cycle must have their wrap-wrap specified

Action: re-create the sequence, specifying its wrap-value

ORA-04016: sequence *string* no longer exists
Cause: sequence was dropped while processing its next value.

Action: re-create the sequence

ORA-04017: invalid value *string* (length = *string*) for parameter MAX_DUMP_FILE_SIZE
Cause: The string supplied for the parameter MAX_DUMP_FILE_SIZE was not an integer, an integer followed by 'K', 'M', or 'G', nor the special value UNLIMITED.

Action: Provide a proper value for this parameter.

ORA-04018: The '*string*' parameter cannot be altered in Oracle Database Standard Edition or Oracle Database Express Edition.
Cause: An attempt was made to alter the specified parameter in the Standard Edition or Express Edition.

Action: Do not attempt to alter the parameter in the Standard Edition or Express Edition.

ORA-04020: deadlock detected while trying to lock object *stringstringstringstringstring*
Cause: While trying to lock a library object, a deadlock is detected.

Action: Retry the operation later.

ORA-04021: timeout occurred while waiting to lock object *stringstringstringstringstring*
Cause: While waiting to lock a library object, a timeout occurred.

Action: Retry the operation later.

ORA-04022: nowait requested, but had to wait to lock dictionary object
Cause: Had to wait to lock a library object during a nowait request.

Action: Retry the operation later.

ORA-04023: Object *stringstringstringstringstring* could not be validated or authorized
Cause: A number of attempts were made to validate or authorize an object but failed.

Action: Please report this error to Oracle Support Services.

ORA-04024: self-deadlock detected while trying to mutex pin cursor *string*
Cause: While trying to mutex pin a cursor, a self-deadlock is detected.

Action: Retry the operation later.

ORA-04025: maximum allowed library object lock allocated for *stringstringstringstringstring*
Cause: Too many active locks for the object has been allocated. This error can be a result of too many cursors kept open per session.

Action: Close cursors, reduce session_cached_cursors value.

ORA-04027: self-deadlock during automatic validation for object *string.string*
Cause: An attempt was made to validate an invalidated object but it failed because of a self-deadlock.

Action: Identify the root cause of the self-deadlock and take corrective action, e.g. compile the invalidated object separately.

ORA-04028: cannot generate diana for object *stringstringstringstringstring*
Cause: Cannot generate diana for an object because of lock conflict.

Action: Please report this error to your support representative.

ORA-04029: error ORA-*string* occurred when querying *stringstringstring*
Cause: The table or view being queried might be missing. The error number indicates the error.

Action: Fix the error.

ORA-04030: out of process memory when trying to allocate *string* bytes (*string*,*string*)
Cause: Operating system process private memory was exhausted.

Action: n/a

ORA-04031: unable to allocate *string* bytes of shared memory ("*string*","*string*","*string*","*string*")
Cause: More shared memory is needed than was allocated in the shared pool or Streams pool.

Action: If the shared pool is out of memory, either use the DBMS_SHARED_POOL package to pin large packages, reduce your use of shared memory, or increase the amount of available shared memory by increasing the value of the initialization parameters SHARED_POOL_RESERVED_SIZE and SHARED_POOL_SIZE. If the large pool is out of memory, increase the initialization parameter LARGE_POOL_SIZE. If the error is issued from an Oracle Streams or XStream process, increase the initialization parameter STREAMS_POOL_SIZE or increase the capture or apply parameter MAX_SGA_SIZE.

ORA-04032: pga_aggregate_target must be set before switching to auto mode
Cause: attempt to set workarea_size_policy to AUTO while pga_aggregate_target is not specified

Action: before setting workarea_size_policy, set pga_aggregate_target to a value representing the total private memory available to the instance. This total is generally the total physical memory available in the system minus what is needed for the SGA minus what is needed for the operating system (e.g. 500MB)

ORA-04033: Insufficient memory to grow pool
Cause: The system had insufficient memory to grow the pool to the specified size.

Action: Specify a smaller value to grow the pool.

ORA-04034: unable to shrink pool to specified size
Cause: The pool could not shrink to the specified size as it could not free memory.

Action: Specify a larger value to which to shrink the pool to.

ORA-04035: unable to allocate *string* bytes of shared memory in shared object cache "*string*" of size "*string*"
Cause: More shared memory is needed than was allocated in the shared object cache.

Action: n/a

ORA-04036: PGA memory used by the instance exceeds PGA_AGGREGATE_LIMIT
Cause: Private memory across the instance exceeded the limit specified in the PGA_AGGREGATE_LIMIT initialization parameter. The largest sessions using Program Global Area (PGA) memory were interrupted to get under the limit.

Action: Increase the PGA_AGGREGATE_LIMIT initialization parameter or reduce memory usage.

ORA-04037: unable to allocate memory on another instance in the cluster
Cause: The instance ran out of memory as its allocated memory was less than the required memory.

Action: Refer to the alert log for the instance which ran out of memory.

ORA-04039: insufficient HugePages to grow System Global Area (SGA)
Cause: The number of system configured HugePages was insufficient to grow the database System Global Area (SGA) to the specified size.

Action: Specify a smaller value of System Global Area (SGA) target or increase the size of the HugePages.

ORA-04041: package specification must be created first before creating package body
Cause: Attempt to create a package body before creating its package specification.

Action: Create the package specification first before creating the package body.

ORA-04042: procedure, function, package, or package body does not exist
Cause: Attempt to access a procedure, function, package, or package body that does not exist.

Action: Make sure the name is correct.

ORA-04043: object *string* does not exist
Cause: An object name was specified that was not recognized by the system. There are several possible causes: - An invalid name for a table, view, sequence, procedure, function, package, or package body was entered. Since the system could not recognize the invalid name, it responded with the message that the named object does not exist. - An attempt was made to rename an index or a cluster, or some other object that cannot be renamed.

Action: Check the spelling of the named object and rerun the code. (Valid names of tables, views, functions, etc. can be listed by querying the data dictionary.)

ORA-04044: procedure, function, package, or type is not allowed here
Cause: A procedure, function, or package was specified in an inappropriate place in a statement.

Action: Make sure the name is correct or remove it.

ORA-04045: errors during recompilation/revalidation of *string*.*string*
Cause: This message indicates the object to which the following errors apply. The errors occurred during implicit recompilation/revalidation of the object.

Action: Check the following errors for more information, and make the necessary corrections to the object.

ORA-04046: results of compilation are too large to support
Cause: Attempt to compile and store a large stored procedure that results in compilation data that is too large for the system to support or store.

Action: Reduce the size of the store procedure by splitting it into smaller stored procedures.

ORA-04047: object specified is incompatible with the flag specified
Cause: The object type implied by the flag does not match the type of object specified.

Action: Specify the correct object, or use the appropriate flag

ORA-04050: invalid or missing procedure, function, or package name
Cause: The required procedure, function, or package name is invalid or missing.

Action: Specify a valid name.

ORA-04051: user *string* cannot use database link *string*.*string*
Cause: During forwarding of a remote object access, an attempt was made to use a non-existent database link or one owned by a user other than the logon user or PUBLIC.

Action: Change your database link structure so that all indirect remote accesses are done from the same userid that originates the request.

ORA-04052: error occurred when looking up remote object *stringstringstringstringstring*
Cause: An error occurred when trying to look up a remote object.

Action: Fix the error. Make sure the remote database system has run CATRPC.SQL to create necessary views used for querying or looking up objects stored in the database.

ORA-04053: error occurred when validating remote object *stringstringstringstringstring*
Cause: An error occurred when trying to validate a remote object.

Action: Fix the error. Make sure the remote database system has run CATRPC.SQL to create necessary views used for querying or looking up objects stored in the database.

ORA-04054: database link *string* does not exist
Cause: During compilation of a PL/SQL block, an attempt was made to use a non-existent database link.

Action: Either use a different database link or create the database link.

ORA-04055: Aborted: "*string*" formed a non-REF mutually-dependent cycle with "*string*".
Cause: This compilation was aborted because the library unit that was compiled would have formed a non-REF mutually-dependent cycle with some other library units. This happens when an attempt is made to compile types that have attributes of other types that may participate in a cycle with this type. Example: create type t1; create type t2 (a t1); create type t1 (a t2);

Action: Break the cycle (possibly by adding a REF or by using another type).

ORA-04060: insufficient privileges to execute *string*
Cause: Attempt to execute a stored procedure without sufficient privileges.

Action: Get necessary privileges.

ORA-04061: existing state of *string* has been invalidated
Cause: Attempt to resume the execution of a stored procedure using the existing state which has become invalid or inconsistent with the stored procedure because the procedure has been altered or dropped.

Action: Try again; this error should have caused the existing state of all packages to be re-initialized.

ORA-04062: *string* of *string* has been changed
Cause: Attempt to execute a stored procedure to serve an RPC stub which specifies a timestamp or signature that is different from the current timestamp/signature of the procedure.

Action: Recompile the caller in order to pick up the new timestamp.

ORA-04063: *string* has errors
Cause: Attempt to execute a stored procedure or use a view that has errors. For stored procedures, the problem could be syntax errors or references to other, non-existent procedures. For views, the problem could be a reference in the view's defining query to a non-existent table. Can also be a table which has references to non-existent or inaccessible types.

Action: Fix the errors and/or create referenced objects as necessary.

ORA-04064: not executed, invalidated *string*
Cause: Attempt to execute a stored procedure that has been invalidated.

Action: Recompile it.

ORA-04065: not executed, altered or dropped *string*
Cause: Attempt to execute a stored procedure that has been altered or dropped thus making it not callable from the calling procedure.

Action: Recompile its dependents.

ORA-04066: non-executable object, *string*
Cause: Attempt to execute a non-procedure.

Action: Make sure that a correct name is given.

ORA-04067: not executed, *string* does not exist
Cause: Attempt to execute a non-existent stored procedure.

Action: Make sure that a correct name is given.

ORA-04068: existing state of packages*stringstringstring* has been discarded
Cause: One of errors 4060 - 4067 when attempt to execute a stored procedure.

Action: Try again after proper re-initialization of any application's state.

ORA-04069: cannot drop or replace a library with table dependents
Cause: An attempt was made to drop or replace a library that has dependents. There could be a table which depends on type which depends on the library being dropped.

Action: Drop all table(s) depending on the type, then retry.

ORA-04070: invalid trigger name
Cause: An invalid trigger name was specified.

Action: Verify that trigger name is not a reserved keyword.

ORA-04071: missing BEFORE, AFTER or INSTEAD OF keyword
Cause: The trigger statement is missing the BEFORE/AFTER/INSTEAD OF clause.

Action: Specify either BEFORE, AFTER or INSTEAD OF.

ORA-04072: invalid trigger type
Cause: An invalid trigger type was given.

Action: Specify either INSERT, UPDATE or DELETE.

ORA-04073: column list not valid for this trigger type
Cause: A column list was specified for a non-update trigger type.

Action: Remove the column list.

ORA-04074: invalid REFERENCING name
Cause: An invalid name was given in the referencing clause.

Action: Verify the referencing name is not a reserved word.

ORA-04075: invalid trigger action
Cause: An statement was given for the trigger action.

Action: Re-specify the trigger action.

ORA-04076: invalid NEW or OLD specification
Cause: An invalid NEW or OLD specification was given for a column.

Action: Re-specify the column using the correct NEW or OLD specification.

ORA-04077: WHEN clause cannot be used with table level triggers
Cause: The when clause can only be specified for row level triggers.

Action: Remove the when clause or specify for each row.

ORA-04078: OLD and NEW values cannot be identical
Cause: The referencing clause specifies identical values for NEW and OLD.

Action: Re-specify either the OLD or NEW referencing value.

ORA-04079: invalid trigger specification
Cause: The create TRIGGER statement is invalid.

Action: Check the statement for correct syntax.

ORA-04080: trigger '*string*' does not exist
Cause: The TRIGGER name is invalid.

Action: Check the trigger name.

ORA-04081: trigger '*string*' already exists
Cause: The TRIGGER name or type already exists.

Action: Use a different trigger name or drop the trigger which is of the same name.

ORA-04082: NEW or OLD references not allowed in table level triggers
Cause: The trigger is accessing "new" or "old" values in a table trigger.

Action: Remove any new or old references.

ORA-04083: invalid trigger variable '*string*'
Cause: The variable referenced in the trigger body is invalid.

Action: See the manual for valid trigger variable types.

ORA-04084: cannot change NEW values for this trigger type
Cause: New trigger variables can only be changed in before row insert or update triggers.

Action: Change the trigger type or remove the variable reference.

ORA-04085: cannot change the value of an OLD reference variable
Cause: Old values can only be read and not changed.

Action: Do not attempt to change an old variable.

ORA-04086: trigger description too long, move comments into triggering code
Cause: The trigger description is limited to 2000 characters (for dictionary storage reasons). The description does not include the text of the "when" clause or the text of the pl/sql code executed for the trigger.

Action: If the trigger description contains a large comment, move that

ORA-04087: cannot change the value of ROWID reference variable
Cause: Rowid's can only be read and not changed.

Action: Do not attempt to change an rowid value.

ORA-04088: error during execution of trigger '*string*.*string*'
Cause: A runtime error occurred during execution of a trigger.

Action: Check the triggers which were involved in the operation.

ORA-04089: cannot create triggers on objects owned by SYS
Cause: An attempt was made to create a trigger on an object owned by SYS.

Action: Do not create triggers on objects owned by SYS.

ORA-04090: '*string*' specifies same table, event and trigger time as '*string*'
Cause: Trigger is of duplicate event and trigger time.

Action: Combine the triggering information into one trigger which is fired at the given time.

ORA-04091: table *string*.*string* is mutating, trigger/function may not see it
Cause: A trigger (or a user defined plsql function that is referenced in this statement) attempted to look at (or modify) a table that was in the middle of being modified by the statement which fired it.

Action: Rewrite the trigger (or function) so it does not read that table.

ORA-04092: cannot *string* in a trigger
Cause: A trigger attempted to commit or rollback.

Action: Rewrite the trigger so it does not commit or rollback.

ORA-04093: references to columns of type LONG are not allowed in triggers
Cause: A trigger attempted to reference a long column in the triggering table.

Action: Do not reference the long column.

ORA-04094: table *string.string* is constraining, trigger may not modify it
Cause: A trigger attempted to modify a table that was constraining for some referential constraint of a parent SQL statement.

Action: n/a

ORA-04095: trigger '*string*' already exists on another table, cannot replace it
Cause: Cannot replace a trigger which already exists on a different table than the one being replaced.

Action: Drop the trigger with the same name and re-create it.

ORA-04096: trigger '*string*' has a WHEN clause which is too large, limit 2K
Cause: A trigger's 'when' clause is limited to 2K for dictionary storage reasons. The trigger being created exceeded that size.

Action: Use a smaller 'when' clause. Note, the trigger body could be used to perform the same limiting action as the 'when' clause.

ORA-04097: DDL conflict while trying to drop or alter a trigger
Cause: An attempt was made to concurrently perform two DDL operations on a trigger or trigger table.

Action: Investigate the new state of the trigger and retry the DDL operation, if still appropriate.

ORA-04098: trigger '*string.string*' is invalid and failed re-validation
Cause: A trigger was attempted to be retrieved for execution and was found to be invalid. This also means that compilation/authorization failed for the trigger.

Action: Options are to resolve the compilation/authorization errors, disable the trigger, or drop the trigger.

ORA-04099: trigger '*string*' is valid but not stored in compiled form
Cause: A trigger was attempted to be retrieved for execution and was found to be valid, but not stored. This may mean the an upgrade was done improperly from a non-stored trigger release.

Action: Alter compile the trigger to create the trigger in stored form. Also, you may want to review that a proper upgrade was done.

75
ORA-05026 to ORA-07499

ORA-05026: cannot delete or update parent key referenced by sharded table
Cause: An attempt was made to delete or update a row from a duplicated table when a foreign key constraint existed in a sharded table referencing this duplicated table and the constraint was ENABLED.

Action: DISABLE NOVALIDATE the constraint before attempting to delete or update rows from the duplicated table. When a sharded table references a duplicated table, deleting a parent row is only allowed when the constraint is in DISABLE state. This means rows from the child sharded table are not looked up for violation. The constraint state can later be changed to ENABLE VALIDATE if there are no rows in sharded table violating the constraint and after duplicated table is refreshed on all shards.

ORA-05027: cannot use ON DELETE clause for this constraint
Cause: A foregin key constraint was being created or altered in a sharded table referencing a duplicated table with ON DELETE clause.

Action: Remove the ON DELETE clause.

ORA-05031: PDB SGA usage has exceeded the limit
Cause: The pluggable database (PDB) was using more system global area (SGA) than the limit set by the SGA_TARGET parameter.

Action: Increase the PDB's SGA_TARGET (limit).

ORA-05700: missing or invalid input value
Cause: A valid input value was not specified.

Action: Reissue the statement specifying a valid input value.

ORA-05701: blockchain user *string* did not exist
Cause: The operation failed because the specified user does not exist.

Action: Create the user and retry the operation.

ORA-05702: unable to retrieve the database global name
Cause: The database initialization parameter GLOBAL_NAMES was not set to be TRUE in a blockchain peer database.

Action: Change GLOBAL_NAMES to TRUE, then retry this operation.

ORA-05703: the referenced database link *string* did not exist
Cause: The database link referenced does not exist.

Action: Create the database link first, then retry this operation.

ORA-05704: the referenced user *string* did not exist
Cause: The user referenced does not exist.

Action: Create the user first, then retry this operation.

ORA-05705: the referenced blockchain *string* did not exist
Cause: The blockchain referenced does not exist.

Action: Create the blockchain first, then retry this operation.

ORA-05706: blockchain *string* already bootstrapped
Cause: The specified blockchain had already been bootstrapped.

Action: No action required.

ORA-05707: The initiating database *string* is not included.
Cause: The bootstrap command did not include the initiating database.

Action: Add the initiating database to the bootstrap command.

ORA-05708: blockchain *string* cannot be altered
Cause: The referenced blockchain either did not exist or was disabled.

Action: No action required.

ORA-05709: peer *string* cannot be added
Cause: Connection information was not found for the referenced peer.

Action: Exeucte the CREATE BLOCKCHAIN statement for the referenced peer first, then retry this operation.

ORA-05710: peer *string* cannot be added
Cause: The referenced peer already existed in the blockchain.

Action: No action required.

ORA-05711: peer *string* cannot be removed
Cause: The referenced peer referenced did not exist in the blockchain.

Action: No action required.

ORA-05712: blockchain *string* cannot be altered
Cause: The referenced blockchain's tentative_epoch# was not NULL.

Action: Reissue the statement after the tentative_epoch# changes to NULL.

ORA-05713: One or more blockchain type objects exist that cannot be downgraded
Cause: There were blockchain type objects in the database that were created in a release later than the selected release for downgrade.

Action: Prior to downgrade, drop the blockchain type objects that cannot be downgraded to the selected release.

ORA-05714: blockchain transaction aborted due to insufficient quorum
Cause: The blockchain transaction could not achieve the quorum to commit successfully.

Action: Check the blockchain votes view for more details.

ORA-05715: operation not allowed on the blockchain or immutable table
Cause: The table was insert-only table and, therefore, could not be updated or deleted.

Action: No action required.

ORA-05716: unsupported hashing algorithm *string*
Cause: The specified hashing algorithm was not supported by the blockchain.

Action: Choose another hashing algorithm.

ORA-05717: unsupported signature algorithm *string*
Cause: The specified signature algorithm was not supported by the blockchain.

Action: Choose another signature algorithm.

ORA-05718: unsupported consensus algorithm *string*
Cause: The specified consensus algorithm was not supported by the blockchain.

Action: Choose another consensus algorithm.

ORA-05719: blockchain *string* cannot be created
Cause: The referenced blockchain already existed.

Action: No action required.

ORA-05720: *string* is not a blockchain table
Cause: The referenced table was not a type blockchain table.

Action: No action required.

ORA-05721: invalid blockchain table type specified
Cause: The blockchain table type could not be specified for objects other than tables.

Action: Remove the blockchain table option.

ORA-05722: deletes not allowed on blockchain table *string*
Cause: A blockchain table was created without a delete rows option. Delete is not allowed.

Action: No action required.

ORA-05723: drop blockchain or immutable table *string* not allowed
Cause: A blockchain or immutable table was created without the drop option.

Action: No action required.

ORA-05724: cannot delete row, not yet expired
Cause: An attempt was made to delete a row from the blockchain table that has not yet expired.

Action: No action required.

ORA-05725: cannot create blockchain table
Cause: An attempt was made to create a blockchain table of a special type that is not supported.

Action: No action required.

ORA-05726: delete row not allowed on this blockchain table
Cause: An attempt was made to delete a row from the blockchain table that does not allow deletion of rows.

Action: No action required.

ORA-05727: low time stamp '*string*' is higher than high time stamp '*string*'
Cause: An attempt was made to verify rows from the blockchain table with an invalid time range.

Action: Retry the operation by specifying a high time stamp higher than the low time stamp.

ORA-05728: COMPATIBLE needs to be *string* or higher to use blockchain or immutable table
Cause: An attempt was made to operate on a blockchain or immutable table with a lower COMPATIBLE parameter value.

Action: Shutdown and startup with the specified compatibility setting.

ORA-05729: blockchain or immutable table cannot be created in root container
Cause: An attempt was made to create a blockchain or immutable table in the root container database.

Action: Create a blockchain or immutable table in a pluggable database.

ORA-05730: data type not supported for blockchain or immutable table
Cause: An attempt was made to create a blockchain or immutable table with an unsupported data type.

Action: No action required.

ORA-05731: blockchain or immutable table *string* cannot be altered
Cause: An attempt was made to alter a blockchain or immutable table that could not be altered.

Action: No action required.

ORA-05732: retention value cannot be lowered
Cause: An attempt was made to alter a blockchain or immutable table to a lower retention value.

Action: Specify a higher retention value.

ORA-05734: signature already exists for row at instance ID '*string*', chain ID '*string*', sequence number '*string*'
Cause: An attempt was made to sign an already signed row of blockchain table.

Action: No action required.

ORA-05735: invalid instance ID '*string*'
Cause: An attempt was made to verify rows from the blockchain table with an invalid instance ID.

Action: Retry the operation by specifying a valid instance ID.

ORA-05736: invalid chain ID '*string*'
Cause: An attempt was made to verify rows from the blockchain table with an invalid chain ID.

Action: Retry the operation by specifying a valid chain ID.

ORA-05737: rows verification failed at instance ID '*string*', chain ID '*string*', sequence number '*string*'
Cause: Rows of blockchain table were corrupted. Verification failed at the row specified by instance ID, chain ID and sequence number.

Action: No action required.

ORA-05738: operation not allowed on the Oracle internal table
Cause: An attempt was made to modify the Oracle internal table.

Action: No action required.

ORA-05739: blockchain or immutable internal column *string* modified
Cause: An attempt was made to modify one or more blockchain or immutable internal columns.

Action: Do not modify Oracle internal blockchain or immutable columns.

ORA-05740: cannot create trigger on a blockchain or immutable table
Cause: An attempt was made to create either before row trigger or compound trigger on a blockchain or immutable table.

Action: Do not create the trigger.

ORA-05741: minimum retention time too low, should be at least *string* days
Cause: An attempt was made to create a blockchain or immutable table with a retention time specified lower than the minimum allowed.

Action: Increase the retention time.

ORA-05742: invalid hash for row at instance ID '*string*', chain ID '*string*', sequence number '*string*'
Cause: An attempt was made to sign a row of blockchain table by specifying an invalid hash.

Action: Retry the operation by specifying a valid row hash.

ORA-05743: owner validation failed for row at instance ID '*string*', chain ID '*string*', sequence number '*string*'
Cause: An attempt was made to sign a row of blockchain table by an invalid user.

Action: No action required.

ORA-05744: no data found from *string.string* at row specified by rowid '*string*'
Cause: No data was found from the specified table at the specified row.

Action: No action required.

ORA-05745: no data found from *string.string* column *string* at row specified by rowid '*string*'
Cause: No data was found from the specified table column at the specified row.

Action: No action required.

ORA-05746: no data found from *string.string* at row specified by instance ID '*string*', chain ID '*string*', sequence number '*string*'
Cause: No data was found from the specified table at the specified row.

Action: No action required.

ORA-05747: maximum retention time too high, should be less than or equal to *string* days
Cause: An attempt was made to create a blockchain or immutable table with a retention time specified higher than the maximum allowed.

Action: Decrease the retention time.

ORA-05748: database open in upgrade mode failed due to nonempty *string.string* table
Cause: A database open in upgrade mode required the specified table to be empty.

Action: Truncate the specified table.

ORA-05749: invalid time range specified
Cause: An attempt was made to verify rows from the blockchain table with an invalid begin end timestamp range.

Action: Retry the operation by specifying a valid time range.

ORA-05750: blockchain *string* checksum mismatch at block *number*
Cause: The cryptographic checksum of blockchain data received from the sender did not match the checksum computed by the receiver.

Action: No action required.

ORA-05751: failed to compute the signature for blockchain *string* at block *number*
Cause: An error was encountered while computing the signature for blockchain entry.

Action: No action required.

ORA-05752: signature verification failed for blockchain *string* at block *number*
Cause: The signature of originator of blockchain entry cannot be verified.

Action: No action required.

ORA-05753: invalid directory for blockchain wallet location
Cause: Directory object for blockchain wallet location does not exist.

Action: Retry the operation with a valid directory object.

ORA-05754: blockchain *string* not found
Cause: The referenced blockchain did not exist in the database.

Action: No action required.

ORA-05755: certificate identified by ID: *string* not found
Cause: The specified certificate did not exist in the database.

Action: Use the correct globally unique identifier of the certificate and retry the operation.

ORA-05756: invalid certificate *string*: start-date *string*, end-date *string*
Cause: The certificate was either expired or not yet valid.

Action: Use a valid certificate and retry the operation.

ORA-05757: signature verification failed for row at instance ID '*string*', chain ID '*string*', sequence number '*string*'
Cause: The signature of originator of the blockchain table row did not match.

Action: No action required.

ORA-05758: illegal character code in column "*string*"
Cause: The specified blockchain table column contained a byte sequence that could not be interpreted as a valid character code in the column's character set. The character set of the column is either the database or the national (NCHAR) character set. Note that Unicode noncharacters, such as U+FFFE and U+FFFF, are considered illegal in Unicode character sets AL32UTF8, AL16UTF16 and UTF8.

Action: Clean up character data before trying to insert it into the database.

ORA-05764: certificate for user *string* not found
Cause: Certificate for specified user did not exist in the database.

Action: Add user certificate and retry the operation.

ORA-05765: failed to access certificate *string*
Cause: Access on specified certificate failed due to NZ error.

Action: No action required.

ORA-05766: initialization parameter WALLET_ROOT is not set
Cause: Blockchain table signing required user private keys and certificates to be present in wallet specified by WALLET_ROOT.

Action: Set initialization parameter WALLET_ROOT appropriately and retry the operation.

ORA-05767: invalid input argument *string* specified for verify_table_blockchain
Cause: An attempt was made to verify blockchain table with one or more invalid arguments

Action: Specify valid arguments and retry the operation.

ORA-05768: epoch validation failed for row at instance ID '*string*', chain ID '*string*', sequence number '*string*'
Cause: An attempt was made to sign a row of blockchain table which was created in an older epoch.

Action: No action required.

ORA-05769: operation not allowed on blockchain or immutable table
Cause: An attempt was made to perform an operation that is not allowed on a blockchain or immutable table.

Action: Do not perform the attempted operation on a blockchain or immutable table.

ORA-05770: unsupported version *string* of blockchain or immutable table *string*.*string*
Cause: An attempt was made to perform an operation on the blockchain or immutable table whose version was not supported by the current release.

Action: Correct the input and try again.

ORA-05771: *string* is not an immutable table
Cause: The referenced table was not an immutable table.

Action: No action required.

ORA-05772: *string* is neither a blockchain table nor an immutable table
Cause: The referenced table was not a blockchain or immutable table.

Action: No action required.

ORA-05773: invalid value '*string*' of argument '*string*' specified for signing a row
Cause: An attempt was made to sign a row of blockchain table with one or more invalid arguments.

Action: Specify valid arguments and retry the operation.

ORA-05774: malicious time *string* detected while operating on blockchain table *string*.*string*
Cause: An attempt was made to perform an operation on the blockchain table using a malicious time.

Action: Check the alert log for details.

ORA-05816: failed to create blockchain or immutable table
Cause: An error was encountered when creating a blockchain or immutable table.

Action: Retry creating the blockchain or immutable table.

ORA-05825: insert during import of table "*string*"."*string*\ failed because system-generated column was NULL
Cause: System-generated columns were null during import table.

Action: None

ORA-06000: NETASY: port open failure
Cause: Autologin unable to open port

Action: Check log file for OS-specific error code

ORA-06001: NETASY: port set-up failure
Cause: Autologin unable to change port attributes

Action: Check log file for OS-specific error code

ORA-06002: NETASY: port read failure
Cause: Autologin unable to read from port

Action: Check log file for OS-specific error code

ORA-06003: NETASY: port write failure
Cause: Autologin unable to write to port

Action: Check log file for OS-specific error code

ORA-06004: NETASY: dialogue file open failure
Cause: Autologin unable to open dialogue file

Action: Check connect string for accuracy/typos

ORA-06005: NETASY: dialogue file read failure
Cause: Autologin unable to read dialogue file

Action: Check log file for OS-specific error code

ORA-06006: NETASY: dialogue execute failure
Cause: Expected response never received

Action: None

ORA-06007: NETASY: bad dialogue format
Cause: Dialogue file contains syntax error

Action: Correct the dialogue file

ORA-06009: NETASY: dialogue filename too long
Cause: Full file spec for dialogue file exceeds 64 bytes

Action: Amend connect string accordingly

ORA-06010: NETASY: dialogue file too long
Cause: Dialogue file exceeds 768 bytes in length

Action: Simplify dialogue (e.g. remove comments, redundant white space), or split into two and link with "more" command

ORA-06011: NETASY: dialogue too long
Cause: One of two: 1. Dialogue contains more than 24 exchange blocks 2. Dialogue send string exceeds 84 bytes in length

Action: Simplify dialogue or split into two and link with "more" command

ORA-06017: NETASY: message receive failure
Cause: Async driver gets I/O error while doing network read operation

Action: Check log file for OS-specific error code and contact your customer support representative.

ORA-06018: NETASY: message send failure
Cause: Async driver gets I/O error while doing network write operation

Action: Check log file for OS-specific error code and contact your customer support representative.

ORA-06019: NETASY: invalid login (connect) string
Cause: Syntax error in login string.

Action: Resubmit with correct string.

ORA-06020: NETASY: initialisation failure
Cause: Async driver unable to complete initialisation

Action: Check log file for OS-specific error code

ORA-06021: NETASY: connect failed
Cause: Async driver unable to establish connection with partner

Action: Check log file for OS-specific error code

ORA-06022: NETASY: channel open failure
Cause: no free channel [should never happen]

Action: Contact your customer support representative.

ORA-06023: NETASY: port open failure
Cause: Async driver unable to open port

Action: Check log file for OS-specific error code

ORA-06024: NETASY: VTM error
Cause: Virtual Terminal Manager unable to read/write to port

Action: Check log file for OS-specific error code

ORA-06025: NETASY: Configuration error
Cause: Async driver genned for server-only, but client service requested

Action: Contact your customer support representative.

ORA-06026: NETASY: port close failure
Cause: Async driver unable to close port

Action: Check log file for OS-specific error code

ORA-06027: NETASY: channel close failure
Cause: Async driver unable to close channel

Action: Check log file for OS-specific error code

ORA-06028: NETASY: unable to intialise for logging
Cause: Async driver unable to initialise for logging I/O

Action: Contact your customer support representative.

ORA-06029: NETASY: port assignment failure
Cause: Async driver unable to assign port to channel [should never happen]

Action: Contact your customer support representative.

ORA-06030: NETDNT: connect failed, unrecognized node name
Cause: Node name specified in host string is unknown (probably misspelled)

Action: Retry with correct node name

ORA-06031: NETDNT: connect failed, unrecognized object name
Cause: Host string contains reference to object (which doesn't exist): @d:*node-obj* => object is ORDN*obj*; when *node* is VMS, the object is ORDN*obj*.COM when *node* is UNIX, the object is ORDN*obj* @d:*node*::"task=*obj*" => object is *obj*; when *node* is VMS, the object is *obj*.COM when *node* is UNIX, the object is *obj*

Action: Retry with correct object name or create the required object on host node

ORA-06032: NETDNT: connect failed, access control data rejected
Cause: Host string contains invalid username/password

Action: Retry with correct username/password

ORA-06033: NETDNT: connect failed, partner rejected connection
Cause: Connection with partner was made but was rejected.

Action: Contact your network administrator.

ORA-06034: NETDNT: connect failed, partner exited unexpectedly
Cause: Connection with host node was made but partner aborted

Action: Make sure object (see 06031, above) is working (for VMS run the command file and make sure that the ORACLE server process starts up); sometimes happens when the network/node is under stress - in this case a retry often works.

ORA-06035: NETDNT: connect failed, insufficient resources
Cause: Insufficient system resources are available to complete the connection; for example, all DECnet channels are in use.

Action: Contact your network administrator.

ORA-06036: NETDNT: connect failed, no response from object

ORA-06037: NETDNT: connect failed, node unreachable
Cause: Host node is down.

Action: Contact your network administrator.

ORA-06038: NETDNT: connect failed, network driver not loaded

ORA-06039: NETDNT: connect failed
Cause: Connect failed for unexpected reason (see OSD error).

Action: Contact your customer support representative.

ORA-06040: NETDNT: invalid login (connect) string
Cause: Syntax error in login string.

Action: Resubmit with correct string.

ORA-06041: NETDNT: disconnect failed
Cause: Driver gets error while doing network close operation

Action: Contact your customer support representative.

ORA-06042: NETDNT: message receive failure
Cause: Driver gets I/O error while doing network read operation

Action: Contact your customer support representative.

ORA-06043: NETDNT: message send failure
Cause: Driver gets I/O error while doing network write operation

Action: Contact your customer support representative.

ORA-06044: NETDNT: connect failed, byte count quota exceeded
Cause: Connect failed because of insufficient byte count quota.

Action: Increase byte count quota.

ORA-06102: NETTCP: cannot allocate context area
Cause: Insufficient dynamic memory available for connection context area.

Action: Contact your customer support representative.

ORA-06105: NETTCP: remote host is unknown
Cause: Host name specified in the login (connect) string is unknown.

Action: Check spelling; make sure name is in the TCP/IP HOST file.

ORA-06106: NETTCP: socket creation failure
Cause: Process open file quota probably exceeded.

Action: Contact your customer support representative.

ORA-06107: NETTCP: ORACLE network server not found
Cause: No entry in SERVICES file for ORACLE server.

Action: Add ("orasrv") entry to the TCP/IP SERVICES file.

ORA-06108: NETTCP: connect to host failed
Cause: Connection attempt to remote host has failed. Probably means that the SQL*Net TCP/IP server on the remote host is not up, or the host itself is not up (check the latter by targeting it with Telnet).

Action: Start the SQL*Net TCP/IP server process on the remote host.

ORA-06109: NETTCP: message receive failure
Cause: I/O error occurred while attempting network read operation.

Action: Contact your customer support representative.

ORA-06110: NETTCP: message send failure
Cause: I/O error occurred while attempting network write operation.

Action: Contact your customer support representative.

ORA-06111: NETTCP: disconnect failure
Cause: Error occurred while closing a socket.

Action: Contact your customer support representative.

ORA-06112: NETTCP: invalid buffer size
Cause: The buffer size specified in the login string exceeds the allowed maximum (of 4096).

Action: Re-submit with valid buffer size.

ORA-06113: NETTCP: Too many connections
Cause: The maximum no. of concurrently open connections has been reached.

Action: Exit an application with an open connection which is no longer required.

ORA-06114: NETTCP: SID lookup failure
Cause: From the remote host's SQL*Net TCP/IP server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA file on the remote host (and restart the SQL*Net TCP/IP server).

ORA-06115: NETTCP: unable to create ORACLE logicals
Cause: The host's SQL*Net TCP/IP server was unable to create the necessary logicals required by the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your system administrator.

ORA-06116: NETTCP: unable to create ORASRV process
Cause: The host's SQL*Net TCP/IP server was unable to create the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your system administrator.

ORA-06117: NETTCP: unable to create ORASRV: quota exceeded
Cause: The host's SQL*Net TCP/IP server was unable to create the ORACLE server process because of quota depletion.

Action: Increase quota allocations to the SQL*Net TCP/IP server process.

ORA-06118: NETTCP: unable to complete handshake with ORASRV
Cause: The ORACLE server process was started but failed to complete its initialization.

Action: Contact your customer support representative.

ORA-06119: NETTCP: spurious client request
Cause: The host's SQL*Net TCP/IP server was unable to recognize this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06120: NETTCP: network driver not loaded
Cause: The TCP/IP network driver is not loaded.

Action: Check that the TCP/IP driver is loaded correctly.

ORA-06121: NETTCP: access failure
Cause: The host's SQL*Net TCP/IP server was unable to test the accessibility of the SID mapping file (specified in CONFIG.ORA) associated with this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06122: NETTCP: setup failure
Cause: The host's SQL*Net TCP/IP server was unable to set up the appropriate environment to service this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06123: NETTCP: cannot set KEEPALIVE
Cause: The host's SQL*Net TCP/IP server was unable to set the socket KEEPLIVE option. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06124: NETTCP: timeout waiting for ORASRV
Cause: The ORACLE server process was started but failed to respond after N secs.

Action: For heavily loaded systems this is not an uncommon occurrence. Increase the value of N (the default is 30) by placing the following entry in the CONFIG.ORA file: SQLNET ORASRV_WAIT = <no. of secs> which will come into effect the next time the SQL*Net TCP/IP server is started.

ORA-06125: NETTCP: ORASRV exited unexpectedly
Cause: The ORACLE server process was started but exited unexpectedly. Possible causes: 1. Insufficient quotas to run ORASRV 2. ORACLE is not installed See the ORASRV output file for more details; the file will be in the ORA_SQLNET directory and will have a name of the form: ORA_SRVTnn_*SID*.OUT

Action: If appropriate action is not obvious from the ORASRV output file then contact your customer support representative.

ORA-06126: NETTCP: ORASRV unable to open network connection
Cause: The ORACLE server process was started but was unable to open the socket passed to it by TCPSRV.

Action: Contact your customer support representative.

ORA-06127: NETTCP: unable to change username
Cause: The host's SQL*Net TCP/IP server could not establish a PROXY LOGIN connection because the client username is unknown (to the host OS).

Action: Create new user account on host.

ORA-06128: NETTCP: unable to create mailbox
Cause: The host's SQL*Net TCP/IP server was unable to create a mailbox (needed for IPC communication with the ORACLE server process). See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06129: NETTCP: unable to transfer socket ownership to ORASRV
Cause: The host's SQL*Net TCP/IP server was unable to transfer the network communication handle to the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06130: NETTCP: host access denied
Cause: The host's SQL*Net TCP/IP server rejected this connection request because the client node does not have access privilege - as determined by the contents of the Valid Node Table (VNT), a component of the host's CONFIG.ORA.

Action: To grant access, add appropriate entry to the host's VNT.

ORA-06131: NETTCP: user access denied
Cause: The host's SQL*Net TCP/IP server rejected this connection request because the client user(name) does not have access privilege - as determined by the contents of the Username Mapping Table (UMT), a component of the host's CONFIG.ORA.

Action: To grant access, add appropriate entry to the host's UMT.

ORA-06132: NETTCP: access denied, wrong password
Cause: The host SQL*Net TCP/IP server rejected this connection request because the client password did not match the host password.

Action: To grant access, get passwords in sync.

ORA-06133: NETTCP: file not found
Cause: The host's SQL*Net TCP/IP server could not find the SID mapping file (specified in CONFIG.ORA) associated with this connection request.

Action: Check CONFIG.ORA for spelling; make correct entry.

ORA-06134: NETTCP: file access privilege violation
Cause: The host's SQL*Net TCP/IP server did not have READ/ EXECUTE permission for the SID mapping file (specified in CONFIG.ORA) associated with this connection request.

Action: Change protection on SID mapping file.

ORA-06135: NETTCP: connection rejected; server is stopping
Cause: The host's SQL*Net TCP/IP server rejected this connection request because it is in the process of stopping.

Action: Re-start SQL*Net TCP/IP server.

ORA-06136: NETTCP: error during connection handshake
Cause: Network I/O failure occurred while communicating with the host's SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06137: NETTCP: error during connection handshake
Cause: Network I/O failure occurred while communicating with the host's SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06138: NETTCP: error during connection handshake
Cause: Network I/O failure occurred while communicating with the host's SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06140: NETTCP: no such user
Cause: A proxy login connect attempt failed because the client username has no counterpart on the host.

Action: Try again with a user that has a counterpart on the host.

ORA-06141: NETTCP: no privilege for user
Cause: A proxy login connect attempt failed because the SQL*Net TCP/IP server had insufficient privileges to access the proxy account.

Action: Change account protection; change server privilges.

ORA-06142: NETTCP: error getting user information
Cause: A proxy login connect attempt failed because the SQL*Net TCP/IP server was unable to access the proxy account. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06143: NETTCP: maximum connections exceeded
Cause: The connect failed because the maximum conncurrent connections supported by the host's SQL*Net TCP/IP server has already been reached.

Action: Wait for a short period and re-try.

ORA-06144: NETTCP: SID (database) is unavailable
Cause: The database administrator on the host has varied the SID offline.

Action: Wait for it to be varied back on-line.

ORA-06145: NETTCP: unable to start ORASRV: images not installed
Cause: The host's SQL*Net TCP/IP server was unable to start the ORACLE server process because the ORACLE protected images were not installed.

Action: Install the images.

ORA-06200: TWOTASK: connect failed, can't create mailbox

ORA-06201: TWOTASK: connect failed, can't attach to mailbox

ORA-06202: TWOTASK: connect failed, can't spawn ORASRV process

ORA-06203: TWOTASK: connect failed, handshake failure

ORA-06204: TWOTASK: connect failed, can't access ORASRV2.COM

ORA-06205: TWOTASK: connect failed, can't create logical name

ORA-06206: TWOTASK: message receive failure

ORA-06207: TWOTASK: message send failure

ORA-06208: TWOTASK: invalid login (connect) string

ORA-06209: TWOTASK: connect failed, mailbox already exists

ORA-06210: TWOTASK: connect failed, ORASRV exited unexpectedly

ORA-06211: TWOTASK: connect failed, timeout waiting for ORASRV

ORA-06212: TWOTASK: connect failed, logical name table is full

ORA-06213: TWOTASK: connect failed

ORA-06214: TWOTASK: connect failed, insufficient quotas to create ORASRV

ORA-06215: TWOTASK: connect failed, ORASRV protected image not installed

ORA-06216: TWOTASK: connect failed, can't find ORASRV image file

ORA-06250: NETNTT: cannot allocate send and receive buffers
Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

ORA-06251: NETNTT: cannot translate address file name
Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-06252: NETNTT: cannot open address file
Cause: The NTT two-task driver could not open a file containing address information.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

ORA-06253: NETNTT: cannot read arguments from address file
Cause: The NTT two-task driver could not read addressing information from its addressing file.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

ORA-06254: NETNTT: cannot share connection to cube
Cause: The NTT two-task driver could not share a connection to the cube.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

ORA-06255: NETNTT: cannot read pid of remote process
Cause: An error occurred while reading the NTT communications link.

Action: Contact your customer support representative.

ORA-06256: NETNTT: remote fork failed
Cause: The Oracle listener process on the cube could not fork off a shadow process.

Action: The instance you are trying to connect to probably doesn't have enough memory to run another shadow process. Ask someone else to log off, or connect to a different instance.

ORA-06257: NETNTT: cannot send command line to shadow process
Cause: An error occurred while writing the NTT communications link.

Action: Contact your customer support representative.

ORA-06258: NETNTT: cannot allocate context area
Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

ORA-06259: NETNTT: cannot read from remote process
Cause: An error occurred while reading the NTT communications link.

Action: Contact your customer support representative.

ORA-06260: NETNTT: cannot write to remote process
Cause: An error occurred while writing the NTT communications linke.

Action: Contact your customer support representative.

ORA-06261: NETNTT: nrange() failed
Cause: The call to 'nrange()' failed while attempting to establish a connection.

Action: Contact your customer support representative.

ORA-06262: NETNTT: nfconn() failed
Cause: The call to 'nfconn()' failed while attempting to establish a connection.

Action: Contact your customer support representative.

ORA-06263: NETNTT: out of memory in pi_connect
Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

ORA-06264: NETNTT: data protocol error
Cause: The NTT two-task driver received an unexpected message type."

Action: Contact your customer support representative.

ORA-06265: NETNTT: break protocol error
Cause: The NTT two-task driver received an unexpected message type."

Action: Contact your customer support representative.

ORA-06266: NETNTT: bad write length
Cause: The NTT two-task driver failed on an internal consistency check.

Action: Contact your customer support representative.

ORA-06267: NETNTT: bad state
Cause: The NTT two-task driver failed on an internal consistency check.

Action: Contact your customer support representative.

ORA-06268: NETNTT: cannot read /etc/oratab
Cause: The NTT two-task driver could not read configuration information from /etc/oratab.

Action: Make sure /etc/oratab exists and is readable. This error may occur if the file is incorrectly formatted. It also may occur if the driver has run out of memory.

ORA-06300: IPA: Disconnect failure
Cause: A fatal error occurred during the disconnect from the server. This was probably caused by inaccessible message queues.

Action: If there is no message queue, restart the SQL*Net IPA servers using ipactl. Otherwise contact your customer support representative.

ORA-06301: IPA: Cannot allocate driver context
Cause: The memory pool is exhausted.

Action: Check the circumstances and try to allocate less memory in your program or adjust the init parameters in your INIT.ORA file and retry.

ORA-06302: IPA: Cannot connect to remote host
Cause: The cause may be one of the following: - there is no ADI server defined to reflect a connection to the specified host. - the remote host is not known by the local system. - the ORACLE kernel on the remote host is not generated with the IPA driver

Action: Check sequentially for the above causes and eliminate the actual cause found.

ORA-06303: IPA: Message send error
Cause: The SQL*Net IPA driver could not write the message into the message queue.

Action: Make sure that the message queue exists and is accessible. If necessary rerun ipactl.

ORA-06304: IPA: Message receive error
Cause: The SQL*Net IPA driver could not read a message from the message queue.

Action: Make sure that the message queue exists and is accessible. If necessary rerun ipactl.

ORA-06305: IPA: Illegal message type
Cause: The communication between user and ORACLE is out of synchronization. This message should not normally be issued.

Action: Contact your customer support representative.

ORA-06306: IPA: Message write length error
Cause: The IPA driver tried to write a message in the queue that was too big for the queue.

Action: Contact your customer support representative.

ORA-06307: IPA: Cannot reset connection
Cause: A fatal error occurred during the resetting of the connection.

Action: Contact your customer support representative.

ORA-06308: IPA: No more connections available
Cause: You have exhausted all your connections.

Action: Try again when some of the current users have logged off.

ORA-06309: IPA: No message queue available
Cause: The SQL*Net IPA servers have not been started.

Action: Run ipactl.

ORA-06310: IPA: Environment variable(s) not set
Cause: Environment variable(s) not set correctly.

Action: Check and correct.

ORA-06311: IPA: Maximum number of servers reached
Cause: Maximum number of servers reached.

Action: Shutdown and restart with an increased maximum number of servers. Note that database links consume one server per link. Be sure to start up enough servers to support database links.

ORA-06312: IPA: Incorrect outgoing service name supplied
Cause: Incorrect outgoing service name supplied.

Action: Check and correct the service name.

ORA-06313: IPA: Shared memory failed to initialise
Cause: The shared memory has not been set up correctly.

Action: Contact your system manager.

ORA-06314: IPA: Event set up failure
Cause: Fatal interprocess communication error.

Action: Contact your system manager.

ORA-06315: IPA: Invalid connect string
Cause: The connect string is malformed.

Action: Check and correct.

ORA-06316: IPA: Invalid database SID
Cause: The SID is unknown at the remote side.

Action: Either the database does not exist, is not running, or there are no reserved servers for that SID.

ORA-06317: IPA: Local maximum number of users exceeded
Cause: The maximum number of simultaneous users of SQL*Net IPA has been exceeded on the local side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06318: IPA: Local maximum number of connections exceeded
Cause: The maximum number of simultaneous connections that SQL*Net IPA can handle to different hosts has been exceeded on the local side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06319: IPA: Remote maximum number of users exceeded
Cause: The maximum number of simultaneous users of SQL*Net IPA has been exceeded on the remote side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06320: IPA: Remote maximum number of connections exceeded
Cause: The maximum number of simultaneous connections that SQL*Net IPA can handle from different hosts has been exceeded on the remote side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06321: IPA: Cannot reach the remote side
Cause: There has been a timeout on an attempt to connect to a remote server the reason for which is most likely to be the remote SQL*Net IPA software is not running. An alternative reason could be that the remote initiator service name is incorrect.

Action: Check and start the remote SQL*Net software. Check that it is started with the correct service names supplied.

ORA-06322: IPA: Fatal shared memory error
Cause: An internal error has occurred in the shared memory handling.

Action: Contact customer support.

ORA-06323: IPA: Cause event error
Cause: Fatal interprocess communication error.

Action: Contact your system manager.

ORA-06400: NETCMN: No default host string specified
Cause: There was no default host string specified in the configuration and the user didn't specify any explicit connect string.

Action: Either reconfigure the system specifying a default connect string or use an explicit connect string.

ORA-06401: NETCMN: invalid driver designator
Cause: The login (connect) string contains an invalid driver designator.

Action: Correct the string and re-submit.

ORA-06402: NETCMN: error receiving break message
Cause: Error occurred while attempting to read a break message.

Action: Contact your customer support representative.

ORA-06403: Unable to allocate memory.
Cause: System unable to allocate needed virtual memory.

Action: Configure more memory, reduce load, or simply try again.

ORA-06404: NETCMN: invalid login (connect) string
Cause: Syntax error in login string.

Action: Correct string and re-submit.

ORA-06405: NETCMN: reset protocol error
Cause: Unable to reset out of break state.

Action: Contact your customer support representative.

ORA-06406: NETCMN: error sending break message
Cause: Error occurred while attempting to send a break message.

Action: Contact your customer support representative.

ORA-06407: NETCMN: unable to set up break handling environment
Cause: Error occurred while attempting to set up asynchronous handlers for incoming, out-of-band break messages.

Action: Contact your customer support representative.

ORA-06408: NETCMN: incorrect message format
Cause: Message from partner contains bad header.

Action: Contact your customer support representative.

ORA-06413: Connection not open.
Cause: Unable to establish connection.

Action: Use diagnostic procedures to ascertain exact problem.

ORA-06416: NETCMN: error on test
Cause: Error occurred while testing I/O status of the network connection.

Action: Contact your customer support representative.

ORA-06419: NETCMN: server can not start oracle
Cause: The remote server was unable to start an ORACLE process on behalf of the client.

Action: Make sure permissions on the remote ORACLE program are correctly set. Contact your system administrator.

ORA-06420: NETCMN: SID lookup failure
Cause: From the remote host's server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA or oratab file on the remote host (restarting the remote server may be needed).

ORA-06421: NETCMN: Error detected in the read-in data
Cause: Error found during recomputation of checksum or CRC.

Action: Possible hardware failures of communication nodes. Contact system administrator immediately.

ORA-06422: NETCMN: Error in sending data
Cause: Unable to transmit data to remote host.

Action: Try reconnect to remote host, and contact your system administrator.

ORA-06423: NETCMN: Error in receiving data
Cause: Unable to receive data from remote host.

Action: Try reconnect to remote host, and contact your system administrator.

ORA-06430: ssaio: Seals do not match
Cause: A function was called with an invalid argument.

Action: Contact your Oracle Customer Support Representative.

ORA-06431: ssaio: Invalid Block number
Cause: The file block number is out of range of the file. The additional information returns the block number.

Action: Verify that the block number is correct. Run dbfsize and check if the block number is in that range. Contact your Oracle Customer Support Representative.

ORA-06432: ssaio: Buffer Not Aligned
Cause: The I/O buffer was not aligned on a 2K boundary.

Action: Contact your Oracle Customer Support Representative.

ORA-06433: ssaio: LSEEK error, unable to seek to requested block.
Cause: The additional information returns the block number

Action: Look up the additional information returned in your operating system reference manual. Verify that the block number is correct.

ORA-06434: ssaio: read error, unable to read requested block from database file.
Cause: The read system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06435: ssaio: write error, unable to write requested block to database file.
Cause: The write system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06436: ssaio: asynchronous I/O failed due to incorrect parameters.
Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06437: ssaio: the asynchronous write was unable to write to the database file.
Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06438: ssaio: the asynchronous read was unable to read from the database file.
Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06439: ssaio: the asynchronous write returned incorrect number of bytes
Cause: This write call may have been truncated. The additional information returns the block number and number of bytes.

Action: Verify that the block number and the number of bytes written are correct.

ORA-06440: ssaio: the asynchronous read returned incorrect number of bytes
Cause: This read call may have been truncated. The additional information returns the block number and number of bytes.

Action: Verify that the block number and the number of bytes read are correct.

ORA-06441: ssvwatev: Incorrect parameter passed to function call
Cause: Either the ORACLE process id, or wait time or event ID is invalid.

Action: The additional information indicates the process id, time and event id.

ORA-06442: ssvwatev: Failed with unexpected error number.
Cause: Some system problems may exists on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06443: ssvpstev: Incorrect parameter passed to function call
Cause: An invalid event ID is passed in to this routine.

Action: The additional information indicates the event id.

ORA-06444: ssvpstev: Failed with unexpected error number.
Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06445: ssvpstevrg: Incorrect parameters passed to function call
Cause: An invalid event id, or the low and high event ID do not exist.

Action: The additional information indicates the error number. It also contains the event id, low boundary and high boundary.

ORA-06446: ssvpstevrg: Failed with unexpected error number.
Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06447: ssvpstp: Incorrect parameter passed to function call
Cause: Invalid oracle process ID is passed in to this routine.

Action: The additional information indicates the process id.

ORA-06448: ssvpstp: Failed with unexpected error number.
Cause: Some system problems may exists on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06449: The list IO or the sysvendor is not installed.
Cause: ORACLE tries to use the sysvendor interface (INIT.ORA parameter use_sysvendor=true) but the UNIX kernel does not have the ORACLE sysvendor interface linked in.

Action: Set use_sysvendor=false in INIT.ORA, if you don't want to use this interface or link the UNIX kernel with this interface so that ORACLE can use it.

ORA-06500: PL/SQL: storage error
Cause: PL/SQL was unable to allocate additional storage. This message normally appears with an ORA-4030 or ORA-4031 error which gives additional information. Sometimes this error can be caused by runaway programs.

Action: 1) Ensure there are no issues or bugs in your PL/SQL program which are causing excessive amounts of memory to be used. 2) Programmatically cause unused objects to be freed (e.g. by setting them to NULL). 3) Increase the amount of shared or process memory (as appropriate) available to you.

ORA-06501: PL/SQL: program error
Cause: This is an internal error message. An error has been detected in a PL/SQL program.

Action: Contact Oracle Support Services.

ORA-06502: PL/SQL: numeric or value error*string*
Cause: An arithmetic, numeric, string, conversion, or constraint error occurred. For example, this error occurs if an attempt is made to assign the value NULL to a variable declared NOT NULL, or if an attempt is made to assign an integer larger than 99 to a variable declared NUMBER(2).

Action: Change the data, how it is manipulated, or how it is declared so that values do not violate constraints.

ORA-06503: PL/SQL: Function returned without value
Cause: A call to PL/SQL function completed, but no RETURN statement was executed.

Action: Rewrite PL/SQL function, making sure that it always returns a value of a proper type.

ORA-06504: PL/SQL: Return types of Result Set variables or query do not match
Cause: Number and/or types of columns in a query does not match declared return type of a result set variable, or declared types of two Result Set variables do not match.

Action: Change the program statement or declaration. Verify what query the variable actually refers to during execution.

ORA-06505: PL/SQL: variable requires more than 32767 bytes of contiguous memory
Cause: A PL/SQL variable was declared with a constraint which required more than 32767 bytes of memory. PL/SQL does not currently support allocations of contiguous memory greater than 32767 bytes.

Action: Consider reducing the constraint in the variable declaration. If that is not possible, try changing the database or national character set to such, that requires less memory for the same constraint. Note: changing the character set will impact execution of all PL/SQL code.

ORA-06508: PL/SQL: could not find program unit being called*string*
Cause: An attempt was made to call a stored program that could not be found. The program may have been dropped or incompatibly modified, or have compiled with errors.

Action: Check that all referenced programs, including their package bodies, exist and are compatible.

ORA-06509: PL/SQL: ICD vector missing for this package
Cause: This indicated a version clash between some package distributed with an Oracle product and the product executable.

Action: Contact Oracle Support Services.

ORA-06510: PL/SQL: unhandled user-defined exception
Cause: A user-defined exception was raised by PL/SQL code, but not handled.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

ORA-06511: PL/SQL: cursor already open
Cause: An attempt was made to open a cursor that was already open.

Action: Close cursor first before reopening.

ORA-06512: at *string*line *string*
Cause: Backtrace message as the stack is unwound by unhandled exceptions.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

ORA-06513: PL/SQL: index for PL/SQL table out of range for host language array
Cause: An attempt is being made to copy a PL/SQL table to a host language array. But an index in the table is either less than one or greater than the maximum size of the host language array. When copying PL/SQL tables to host language arrays, the table entry at index 1 is placed in the first element of the array, the entry at index 2 is placed in the second element of the array, etc. If an table entry has not been assigned then the corresponding element in the host language array is set to null.

Action: Increase size of host language array, or decrease size of PL/SQL table. Also make sure that you don't use index values less than 1.

ORA-06514: PL/SQL: The remote call cannot be handled by the server
Cause: The remote call has parameters that are cursor variables or lob variables. This cannot be handled by stored procedures on your server.

Action: Avoid using cursor variables or lob variables as parameters for stored procedures on this server or upgrade your server to a version that supports this.

ORA-06515: PL/SQL: unhandled exception *string*
Cause: An exception was raised by PL/SQL code, but not handled. The exception number is outside the legal range of Oracle errors.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

ORA-06516: PL/SQL: the Probe packages do not exist or are invalid
Cause: A Probe operation, probably an attempt to initialize the ORACLE server to debug PL/SQL, could not be completed because the Probe packages were not loaded or have become invalid.

Action: DBA should load the Probe packages. This can be done by running the pbload.sql script supplied with the RDBMS.

ORA-06517: PL/SQL: Probe error - *string*
Cause: An error occurred while passing a Probe operation to the server for execution.

Action: Refer to the entry for the embedded error message.

ORA-06518: PL/SQL: Probe version *string* incompatible with version *string*
Cause: The current version of Probe is incompatible with the version on the ORACLE server.

Action: Refer to the documentation to ensure that this degree of compatibility is supported.

ORA-06519: active autonomous transaction detected and rolled back
Cause: Before returning from an autonomous PL/SQL block, all autonomous transactions started within the block must be completed (either committed or rolled back). If not, the active autonomous transaction is implicitly rolled back and this error is raised.

Action: Ensure that before returning from an autonomous PL/SQL block, any active autonomous transactions are explicitly committed or rolled back.

ORA-06520: PL/SQL: Error loading external library
Cause: An error was detected by PL/SQL trying to load the external library dynamically.

Action: Ensure that the dynamic library exists, that it is installed correctly and that it is not corrupt or otherwise unreadable by the operating system. Also, ensure that the library path in the LIBRARY object is correct, including the values of any environment variables used in the library path and the directory path values of any DIRECTORY objects used by the LIBRARY object.

ORA-06521: PL/SQL: Error mapping function
Cause: An error was detected by PL/SQL trying to map the specified function dynamically.

Action: Ensure that the callout function name exists in the dynamic library and that the name specified in the untrusted callout specification exactly matches the function name in the dynamic library.

ORA-06522: *string*
Cause: ORA-06520 or ORA-065211 could stack this error with a system specific error string. Because this error may reveal sensitive file system information, it is not commonly used.

Action: This error string could give the cause for errors ORA-06520 or ORA-06521.

ORA-06523: Maximum number of arguments exceeded
Cause: There is an upper limit on the number of arguments that one can pass to the external function.

Action: Check the port specific documentation on how to calculate the upper limit.

ORA-06524: Unsupported option : *string*
Cause: The option specified is an unsupported feature for external procedures.

Action: Correct the syntax in the external specification

ORA-06525: Length Mismatch for CHAR or RAW data
Cause: The length specified in the length variable has an illegal value. This can happen if you have requested requested a PL/SQL INOUT, OUT or RETURN raw variable to be passed as a RAW with no corresponding length variable. This error can also happen if there is a mismatch in the length value set in the length variable and the length in the orlvstr or orlraw.

Action: Correct the external procedure code and set the length variable correctly.

ORA-06526: Unable to load PL/SQL library
Cause: PL/SQL was unable to instantiate the library referenced by this referenced in the EXTERNAL syntax. This is a serious error and should normally not happen.

Action: Report this problem to customer support.

ORA-06527: External procedure SQLLIB error: *string*
Cause: An error occurred in sqllib during execution of a Pro* external procedure.

Action: The message text indicates the actual SQLLIB error that occurred. Consult the Oracle Error Messages and Codes manual for a complete description of the error message and follow the appropriate action.

ORA-06528: Error executing PL/SQL profiler
Cause: An error occurred in during execution of a PL/SQL profiler procedure.

Action: Check the stacked errors for more details.

ORA-06529: Version mismatch - PL/SQL profiler
Cause: The PL/SQL profiler package (dbmspb.sql, prvtpbp.plb) does not match the version of the code in the server implementing the profiler.

Action: Run the package profload.sql in $ORACLE_HOME/rdbms/admin to load the correct version of the PL/SQL profiler packages

ORA-06530: Reference to uninitialized composite
Cause: An object, LOB, or other composite was referenced as a left hand side without having been initialized.

Action: Initialize the composite with an appropriate constructor or whole-object assignment.

ORA-06531: Reference to uninitialized collection
Cause: An element or member function of a nested table or varray was referenced (where an initialized collection is needed) without the collection having been initialized.

Action: Initialize the collection with an appropriate constructor or whole-object assignment.

ORA-06532: Subscript outside of limit
Cause: A subscript was greater than the limit of a varray or non-positive for a varray or nested table.

Action: Check the program logic and increase the varray limit if necessary.

ORA-06533: Subscript beyond count
Cause: An in-limit subscript was greater than the count of a varray or too large for a nested table.

Action: Check the program logic and explicitly extend if necessary.

ORA-06534: Cannot access Serially Reusable package *string*
Cause: The program attempted to access a Serially Reusable package in PL/SQL called from SQL context (trigger or otherwise). Such an access is currently unsupported.

Action: Check the program logic and remove any references to Serially Reusable packages (procedure, function or variable references) which might happen in PL/SQL called from sql context (trigger or otherwise).

ORA-06535: statement string in *string* is NULL or 0 length
Cause: The program attempted to use a dynamic statement string that was either NULL or 0 length.

Action: Check the program logic and ensure that the dynamic statement string is properly initialized.

ORA-06536: IN bind variable bound to an OUT position
Cause: The program attempted to bind an IN bind variable to a statement that was expecting an OUT bind variable at that position.

Action: Make sure that an OUT or IN OUT bind mode is specified for the bind argument.

ORA-06537: OUT bind variable bound to an IN position
Cause: The program attempted to bind an OUT bind variable to a statement that was expecting an IN bind variable at that position.

Action: Make sure that an IN or IN OUT bind mode is specified for the bind argument.

ORA-06538: statement violates *string* RESTRICT_REFERENCES pragma
Cause: The program attempted to execute a dynamic statement which does not meet the purity level specified (in the pragma RESTRICT_REFERENCES directive) for the module executing the statement.

Action: Ensure that the dynamic statement meets the purity level specified for the module executing the statement.

ORA-06539: target of OPEN must be a query
Cause: The program attempted to perform an OPEN cursor operation on a dynamic statement that was not a query.

Action: Ensure that the OPEN cursor operation is done on a dynamic query statement.

ORA-06540: PL/SQL: compilation error
Cause: A pl/sql compilation error occurred. However, the user generally will not see this error message. Instead, there will be accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

ORA-06541: PL/SQL: compilation error - compilation aborted
Cause: A pl/sql compilation error occurred and the compilation was aborted; but the compilation unit was written out to the backing store. However, unlike ora-06545, the user generally will not see this error message. Instead, there will be accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

ORA-06542: PL/SQL: execution error

ORA-06543: PL/SQL: execution error - execution aborted

ORA-06544: PL/SQL: internal error, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]
Cause: A pl/sql internal error occurred.

Action: Report as a bug; the first argument is the internal error nuber.

ORA-06545: PL/SQL: compilation error - compilation aborted
Cause: A pl/sql compilation error occurred and the compilation was aborted completely without the compilation unit being written out to the backing store. Unlike ora-06541, the user will always see this error along with the accompaning PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

ORA-06546: DDL statement is executed in an illegal context
Cause: DDL statement is executed dynamically in illegal PL/SQL context. - Dynamic OPEN cursor for a DDL in PL/SQL - Bind variable's used in USING clause to EXECUTE IMMEDIATE a DDL - Define variable's used in INTO clause to EXECUTE IMMEDIATE a DDL

Action: Use EXECUTE IMMEDIATE without USING and INTO clauses to execute the DDL statement.

ORA-06547: RETURNING clause must be used with INSERT, UPDATE, or DELETE statements
Cause: EXECUTE IMMEDIATE with a RETURNING clause is used to execute dynamic UPDATE, INSERT, or DELETE statements only.

Action: use RETURNING clause in EXECUTE IMMEDIATE for INSERT, UPDATE, or DELETE statements only. For other statements, use USING clause instead.

ORA-06548: no more rows needed
Cause: The caller of a pipelined function did not need more rows to be produced by the pipelined function.

Action: Do not catch the NO_DATA_NEEDED exception in an exception handling block.

ORA-06549: PL/SQL: failed to dynamically open shared object (DLL): *string*:*string*
Cause: One possible cause might be there are too many DLLs open at the same time.

Action: n/a

ORA-06550: line *string*, column *string*:\n*string*
Cause: Usually a PL/SQL compilation error.

Action: Refer to the following PL/SQL messages for more information about the error.

ORA-06551: PL/SQL: Unhandled exception

ORA-06552: PL/SQL: *string*

ORA-06553: PLS-*string*: *string*

ORA-06554: package DBMS_STANDARD must be created before using PL/SQL
Cause: The DBMS specific extensions to PL/SQL's package "STANDARD" are in package "DBMS_STANDARD". This package must be created before using PL/SQL.

Action: Create package "DBMS_STANDARD". The source for this PL/SQL stored package is provided with the distribution.

ORA-06555: this name is currently reserved for use by user SYS
Cause: You tried to create a package named "STANDARD", "DBMS_STANDARD" or "DEBUG_IO". These are currently reserved for use by user SYS.

Action: Choose another name for your package.

ORA-06556: the pipe is empty, cannot fulfill the unpack_message request
Cause: There are no more items in the pipe.

Action: Check that the sender and receiver agree on the number and types of items placed on the pipe.

ORA-06557: null values are not allowed for any parameters to pipe icd's
Cause: Internal error from the dbms_pipe package.

Action: Contact Oracle Support Services.

ORA-06558: buffer in dbms_pipe package is full. No more items allowed
Cause: The pipe buffer size has been exceeded.

Action: Inspect the program to analyze the rate of input and output to the pipe. You might need to take items out of the pipe by executing RECEIVE_MESSAGE, or empty the entire pipe by executing PURGE on the pipe.

ORA-06559: wrong datatype requested, *string*, actual datatype is *string*
Cause: The sender put different datatype on the pipe than that being requested (package 'dbms_pipe'). The numbers are: 6 - number, 9 - char, 12 - date.

Action: Check that the sender and receiver agree on the number and types of items placed on the pipe.

ORA-06560: pos, *string*, is negative or larger than the buffer size, *string*
Cause: Internal error from the dbms_pipe package.

Action: Contact Oracle Support Services.

ORA-06561: given statement is not supported by package DBMS_SQL
Cause: Attempting to parse an unsupported statement using procedure PARSE provided by package DBMS_SQL.

Action: Only statements which begin with SELECT, DELETE, INSERT, UPDATE, LOCK, BEGIN, DECLARE or << (PL/SQL label delimiter) are supported.

ORA-06562: type of out argument must match type of column or bind variable
Cause: Attempting to get the value of a column or a bind variable by calling procedure COLUMN_VALUE or VARIABLE_VALUE of package DBMS_SQL but the type of the given out argument where to place the value is different from the type of the column or bind variable that was previously defined by calling procedure DEFINE_COLUMN (for defining a column) or BIND_VARIABLE (for binding a bind variable) of package DBMS_SQL.

Action: Pass in an out argument of the correct type when calling procedure COLUMN_VALUE or VARIABLE_VALUE. The right type is the type that was provided when defining the column or binding the bind variable.

ORA-06563: name has too many parts
Cause: The name to be resolved was specified as one of the following: - With three parts (A.B.C) but the A.B parts resolved to an object that did not expose visible nested procedures; the C part could not be resolved. - With two parts (A.B) and the A part resolved to an object that did not expose visible nested procedures; the B part could not be resolved.

Action: Specify the valid name of an object or of a packaged procedure or function without specifying any additional trailing parts.

ORA-06564: object *string* does not exist
Cause: The named object could not be found. Either it does not exist or you do not have permission to access it.

Action: Create the object or get permission to access it.

ORA-06565: cannot execute *string* from within stored procedure
Cause: The named procedure cannot be executed from within a stored procedure, function or package. This function can only be used from pl/sql anonymous blocks.

Action: Remove the procedure from the calling stored procedure.

ORA-06566: invalid number of rows specified
Cause: An invalid number of rows was specified in a call to the procedure DEFINE_COLUMN in the package DBMS_SQL. For a given parsed statement in a given cursor, all columns must be defined to have the same number of rows, so all the calls to DEFINE_COLUMN must specify the same number of rows.

Action: Specify a number that matches that for previously defined columns.

ORA-06567: invalid number of values specified
Cause: An invalid number of values to be bound was specified in a call to the procedure BIND_VARIABLE in the package DBMS_SQL. In order to execute a given parsed statement in a given cursor, the same number of values must have been bound for all bind variables, so when EXECUTE is called, the latest calls to

BIND_VARIABLE must must have specified the same number of values to be bound for all bind variables.

Action: Make sure that the same number of values have been bound for all of the bind variables.

ORA-06568: obsolete ICD procedure called
Cause: An obsolete ICD procedure was called by a PL/SQL program. The PL/SQL program was probably written for an eralier release of RDBMS.

Action: Make sure that all PL/SQL programs have been upgraded to the latest release of the RDBMS. This can be accomplished by following upgrade instructions in the README file, or by running the catproc.sql script supplied with the RDBMS.

ORA-06569: Collection bound by bind_array contains no elements
Cause: A collection with zero elements was bound to a bind variable in a call to procedure BIND_ARRAY in the package DBMS_SQL. In order to execute a bind of a collection, the collection must contain at least one element. If no elements are present then at execute time there will be no value for this bind and the statement is meaningless.

Action: Fill the collection with the elements you want to bind and try the bind call again.

ORA-06570: shared pool object does not exist, cannot be pinned/purged
Cause: The specified shared pool shared cursor could not be found, therefore it cannot be pinned/purged.

Action: Make sure that a correct shared cursor name is given. Names are a string of the form 'HHHHHHHH,SDDDDDDDDDD' where the H's are an 8 digit hex number from the 'address' column of v$sqlarea, and the D's are a 1 to 10 digit decimal number with an optional leading sign (from the 'hash_value' column) Remove the procedure from the calling stored procedure.

ORA-06571: Function *string* does not guarantee not to update database
Cause: There are two possible causes for this message: * A SQL statement references a packaged, PL/SQL function that does not contain a pragma that prevents the database from being updated. * A SQL statement references a stand-alone, PL/SQL function that contains an instruction to update the database.

Action: If the referenced function is a packaged, PL/SQL function: Recreate the PL/SQL function with the required pragma; be certain to include the 'Write No Database State' (WNDS) argument in the argument list of the pragma. If the referenced function is a stand-alone, PL/SQL function: Do not use the function.

ORA-06572: Function *string* has out arguments
Cause: A SQL statement references either a packaged, or a stand-alone, PL/SQL function that contains an OUT parameter in its argument list. PL/SQL functions referenced by SQL statements must not contain the OUT parameter.

Action: Recreate the PL/SQL function without the OUT parameter in the argument list.

ORA-06573: Function *string* modifies package state, cannot be used here
Cause: There are two possible causes for this message: * A SQL statement references a packaged, PL/SQL function that does not contain a pragma containing the 'Write no Package State' (WNPS). * A SQL statement references a stand-alone, PL/SQL function that modifies a package state. A stand-alone, PL/SQL function referenced by a SQL statement cannot modify a package state.

Action: If the function is a packaged, PL/SQL function: Recreate the function and include a pragma containing the 'Write no Package State' (WNPS). If the function is a stand-alone, PL/SQL function: Delete the function from the SQL statement.

ORA-06574: Function *string* references package state, cannot execute remotely
Cause: There are two possible causes for this message: * A remote, packaged function or a remote-mapped, local, packaged function that does not contain a pragma with the 'Write no Package State' (WNPS) and 'Read no Package State' (RNPS) arguments references a package state. * A remote, stand-alone function or a remote-mapped, local, stand-alone function contains a reference to a package state (reads or writes a package variable). Only local functions that are referenced in a SELECT list, VALUES clause of an INSERT statement, or SET clause of an UPDATE statement can modify a package state.

Action: If the function is a packaged function: Recreate the function and include a pragma containing the 'Write no Package State' (WNPS) and 'Read no Package State' (RNPS) arguments. If the function is a stand-alone function: Do not call the function.

ORA-06575: Package or function *string* is in an invalid state
Cause: A SQL statement references a PL/SQL function that is in an invalid state. Oracle attempted to compile the function, but detected errors.

Action: Check the SQL statement and the PL/SQL function for syntax errors or incorrectly assigned, or missing, privileges for a referenced object.

ORA-06576: not a valid function or procedure name
Cause: Could not find a function (if an INTO clause was present) or a procedure (if the statement did not have an INTO clause) to call.

Action: Change the statement to invoke a function or procedure

ORA-06577: output parameter not a bind variable
Cause: The argument corresponding to an IN/OUT or OUT parameter for a function or a procedure or a function return value in a CALL statement must be a bind variable.

Action: Change the argument to a bind variable

ORA-06578: output parameter cannot be a duplicate bind
Cause: The bind variable corresponding to an IN/OUT or OUT parameter for a function or a procedure or a function return value in a CALL statement cannot be a duplicate bind variable.

Action: Change the bind variable to be unique

ORA-06579: Bind variable not big enough to hold the output value
Cause: The bind variable specified by the user is not large enough to hold the output returned by the function or a procedure.

Action: Specify a bind variable of larger size.

ORA-06580: Hash Join ran out of memory while keeping large rows in memory
Cause: Hash Join reserves 3 slots (each slot size = DB_BLOCK_SIZE * HASH_JOIN_MULTIBLOCK_IO_COUNT) for a row. If a row is larger than that, this error will be raised.

Action: Increase HASH_JOIN_MULTIBLOCK_IO_COUNT so that each joined row fits in a slot. HASH_AREA_SIZE may also need to be increaed.

ORA-06592: CASE not found while executing CASE statement
Cause: A CASE statement must either list all possible cases or have an else clause.

Action: Add all missing cases or an else clause.

ORA-06593: *string* is not supported with natively compiled PL/SQL modules
Cause: Specified feature is not yet supported for natively compiled PL/SQL modules yet.

Action: Recompile the relevant PL/SQL modules in non-native mode by setting the parameter plsql_compiler_flags to INTERPRETED.

ORA-06595: REF CURSOR parameters are not supported in forwarded RPC calls
Cause: An attempt was made to make a forwarded RPC call with a REF CURSOR parameter.

Action: Either call the remote function directly (i.e., not by way of forwarding), or move the remote function to a database where it can be called directly.

ORA-06596: object cannot be purged, object is permanently kept in shared pool
Cause: The specified object was permanently kept, therefore, cannot be purged.

Action: Use DBMS_SHARED_POOL.UNKEEP procedure to unkeep the object and then purge it.

ORA-06597: Failed to increase the session's call stack memory to *string* bytes at a depth of *string* calls. (The current maximum is *string* bytes.)
Cause: PL/SQL program execution used more call stack memory than permitted.

Action: * Ask your DBA to increase the maximum allowed call stack memory. * Decrease the amount of call stack used by the program. This may be accomplished by using fewer, smaller local variables, or by limiting the depth of function call nesting.

ORA-06598: insufficient INHERIT PRIVILEGES privilege
Cause: An attempt was made to run an AUTHID CURRENT_USER function or procedure, or to reference a BEQUEATH CURRENT_USER view, and the owner of that function, procedure, or view lacks INHERIT PRIVILEGES privilege on the calling user.

Action: Either do not call the function or procedure or reference the view, or grant the owner of the function, procedure, or view INHERIT PRIVILEGES privilege on the calling user.

ORA-06599: unsupported LOB operation in RPC call
Cause: An attempt was made to perform certain large object (LOB) date type operations (for example, deep copying of a temporary or abstract LOB on the client side) while performing a remote procedural call (RPC). This is not currently supported.

Action: Perform the LOB operation in question before starting the RPC. Or, perform those LOB operations on the server side instead of the client side.

ORA-06600: LU6.2 Driver: SNA software is not loaded
Cause: The SNA software is not running.

Action: Start the SNA software and try again.

ORA-06601: LU6.2 Driver: Invalid database ID string
Cause: The database string in the connect was invalid.

Action: Provide a valid database string, as defined in documentation.

ORA-06602: LU6.2 Driver: Error allocating context area
Cause: Context area failure.

Action: Contact your local service representative.

ORA-06603: LU6.2 Driver: Error allocating memory
Cause: Operating system refused request for memory.

Action: Contact you local service representative.

ORA-06604: LU6.2 Driver: Unable to allocate session with remote LU
Cause: Allocate system call failed.

Action: Ensure that the SNA software is running and that sessions are free. If this is the case, then check your SNA configuration data for errors. You may have entered an incorrect parameter.

ORA-06605: LU6.2 Driver: Unexpected line turnaround
Cause: SNA software switched from send to receive unexpectedly.

Action: Check the SNA configuration data, particularly parameters associated with a session.

ORA-06606: LU6.2 Driver: Unexpected response from SNA
Cause: A parameter in an SNA call returned an unexpected value.

Action: Attempt to reproduce problem, debug and record the value of the 'what' data parameter at the time of error. Then contact your service representative.

ORA-06607: LU6.2 Driver: Reset occurred in send state
Cause: A reset was issued whilst in send state.

Action: Check the SNA LOG data, if relevent, for further information.

ORA-06608: LU6.2 Driver: Reset occurred in receive state
Cause: A reset was received from the partner whilst in receive state. This may be because the partner deallocated.

Action: Check the SNA LOG data, if relevent, for further information.

ORA-06610: LU6.2 Driver: Failed during deallocation
Cause: LU6.2 driver was unable to deallocate gracefully.

Action: Check the reason for deallocation. Consult the SNA LOG data.

ORA-06611: LU6.2 Driver: Request to send error

ORA-06612: LU6.2 Driver: Send data error

ORA-06613: LU6.2 Driver: Receive and wait error

ORA-06614: LU6.2 Driver: Receive Immediate error

ORA-06615: LU6.2 Driver: Send error

ORA-06616: LU6.2 Driver: Attach to LU failed
Cause: The SQL*Net LU6.2 driver was unable to attach to the LU specified in the connect string, or was unable to attach to the default LU.

Action: Check that the LU name specified in the connect string, or the default LU name if no LU was specified, is correctly configured and operational.

ORA-06617: LU6.2 Driver: Attach to PU failed

ORA-06618: LU6.2 Driver: Activation of subnetwork failed

ORA-06619: LU6.2 Driver: Unable to activate remote partner

ORA-06620: LU6.2 Driver: Invalid remote partner

ORA-06621: LU6.2 Driver: Allocation error

ORA-06622: LU6.2 Driver: Unable to attach to SNA
Cause: The SQL*Net LU6.2 driver could not attach to the SNA software on your machine. The most likely cause is that the SNA software is not operational.

Action: Check the status of the SNA software, ensure that it is operational and then try again.

ORA-06700: TLI Driver: incorrect message type from host
Cause: TLI received a message with an unrecognizable message type.

Action: Contact your customer support representative.

ORA-06701: TLI Driver: incorrect number of bytes written
Cause: TLI sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes supplied to the driver.

Action: Contact your customer support representative.

ORA-06702: TLI Driver: cannot allocate context area
Cause: TLI could not allocate heap space for the context area.

Action: Contact your customer support representative.

ORA-06703: TLI Driver: send break message failed
Cause: TLI failed to send a break message across the connection.

Action: Contact your customer support representative.

ORA-06704: TLI Driver: receive break message failed
Cause: TLI failed to receive an expected break message.

Action: Contact your customer support representative.

ORA-06705: TLI Driver: remote node is unknown
Cause: TLI could not find your remote host information.

Action: Make sure you specified the hostname correctly on the command line. (Also, check your capitalization and spelling.)

ORA-06706: TLI Driver: service not found
Cause: TLI could not find service information for the specified service name.

Action: If you specified the service name on the command line or with the environment variable TLI_SERVER, make sure you specified it correctly. If the service name is not in the SERVICES file for your protocol, ask your system adminstrator to add it.

ORA-06707: TLI Driver: connection failed
Cause: TLI failed to establish the connection to a SQL*Net TCP/IP server due to an error encountered by the remote server, which has supplied a string describing the remote error.

Action: See the SQL*Net TCP/IP User's Guide section "orasrv Messages" for the specific cause and action.

ORA-06708: TLI Driver: message receive failure
Cause: TLI encountered an error receiving a message from the communication channel.

Action: Contact your customer support representative.

ORA-06709: TLI Driver: message send failure
Cause: TLI encountered an error sending a message across the communication channel.

Action: Contact your customer support representative.

ORA-06710: TLI Driver: send interrupt break message failed
Cause: TLI failed to send a break message while handling an interrupt signal from the user.

Action: Contact your customer support representative.

ORA-06711: TLI Driver: error on bind
Cause: TLI failed to assign a network address to the communication channel.

Action: Contact your customer support representative.

ORA-06712: TLI Driver: error on accept
Cause: TLI failed to accept a connection request from the client.

Action: Contact your customer support representative.

ORA-06713: TLI Driver: error on connect
Cause: TLI failed to connect the client to the remote server. The network line to the remote host may be down.

Action: Use other network login programs to make sure that the remote host is accessible.

ORA-06720: TLI Driver: SID lookup failure
Cause: The database SID supplied in the database login string was not recognized by the remote host.

Action: Ask your system administrator to add the appropriate SID entry to oratab on the remote host.

ORA-06721: TLI Driver: spurious client req
Cause: The remote TLI server received an undefined request.

Action: Contact your customer support representative.

ORA-06722: TLI Driver: connection setup failure
Cause: The remote TLI server rejected the connection request, and the client was unable to retrieve an error code or message.

Action: Contact your customer support representative.

ORA-06730: TLI Driver: unable to open clone device
Cause: TLI failed to open the Streams clone device associated with the transport provider.

Action: Contact your customer support representative.

ORA-06731: TLI Driver: cannot alloc t_call
Cause: TLI cannot allocate space for the client's connection information.

Action: Contact your customer support representative.

ORA-06732: TLI Driver: cannot alloc t_discon
Cause: TLI cannot allocate space for the client's disconnection information.

Action: Contact your customer support representative.

ORA-06733: TLI Driver: failed to receive disconnect
Cause: TLI failed to receive an expected disconnection message during connection release.

Action: Contact your customer support representative.

ORA-06734: TLI Driver: cannot connect
Cause: TLI failed to connect the client to the remote server.

Action: Check that the remote TLI server is running.

ORA-06735: TLI Driver: client failed to close error conn
Cause: TLI failed to properly close a connection after an error was received.

Action: Contact your customer support representative.

ORA-06736: TLI Driver: server not running
Cause: TLI timed out while attempting to connect to the remote TLI server.

Action: Check that the remote TLI server is running with the status utility for the transport provider you are using. If it is not, ask your system adminstrator to start it.

ORA-06737: TLI Driver: connection failed
Cause: TLI could not establish a connection to the remote TLI server.

Action: Check that the remote TLI server is running with the status utility for the transport provider you are using.

ORA-06741: TLI Driver: unable to open protocol device
Cause: The TLI server failed to open the Streams device associated with the transport provider.

Action: Contact your customer support representative.

ORA-06742: TLI Driver: cannot alloc t_bind
Cause: The TLI server cannot allocate space for its requested network address.

Action: Contact your customer support representative.

ORA-06743: TLI Driver: cannot alloc t_bind
Cause: The TLI server cannot allocate space for its actual network address.

Action: Contact your customer support representative.

ORA-06744: TLI Driver: listener cannot bind
Cause: The TLI server failed to assign the correct network address on which to listen for connections.

Action: Contact your customer support representative.

ORA-06745: TLI Driver: listener already running
Cause: The network address on which the TLI server awaits connection requests is in use, possibly because the server is already running.

Action: Ensure that the TLI server is not already running. If it is not running and this error message recurs, contact your customer support representative.

ORA-06746: TLI Driver: cannot alloc t_call
Cause: TLI cannot allocate space for the TLI server's connection information.

Action: Contact your customer support representative.

ORA-06747: TLI Driver: error in listen
Cause: The TLI server encountered an error while listening for connection requests.

Action: Contact your customer support representative.

ORA-06748: TLI Driver: cannot allocate t_discon
Cause: TLI cannot allocate space for the TLI server's disconnection information.

Action: Contact your customer support representative.

ORA-06749: TLI Driver: option not allowed across network
Cause: The requested TLI server command must be issued from the same host on which the server is running.

Action: Log in to the remote host and try again.

ORA-06750: TLI Driver: sync failed
Cause: The ORACLE process started by the TLI server was unable to synchronize its inherited connection.

Action: Contact your customer support representative.

ORA-06751: TLI Driver: bound addresses unequal
Cause: The osn check server address failed. The bound server address was not the same as the requested binding address.

Action: Contact your customer support representative.

ORA-06752: TLI: error in signal setup
Cause: A call to sigaction() returned with a system error.

Action: Contact your customer support representative.

ORA-06753: TLI Driver: name-to-address mapping failed
Cause: For SVR4, the netdir_getbyname() call failed for some unknown reason.

Action: Contact your custumer service representative.

ORA-06754: TLI Driver: unable to get local host address
Cause: The name of the remote host to connect to was not specified, and the name of the local host cannot be retrieved from the HOSTS file.

Action: Contact your system administrator.

ORA-06755: TLI Driver: cannot close transport endpoint
Cause: The TLI server was unable to close a connection after passing it to an ORACLE process.

Action: Contact your customer support representative.

ORA-06756: TLI Driver: cannot open oratab
Cause: The TLI server could not open the file used to define the locations of remotely accessible databases.

Action: Ask your system administrator to check that the file exists and has the correct permissions.

ORA-06757: TLI Driver: server got bad command
Cause: The TLI server received an invalid command.

Action: Contact your customer support representative.

ORA-06760: TLI Driver: timeout reading orderly release
Cause: TLI was not able to retreive an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06761: TLI Driver: error sending orderly release
Cause: TLI encountered an error sending a disconnect message closing the communication channel.

Action: Contact your customer support representative.

ORA-06762: TLI Driver: error reading orderly release
Cause: TLI encountered an error receiving an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06763: TLI Driver: error sending disconnect
Cause: TLI encountered an error sending a disconnect message closing the communication channel.

Action: Contact your customer support representative.

ORA-06764: TLI Driver: error reading disconnect
Cause: TLI was not able to retreive an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06765: TLI Driver: error awaiting orderly release
Cause: TLI encountered an error awaiting a disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06766: TLI Driver: close failed during release
Cause: TLI failed to close the communication channel after receiving a disconnect message.

Action: Contact your customer support representative.

ORA-06767: TLI Driver: alloc failed during release
Cause: TLI cannot allocate space for disconnection information while closing the communication channel.

Action: Contact your customer support representative.

ORA-06770: TLI Driver: error sending version
Cause: TLI encountered an error while sending its version information during connection establishment.

Action: Contact your customer support representative.

ORA-06771: TLI Driver: error reading version
Cause: TLI encountered an error while awaiting the expected version information during connection establishment.

Action: Contact your customer support representative.

ORA-06772: TLI Driver: error sending command
Cause: TLI encountered an error while sending a command message during connection establishment.

Action: Contact your customer support representative.

ORA-06773: TLI Driver: error reading command
Cause: TLI encountered an error while awaiting the expected command message during connection establishment.

Action: Contact your customer support representative.

ORA-06774: TLI Driver: error sending break mode
Cause: TLI encountered an error while sending break-mode message during connection establishment.

Action: Contact your customer support representative.

ORA-06775: TLI Driver: error reading break mode
Cause: TLI encountered an error while awaiting the expected break-mode message during connection establishment.

Action: Contact your customer support representative.

ORA-06776: TLI Driver: error sending parms
Cause: TLI encountered an error while sending the connection parameters during connection establishment.

Action: Contact your customer support representative.

ORA-06777: TLI Driver: error reading parms
Cause: TLI encountered an error while awaiting the expected connection parameter message during connection establishment.

Action: Contact your customer support representative.

ORA-06778: TLI Driver: error sending ccode
Cause: TLI encountered an error while sending the completion status message during connection establishment.

Action: Contact your customer support representative.

ORA-06779: TLI Driver: error reading ccode
Cause: TLI encountered an error while awaiting the expected completion status message during connection establishment.

Action: Contact your customer support representative.

ORA-06780: TLI Driver: recv error code failed
Cause: TLI encountered an error while awaiting an expected error message during connection establishment.

Action: Contact your customer support representative.

ORA-06781: TLI Driver: error reading negotation string
Cause: TLI encountered an error while awaiting the expected negotiation message during connection establishment.

Action: Contact your customer support representative.

ORA-06790: TLI Driver: poll failed
Cause: TLI was unable to poll the communication channel for possible incoming messages.

Action: Contact your customer support representative.

ORA-06791: TLI Driver: poll returned error event
Cause: TLI received an unexpected event while polling the communication channel for possible incoming messages.

Action: Contact your customer support representative.

ORA-06792: TLI Driver: server cannot exec oracle
Cause: The remote TLI server was unable to start an ORACLE process on behalf of the client.

Action: Note the operating system error message or number and contact your system adminstrator. The permissions on the remote ORACLE program may be set incorrectly.

ORA-06793: TLI Driver: server cannot create new process
Cause: The remote TLI server was unable to start an ORACLE process on behalf of the client.

Action: Note the operating system error message or number and contact your system adminstrator. The remote host may be unable to create any new processes due to a full process table.

ORA-06794: TLI Driver: shadow process could not retrieve protocol info
Cause: The ORACLE process either failed to allocate memory to store the protocol information record, or the protocol rejected the request for some unknown reason.

Action: Contact your customer support representative.

ORA-06800: TLI Driver: SQL*Net SPX client went away during reconnect
Cause: The client process was aborted by the system or the user, and was unable to complete the connection establishment with the server listener process.

Action: Determine cause of client exit, and reattempt connection.

ORA-06801: TLI Driver: listen for SPX server reconnect failed
Cause: An unknown event occurred on the client's listening socket.

Action: Contact your customer support representative.

ORA-06802: TLI Driver: could not open the /etc/netware/yellowpages file
Cause: The /etc/netware/yellowpages file does not exist, or is not readable by the TLI listener process.

Action: Insure the file exists and is readable. Make sure that the server machine's node name, network number, ethernet address, and listening socket number are encoded in the file.

ORA-06803: TLI Driver: the IPX device file could not be opened
Cause: The /dev/ipx file does not exist, or the driver has not been installed in the kernel correctly.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06804: TLI Driver: could not bind an IPX address at initialization
Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06805: TLI Driver: could not send datagram SAP packet for SPX
Cause: The socket endpoint for sending SAP packet was corrupted for some unknown reason.

Action: Contact your customer support representative.

ORA-06806: TLI Driver: could not complete protocol initialization for SPX
Cause: A step in the SPX/IPX protocol initialization failed.

Action: Check the previous error reported, and follow corrective action.

ORA-06807: TLI Driver: could not open ethernet device driver file
Cause: The file /dev/eth does not exist, or the driver it references could not be opened.

Action: The system's real ethernet device file, for example /dev/wd, for the Western Digital ethernet driver, should be linked to the file /dev/eth. If this has been done, insure that the ethernet driver has been installed by completing the TCP/IP installation on your system, and testing a connection. If problem continues, contact your customer support representative for a list of supported ethernet drivers.

ORA-06808: TLI Driver: could not link IPX and ethernet streams
Cause: Either the ethernet driver has not been installed in the system correctly, or the ethernet driver is not supported.

Action: Insure that the ethernet driver has been installed by completing the TCP/IP installation on your system, and testing a connection. If problem continues, contact your customer support representative for a list of supported ethernet drivers.

ORA-06809: TLI Driver: could not clear the IPX ethernet SAP at init
Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06810: TLI Driver: could not set the IPX ethernet SAP at init
Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06811: TLI Driver: could not set the IPX network number at init
Cause: The IPX driver has not been correctly installed, or the network number encoded in the /etc/netware/yellowpages file is invalid.

Action: The network number in the yellowpages file should match the four-byte network number of your Novell file server. If this is configured correctly, reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06812: TLI Driver: could not read the ethernet driver's node address
Cause: The ethernet driver is not installed correctly, or does not support this operation.

Action: Contact your customer support representative for a list of supported ethernet drivers.

ORA-06813: TLI Driver: the configured ethernet address is incorrect
Cause: The node address read from the ethernet driver does not match the value encoded in the /etc/netware/yellowpages file for this server.

Action: Confirm the correct ethernet node address for your LAN card, and enter this value in the yellowpages file.

ORA-06814: TLI Driver: the SPX device file could not be opened
Cause: The /dev/nspxd file does not exist, or the driver has not been installed in the kernel correctly.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06815: TLI Driver: could not link SPX and IPX streams
Cause: The SPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06816: TLI Driver: could not set the SPX SAP address
Cause: The SPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06817: TLI Driver: could not read the Novell network address
Cause: The file $ORACLE_HOME/spx/address could not be opened for reading and writing.

Action: Make sure ORACLE_HOME is set, and the permissions on the ORACLE_HOME are read, write. If this file has been unintentially deleted, run spxctl (net option) to reset the configured Novell network number for SQL*Net SPX.

ORA-06900: CMX: cannot read tns directory
Cause: CMX is not started on your system.

Action: Install and/or start CMX on your system.

ORA-06901: CMX: no local name assigned to local application
Cause: Local application oracmx has no local name assigned

Action: Enter unique local name for oracmx in the tns directory

ORA-06902: CMX: cannot attach to cmx subsystem
Cause: ccp-xxxx is not started

Action: start your ccp software on the communication controller

ORA-06903: CMX: cannot read transport address of remote application
Cause: remote application not entered in tns directory

Action: enter remote application in tns directory

ORA-06904: CMX: no transport address available for remote application
Cause: no local name assigned to remote application

Action: assign local name to remote application

ORA-06905: CMX: connect error
Cause: remote partner not listening

Action: make sure remote node has CMX installed and running make sure oracmx is running on remote host

ORA-06906: CMX: cannot get maximum packet size from CMX
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06907: CMX: error during connect confirmation
Cause: remote partner aborted

Action: contact your customer support representative

ORA-06908: CMX: error during transfer of ORACLE_SID
Cause: remote partner aborted

Action: contact your customer support representative

ORA-06909: CMX: error during acknowledge of ORACLE_SID
Cause: remote partner aborted

Action: contact your customer support representative

ORA-06910: CMX: Cannot start oracle process on remote machine
Cause: oracle process not found or wrong mode (should be 4751)

Action: change /etc/oratab or set mode to 4751

ORA-06911: CMX: t_event returns ERROR
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06912: CMX: write error in datarq
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06913: CMX: error during redirection of connection
Cause: oracmx has been stopped, or user process has been aborted

Action: contact your customer support representative

ORA-06914: CMX: unexepected event during start of oracle
Cause: connect sequence out of sync

Action: contact your customer support representative

ORA-06915: CMX: unknown t_event in datarq
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06916: CMX: error in data read (t_datain)
Cause: remote partner aborted

Action: contact your customer support representative

ORA-06917: CMX: error in data read (too many bytes read)
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06918: CMX: T_NOEVENT during wait for read event
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06919: CMX: error during write request (unknown event)
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06920: CMX: getbrkmsg illegal datatype
Cause: received packets are corrupted

Action: contact your customer support representative

ORA-06921: CMX: getdatmsg illegal datatype
Cause: received packets are corrupted

Action: contact your customer support representative

ORA-06922: CMX: bad write length
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06923: CMX: illegal break condition
Cause: break handling out of sync

Action: contact your customer support representative

ORA-06924: CMX: wrong break message length
Cause: received packets are corrupted

Action: contact your customer support representative

ORA-06925: CMX: disconnect during connect request
Cause: partner is not responding

Action: make sure partner is up and running and reachable

ORA-06926: CMX: T_ERROR during read data
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06927: CMX: T_DATAIN received before all data written
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06928: CMX: wrong ORACLE_SID
Cause: ORACLE_SID is not entered in remote oratab

Action: add ORACLE_SID to remote oratab

ORA-06929: CMX: error when sending ORACLE_SID
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06930: CMX: error when checking ORACLE_SID
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06931: CMX: error during read_properties for server
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06932: CMX: error in local name
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06933: CMX: error during attach
Cause: internal error in CMX

Action: contact your customer support representative

ORA-06950: No error
Cause: SQL*Net AppleTalk error codes base. This is not an error.

Action: None

ORA-06951: Operating system call error
Cause: AppleTalk API received error in VMS system service.

Action: Contact Oracle Customer Support representative.

ORA-06952: Remote end of the communication issued a forward-reset packet.
Cause: Peer program may have aborted

Action: Investigate network problems and try again.

ORA-06953: Not enough virtual memory
Cause: Not enough memory available.

Action: Check VMS process quotas and/or sysgen parameters

ORA-06954: Illegal file name
Cause: Erroneous file name

Action: Check path name for server output file, or SQL*Net Appletalk Logical names and symbols.

ORA-06955: Number of database servers exceed limit
Cause: Too many database connections.

Action: Check ATKSRV_MAXCONparameter in configuration file.

ORA-06956: Failed to get local host name
Cause: Unable to get Appletalk host name.

Action: Check Appletalk configuration.

ORA-06957: No SID is currently available
Cause: Incoming SQL*Net connection specified invalid SID name.

Action: Specify correct SID in connect string and retry.

ORA-06958: Failed to access configuration file
Cause: Unable to access CONFIG.ATK

Action: Check file protections.

ORA-06959: Buffer I/O quota is too small
Cause: Buffered I/O quota exceeded.

Action: Increase BIOlm using AUTHORIZE utility and retry.

ORA-06960: Failed to access log file
Cause: SQL*Net Appletalk listener could not create log file.

Action: Check directory path and protections.

ORA-06961: Insufficient privilege for attempted operation
Cause: The attempted operation did not have sufficient privileges.

Action: Check process privileges and retry.

ORA-06970: X.25 Driver: remote host is unknown
Cause: Host name specified in the login (connect string) is unknown.

Action: Check spelling; make sure name is in the X.25 HOST file.

ORA-06971: X.25 Driver: error while receiving data

ORA-06972: X.25 Driver: error while sending data

ORA-06973: X.25 Driver: invalid buffer size
Cause: The buffer size specified in the login string must be between 5 and 4096.

Action: Re-submit with valid buffer size.

ORA-06974: X.25 Driver: SID lookup failure
Cause: From the remote host's SQL*Net X.25 server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA file on the remote host (and restart the SQL*Net X.25 server).

ORA-06975: X.25 Driver: connect to host failed
Cause: Connection attempt to remote host has failed. Probably means that the SQL*Net X.25 server on the remote host is not up, or the host itself is not up.

Action: Start the SQL*Net X.25 server process on the remote host.

ORA-06976: X.25 Driver: endpoint creation failure
Cause: Process open file quota probably exceeded.

Action: Contact your customer support representative.

ORA-06977: X.25 Driver: X.25 Level 2 failure
Cause: X.25 level 2 is down. X.25 link is not working.

Action: Run system checks to verify functioning of X.25 software. Contact your hardware vendor.

ORA-06978: X.25 Driver: Too many callback tries
Cause: Call back address probably same as called address.

Action: Verify that callback address and called address are different.

ORA-06979: X.25 Driver: server cannot start oracle
Cause: The remote X.25 server was unable to start an ORACLE process on behalf of the client.

Action: Make sure permissions on the remote ORACLE program are correctly set. Contact your system administrator.

ORA-07200: slsid: oracle_sid not set.
Cause: The environment variable $(ORACLE_SID) is not set.

Action: Set ORACLE_SID environment variable.

ORA-07201: slhom: oracle_home variable not set in environment.
Cause: $(ORACLE_HOME) environment variable not set.

Action: Set ORACLE_HOME.

ORA-07202: sltln: invalid parameter to sltln.
Cause: The sltln name translation routine was called with invalid arguments. The input, or output stings were either NULL or 0 length.

Action: Probable internal oracle error. Contact customer support.

ORA-07203: sltln: attempt to translate a long environment variable.
Cause: A string was passed to sltln containing a long environment variable. sltln accepts environment names of 30 or less characters.

Action: Shorten environment variable name to less than 30 characters.

ORA-07204: sltln: name translation failed due to lack of output buffer space.
Cause: The sltln routine is given a maximum length buffer to expand the name into. An overflow of this buffer occurred.

Action: Possible internal error. Check output buffer length stored in sercose[0]. Pathnames are limited to 255 characters.

ORA-07205: slgtd: time error, unable to obtain time.
Cause: Time() system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07206: slgtd: gettimeofday error, unable to obtain time.
Cause: Gettimeofday() system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07207: sigpidu: process ID string overflows internal buffer.
Cause: The sigpidu routine is given a maximum length buffer to hold process ID string. An overflow of this buffer occurred.

Action: Internal error. Contact customer support.

ORA-07208: sfwfb: failed to flush dirty buffers to disk.
Cause: The fsync system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07209: sfofi: file size limit was exceeded.
Cause: The size of the file to be opened exceeded the OS limit imposed on this process.

Action: Run osh to increase the file size limit.

ORA-07210: slcpu: getrusage error, unable to get cpu time.
Cause: Getrusage system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07211: slgcs: gettimeofday error, unable to get wall clock.
Cause: Gettimeofday system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07212: slcpu: times error, unable to get cpu time.
Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07213: slgcs: times error, unable to get wall clock.
Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07214: slgunm: uname error, unable to get system information.
Cause: uname system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07215: slsget: getrusage error.
Cause: Getrusage system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

ORA-07216: slghst: gethostname error, unable to get name of current host.
Cause: gethostname system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07217: sltln: environment variable cannot be evaluated.
Cause: getenv call returned a null pointer.

Action: Set the environment variable and try again.

ORA-07218: slkhst: could not perform host operation
Cause: Unix system() call failed

Action: Examine system error message

ORA-07219: slspool: unable to allocate spooler argument buffer.
Cause: Malloc failed to allocate space to hold spooler arguments.

Action: Check additional information returned in OS reference manual. The process may have run out of heap space. Contact customer support.

ORA-07220: slspool: wait error.
Cause: Wait returned an error, when waiting for spool job to complete. Possible spooler program error.

Action: Check additional information returned. Refer to OS reference manual. Contact customer support.

ORA-07221: slspool: exec error, unable to start spooler program.
Cause: Exec failed when starting line printer spooler command. Likely that either the default line printer command, or ORACLE_LPPROG, is incorrectly set.

Action: Verify default line printer command and ORACLE_LPPROG are set correctly. Set ORACLE_LPPROG to working line printer spooler.

ORA-07222: slspool: line printer spooler command exited with an error.
Cause: The line printer spooler exited with a non-zero return value. This probably indicates an error in spooling file.

Action: Verify that line printer spooler is up. Verify that ORACLE_LPPROG, and ORACLE_LPARG are set properly. Check exit value returned as additional informatin.

ORA-07223: slspool: fork error, unable to spawn spool process.
Cause: Fork system call failed to create additional process. Probable resource limit reached.

Action: Check additional information returned. Retry operation. Contact system administrator.

ORA-07224: sfnfy: failed to obtain file size limit; errno = *string*.
Cause: The ulimit system call returned an error.

Action: Check errno and contact customer support.

ORA-07225: sldext: translation error, unable to expand file name.
Cause: Additional information returned is error returned from sltln.

Action: Check additional information.

ORA-07226: rtneco: unable to get terminal mode.
Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07227: rtneco: unable to set noecho mode.
Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07228: rtecho: unable to restore terminal to echo mode.
Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07229: slcpuc: error in getting number of CPUs.
Cause: error in mpcntl system call

Action: check errno and contact system administrator

ORA-07230: slemcr: fopen error, unable to open error file.
Cause: Fopen failed to open file.

Action: Try to determine which file was not opened. Check that file exists and is accessible.

ORA-07231: slemcc: invalid file handle, seals do not match.
Cause: Function was called with an invalid argument. The file handle used was not obtained be slemcr.

Action: Internal error. Contact customer support.

ORA-07232: slemcc: fclose error.
Cause: An error was encountered when closing the file. Possible OS error.

Action: Contact system administator.

ORA-07233: slemcw: invalid file handle, seals do not match.
Cause: Function was called with an invalid file handle. File handle was not obtained by slemcr.

Action: Internal error. Contact customer support.

ORA-07234: slemcw: fseek error.
Cause: Unable to seek to desired position in file. Possible OS error. Possible internal error.

Action: Verify that error message file is intact. Try to regenerate error message file. Contact customer support.

ORA-07235: slemcw: fwrite error.
Cause: Unable to write item to file. Possible OS error. Possible permissions problem.

Action: Retry operation.

ORA-07236: slemop: open error.
Cause: Unable to open error file. Possible permissions problem.

Action: Verify permission on error message file. Check additional information for errno.

ORA-07237: slemcl: invalid file handle, seals do not match.
Cause: Function was called with an invalid file handle. Handle was not obtained by previous call to slemop.

Action: Internal error.

ORA-07238: slemcl: close error.
Cause: Unable to close file. Possible OS error.

Action: Contact system administator. Check additional information for errno.

ORA-07239: slemrd: invalid file handle, seals do not match.
Cause: Function was called with invalid file handle. Handle was not obtained by call to slemop.

Action: Internal error. Contact customer support.

ORA-07240: slemrd: seek error.
Cause: Unable to seek to desired position in file. Possible OS error.

Action: Check that error file is still intact. Verify space on device. Contact system administrator. Check additional information for errno.

ORA-07241: slemrd: read error.
Cause: Unable to read file. Possible OS error.

Action: Verify that error file is intact. Regenerate error message file. Contact customer support. Check additional information for errno.

ORA-07242: slembfn: translation error, unable to translate error file name.
Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

ORA-07243: supplied buffer not big enough to hold entire line
Cause: supplied buffer was not big enough

Action: Internal error. Contact customer support. Additional information indicates how big the supplied buffer was.

ORA-07244: ssfccf: create file failed, file size limit reached.
Cause: An attempt was made to create a file that exceeds the process's file size limit.

Action: Run osh to raise the file size limit.

ORA-07245: sfccf: unable to lseek and write the last block.
Cause: An attempt was made to move and write to a bad device address.

Action: Check errno. Possible lack of space on device.

ORA-07246: sfofi: open error, unable to open database file.
Cause: sfofi returns an error.

Action: This is an oracle internal error.

ORA-07247: skgfrfms, skgfrnms: read error, unable to read block from database file
Cause: The ioctl() system call returned an error doing VOL_READ_MIRRORS.

Action: Check errno.

ORA-07248: sfwfb: write error, unable to write database block.
Cause: sfwfb returns an error.

Action: This is an oracle internal error.

ORA-07249: slsget: open error, unable to open /proc/pid.
Cause: The open() system call returned an error.

Action: Check that /proc has the right permissions.

ORA-07250: spcre: semget error, unable to get first semaphore set.
Cause: An error occurred when trying to get first semaphore set.

Action: Check errno. Verify that system is configured to have semaphores. Verify that enough semaphores are available. Additional information indicates how many semaphores were requested.

ORA-07251: spcre: semget error, could not allocate any semaphores.
Cause: Semget failed to even allocate a single semaphore. Either they are all in use or the system is not configured to have any semaphores.

Action: Check to see if all semaphores are in use. Check to see if system is configured to have semaphores. Check errno.

ORA-07252: spcre: semget error, could not allocate semaphores.
Cause: Semget system call returned an error. Possible resource limit problem.

Action: Check errno. Verify that enough semaphores are available in system. If additional errors occur in destroying the semaphore sets then sercose[0] will be non-zero. If this occurs, remove the semaphore sets using ipcrm.

ORA-07253: spdes: semctl error, unable to destroy semaphore set.
Cause: Semctl system call returned an error.

Action: Check semaphore sets. May require manual cleanup. Check additional information returned. Consult OS reference manual.

ORA-07254: spdcr: translation error while expanding ?/bin/oracle.
Cause: An error occurred while translating the name of the oracle executable.

Action: Check sercose[0] for error returned from sltln. Perhaps $(ORACLE_HOME) is not set correctly.

ORA-07255: spini: cannot set up signal handler.
Cause: System failed to set up signal handler.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07256: sptrap: cannot set up signal handler to catch exceptions.
Cause: System failed to set up signal handler to catch exceptions.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07257: spdcr: translation error expanding program name.
Cause: Error ocurred when expanding program name ora_PNAME_@. The result of this translation is put in argv[0] of oracle process.

Action: Check error returned by sltln returned in sercose[0].

ORA-07258: spdcr: fork error, unable to create process.
Cause: An error occurred when creating a new process.

Action: Check errno. Perhaps a system limit on the number of processes has been exceeded.

ORA-07259: spdcr: exec error, detached process failed in startup.
Cause: An oracle detached process died shortly after startup. Wait() indicated that a child process terminated.

Action: Check ?/dbs directory for trace or core files. Check errno.

ORA-07260: spdcr: wait error.
Cause: Wait system call returned an error.

Action: Check errno.

ORA-07261: spdde: kill error, unable to send signal to process.
Cause: Kill system call returned an error. Possibly an attempt to destroy an already gone process.

Action: Check errno.

ORA-07262: sptpa: sptpa called with invalid process id.
Cause: This is an internal error.

Action: This is an oracle internal error.

ORA-07263: sptpa: kill error.
Cause: Kill system call returned an error. Possible OS error.

Action: Check errno. Additional information indicates the process ID tested.

ORA-07264: spwat: semop error, unable to decrement semaphore.
Cause: Semop system call returned an error. Semaphore set may not exist.

Action: Check errno. Semaphore ID is returned in sercose[0]. Verify semaphore set exists. A possible cause for this error is that a "shutdown abort" was done while this process was running.

ORA-07265: sppst: semop error, unable to increment semaphore.
Cause: Semop system call returned an error. Semaphore set may not exist.

Action: Check errno. Semaphore ID is returned in sercose[0]. Check semaphore set existence. A possible cause for this error is that a "shutdown abort" was done while this process was running.

ORA-07266: sppst: invalid process number passed to sppst.
Cause: Function was passed an invalid oracle process id.

Action: Internal error.

ORA-07267: spwat: invalid process number.
Cause: Function was passed an invalid oracle process id.

Action: Internal error. Additional information indicates the invalid process id.

ORA-07268: szguns: getpwuid error.
Cause: Getpwuid() could not find an entry in the passwd file for a user.

Action: Add an entry for the user in the passwd file.

ORA-07269: spdcr: detached process died after exec.
Cause: Detached process succesfully execed, but died shortly thereafter. Additional information indicates exit code, and termination status.

Action: Check termination code for information as to why process exited. Check for core dump or trace file.

ORA-07270: spalck: setitimer error, unable to set interval timer.
Cause: An error occurred while trying to set an interval timer. Probable porting problem.

Action: Check errno.

ORA-07271: spwat: invalid oracle process number.
Cause: Function was called with an invalid oracle process number (0).

Action: Internal oracle error.

ORA-07272: spwat: invalid semaphore set id.
Cause: Semaphore ID fetched from SGA was not initialized to valid value. Additional information returned is semaphore set index, and oracle process number.

Action: Oracle internal error. Check semaphore set index. Check oracle process number.

ORA-07273: sppst: invalid semaphore id.
Cause: Semaphore ID fetched from SGA contained an invalid value. Additional information returned is semaphore set index, and oracle process number.

Action: Oracle internal error. Check semaphore set index. Check oracle process number.

ORA-07274: spdcr: access error, access to oracle denied.
Cause: Unable to access "oracle" program. Verify ?/bin/oracle or $ORABCKPRG exist, and are executable.

Action: Check errno returned.

ORA-07275: unable to send signal to process
Cause: The kill system call returned an error. Possibly an attempt to signal a process which does not exist.

Action: Check errno.

ORA-07276: no dba group in /etc/group.
Cause: A group has not been set up for dba users.

Action: Contact system administrator. Set up dba group in /etc/group.

ORA-07277: spdde: illegal pid passed as argument.
Cause: A 0 pid was passed to spdde.

Action: Internal error. .

ORA-07278: splon: ops$username exceeds buffer length.
Cause: Splon constructed an ops$username logon which exceeded the alloted buffer space.

Action: Use a shorter Unix username, or use an oracle username. Contact customer support.

ORA-07279: spcre: semget error, unable to get first semaphore set.
Cause: An error occurred when trying to get first semaphore set.

Action: Check errno. Verify that system is configured to have semaphores. Verify that enough semaphores are available. Additional information indicates how many semaphores were requested.

ORA-07280: slsget: unable to get process information.
Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07281: slsget: times error, unable to get cpu time.
Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07282: sksaprd: string overflow.
Cause: The internal buffer is not big enough to hold the archive control string.

Action: Internal restriction. Try a shorter archive control string.

ORA-07283: sksaprd: invalid volume size for archive destination.
Cause: An invalid volume size was specified.

Action: Specify a valid volume size in archive control string.

ORA-07284: sksaprd: volume size specification not terminated properly.
Cause: Some non-numeric text follows the volume size specification.

Action: Enter a correct archive control string.

ORA-07285: sksaprd: volume size should not be specified for a disk file.
Cause: Volume size was specified for a disk file.

Action: If you are archiving to a disk file, do not specify its volume size.

ORA-07286: sksagdi: cannot obtain device information.
Cause: Stat on the log archiving device failed.

Action: Check the returned OSD error for the reason of failure.

ORA-07287: sksagdi: unsupported device for log archiving.
Cause: Log archiving to this device is unsupported.

Action: Try log archiving to a supported device.

ORA-07290: sksagdi: specified directory for archiving does not exist.
Cause: The specified pathname is not a directory.

Action: Verify that the archive destination directory exists.

ORA-07303: ksmcsg: illegal database buffer size.
Cause: The database buffer size must be a multiple of the database block size, and less than the maximum block size.

Action: Verify that the db_block_size parameter is correct in INIT.ORA.

ORA-07304: ksmcsg: illegal redo buffer size.
Cause: The redo buffer size must be a multiple of machine block size.

Action: Verify that the log_buffer INIT.ORA parameter is correctly set.

ORA-07324: smpall: malloc error while allocating pga.
Cause: Malloc library routine returned an error.

Action: Check errno. Possibly out of swap space.

ORA-07327: smpdal: attempt to destroy pga when it was not mapped.
Cause: Smpdal was called when the PGA had not been previously created.

Action: Internal error.

ORA-07339: spcre: maximum number of semaphore sets exceeded.
Cause: The internal buffer is not big enough to hold the number of semaphore set identifiers requested.

Action: Reconfigure OS to have more semaphores per set.

ORA-07345: The datafile name must not contain the string '..'.
Cause: The specified datafile name contains '..'.

Action: Correct the datafile name and retry the operation.

ORA-07346: slnrm: normalized file name is too long
Cause: After normalizing the specified file name, the resulting file name was too long.

Action: Specify the shorter file name and retry the operation.

ORA-07390: sftopn: translate error, unable to translate file name.
Cause: An error occurred while expanding the file name to open. Additional information returns error generated in translation routine.

Action: Lookup additional error code for further information.

ORA-07391: sftopn: fopen error, unable to open text file.
Cause: Fopen library routine returned an error.

Action: Verify existence and permissions.

ORA-07392: sftcls: fclose error, unable to close text file.
Cause: Fclose library routine returned an error.

Action: Possible internal oracle error.

ORA-07393: unable to delete text file
Cause: An error occurred while deleting a text file.

Action: Verify that the file exists and check additional errors.

ORA-07394: unable to append string to text file
Cause: An error occurred while performing a string put operation.

Action: This is an internal error. Check additional information.

ORA-07400: slemtr: translated name for the message file is too long.
Cause: The name for the message file overflows internal buffer.

Action: Try making the complete path-name of the message file shorter by reorganizing the directory hierarchy.

ORA-07401: sptrap: cannot restore user exception handlers.
Cause: The system failed to restore user exception handlers.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07402: sprst: cannot restore user signal handler.
Cause: The system failed to restore user signal handlers.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07403: sfanfy: db_writers parameter not valid.
Cause: The db_writers parameter in INIT.ORA exceeds the system-dependent maximum or is less than 0.

Action: Change the db_writers parameter in INIT.ORA.

ORA-07404: sfareq: Timeout occurred waiting for request to complete.
Cause: The master database writer timed out waiting for a write or close to complete. One of the database writers may have stopped running.

Action: Check all database writer trace files. Shut down the database and try to warm start.

ORA-07405: sptrap: cannot setup alternate signal stack.
Cause: The system failed to setup an alternate signal stack.

Action: Check errno and sercose[0] for the location where it failed.

ORA-07406: slbtpd: invalid number.
Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

ORA-07407: slbtpd: invalid exponent.
Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed.

ORA-07408: slbtpd: overflow while converting to packed decimal.
Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

ORA-07409: slpdtb: invalid packed decimal nibble.
Cause: An impossible request for decimal to binary conversion was made.

Action: This conversion cannot be performed.

ORA-07410: slpdtb: number too large for supplied buffer.
Cause: An impossible request for decimal to binary conversion was made.

Action: This conversion cannot be performed.

ORA-07411: slgfn: full path name too big for supplied buffer.
Cause: The supplied buffer is not big enough to hold the full path name.

Action: The construction of the full path name cannot be performed.

ORA-07412: sfaslv: Error getting entry in asynchronous write array.
Cause: One of the database writer processes could not locate its entry in the SGA.

Action: Contact customer support.

ORA-07415: slpath: allocation of memory buffer failed.
Cause: Malloc() failed to allocate buffer for storing ORACLE_PATH.

Action: System has run out of heap space. Additional information indicates errno.

ORA-07416: slpath: pathname construction failed; lack of output buffer space.
Cause: The slpath routine is given a maximum length buffer to expand the name into. An overflow of this buffer occurred.

Action: Possible internal error. Check output buffer length stored in sercose[0] and constructed pathname length in sercose[1].

ORA-07417: sfareq: One or more database writers not active.
Cause: One or more of the database writer processes is no longer running.

Action: Check the trace files for the database writers. Shut down the database and try to warm start.

ORA-07418: sfareq: Database writer got error in timing function.
Cause: An error occurred when the database writer called the system timing function.

Action: Check the database writer trace file. Shut down database and try to warm start.

ORA-07419: sfareq: Database writer got error in timing function.
Cause: An error occurred when the database writer called the system timing function.

Action: Check the database writer trace file. Shut down database and try to warm start.

ORA-07425: sdpri: error *string* in translating dump file location.
Cause: An oracle error occurred when translating the location of the dump file.

Action: Check the oracle error code.

ORA-07426: spstp: cannot obtain the location of dbs directory.
Cause: An oracle error occurred when translating the location of the dbs directory.

Action: Check additional information for the error returned from sltln.

ORA-07427: spstp: cannot change directory to dbs.
Cause: Chdir system call returned an error. Possible permission problems.

Action: Check additional information for the OS error code.

ORA-07431: fork failed
Cause: The server process was unable to fork a child process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-07432: unable to perform nested sleep
Cause: An attempt was made to make a process sleep when it was already sleeping. This platform does not support this capability.

Action: Try the SLEEP command when the process is not sleeping.

ORA-07440: WMON process terminated with error
Cause: The wakeup monitor process died.

Action: Warm start instance.

ORA-07441: function address must be aligned on *string* byte boundary
Cause: An improperly aligned function address was specified.

Action: Use a properly aligned function address.

ORA-07442: function address must be in the range *string* to *string*
Cause: An invalid function address was specified.

Action: Use a valid function address.

ORA-07443: function *string* not found
Cause: A nonexistent or an invalid function name was specified.

Action: Use a valid function name.

ORA-07444: function address *string* is not readable
Cause: An invalid function name/address was specified.

Action: Use a valid function name/address.

ORA-07445: exception encountered: core dump [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]
Cause: An operating system exception occurred which should result in the creation of a core file. This is an internal error.

Action: Visit My Oracle Support to access the ORA-07445 Lookup tool (reference Note 7445.1) for more information regarding the specific ORA-07445 error encountered. An Incident has been created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

ORA-07446: sdnfy: bad value '*string*' for parameter *string*.
Cause: The directory specified as the value for the stated parameter could not be used.

Action: Make sure the directory you have specified is a valid directory/file specification.

ORA-07447: ssarena: usinit failed.
Cause: Oracle failed to create a shared arena file.

Action: Use sercerrno field to determine cause of failure.

ORA-07448: ssarena: maximum number of shared arenas exceeded.
Cause: Oracle attempted to create more shared arena files than permitted.

Action: Raise the value for max_arena in INIT.ORA.

ORA-07449: sc: usnewlock failed.
Cause: Oracle failed to acquire a shared arena lock.

Action: Check result code in sercerrno to determine the cause of failure.

ORA-07451: slskstat: unable to obtain load information.
Cause: kstat library returned an error. Possible OS failure

Action: Check result code in sercose[0] for more information.

ORA-07452: specified resource manager plan does not exist in the data dictionary
Cause: User tried to load a resource manager plan that does not exist.

Action: Use a resource manager plan that exists in the data dictionary.

ORA-07453: requested resource manager plan schema does not contain OTHER_GROUPS
Cause: User tried to load a resource manager plan schema that does not contain the OTHER_GROUPS group.

Action: Use a resource manager plan schema that contains the OTHER_GROUPS group.

ORA-07454: queue timeout, *string* second(s), exceeded
Cause: User session queued for longer than maximum specified queue queue duration time for consumer group.

Action: Re-submit job at a later time or increase queue timeout.

ORA-07455: estimated execution time (*string* secs), exceeds limit (*string* secs)
Cause: User attempted to execute an operation whose estimated execution time exceeds the limit specified for the consumer group.

Action: Execute job on behalf of another group, or increase limit.

ORA-07456: cannot set RESOURCE_MANAGER_PLAN when database is closed
Cause: An attempt was made to turn on the Resource Manager when the database was closed.

Action: Open the database and try again.

ORA-07457: cannot set _INTERNAL_RESOURCE_MANAGER_PLAN because of FORCE
Cause: An attempt was made to set the _INTERNAL_RESOURCE_MANAGER_PLAN parameter, however this failed because the current RESOURCE_MANAGER_PLAN has the FORCE prefix.

Action: Remove the FORCE prefix from the RESOURCE_MANAGER_PLAN parameter.

ORA-07458: cannot set the RESOURCE_MANAGER_PLAN parameter
Cause: An attempt was made to set the RESOURCE_MANAGER_PLAN parameter, however, this failed because the database was quiesced.

Action: Unquiesce the database.

ORA-07459: cannot restore the RESOURCE_MANAGER_PLAN parameter
Cause: An attempt was made to internally restore the RESOURCE_MANAGER_PLAN parameter to the value before it was internally set. This failed because the current plan was set by the user and therefore did not need to be restored.

Action: No action needed.

ORA-07460: cannot set the RESOURCE_MANAGER_PLAN parameter
Cause: An attempt was made to internally set the RESOURCE_MANAGER_PLAN parameter, however, this failed because the current RESOURCE_MANAGER_PLAN has the FORCE prefix.

Action: Remove the FORCE prefix from the RESOURCE_MANAGER_PLAN parameter.

ORA-07461: RESOURCE_MANAGER_PLAN '*string*' is locked and cannot be set
Cause: The resource manager plan was locked for deletion and could not be accessed.

Action: Ensure that the resource manager plan is not in the process of being deleted.

ORA-07468: spwat: mset error, unable to set semaphore.
Cause: The mset routine returned an error. Semaphore may not exist.

Action: Check result code in sercerrno. Semaphore number returned in sercose[0].

ORA-07469: sppst: mclear error, unable to clear semaphore.
Cause: The mclear routine returned an error. Semaphore may not exist.

Action: Check result code in sercerrno. Semaphore number returned in sercose[0].

ORA-07470: snclget: cannot get cluster number.
Cause: The cluster_status system call failed to get status information for the current cluster.

Action: Check result code in sercose[0]. Possible operating system failure.

ORA-07471: snclrd: name translation error of sgadef.dbf file name.
Cause: Unable to expand out ?/dbs/sgadef@.dbf file name.

Action: Verify $(ORACLE_HOME) and $(ORACLE_SID) are properly set. Check error number returned from sltln in sercose[0].

ORA-07472: snclrd: open error when opening sgadef.dbf file.
Cause: open failed when opening the file ?/dbs/sgadef@.dbf

Action: Check errno. Possible permission problem. Verify that the file ?/dbs/sgadef@.dbf exists.

ORA-07473: snclrd: read error when trying to read sgadef.dbf file.
Cause: Read had an error when reading sgadef.dbf file.

Action: Check errno. Verify file exists, and is correct size.

ORA-07474: snclrd: close error, unable to close sgadef.dbf file.
Cause: An error occurred in close, while closing the file "?/dbs/sgadef@.dbf"

Action: Check errno. Possible operating system error.

ORA-07475: slsget: cannot get vm statistics.
Cause: The vm_statistics system call failed to get virtual memory statistics.

Action: Check result code in sercerrno. Possible operating system failure.

ORA-07476: slsget: cannot get mapped memory statistics.
Cause: The vm_mapmem system call failed to get mapped memory statistics.

Action: Check result code in sercerrno. Possible operating system failure.

ORA-07477: scgcmn: lock manager not initialized.
Cause: Lock manager must be initialized before converting locks.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07478: scgcmn: cannot get lock status.
Cause: lm_stat_lock failed.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07479: scgcmn: cannot open or convert lock.
Cause: lm_open or lm_open_convert failed.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07480: snchmod: cannot change permissions on ?/dbs/sgalm.dbf.
Cause: When creating an instance, snlmini could not change the permissions on ?/dbs/sgalm.dbf

Action: Contact your customer support representative.

ORA-07481: snlmatt: cannot attach to lock manager instance.
Cause: lm_attach failed to attach to lock manager instance.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07482: snlmini: cannot create lock manager instance.
Cause: lm_create failed to create lock manager instance.

Action: Check permissions on ?/dbs, and remove ?/dbs/sgalm.dbf if it exists, then retry.

ORA-07483: snlkget: cannot convert(get) lock.
Cause: lm_convert failed to convert(get) lock.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07484: snlkput: cannot convert(put) lock.
Cause: lm_convert failed to put lock value.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07485: scg_get_inst: cannot open instance number lock.
Cause: lm_open failed.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07486: scg_get_inst: cannot convert(get) instance number lock.
Cause: lm_convert failed to get lock value.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07487: scg_init_lm: cannot create lock manager instance.
Cause: lm_create failed.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07488: scgrcl: lock manager not initialized.
Cause: Lock manager must be initialized before releasing locks.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07489: scgrcl: cannot get lock status.
Cause: lm_stat_lock failed during lock release/cancel.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07490: scgrcl: cannot convert lock.
Cause: lm_convert failed during lock release/cancel.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07491: scgrcl: cannot cancel lock request.
Cause: lm_cancel failed during lock release/cancel.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07492: scgrcl: cannot close lock.
Cause: lm_close failed during lock release/cancel.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07493: scgrcl: lock manager error.
Cause: An error was encountered releasing the lock.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07494: scgcm: unexpected error.
Cause: Unknown or unexpected error code.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07495: spwat: lm_wait failed.
Cause: lm_wait failed.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07496: sppst: lm_post failed.
Cause: lm_post failed.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07497: sdpri: cannot create trace file '*string*'; errno = *string*.
Cause: 1. The trace file could not be created for writing. 2. The trace file is a symbolic link.

Action: 1. Check if the dump directory exists and whether it is writable. 2. Remove the symbolic link.

ORA-07498: spstp: Unable to open /dev/resched.
Cause: The rescheduling driver /dev/resched is not found or is not working properly.

Action: Check installation of the ORACLE rescheduling driver in the AIX kernel.

ORA-07499: spglk: Cannot reschedule.
Cause: The rescheduling driver /dev/resched is not open. This is an internal error and should not occur.

Action: Contact your customer support representative.

76
ORA-07500 to ORA-09859

ORA-07500: scglaa: $cantim unexpected return
Cause: VMS system service $CANTIM returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07501: scgtoa: $deq unexpected return
Cause: VMS system service $DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07502: scgcmn: $enq unexpected return
Cause: VMS system service $ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07503: scgcmn: $setimr unexpected return
Cause: VMS system service $SETIMR returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07504: scgcmn: $hiber unexpected return
Cause: VMS system service $HIBER returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07505: scggt: $enq parent lock unexpected return
Cause: VMS system service $ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07506: scgrl: $deq unexpected return on lockid *string*
Cause: VMS system service $DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07507: scgcm: unexpected lock status condition
Cause: A global locking system service returned an unexpected value.

Action: Check for system error message (if any) and refer to VMS documentation, or contact your customer support representative.

ORA-07508: scgfal: $deq all unexpected return
Cause: VMS system service $DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07509: scgfal: $deq parent lock unexpected return
Cause: VMS system service $DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07510: scgbrm: $getlki unexpected return on lockid *string*
Cause: VMS system service $GETLKI returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07511: sscggtl: $enq unexpected return for master termination lock
Cause: VMS system service $ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07512: sscggtl: $enq unexpected return for client termination lock
Cause: VMS system service $ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07513: sscgctl: $deq unexpected return on cancel of term. lock
Cause: VMS system service $DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07514: scgcan: $deq unexpected return while canceling lock
Cause: VMS system service $DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07534: scginq: $getlki unexpected return on lockid *string*
Cause: VMS system service $GETLKI returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07548: sftopn: Maximum number of files already open
Cause: Too many test files open

Action: This is an internal error, please report to Oracle

ORA-07549: sftopn: $OPEN failure
Cause: VMS system service $OPEN failed

Action: Examine system error message and refer to VMS documentation

ORA-07550: sftopn: $CONNECT failure
Cause: VMS system service $OPEN failed

Action: Examine system error message and refer to VMS documentation

ORA-07551: sftcls: $CLOSE failure
Cause: VMS system service $CLOSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07552: sftget: $GET failure
Cause: VMS system service $GET failed

Action: Examine system error message and refer to VMS documentation

ORA-07561: szprv: $IDTOASC failure
Cause: VMS system service $IDTOASC failed

Action: Examine system error message and refer to VMS documentation

ORA-07562: sldext: extension must be 3 characters
Cause: An extension was found but it is of improper length

Action: This is an internal error, please report to Oracle

ORA-07563: sldext: $PARSE failure
Cause: VMS system service $PARSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07564: sldext: wildcard in filename or extension
Cause: A wildcard was used in the file name

Action: Reenter the file name completely

ORA-07565: sldext: $SEARCH failure
Cause: VMS system service $SEARCH failed

Action: Examine system error message and refer to VMS documentation

ORA-07568: slspool: $OPEN failure
Cause: VMS system service $OPEN failed

Action: Examine system error message and refer to VMS documentation

ORA-07569: slspool: $CLOSE failure
Cause: VMS system service $CLOSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07570: szrfc: $IDTOASC failure
Cause: VMS system service $IDTOASC failed

Action: Examine system error message and refer to VMS documentation

ORA-07571: szrfc: $FIND_HELD failure
Cause: VMS system service $FIND_HELD failed

Action: Examine system error message and refer to VMS documentation

ORA-07572: szrfc: insufficient rolename buffer space
Cause: An OS role name was too long.

Action: Re-define the role name to be of correct length.

ORA-07573: slkhst: could not perform host operation
Cause: VMS system service LIB$SPAWN failed

Action: Examine system error message and refer to VMS documentation

ORA-07574: szrfc: $GETUAI failure
Cause: VMS system service $GETUAI failed

Action: Examine system error message and refer to VMS documentation

ORA-07576: sspexst: $GETJPIW failure on process ID *string*
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07577: no such user in authorization file
Cause: An attempt was made to set an INTERNAL password (for either DBA or OPER privilege), but the corresponding VMS account (either ORA_*sid*_DBA or ORA_*sid*_OPER) hasn't been created yet.

Action: Add a VMS account for ORA_*sid*_DBA and/or ORA_*sid*_OPER before trying to set a password for them.

ORA-07578: szprv: $FIND_HELD failure
Cause: VMS system service $FIND_HELD failed

Action: Examine system error message and refer to VMS documentation

ORA-07579: spini: $DCLEXH failure
Cause: VMS system service $PARSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07580: spstp: $GETJPIW failure
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07581: spstp: cannot derive SID from unexpected process name
Cause: A background process did not have name of correct form

Action: If the job name was changed, restore it, otherwise this is an internal error, please report to Oracle.

ORA-07582: spstp: ORA_SID has illegal value
Cause: The ORA_SID must exist and be less than 6 characters

Action: Consult the VMS Installation guide for information on setting the SID.

ORA-07584: spdcr: invalid value for ORA_sid_(proc_)PQL$_item
Cause: A logical name used to set a detached process quota value has an invalid value (probably non-numeric).

Action: Examine the values of these logical names, correct the one in error, and retry.

ORA-07585: spdcr: $PARSE failure
Cause: VMS system service $PARSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07586: spdcr: $SEARCH failure
Cause: VMS system service $SEARCH failed

Action: Examine system error message and refer to VMS documentation

ORA-07587: spdcr: $CREPRC failure
Cause: VMS system service $CREPRC failed

Action: Examine system error message and refer to VMS documentation

ORA-07588: spdcr: $GETJPIW get image name failure
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07589: spdde: system ID not set
Cause: The logical name ORA_SID doesn't translate to a valid value.

Action: Check the value of ORA_SID in the process that gets the error, and correct the installation or command procedures that caused ORA_SID to be set incorrectly.

ORA-07590: spdde: $DELPRC failure
Cause: VMS system service $DELPRC failed

Action: Examine system error message and refer to VMS documentation

ORA-07591: spdde: $GETJPIW failure
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07592: sspgprv: Error obtaining required privileges
Cause: While obtaining needed privileges, an error was returned from SYS$SETPRV.

Action: This is an internal error. Please report to Oracle

ORA-07593: ssprprv: Error release privileges
Cause: While releasing privileges, an error was returned from SYS$SETPRV.

Action: This is an internal error. Please report to Oracle

ORA-07594: spiip: $GETJPIW failure
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07595: sppid: $GETJPIW failure
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07596: sptpa: $GETJPIW failure
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07597: spguns: $GETJPIW failure
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07598: spwat: $SETIMR failure
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07599: spwat: $SCHDWK failure
Cause: VMS system service $SCHDWK failed

Action: Examine system error message and refer to VMS documentation

ORA-07600: slkmnm: $GETSYIW failure
Cause: VMS system service $GETSYIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07601: spguno: $GETJPIW failure
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07602: spgto: $GETJPIW failure
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07605: szprv: $ASCTOID failure
Cause: VMS system service $ASCTOID failed

Action: Examine system error message and refer to VMS documentation

ORA-07606: szprv: $CHKPRO failure
Cause: VMS system service $CHKPRO failed

Action: Examine system error message and refer to VMS documentation

ORA-07607: szaud: $SNDOPR failure
Cause: VMS system service $SNDOPR failed

Action: Examine system error message and refer to VMS documentation

ORA-07608: szprv: $GETUAI failure
Cause: VMS system service $GETUAI failed

Action: Examine system error message and refer to VMS documentation

ORA-07609: szprv: $HASH_PASSWORD failure
Cause: VMS system service $HASH_PASSWORD failed

Action: Examine system error message and refer to VMS documentation

ORA-07610: $GETJPIW failed in retrieving the user's MAC priviledges
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07612: $GETUAI failed in retrieving the user's clearance level
Cause: VMS system service $GETUAI failed

Action: Examine system error message and refer to VMS documentation

ORA-07613: $GETJPIW failed in retrieving the user's process label
Cause: VMS system service $GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07614: $CHANGE_CLASS failed in retrieving the user's process label
Cause: VMS system service $CHANGE_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

ORA-07615: $CHANGE_CLASS failed in retrieving the specified file label
Cause: VMS system service $CHANGE_CLASSS failed

Action: Examine system error message and refer to SEVMS documentation

ORA-07616: $CHANGE_CLASS failed in retrieving the specified device label
Cause: VMS system service $CHANGE_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

ORA-07617: $FORMAT_CLASS failed translating the binary label to a string
Cause: VMS system service $FORMAT_CLASS failed because the given binary classification was not valid.

Action: Examine system error message and refer to SEVMS documentation

ORA-07618: $IDTOASC failed translating a secrecy level
Cause: VMS system service $IDTOASC failed while looking up the string representation in the rights database of a secrecy level.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07619: $IDTOASC failed translating an integrity level
Cause: VMS system service $IDTOASC failed while looking up the string representation in the rights database of an integrity level.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07620: smscre: illegal database block size
Cause: An illegal database block size was specified in the parameter file. It must be positive, a multiple of 512, and less than the maximum physical i/o data size.

Action: Change db_block_size in the parameter file to conform to these limits.

ORA-07621: smscre: illegal redo block size
Cause: An illegal redo log buffer size was specified in the parameter file. It must be positive and a multiple of 512.

Action: Change log_buffer in the parameter file to conform to these limits.

ORA-07622: smscre: $CREATE failure
Cause: While creating the system global area (SGA) backing file, VMS system service $CREATE failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07623: smscre: $CRMPSC failure
Cause: While creating the system global area (SGA), VMS system service $CRMPSC failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07624: smsdes: $DGBLSC failure
Cause: While deleting the system global area (SGA), VMS system service $DGBLSC failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07625: smsget: $MGBLSC failure
Cause: While mapping the system global area (SGA) during logon, VMS system service $MGBLSC failed. The usual reason is that Oracle has not been started up.

Action: Examine the system error message and refer to VMS documentation. Start up Oracle if it is not already started.

ORA-07626: smsget: sga already mapped
Cause: An attempt to map the SGA during logon failed because it was already mapped. This is an internal error.

Action: Exit your program and try again, and report this to your customer support representative.

ORA-07627: smsfre: $CRETVA failure
Cause: While unmapping the system global area (SGA) during logoff, VMS system service $CRETVA failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07628: smsfre: sga not mapped
Cause: An attempt to unmap the SGA during logoff failed because it was not mapped. This is an internal error.

Action: Exit your program and try again, and report this to your customer support representative.

ORA-07629: smpall: $EXPREG failure
Cause: While extending the program global area (PGA), VMS system service $EXPREG failed. This often happens when the virtual memory page count quota is exceeded.

Action: Examine the system error message and refer to VMS documentation.

ORA-07630: smpdal: $DELTVA failure
Cause: While deleting the program global area (PGA) during logoff, VMS system service $DELTVA failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07631: smcacx: $EXPREG failure
Cause: While creating or extending a context area, VMS system service $EXPREG failed. This often happens when the virtual memory page count quota is exceeded.

Action: Examine the system error message and refer to VMS documentation.

ORA-07632: smsrcx: $DELTVA failure
Cause: While deleting a context area, VMS system service $DELTVA failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07633: smsdbp: illegal protection value
Cause: The buffer debug function was called with an illegal value. This is an internal error.

Action: Contact your customer support representative.

ORA-07634: smsdbp: $CRETVA failure
Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service $CRETVA failed.

Action: Contact your customer support representative.

ORA-07635: smsdbp: $SETPRT failure
Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service $SETPRT failed.

Action: Contact your customer support representative.

ORA-07636: smsdbp: $MGBLSC failure
Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service $MGBLSC failed.

Action: Contact your customer support representative.

ORA-07637: smsdbp: buffer protect option not specified when sga created
Cause: Trying to change the buffer protect mode when the SGA was not created with buffer protect debug option. This is an internal error.

Action: Contact your customer support representative.

ORA-07638: smsget: SGA pad area not large enough for created SGA
Cause: An attempt was made to map an SGA with software in which the SGA pad area isn't large enough.

Action: Create a smaller SGA, or relink the software with a larger pad.

ORA-07639: smscre: SGA pad area not large enough (*string* bytes required)
Cause: An attempt was made to create an SGA with software in which the SGA pad area isn't large enough.

Action: Create a smaller SGA, or relink the software with a larger pad.

ORA-07640: smsget: SGA not yet valid. Initialization in progress
Cause: An attempt was made to map to the SGA while it was being initialized.

Action: Wait until initialization is complete, and try again.

ORA-07641: smscre: Unable to use the system pagefile for the SGA
Cause: The system global area (SGA) backing file could not be allocated using the system pagefile because the system-wide limit on global pages has been exceeded.

Action: Either increase the VMS system parameter GBLPAGFIL or use a disk file as the SGA backing file.

ORA-07642: smprtset: $CMKRNL failure
Cause: While attempting to set the protection of a region of memory, an error was returned from the $CMKRNL system service.

Action: Examine the system error message and refer to VMS documentation.

ORA-07643: smsalo: SMSVAR is invalid
Cause: an internal error

Action: Report this error to Oracle Support Services, provide your INIT.ORA file.

ORA-07645: sszfsl: $CHANGE_CLASS failure
Cause: While attempting to set the label on a file, SEVMS service $CHANGE_CLASS failed.

Action: Examine the system message and refer to SEVMS system documentation.

ORA-07646: sszfck: $CREATE failure
Cause: While attempting to create a file, VMS system service $CREATE failed.

Action: Examine the system message and refer to VMS system documentation.

ORA-07647: sszfck: $OPEN failure
Cause: While attempting to reopen a file, VMS system service $OPEN failed.

Action: Examine the system message and refer to VMS system documentation.

ORA-07650: sigunc: $GETJPIW failure
Cause: While attempting to get the user's terminal device name, user name, user program name, or process name during logon, VMS system service $GETJPIW failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07655: slsprom:$TRNLOG failure
Cause: While attempting to translate SYS$INPUT during a prompt for a password, VMS system service $TRNLOG failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07656: slsprom:$GETDVI failure
Cause: While attempting to get device characteristics during a prompt for a password, VMS system service $GETDVI failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07657: slsprom:$ASSIGN failure
Cause: While prompting for a password, VMS system service $ASSIGN failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07658: slsprom:$QIOW read failure
Cause: While prompting for a password, VMS system service $QIOW failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07665: ssrexhd: recursive exception encountered *string string string string string string*
Cause: A VMS exception occurred while executing in the Oracle exception handler. The message includes the signal number, first and second signal arguments, and exception PC, PSL and R0. This is an internal error.

Action: Contact your customer support representative.

ORA-07670: $IDTOASC failed translating a secrecy category
Cause: VMS system service $IDTOASC failed while looking up the string representation in the rights database of a secrecy category.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07671: $IDTOASC failed translating an integrity category
Cause: VMS system service $IDTOASC failed while looking up the string representation in the rights database of an integrity category.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07672: $PARSE_CLASS failed translating the string into a binary label
Cause: SEVMS system service $PARSE_CLASS failed because the given string did not represent a valid classification.

Action: Examine system error message and refer to SEVMS documentation.

ORA-07680: sou2os: another call to Oracle currently executing
Cause: A call to the Oracle shared image entry point occurred from within the shared image. This is an internal error.

Action: Contact your customer support representative.

ORA-07681: sou2os: An error occurred while initializing Oracle
Cause: While attempting to set up the dispatch vectors for the shared image, an error occurred. This is an internal error.

Action: Contact your customer support representative.

ORA-07682: sou2os: set kernel dispatch fail err
Cause: During Oracle shared image entry, a dispatch to kernel mode failed.

Action: Make sure that your shared image is installed with the CMKRNL privilege, then contact your customer support representative.

ORA-07683: sou2os: $SETPRV reset error
Cause: During an attempt to restore user privileges at Oracle shared image exit, VMS system service $SETPRV failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07684: sou2os: supervisor stack reset error
Cause: During an attempt to restore the supervisor-mode stack at Oracle shared image exit, VMS system service $SETSTK failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07685: sou2os: supervisor stack set error
Cause: During an attempt to set the Oracle supervisor-mode stack at Oracle shared image entry, VMS system service $SETSTK failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07700: sksarch: interrupt received
Cause: An interrupt was received while archiving the logs

Action: Retry operation

ORA-07701: sksatln: internal exception: output buffer too small
Cause: Overflow of buffer for parsing archive control text string

Action: This is an internal error, please report to Oracle

ORA-07702: unrecognized device type in archive text
Cause: Unrecognized device type in archive text

Action: This is an internal error, please report to Oracle

ORA-07703: error in archive text: need '/' after device type
Cause: The archive control text in the ARCHIVE command is invalid; the device type (to indicate a file or tape) must be followed by a '/'.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07704: error in archive text: need ':' after device name
Cause: The archive control text in the ARCHIVE command is invalid; the device name must be followed by a ':'.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07705: sksaprs: device name buffer too small
Cause: The buffer supplied for the device name is too small. This is an internal error.

Action: Contact your customer support representative.

ORA-07706: error in archive text: need disk file name
Cause: The archive control text in the ARCHIVE command is invalid; the disk file name is missing.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07707: error in archive text: need tape label name
Cause: The archive control text in the ARCHIVE command is invalid; the tape label name is missing.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07708: sksaprs: tape label name buffer too small
Cause: The buffer supplied for the tape label is too small. This is an internal error.

Action: Contact your customer support representative.

ORA-07709: sksaprs: archiving to a remote host is not allowed
Cause: The user specified a remote disk for archiving via DECnet.

Action: Archive to a disk on the local host.

ORA-07710: sksaprs: file name buffer too small
Cause: The buffer supplied for the file name is too small. This is an internal error.

Action: Contact your customer support representative.

ORA-07713: sksamtd: could not mount archival device (SYS$MOUNT failure)
Cause: VMS system service SYS$MOUNT failed

Action: Examine system error message and refer to VMS documentation

ORA-07715: sksadtd: could not dismount archival device (SYS$DISMNT failure)
Cause: VMS system service SYS$DISMNT failed

Action: Examine system error message and refer to VMS documentation

ORA-07716: sksachk: invalid device specification for ARCHIVE
Cause: VMS system service SYS$GETDVI failed"

Action: Specify a valid device in ARCHIVE control string

ORA-07717: sksaalo: error allocating memory
Cause: VMS system service LIB$GET_VM failed"

Action: Examine system error message and refer to VMS documentation

ORA-07718: sksafre: error freeing memory
Cause: VMS system service LIB$FREE_VM failed

Action: Examine system error message and refer to VMS documentation

ORA-07721: scgcm: not enough OS resource to obtain system enqueue
Cause: A call to sys$enq returned an error indicating that the operating system lacked the resources necessary to create a lock. This is caused by the messages SS$_EXENQLM or SS$_INSFMEM.

Action: Free up some of the required resource to allow the creation of the required lock.

ORA-07740: slemop: incorrect handle size (programming error)
Cause: structures used for reading error message files do not match

Action: this is an internal error, please report to Oracle

ORA-07741: slemop: $OPEN failure
Cause: VMS system service $OPEN failed

Action: Examine system error message and refer to VMS documentation

ORA-07742: slemop: $CONNECT failure
Cause: VMS system service $CONNECT failed

Action: Examine system error message and refer to VMS documentation

ORA-07743: slemop: incorrect error file attributes
Cause: An error message file is of incorrect format

Action: Unless an error file has been changed, report this to Oracle

ORA-07744: slemcl: invalid error message file handle
Cause: seal in passed in handle does not match correct value

Action: this is an internal error, please report to Oracle

ORA-07745: slemcl: $CLOSE failure
Cause: VMS system service $CLOSE failed

Action: Check system error and refer to VMS documentation

ORA-07746: slemrd: invalid error message file handle
Cause: seal in passed in handle does not match correct value

Action: this is an internal error, please report to Oracle

ORA-07747: slemrd: $READ failure
Cause: VMS system service $READ failed

Action: Check system error and refer to VMS documentation

ORA-07750: slemcr: fopen failure
Cause: An attempt to create a message file failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07751: slemcr: malloc failure
Cause: An attempt to allocate a cache for a newly-created message file failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07753: slemcf: fseek before write failure
Cause: An attempt to seek before writing a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07754: slemcf: fwrite failure
Cause: An attempt to write a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07755: slemcf: fseek before read failure
Cause: An attempt to seek before reading a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07756: slemcf: fread failure
Cause: An attempt to read a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07757: slemcc: invalid handle
Cause: The seal in a passed-in handle does not match correct value. This is an internal error.

Action: Contact your customer support representative.

ORA-07758: slemcw: invalid handle
Cause: The seal in a passed-in handle does not match correct value. This is an internal error.

Action: Contact your customer support representative.

ORA-07759: slemtr: invalid destination
Cause: The destination string provided to the function is too short This is an internal error.

Action: Contact your customer support representative.

ORA-07760: slemtr: $open failure
Cause: the $open service failed. This is an internal error

Action: Contact your customer support representative.

ORA-07800: slbtpd: invalid number
Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

ORA-07801: slbtpd: invalid exponent
Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

ORA-07802: slbtpd: overflow while converting to packed decimal
Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

ORA-07803: slpdtb: invalid packed decimal nibble
Cause: An impossible request for decimal to binary conversion was made

Action: This conversion cannot be performed

ORA-07804: slpdtb: number too large for supplied buffer
Cause: An impossible request for decimal to binary conversion was made

Action: This conversion cannot be performed

ORA-07820: sspscn: SYS$CRELNM failure
Cause: An error was returned from the SYS$CRELNM function

Action: Check system error and refer to VMS documentation

ORA-07821: sspsdn: SYS$DELLNM failure
Cause: An error was returned from the SYS$DELLNM function

Action: Check system error and refer to VMS documentation

ORA-07822: sspscm: SYS$CREMBX failure
Cause: An error was returned from the SYS$CREMBX function while trying to create the process dump mailbox.

Action: Check system error and refer to VMS documentation

ORA-07823: sspsqr: $QIO failure
Cause: An error was returned from $QIO while trying to queue a read to the process dump mailbox.

Action: Check system error and refer to VMS documentation

ORA-07824: sspain: $SETIMR failure
Cause: An error was returned from SYS$SETIMR while trying to queue a process spin-watch timer.

Action: Check system error and refer to VMS documentation

ORA-07825: sspsck: $QIO failure at AST level
Cause: An error was returned from SYS$QIO while trying to read the process dump mailbox.

Action: Check system error and refer to VMS documentation

ORA-07826: sspscm: SYS$GETDVIW failure
Cause: An error was returned from SYS$GETDVIW while trying to get information about the process dump mailbox.

Action: Check system error and refer to VMS documentation

ORA-07840: sllfop: LIB$GET_VM failure
Cause: An error was returned from LIB$GET_VM while attempting to allocate memory for an i/o vector.

Action: Check system error and refer to VMS documentation

ORA-07841: sllfop: SYS$OPEN failure
Cause: An error was returned from SYS$OPEN while attempting to open the data file for reading

Action: Check system error and refer to VMS documentation

ORA-07842: sllfcl: SYS$CLOSE failure
Cause: An error was returned from SYS$CLOSE while attempting to close the input data file

Action: Check system error and refer to VMS documentation

ORA-07843: sllfcl: LIB$FREE_VM failure
Cause: An error was returned from LIB$FREE_VM while attempting to free the memory for the i/o vector

Action: Check system error and refer to VMS documentation

ORA-07844: sllfop: LIB$GET_VM failure
Cause: An error was returned from LIB$GET_VM while attempting to allocate memory for data and index buffers

Action: Check system error and refer to VMS documentation

ORA-07845: sllfcl: LIB$FREE_VM failue
Cause: An error was returned from LIB$FREE_VM while attempting to free memory used by data and index buffers

Action: Check system error and refer to VMS documentation

ORA-07846: sllfop: *string* byte record too big for *string* byte user buffer
Cause: The longest record in the file will not fit into the largest data buffer that can be allocated

Action: Modify the RMS file to have smaller records

ORA-07847: sllfop: $CONNECT failure
Cause: An error was returned by SYS$CONNECT while attempting to open the data file

Action: Check system error and refer to VMS documentation

ORA-07848: sllfrb: $GET failure
Cause: An error was returned by SYS$GET while attempting to read the data file

Action: Check system error and refer to VMS documentation

ORA-07849: sllfsk: $GET failure
Cause: An error was returned by SYS$GET while attempting to skip records in the input file

Action: Check system error and refer to VMS documentation

ORA-07850: sllfop: bad option
Cause: You are using a bad option to loader Fixed= is one legal option. Check documentation for others.

Action: Check documentation

ORA-07860: osnsoi: error setting up interrupt handler
Cause: An error occurred while setting up the control interrupt handler

Action: This is an internal error. Contact your Oracle representative.

ORA-07880: sdopnf: internal error
Cause: A list of all files open by this process could not be obtained.

Action: This is an internal error. Contact your customer support representative.

ORA-08000: maximum number of session sequence lists exceeded
Cause: the sequence parent state objects for this session are all used

Action: an internal error; quit the session and begin a new one

ORA-08002: sequence *string*.CURRVAL is not yet defined in this session
Cause: sequence CURRVAL has been selected before sequence NEXTVAL

Action: select NEXTVAL from the sequence before selecting CURRVAL

ORA-08003: sequence *string*.NEXTVAL exceeds internal limits
Cause: The sequence was created with unsafe values for some of the parameters. The calculation of NEXTVAL cannot be made because it exceeds the legal represention size.

Action: Alter or recreate the sequence number with legal limits.

ORA-08004: sequence *string*.NEXTVAL *string string*VALUE and cannot be instantiated
Cause: instantiating NEXTVAL would violate one of MAX/MINVALUE

Action: alter the sequence so that a new value can be requested

ORA-08005: specified row does not exist
Cause: A row with the given rowid does not exist in any of the tables given

Action: check the query for misspellings of table names and the rowid

ORA-08006: specified row no longer exists
Cause: the row has been deleted by another user since the operation began

Action: re-try the operation

ORA-08007: Further changes to this block by this transaction not allowed
Cause: Max locks have been reached for this transaction in this block

Action: Commit changes

ORA-08008: another instance is mounted with USE_ROW_ENQUEUES = *string*
Cause: the shared instance being started does not have the same value for use_row_enqueues as already running instances

Action: ensure that all instances' INIT.ORA files specify the same value for the parameter 'use_row_enqueues'

ORA-08100: index is not valid - see trace file for diagnostics
Cause: Validate Index detected an inconsistency in its argument index

Action: Send trace file to your customer support representative

ORA-08101: index key does not exist file *string*: (root *string*, node *string*) blocks (*string*)
Cause: Internal error: possible inconsistency in index

Action: Send trace file to your customer support representative, along with information on reproducing the error

ORA-08102: index key not found, obj# *string*, file *string*, block *string* (*string*)
Cause: Internal error: possible inconsistency in index

Action: Send trace file to your customer support representative, along with information on reproducing the error

ORA-08103: object no longer exists
Cause: The object has been deleted by another user since the operation began, or a prior incomplete recovery restored the database to a point in time during the deletion of the object.

Action: Delete the object if this is the result of an incomplete recovery.

ORA-08104: this index object *string* is being online built or rebuilt
Cause: the index is being created or rebuild or waited for recovering from the online (re)build

Action: wait the online index build or recovery to complete

ORA-08105: Oracle event to turn off smon cleanup for online index build
Cause: set this event only under the supervision of Oracle development

Action: debugging only

ORA-08106: cannot create journal table *string.string*
Cause: The online index builder could not create its journal table

Action: Rename the conflicting table or rerun the SQL statement. There * may be a concurrent online index rebuild on the same object. rename your table in conflict or rerun the SQL statement * there may be a concurrent online index rebuild on the same object.

ORA-08108: may not build or rebuild this type of index online
Cause: only support normal index or IOT top-level index

Action: change your index type

ORA-08109: nosort is not a supported option for online index build
Cause: may not specify nosort for online index build

Action: get rid of nosort in the index creation command

ORA-08110: Oracle event to test SMON cleanup for online index build
Cause: Oracle Kernel test only

Action: Donot set this event(for test only)

ORA-08111: a partitioned index may not be coalesced as a whole
Cause: User attempted to coalesce a partitioned index using ALTER INDEX COALESCE statement, which is illegal

Action: Coalesce the index a (sub)partition at a time (using ALTER INDEX MODIFY (sub)PARTITION COALESCE)

ORA-08112: a composite partition may not be coalesced as a whole
Cause: User attempted to coalesce a composite partition

Action: Coalesce the index a subpartition at a time (using ALTER INDEX MODIFY SUBPARTITION COALESCE)

ORA-08113: composite partition index may not be compressed
Cause: User attempted to compress a composite partition index

Action: create uncompressed composite partition index

ORA-08114: can not alter a fake index
Cause: User attempted to alter a fake index

Action: drop fake index

ORA-08115: can not online create/rebuild this index type
Cause: User attempted to create index type that online doesnot support

Action: use offline index create/rebuild command

ORA-08116: can not acquire dml enough lock(S mode) for online index build
Cause: User attempted to create index online without allowing DML Share lock

Action: allow DML share lock on the base table

ORA-08117: Index Organized Table operation released its block pin
Cause: Block maintenance forced the release of a block pin

Action: Contact your customer support representative

ORA-08118: Deferred FK constraints cannot be enforced, index too big (*string*)
Cause: Deferred Foreign Key constraints cannot be enforced due to the index key being too big and built on a non-default DB_BLOCK_SIZE.

Action: First try to drop the Foreign Key and then the primary key.

ORA-08119: The new initrans will make the index too big
Cause: Specifying the initrans need additional space to hold the index key which might make the index too big

Action: Try giving a smaller initrans value

ORA-08120: Need to create SYS.IND_ONLINE$ table in order to (re)build index
Cause: Alter index Build/Rebuild online require existing of SYS.IND_ONLINE$ table.

Action: User/DBA needs to create sys.ind_online$ before alter the index /rdbms/admin/catcio.sql contains script to create ind_online$.

ORA-08121: Number of indexes need to be maintained offline exceeds limit for DML
Cause: Too many indexes needed to be maintained. The limit is 2^16 indexes for each DML statement

Action: Make sure the index maintainance is online. If indexes need to be maintained offline, drop some indexes.

ORA-08122: Online (re)build of index rolled back due to DML conflict
Cause: The online (re)build journal is inconsistent with ongoing DML and cannot be used successfully to complete the online index (re)build.

Action: Reissue the online (re)build operation, after performing any cleanup, if needed.

ORA-08175: discrete transaction restriction violated (*string*)
Cause: An attempt was made to perform an action that is not currently supported in a discrete transaction.

Action: Rollback the transaction, and retry it as a normal transaction.

ORA-08176: consistent read failure; rollback data not available
Cause: Encountered data changed by an operation that does not generate rollback data : create index, direct load or discrete transaction.

Action: In read/write transactions, retry the intended operation. Read only transactions must be restarted.

ORA-08177: can't serialize access for this transaction
Cause: Encountered data changed by an operation that occurred after the start of this serializable transaction.

Action: In read/write transactions, retry the intended operation or transaction.

ORA-08178: illegal SERIALIZABLE clause specified for user INTERNAL
Cause: Serializable mode is not supported for user INTERNAL.

Action: Reconnect as another user and retry the SET TRANSACTION command.

ORA-08179: concurrency check failed
Cause: Encountered data changed by an operation that occurred after a specific snapshot. This is usually used to indicate that a particular cached copy of a datablock is stale. This is used for internal use for now.

Action: refresh the cached copy of the datablock and retry operation.

ORA-08180: no snapshot found based on specified time
Cause: Could not match the time to an SCN from the mapping table.

Action: try using a larger time.

ORA-08181: specified number is not a valid system change number
Cause: supplied scn was beyond the bounds of a valid scn.

Action: use a valid scn.

ORA-08182: operation not supported while in Flashback mode
Cause: user tried to do dml or ddl while in Flashback mode

Action: disable Flashback and re-attempt the operation

ORA-08183: Flashback cannot be enabled in the middle of a transaction
Cause: user tried to do Flashback in the middle of a transaction

Action: do a commit

ORA-08184: attempting to re-enable Flashback while in Flashback mode
Cause: as stated above

Action: disable first before re-enabling

ORA-08185: Flashback not supported for user SYS
Cause: user logged on as SYS

Action: logon as a different (non SYS) user.

ORA-08186: invalid timestamp specified
Cause: as stated above

Action: enter a valid timestamp

ORA-08187: snapshot expression not allowed here
Cause: A snapshot expression using AS OF was specified when not allowed.

Action: Do not use the AS OF clause

ORA-08189: cannot flashback the table because row movement is not enabled
Cause: An attempt was made to perform Flashback Table operation on a table for which row movement has not been enabled. Because the Flashback Table does not preserve the rowids, it is necessary that row movement be enabled on the table.

Action: Enable row movement on the table

ORA-08190: restore point *string* is from a different incarnation of the database
Cause: An attempt was made to perform Flashback Table operation using a restore point from a different incarnation of the database

Action: Provide a restore point from the current database incarnation

ORA-08191: Flashback Table operation is not supported on remote tables
Cause: An attempt was made to perform Flashback Table operation on a remote table. This was not supported.

Action: Do not perform a Flashback Table operation on remote tables.

ORA-08192: Flashback Table operation is not allowed on fixed tables
Cause: An attempt was made to perform Flashback Table operation on a fixed table. This was not supported.

Action: Do not perform a Flashback Table operation on fixed tables.

ORA-08193: Flashback Table operation is not allowed on temporary tables
Cause: An attempt was made to perform Flashback Table operation on a temporary table. This was not supported.

Action: Do not perform a Flashback Table operation on temporary tables.

ORA-08194: Flashback Table operation is not allowed on materialized views
Cause: An attempt was made to perform Flashback Table operation on a materialized view. This was not supported.

Action: Do not perform a Flashback Table operation on materialized views or snapshot logs.

ORA-08195: Flashback Table operation is not supported on partitions
Cause: An attempt was made to perform Flashback Table operation on a partition. This was not supported.

Action: Do not perform a Flashback Table operation on partitions.

ORA-08196: Flashback Table operation is not allowed on AQ tables
Cause: An attempt was made to perform Flashback Table operation on AQ tables. This was not supported.

Action: Do not perform a Flashback Table operation on AQ tables.

ORA-08197: Flashback Table operation is not supported on clustered tables
Cause: An attempt was made to perform Flashback Table operation on a clustered table. This was not supported.

Action: Do not perform a Flashback Table operation on clustered tables.

ORA-08198: Flashback Table is not supported on object tables, nested tables
Cause: An attempt was made to perform Flashback Table operation on a object table or a nested table or a table with nested table column. This was not supported.

Action: Do not perform a Flashback Table operation on such tables.

ORA-08199: Flashback Table operation is not supported on this object
Cause: An attempt was made to perform Flashback Table operation on an object on which the operation was not supported.

Action: Do not perform a Flashback Table operation on such objects.

ORA-08205: ora_addr: $ORACLE_SID not set in environment
Cause: The environment variable ORACLE_SID is not set.

Action: Set the ORACLE_SID environment variable.

ORA-08206: ora_addr: cannot translate address file name
Cause: Cannot translate $ORACLE_HOME/dbs/sgadef$ORACLE_SID.dbf.

Action: Ensure that ORACLE_HOME and ORACLE_SID are properly set.

ORA-08207: ora_addr: cannot open address file
Cause: The address file could not be opened.

Action: Check that ORACLE is up. Check that the file $(ORACLE_HOME)/dbs/sgadef$(ORACLE_SID).dbf exists and has correct permissions.

ORA-08208: ora_addr: cannot read from address file
Cause: The address file could not be read.

Action: Check that the file $(ORACLE_HOME)/dbs/sgadef$(ORACLE_SID).dbf exists and contains a single line of text.

ORA-08209: scngrs: SCN not yet initialized
Cause: The System Commit Number has not yet been initialized.

Action: Contact your customer support representative.

ORA-08210: Requested I/O error
Cause: Oracle requested that an I/O error be returned for this operation.

Action: This should not occur in normal Oracle operation. Contact support.

ORA-08230: smscre: failed to allocate SGA
Cause: The n_core system call failed, maybe due to insufficient memory.

Action: Specify a smaller number of buffers. Check INIT.ORA parameters.

ORA-08231: smscre: unable to attach to SGA
Cause: The process cannot attach to the SGA. This can happen if either the listener can't attach, or the process cannot communicate with the listener.

Action: Verify that the instance is up and running. Contact your customer support representative.

ORA-08232: smsdes: cannot detach from SGA
Cause: Probably, the listener process has died.

Action: Contact your customer support representative.

ORA-08233: smsdes: cannot unmap SGA
Cause: The n_core system call failed while detaching from the SGA.

Action: Note nCX error returned; contact your customer support representative.

ORA-08234: smsget: cannot get instance listener address
Cause: The instance listener address cannot be read from the sgadef file.

Action: Verify $(ORACLE_HOME) and $(ORACLE_SID) are set correctly. Additional information gives error return from ora_addr.

ORA-08235: smsget: listener not on this node
Cause: A process wishing to attach to the SGA is on a different node from its instance's listener.

Action: Verify $(ORACLE_HOME) and $(ORACLE_SID) are set correctly. Contact your customer support representative.

ORA-08236: smsget: cannot share subcube with listener
Cause: The n_share call failed, probably because the listener has died.

Action: Check if the listener is running, and contact your customer support representative.

ORA-08237: smsget: SGA region not yet created
Cause: Attempting to attach to an SGA which has not yet been created.

Action: Verify that the instance is running. Contact your customer support representative.

ORA-08238: smsfre: cannot detach from SGA
Cause: The n_core system call failed while detaching from the SGA.

Action: Check nCX error, and contact your customer support representative.

ORA-08243: recursive audit operation attempted
Cause: A recursive operation requiring audit was attempted in the middle of an auditing operation or an audit table movement operation. The most likely reason is that space management operations needed to free up space in the audit tablespace

or a SQL operation on dictionary tables directly or using database triggers which produced more audit records.

Action: Check space in the tablespace for SYS.AUD$ or SYS.FGA_LOG$ and correct the problem. Or, if the problem was recursively auditing SQL operations, remove the audit configuration on such objects or statements.

ORA-08260: ora_addr: cannot open nameserver
Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08261: ora_addr: cannot find name in nameserver
Cause: The listener nameserver entry for an instance could not be found.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08263: ora_addr: cannot free listener address
Cause: The listener nameserver entry could not be freed

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08264: ora_addr: cannot close nameserver
Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08265: create_ora_addr: cannot open nameserver
Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08266: create_ora_addr: cannot register name in nameserver
Cause: The listener's addressing information could not be registered.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08267: destroy_ora_addr: cannot close nameserver
Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08268: create_ora_addr: cannot close nameserver
Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08269: destroy_ora_addr: cannot destroy name
Cause: The listener's addressing information could not be removed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08270: sksachk: Illegal archival control string
Cause: Archive files cannot be created with the given archival control string.

Action: Check that the volume exists

ORA-08271: sksabln: Buffer size not large enough for archive control string
Cause: The given archival control string expands into too many characters.

Action: Reduce archive control string length.

ORA-08274: Out of memory for environment variable
Cause: There is insufficient memory to return the requested value

Action: Reduce memory usage and retry.

ORA-08275: Environment variable unset
Cause: The requested environment variable is not set

Action: Ensure that the variable name requested is correct.

ORA-08276: No room in nameserver for pid
Cause: There is no room to record the pid for a background process

Action: Shutdown abort and restart the database.

ORA-08277: Cannot set environment variable
Cause: There is insufficient memory to expand the environment.

Action: Reduce memory usage and retry.

ORA-08278: Cannot get CPU statistics
Cause: Could not retrieve CPU times because n_stat failed.

Action: Contact customer support.

ORA-08308: sllfop: Cannot open file
Cause: Oracle could not open a file.

Action: Check the Unix errno returned as additional information.

ORA-08309: sllfop: Cannot fstat file
Cause: Oracle could not obtain information about an open file.

Action: Check the Unix errno returned as additional information.

ORA-08310: sllfop: Bad value for recsize
Cause: An illegal value for the record size was specified.

Action: Specify a value for the recsize option that is greater than 0.

ORA-08311: sllfop: bad value for maxrecsize
Cause: An illegal value for the maximum record size was specified.

Action: Specify a value for the maxrecsize option that is greater than 0.

ORA-08312: sllfop: unrecognized processing option
Cause: An unrecognized processing option was specified.

Action: Check the Oracle for nCUBE 2 User's Guide for valid options.

ORA-08313: sllfop: could not allocate buffers
Cause: Memory for the load buffers could not be allocated.

Action: Reduce the maximum record size. Eliminate any unnecessary processes on your current node before running SQL*Loader again.

ORA-08314: sllfcf: Error closing file
Cause: An error occurred trying to close a file.

Action: Check the Unix errno returned as additional information.

ORA-08315: sllfrb: Error reading file
Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

ORA-08316: sllfsk: Error seeking in file.
Cause: The lseek system call returned an error.

Action: Check the Unix errno returned as additional information.

ORA-08317: sllfsk: Error seeking in file.
Cause: The lseek system call returned an error.

Action: Check the Unix errno returned as additional information.

ORA-08318: sllfsk: Error reading file
Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

ORA-08319: sllfsk: Error reading file
Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

ORA-08320: scnget: Call to scnget before scnset or scnfnd.
Cause: An internal error

Action: Contact your customer support representative.

ORA-08321: scnmin: NOT IMPLEMENTED YET
Cause: An internal error

Action: Contact your customer support representative.

ORA-08322: scnmin: open/convert of bias lock failed
Cause: A call to the lkmgr failed to open and convert the bias lock

Action: Check to make sure the lkmgr is up.

ORA-08323: scnmin: close of bias lock failed
Cause: A call to the lkmgr failed to close the bias lock

Action: Check to make sure the lkmgr is up.

ORA-08330: Printing not supported
Cause: An attempt was made to automatically spool a file to the printer

Action: None

ORA-08331: Wait operation timed out
Cause: Oracle timed out waiting for an event

Action: Contact your Oracle support representative

ORA-08332: rollback segment #*string* specified not available
Cause: (same as 1545)

Action: (same as 1545). Also, make sure you have created enough rollback segments for the number of instances you are trying to start.

ORA-08340: This command not allowed on nCUBE, only one thread is ever used.
Cause: An illegal command was executed for the nCUBE platform.

Action: There is no need to issue this command.

ORA-08341: On nCUBE, this command can only be executed from instance 1.
Cause: A command that can only be issued on instance 1 was issued elsewhere.

Action: Log on to instance 1 and repeat the command.

ORA-08342: sropen: failed to open a redo server connection
Cause: An error occurred trying to connect to the redo server.

Action: The OS specific error message should tell you what to do.

ORA-08343: srclose: failed to close a redo server connection
Cause: An error occurred trying to close the redo server connection.

Action: The OS specific error message should tell you what to do.

ORA-08344: srapp: failed to send redo data to the redo server
Cause: An error occurred trying to send redo to the redo server.

Action: The OS specific error message should tell you what to do.

ORA-08401: invalid compiler name: *string*
Cause: An invalid compiler name *compname* was passed to a UTL_PG conversion routine.

Action: Correct the compiler name parameter in the PL/SQL code that called the conversion routine.

ORA-08402: error executing PL/SQL code coverage
Cause: An error occurred during execution of a PL/SQL code coverage procedure.

Action: Check the error stack for more details.

ORA-08412: error encountered in WMSGBSIZ, size for WMSGBLK is not big enough for warning message
Cause: The WMSGBSIZ is the maximun size for warning message block, it is recommanded to be 1024 bytes to 8 kbytes.

Action: Defined WMSGBLK of size between 1k to 8k bytes and update the WMSGBSIZ to the sizeof(WMSGBLK).

ORA-08413: invalid compiler type in FORMAT parameter at *string*
Cause: An invalid compiler type is defined in format control block. The format control block is invalid.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08414: error encountered in *string*
Cause: The function *routine* returned an error. Where *routine* may be: RAW_TO_NUMER NUMBER_TO_RAW RAW_TO_NUMBER_FORMAT NUMBER_TO_RAW_FORMAT MAKE_NUMBER_TO_RAW_FORMAT MAKE_RAW_TO_NUMBER_FORMAT

Action: This message will be preceded by messages providing details about the error. Check those messages to determine what action to take.

ORA-08429: raw data has invalid digit in display type data
Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contained invalid data. The picture mask parameter specified a digit, but the corresponding input from the raw data did not contain a valid digit.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08430: raw data missing leading sign
Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08431: raw data missing zero as defined in picture
Cause: The picture mask parameter passed to a UTL_PG RAW_TO_NUMBER conversion routine contained a zero, but the corresponding input from the raw data was not a zero.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08432: raw data has invalid floating point data
Cause: The input raw data passed to a UTL_PG RAW_TO_NUMBER conversion routine contained invalid floating point data.

Action: Correct the input raw data.

ORA-08433: invalid picture type in convert raw to number
Cause: The picture mask parameter passed to a UTL_PG RAW_TO_NUMBER conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

ORA-08434: raw data has invalid trailing sign
Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had no trailing sign, but the mask options parameter specified a trailing sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08435: PICTURE MASK missing the leading sign when SIGN IS LEADING specified
Cause: The input MASK passed to a UTL_PG RAW_TO_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08436: raw data has invalid sign digit
Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had an invalid sign digit in the position where the picture mask specified a sign.

Action: Correct the input raw data or the picture mask so that they match.

ORA-08437: invalid picture type in picture mask
Cause: The picture mask parameter passed to a UTL_PG NUMBER_TO_RAW conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

ORA-08440: raw buffer is too short to hold converted data
Cause: The output raw buffer passed to a UTL_PG NUMBER_TO_RAW conversion routine was not large enough to contain the results of the conversion based on the picture mask.

Action: Increase the raw buffer size to the size necessary to hold the entire result of the conversion.

ORA-08441: closed parenthesis missing in picture mask
Cause: A closed parenthesis was missing from the picture mask passed to a UTL_PG conversion routine.

Action: Correct the picture mask.

ORA-08443: syntax error in BLANK WHEN ZERO clause in mask options
Cause: A syntax error was found in the BLANK WHEN ZERO clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: BLANK ZERO BLANK ZEROS BLANK ZEROES BLANK WHEN ZERO BLANK WHEN ZEROS BLANK WHEN ZEROES

Action: Correct the mask options parameter.

ORA-08444: syntax error in JUSTIFIED clause in mask options
Cause: A syntax error was found in the JUSTIFIED clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: JUST JUST RIGHT JUSTIFIED JUSTIFIED RIGHT

Action: Correct the mask options parameter.

ORA-08445: syntax error in SIGN clause in mask options
Cause: A syntax error was found in the SIGN clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SIGN LEADING SIGN LEADING SEPARATE SIGN LEADING SEPARATE CHARACTER SIGN TRAILING SIGN TRAILING SEPARATE SIGN TRAILING SEPARATE CHARACTER SIGN IS LEADING SIGN IS LEADING SEPARATE SIGN IS LEADING SEPARATE CHARACTER SIGN IS TRAILING SIGN IS TRAILING SEPARATE SIGN IS TRAILING SEPARATE CHARACTER

Action: Correct the mask options parameter.

ORA-08446: syntax error in SYNCHRONIZED clause in mask options
Cause: A syntax error was found in the SYNCHRONIZED clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SYNC SYNC LEFT SYNC RIGHT SYNCHRONIZED SYNCHRONIZED LEFT SYNCHRONIZED RIGHT

Action: Correct the mask options parameter.

ORA-08447: syntax error in USAGE clause in mask options
Cause: A syntax error was found in the USAGE clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: USAGE DISPLAY USAGE COMP USAGE COMP-3 USAGE COMP-4 USAGE COMPUTATIONAL USAGE COMPUTATIONAL-3 USAGE COMPUTATIONAL-4 USAGE IS DISPLAY USAGE IS COMP USAGE IS COMP-3 USAGE IS COMP-4 USAGE IS COMPUTATIONAL USAGE IS COMPUTATIONAL-3 USAGE IS COMPUTATIONAL-4

Action: Correct the mask options parameter.

ORA-08448: syntax error in DECIMAL-POINT environment clause
Cause: A syntax error was found in the DECIMAL-POINT environment clause parameter passed to a UTL_PG conversion routine. Valid specifications are: DECIMAL-POINT IS COMMA

Action: Correct the environment clause parameter.

ORA-08449: invalid numeric symbol found in picture mask
Cause: An invalid numeric symbol was found in the picture mask parameter passed to a UTL_PG conversion routine.

Action: Correct the picture mask parameter.

ORA-08450: invalid specification of CR in picture mask
Cause: The CR suffix was incorrectly specified in the picture mask parameter passed to a UTL_PG conversion routine. The CR suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

ORA-08451: invalid specification of DB in picture mask
Cause: The DB suffix was incorrectly specified in the picture mask parameter passed to a UTL_PG conversion routine. The DB suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

ORA-08452: specification of E in picture mask is unsupported
Cause: The floating point exponent symbol 'E' was specified in the picture mask parameter passed to a UTL_PG conversion routine. The floating point data type is currently not supported by the UTL_PG conversion routines.

Action: Correct the picture mask parameter, and the data, if necessary.

ORA-08453: more than one V symbol specified in picture mask
Cause: The picture mask passed to a UTL_PG conversion routine contained more than one decimal point indicator ('V'). Only one decimal point indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

ORA-08454: more than one S symbol specified in picture mask
Cause: The picture mask passed to a UTL_PG conversion routine contained more than one operational sign indicator ('S'). Only one operational sign indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

ORA-08455: syntax error in CURRENCY SIGN environment clause
Cause: A syntax error was found in the CURRENCY SIGN environment clause parameter passed to a UTL_PG conversion routine. Valid specifications are: CURRENCY SIGN IS x where x is a valid currency sign

Action: Correct the environment clause parameter.

ORA-08456: no sign in picture mask but SIGN clause in mask options
Cause: The picture mask parameter passed to a UTL_PG conversion routine contained no sign symbol ('S', '+', or '-'), but the mask options parameter contained a SIGN clause. A sign symbol is required in the picture mask parameter when the mask options parameter contains a SIGN clause.

Action: Correct the picture mask parameter or the mask options parameter.

ORA-08457: syntax error in SEPARATE CHARACTER option of SIGN clause
Cause: A syntax error was found in the SEPARATE CHARACTER option of the SIGN clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SEPARATE SEPARATE CHARACTER

Action: Correct the mask options parameter.

ORA-08458: invalid format parameter
Cause: The format parameter passed to a UTL_PG conversion routine was invalid. The format parameter should have been built by a prior call to either MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08459: invalid format parameter length
Cause: The format parameter passed to a UTL_PG conversion routine was not the correct length. Format parameters must be 2048 bytes in length.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08460: invalid environment clause in environment parameter
Cause: The environment parameter passed to a UTL_PG conversion routine contained an unsupported or invalid environment clause. Only the CURRENCY SIGN and the DECIMAL-POINT IS COMMA environment clauses are supported.

Action: Correct the environment parameter.

ORA-08462: raw buffer contains invalid decimal data
Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contains invalid decimal data.

Action: Correct the input data.

ORA-08463: overflow converting decimal number to Oracle number
Cause: The output variable passed to a UTL_PG RAW_TO_NUMBER was not large enough to hold the Oracle number resulting from the input decimal number.

Action: Be sure that the input decimal number is valid, and besure that the output variable is large enough to hold the Oracle number value.

ORA-08464: input raw decimal data contains more than 42 digits
Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contained more than 42 digits. This exceeds the maximum size of an Oracle number.

Action: Correct the raw input buffer.

ORA-08465: input mask contains more than 32 characters
Cause: The input mask passed to UTL_PG numeric conversion routine contained more the 32 characters.

Action: Correct the mask input buffer.

ORA-08466: raw buffer length *string* is too short for *string*
Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine was less than %s bytes long, but the picture mask parameter specified that %s bytes of input data were to be converted.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08467: error converting Oracle number to *string*
Cause: An error occurred when converting an Oracle number to a COBOL *type* of: DISPLAY COMP-3 or character variable. The Oracle number was not in the correct format.

Action: Correct the call to the conversion routine. The input must be a valid Oracle number variable.

ORA-08468: mask option *string* is not supported
Cause: The mask option *clause* was passed to a UTL_PG conversion routine, but is not supported by UTL_PG. The *clause* can be: USAGE IS POINTER USAGE IS INDEX USAGE IS COMP-1 USAGE IS COMP-2 POINTER

Action: Remove the *clause* from the mask options parameter in the PL/SQL call to UTL_PG.

ORA-08469: must use the SIGN IS SEPARATE clause in mask options
Cause: A signed numeric entry with DISPLAY usage was converted using a non-defaulted character set and its PICTURE character-string contains an S. In these circumstances, a SIGN IS SEPARATE clause must be specified in the mask options.

Action: Either specify a valid SIGN IS SEPARATE clause in the mask options, use the defaulted character set, or don't specify an S in the PICTURE character-string.

ORA-08498: Warning: picture mask '*string*' overrides picture mask option 'USAGE IS *string*' to 'USAGE IS DISPLAY'
Cause: Picture mask USAGE option was overridden by the picture mask.

Action: This is an informational message only. The message may be eliminated by changing the USAGE option to match the picture mask.

ORA-08499: Warning: picture mask options '*string*' ignored by UTL_PG
Cause: Picture mask options such as OCCUR, SYNC and others are not processed by the UTL_PG numeric conversion routines.

Action: This is an informational message only. The message may be eliminated by removing the unnecessary picture mask options from the parameter list passed to the UTL_PG routine.

ORA-09200: sfccf: error creating file
Cause: Could be out of disk space

Action: See OSD error accompanying this message

ORA-09201: sfcopy: error copying file
Cause: Block sizes may not match

Action: See OSD error accompanying this message

ORA-09202: sfifi: error identifying file
Cause: db_block_size specified in init.ora could be incorrect

Action: See OSD error accompanying this message

ORA-09203: sfofi: error opening file
Cause: File attributes may have changed

Action: See OSD error accompanying this message

ORA-09204: sfotf: error opening temporary file
Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

ORA-09205: sfqio: error reading or writing to disk
Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09206: sfrfb: error reading from file
Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09207: sfsrd: error reading from file
Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09208: sftcls: error closing file
Cause: File may have been corrupted

Action: See OSD error accompanying this message

ORA-09209: sftget: error reading from file
Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09210: sftopn: error opening file
Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

ORA-09211: sfwfb: error writing to file
Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09212: sfwfbmt: error writing to file
Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09213: slgfn: error fabricating file name
Cause: Filename may be too long

Action: See OSD error accompanying this message

ORA-09214: sfdone: I/O error detected
Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09215: sfqio: error detected in IOCompletionRoutine
Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09216: sdnfy: bad value '*string*' for parameter *string*
Cause: The directory specified as the value for the stated parameter could not be used.

Action: Make sure the directory you have specified is a valid directory/file specification.

ORA-09217: sfsfs: failed to resize file
Cause: Could be out of disk space

Action: See OSD error accompanying this message

ORA-09218: sfrfs: failed to refresh file size
Cause: File may be corrupted or truncated

Action: See OSD error accompanying this message

ORA-09240: smpalo: error allocating PGA memory
Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09241: smsalo: error allocating SGA memory
Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09242: smscre: error creating SGA
Cause: An error occurred while creating SGA.

Action: See OSD error accompanying this message

ORA-09243: smsget: error attaching to SGA
Cause: SGA may not have been created (database not started)

Action: See OSD error accompanying this message

ORA-09244: smprset: error setting memory protections
Cause: An error occurred while setting memory protections.

Action: See OSD error accompanying this message

ORA-09245: smcstk: error switching stacks
Cause: An error occurred while switching stacks.

Action: See OSD error accompanying this message

ORA-09246: sfsmap: unable to map SGA
Cause: Unable to map SGA.

Action: See OSD error accompanying this message

ORA-09247: smsdes: error destroying the SGA
Cause: An error occurred while destroying the SGA.

Action: See OSD error accompanying this message

ORA-09260: sigpidu: error obtaining process id
Cause: May be out of resources

Action: See OSD error accompanying this message

ORA-09261: spdcr: error creating detached (background) process
Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09262: spdde: error terminating detached (background) process
Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09263: spini: error initializing process
Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09264: sptpa: error flagging process
Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09265: spwat: error temporarily suspending process
Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09266: spawn: error starting an Oracle process
Cause: Could be out memory

Action: See OSD error accompanying this message

ORA-09270: szalloc: error allocating memory for security
Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09271: szlon: error verifying user name
Cause: Username may be too long

Action: See OSD error accompanying this message

ORA-09272: remote os logon is not allowed
Cause: Remote os login attempted when not allowed.

Action: See OSD error accompanying this message

ORA-09273: szrfc: error verifying role name
Cause: An OS error was returned when verifying the role name.

Action: See OSD error accompanying this message

ORA-09274: szrfc: insufficient role name buffer space
Cause: An OS role name was too long.

Action: See OSD error accompanying this message

ORA-09275: CONNECT INTERNAL is not a valid DBA connection
Cause: CONNECT INTERNAL is no longer supported for DBA connections.

Action: Please try to connect AS SYSDBA or AS SYSOPER.

ORA-09276: All bequeath database links must be loopback database links
Cause: A non-loopback bequeath connect string was supplied for a database link.

Action: Please use a connect string with a different transport protocol, or specify a loopback connect string (one that points to the instance for the current session) using "(PROGRAM=<this instance's ORACLE_HOME>/bin/oracle)" and, optionally, "(ENVS="ORACLE_SID=<this instance's ORACLE_SID>")".

ORA-09280: sllfcf: error closing file
Cause: File may be corrupted

Action: See OSD error accompanying this message

ORA-09281: sllfop: error opening file
Cause: Possibly incorrect path specified to the file

Action: See OSD error accompanying this message

ORA-09282: sllfrb: error reading records
Cause: File could be corrupted

Action: See OSD error accompanying this message

ORA-09283: sllfsk: error skipping records
Cause: File could be corrupted

Action: See OSD error accompanying this message

ORA-09284: sllfop: cannot allocate read buffer
Cause: malloc() system call returned an error. The system might have run out of heap space

Action: Check additional information for the OS error.

ORA-09285: sllfop: unrecognizable processing option, incorrect format
Cause: Processing option passed is of incorrect format

Action: Consult your IUG for permissible formats

ORA-09290: sksaalo: error allocating memory for archival
Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09291: sksachk: invalid device specified for archive destination
Cause: Unable to access directory

Action: Specify a valid device in ARCHIVE control string

ORA-09292: sksabln: unable to build archive file name
Cause: Bad directory or format specified

Action: Specify a valid directory in 'log_archive_format' and a valid format string in 'log_archive_format' in init.ora

ORA-09293: sksasmo: unable to send message to console
Cause: An error was returned while attempting to send a message to the console operator

Action: See OSD error accompanying this message

ORA-09300: osncon: unable to connect, DPMI not available
Cause: Unable to detect the presence of DPMI

Action: Restart Windows and retry

ORA-09301: osncon: local kernel only supported in standard mode
Cause: An attempt was made to connect to S: while in enhanced mode

Action: Restart Windows in standard mode

ORA-09310: sclgt: error freeing latch
Cause: Internal error

Action: See OSD error accompanying this message

ORA-09311: slsleep: error temporarily suspending process
Cause: May be out of resources

Action: See OSD error accompanying this message

ORA-09312: slspool: error spooling file to printer
Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09313: slsprom: error prompting user
Cause: May be out of resources

Action: See OSD error accompanying this message

ORA-09314: sltln: error translating logical name
Cause: Internal buffer may have overflowed

Action: See OSD error accompanying this message

ORA-09315: sql2tt: two-task error translating ORACLE_EXECUTABLE
Cause: Internal error

Action: See OSD error accompanying this message

ORA-09316: szrpc: unable to verify password for role
Cause: OS roles may not be supported for this platform

Action: See OSD error accompanying this message

ORA-09317: szprv: insufficient privileges
Cause: The password specified is invalid

Action: See OSD error accompanying this message

ORA-09318: slkhst: unable to host out to operating system
Cause: There might not be enough memory for the command or hosting out may not be supported on this platform

Action: See OSD error accompanying this message

ORA-09319: slgtd: unable to obtain the current date and time
Cause: The system time might be set incorrectly

Action: See OSD error accompanying this message

ORA-09320: szrfc: unable to obtain the list of valid OS roles
Cause: OS roles may not be supported on this platform

Action: See OSD error accompanying this message

ORA-09321: slzdtb: unable to convert zoned decimal to binary
Cause: internal error

Action: See OSD error accompanying this message

ORA-09322: slpdtb: unable to convert packed decimal to binary
Cause: internal error

Action: See OSD error accompanying this message

ORA-09330: Session terminated internally by Oracle or by an Oracle DBA
Cause: A client workstation that is abnormally disconnected would cause Oracle to terminate that session after about a minute. This message also appears in the trace file if a shutdown abort is performed.

Action: No action required.

ORA-09340: Specified ORACLE_SID is either invalid or too long
Cause: ORACLE_SID must be at the most 4 alphanumeric characters.

Action: Specify an ORACLE_SID with the correct format.

ORA-09341: scumnt: unable to mount database
Cause: Another instance is currently mounting the database

Action: Try again later.

ORA-09342: Detached process terminated by Oracle during shutdown abort
Cause: The user performed a shutdown abort.

Action: No action required.

ORA-09344: spsig: error signalling thread
Cause: This function may not be implemented.

Action: No action required.

ORA-09350: Windows 32-bit Two-Task driver unable to allocate context area
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09351: Windows 32-bit Two-Task driver unable to allocate shared memory
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09352: Windows 32-bit Two-Task driver unable to spawn new ORACLE task
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09353: Windows 32-bit Two-Task driver unable to open event semaphore
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09354: Windows 32-bit Two-Task driver: ORACLE task unexpectedly died
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09360: Windows 3.1 Two-Task driver unable to allocate context area
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09361: Windows 3.1 Two-Task driver unable to lock context area
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09362: Windows 3.1 Two-Task driver unable to deallocate context area
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09363: Windows 3.1 Two-Task driver invalid context area
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09364: Windows 3.1 Two-Task driver unable to create hidden window
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09365: Windows 3.1 Two-Task driver unable to destroy hidden window
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09366: Windows 3.1 Two-Task driver unable to allocate shared memory
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09367: Windows 3.1 Two-Task driver unable to deallocate shared memory
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09368: Windows 3.1 Two-Task driver unable to spawn ORACLE
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09369: Windows 3.1 Two-Task driver bad instance handle
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09370: Windows 3.1 Two-Task driver ORACLE task timed out
Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09700: sclin: maximum number of latches exceeded
Cause: ORACLE wants to use more latches then available.

Action: increase INIT.ORA parameter latch_pages or decrease the amount of shared memory you are using.

ORA-09701: scnfy: maximum number of processes exceeded
Cause: PROCESSES INIT.ORA parameter exceeded.

Action: Decrease the PROCESSES parameter and restart.

ORA-09702: sem_acquire: cannot acquire latch semaphore
Cause: The semaphore used for accessing latches could not be seized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09703: sem_release: cannot release latch semaphore
Cause: The semaphore used for accessing latches could not be released

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09704: sstascre: ftok error in creating test and set pages.
Cause: the ftok() library call failed in sstastcre().

Action: Verify that tasdef@.dbf file exists. If it does then this is a possible system failure. Perhaps System V compatibility is not enabled.

ORA-09705: spcre: cannot initialize latch semaphore
Cause: The semaphore used for accessing latches could not be initialized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09706: slsget: get_process_stats error.
Cause: get_process_stats system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

ORA-09708: soacon: failed to bind socket to port.
Cause: The bind system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

ORA-09709: soacon: failed to accept a connection.
Cause: The accept system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

ORA-09710: soarcv: buffer overflow.
Cause: The internal buffer is not big enough to hold the message read.

Action: Internal error. Contact customer support representative.

ORA-09711: orasrv: archmon already connected.
Cause: An existing connection has already been made from archmon to orasrv.

Action: Stop trying to connect.

ORA-09712: orasrv: log archiver already connected.
Cause: An existing connection has already been made from log archiver to orasrv.

Action: Stop trying to connect.

ORA-09714: Two Task interface: cannot obtain puname
Cause: The TXIPC driver cannot obtain the name of the PU. (Possible OS error)

Action: Check if the PUs are named (consistend).

ORA-09715: orasrv: cannot obtain puname
Cause: Orasrv cannot obtain the name of the PU. (Possible OS error)

Action: Check if the PUs are named (consistend).

ORA-09716: kslcll: Unable to fix in-flux lamport latch.
Cause: One Oracle process died while still holding a lamport latch.

Action: Exit (kill) all Oracle user processes. Shutdown (abort) and restart Oracle RDBMS kernel.

ORA-09717: osnsui: maximum number of user interrupt handlers exceeded.
Cause: The internal limit on the number of user interrupt handlers has been exceeded.

Action: Reduce the number of simulataneous logons or reduce the number of user interrupt handlers.

ORA-09718: osnsui: cannot set up user interrupt handler.
Cause: Malloc() failed to allocate space to hold user interrupt handler.

Action: Possible memory resource shortage.

ORA-09719: osncui: invalid handle.
Cause: The handle passed to osncui is out of the valid range.

Action: Use a valid handle.

ORA-09740: slsget: cannot get virtual memory region statistics.
Cause: The vm_region system call failed to get virual memory region statistics.

Action: Check return code in sercerrno. Possible operating system failure.

ORA-09741: spwat: error waiting for a post.
Cause: Msg_receive system call returned an error. Internal error.

Action: Check return code in sercerrno. Port name is returned in sercose[0].

ORA-09742: sppst: error during a post.
Cause: Msg_send system call returned an error. Internal error.

Action: Check return code in sercerrno. Port name is returned in sercose[0].

ORA-09743: smscre: could not attach shared memory.
Cause: The mmap or write system call returned an error. Internal error.

Action: Contact Oracle support.

ORA-09744: smsget: mmap returned an error.
Cause: The mmap system call returned an error. Internal error.

Action: Contact Oracle support.

ORA-09745: smscre: vm_allocate error, unable to create shared memory.
Cause: Error in system call vm_allocate. Failed to create SGA as a single shared memory segment.

Action: Check result code returned in sercerrno. Verify that the SGA attach address is valid.

ORA-09746: smscre: shared memory attach address incorrect.
Cause: The vm_allocate system call attached the SGA at an incorrect location.

Action: Verify that the SGA attach address is valid.

ORA-09747: pw_detachPorts: server call pws_detach failed.
Cause: The call pws_detach to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

ORA-09748: pws_look_up: fork failed
Cause: The pws_look_up call could not fork the (Oracle helper) process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-09749: pws_look_up: port lookup failure
Cause: The pws_look_up could not find a port to (Oracle helper).

Action: Make sure the (Oracle helper) server has been started correctly by pws_look_up, and that the network name server is still running.

ORA-09750: pw_attachPorts: port_rename failed.
Cause: The port_rename system call failed; possible internal error.

Action: Check return code in sercerrno, report to Oracle customer support.

ORA-09751: pw_attachPorts: server call pws_attach failed.
Cause: The call pws_attach to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

ORA-09752: pw_attachPorts: port_allocate failed.
Cause: The port_allocate system call failed; possible resource exhaustion.

Action: Check return code in sercerrno, report to Oracle customer support.

ORA-09753: spwat: invalid process number.
Cause: Function was passed an invalid oracle process id.

Action: Internal error. Additional information indicates the invalid process id.

ORA-09754: sppst: invalid process number passed to sppst.
Cause: Function was passed an invalid oracle process id.

Action: Internal error. Contact Oracle support.

ORA-09755: osngpn: port allocation failure.
Cause: The port_allocate system call failed.

Action: Possible system resource shortage; check the error code in sercerrno.

ORA-09756: osnpns: no port in the name server.
Cause: osnpns could not find the given named port in the name server.

Action: Check the error code in sercerrno. Make sure the shadow process and network name server are still running.

ORA-09757: osnipn: port allocation failure.
Cause: The port_allocate system call failed.

Action: Possible system resource shortage; check the error code in sercerrno.

ORA-09758: osnipn: could not check port in name server.
Cause: The netname_check_in call failed.

Action: Check the error code in sercerrno. Make sure the network name server is running.

ORA-09759: osnsbt: bad message received.
Cause: The msg_receive system call failed, or received a bad message.

Action: Internal error. Report the error code returned in sercerrno.

ORA-09760: osnpui: cannot send break message
Cause: The Pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Contact your customer support representative.

ORA-09761: pw_destroyPorts: server call pws_stop_instance failed.
Cause: The call pws_stop_instance to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

ORA-09762: sNeXT_instanceName: translation error.
Cause: A failure was detected while translating the value of ORACLE_SID.

Action: Make sure ORACLE_SID is defined, and that it is of legal length.

ORA-09763: osnmpx: send/receive error exchanging Mach ports.
Cause: The Mach driver failed to exchange port information with the other side of the connection. Either msg_send (sercose[0] == 1) or msg_receive (sercose[0] == 2) failed.

Action: Check return code in sercerrno. Make sure both sides of the connection are still running.

ORA-09764: osnmop: access error on oracle executable
Cause: The Mach driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-09765: osnmop: fork failed
Cause: The Mach driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-09766: osnmop: buffer allocation failure.
Cause: The Mach driver failed to allocate enough vm space for its I/O buffers.

Action: Decrease the value of buffer_size parameter in the Two-Task driver hoststring.

ORA-09767: osnmfs: bad return code from msg_send.
Cause: The msg_send system call failed while flushing the Mach driver's send buffer.

Action: Internal error. Contact your customer support representative.

ORA-09768: osnmgetmsg: could not read a message
Cause: The msg_receive system call returned a failure code while waiting for a message in the Mach driver.

Action: Internal error. Contact your customer support representative.

ORA-09769: osnmbr: cannot send break message
Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09770: pws_look_up: translation failure.
Cause: The pws_look_up routine failed to translate the name of the (Oracle helper) executable.

Action: Make sure ORACLE_SID and ORACLE_HOME are set and correct. Additional information gives the translation error code.

ORA-09771: osnmwrtbrkmsg: bad return code from msg_send.
Cause: The msg_send sytem call failed while sending a Mach driver break.

Action: Internal error. Contact your customer support representative.

ORA-09772: osnpmetbrkmsg: message from host had incorrect message type
Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

ORA-09773: osnmgetdatmsg: message from host had incorrect message type
Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

ORA-09774: osnmui: cannot send break message
Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09775: osnmrs: reset protocol error
Cause: The Mach two-task driver could not reset the connection.

Action: Internal error. Contact your customer support representative.

ORA-09776: pws_look_up: access error on (Oracle helper) executable
Cause: The pws_look_up call could not access the (Oracle helper) executable.

Action: Check the permissions on the (Oracle helper) executable and each component of the ORACLE_HOME/bin path.

ORA-09777: osnpbr: cannot send break message
Cause: The pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09778: snynfyport: failure allocating the notify port.
Cause: The routine failed to allocate or set the task's notify port.

Action: Possible operating system error. Contact Oracle support.

ORA-09779: snyGetPort: failure to allocate a port.
Cause: The port_allocate system call failed; system resources might be exhausted.

Action: Possible operating system error. Contact Oracle support.

ORA-09786: sllfop: open error, unable to open file.
Cause: Open system call returned an error.

Action: Check errno.

ORA-09787: sllfop: unrecognizable processing option, incorrect format.
Cause: Processing option passed is of incorrect format.

Action: Consult your IUG for permissible formats.

ORA-09788: sllfrb: unable to read file.
Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

ORA-09789: sllfsk: unable to read file.
Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

ORA-09790: sllfcf: unable to close file.
Cause: Close system call returned an error.

Action: Check errno.

ORA-09791: slembdf: translation error, unable to translate error file name.
Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

ORA-09792: sllfop: cannot allocate read buffer.
Cause: Malloc system call returned an error. The system might have run out of heap space.

Action: Check additional information for the OS error.

ORA-09793: szguns: length of user name is greater than buffer.
Cause: The length of the name of the user being looked up is longer than size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09794: szrbuild: length of role name is greater than buffer.
Cause: The length of the name of the role being looked up is longer than size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09795: szrbuild: malloc of role structure failed.
Cause: The allocation of memory for an internal structure used to hold a role descriptor failed.

Action: Check the UNIX error number for a possible operating system failure.

ORA-09796: szrbuild: malloc of role name failed.
Cause: The allocation of memory for an internal buffer used to hold the name of a role failed.

Action: Check the UNIX error number for a possible operating system failure.

ORA-09797: Failed to get O/S MAC privileges.
Cause: The operating system would not allow the retrieval of this process' privileges.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09798: Label comparison failed.
Cause: The comparison of two binary labels failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09799: File label retrieval failed.
Cause: ORACLE was unable to get a label attached to a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09800: Process sensitivity label retrieval failed.
Cause: ORACLE was unable to get the sensitivity label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09801: Unable to get user ID from connection
Cause: ORACLE was unable to retrieve the user's ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09802: Conversion of binary label to string failed.
Cause: ORACLE was unable to convert a binary label to a string.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09803: Allocation of string buffer failed.
Cause: a buffer used to hold the name of the file for which a label was to be obtained could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

ORA-09804: Class conversion from binary to ORACLE failed.
Cause: ORACLE was unable to convert a class component from binary format to ORACLE format.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09805: conversion of category number to string failed.
Cause: ORACLE was unable to translate a category number to its corresponding string representation failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The category number is contained in the "Additional information" field.

ORA-09806: Allocation of label string buffer failed.
Cause: a temporary buffer used to hold a label could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

ORA-09807: Conversion of label from string to binary failed.
Cause: ORACLE was unable to convert the string representation of a label to binary format.

Action: Re-enter a valid label.

ORA-09808: Could not obtain user clearance.
Cause: ORACLE was unable to get a user's clearance level.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09809: Unable to get user's group ID from connection
Cause: ORACLE was unable to retrieve the user's group ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09810: Unable to get process ID from connection
Cause: ORACLE was unable to retrieve the user's process ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09811: Unable to initialize package.
Cause: ORACLE was unable to initialize the library used to obtain security information.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09812: Unable to get user clearance from connection
Cause: ORACLE was unable to retrieve the user's operating system session clearance from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09813: Unable to get directory status
Cause: ORACLE was unable to determine if a directory is multilevel.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09814: Unable to expand file name
Cause: ORACLE was unable to expand the name of a file that resides in multilevel directory.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09815: File name buffer overflow
Cause: The buffer that ORACLE uses to hold the expanded name of a too small.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09816: Unable to set effective privileges
Cause: This is an internal error.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09817: Write to audit file failed.
Cause: ORACLE was unable to write an entry to the file used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09818: Number is too large
Cause: ORACLE was unable to convert a component string to a number because the number is larger than the largest possible value for an integer. The additional information field specifies the maximum.

Action: Correct the string and repeat the conversion.

ORA-09819: Number exceeds maximum legal value
Cause: the number specified for a component was greater than the maximum value allowed for that component.

Action: Change the component to a value less than the maximum and repeat the conversion. The maximum component number is contained in the "Additional information" field.

ORA-09820: Conversion of class string to numeric representation failed.
Cause: ORACLE was unable to convert a class string to a number because all of the characters in the string were not numeric.

Action: Change the string to be either all numbers or all non-numeric characters and repeat the conversion.

ORA-09821: Numeric label is not valid
Cause: A label specified in ORACLE numeric format was found not to be valid.

Action: Re-enter a valid label. Consult your system's encodings for valid numeric component values.

ORA-09822: Translation of audit file name failed.
Cause: Oracle was unable to translate the value of the AUDIT_FILE_DEST initialization parameter.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09823: device name is too long
Cause: The name of a device was too long to fit into an internal buffer. The additional information field contains the length of the device name.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09824: Unable to enable allowmacaccess privilege.
Cause: ORACLE was not able to turn on allowmacaccess privilege so that it could do a label comparison.

Action: Check the UNIX error number. If it indicates that ORACLE does not have the allowmacaccess privilege, add the allowmacaccess privilege to the potential privilege set of $ORACLE_HOME/bin/oracle using chpriv (1M). If the executable already has the allowmacaccess privilege, contact Oracle Support Services.

ORA-09825: Unable to disable allowmacaccess privilege.
Cause: ORACLE was not able to turn off the allowmacaccess privilege after doing a label comparison.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09826: SCLIN: cannot initialize atomic latch.
Cause: System call atomic_op() return error.

Action: Check additional information in the trace file.

ORA-09827: SCLGT: atomic latch return unknown error.
Cause: System call atomic_op() return unexpected error.

Action: Check additional information in the trace file.

ORA-09828: SCLFR: atomic latch return error.
Cause: System call atomic_op() return unexpected error.

Action: Check additional information in the trace file.

ORA-09829: pw_createPorts: server call pws_start_instance failed.
Cause: The call pws_start_instance to (Oracle helper) failed; system resources might be exhausted.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

ORA-09830: snyAddPort: failed to perform a remote procedure call.
Cause: The msg_rpc system call returned an error.

Action: Internal error. Contact Oracle support.

ORA-09831: snyStartThread: failed to build the server port set.
Cause: The routine failed to build a port set on which to listen for requests.

Action: Possible operating system failure. Contact Oracle support.

ORA-09832: infoCallback: bad message format.
Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

ORA-09833: addCallback: bad message format.
Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

ORA-09834: snyGetPortSet: failed to collect info on a port.
Cause: The port_status system called failed.

Action: Possible operating system error. Contact Oracle support.

ORA-09835: addCallback: callback port is already in a set.
Cause: The port to be added to the callback list is already in a port set.

Action: Internal error. Contact Oracle support.

ORA-09836: addCallback: could not add a port to the callback set.
Cause: The port_set_add system called failed.

Action: Possible operating system error. Contact Oracle support.

ORA-09837: addCallback: could not add allocate a callback link.
Cause: The malloc library call failed to allocate space for a callback link.

Action: Possible operating system error. Contact Oracle support.

ORA-09838: removeCallback: failure removing the callback port.
Cause: The port port_set_remove system call failed.

Action: Possible operating system error. Contact Oracle support.

ORA-09839: removeCallback: callback port is not in the callback set.
Cause: The port to be removed to the callback list is not in the callback port set.

Action: Internal error. Contact Oracle support.

ORA-09840: soacon: Name translation failure.
Cause: sltln() could not translate the named pipe ?/dbs/mon2arch_@.

Action: Make sure that the ORACLE_HOME specified for this ORACLE_SID in oratab is correct.

ORA-09841: soacon: Name translation failure.
Cause: sltln() could not translate the named pipe ?/dbs/arch2mon_@.

Action: Make sure that the ORACLE_HOME specified for this ORACLE_SID in oratab is correct.

ORA-09842: soacon: Archmon unable to create named pipe.
Cause: mknod() failed to create named pipe ?/dbs/mon2arch_@.

Action: Your current OS login may lack write permission for the ORACLE_HOME/dbs directory. Only userids in the dba group of a given instance can run archmon for that ORACLE_SID. Make sure that the ORACLE_HOME directory is correct in oratab.

ORA-09843: soacon: Archmon unable to create named pipe.
Cause: mknod() failed to create named pipe ?/dbs/arch2mon_@.

Action: Your current OS login may lack write permission for the ORACLE_HOME/dbs directory. Only userids in the dba group of a given instance can run archmon for that ORACLE_SID. Make sure that the ORACLE_HOME directory is correct in oratab.

ORA-09844: soacon: Archmon unable to open named pipe.
Cause: open() failed to open named pipe ?/dbs/mon2arch_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09845: soacon: Archmon unable to open named pipe.
Cause: open() failed to open named pipe ?/dbs/arch2mon_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09846: soacon: ARCH unable to open named pipe.
Cause: open() failed to open named pipe ?/dbs/mon2arch_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09847: soacon: ARCH unable to open named pipe.
Cause: open() failed to open named pipe ?/dbs/arch2mon_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09848: soawrt: Unable to write to named pipe.

ORA-09849: soarcv: Unable to read from named pipe.

ORA-09850: soacon: Archmon unable to lock named pipe.
Cause: fcntl() failed to set write lock on named pipe ?/dbs/arch2mon_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE_SID. Only one archmon session is allowed at a time for a given instance.

ORA-09851: soacon: Archmon unable to lock named pipe.
Cause: fcntl() failed to set read lock on named pipe ?/dbs/mon2arch_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE_SID. Only one archmon session is allowed at a time for a given instance.

ORA-09853: snyRemovePort: bad return code from request.
Cause: The request to remove a port from the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

ORA-09854: snyPortInfo: bad return code from request.
Cause: The request to collect info on a port in the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

ORA-09855: removeCallback: bad message format.
Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

ORA-09856: smpalo: vm_allocate error while allocating pga.
Cause: The vm_allocate system call returned an error.

Action: Check returned error. Possibly out of system resources.

ORA-09857: smprset: vm_protect error while protecting pga.
Cause: The vm_protect system call returned an error.

Action: Internal error. Contact Oracle support.

ORA-09858: sfngat: the input file name is not in the OMF format
Cause: The function sfngat() received a filename which is not an OMF file name.

Action: Further diagnostic information should be in the error stack.

ORA-09859: sfngat: the input file name is not in the autobackup OMF format
Cause: The function sfngat() received a filename which is not an autobackup OMF file name.

Action: Further diagnostic information should be in the error stack.

77

ORA-09870 to ORA-12101

ORA-09870: spini: failure initializing maximum number of open files.
Cause: ulimit system call returned an error.

Action: Check errno.

ORA-09871: TASDEF_NAME: translation error while expanding ?/dbs/tasdef@.dbf.
Cause: Failure of sltln(?/tasdef@.dbf) while creating test and set pages.

Action: Check additional return error for more information.

ORA-09872: TASDEF_CREATE: create failure in creating ?/dbs/tasdef@.dbf.
Cause: Create() failed when trying to create the tasdef file.

Action: Verify permissions on $(ORACLE_HOME)/dbs directory.

ORA-09873: TASDEF_OPEN: open error when opening tasdef@.dbf file.
Cause: Unable to open tasdef@.dbf file.

Action: Check errno. Possible permission problem. Verify that tasdef@.dbf file exists.

ORA-09874: TASDEF_READ: read error, unable to read tasdef@.dbf file.
Cause: Read system call returned an error when attempting to read ?/dbs/tasdef@.dbf.

Action: Check errno returned. Sgadef file may be corrupted or incompatible with oracle version.

ORA-09875: TASDEF_WRITE: write error when writing ?/dbs/tasdef@.dbf file.
Cause: Write call failed.

Action: Check errno returned. Possibly out of space on device.

ORA-09876: TASDEF_CLOSE: unable to close ?/dbs/tasdef@.dbf file.
Cause: Close system call returned an error.

Action: Check errno returned. Possible operating system failure.

ORA-09877: sstascre: shmget error, unable to get a shared memory segment.
Cause: Error in shmget.

Action: Check errno returned. Verify that enough shared memory is available on the system.

ORA-09878: sstascre/sstasat: shmat error, unable to attach tas write page
Cause: Error in shmat.

Action: Check errno returned.Verify that enough shared memory is available on the system.

ORA-09879: sstascre/sstasat: shmat error, unable to attach tas read page
Cause: Error in shmat.

Action: Check errno returned.Verify that enough shared memory is available on the system.

ORA-09880: sstasfre/sstasdel: shmdt error, unable to detach tas write page
Cause: Error in shmdt.

Action: Check errno returned.

ORA-09881: sstasfre/sstasdel: shmdt error, unable to detach tas read page
Cause: Error in shmdt.

Action: Check errno returned.

ORA-09882: sstasfre/sstasdel: shmctl error, unable to remove tas shm page
Cause: Error in shmctl.

Action: Check errno returned.

ORA-09883: Two Task interface: oratab file does not exist
Cause: The oratab file does not exist.

Action: Install oracle before you use it or recreate the oratab file.

ORA-09884: Two Task interface: SID doens't match current PU
Cause: You are trying to start oracle on another PU than you configured oracle on or there is no entry for this SID in oratab file.

Action: Start oracle with this SID on its designated PU (see oratab file). Or install the new database with SID.

ORA-09885: osnTXtt: cannot create TXIPC channel
Cause: The TXIPC driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-09886: osnTXtt: translation error while expanding txipc@.trc.
Cause: Failure of sltln(txipc@.trc) while creating debug channel.

Action: Check additional return error for more information.

ORA-09887: osnTXtt: Failed to create/open debug channel.

ORA-09888: osnTXtt: txipc channel creation failed
Cause: The txipc driver failed to create channels for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table operating system error code and contact your system administrator.

ORA-09889: osnTXtt: access error on oracle executable
Cause: The txipc driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-09890: osnTXtt: malloc failed
Cause: The txipx driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

ORA-09908: slkmnm: gethostname returned error code.
Cause: The system call gethostname returned an error.

Action: This is most likely an internal error. Make sure gethostname is successful in other contexts, and if so contact Oracle support.

ORA-09909: Malloc of scratch buffer failed.
Cause: Memory needed for a temporary buffer could not be allocated. The additional information field contains the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09910: Unable to find ORACLE password file entry for user.
Cause: No entry exists for the user in the ORACLE password file.

Action: Have the database administrator install a password entry by running orapasswd.

ORA-09911: Incorrect user password.
Cause: The password entered by the user was incorrect.

Action: Enter the correct password.

ORA-09912: Malloc of name buffer(s) failed.
Cause: ORACLE was unable to allocate memory for one or both of the buffers that are used to hold the name of DBA and the operator users.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09913: Malloc of dummy name failed.
Cause: ORACLE was unable to allocate memory for the user name that is to to be used in the encryption of the user's password.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09914: Unable to open the ORACLE password file.
Cause: ORACLE could not open the password file for reading.

Action: Check the UNIX error number. If the error number indicates that the file does not exist, have the database administrator create the file by running orapasswd. If the error number indicates insufficient permissions, ask the database administrator to change the permissions. Otherwise, contact ORACLE customer support.

ORA-09915: Password encryption failed.
Cause: ORACLE was unable to encrypt a password.

Action: This is an internal error - contact ORACLE customer support.

ORA-09916: Required password was not specified.
Cause: A user attempted to connect as "internal," but did not specify a password.

Action: Connect as internal again and specify a password.

ORA-09918: Unable to get user privileges from SQL*Net
Cause: ORACLE was unable to retrieve the user's privilege set from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09919: Unable to set label of dedicated server
Cause: ORACLE was unable to set the label of the dedicated to server to the required value.

Action: Check the UNIX error number for a possible operating system error. Also, check the privileges on the oracle executable. It should have at least "allowmacaccess" privilege.

ORA-09920: Unable to get sensitivity label from connection
Cause: ORACLE was unable to retrieve the user's sensitivity label from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09921: Unable to get information label from connection
Cause: ORACLE was unable to retrieve the user's information label from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09922: Can't spawn process - background log directory not created properly
Cause: ORACLE was unable to spawn a background process because the directory that will hold trace files of the background processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "background_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-09923: Can't spawn process - user log directory not created properly
Cause: ORACLE was unable to spawn a background process because the directory that holds the trace files of the dedicated server processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "user_dump_dest". Make sure that all of the following is true: 1. The directory exists.

2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-09924: Can't spawn process - core dump directory not created properly
Cause: ORACLE was unable to spawn a background process because the directory that holds the core dumps produced by ORACLE processes in the event of exceptions was not created properly.

Action: Examine the directory pointed to by the initialization parameter "core_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-09925: Unable to create audit trail file
Cause: ORACLE was not able to create the file being used to hold audit trail records.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact ORACLE customer support.

ORA-09926: Unable to set effective privilege set of the server
Cause: A dedicated server was unable to set it's own privilege set.

Action: Check the privileges granted to the ORACLE executable. It must have at least "allowmacacess" privilege.

ORA-09927: Unable to set label of server
Cause: ORACLE was not able to set the label of a server to a new value.

Action: Check the privileges on $ORACLE_HOME/bin/oracle. Make sure that it has "allowmacaccess" privilege.

ORA-09928: Unable to restore the label of server
Cause: ORACLE was unable to restore the label of the server to the value that it had before raising it to database high.

Action: This is an internal error - contact ORACLE support.

ORA-09929: GLB of two labels is invalid
Cause: The result of a greatest lower bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

ORA-09930: LUB of two labels is invalid
Cause: The result of a least upper bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

ORA-09931: Unable to open ORACLE password file for reading
Cause: An attempt to open a password file for reading failed.

Action: Make sure that the permissions on the file have not been changed so that the ORACLE user cannot open it.

ORA-09932: Close of ORACLE password file failed.
Cause: An attempt to close a password file failed.

Action: Check the UNIX error number for the specific reason.

ORA-09933: Deletion of old password file failed.
Cause: The removal of the old password file failed.

Action: Check the UNIX error number for the specific reason.

ORA-09934: Link of current password file to old failed.
Cause: ORACLE was unable to create a link so that the old password file could be saved.

Action: Check the UNIX error number for the specific reason.

ORA-09935: Unlink of current password file failed.
Cause: ORACLE was unable to complete the saving of the current password file.

Action: Check the UNIX error number for the specific reason.

ORA-09936: Open of ORACLE password file for write failed.
Cause: ORACLE was unable to create a password file.

Action: Check the UNIX error number for the specific reason.

ORA-09937: Chmod of ORACLE password file failed.
Cause: ORACLE was unable to change a password file to be readonly.

Action: Check the UNIX error number for the specific reason.

ORA-09938: Save of signal handlers failed.
Cause: ORACLE was unable to save the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

ORA-09939: Restoration of signal handlers failed.
Cause: ORACLE was unable to restore the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

ORA-09940: ORACLE password file header is corrupt
Cause: The header of one of the password files was not in the format that ORACLE expected.

Action: Check the headers of both files. The header should be in the format "FILE VERSION: N.N.N.N.N EXECUTABLE VERSION: N.N.N.N.N" where N is a number. Remove the corrupt file(s) and re-run "orapasswd".

ORA-09941: Version of orapasswd or installer is older than file.
Cause: The version of orapasswd or installer that is being run is older than that of the ORACLE password file. Since the file version is only changed when the format is changed, this error means that the executable is using a different format than that with which the file was created.

Action: Run a version of the installer or orapasswd whose version is the same or later than that of the file.

ORA-09942: Write of ORACLE password file header failed.
Cause: The attempt to write out the header of the ORACLE password file failed.

Action: Check the operating system error number. It is possible that the file system became full.

ORA-09943: Allocation of memory for password list component failed.
Cause: When it is building a list of password file entries, ORACLE allocates memory for various components. One of the allocations failed.

Action: Check the operating system error number. The system has probably run out of memory.

ORA-09944: Password entry is corrupt.
Cause: An entry in an ORACLE password file was not in the format that ORACLE expected.

Action: Removed the corrupt file(s) and re-run "orapasswd."

ORA-09945: Unable to initialize the audit trail file
Cause: ORACLE unable to write header information to the file being used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact ORACLE customer support.

ORA-09946: File name too long for buffer
Cause: The buffer that was to be used to hold a file name was determined to be too short for the generated name. This will happen if the translated name for either a trace file or an audit file is longer than the maximum allowed, which on many ports is 256 characters.

Action: Use a shorter file name.

ORA-09947: Unable to allocate connection attributes structure
Cause: ORACLE was not able to allocate the memory needed to hold the attributes of the SQL*Net connection. The "Additional Information" field holds the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE customer support.

ORA-09948: Process information label retrieval failed.
Cause: ORACLE was unable to get the information label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09949: Unable to get client operating system privileges
Cause: ORACLE was unable to get the operating system privileges for the client process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09950: Unable to get server operating system privileges
Cause: ORACLE was unable to get its privileges from the operating system.

Action: This is an error that should never happen. Contact ORACLE customer support.

ORA-09951: Unable to create file
Cause: ORACLE was unable to create a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09952: scgcmn: lk_open_convert unexpected return: open failed
Cause: The distributed lock manager returned an unexpected value

Action: Check for system error message and refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09953: scggc: unexpected return of a lock convert
Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09954: scgcc: unexpected return status to callback of lock close
Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09955: scgcan: unexpected return status when canceling a lock
Cause: DLM system service x returned an unexpected value

Action: Check for system error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09956: scgcm: unexpected lock status condition
Cause: A global locking system service returned an unexpected value.

Action: Check for system error message (if any) and refer to refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09957: Unable to send termination request to IMON
Cause: The attempt to send a termination signal to IMON failed.

Action: This is an internal error, contact ORACLE support.

ORA-09958: IMON: two processes with the same ORACLE pid are active
Cause: The IMON process was unable to add an entry for a server process because another active process occupies the slot.

Action: This is an internal error, contact ORACLE support.

ORA-09959: IMON: deletion of a process failed.
Cause: The IMON process was unable to delete a server process from its process ID array because no entry for the process could be found.

Action: This is an internal error, contact ORACLE support.

ORA-09960: Unable to establish signal handler for termination signal
Cause: ORACLE was unable to set up a handler for the signal used to notify it that the instance was shutting down.

Action: This is an internal error, contact ORACLE support.

ORA-09961: Unable to restore termination signal handler
Cause: ORACLE failed to set the handler for the termination signal to its previous value.

Action: This is an internal error, contact ORACLE support.

ORA-09962: lk_group_create error in scggrc

ORA-09963: lk_group_attach error in scggra

ORA-09964: lk_group_detach error in scggrd

ORA-09966: falure in translation while expanding ?/dbs/lk for lock file
Cause: Oracle failed to translate ?/dbs/lk, when creating a file name for the database mount lock or the instance startup/shutdown lock.

Action: Check additional return errors for more information.

ORA-09967: unable to create or open lock file
Cause: Oracle failed, when making an open system call, inorder to acquire a file lock used by the database mount lock or the instance startup/shutdown lock.

Action: Check errno for more information.

ORA-09968: unable to lock file
Cause: The system call for locking a file returned an error when trying to acquire a database mount lock or the instance startup/shutdown lock.

Action: Check errno for more information.

ORA-09969: unable to close or remove lock file
Cause: The close system call or unlink system call returned an error.

Action: Check errno for more information.

ORA-09974: skxfidini: Error Initializing SDI Channel
Cause: The process was unable to initialize the SDI channel properly.

Action: Correct the operating system error and retry the operation.

ORA-09975: kxfspini: Error Initializing SDI Process
Cause: The process was unable to attach to the SDI channel.

Action: Verify that the SDI process specific limits correctly configured. Correct the operating system error and retry the operation.

ORA-09976: skxfqdini: Error Creating Port
Cause: The process was unable to create a communications endpoint.

Action: Verify that the SDI port specific limits correctly configured. Correct the operating system error and retry the operation.

ORA-09977: skxfqhini: Error Connecting
Cause: The process was unable to connect to another endpoint.

Action: Verify that the SDI port specific limits correctly configured. Check that the other node(s) is part of the cluster and operating properly. Correct the operating system error and retry the operation.

ORA-09978: skxfqhdel: Error Disconnecting from another endpoint.
Cause: The process was unable to disconnect cleanly from another endpoint.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09979: skxfqhsnd: Error Sending a message to another endpoint
Cause: The process was unable to send a message to an existing endpoint.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09980: skxfqdrcv: Error Receiving a message from another endpoint
Cause: The process encountered an error while trying to receive a message.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09981: skxfqdreg: Error Adding a page to the SDI buffer pool
Cause: The process was unable to add a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

ORA-09982: skxfqddrg: Error Removing a page from the SDI buffer pool
Cause: The process was unable to remove a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

ORA-09983: skxfidsht: Error shutting down SDI channel
Cause: The process was unable shut down the SDI channel

Action: Check the SDI persistent resources using SDI tools. Verify that all processes exited cleanly and the instance is safely shut down. Delete any remaining SDI channel IDs associated with the current instance.

ORA-09984: SGA file $ORACLE_HOME/dbs/sgadef$ORACLE_SID.dbf does not exist
Cause: file does not exist or is not accessible

Action: Restart the instance to create the SGA definition file.

ORA-09985: SGA definition file could not be read
Cause: UNIX read() operation failed

Action: check errno and take appropriate action.

ORA-09986: wrong number of bytes read from SGA definition file
Cause: Struct skgmsdef size differs from no. of bytes read from SGA file

Action: Compare the two struct definitions and ensure that they are identical in size and structure.

ORA-09987: unable to attach to SGA in READ-ONLY mode
Cause: The instance is not up, or SGA segments are not read-accessible

Action: Verify that the instance is up and read permissions for the SGA segments are set.

ORA-09988: error while detaching SGA
Cause: skgmsdef struct is corrupted and/or segment addresses are modified

Action: Safely shut down instance and mount SGA segments again.

ORA-09989: attempt to use invalid skgmsdef struct pointer
Cause: Pointer to skgmsdef struct used without validating it

Action: Assign a valid address to the skgmsdef struct pointer before using it.

ORA-10702: Application continuity debugging was not enabled
Cause: Enable application continuity debugging

Action: Level indicates details. Level: 0x0001: Transaction intention debugging 0x1000: Failure injection testing 0x2000: Failure injection testing 0x4000: Failure injection testing

ORA-10887: An Oracle Active Data Guard license is required to open a pluggable database while standby recovery is applying changes.
Cause: An attempt was made to open a pluggable database without the Oracle Active Data Guard license.

Action: Do not open a pluggable database or acquire the Oracle Active Data Guard license.

ORA-10889: minimum number of instances needed for redo apply unavailable
Cause: An attempt was made to start multi-instance redo apply with less than two instances in either a mounted or open state.

Action: Mount or open at least two instances.

ORA-10892: multi-instance redo apply encountered nonlogged operation
Cause: Multi-instance Redo Apply did not support applying invalidation redo. Invalidation redo is created as part of performing a nonlogged operation. Details of the first data block affected by the nonlogged operation can be found in the alert log.

Action: Restart recovery using single instance Redo Apply. Do not specify the INSTANCE keyword in the command to start recovery.

ORA-10979: trace flags for join index implementation
Cause: This is an informational message.

Action: Values are as follows: LEVEL ACTION
---------- > 1 Dump refresh expressions (SQL) to trace file. > 999 If a complete refresh is invoked, it will not be performed but the

system will assume that a complete refresh was done, causing the view to be VALID and updating timestamps. This should be used only under Oracle Support supervision.

ORA-12000: a materialized view log already exists on table '*string*'
Cause: An attempt was made to create a materialized view log on a table that already had a materialized view log. Each master table had only one materialized view log.

Action: All materialized views on a table can use the same materialized view log for that table. To make changes to the existing log, use the ALTER MATERIALIZED VIEW LOG command or drop the materialized view log and create it again.

ORA-12001: cannot create log: table '*string*' already has a trigger
Cause: Materialized view logs are filled by a trigger on the master table. That trigger cannot be created.

Action: To create a materialized view log, drop the current trigger on the master.

ORA-12002: there is no materialized view log on table "*string*"."*string*"
Cause: There was no materialized view log on the master table.

Action: Create a materialized view log on the master table.

ORA-12003: materialized view or zonemap "*string*"."*string*" does not exist
Cause: The database object with the given owner and name was not found.

Action: Verify input and retry.

ORA-12004: REFRESH FAST cannot be used for materialized view "*string*"."*string*"
Cause: The materialized view log does not exist or cannot be used. PCT refresh is also not enabled on the materialized view

Action: Use just REFRESH, which will reinstantiate the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log or PCT refresh is possible after a given set of changes, REFRESH FAST will be available starting the next time the materialized view is refreshed.

ORA-12005: may not schedule automatic refresh for times in the past
Cause: An attempt was made to schedule an automated materialized view refresh for a time in the past.

Action: Choose a time in the future instead.

ORA-12007: materialized view reuse parameters are inconsistent
Cause: The CREATE MATERIALIZED VIEW .. or CREATE MATERIALIZED VIEW LOG .. REUSE command was given inconsistent parameters immediately after the REUSE.

Action: Examine the other messages on the stack to find the problem.

ORA-12008: error in materialized view or zonemap refresh path
Cause: Table SNAP$_<mview_name> reads rows from the view MVIEW$_<mview_name>, which is a view on the master table (the master may be at a remote site). Any error in this path will cause this error at refresh time. For fast refreshes, the table <master_owner>.MLOG$_*master* is also referenced.

Action: Examine the other messages on the stack to find the problem. See if the objects SNAP$_<mview_name>, MVIEW$_<mview_name>, *mowner*.*master@dblink*, *mowner*.MLOG$_*master@dblink* still exist.

ORA-12009: materialized views may not contain long columns
Cause: An attempt was made to create a materialized view with a long column.

Action: Do not attempt to create materialized view logs with long columns.

ORA-12010: cannot create materialized view log on table owned by SYS
Cause: An attempt was made to create a materialized view log on the table owned by SYS. CREATE MATERIALIZED VIEW LOG attempts to create a trigger on the table, but triggers can not be created on SYS tables.

Action: Do not create a materialized view log on SYS tables.

ORA-12011: execution of *string* jobs failed
Cause: An error was caught in dbms_ijob.run from one or more jobs which were due to be run.

Action: Look at the alert log for details on which jobs failed and why.

ORA-12012: error on auto execute of job *string*
Cause: An error was caught while doing an automatic execution of a job.

Action: Look at the accompanying errors for details on why the execute failed.

ORA-12013: updatable materialized view must be simple enough and have a materialized view log on its master table to do fast refresh
Cause: The updatable materialized view query contained a JOIN, SUBQUERY, UNION, CONNECT BY, ORDER BY, or GROUP BY clause, or the master table did not have a materialized view log.

Action: Make the materialized view simpler. If a join is really needed, make multiple simple materialized views then put a view on top of them. Make sure a materialized view log is created for the master table.

ORA-12014: table '*string*' does not contain a primary key constraint
Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH PRIMARY KEY option and the master table did not contain a primary key constraint or the constraint was disabled.

Action: Reissue the command using only the WITH ROWID option, create a primary key constraint on the master table, or enable an existing primary key constraint.

ORA-12015: cannot create a fast refresh materialized view from a complex query
Cause: Neither ROWIDs and nor primary key constraints are supported for complex queries.

Action: Reissue the command with the REFRESH FORCE or REFRESH COMPLETE option or create a simple materialized view.

ORA-12016: materialized view does not include all primary key columns
Cause: The query that instantiates the materialized view did not include all of the columns in the master's primary key constraint.

Action: Include all of the master's primary key columns in the materialized view query or create a ROWID materialized view.

ORA-12017: cannot alter primary key mview '*string*' to a rowid mview
Cause: An attempt was made to convert the primary key of a materialized view to a ROWID materialized view.

Action: Conversion of a primary key materialized view to a ROWID materialized view is not supported. Create a new materialized view with ROWIDs or drop and recreate the materialized view with ROWIDs.

ORA-12018: following error encountered during code generation for "*string*"."*string*"
Cause: The refresh operations for the indicated materialized view could not be regenerated due to errors.

Action: Correct the problem indicated in the following error messages and repeat the operation.

ORA-12019: master table is a synonym to a remote object
Cause: An attempt was made to create a materialized view or a materialized view log on a remote synonym which is unsupported.

Action: Do not create a materialized view or materialized view log on a remote synonym.

ORA-12020: materialized view *string* is not registered
Cause: An attempt was made to unregister a materialized view that is not registered.

Action: No action required.

ORA-12021: materialized view "*string*"."*string*" is corrupt
Cause: The materialized view indicated is no longer valid.

Action: Contact Oracle Customer Support.

ORA-12022: materialized view log on "*string*"."*string*" already has rowid
Cause: Materialized view log on the indicated table already has ROWID information.

Action: No action required.

ORA-12023: missing index on materialized view "*string*"."*string*"
Cause: The specified ROWID materialized view did not have the required index on the ROWID column of its underlying table.

Action: Drop and recreate the materialized view.

ORA-12024: materialized view log on "*string*"."*string*" does not have primary key columns
Cause: Materialized view log on the indicated table does not have primary key information.

Action: Add primary keys to the materialized view log using the ALTER MATERIALIZED VIEW command.

ORA-12025: materialized view log on "*string*"."*string*" already has primary keys
Cause: Materialized view log on the indicated table already has primary key columns.

Action: No action required.

ORA-12026: invalid filter column detected
Cause: One or more of the specified filter columns did not exist or was a primary key column or a primary key based object identifier.

Action: Ensure that all specified filter columns exist in the master table and ensure that primary key columns or primary key based object identifiers are not included in the list of filter columns.

ORA-12027: duplicate filter column
Cause: One or more of the specified filter columns were already being recorded in the materialized view log.

Action: Describe the materialized view log table and reissue the SQL command with the filter columns that are already being recorded in the materialized view log.

ORA-12028: materialized view type is not supported by master site *string*
Cause: Pre-Oracle8 master sites are not able to support primary key or subquery materialized views that are able to perform a fast refresh.

Action: Create a ROWID materialized view or use a master table from an Oracle8 site.

ORA-12029: LOB columns may not be used as filter columns
Cause: An attempt was made to use LOB columns as filter columns.

Action: Remove LOB columns from the filter columns list and retry command.

ORA-12030: cannot create a fast refresh materialized view
Cause: The materialized view log did not exist or did not log the information needed by the materialized view to perform a fast refresh.

Action: Ensure that the materialized view log exists and logs the necessary information. - For ROWID materialized views, the master table's ROWID must be logged. - For primary key materialized views, the master table's primary key columns must be logged. - For subquery materialized views, the filter columns, primary key, and ROWID values must be logged. - For object materialized views, object id must be logged.

ORA-12031: cannot use primary key columns from materialized view log on "*string*"."*string*"
Cause: The materialized view log either did not have primary key columns logged, or the timestamp associated with the primary key columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add primary key columns to the materialized view log, if required.

ORA-12032: cannot use rowid column from materialized view log on "*string*"."*string*"
Cause: The materialized view log either does not have ROWID columns logged, or the timestamp associated with the ROWID columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add ROWID columns to the materialized view log, if required.

ORA-12033: cannot use filter columns from materialized view log on "*string*"."*string*"
Cause: The materialized view log either did not have filter columns logged, or the timestamp associated with the filter columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add filter columns to the materialized view log, if required.

ORA-12034: materialized view log on "*string*"."*string*" younger than last refresh
Cause: The materialized view log was younger than the last refresh.

Action: A complete refresh is required before the next fast refresh.

ORA-12035: could not use materialized view log on "*string*"."*string*"
Cause: The materialized view log did not exist or could not be used.

Action: Use just REFRESH, which will reinstantiate the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log, REFRESH FAST will be available starting the next time the materialized view is refreshed.

ORA-12036: updatable materialized view log is not empty, refresh materialized view
Cause: The updatable materialized view log was not empty. The updatable materialized view log must be empty before an updatable rowid materialized view can be altered to a primary key materialized view.

Action: Ensure that updatable materialized view log is empty by refreshing the materialized view before converting the updatable ROWID materialized view to a primary key materialized view.

ORA-12037: unknown export format
Cause: An attempt was made to import a materialized view exported by an unknown export version (e.g., from a newer release than the importing site)

Action: Re-export the file using a version of export known by the importing site.

ORA-12038: string literal has unexpected length

ORA-12039: unable to use local rollback segment "*string*"
Cause: A local rollback segment was specified in the CREATE MATERIALIZED VIEW command, but automatic refresh parameters were not specified. Therefore a refresh group was not created to automatically refresh the materialized view and the local rollback segment can't be registered for future use.

Action: Either supply the automatic refresh parameters so that a refresh group will be created or do not specify a local rollback segment.

ORA-12040: master rollback segment option not support by master site *string*
Cause: An attempt was made to specify master rollback segment in the current operation. The master site of the current materialized view does not allow users to specify a rollback segment to be used for materialized view operations. This feature is only supported by Oracle8 or later master sites.

Action: Do not specify a master rollback segment in the current operation or choose a new master site.

ORA-12041: cannot record ROWIDs for index-organized table "*string*"."*string*"
Cause: Index-organized tables do not have ROWIDs. Therefore a materialized view log that records the ROWIDs of an index-organized table could not be created.

Action: Do not include the WITH ROWID option when using the CREATE MATERIALIZED VIEW command and do not include the ADD ROWID option when using the ALTER MATERIALIZED VIEW command if the master table is index-organized.

ORA-12042: cannot alter job_queue_processes in single process mode
Cause: An attempt was made to alter job_queue_processes in single process mode.

Action: Do not attempt to set job_queue_processes in single process mode.

ORA-12043: invalid CREATE MATERIALIZED VIEW option
Cause: An invalid option was used in a CREATE MATERIALIZED VIEW statement.

Action: Specify only valid options.

ORA-12044: invalid CREATE MATERIALIZED VIEW LOG option
Cause: An invalid option was used in a CREATE MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

ORA-12045: invalid ALTER MATERIALIZED VIEW LOG option
Cause: An invalid option was used in an ALTER MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

ORA-12046: cannot use trusted constraints for refreshing remote MV
Cause: REFRESH USING TRUSTED CONSTRAINTS specified in ALTER MATERIALIZED VIEW or CREATE MATERIALIZED VIEW of a remote materialized view

Action: remove this attribute from ALTER/ CREATE MATERIALIZED VIEW DDL

ORA-12047: PCT FAST REFRESH cannot be used for materialized view "*string*"."*string*"
Cause: PCT refresh is either not enabled on this materialized view or not possible after set of the base table changes since last refresh.

Action: Use just REFRESH FORCE, which will reinstantiate the entire table and try to pick the best refresh method on the materialized view Do explain_mview to look at the cause why PCT refresh is not possible on this materialized view

ORA-12048: error encountered while refreshing materialized view "*string*"."*string*"
Cause: Some problem occurs during refresh of multiple materialized views in atomic mode. The materialized view whose refresh failed has raised this error.

Action: Examine the other messages on the stack to find the refresh problem.

ORA-12051: ON COMMIT attribute is incompatible with other options
Cause: ON COMMIT refresh attribute, incompatible with other refresh options such as automatic periodic refresh, was specified.

Action: Specify only valid options.

ORA-12052: cannot fast refresh materialized view *string.string*
Cause: Either ROWIDs of certain tables were missing in the definition or the inner table of an outer join did not have UNIQUE constraints on join columns.

Action: Specify the FORCE or COMPLETE option. If this error is got during creation, the materialized view definition may have be changed. Refer to the documentation on materialized views.

ORA-12053: this is not a valid nested materialized view
Cause: The list of objects in the FROM clause of the definition of this materialized view had some dependencies upon each other.

Action: Refer to the documentation to see which types of nesting are valid.

ORA-12054: cannot set the ON COMMIT refresh attribute for the materialized view
Cause: The materialized view did not satisfy conditions for refresh at commit time.

Action: Specify only valid options.

ORA-12055: materialized view definition contains cyclic dependencies with existing materialized views
Cause: The materialized view query definition introduced a cyclic dependency with existing materialized view.

Action: Modify the materialized view query definition.

ORA-12056: invalid REFRESH method
Cause: The NEVER REFRESH option may not be used under the following conditions: * The materialized view is updatable * The materialized view refreshes ON COMMIT * Automatic refresh options are specified

Action: For updatable materialized views, reissue the SQL command using REFRESH FORCE, REFRESH FAST, or REFRESH COMPLETE. For read-only materialized views, reissue the SQL command using ON DEMAND.

ORA-12057: materialized view or zonemap "*string*"."*string*" is invalid and must use complete refresh
Cause: The status of the materialized view or zonemap was invalid and an attempt was made to fast refresh it.

Action: Perform a complete refresh of the materialized view or zonemap.

ORA-12058: materialized view cannot use prebuilt table
Cause: An attempt was made to use the prebuilt tables.

Action: Reissue the SQL command using BUILD IMMEDIATE or BUILD DEFERRED.

ORA-12059: prebuilt table "*string*"."*string*" does not exist
Cause: The specified prebuilt table did not exist.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table exists.

ORA-12060: shape of prebuilt table does not match definition query
Cause: The number of columns or the type or the length semantics of a column in the prebuilt table did not match the materialized view definition query.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table matches the materialized view definition query.

ORA-12061: invalid ALTER MATERIALIZED VIEW option
Cause: An invalid option was used in an ALTER MATERIALIZED VIEW statement.

Action: Specify only valid options.

ORA-12062: transaction *string* received out of sequence from site *string*
Cause: A transaction from the client site was received out of sequence. This implies that one or more transactions were missing.

Action: Ensure that the transaction queue at the client site is valid and has not been corrupted.

ORA-12063: unable to apply transaction from site *string*
Cause: The current transaction from the client site could not be applied to the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

ORA-12064: invalid refresh sequence number: *string*
Cause: The client site was attempting to perform a refresh with an invalid refresh sequence.

Action: Perform a complete refresh to synchronize the refresh sequence number.

ORA-12065: unknown refresh group identifier *string*
Cause: The specified refresh group did not exist at the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

ORA-12066: invalid CREATE MATERIALIZED VIEW command
Cause: The Replication API does not support the following options and types of materialized view: o ROWID materialized views o REFRESH ON COMMIT o ON PREBUILT TABLE o BUILD DEFERRED o NEVER REFRESH o ENABLE QUERY REWRITE

Action: Create a PRIMARY KEY materialized view using REFRESH WITH PRIMARY KEY and/or remove the invalid options.

ORA-12067: empty refresh groups are not allowed
Cause: The refresh group being instantiated did not contain any materialized views.

Action: Modify the template to include at least one materialized view.

ORA-12068: updatable mview log for mview "*string*"."*string*" does not exist
Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.

Action: Create the updatable materialized view log.

ORA-12069: invalid object for offline instantiation
Cause: Only materialized views can be offline instantiated. The object being offline instantiated was not a valid materialized view.

Action: Remove the object from the template or replace the object with a valid materialized view.

ORA-12070: cannot offline instantiate materialized view "*string*"."*string*"
Cause: Offline instantiation does not support materialized views using the following options: o ON PREBUILT TABLE o BUILD DEFERRED

Action: Remove the invalid options.

ORA-12071: definition query of "*string*"."*string*" is invalid for offline instantiation
Cause: Offline instantiation requires materialized view definition queries to observe the following constraints: o The database link that will be used by the materialized view site to connect to the master site must be included with each master table referenced in the query. o All master tables referenced must be located at the local site. References to other sites are not allowed.

Action: Modify the materialized view definition query.

ORA-12072: updatable materialized view log data for "*string*"."*string*" cannot be created
Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.

Action: Create an updatable materialized view log.

ORA-12073: request cannot be processed
Cause: An out-of-sequence request was made and it cannot be processed.

Action: Try again with a valid request.

ORA-12074: invalid memory address
Cause: An attempt was made to access an invalid memory region.

Action: Reconnect and try the command again.

ORA-12075: invalid object or field
Cause: An attempt was made to access an invalid field or object in the Java Virtual Memory.

Action: Retry the request.

ORA-12076: invalid threshold value
Cause: The result set threshold or LOB threshold value is not supported.

Action: Specify a threshold value below 64K.

ORA-12077: temporary updatable materialized view log does not exist
Cause: Temporary updatable materialized view log was not created or was dropped.

Action: Re-create the temporary updatable materialized view log. Warning: This will cause a complete refresh of the materialized view.

ORA-12078: fast refresh of refresh group ID *string* failed
Cause: Refresh result set sent through client method REFRESH_REQ_RESULT returned an unknown value.

Action: Re-issue the refresh request.

ORA-12079: do not invalidate result cache created during materialized view refresh
Cause: Result cache created during materialized view refresh was not invalidated at end.

Action: Do not set this as an event.

ORA-12080: Buffer cache miss for IOQ batching

ORA-12081: update operation not allowed on table "*string*"."*string*"
Cause: An attempt was made to update a read-only materialized view.

Action: No action required. Only Oracle is allowed to update a read-only materialized view.

ORA-12082: "*string*"."*string*" cannot be index organized
Cause: An attempt was made to create an index-organized materialized aggregate view or an index-organized updatable ROWID materialized view. This is not supported.

Action: Try to create the materialized view without the index organization clause.

ORA-12083: must use DROP MATERIALIZED VIEW to drop "*string*"."*string*"
Cause: An attempt was made to drop a materialized view using a command other than DROP MATERIALIZED VIEW.

Action: Use the DROP MATERIALIZED VIEW command.

ORA-12084: must use ALTER MATERIALIZED VIEW to alter "*string*"."*string*"
Cause: An attempt was made to alter a materialized view using a command other than ALTER MATERIALIZED VIEW.

Action: Use the ALTER MATERIALIZED VIEW command.

ORA-12085: materialized view log on "*string*"."*string*" already has object id
Cause: Materialized view log on the indicated table already has object id information.

Action: No action required.

ORA-12086: table "*string*"."*string*" is not an object table
Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH OBJECT ID option and the master table is not an object table.

Action: Either specify the name of an object table, or remove the WITH OBJECT ID clause.

ORA-12087: online redefinition not allowed on tables owned by "*string*"
Cause: An attempt was made to online redefine a table owned by SYS or SYSTEM.

Action: Do not attempt to online redefine a table owned by SYS or SYSTEM.

ORA-12088: cannot online redefine table "*string*"."*string*" with unsupported datatype
Cause: An attempt was made to online redefine a table containing a LONG column, an ADT column, or a FILE column.

Action: Do not attempt to online redefine a table containing a LONG column, an ADT column, or a FILE column.

ORA-12089: cannot online redefine table "*string*"."*string*" with no primary key
Cause: An attempt was made to online redefine a table that does not have a primary key defined on it.

Action: Do not attempt to online redefine a table that does not have a primary key defined on it.

ORA-12090: cannot online redefine table "*string*"."*string*"
Cause: An attempt was made to online redefine a table that is either a temporary table, an IOT overflow table, a table with fine-grained access control or row-level security enabled, a CDC change table, or a table with a CDC change table defined on it.

Action: Do not attempt to online redefine a table that is not supported by online redefinition.

ORA-12091: cannot online redefine table "*string*"."*string*" with materialized views
Cause: An attempt was made to online redefine a table that had materialized views defined on it or had a materialized view log defined on it or is a master.

Action: Drop all materialized views and materialized view logs before attempting to online redefine the table.

ORA-12092: cannot online redefine replicated table "*string*"."*string*"
Cause: An attempt was made to online redefine a table that is either a materialized view or a replicated table.

Action: Do not attempt to online redefine a table that is either a materialized view or a replicated table.

ORA-12093: invalid interim table "*string*"."*string*"
Cause: The table is not the interim table of the corresponding table to be online redefined.

Action: Pass in the valid interim table.

ORA-12094: error during online redefinition
Cause: There was an error during the online redefinition process.

Action: Abort the online redefinition process.

ORA-12096: error in materialized view log on "*string*"."*string*"
Cause: There was an error originating from this materialized view log. One possible cause is that schema redefinition has occurred on the master table and one or more columns in the log is now a different type than corresponding master column(s). Another possible cause is that there is a problem accessing the underlying materialized view log table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop the materialized view log and recreate it.

ORA-12097: changes in the master tables during refresh, try refresh again
Cause: There are some changes (i.e., conventional DML, direct load, partition maintenance operation) in the master tables during materialized view refresh.

Action: Refresh the affected materialized views again.

ORA-12098: cannot comment on the materialized view
Cause: An attempt was made to issue a COMMENT ON TABLE statement on a materialized view.

Action: Issue a COMMENT ON MATERIALIZED VIEW statement instead.

ORA-12099: Don't go into fast table scan (kdst) mode

ORA-12100: materialized view log on "*string*"."*string*" already has sequence
Cause: Materialized view log on the indicated table already has sequence information.

Action: No action required.

ORA-12101: shape of materialized view does not match the base table
Cause: The number of columns or the type or the length semantics of a column in the materialized view did not match the materialized view base table.

Action: Ensure that the materialized view column list matches with the base table.

78

ORA-12150 to ORA-12269

ORA-12150: TNS:unable to send data
Cause: Unable to send data. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12151: TNS:received bad packet type from network layer
Cause: Internal error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12152: TNS:unable to send break message
Cause: Unable to send break message. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12153: TNS:not connected
Cause: Not currently connected to a remote host.

Action: Reestablish connection.

ORA-12154: TNS:could not resolve the connect identifier specified
Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

ORA-12155: TNS:received bad datatype in NSWMARKER packet
Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12156: TNS:tried to reset line from incorrect state
Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12157: TNS:internal network communication error
Cause: Internal error during network communication.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12158: TNS:could not initialize parameter subsystem
Cause: Unable to locate parameter file.

Action: Verify that a valid parameter file exists, and is readable.

ORA-12159: TNS:trace file not writeable
Cause: The trace file to be generated is not writeable by this user.

Action: If the user does not have write permissions in the directory to which the trace file will be written, contact an administrator to get the proper permissions or set the TRACE_DIRECTORY_CLIENT parameter in the net profile (SQLNET.ORA file) to a directory the user can write to.

ORA-12160: TNS:internal error: Bad error number
Cause: Corrupt error reporting subsystem.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12161: TNS:internal error: partial data received
Cause: The connection may be terminated.

Action: Reconnect and try again. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12162: TNS:net service name is incorrectly specified
Cause: The connect descriptor corresponding to the net service name in TNSNAMES.ORA or in the directory server (Oracle Internet Directory) is incorrectly specified.

Action: If using local naming make sure there are no syntax errors in the corresponding connect descriptor in the TNSNAMES.ORA file. If using directory naming check the information provided through the administration used for directory naming. If using ORACLE_SID, please check if ORACLE_SID is// set.

ORA-12163: TNS:connect descriptor is too long
Cause: The connect descriptor corresponding to the net service name specified as the connect identifier is too long. The maximum length for a connect descriptor is 512 bytes and this limit has been exceeded.

Action: Check the net service name's connect descriptor in the local naming file (TNSNAMES.ORA) or in the directory server (Oracle Internet Directory). Use a smaller connect descriptor. If this is not possible, contact Worldwide Customer Support.

ORA-12164: TNS:Sqlnet.fdf file not present
Cause: The sqlnet.fdf file doesn't exist in $ORACLE_HOME/network/admin.

Action: The sqlnet.fdf file is required for Oracle Tracing to occur. Either install the sqlnet.fdf file in $ORACLE_HOME/network/admin or turn off tracing in your ORA file.

ORA-12165: TNS:Trying to write trace file into swap space.
Cause: Oracle Trace doesn't allow writing trace information into your swap space.

Action: Oracle Trace cannot write trace information into swap space so either disable tracing or redirect trace files to be written to another area of your disk.

ORA-12166: TNS:Client can not connect to HO agent.
Cause: NVstring contained DESCRIPTION/HO.

Action: Call HO agent from integrating server.

ORA-12168: TNS:Unable to contact LDAP Directory Server
Cause: Cannot contact LDAP directory server to get Oracle Net configuration.

Action: Verify that the directory server is up and accessible from the network. Verify that directory access configuration is correct. For more information see the Oracle Internet Directory Administrators Guide or the Oracle Net Administrators Guide.

ORA-12169: TNS:Net service name given as connect identifier is too long
Cause: The net service name you are attempting to resolve is too long.

Action: The maximum length of a net service name is 255 bytes; this limit has been exceeded. Use a smaller net service name. If this is not possible, contact Worldwide Customer Support.

ORA-12170: TNS:Connect timeout occurred
Cause: The server shut down because connection establishment or communication with a client failed to complete within the allotted time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the server.

Action: If the error occurred because of a slow network or system, reconfigure one or all of the parameters SQLNET.INBOUND_CONNECT_TIMEOUT, SQLNET.SEND_TIMEOUT, SQLNET.RECV_TIMEOUT in sqlnet.ora to larger values. If a malicious client is suspected, use the address in sqlnet.log to identify the source and restrict access. Note that logged addresses may not be reliable as they can be forged (e.g. in TCP/IP).

ORA-12171: TNS:could not resolve connect identifier: *string*
Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a

net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

ORA-12196: TNS:received an error from TNS
Cause: The navigation layer received an error from TNS.

Action: See the error log file for the specific TNS error.

ORA-12197: TNS:keyword-value resolution error
Cause: The navigation layer received an error while trying to look up a value for a keyword.

Action: Check the syntax of the connect descriptor.

ORA-12198: TNS:could not find path to destination
Cause: Could not navigate a path through Interchanges to the destination. This error occurs if an invalid community is in the address string, or the address includes a protocol that is not available or the TNSNAV.ORA file does not have a correct CMANAGER address specified or the Interchange is down.

Action: Assure that Interchanges necessary to get to the desired destination are up and have available capacity for an additional connection. Also check that the correct community and protocol have been specified in the CMANAGER address used.

ORA-12200: TNS:could not allocate memory
Cause: Out of memory on machine.

Action: Reconfigure machine to have more storage or run fewer applications while the Interchange is running.

ORA-12201: TNS:encountered too small a connection buffer
Cause: TNS connection buffer supplied by the application was too small to retrieve the data sent back.

Action: Supply a larger connection buffer. If problem persists, call Worldwide Customer Support.

ORA-12202: TNS:internal navigation error
Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

ORA-12203: TNS:unable to connect to destination
Cause: Invalid address specified or destination is not listening. This error can also occur because of underlying network or network transport problems.

Action: Verify that the net service name you entered was correct. Verify that the ADDRESS portion of the connect descriptor which corresponds to the net service name is correct. Ensure that the destination process (for example the listener) is running at the remote node.

ORA-12204: TNS:received data refused from an application
Cause: The application using Connection Manager refused the connection at the listener.

Action: Make sure that the application listener at the destination is functioning correctly. If it is and the problem persists, contact Worldwide Customer Support.

ORA-12205: TNS:could not get failed addresses
Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

ORA-12206: TNS:received a TNS error during navigation
Cause: Internal navigation error because of an unexpected TNS error.

Action: Look at the log file to find the TNS error. If necessary, turn on tracing and repeat the operation.

ORA-12207: TNS:unable to perform navigation
Cause: Improperly configured navigation file TNSNAV.ORA.

Action: Check the syntax of the TNSNAV.ORA file on the application`s machine, and verify that it lists the correct communities.

ORA-12208: TNS:could not find the TNSNAV.ORA file
Cause: Either the ORACLE environment is not set up correctly, or the TNSNAV.ORA file is not present.

Action: Ensure that the ORACLE environment is set up appropriately on your platform and that a TNSNAV.ORA file is present.

ORA-12209: TNS:encountered uninitialized global
Cause: Application calling navigation routine has not properly configured the global variables. There are no TNSNAV.ORA files available, or they are defective.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12210: TNS:error in finding Navigator data
Cause: Application calling navigation routine has not properly configured the TNSNAV.ORA file.

Action: Check the syntax of the TNSNAV.ORA file.

ORA-12211: TNS:needs PREFERRED_CMANAGERS entry in TNSNAV.ORA
Cause: TNSNAV.ORA does not have a PREFERRED_CMANAGERS defined.

Action: Add a PREFERRED_CMANAGERS entry to the TNSNAV.ORA file.

ORA-12212: TNS:incomplete PREFERRED_CMANAGERS binding in TNSNAV.ORA
Cause: The PREFERRED_CMANAGERS binding in the client's TNSNAV.ORA file does not have a CMANAGER_NAME specified.

Action: Define the CMANAGER_NAME as part of the PREFERRED_CMANAGERS binding. Use of the Oracle Network Manager should eliminate this error.

ORA-12213: TNS:incomplete PREFERRED_CMANAGERS binding in TNSNAV.ORA
Cause: The PREFERRED_CMANAGERS binding in the client's TNSNAV.ORA file does not have an ADDRESS specified.

Action: Define the ADDRESS as part of the PREFERRED_CMANAGERS binding.

ORA-12214: TNS:missing local communities entry in TNSNAV.ORA
Cause: There is no LOCAL_COMMUNITIES entry in TNSNAV.ORA.

Action: Define the LOCAL_COMMUNITIES for this node in the TNSNAV.ORA file.

ORA-12215: TNS:poorly formed PREFERRED_NAVIGATORS Addresses in TNSNAV.ORA
Cause: Address binding for PREFERRED_NAVIGATORS entry is improperly entered. entry.

Action: Check your PREFERRED_NAVIGATORS entry and fix it in TNSNAV.ORA

ORA-12216: TNS:poorly formed PREFERRED_CMANAGERS addresses in TNSNAV.ORA
Cause: Address binding for the PREFERRED_CMANAGERS entry in the client's TNSNAV.ORA file is improperly entered.

Action: Define the ADDRESS as part of the PREFERRED_CMANAGERS binding.

ORA-12217: TNS:could not contact PREFERRED_CMANAGERS in TNSNAV.ORA
Cause: There is a syntax error in the PREFERRED_CMANAGERS entry, or addresses specified are wrong, or the intended Connection Managers are unavailable.

Action: Check the PREFERRED_CMANAGERS entries in the client's TNSNAV.ORA file and correct them or talk with your network administrator to determine if the specified Connection Managers are available. Verify that the Interchanges are active by using the INTCTL STATUS command.

ORA-12218: TNS:unacceptable network configuration data
Cause: Poorly formed network configuration data. For example, a PREFERRED_CMANAGERS entry may have an incorrect CMANAGER_NAME in the client's TNSNAV.ORA file. Or an Interchange downtime parameter (TIMEOUT_INTERVAL) on the Navigator may be set to zero in INTCHG.ORA.

Action: Check the entries in TNSNAV.ORA and the Interchange configuration files and correct them. If necessary, talk with your network administrator to determine if the specified Interchanges (Connection Managers) are available and properly configured. Use the Oracle Network Manager to generate the configuration files if necessary.

ORA-12219: TNS:missing community name from address in ADDRESS_LIST
Cause: This error occurs when an ADDRESS_LIST has some ADDRESSes in it that have no COMMUNITY component and others that do have a COMMUNITY component.

Action: Check that in the connect descriptors you are using either all the ADDRESSes have a COMMUNITY component or all do not.

ORA-12221: TNS:illegal ADDRESS parameters
Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA or in the directory. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation or the Oracle Net Administrator's Guide. Protocols that resolve names at the transport layer are vulnerable to this error if not properly configured or names are misspelled.

ORA-12222: TNS:no support is available for the protocol indicated
Cause: The protocol requested in the ADDRESS portion of the connect descriptor identified through the net service name is not available. If the supplied ADDRESS is typographically correct then support for that protocol is not installed.

Action: Install support for the protocol or correct typographical error, as appropriate. Note: if the supplied address was derived from resolving the net service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA) or in the directory server.

ORA-12223: TNS:internal limit restriction exceeded
Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

ORA-12224: TNS:no listener
Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

ORA-12225: TNS:destination host unreachable
Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

ORA-12226: TNS:operating system resource quota exceeded
Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

ORA-12227: TNS:syntax error
Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

ORA-12228: TNS:protocol adapter not loadable
Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

ORA-12229: TNS:Interchange has no more free connections
Cause: One or more Interchanges along the path to the destination desired has no more free connections available to be used for this call.

Action: Try again later when the Interchanges are less busy, or contact your network administrator to have him determine which interchange it is, and increase the number of connections available on that interchange.

ORA-12230: TNS:Severe Network error occurred in making this connection
Cause: This error is reported by an interchange which fails to make contact with the destination due to a physical network error while calling a destination.

Action: Try again later when the network service may have been fixed or report the problem to your Network Administrator so that he may fix the problem.

ORA-12231: TNS:No connection possible to destination
Cause: This error is reported by an interchange which fails to find a possible connection along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12232: TNS:No path available to destination
Cause: This error is reported by an interchange which fails to find a possible path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12233: TNS:Failure to accept a connection
Cause: This error is reported by an interchange which fails to accept a connection due to a redirect failure.

Action: Report the problem to your Network Administrator so that he may isolate the interchange problem.

ORA-12234: TNS:Redirect to destination
Cause: This error is reported by an interchange which determines that this interchange is not the right gateway and needs to redirect the connection to another gateway along the path to the destination.

Action: None

ORA-12235: TNS:Failure to redirect to destination
Cause: This error is reported by an interchange which fails to redirect a connection to another interchange along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12236: TNS:protocol support not loaded
Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

ORA-12238: TNS: NT Operaion is aborted
Cause: The NT operation is aborted because it is interrupted by upper layer to cleanup the database session.

Action: None

ORA-12268: server uses weak encryption/crypto-checksumming version
Cause: Encryption/crypto-checksumming version used by server is not supported by client configuration.

Action: Upgrade the server to use strong version of the encryption and crypto-checksumming adapter. If support for weaker version is needed, add the following to sqlnet.ora file to allow connections to weak servers: sqlnet.allow_weak_crypto = true CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the server cannot be updated to run stronger version of the encryption and crypto-checksumming adapter. User is strongly advised to consider the implications of this parameter before configuring it to allow weak connections.

ORA-12269: client uses weak encryption/crypto-checksumming version
Cause: Encryption/crypto-checksumming version used by client is not supported by server configuration.

Action: Upgrade the client to use stronger version of the encryption and crypto-checksumming adapter. If support for weaker version is needed, add the following to sqlnet.ora file to allow connections to weak clients: sqlnet.allow_weak_crypto_clients = true CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the client cannot be updated to run stronger version of the encryption and crypto-checksumming adapter. User is strongly advised to consider the implications of this parameter before configuring it to allow weak connections.

79
ORA-12315 to ORA-12354

ORA-12315: database link type is invalid for the ALTER DATABASE statement
Cause: The database link name you specified on the ALTER DATABASE statement is not an ROM: link. You must specify an ROM: link when using the ALTER DATABASE statement to mount or open a secondary database.

Action: Re-issue the ALTER DATABASE statement using a valid ROM: link to the database you want to mount or open. If a valid ROM: link does not exist, create one using the CREATE DATABASE LINK command. See the Trusted ORACLE RDBMS Guide to Security Features for more information about creating database links using the ROM: link type.

ORA-12316: syntax error in database link's connect string
Cause: The connect string in the CREATE DATABASE LINK statement has a syntactical error.

Action: Drop the database link and recreate it using valid syntax. See the SQL Language Reference Manual for more information about the connect string portion of the CREATE DATABASE LINK statement.

ORA-12317: logon to database (link name *string*) denied
Cause: There are several possible causes for this error. First, you can get this error if your username (and password, if you are using database instead of operating system authentication) in the secondary database are not identical to your username (and password) in the primary database. Second, you can get this error if your username in the secondary database is invalid (has not been created). Third, you can get this error if the username/password combination specified in the connect string of the database link definition is invalid (either not created or has an invalid password).

Action: In the first case, ensure that the secondary database contains a username (and password, if you are using database authentication) identical to the one you are using in the primary database. In general, you should always use operating system authentication in Trusted ORACLE (see the Trusted ORACLE RDBMS Guide to Security Features for more information about the advantages of OS authentication). In the second case, ensure that your username in the secondary database has been created. In the third case, ensure that the username specified in the connect string has been created in the secondary database.

ORA-12318: database (link name *string*) is already mounted
Cause: You are attempting to mount a secondary database that has already been mounted by your instance.

Action: The database is already mounted, so you need not take additional action to mount it. To establish access, use the ALTER DATABASE *linkname* OPEN command to open the database.

ORA-12319: database (link name *string*) is already open
Cause: You are attempting to open a secondary database that is already open.

Action: The database is open and you need not take additional action to establish access.

ORA-12321: database (link name *string*) is not open and AUTO_MOUNTING=FALSE
Cause: The secondary database that your instance is attempting to mount is not open and automatic mounting has not been enabled.

Action: Manually mount and open the secondary database using ALTER DATABASE *linkname* with the OPEN and MOUNT options. Alternately, to allow your instance to automatically mount and open secondary databases, set the AUTO_MOUNTING parameter in the parameter file to TRUE.

ORA-12322: unable to mount database (link name *string*)
Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

ORA-12323: unable to open database (link name *string*)
Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

ORA-12324: cannot use the ROM: link type on a private database link
Cause: You can only specify the ROM: link type on a public, not a private, database link.

Action: Determine if there is an existing public database link to the secondary database. If not, and if you wish to establish public access to the secondary database, create a public database link to the secondary database using the CREATE DATABASE LINK command.

ORA-12326: database *string* is closing immediately; no operations are permitted
Cause: The database you attempted to access is closing, so your operation has been terminated.

Action: Wait until the database has been reopened, or contact the database adminstrator.

ORA-12329: database *string* is closed; no operations are permitted
Cause: The database you attempted to access is closed, so your operation has been terminated.

Action: Wait until the database is reopened, or contact the database administrator.

ORA-12333: database (link name *string*) is not mounted
Cause: You attempted to open a database that has not been mounted.

Action: Mount the database with the ALTER DATABASE *linkname* MOUNT command, then re-attempt to open the database.

ORA-12334: database (link name *string*) is still open
Cause: You attempted to dismount a database that is still open.

Action: Close the database with the ALTER DATABASE *linkname* CLOSE command, then re-attempt to dismount the database.

ORA-12335: database (link name *string*) is not open
Cause: You attempted to close a database that is not open.

Action: The database is closed; you can proceed with dismounting it.

ORA-12336: cannot login to database (link name *string*)
Cause: You are tyring to login while another user is mounting or dismounting the same database.

Action: Check to see if the database is in the middle of being mounted or opened and try your login again once the database is accessible.

ORA-12341: maximum number of open mounts exceeded
Cause: The number specified on the OPEN_MOUNTS parameter in the parameter file exceeds the maximum allowed (255).

Action: Change the value of this parameter so that it reflects the actual number of possible open mounts to secondary databases. This must be less than 255.

ORA-12342: open mounts exceeds limit set on the OPEN_MOUNTS parameter
Cause: The number of currently open mounts exceeds the value you specified on the OPEN_MOUNTS parameter.

Action: Increase the value of the OPEN_MOUNTS parameter so that it accommodates the maximum possible number of open mounts to secondary databases.

ORA-12345: user *string* lacks CREATE SESSION privilege in database link (linkname *string*)
Cause: There are several possible causes for this message: First, you will get this message if your username in the second database specified was not granted the CREATE SESSION system privilege. Second, you will get this message if the username specified in the connect string of the database link definition was not granted the CREATE SESSION system privilege.

Action: The action you take depends upon the cause of the message: In the first case, ensure that your username in the secondary database was granted the CREATE SESSION system privilege. In the second case, ensure the username specified in the connect string of the database link definition was granted the CREATE SESSION system privilege in the secondary database.

ORA-12350: database link being dropped is still mounted
Cause: An attempt was made to drop a ROM: database link that was still mounted and/or opened.

Action: Close and dismount the database and then re-issue the drop statement.

ORA-12351: cannot create view using a remote object which has a remote object reference
Cause: You tried to create a view which references a remote object which, in turn, references an object on another database. Since the view that you tried to create references a remote object, that object cannot reference an object on another database.

Action: Choose a different object to reference in your view or change the remote object so that it does not reference another database.

ORA-12352: object *string.string@string* is invalid
Cause: An attempt was made to reference (compile against) an object of a secondary database but the object is invalid and the system cannot validate or recompile it because it is in a secondary database.

Action: Manually recompile the invalid object in the secondary database.

ORA-12353: secondary stored object cannot reference remote object
Cause: You tried to either select from a remote view or execute a remote procedure which references an object on another database. Since the remote view or procedure is on a secondary database, an additional reference to another database cannot be done.

Action: Choose a different object to reference or change the remote view or procedure so that it does not reference another database.

ORA-12354: secondary object being dropped
Cause: You tried to access a object (for example, a table or view) on a secondary database that was in the process of being dropped.

Action: Repeat the operation. If you receive this message again, try to access the object from the secondary database. If you receive an internal error or a trace file, contact Oracle WorldWide Technical Support.

80
ORA-12400 to ORA-12498

ORA-12400: invalid argument to facility error handling
Cause: An argument to a facility error handling function exceeded a maximum limit or referred to an invalid product/facility.

Action: Specify a valid facility error handling parameter value.

ORA-12401: invalid label string: *string*
Cause: The policy could not convert the label string to a valid internal label.

Action: Correct the syntax of the label string.

ORA-12402: invalid format string: *string*
Cause: The format string is not supported by the policy.

Action: Correct the syntax of the format string.

ORA-12403: invalid internal label
Cause: An internal label could not be converted to a valid label for the policy.

Action: Analyze any additional messages on the error stack and consult the policy documentation.

ORA-12404: invalid privilege string: *string*
Cause: The policy could not interpret the privilege string.

Action: Specify a privilege string that is supported by the policy.

ORA-12405: invalid label list
Cause: The policy determined that the label list was invalid for its intended use.

Action: Check the policy constraints on the specific list of labels.

ORA-12406: unauthorized SQL statement for policy *string*
Cause: The policy did not authorize the database session to perform the requested SQL statement.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

ORA-12407: unauthorized operation for policy *string*
Cause: The policy did not authorize the database session to perform the requested operation.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

ORA-12408: unsupported operation: *string*
Cause: The specified policy does not support the requested operation.

Action: Consult the policy documentation to determine the supported access mediation operations.

ORA-12409: policy startup failure for *string* policy
Cause: The policy encountered an error during startup processing; access to the data protected by the policy is prohibited.

Action: Check the alert log for additional information, correct the policy error, and restart the instance.

ORA-12410: internal policy error for policy: *string*\n Error: *string*
Cause: The policy enforcement encountered an internal error.

Action: Consult the policy documentation for details.

ORA-12411: invalid label value
Cause: The specified label value does not exist.

Action: Check the data dictionary views for the policy to identify valid labels.

ORA-12412: policy package *string* is not installed
Cause: The policy package does not exist in the database.

Action: Check that the policy package name is correct or install the required policy package.

ORA-12413: labels do not belong to the same policy
Cause: The labels being compared belong to different policies.

Action: Only compare labels that belong to the same policy.

ORA-12414: internal LBAC error: *string*\n Error: *string*
Cause: An internal label policy framework error occurred.

Action: Contact Oracle Customer Support.

ORA-12415: A column of another datatype exists on the specified table
Cause: The datatype of the column present in the table is different from the datatype set for the policy column.

Action: Drop the column on the table or change the datatype for policy column.

ORA-12416: policy *string* not found
Cause: The specified policy does not exist in the database.

Action: Enter the correct policy name or create the policy.

ORA-12417: database object "*string*" not found
Cause: The specified object was not in the database.

Action: Enter the correct name for the database object.

ORA-12418: user *string* not found
Cause: The specified user does not exist in the database.

Action: Correct the user name or create the user.

ORA-12419: null binary label value
Cause: A null value was provided for a binary label operation.

Action: Provide a valid binary label for the operation.

ORA-12420: required procedures and functions not in policy package "*string*"
Cause: The policy package did not contain all of the procedures and functions necessary to enforce the policy.

Action: Consult the label framework documentation for a list of required procedures and functions for a policy package.

ORA-12421: different size binary labels
Cause: The label sizes for the binary label operation were not equal.

Action: Provide binary labels with the same lengths for the operation.

ORA-12422: max policies exceeded
Cause: You tried to create a new policy, but the maximum number of policies for the instance had already been created.

Action: Increase the size of the MAX_LABEL_POLICIES initialization parameter and restart the server.

ORA-12423: invalid position specified
Cause: The position specified for a binary label operation was invalid.

Action: Provide a position that is within the label size limits.

ORA-12424: length exceeds binary label size
Cause: The length specified for a binary label operation exceeded the the size of the binary label.

Action: Provide a bit or byte length that is within the label size limits.

ORA-12425: cannot apply policies or set authorizations for system schemas
Cause: You tried to either apply a policy to the SYS, SYSTEM, or LBACSYS schema or to set user labels/privileges for the SYS, SYSTEM, or LBACSYS user.

Action: Apply policies and set authorizations only for non-system users.

ORA-12426: invalid audit option
Cause: The option specified was not a valid audit option for the specified policy.

Action: Enter a correct audit option.

ORA-12427: invalid input value for *string* parameter
Cause: An input parameter was specified incorrectly.

Action: Correct the parameter value.

ORA-12428:

ORA-12429: label list range exceeded
Cause: The specified index value was not between 1 and 6.

Action: Correct the index value for the label list operation.

ORA-12430: invalid privilege number
Cause: The specified privilege number was not between 1 and 32.

Action: Correct the privilege number.

ORA-12431: invalid audit action
Cause: The specified audit action was not a valid audit action.

Action: Correct the audit action number.

ORA-12432: LBAC error: *string*
Cause: LBAC enforcement resulted in an error.

Action: Correct the problem identified in the error message.

ORA-12433: create trigger failed, policy not applied
Cause: The policy could not be applied due to errors during the creation of a DML trigger.

Action: Correct the SQL syntax of the label function specification.

ORA-12434: invalid audit type: *string*
Cause: The audit type must be BY ACCESS or BY SESSION.

Action: Correct the audit type value.

ORA-12435: invalid audit success: *string*
Cause: The audit success parameter must be SUCCESSFUL or NOT SUCCESSFUL.

Action: Correct the audit success value.

ORA-12436: no policy options specified
Cause: A NULL option string was specified, but no default schema or policy option string was found.

Action: Enter a valid option string, or alter the schema or policy to have a valid default option string.

ORA-12437: invalid policy option: *string*
Cause: A value that was not a valid policy option was entered.

Action: Correct the policy option value.

ORA-12438: repeated policy option: *string*
Cause: A policy option was entered more than once in the option string.

Action: Remove the duplicate policy option value.

ORA-12439: invalid combination of policy options
Cause: A set of contradictory policy options was entered.

Action: Provide a set of compatible policy options.

ORA-12440: insufficient authorization for the SYSDBA package
Cause: The use of the SYSDBA package requires the LBAC_DBA role.

Action: Grant the LBAC_DBA role to the database user.

ORA-12441: policy *string* already exists
Cause: You tried to create a policy with the same name as an existing one.

Action: Use a different name or drop the existing policy.

ORA-12442: policy column "*string*" already used by an existing policy
Cause: You tried to create a policy with the same policy column name as an existing policy.

Action: Use a different name for the policy column or drop the existing policy.

ORA-12443: policy not applied to some tables in schema
Cause: You applied a policy to a schema, and some of the tables in the schema already had the policy applied.

Action: No action necessary; the policy was applied to the remaining tables.

ORA-12444: policy already applied to table
Cause: You tried to apply a policy to a table that was already protected by the policy.

Action: To change the policy options, predicate, or label function, remove the policy from the table and re-apply it.

ORA-12445: cannot change HIDDEN property of column
Cause: You tried to specify a different HIDE option for a table with an existing policy column.

Action: Drop the column from the table and reapply the policy with the new HIDE option.

ORA-12446: Insufficient authorization for administration of policy *string*
Cause: You tried to perform an administrative function for a policy, but you have not been granted the *policy*_DBA role.

Action: Grant the user the *policy*_DBA role for the specified policy.

ORA-12447: policy role already exists for policy *string*
Cause: The role named *policy*_DBA already exists.

Action: Correct the policy name or delete the existing policy.

ORA-12448: policy *string* not applied to schema or table *string*
Cause: An attempt was made to alter, enable or disable a schema or table policy that was not applied.

Action: Correct the policy or schema or table name.

ORA-12449: Labels specified for user must be of type USER
Cause: You tried to set labels for a user, but the labels in the list were not all designated as USER labels.

Action: Alter the labels to be USER labels.

ORA-12450: LOB datatype disabled in LBAC initialization file
Cause: You tried to specify a LOB datatype for a column or attribute, but the use of the LOB datatype has been disabled.

Action: Change the LBAC initialization file to allow the creation of LOB columns and attributes.

ORA-12451: label not designated as USER or DATA
Cause: A label is either a DATA label, a USER label, or both DATA and USER.

Action: Enter TRUE for at least DATA or USER.

ORA-12452: label tag *string* already exists
Cause: The label tag value you entered is already in use for another label.

Action: Enter a different value for the label tag.

ORA-12453: label *string* already exists
Cause: The label value you entered already exists.

Action: No action necessary; alter the label to change its tag or type.

ORA-12454: label *string* does not exist for policy *string*
Cause: The label tag or value you entered did not identify a label for the policy.

Action: Enter a label value or tag that is in use by the policy.

ORA-12455: internal error in Label Security MMON cleanup task
Cause: An internal error occurred in the Label Security MMON cleanup task.

Action: Contact Oracle Customer Support.

ORA-12456: label security startup in progress
Cause: You attempted to connect to the database before the Oracle Label Security component was fully initialized.

Action: Wait until the database is fully open before attempting to connect.

ORA-12457: security label exceeded maximum allowable length
Cause: An operation attempted to materialize a security label greater than 4000 bytes in length.

Action: Consult the Oracle Label Security documentation for information on how the length of a security label is calculated. Re-submit the operation once the problem has been corrected.

ORA-12458: Oracle Label Security not enabled
Cause: A Label Security operation was attempted without enabling Oracle Label Security.

Action: Consult the Oracle Label Security documentation for information on how to enable Oracle Label Security.

ORA-12459: Oracle Label Security not configured
Cause: An administrative operation was attempted without configuring Oracle Label Security.

Action: Consult the Oracle Label Security documentation for information on how to configure Oracle Label Security.

ORA-12460: cannot disable Oracle Label Security when Database Vault is enabled
Cause: An attempt was made to disable Oracle Label Security when Database Vault was enabled.

Action: Disable Database Vault and bounce the database before attempting to disable Oracle Label Security.

ORA-12461: undefined level *string* for policy *string*
Cause: The specified level is not defined for the policy.

Action: Correct the level identifier value.

ORA-12462: undefined compartment *string* for policy *string*
Cause: The specified compartment is not defined for the policy.

Action: Correct the compartment identifier value.

ORA-12463: undefined group *string* for policy *string*
Cause: The specified group is not defined for the policy.

Action: Correct the group identifier value.

ORA-12464: invalid characters in label component *string*
Cause: Label components can contain only alphanumeric characters, blanks, and underscores.

Action: Correct syntax of the label component.

ORA-12465: not authorized for read or write on specified groups or compartments
Cause: Groups or compartments were included that were not in the user's list of groups and compartments authorized for read or write access.

Action: Include groups or compartments authorized for read or write access in the user's list of groups and compartments.

ORA-12466: default level is greater than the user's maximum
Cause: The default level cannot be greater than the user's maximum.

Action: Enter an authorized level.

ORA-12467: minimum label can contain a level only
Cause: You included compartments or groups in the minimum label.

Action: Enter only an authorized minimum level as the label.

ORA-12468: max write level does not equal max read level
Cause: The level in the max write label must equal the level in the max read label.

Action: Enter max read and max write labels with the same level component.

ORA-12469: no user levels found for user *string* and policy *string*
Cause: No levels have been specified for the user.

Action: Enter the maximum and minimum labels for the user.

ORA-12470: NULL or invalid user label: *string*
Cause: The label entered is NULL or not within the user's authorizations.

Action: Enter the authorized labels for the user.

ORA-12471: Specified compartment or group is not authorized for user
Cause: The specified compartment or group is not in user's authorizations or the user does not have read on compartment or group specified for write.

Action: Enter an authorized compartment or group.

ORA-12472: policy *string* is being used
Cause: The policy which was being dropped due to event propagation from OID was applied to some table or schema.

Action: Drop a policy in OID only if it is not used in any of the databases using the policy.

ORA-12473: The procedure is disabled when Label Security is used with OID.
Cause: Using Label Security with OID disabled this procedure.

Action: Do not use OID with Label Security if this procedure is required to function.

ORA-12474: cannot change column name for a policy in use
Cause: An attempt was made to change a column name for a policy that was applied on user schemas or tables.

Action: Disable the policy for all user schemas and tables before changing the column name.

ORA-12475: incompatible Oracle Label Security configuration
Cause: An attempt was made to configure Oracle Label Security with OID in a pluggable database when Oracle Label Security without OID is configured in another pluggable database or vice-versa.

Action: Use similar configurations of Oracle Label Security in all pluggable databases.

ORA-12476: least upper bound resulted in an invalid OS label
Cause: You tried to do an operation that generated a least upper bound (LUB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

ORA-12477: greatest lower bound resulted in an invalid OS label
Cause: You tried to do an operation that generated a greatest lower bound (GLB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

ORA-12479: file label *string* must equal DBHIGH *string*
Cause: A database file had an OS label that did not match DBHIGH. Either DBHIGH was altered or the OS file was relabeled.

Action: Relabel the file so that its label matches DBHIGH, or alter DBHIGH so that it matches the label on the file.

ORA-12480: specified clearance labels not within the effective clearance
Cause: You specified a clearance range that was not within your authorized clearance; you can only specify clearance ranges that are within your clearance.

Action: Specify clearance labels that are within your own clearance range.

ORA-12481: effective label not within program unit clearance range
Cause: The effective label when the program unit was invoked was not within the range authorized for the program unit.

Action: Modify the program unit clearance range or invoke the program unit from a session with an authorized effective clearance.

ORA-12482: internal MLS error: *string*\n Error: *string*
Cause: An internal MLS policy error occurred.

Action: Contact Oracle Customer Support.

ORA-12483: label not in OS system accreditation range
Cause: The specified label is above the OS maximum label or below the OS minimum label.

Action: Use a label that is within the accreditation range for the host OS.

ORA-12484: invalid OS label
Cause: The specified label does not exist in the OS host's label definition file.

Action: Use the OS label management tools to define the label.

ORA-12485: new effective label not within effective clearance
Cause: You attempted to enter a value for an effective label that did not dominate the effective min label or was not dominated by the effective max label.

Action: Enter a value between the min and the max labels.

ORA-12486: effective max labels and min labels cannot be changed
Cause: You attempted to enter a value for an effective min label or effective max label, but these labels cannot be changed.

Action: Enter NULL values for the effective minimum and maximum labels.

ORA-12487: clearance labels not between DBHIGH and DBLOW
Cause: You attempted to enter a value for a clearance label that was not dominated by DBHIGH or did not dominate DBLOW.

Action: Enter clearance label values between DBHIGH and DBLOW.

ORA-12488: maximum label does not dominate minimum label
Cause: You attempted to enter a value for a clearance label that did not preserve the dominance relationship between the minimum and maximum labels.

Action: Enter label values that preserves the dominance relationship between the minimum and maximum.

ORA-12489: default label not within clearance range
Cause: You attempted to enter a value for a default label that did not dominate the minimum clearance or was not dominated by the maximum clearance.

Action: Enter a default label value within the clearance range.

ORA-12490: DBHIGH cannot be lowered
Cause: You attempted to enter a value for DBHIGH that did not dominate the existing value of DBHIGH.

Action: Enter a value for DBHIGH that dominates the old value.

ORA-12491: DBHIGH value does not dominate DBLOW
Cause: You attempted to enter a value for DBHIGH that did not dominate DBLOW.

Action: Enter a value for DBHIGH that dominates DBLOW.

ORA-12492: DBLOW cannot be changed
Cause: You attempted to change the value of DBLOW after it had been set to any initial value. DBLOW can only be set once after initial database creation.

Action: To change DBLOW, you have to create a new database, set DBLOW to the new value, and import your data into the new database.

ORA-12493: invalid MLS binary label
Cause: The MLS binary label contained an invalid value, was not the correct size, or contained a level, category, or release category that was not enabled.

Action: Check the DBA_MLS_LABELS view for the valid MLS labels.

ORA-12494: cannot insert or delete a level, category, or release category
Cause: You attempted to insert or delete a level, category, or release category definition.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

ORA-12495: cannot disable an enabled level, category, or release category
Cause: You attempted to disable a level, category, or release category that had previously been enabled. An enabled label definition may be exist in some database label, so cannot be disabled.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

ORA-12496: cannot change existing level, category, or release numbers
Cause: You attempted to change the number assigned to level, category or releasability category.

Action: Change the character string representations, not the numbers.

ORA-12497: maximum combined categories exceeds *string*
Cause: The maximum number of descriptive categories plus release categories supported by the MLS policy was exceeded.

Action: Enter numbers that do not add up to more than the maximum.

ORA-12498:

81
ORA-12500 to ORA-12699

ORA-12500: TNS:listener failed to start a dedicated server process
Cause: The process of starting up a dedicated server process failed. The executable could not be found or the environment may be set up incorrectly.

Action: Turn on tracing at the ADMIN level and reexecute the operation. Verify that the ORACLE Server executable is present and has execute permissions enabled. Ensure that the ORACLE environment is specified correctly in LISTENER.ORA. The Oracle Protocol Adapter that is being called may not be installed on the local hard drive. Please check that the correct Protocol Adapter are successfully linked. If error persists, contact Oracle Customer Support.

ORA-12502: TNS:listener received no CONNECT_DATA from client
Cause: No CONNECT_DATA was passed to the listener.

Action: Check that the service name resolved from TNSNAMES.ORA has the CONNECT_DATA component of the connect descriptor.

ORA-12503: TNS:listener received an invalid REGION from client
Cause: Invalid REGION was passed to the listener.

Action: Check the REGION name specified in the CONNECT_DATA component of the connect descriptor.

ORA-12504: TNS:listener was not given the SERVICE_NAME in CONNECT_DATA
Cause: The listener was not configured with a default service and SERVICE_NAME was missing from the CONNECT_DATA received by the listener.

Action: Possible solutions are: - Configure DEFAULT_SERVICE parameter in LISTENER.ORA with a valid service name. Reload the listener parameter file using reload [<listener_name>]. This should be done by the LISTENER administrator. - If using a service name, Check that the connect descriptor corresponding to the service name in TNSNAMES.ORA has a SERVICE_NAME or SID component in the CONNECT_DATA.

ORA-12505: TNS:listener does not currently know of SID given in connect descriptor
Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a SID for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: lsnrctl services *listener name* - Check that the SID parameter in the connect descriptor specifies an instance known by the listener. - Check for an event in the listener.log file.

ORA-12506: TNS:listener rejected connection based on service ACL filtering
Cause: The client is not present in Service Access Control List.

Action: Add the client's address in Service ACL.

ORA-12508: TNS:listener could not resolve the COMMAND given
Cause: The COMMAND given to listener is not supported.

Action: This is not seen in normal use of Oracle Net.

ORA-12509: TNS:listener failed to redirect client to service handler
Cause: The dispatcher terminated unexpectedly

Action: Attempt to connect again and if the same error occurs, contact the DBA to check the state of the dispatchers for this SID. If the problem persists, turn on tracing in the listener to determine the TNS error caused by the redirect.

ORA-12510: TNS:database temporarily lacks resources to handle the request
Cause: The dispatchers appear to be busy handling other requests.

Action: Attempt the connection again. If error persists, ask the DBA to increase the number of dispatchers and/or dispatchers' limit on number of connections/sessions that they can accept.

ORA-12511: TNS:service handler found but it is not accepting connections
Cause: The dispatchers notified the listener that they temporarily do not accept new connections.

Action: Attempt the connection again. If error persists, contact the DBA to check the state of the dispatchers and/or ask him to increase the number of dispatchers.

ORA-12513: TNS:service handler found but it has registered for a different protocol
Cause: The dispatchers registered for this service are connected to the listener by way of a different network protocol than that of the client.

Action: Contact the DBA to register a dispatcher on your protocol.

ORA-12514: TNS:listener does not currently know of service requested in connect descriptor
Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a service name for a service (usually a database service) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which services are currently known by the listener by executing: lsnrctl services *listener name* - Check that the SERVICE_NAME parameter in the connect descriptor of the net service name used specifies a service known by the listener. - If an easy connect naming connect identifier was used, check that the service name specified is a service known by the listener. - Check for an event in the listener.log file.

ORA-12515: TNS:listener could not find a handler for this presentation
Cause: None of the listener's known service handlers are registered as supporting the presentation protocol required by the connecting client.

Action: Check that the destination service is configured to accept the presentation protocol.

ORA-12516: TNS:listener could not find available handler with matching protocol stack
Cause: None of the known and available service handlers for the given SERVICE_NAME support the client's protocol stack: transport, session, and presentation protocols.

Action: Check to make sure that the service handlers (e.g. dispatchers) for the given SERVICE_NAME are registered with the listener, are accepting connections, and that they are properly configured to support the desired protocols.

ORA-12518: TNS:listener could not hand off client connection
Cause: The process of handing off a client connection to another process failed.

Action: Turn on listener tracing and re-execute the operation. Verify that the listener and database instance are properly configured for direct handoff. If problem persists, call Oracle Support.

ORA-12519: TNS:no appropriate service handler found
Cause: The listener could not find any available service handlers that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener, and are accepting connections.

ORA-12520: TNS:listener could not find available handler for requested type of server
Cause: None of the known and available service handlers for requested type of server (dedicated or shared) are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that the appropriate handlers are accepting connections.

ORA-12521: TNS:listener does not currently know of instance requested in connect descriptor
Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified in addition to the service name an instance name for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: lsnrctl services *listener name* - Check that the INSTANCE_NAME parameter in the connect descriptor specifies an instance name known by the listener. - Check for an event in the listener.log file.

ORA-12522: TNS:listener could not find available instance with given INSTANCE_ROLE
Cause: There are not any available and appropriate database instances registered with the listener, that are part of the service identified by SERVICE_NAME given in the connect descriptor and that have the specified INSTANCE_ROLE (and INSTANCE_NAME, if specified).

Action: Check to make sure that the INSTANCE_ROLE specified is correct. Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that they are ready to accept connections.

ORA-12523: TNS:listener could not find instance appropriate for the client connection
Cause: The listener could not find any available (database) instances, that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) are registered with the listener, and have status READY.

ORA-12524: TNS:listener could not resolve HANDLER_NAME given in connect descriptor
Cause: The HANDLER_NAME in the CONNECT_DATA was not found in the listener's tables for the specified SERVICE_NAME and INSTANCE_NAME.

Action: Check to make sure that the HANDLER_NAME specified is correct.

ORA-12525: TNS:listener has not received client's request in time allowed
Cause: The listener disconnected the client because the client failed to provide the necessary connect information within the allowed time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the listener.

Action: If the error occurred because of a slow network or system, reconfigure INBOUND_CONNECT_TIMEOUT to a larger value. If a malicious client is suspected, use the address in listener.log to identify the source and restrict access. Turn on tracing for more information.

ORA-12526: TNS:listener: all appropriate instances are in restricted mode
Cause: Database instances supporting the service requested by the client were in restricted mode. The Listener does not allow connections to instances in restricted mode. This condition may be temporary, such as during periods when database administration is performed.

Action: Attempt the connection again. If error persists, then contact the database administrator to change the mode of the instance, if appropriate.

ORA-12527: TNS:listener: all instances are in restricted mode or blocking new connections
Cause: All appropriate database instances supporting the service requested by the client reported that they either were in restricted mode or were blocking the new connections. The Listener does not allow connections to such instances. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the database administrator to check the status of the instances.

ORA-12528: TNS:listener: all appropriate instances are blocking new connections
Cause: All instances supporting the service requested by the client reported that they were blocking the new connections. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the administrator to check the status of the instances.

ORA-12529: TNS:connect request rejected based on current filtering rules
Cause: Connection Manager and its listener were configured with filtering rules specifying that the connect request be rejected.

Action: If this connect request should be allowed, then contact the administrator to modify the filtering rules.

ORA-12530: TNS:listener: rate limit reached
Cause: Listener has reached connection or service rate limit and hence rejected the connection.

Action: Attempt the connection again. If the error occurs frequently, contact the database administrator to increase connection or service rate limit.

ORA-12531: TNS:cannot allocate memory
Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

ORA-12532: TNS:invalid argument
Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12533: TNS:illegal ADDRESS parameters
Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation for your platform. Protocols that resolve names at the transport layer (such as DECnet object names) are vulnerable to this error if not properly configured or names are misspelled.

ORA-12534: TNS:operation not supported
Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12535: TNS:operation timed out
Cause: The requested operation could not be completed within the time out period.

Action: Look at the documentation on the secondary errors for possible remedy. See SQLNET.LOG to find secondary error if not provided explicitly. Turn on tracing to gather more information.

ORA-12536: TNS:operation would block
Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

ORA-12537: TNS:connection closed
Cause: "End of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

ORA-12538: TNS:no such protocol adapter
Cause: The protocol adapter requested (by way of the "(PROTOCOL=..)" keyword-value pair in a TNS address) is unknown. If the supplied address is typographically correct then the protocol adapter is not installed.

Action: Install the protocol adapter or correct typographically error, as appropriate. Note: if the supplied address was derived from resolving the service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA or SQLNET.ORA).

ORA-12539: TNS:buffer over- or under-flow
Cause: Buffer too small for incoming data or too large for outgoing data.

Action: This restriction (which is associated with CONNECT DATA) is not normally visible to the user. For further details, turn on tracing and reexecute the operation; contact Oracle Customer Support.

ORA-12540: TNS:internal limit restriction exceeded
Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

ORA-12541: TNS:no listener
Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

ORA-12542: TNS:address already in use
Cause: Specified listener address is already being used.

Action: Start your listener with a unique address.

ORA-12543: TNS:destination host unreachable
Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

ORA-12544: TNS:contexts have different wait/test functions
Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12545: Connect failed because target host or object does not exist
Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.) If the protocol is TCP/IP, edit the TNSNAMES.ORA file to change the host name to a numeric IP address and try again.

ORA-12546: TNS:permission denied
Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

ORA-12547: TNS:lost contact
Cause: Partner has unexpectedly gone away, usually during process startup.

Action: Investigate partner application for abnormal termination. On an Interchange, this can happen if the machine is overloaded.

ORA-12548: TNS:incomplete read or write
Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12549: TNS:operating system resource quota exceeded
Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

ORA-12550: TNS:syntax error
Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

ORA-12551: TNS:missing keyword
Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

ORA-12552: TNS:operation was interrupted
Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12554: TNS:current operation is still in progress
Cause: An internal operation is still in progress.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12555: TNS:permission denied
Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

ORA-12556: TNS:no caller
Cause: TNS detected an incoming connect request but there was no caller.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12557: TNS:protocol adapter not loadable
Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

ORA-12558: TNS:protocol adapter not loaded
Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

ORA-12560: TNS:protocol adapter error
Cause: A generic protocol adapter error occurred.

Action: Check addresses used for proper protocol specification. Before reporting this error, look at the error stack and check for lower level transport errors. For further details, turn on tracing and reexecute the operation. Turn off tracing when the operation is complete.

ORA-12561: TNS:unknown error
Cause: A generic protocol error occurred.

Action: For further details, turn on tracing and reexecute the operation.

ORA-12562: TNS:bad global handle
Cause: Internal error - bad 'gbh' argument passed to TNS from caller. System may have been linked with old libraries.

Action: Not normally visible to the user, contact Oracle Customer Support.

ORA-12563: TNS:operation was aborted
Cause: NT operation was interrupted by the uppper layer.

Action: None

ORA-12564: TNS:connection refused
Cause: The connect request was denied by the remote user (or TNS software).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation.

ORA-12566: TNS:protocol error
Cause: An unexpected TNS protocol error has occurred.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12569: TNS:packet checksum failure
Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12570: TNS:packet reader failure
Cause: An error occurred during a data receive.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12571: TNS:packet writer failure
Cause: An error occurred during a data send.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12574: TNS:Application generated error
Cause: This error was generated by peer application. Please see secondary errors for the actual cause.

Action: Action should be taken on secondary error.

ORA-12575: TNS:dhctx busy
Cause: The handoff over a dhctx failed as dhctx was already busy with an ongoing handoff.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12576: TNS:handoff not supported for this session
Cause: Handoff of a established session was attempted which either had tcps as its transport or NA options were enabled for this session.

Action: Check the transport setting as well as NA options. If error persists, contact Oracle Customer Support.

ORA-12578: TNS:wallet open failed
Cause: An error was encountered while trying to open the specified wallet.

Action: For further details, turn on tracing and re-execute the operation.

ORA-12579: TNS:transport connection failed
Cause: An error was encountered while trying to create transport connection.

Action: Likely reasons include host may be down, outbound transport connection may be blocked by network or any other transport connectivity issue. If error persists, contact Oracle Customer Support.

ORA-12582: TNS:invalid operation
Cause: An internal function received an invalid request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12583: TNS:no reader
Cause: A send operation has been requested but partner has already disconnected.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12585: TNS:data truncation
Cause: A receive operation has completed with insufficient data to satisfy the user's request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12589: TNS:connection not bequeathable
Cause: An attempt to hand-off a connection from one process to another has failed because the protocol provider does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12590: TNS:no I/O buffer
Cause: An attempt to perform an I/O operation failed because no buffer was available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12591: TNS:event signal failure
Cause: The TNS software is unable to signal an event occurrence.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12592: TNS:bad packet
Cause: An ill-formed packet has been detected by the TNS software.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12593: TNS:no registered connection
Cause: An attempt to solicit network event activity has failed because no connections are registered for event notification.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12595: TNS:no confirmation
Cause: TNS is unable to get requested confirmation acknowledgment from remote partner.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12596: TNS:internal inconsistency
Cause: TNS has detected an internal inconsistency.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12597: TNS:connect descriptor already in use
Cause: Internal error - illegal use of connect descriptor.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12598: TNS:banner registration failed
Cause: The registration of a product banner with the Oracle server failed.

Action: This is an error which is not normally visible externally. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12599: TNS:cryptographic checksum mismatch
Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If error persists, check (and correct) the integrity of your physical connection.

ORA-12600: TNS: string open failed
Cause: The creation of a string in ORACLE NLS format failed.

Action: This is an internal error, enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12601: TNS:information flags check failed
Cause: The TNS information flags set by the process prior to connection negotiation were not present after the negotiation was finished.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12602: TNS: Connection Pooling limit reached
Cause: The operation failed because maximum active current connections has been reached. It may not be a real error when the Connection Pooling feature is enabled. It is possible that the application later reissues the operation and successfully grabs the connection pool slot and proceeds.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12606: TNS: Application timeout occurred
Cause: A network session did not reach an application-defined stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

ORA-12607: TNS: Connect timeout occurred
Cause: A network session did not reach a predefined connect stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

ORA-12608: TNS: Send timeout occurred
Cause: The send or write operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the send timeout value if necessary.

ORA-12609: TNS: Receive timeout occurred
Cause: The receive or read operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the receive timeout value if necessary.

ORA-12611: TNS:operation is not portable
Cause: Attempted operation is not portable.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12612: TNS:connection is busy
Cause: Attempted operation failed because it conflicts with an ongoing action or status of the connection.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12615: TNS:preempt error
Cause: A request to service an event failed because no event notification has yet been posted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12616: TNS:no event signals
Cause: The operation failed because the type of data specified is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12618: TNS:versions are incompatible
Cause: The two machines are running incompatible versions of TNS.

Action: Check the version numbers, and upgrade the machine with the smaller one.

ORA-12619: TNS:unable to grant requested service
Cause: The connect request failed because requested service could not be provided by the local TNS software.

Action: If appropriate, reexecute with reduced service requirements.

ORA-12620: TNS:requested characteristic not available
Cause: The connect request failed because a requested transport characteristic could not be supported by the remote TNS software.

Action: If appropriate, reexecute with reduced requirements.

ORA-12622: TNS:event notifications are not homogeneous
Cause: An attempt to register a connection for event notification failed because the event notification type conflicts with existing registrations.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12623: TNS:operation is illegal in this state
Cause: Connection is half-duplex and a full-duplex operation was attempted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12624: TNS:connection is already registered
Cause: An attempt to register a connection for event notification failed because the connection is already registered.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12625: TNS:missing argument
Cause: An operation failed because an argument was missing"

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12626: TNS:bad event type
Cause: An attempt to register a connection for event notification failed because the event type is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12628: TNS:no event callbacks
Cause: An attempt to register a connection for event notification failed because asynchronous callbacks are not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12629: TNS:no event test
Cause: An attempt to register a connection for event notification failed because the ability to test for events is not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12630: Native service operation not supported
Cause: An operation requested by a user is not supported by the native services component.

Action: This may be an internal error if the operation should have been supported.

ORA-12631: Username retrieval failed
Cause: The authentication service failed to retrieve the name of a user.

Action: Enable tracing to determine which routine is failing.

ORA-12632: Role fetch failed
Cause: The authentication service failed to retrieve one of the user's roles.

Action: Enable tracing to determine which routine is failing.

ORA-12633: No shared authentication services
Cause: The list of authentication services specified by the user does not match those supported by the process.

Action: Either specify another list or relink the executable with the desired services.

ORA-12634: Memory allocation failed
Cause: Process was unable to allocate memory.

Action: Terminate other processes in order to reclaim needed memory.

ORA-12635: No authentication adapters available
Cause: The executable was not linked with any authentication service adapters but the sqlnet.ora parameter that determines whether or not authentication is required was set to true.

Action: Either disable the parameter or relink the executable with service adapters.

ORA-12636: Packet send failed
Cause: A process was unable to send a packet to another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

ORA-12637: Packet receive failed
Cause: A process was unable to receive a packet from another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

ORA-12638: Credential retrieval failed
Cause: The authentication service failed to retrieve the credentials of a user.

Action: Enable tracing to determine the exact error.

ORA-12639: Authentication service negotiation failed
Cause: No match was found between the types of authentication services that the client supports and those that the server is using.

Action: Possible solutions: 1. Change the entry in sqlnet.ora that determines which services are to be used. 2. Relink the client with at least one of the authentication service adapters that the server supports. 3. Relink the server with at least one of the authentication service adapters that the client supports. 4. Disable authentication on both the client and server.

ORA-12640: Authentication adapter initialization failed
Cause: The function specified in the authentication table entry for the service failed.

Action: Enable tracing to determine the exact error.

ORA-12641: Authentication service failed to initialize
Cause: The authentication service failed during initialization.

Action: Enable tracing to determine the exact error.

ORA-12642: No session key
Cause: A process has no session key associated with it because the authentication service being used does not use one.

Action: If a session key is required, use another authentication service.

ORA-12643: Client received internal error from server
Cause: The client process received an error from the server that indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If successful in recreating the problem, contact Oracle Customer Support.

ORA-12645: Parameter does not exist.
Cause: A sqlnet.ora parameter from which a value was needed does not exist.

Action: Set the parameter in the parameter file.

ORA-12646: Invalid value specified for boolean parameter
Cause: The value specified for a parameter was set to a value other than true/false or on/off.

Action: Correct the value of the parameter.

ORA-12647: Authentication required
Cause: The parameter that controls whether authentication is required was set to true, but the executable does not have an authentication service linked in.

Action: Either re-link the executable with an authentication service adapter or disable the parameter.

ORA-12648: Encryption or data integrity algorithm list empty
Cause: A list-of-algorithms parameter was empty, e.g. "()".

Action: Change the list to contain the name of at least one installed algorithm, or remove the list entirely if every installed algorithm is acceptable.

ORA-12649: Unknown encryption or data integrity algorithm
Cause: A list-of-algorithms parameter included an algorithm name that was not recognized.

Action: Either remove that algorithm name, correct it if it was misspelled, or install the driver for the missing algorithm.

ORA-12650: No common encryption or data integrity algorithm
Cause: The client and server have no algorithm in common for either encryption or data integrity or both.

Action: Choose sets of algorithms that overlap. In other words, add one of the client's algorithm choices to the server's list or vice versa.

ORA-12651: Encryption or data integrity algorithm unacceptable
Cause: The algorithm the server chose to use for encryption or data integrity was not one of the choices acceptable to the client. This is either the result of an internal error, of a network data transmission error, or of deliberate tampering with the transmitted data.

Action: For further details, turn on tracing, re-execute the operation, and contact Oracle Customer Support.

ORA-12652: String truncated
Cause: Not enough memory was allocated for a string so it had to be truncated

Action: If it is OK that the string is truncated, then it is not an error. Otherwise, call the routine that reported the error again with a larger string buffer.

ORA-12653: Authentication control function failed
Cause: The control function utilized by the authentication service driver failed.

Action: Enable tracing to determine the exact error.

ORA-12654: Authentication conversion failed
Cause: The authentication service was unable to convert the credentials of a user from the format specific to the format into the ORACLE format.

Action: Enable tracing to determine the exact error.

ORA-12655: Password check failed
Cause: The authentication service being used was unable to verify the provided password.

Action: Enable tracing to determine the exact error.

ORA-12656: Cryptographic checksum mismatch
Cause: The cryptographic checksum received with a packet of incoming data didn't match the checksum computed by the receiving end. This indicates that the packet was tampered with or otherwise corrupted in transit.

Action: Look for sources of data corruption, perhaps including deliberate tampering.

ORA-12657: No algorithms installed
Cause: The near side of the connection required the use of a service (either encryption or checksumming) when no algorithms for that service were installed.

Action: Remove the "ON" requirement for that service.

ORA-12658: ANO service required but TNS version is incompatible
Cause: A client process that is running an earlier version of TNS attempted to connect but the connection failed because the server process required that an ANO service (authentication, encryption, etc.) be used.

Action: Relink the calling executable and retry the connection or eliminate the requirement that the service be used on the server side.

ORA-12659: Error received from other process
Cause: An error was received by one or more services from the process on the other side of the connection.

Action: Enable tracing to determine the exact error(s). The error(s) is (are) not returned directly because an error generated by a server may not make sense on the client side and vice-versa.

ORA-12660: Encryption or crypto-checksumming parameters incompatible
Cause: One side of the connection specified "REQUIRED" for encryption or crypto-checksumming, while the other side specified "REJECTED".

Action: Change the "REQUIRED" side to "REQUESTED" if the you want encryption or crypto-checksumming to be optional, or change the "REJECTED" side to "ACCEPTED" if you do not want the service to be optional.

ORA-12661: Protocol authentication to be used
Cause: The authentication service has determined that the Oracle Net transport protocol in use is to be utilized to authenticate a user's identity.

Action: This error is used solely to communicate information between the authentication service and the Oracle Net session layer and should not normally be visible. If the error is seen, contact Oracle Worldwide Support.

ORA-12662: proxy ticket retrieval failed
Cause: The authentication adapter used by Oracle Net failed to retrieve the credentials needed to authenticate a database link.

Action: Enable tracing to determine the exact error.

ORA-12663: Services required by client not available on the server
Cause: Service(s) that was (were) required by the client process were not available on the server process.

Action: Configure the server with the services required by the client (best solution) or delete the requirement from the configuration file of the client (least secure).

ORA-12664: Services required by server not available on the client
Cause: Service(s) that was (were) required by the server process were not available on the client process.

Action: Configure the client with the services required by the server (best solution) or delete the requirement from the configuration file of the server (least secure).

ORA-12665: NLS string open failed
Cause: A native service was unable to make a string available for use by the National Language Support component.

Action: Make sure the National Language Support component has been properly. If it has, enable tracing and report the problem to Customer Support.

ORA-12666: Dedicated server: outbound transport protocol different from inbound
Cause: The protocol specified for an externally-identified outbound connection from a dedicated server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the dedicated server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection.

ORA-12667: Shared server: outbound transport protocol different from inbound
Cause: The protocol specified for an externally-identified outbound connection from a shared server (database link) was not the same as as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the shared server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection

ORA-12668: Dedicated server: outbound protocol does not support proxies
Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a dedicated server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must the same as that used for the connection from the client to the server.

ORA-12669: Shared server: outbound protocol does not support proxies
Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a shared server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must the same as that used for the connection from the client to the server.

ORA-12670: Incorrect role password
Cause: A password supplied for a role could not be validated by the authentication service.

Action: Supply the correct password.

ORA-12671: Shared server: adapter failed to save context
Cause: The adapter for the authentication service failed when it tried to save the data needed for proxy connections (database links) through the shared server.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support if the reason is not obvious.

ORA-12672: Database logon failure
Cause: The authentication service adapter in use encountered an error it attempted to validate the logon attempt of a user.

Action: Enable tracing to determine the exact error encountered by the adapter.

ORA-12673: Dedicated server: context not saved
Cause: A connection was marked as being a proxy connection (database link) from a dedicated server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

ORA-12674: Shared server: proxy context not saved
Cause: A connection was marked as being a proxy connection (database link) from a shared server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

ORA-12675: External user name not available yet
Cause: The authentication service in use was not able to return the external name of a user of the ORACLE server because it is not available to the service yet.

Action: This is just an informational message and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

ORA-12676: Server received internal error from client
Cause: The server process received an error from the client which indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If the problem recurs, contact Oracle Customer Support.

ORA-12677: Authentication service not supported by database link
Cause: The authentication service used by the proxy process (database link) was unable to find the adapter being used by the client in its list of authentication mechanisms.

Action: Specify an authentication adapter that is shared by the client and the server being used for the database link.

ORA-12678: Authentication disabled but required
Cause: The configuration parameters that control whether authentication is disabled or required were both set to TRUE.

Action: Set one or both of the parameters to FALSE.

ORA-12679: Native services disabled by other process but required
Cause: The remote process has disabled native services but the local process requires them.

Action: Enable native services on the remote process or disable them locally.

ORA-12680: Native services disabled but required
Cause: The process has disabled native services but at least one service is required.

Action: Enable native services or change the configuration file so that none of the available services are required.

ORA-12681: Login failed: the SecurID card does not have a pincode yet
Cause: The SecurID card that is used to logon to Oracle, does not have a pincode assigned to it.

Action: Use one of the programs supplied by Security Dynamics to assign a pincode to the card.

ORA-12682: Login failed: the SecurID card is in next PRN mode
Cause: The SecurID card and the SecurID server are out of sync and the server requires the next cardcode to resynchronize the card.

Action: Use one of the programs supplied by Security Dynamics to resynchronize the SecurID card.

ORA-12683: encryption/crypto-checksumming: no Diffie-Hellman seed
Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

ORA-12684: unsupported encryption/crypto-checksumming version
Cause: Encryption/crypto-checksumming version used by remote is not supported by this configuration.

Action: Upgrade the remote client/server to use higher version of encryption/crypto-checksumming adapter. If the support for lower version is needed, add the following to sqlnet.ora file: CLIENT: (to allow connections to weak servers) sqlnet.allow_weak_crypto = true SERVER: (to allow connections from weak clients) sqlnet.allow_weak_crypto_clients = true CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the remote endpoint cannot be updated to run the higher version of the encryption adapter. User is strongly advised to carefully consider the implications of this parameter before configuring it to allow weak connections.

ORA-12685: Native service required remotely but disabled locally
Cause: A native service is required by the remote process but native services have been disabled locally.

Action: Enable native services locally or change the configuration parameters on the remote host so that no native services are required.

ORA-12686: Invalid command specified for a service
Cause: An operation which does not exist was specified for a native service.

Action: This is a programming error and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

ORA-12687: Credentials expired.
Cause: The credentials that are used to authenticate the user for the requested connection have expired.

Action: Renew your credentials. Refer to the documentation specific for your Network Authentication Adapter on how to do this.

ORA-12688: Login failed: the SecurID server rejected the new pincode
Cause: There are a number of reasons why the SecurID server would refuse a pincode: - The user might not have permission to make up his own pincode. - The pincode was either too short or too long. Valid pincodes consist of minimal four, but no more than eight characters. - The pincode contains any non alphanumeric characters.

Action: Reexecute the operation and make sure to use a pincode that satisfies the above requirements. If the problem persists, turn on tracing at the Oracle Server side of the connection and examine the trace file for the exact error.

ORA-12689: Server Authentication required, but not supported
Cause: Server Authentication is required for this connection, but not supported by both sides of the connection.

Action: Make sure both sides of the connection have the correct version of Advanced Networking Option, and that the Authentication Adapter supports Server Authentication.

ORA-12690: Server Authentication failed, login cancelled
Cause: Server Authentication is required, but the server's credentials were found invalid by the client.

Action: Make sure that the server has a valid set of credentials. Refer to your authentication adapter specific documentation on how to do this.

ORA-12691: TTC RPC (*string*) not supported by Oracle Connection Manager in Traffic Director mode
Cause: Oracle Connection Manager in Traffic Director mode does not support the specified Two-Task Common (TTC) Remote Procedure Call(RPC).

Action: Do not use functionality that issues the specified TTC RPC which was disallowed by Oracle Connection Manager in Traffic Director mode

ORA-12692: functionality (*string*) not supported by Oracle Connection Manager in Traffic Director mode
Cause: Oracle Connection Manager in Traffic Director mode does not support the specified functionality.

Action: Do not use functionality that is not supported by Oracle Connection // Manager in Traffic Director mode.

ORA-12693: PRCP is not configured in Oracle Connection Manager in Traffic Director mode
Cause: The client was attempting to connect using Proxy Resident Connection Pool (PRCP) while PRCP is not configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should use PRCP connections only when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

ORA-12694: non-PRCP connection requested when PRCP is configured in Oracle Connection Manager in Traffic Director mode
Cause: The client was attempting a non Proxy Resident Connection Pool (PRCP) connection while PRCP was configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should only use PRCP connections when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

ORA-12695: This statement cannot be executed with Oracle Connection Manager in Traffic Director mode with PRCP enabled
Cause: The client did not send enough information to execute the statement with Oracle Connection Manager in Traffic Director mode with Proxy Resident Connection Pooling (PRCP) enabled.

Action: This client needs a patch that will fix the issue. Alternatively, it needs to be upgraded to Oracle Database Release 18.1 or later. Contact Oracle Customer Support for the patch.

ORA-12696: Double Encryption Turned On, login disallowed
Cause: The user is using a Secure Protocol Adapter that has Encryption turned ON as well as ANO Encryption.

Action: Turn OFF either ANO Encryption or the Protocol Adapter Encryption if possible. Refer to the Administrator's Guide on how to do this.

ORA-12697: PRCP: Internal error\n
Cause: Invalid PRCP state detected while collecting statistics

Action: Check with CMAN in Traffice Director mode admin to get more info from traces and sqlnet.log.

ORA-12699: Native service internal error
Cause: An internal error occurred in the native services component.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support.

82
ORA-12700 to ORA-19400

ORA-12700: invalid NLS parameter value (*string*)
Cause: An invalid or unknown NLS configuration parameter was specified.

Action: Check the syntax and spelling of the parameter. Enter the correct parameter into the initialization parameter file.

ORA-12701: CREATE DATABASE character set is not known
Cause: The character set specified when creating the database is unknown.

Action: Refer to your Oracle operating system-specific documentation for more information about character sets on the system. Use a valid character set in the CREATE DATABASE command.

ORA-12702: invalid NLS parameter string used in SQL function
Cause: An unknown parameter name or invalid value is specified in a NLS parameter string.

Action: Check the syntax of the function and the parameters. Enter the command again using the correct syntax and valid values.

ORA-12703: this character set conversion is not supported
Cause: The requested conversion between two character sets in the CONVERT function is not implemented

Action: Use character sets available on the system in the CONVERT function.

ORA-12704: character set mismatch
Cause: One of the following: - The string operands(other than an nlsparams argument) to an operator or built-in function do not have the same character set. - An nlsparams operand is not in the database character set. - String data with character set other than the database character set is passed to a built-in function not expecting it. - The second argument to CHR() or CSCONVERT() is not CHAR_CS or NCHAR_CS. - A string expression in the VALUES clause of an INSERT statement, or the SET clause of an UPDATE statement, does not have the same character set as the column into which the value would be inserted. - A value provided in a DEFAULT clause when creating a table does not have the same character set as declared for the column. - An argument to a PL/SQL function does not conform to the character set requirements of the corresponding parameter.

Action: Strings declared with NCHAR or NCHAR VARYING do not interoperate with strings declared with CHAR or VARCHAR2. Use TRANSLATE() function to explicitly convert one to the other.

ORA-12705: Cannot access NLS data files or invalid environment specified
Cause: Either an attempt was made to issue an ALTER SESSION command with an invalid NLS parameter or value; or the environment variable(s) NLS_LANG, ORA_NLSxx, or ORACLE_HOME was incorrectly specified, therefore the NLS data files cannot be located.

Action: Check the syntax of the ALTER SESSION command and the NLS parameter, correct the syntax and retry the statement, or specify the correct directory path/values in the environment variables.

ORA-12706: this CREATE DATABASE character set is not allowed
Cause: It is not allowed to create a database on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: Create the database using either ASCII-based or EBCDIC-based character sets, depending on what is supported by the hardware. Refer to your Oracle operating system-specific documentation for more information about the type of character set supported.

ORA-12707: error while getting create database NLS parameter *string*
Cause: Internal error

Action: Contact Oracle Support Services.

ORA-12708: error while loading create database NLS parameter *string*
Cause: Internal error

Action: Contact Oracle Support Services.

ORA-12709: error while loading create database character set
Cause: Internal error

Action: Contact Oracle Support Services.

ORA-12710: CREATE CONTROLFILE character set is not known
Cause: The character set specified when creating the control file is unknown.

Action: Specify a known character set.

ORA-12711: this CREATE CONTROLFILE character set is not allowed
Cause: It is not allowed to create a control file on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: Create the correct control file for machine and character set.

ORA-12712: new character set must be a superset of old character set
Cause: When you ALTER DATABASE ... CHARACTER SET, the new character set must be a superset of the old character set. For example, WE8ISO8859P1 is not a superset of the WE8DEC.

Action: Specify a superset character set.

ORA-12713: Character data loss in NCHAR/CHAR conversion
Cause: When character set conversion happened between CHAR and NCHAR either implicitly or explicitly, some characters were lost due to no mapping characters in the destination character set.

Action: Ensure that all the characters can be mapped to characters in the destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE.

ORA-12714: invalid national character set specified
Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set

Action: Ensure that the specified national character set is valid

ORA-12715: invalid character set specified
Cause: The character set specified is not allowed for this operation or is invalid

Action: Ensure that the specified character set is valid

ORA-12716: Cannot ALTER DATABASE CHARACTER SET when CLOB data exists
Cause: CLOB data changes representation to Unicode when converting to a multibyte character set and must be migrated

Action: Remove CLOB data as listed in the alert file. CLOB data can be migrated by methods such as import/export

ORA-12717: Cannot issue ALTER DATABASE NATIONAL CHARACTER SET when NCLOB, NCHAR or NVARCHAR2 data exists
Cause: NCLOB, NCHAR or NVARCHAR2 data changed the representation to Unicode when converting to a multibyte character set and must be migrated.

Action: Remove NCLOB, NCHAR or NVARCHAR2 data as listed in the alert file. The above type data can be migrated by methods such as import/export.

ORA-12718: operation requires connection as SYS
Cause: This command can only be run when connecting as SYS

Action: Connect as SYS to run this command

ORA-12719: operation requires database is in RESTRICTED mode
Cause: This command can only be run when the database is in RESTRICTED mode

Action: Ensure that the system is in RESTRICTED mode

ORA-12720: operation requires database is in EXCLUSIVE mode
Cause: This command can only be run when the database is in EXCLUSIVE mode

Action: Ensure that the system is in EXCLUSIVE mode

ORA-12721: operation cannot execute when other sessions are active
Cause: This command can only be run when there are no other sessions active

Action: Ensure there are no other connections to the database

ORA-12722: regular expression internal error
Cause: A regular expression internal error occurred.

Action: This is an internal error. Contact Oracle Support Services.

ORA-12723: regular expression too complex
Cause: The regular expression was too complex and could not be parsed.

Action: This is an internal error. Contact Oracle Support Services.

ORA-12724: regular expression corrupt
Cause: The regular expression contained an incorrect sequence of metacharacters.

Action: Ensure the metacharacters are correctly positioned.

ORA-12725: unmatched parentheses in regular expression
Cause: The regular expression did not have balanced parentheses.

Action: Ensure the parentheses are correctly balanced.

ORA-12726: unmatched bracket in regular expression
Cause: The regular expression did not have balanced brackets.

Action: Ensure the brackets are correctly balanced.

ORA-12727: invalid back reference in regular expression
Cause: A back references was found before a sub-expression.

Action: Ensure a valid sub-expression is being referenced.

ORA-12728: invalid range in regular expression
Cause: An invalid range was found in the regular expression.

Action: Ensure a valid range is being used.

ORA-12729: invalid character class in regular expression
Cause: An unknown character class was found in the regular expression.

Action: Ensure a valid characters class is being used.

ORA-12730: invalid equivalence class in regular expression
Cause: An unknown equivalence class was found in the regular expression.

Action: Ensure a valid equivalence class is being used.

ORA-12731: invalid collation class in regular expression
Cause: An unknown collation class was found in the regular expression.

Action: Ensure a valid collation class is being used.

ORA-12732: invalid interval value in regular expression
Cause: An invalid interval value was found in the regular expression.

Action: Ensure a valid interval value is being used.

ORA-12733: regular expression too long
Cause: The operation failed because the regular expression it used exceeds the maximum supported size.

Action: Use a shorter regular expression.

ORA-12734: Instant Client Light: unsupported client national character set *string*
Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12735: Instant Client Light: unsupported client character set *string*
Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12736: Instant Client Light: unsupported server national character set *string*
Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12737: Instant Client Light: unsupported server character set *string*
Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12738: Express Instant Client: unsupported client national character set *string*
Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12739: Express Instant Client: unsupported client character set *string*
Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12740: Express Instant Client: unsupported server national character set *string*
Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12741: Express Instant Client: unsupported server character set *string*
Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Light for this character set

ORA-12742: unable to create the collation key
Cause: The character argument of a collation-sensitive operator was too long or it had too many decomposable characters to create a collation key for it in the available buffer space.

Action: Shorten the argument value or, if using a UCA-based collation, increase the ratio of characters with short or no Unicode decomposition to characters with long Unicode decomposition in the value.

ORA-12743: internal LX error code, arguments: [*string*], [*string*], [*string*]
Cause: This is an internal error in a globalization support function.

Action: Contact Oracle Support Services.

ORA-12744: Character set *string* is not allowed as a database character set.
Cause: An attempt was made to create or alter a database using a client-only or conversion-only character set.

Action: Specify a supported database character set.

ORA-12746: unrecognized collation name "*string*"
Cause: The name of the collation that you specified was not recognized by the Oracle Database, because the name was misspelled, or the collation was user-defined but not installed in the Oracle Home of the database instance, or because the directory specified in the ORA_NLS10 environment setting, either explicitly or defaulting to $ORACLE_HOME/nls/data (%ORACLE_HOME%\nls\data on Microsoft Windows), did not contain valid NLS data files.

Action: Specify a valid collation name or fix your database software configuration.

ORA-12747: unrecognized collation ID (*string*)
Cause: The ID of the collation that you specified was not recognized by the Oracle Database, because it was incorrect, or the collation was user-defined but not installed in the Oracle Home of the database instance, or because the directory specified in the ORA_NLS10 environment setting, either explicitly or defaulting to $ORACLE_HOME/nls/data(%ORACLE_HOME%\nls\data on Microsoft Windows), did not contain valid NLS data files.

Action: Specify a valid collation ID or fix your database software configuration.

ORA-12752: An instance-critical process has terminated.
Cause: An unexpected error was encountered by an instance-critical process.

Action: Contact Oracle Support Services.

ORA-12753: The Oracle home user ID does not match the effective user ID of the local client which connected to the Oracle instance.
Cause: The user ID that is the owner of the Oracle home directory was not the same as the effective user ID of the local client that connected to the Oracle instance.

Action: Run the local client that connects to Oracle instance with the same user ID as the owner of the Oracle home.

ORA-12757: instance does not currently know of requested service
Cause: The instance received a request to create a session. The request specified a service not currently associated with the instance. If an existing connection to the instance used this service, the service may have relocated to a different instance or may no longer exist.

Action: Ensure that the specified service is valid and reconnect.

ORA-12774: error entering CDB sandbox *string*: *string*
Cause: An attempt to enter the sandbox for a multitenant container database (CDB) failed.

Action: Check the definition of the sandbox for the CDB.

ORA-12775: error entering PDB sandbox *string*: *string*
Cause: An attempt to enter the sandbox for a pluggable database (PDB) failed.

Action: Check the definition of the sandbox for the PDB.

ORA-12776: error exiting PDB sandbox *string*: *string*
Cause: An attempt to exit the sandbox for a pluggable database (PDB) failed.

Action: Resolve the problem indicated by the particular error.

ORA-12777: A non-continuable error encountered. Check the error stack for additional information [*string*], [*string*], [*string*], [*string*].
Cause: The error recorded before this error should not be cleared and should be re-signaled to the top-level error handler.

Action: See the previously recorded error. Contact DBA.

ORA-12778: path mismatch for *string* expected '*string*' but found '*string*'
Cause: The path recorded in the SGA did not match the current value.

Action: Clear the SGA by shutting down the instance and then restart.

ORA-12792: Network transfer operation aborted due to TTC error *string*.
Cause: A Two-Task Common (TTC) error occurred during the network transfer operation.

Action: Check connectivity to the remote database and check the alert log for problems reported by TTC.

ORA-12800: system appears too busy for parallel query execution
Cause: load on system is too high to perform parallel queries.

Action: re-execute serially or wait until system load is reduced.

ORA-12801: error signaled in parallel query server *string*
Cause: A parallel query server reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

ORA-12802: parallel query server lost contact with coordinator
Cause: A parallel query server lost contact with the foreground (coordinator) process/thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12803: parallel query server lost contact with another server
Cause: A parallel query server lost contact with another server.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12804: parallel query server appears to have died
Cause: Cannot find process information for a parallel query server thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12805: parallel query server died unexpectedly
Cause: A parallel query server died unexpectedly, PMON cleaning up the process.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-12806: could not get background process to hold enqueue
Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-12807: process queue could not receive parallel query message
Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-12808: cannot set *string*_INSTANCES greater than number of instances *string*
Cause: An attempt was made to set SCAN_INSTANCES or CACHE_INSTANCES using the ALTER SYSTEM command to a value larger than the number of available instances.

Action: See the accompanying message for the current allowable maximum value, or set SCAN_INSTANCES / CACHE_INSTANCES to ALL.

ORA-12809: cannot set *string*_INSTANCES when mounted in exclusive mode
Cause: An attempt was made to set SCAN_INSTANCES or CACHE_INSTANCES using the ALTER SYSTEM command while the database was mounted in exclusive mode.

Action: SCAN_INSTANCES / CACHE_INSTANCES may not be set unless running Oracle Real Application Clusters mounted in CLUSTER_DATABASE mode.

ORA-12810: PARALLEL_MAX_SERVERS must be less than or equal to *string*
Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to a value higher than the maximum allowed by the system.

Action: Set PARALLEL_MAX_SERVERS to a value less than or equal to the maximum specified in the accompanying message and retry.

ORA-12811: PARALLEL_MIN_SERVERS must be less than or equal to PARALLEL_MAX_SERVERS, *string*
Cause: An attempt was made to set the PARALLEL_MIN_SERVERS parameter to a value higher than PARALLEL_MAX_SERVERS.

Action: Set PARALLEL_MIN_SERVERS to a value less than or equal to PARALLEL_MAX_SERVERS (indicated in the accompanying message) and retry.

ORA-12812: only one PARALLEL or NOPARALLEL clause may be specified
Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement, or in a RECOVER command.

Action: Remove all but one of the PARALLEL or NOPARALLEL clauses and reissue the statement.

ORA-12813: value for PARALLEL or DEGREE must be greater than 0
Cause: PARALLEL 0 or DEGREE 0 was specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement.

Action: Specify a degree of parallelism greater than 0 or specify default parallelism using PARALLEL with no degree or using DEGREE DEFAULT within a PARALLEL clause.

ORA-12814: only one CACHE or NOCACHE clause may be specified
Cause: CACHE was specified more than once, NOCACHE was specified more than once, or both CACHE and NOCACHE were specified in a CREATE TABLE or CLUSTER, or in an ALTER TABLE or CLUSTER statement.

Action: Remove all but one of the CACHE or NOCACHE clauses and reissue the statement.

ORA-12815: value for INSTANCES must be greater than 0
Cause: PARALLEL parameter specifying number of instances must be a positive integer or DEFAULT

Action: specify a positive integer or DEFAULT for INSTANCES if parallelism across instances is desired.

ORA-12816: parallel create index fastpath operation
Cause: The parallel create index fastpath operation event has been set.

Action: set this event only under the supervision Oracle development

ORA-12817: parallel query option must be enabled
Cause: A parallel query option feature has been invoked but this option has not been enabled.

Action: Enable the parallel query option.

ORA-12818: invalid option in PARALLEL clause
Cause: an unrecognized option was used within a PARALLEL clause.

Action: specify any combination of DEGREE { *n* | DEFAULT } and INSTANCES { *n* | DEFAULT } within the PARALLEL clause.

ORA-12819: missing options in PARALLEL clause
Cause: PARALLEL clause cannot be empty.

Action: specify any combination of DEGREE { *n* | DEFAULT } and INSTANCES { *n* | DEFAULT } within the PARALLEL clause.

ORA-12820: invalid value for DEGREE
Cause: invalid value for DEGREE was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the DEGREE option within a PARALLEL clause.

ORA-12821: invalid value for INSTANCES
Cause: invalid value for INSTANCES was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the INSTANCES option within a PARALLEL clause.

ORA-12822: duplicate option in PARALLEL clause
Cause: DEGREE or INSTANCES was specified more than once within a PARALLEL clause.

Action: specify each desired PARALLEL clause option only once.

ORA-12823: default degree of parallelism may not be specified here
Cause: the PARALLEL keyword was used alone or DEGREE DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

ORA-12824: INSTANCES DEFAULT may not be specified here
Cause: INSTANCES DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command

Action: respecify with an explicit value for INSTANCES or omit the INSTANCES option if single instance recovery is desired.

ORA-12825: explicit degree of parallelism must be specified here
Cause: the DEGREE option was omitted from an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

ORA-12826: hung parallel query server was killed
Cause: parallel query server was hung and subsequently killed.

Action: re-execute query and report suspicious events in trace file to Oracle Support Services if error persists.

ORA-12827: insufficient parallel query slaves (requested *string*, available *string*, parallel_min_percent *string*)
Cause: PARALLEL_MIN_PERCENT parameter was specified and fewer than the minimum number of slaves were acquired

Action: Either reexecute the query with a lower PARALLEL_MIN_PERCENT or wait until some running queries are completed, thus freeing up slaves

ORA-12828: Can't start parallel transaction at a remote site
Cause: PDML transaction cannot be started because we are not in the coordinator site of the distributed transaction.

Action: Do not use PDML at remote sites.

ORA-12829: Deadlock - itls occupied by siblings at block *string* of file *string*
Cause: parallel statement failed because all itls in the current block are occupied by siblings of the same transaction.

Action: increase MAXTRANS of the block or reduce the degree of parallelism for the statement. Reexecute the statement. Report suspicious events in trace file to Oracle Support Services if error persists.

ORA-12830: Must COMMIT or ROLLBACK after executing parallel INSERT/UPDATE/DELETE
Cause: After executing a parallel INSERT/UPDATE/DELETE statement, a command other than COMMIT or ROLLBACK was issued.

Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

ORA-12831: Must COMMIT or ROLLBACK after executing INSERT with APPEND hint
Cause: After executing an INSERT statement with an APPEND hint, a command other than COMMIT or ROLLBACK was issued.

Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

ORA-12832: Could not allocate slaves on all specified instances
Cause: After executing a query on a global v$ fixed view, one or more instances failed to allocate a slave to process query

Action: To allow results to be returned by sucessfully allocated slaves, execute ALTER SESSION SET ALLOW_PARTIAL_SN_RESULTS=TRUE statement, or check parameters of instances

ORA-12833: Coordinator's instance not a member of parallel_instance_group
Cause: The coordinator's instance must be a member of the parallel_instance_group in which this operation will be run.

Action: Either add the coordinator's instance to the current parallel_instance_group or change parallel_instance_group.

ORA-12834: Instance group name, '*string*', too long, must be less than *string* characters
Cause: The instance group name is too long.

Action: Either shorten the name or get rid of the instance group.

ORA-12835: No instances are active in the GLOBAL_VIEW_ADMIN_GROUP
Cause: There must be at least one instance in the GLOBAL_VIEW_ADMIN_GROUP in order to execute a query on global views

Action: Change the value of GLOBAL_VIEW_ADMIN_GROUP

ORA-12838: cannot read/modify an object after modifying it in parallel
Cause: Within the same transaction, an attempt was made to add read or modification statements on a table after it had been modified in parallel or with direct load. This is not permitted.

Action: Rewrite the transaction, or break it up into two transactions: one containing the initial modification and the second containing the parallel modification operation.

ORA-12839: cannot modify an object in parallel after modifying it
Cause: Within the same transaction, an attempt was made to perform parallel modification operations on a table after it had been modified. This is not permitted.

Action: Rewrite the transaction or break it up into two transactions: one containing the parallel modification and the second containing the initial modification operation.

ORA-12840: cannot access a remote table after parallel/insert direct load txn
Cause: Within a transaction, an attempt was made to perform distributed access after a PDML or insert direct statement had been issued.

Action: Commit/rollback the PDML transaction first, and then perform the distributed access, or perform the distributed access before the first PDML statement in the transaction.

ORA-12841: Cannot alter the session parallel DML state within a transaction
Cause: Transaction in progress

Action: Commit or rollback transaction and then re-execute

ORA-12842: Cursor invalidated during parallel execution
Cause: The cursor was invalidated during the parse phase of deferred parallel processing, e.g. when set operands are parallelized.

Action: Depends on why the cursor was invalidated. Possible causes include DDL on a schema object and shared pool being flushed.

ORA-12843: pdml lock not held properly on the table
Cause: The coodinator crashed or released the lock on the partition which the slave is trying to aquire currently.

Action: Check if the coordinator or some of the other slaves died. Also check that the lock has not been corrupted. Issue the pdml again.

ORA-12845: failed to receive interinstance parallel execution message
Cause: OS or interconnect problem receiving interinstance message

Action: Check OS specific diagnostics

ORA-12850: Could not allocate slaves on all specified instances: *string* needed, *string* allocated
Cause: When executing a query on a gv$ fixed view, one or more instances failed to allocate a slave to process query.

Action: Check trace output for instances on which slaves failed to start. GV$ query can only proceed if slaves can be allocated on all instances.

ORA-12851: PARALLEL_MAX_SERVERS must be greater than or equal to PARALLEL_MIN_SERVERS, *string*
Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to a value less than PARALLEL_MIN_SERVERS.

Action: Set PARALLEL_MAX_SERVERS to a value greater than or equal to PARALLEL_MIN_SERVERS value specified in the accompanying message and retry.

ORA-12852: PARALLEL_MIN_SERVERS must be less than PROCESSES minus the number of reserved processes, *string*
Cause: An attempt was made to set the PARALLEL_MIN_SERVERS parameter to a value higher than PROCESSES minus the number of reserved processes.

Action: Set PARALLEL_MIN_SERVERS to a value less than PROCESSES minus the number of reserved processes specified in the accompanying message and retry.

ORA-12853: insufficient memory for PX buffers: current *string*K, max needed *string*K
Cause: Insufficient SGA memory for PX buffers

Action: Reconfigure sga to include at least (max - current) bytes of additional memory

ORA-12854: Parallel query is not supported on temporary LOBs
Cause: The parallel query statement produced a temporary LOB.

Action: Turn off parallelism for the query or underlying table

ORA-12855: cannot run parallel or insert direct load in a loopback
Cause: A loopback was created in the transaction before this operation.

Action: Do not use loopback when using pdml or insert direct load.

ORA-12856: cannot run parallel query on a loopback connection
Cause: A table or index in a parallel query is referenced via a loopback connection.

Action: Do not use loopback connection when running a query in parallel.

ORA-12872: First slave parse gave different plan
Cause: First hard parse on slave given QC-supplied environment and parameters gave different plan from QC. Try again with outline.

Action: No external action. Internally used for outline-based reparse.

ORA-12874: parallel execution monitor terminated with error
Cause: The parallel execution monitor process died.

Action: Wait for the process to restart.

ORA-12875: PARALLEL_MAX_SERVERS cannot be set to 0 in CDB system
Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to 0 in the multitenant container database (CDB) system.

Action: Set the PARALLEL_MAX_SERVERS parameter to non-zero value to ensure CDB system performance.

ORA-12894: source should be a sparse file
Cause: The 'setsparseparent' command specified a source file that was not sparse.

Action: Use a sparse file as the source file.

ORA-12895: destination should be sparse
Cause: The 'setsparseparent' command specified a destination that was not backed by a sparse disk group.

Action: Use a destination backed by a sparse disk group.

ORA-12896: child *string* should be a sparse file
Cause: The 'setsparseparent' command specified a child file that was not sparse.

Action: Use a sparse file as the child file.

ORA-12897: failure to set parent to '%0!s' for a sparse file '%1!s'
Cause: The 'setsparseparent' command was not successful.

Action: Examine the accompanying error messages for details.

ORA-12898: failure to set parent for the destination file
Cause: The parent information was not copied to the destination file.

Action: The 'setsparseparent' command can be used to set the parent.

ORA-12899: value too large for column *string* (actual: *string*, maximum: *string*)
Cause: An attempt was made to insert or update a column with a value which is too wide for the width of the destination column. The name of the column is given, along with the actual width of the value, and the maximum allowed width of the column. Note that widths are reported in characters if character length semantics are in effect for the column, otherwise widths are reported in bytes.

Action: Examine the SQL statement for correctness. Check source and destination column data types. Either make the destination column wider, or use a subset of the source column (i.e. use substring).

ORA-12900: must specify a default temporary tablespace for a locally managed database
Cause: a locally managed database must have a temporary tablespace other than SYSTEM tablespace

Action: specify the default temporary tablespace when creating a locally managed database

ORA-12901: default temporary tablespace must be of TEMPORARY type
Cause: in a locally managed database, default temporary tablespace must be TEMPORARY type

Action: n/a

ORA-12902: default temporary tablespace must be SYSTEM or of TEMPORARY type
Cause: in a dictionary managed database, default temporary tablespace must be SYSTEM or TEMPORARY type

Action: n/a

ORA-12903: default temporary tablespace must be an ONLINE tablespace

ORA-12904: default temporary tablespace cannot be altered to PERMANENT type

ORA-12905: default temporary tablespace cannot be brought OFFLINE

ORA-12906: cannot drop default temporary tablespace

ORA-12907: tablespace *string* is already the default temporary tablespace

ORA-12908: cannot specify SYSTEM as default temporary tablespace when creating database

ORA-12909: TEMPORARY keyword expected

ORA-12910: cannot specify temporary tablespace as default tablespace
Cause: attempt to assign a temporary tablespace to be a user's default tablespace

Action: assign a permanent tablespace to be the default tablespace

ORA-12911: permanent tablespace cannot be temporary tablespace
Cause: attempt to assign a permanent tablespace to be a user's temporary tablespace

Action: assign a temporary tablespace to be user's temporary tablespace

ORA-12912: Dictionary managed tablespace specified as temporary tablespace
Cause: attempt to assign a dictionary managed tablespace to be a user's temporary tablespace

Action: Assign a locally managed temporary tablespace to be user's temporary tablespace

ORA-12913: Cannot create dictionary managed tablespace
Cause: Attemp to create dictionary managed tablespace in database which has system tablespace as locally managed

Action: Create a locally managed tablespace.

ORA-12914: Cannot migrate tablespace to dictionary managed type
Cause: Attemp to migrate locally managed tablespace to dictionary managed type when the database has locally managed system tablespace.

Action: Command cannot be issued.

ORA-12915: Cannot alter dictionary managed tablespace to read write
Cause: Attemp to alter dictionary managed tablespace to read write in database which has system tablespace as locally managed. This tablespace can only be dropped.

Action: Command cannot be issued.

ORA-12916: cannot shrink permanent or dictionary managed tablespace
Cause: An attempt was made to shrink a permanent tablespace or a dictionary managed tablespace.

Action: Check the tablespace type and issue the statement only on locally managed temporary tablespaces.

ORA-12917: Invalid option specified for default permanent tablespace

ORA-12918: Invalid tablespace type for default permanent tablespace
Cause: The tablespace is either dropped, temporary or undo

Action: Check the tablespace type and reissue the statement

ORA-12919: Can not drop the default permanent tablespace
Cause: An attemp was made to drop the default permanent tablespace

Action: Make a different tablespace as the default permanent tablespace and reissue the drop

ORA-12920: database is already in force logging mode
Cause: ALTER DATABASE FORCE LOGGING command failed because the database is already in force logging mode.

Action: No action required.

ORA-12921: database is not in force logging mode
Cause: ALTER DATABASE NO FORCE LOGGING command failed because the database is not in force logging mode.

Action: No action required.

ORA-12922: concurrent ALTER DATABASE [NO] FORCE LOGGING command is running
Cause: There is a concurrent ALTER DATABASE FORCE LOGGING or ALTER DATABASE NO FORCE LOGGING command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

ORA-12923: tablespace *string* is in force logging mode
Cause: An attempt to alter the specified tablespace temporary failed because the tablespace is in force logging mode.

Action: Put the tablespace out of force logging mode by ALTER TABLESPACE NO FORCE LOGGING command.

ORA-12924: tablespace *string* is already in force logging mode
Cause: An attempt to alter the specified tablespace into force logging mode failed because it is already in force logging mode.

Action: No action required.

ORA-12925: tablespace *string* is not in force logging mode
Cause: An attempt to alter the specified tablespace out of force logging mode failed because it is not in force logging mode.

Action: No action required.

ORA-12926: FORCE LOGGING option already specified
Cause: In CREATE TABLESPACE, the FORCE LOGGING option was specified more than once.

Action: Remove all but one of the FORCE LOGGING options.

ORA-12927: RETENTION option already specified
Cause: In CREATE TABLESPACE, the RETENTION option was specified more than once.

Action: Remove all but one of the RETENTION options.

ORA-12928: ENCRYPTION option already specified
Cause: In CREATE TABLESPACE, the ENCRYPTION option was specified more than once.

Action: Remove all but one of the ENCRYPTION options.

ORA-12931: FORCE LOGGING or SET STANDBY NOLOGGING already specified
Cause: FORCE LOGGING or SET STANDBY NOLOGGING options were specified more than once.

Action: Remove all but one of the FORCE LOGGING or SET STANDBY NOLOGGING options.

ORA-12932: sending data for a nonlogged block fetch request failed
Cause: A request from a remote database in the same Oracle Data Guard configuration to send data blocks to avoid or replace soft corrupt blocks due to nonlogged operations failed. This error is accompanied by additional errors that indicate the reason for the failure.

Action: Use any additional errors reported to identify and rectify the the underlying issue.

ORA-12933: failed to connect while serving a nonlogged block fetch request
Cause: A request from a remote database in the same Oracle Data Guard configuration to send data blocks to avoid or replace soft corrupt blocks due to nonlogged operations could not connect to the requesting database. This error is accompanied by additional errors that indicate the reason for the failure.

Action: Use any additional errors reported to identify and rectify the the underlying issue.

ORA-12934: replace of nonlogged blocks in file *string* failed
Cause: The process performing replacement of nonlogged blocks failed to replace one or more blocks of the file indicated due to unexpected reasons such as a write failure reported by the operating system.

Action: Inspect any additional error messages and check the alert log for any messages related to Nonlogged Block Replacement (NBR).

ORA-12935: operation [*string*] to database (service '*string*') failed (error *string*)
Cause: The process performing replacement of nonlogged blocks received an error when attempting to connect (CONNECT) or make a fetch request (REQUEST) against the database identified by the given service. The database was expected to act as a source of replacement blocks.

Action: Use the reported error to identify the issue or inspect any additional error messages and check the alert log for any messages related to Nonlogged Block Replacement (NBR).

ORA-12936: timeout waiting for data blocks from database (service '*string*')
Cause: The process performing replacement of nonlogged blocks waited too long for a request sent to the remote database for a range of blocks to be completed.

Action: Check connectivity to the remote database or check the alert log at the remote database for problems reported by a transport task process (TTnn).

ORA-12937: data blocks received for earlier recovery session (RCVID *string*)
Cause: A database received data blocks requested by a recovery session that has now terminated. This error signals to the sending database that no more transfer requests should be made for the same RCVID.

Action: None required.

ORA-12938: out of memory for the data transfer cache
Cause: A request to use space in the data transfer cache was rejected because there was no free space left in the cache and space could not be freed up.

Action: Ensure that automatic SGA tuning is enabled using either MEMORY_TARGET or SGA_TARGET system parameters or specify a larger size for the system parameter DATA_TRANSFER_CACHE_SIZE.

ORA-12939: The Data Guard environment is incomplete.
Cause: A request to perform Nonlogged Block Replacement (NBR) recovery could not identify any other database in the Data Guard environment from which to request replacement blocks.

Action: Ensure there is a LOG_ARCHIVE_DEST_n parameter configured that identifies the primary or standby database from which requests for replacement blocks can be made.

ORA-12940: Not enough space in DBVerify text buffer
Cause: DBVerify ran out of text buffer. The error was trapped internally by the system. DBVerify would return the result in text buffer and then resume checking.

Action: None

ORA-12941: DBVerify exception
Cause: DBVerify encountered run-time error. The error signal was trapped internally by the system.

Action: None

ORA-12942: database incarnation at source does not match
Cause: A request to send data blocks to a recovery process failed because the source of the blocks is not on the same database incarnation as the site where the recovery is being performed.

Action: Use standard Oracle Data Guard procedures to synchronize the primary and standby databases. Standby media recovery automatically tries to resolve many of the remaining nonlogged blocks on the standby database. To resolve any remaining nonlogged blocks, use the RMAN RECOVER ... NONLOGGED BLOCK command.

ORA-12950: SYSTEM tablespace specified as default permanent tablespace
Cause: SYSTEM tablespace was specified as the default permanent during database creation.

Action: If default permanent tablespace is not specified,then SYSTEM will implicitly become the default permanent tablespace. Specify an alternate tablespace or omit the default tablespace clause and reissue the CREATE DATABASE statement

ORA-12951: Attempt to change default permanent tablespace to temporary
Cause: It is incorrect to alter the default permanent tablespace of a database to temporary type

Action: n/a

ORA-12952: Control space growth in ASSM segment under concurrency

ORA-12953: enable space scan optimization for clusters

ORA-12954: The request exceeds the maximum allowed database size of 12 GB.
Cause: The 12 GB space limit of Oracle Database Express Edition was reached.

Action: Delete some files to create space or upgrade the database to the full edition.

ORA-12955: unable to acquire *string* extents from other instances of the cluster for temporary tablespace *string*
Cause: The current instance was out of space in the temporary segment belonging to the specified temporary tablespace and was unable to acquire unused extents from other instances of the cluster. This might happen when the system monitor process (SMON) on an instance was busy and was unable to cleanup unused extents from the temporary tablespace.

Action: 1) Check if the system monitor process (SMON) is busy or in a hung state on other instances of the cluster. 2) Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-12961: cannot open database in read/write mode on a read-only instance
Cause: An attempt was made to open the database on a read-only instance under the following 2 cases: 1) User explicitly specified read write option in the SQL command. 2) User forgot to explicitly specify read-only in which case, read write mode was assumed by default.

Action: User should specify the open mode as read-only.

ORA-12962: cannot create database on a read-only instance
Cause: An attempt was made to create a database on a read-only instance.

Action: Create database should only be attempted from a read write instance.

ORA-12963: A read-only instance cannot be the first instance to open a database.
Cause: A read-only instance was the first instance to try to open a database.

Action: A database must have been opened by at least one read write instance for a read-only instance to be able to open it.

ORA-12964: All existing read write instances have closed the database.
Cause: The last read write instance holding the database open closed it.

Action: There has to be at least one read write instance holding the database open for a read-only instance to hold it open.

ORA-12965: cannot mount an enabled thread on a read-only instance
Cause: An attempt was made to mount an enabled redo thread obtained as a user specified parameter.

Action: The parameter value should be changed to the thread number of a disabled thread.

ORA-12966: could not find a disabled redo thread to mount
Cause: There were no available disabled redo threads which could be used to mount on the current read-only instance.

Action: None

ORA-12967: read-only instance cannot mount a standby database
Cause: An attempt was made to mount a standby database on a read-only instance.

Action: This action is not allowed.

ORA-12968: delayed log flush should not be enabled in a read-only instance
Cause: The system parameter for ping with no log force feature was set to true.

Action: The parameter should be set to false on a read-only instance.

ORA-12969: invalid alter database option for read-only instance
Cause: An attempt was made to execute a disallowed ALTER DATABASE statement on a read-only instance.

Action: Only OPEN, CLOSE and CREATE TEMPFILE options are allowed for ALTER DATABASE statement on a read-only instance.

ORA-12970: cannot close PDB on all read/write instances while read-only instances exist
Cause: An attempt was made to close a pluggable database (PDB) on the last read/write instance while a read-only instance was holding it open.

Action: A PDB should be closed on all of the read-only instances before it can be closed on the last read/write instance.

ORA-12980: checkpoint option not allowed with SET UNUSED
Cause: An attempt was made to specify checkpoint option with SET UNUSED.

Action: Remove checkpoint option.

ORA-12981: cannot drop column from an object type table
Cause: An attempt was made to drop a column from an object type table.

Action: This action is not allowed.

ORA-12982: cannot drop column from a nested table
Cause: An attempt was made to drop a column from a nested table.

Action: This action is not allowed.

ORA-12983: cannot drop all columns in a table
Cause: An attempt was made to drop all columns in a table.

Action: Ensure that at least one column remains in the table after the drop column operation.

ORA-12984: cannot drop partitioning column
Cause: An attempt was made to drop a column used as the partitioning key.

Action: This action is not allowed.

ORA-12985: tablespace '*string*' is read only, cannot drop column
Cause: An attempt was made to drop column from a partition/subpartition on a read only tablespace.

Action: Set the tablespace to read write and resubmit statement.

ORA-12986: columns in partially dropped state. Submit ALTER TABLE DROP COLUMNS CONTINUE
Cause: An attempt was made to access a table with columns in partially dropped state (i.e., drop column operation was interrupted).

Action: Submit ALTER TABLE DROP COLUMNS CONTINUE to complete the drop column operation before accessing the table.

ORA-12987: cannot combine drop column with other operations
Cause: An attempt was made to combine drop column with other ALTER TABLE operations.

Action: Ensure that drop column is the sole operation specified in ALTER TABLE.

ORA-12988: cannot drop column from table owned by SYS
Cause: An attempt was made to drop a column from a system table.

Action: This action is not allowed

ORA-12989: invalid value for checkpoint interval
Cause: An invalid checkpoint interval specified in statement. Checkpoint interval must be between 0 and (2^31-1).

Action: Correct checkpoint interval and resubmit statement

ORA-12990: duplicate option specified
Cause: Duplicate option specified in statement.

Action: Remove the duplicate option and resubmit statement.

ORA-12991: column is referenced in a multi-column constraint
Cause: An attempt was made to drop a column referenced by some constraints.

Action: Drop all constraints referencing the dropped column or specify CASCADE CONSTRAINTS in statement.

ORA-12992: cannot drop parent key column
Cause: An attempt was made to drop a parent key column.

Action: Drop all constraints referencing the parent key column, or specify CASCADE CONSTRAINTS in statement.

ORA-12993: tablespace '*string*' is offline, cannot drop column
Cause: An attempt was made to drop a column from a partition/subpartition on an offline tablespace.

Action: Bring the tablespace online and resubmit statement.

ORA-12994: drop column option only allowed once in statement
Cause: An attempt was made to repeat the drop column option in a single statement.

Action: Separate drop column options into different statements and resubmit statements.

ORA-12995: no columns in partially dropped state
Cause: An attempt was made to submit DROP COLUMNS CONTINUE statement while there are no partially dropped columns.

Action: Cannot submit this statement.

ORA-12996: cannot drop system-generated virtual column
Cause: An attempt was made to drop a virtual column generated by the system.

Action: This action is not allowed.

ORA-12997: cannot drop primary key column from an index-organized table
Cause: An attempt was made to drop a primary key column from an index- organized table.

Action: This action is not allowed.

ORA-12998: Ignore errors during drop column from atb.c

ORA-12999: cannot DROP or SET UNUSED a column that has been set unused
Cause: An attempt was made to DROP or SET UNUSED a column that has already been 'set unused'.

Action: Use the DROP UNUSED COLUMNS option to remove the column.

ORA-13000: dimension number is out of range
Cause: The specified dimension was either smaller than 1 or greater than the number of dimensions encoded in the HHCODE.

Action: Ensure that the dimension number is between 1 and the maximum number of dimensions encoded in the HHCODE.

ORA-13001: dimensions mismatch error
Cause: The number of dimensions in two HHCODEs involved in a binary HHCODE operation did not match.

Action: Ensure that the number of dimensions in the HHCODEs match.

ORA-13002: specified level is out of range
Cause: The specified level is either smaller than 1 or greater than the maximum level encoded in an HHCODE.

Action: Verify that all levels are between 1 and the maximum number of levels encoded in the HHCODE.

ORA-13003: the specified range for a dimension is invalid
Cause: The specified range for a dimension was invalid.

Action: Ensure that the lower bound (lb) is less than the upper bound (ub).

ORA-13004: the specified buffer size is invalid
Cause: The buffer size for a function is not valid.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13005: recursive HHCODE function error
Cause: An error occurred in a recursively called HHCODE function.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13006: the specified cell number is invalid
Cause: The cell identifier was either less than 0 or greater than (2^ndim - 1).

Action: Ensure that the cell identifier is between 0 and (2^ndim - 1).

ORA-13007: an invalid HEX character was detected
Cause: A character that is not in the range [0-9] or [A-F a-f] was detected.

Action: Verify that all characters in a string are in [0-9] or [A-F a-f].

ORA-13008: the specified date format has an invalid component
Cause: Part of specified date format is invalid.

Action: Verify that the date format is valid.

ORA-13009: the specified date string is invalid
Cause: The specified date string had a bad component or did not match the specified format string.

Action: Ensure that the components of the date string are valid and that the date and format strings match.

ORA-13010: an invalid number of arguments has been specified
Cause: An invalid number of arguments was specified for an SDO function.

Action: Verify the syntax of the function call.

ORA-13011: value is out of range
Cause: A specified dimension value was outside the range defined for that dimension.

Action: Ensure that all values to be encoded are within the defined dimension range.

ORA-13012: an invalid window type was specified
Cause: An invalid window type was specified.

Action: Valid window types are RANGE, PROXIMITY, POLYGON.

ORA-13013: the specified topology was not INTERIOR or BOUNDARY
Cause: A topology was specified that was not INTERIOR or BOUNDARY.

Action: Ensure that INTERIOR or BOUNDARY is used to describe the topology of the HHCODE.

ORA-13014: a topology identifier outside the range of 1 to 8 was specified
Cause: A topology identifier outside the range of 1 to 8 was specified.

Action: Specify a topology in the range of 1 to 8.

ORA-13015: the window definition is not valid
Cause: The number of values used to define the window does not correspond to the window type.

Action: Verify that the number of values used to defined the window is correct for the window type and number of dimensions.

ORA-13016: specified topology [*string*] is invalid
Cause: The specified topology did not exist in the database, or some components of the topology were missing from the database.

Action: Check the specified topology by executing the SDO_TOPO.validate_topology function.

ORA-13017: unrecognized line partition shape
Cause: The shape of a 2-D line partition could not be determined.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13018: bad distance type
Cause: The specified distance type is invalid.

Action: The only supported distance functions are EUCLID and MANHATTAN.

ORA-13019: coordinates out of bounds
Cause: Vertex coordinates lie outside the valid range for specified dimension.

Action: Redefine vertex coordinates within specified boundaries.

ORA-13020: coordinate is NULL
Cause: A vertex coordinate has a NULL value.

Action: Redefine vertex coordinate to have non-NULL value.

ORA-13021: element not continuous
Cause: The coordinates defining a geometric element are not connected.

Action: Redefine coordinates for the geometric element.

ORA-13022: polygon crosses itself
Cause: The coordinates defining a polygonal geometric element represent crossing segments.

Action: Redefine coordinates for the polygon.

ORA-13023: interior element interacts with exterior element
Cause: An interior element of a geometric object interacts with the exterior element of that object.

Action: Redefine coordinates for the geometric elements.

ORA-13024: polygon has less than three segments
Cause: The coordinates defining a polygonal geometric element represent less than three segments.

Action: Redefine the coordinates for the polygon.

ORA-13025: polygon does not close
Cause: The coordinates defining a polygonal geometric element represent an open polygon.

Action: Redefine the coordinates of the polygon.

ORA-13026: unknown element type for element *string.string.string*
Cause: The SDO_ETYPE column in the *layer*_SDOGEOM table contains an invalid geometric element type value.

Action: Redefine the geometric element type in the *layer*_SDOGEOM table for the specified geometric element using one of the supported SDO_ETYPE values. See the Oracle Spatial documentation for an explanation of SDO_ETYPE and its possible values.

ORA-13027: unable to read dimension definition from *string*
Cause: There was a problem reading the dimension definition from the *layer*_SDODIM table.

Action: Verify that the *layer*_SDODIM table exists and that the appropriate privileges exist on the table. Address any other errors that might appear with the message.

ORA-13028: Invalid Gtype in the SDO_GEOMETRY object
Cause: There is an invalid SDO_GTYPE in the SDO_GEOMETRY object.

Action: Verify that the geometries have valid gtypes.

ORA-13029: Invalid SRID in the SDO_GEOMETRY object
Cause: There is an invalid SDO_SRID in the SDO_GEOMETRY object. The specified SRID may be outside the valid SRID range.

Action: Verify that the geometries have valid SRIDs.

ORA-13030: Invalid dimension for the SDO_GEOMETRY object
Cause: There is a mismatch between the dimension in the SDO_GTYPE and dimension in the SDO_GEOM_METADATA for the SDO_GEOMETRY object.

Action: Verify that the geometries have valid dimensionality.

ORA-13031: Invalid Gtype in the SDO_GEOMETRY object for point object
Cause: There is an invalid SDO_GTYPE in the SDO_GEOMETRY object where the VARRAYs are NULL but the SDO_GTYPE is not of type POINT.

Action: Verify that the geometries have valid gtypes.

ORA-13032: Invalid NULL SDO_GEOMETRY object
Cause: There are invalid SDO_POINT_TYPE or SDO_ELEM_INFO_ARRAY or SDO_ORDINATE_ARRAY fields in the SDO_GEOMETRY object.

Action: Verify that the geometries have valid fields. To specify a NULL geometry, specify the whole SDO_GEOMETRY as NULL instead of setting each field to NULL.

ORA-13033: Invalid data in the SDO_ELEM_INFO_ARRAY in SDO_GEOMETRY object
Cause: There is invalid data in the SDO_ELEM_INFO_ARRAY field of the SDO_GEOMETRY object. The triplets in this field do not make up a valid geometry.

Action: Verify that the geometries have valid data.

ORA-13034: Invalid data in the SDO_ORDINATE_ARRAY in SDO_GEOMETRY object
Cause: There is invalid data in the SDO_ORDINATE_ARRAY field of the SDO_GEOMETRY object. The coordinates in this field do not make up a valid geometry. There may be NULL values for X or Y or both.

Action: Verify that the geometries have valid data.

ORA-13035: Invalid data (arcs in geodetic data) in the SDO_GEOMETRY object
Cause: There is invalid data in the SDO_ELEM_INFO_ARRAY field of the SDO_GEOMETRY object. There are arcs in a geometry that has geodetic coordinates.

Action: Verify that the geometries have valid data.

ORA-13036: Operation [*string*] not supported for Point Data
Cause: The specified geometry function was not supported for point data.

Action: Ensure that the specified geometry function is not called on point data.

ORA-13037: SRIDs do not match for the two geometries
Cause: A spatial operation was invoked with two geometries where one geometry had an SRID and the other geometry did not have an SRID.

Action: Ensure that the spatial operations are invoked between two geometries with compatible SRIDs.

ORA-13039: failed to update spatial index for element *string.string.string*
Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13040: failed to subdivide tile
Cause: This is an internal error.

Action: Note any accompanying errors and contact Oracle Support Services.

ORA-13041: failed to compare tile with element *string.string.string*
Cause: The spatial relationship between a generated tile and the specified element could not be determined.

Action: This is an internal error. Verify the geometry using the VALIDATE_GEOMETRY_WITH_CONTEXT procedure. If the procedure does not return any errors, note any errors that accompany ORA-13041 and contact Oracle Support Services.

ORA-13042: invalid SDO_LEVEL and SDO_NUMTILES combination
Cause: An invalid combination of SDO_LEVEL and SDO_NUMTILES values was read from the *layer*_SDOLAYER table. The most likely cause is that the columns are NULL.

Action: Verify the that SDO_LEVEL and SDO_NUMTILES columns contain valid integer values as described in the Oracle Spatial documentation. Then retry the operation.

ORA-13043: failed to read metadata from the *layer*_SDOLAYER table
Cause: An error was encountered reading the layer metadata from the *layer*_SDOLAYER table.

Action: This error is usually the result of an earlier error which should also have been reported. Address this accompanying error and retry the current operation. If no accompanying error was reported, contact Oracle Support Services.

ORA-13044: the specified tile size is smaller than the tolerance
Cause: The tile size specified for fixed size tessellation is smaller than the tolerance as specified in the layer metadata.

Action: See the Oracle Spatial documentation for an explanation of tiling levels, tile size, and tiling resolution. Ensure that the tiling parameters are set such that any generated tile is always larger than or equal to a tile at the maximum level of resolution. This can be achieved by using a fewer number of tiles per geometric object or specifying a smaller tile size value than the current one.

ORA-13046: invalid number of arguments
Cause: An invalid number of arguments were specified for an SDO_GEOM function.

Action: See the Oracle Spatial documentation for a description of the syntax and semantics of the relevant SDO_GEOM function.

ORA-13047: unable to determine ordinate count from table *layer*_SDOLAYER
Cause: An SDO_GEOM function was unable to determine the number of ordinates for the SDO layer *layer*.

Action: Verify that the *layer*_SDOLAYER table has a valid value for the column SDO_ORDCNT. Then retry the operation.

ORA-13048: recursive SQL fetch error
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13049: unable to determine tolerance value from table *layer*_SDODIM
Cause: An SDO_GEOM function was unable to determine the tolerance value for the SDO layer *layer*.

Action: Verify that the *layer*_SDODIM table has a valid value for the column SDO_TOLERANCE.

ORA-13050: unable to construct spatial object
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13051: failed to initialize spatial object
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13052: unsupported geometric type for geometry *string*.*string*
Cause: The geometry type for a specific instance in a *layer*_SDOGEOM table is not among the set of geometry types supported by Oracle Spatial.

Action: Check the Oracle Spatial documentation for the list of supported geometry types and workarounds that permit the storage and retrieval of non-supported geometric types with the SDO schema.

ORA-13053: maximum number of geometric elements in argument list exceeded
Cause: The maximum number of geometric elements that can be specified in the argument list for an SDO_GEOM function was exceeded.

Action: Check the Oracle Spatial documentation for the syntax of the SDO_GEOM function and use fewer arguments to describe the geometry, or check the description of the SDO_WINDOW package for a workaround that permits storing the object in a table and then using it in as an argument in a call to the SDO_GEOM function.

ORA-13054: recursive SQL parse error
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13055: Oracle object *string* does not exist in specified table
Cause: The requested object is not present in the specified table.

Action: Verify the syntax of the function or procedure that reported this error and verify that the object does indeed exist in the specified table. Then retry the operation.

ORA-13056: Spatial Reference ID (SRID) does not exist: NULL.
Cause: The operation required a valid SRID but none was specified.

Action: Contact Oracle Support Services.

ORA-13057: Spatial Reference ID (SRID) *number* does not exist.
Cause: The specified SRID is not known.

Action: Ensure that the specified SRID was valid.

ORA-13058: Spatial Reference ID (SRID) does not exist.
Cause: The SRID for the operation could not be determined.

Action: Ensure that the SRID for the operation is valid.

ORA-13059: invalid WRK_TBLSPC parameter
Cause: An invalid "WRK_TBLSPC" parameter value was specified.

Action: Ensure that the specified "WRK_TBLSPC" exists and is accessible to the current user.

ORA-13060: topology with the name *string* already exists
Cause: The specified topology name was not unique in the database.

Action: Verify that the CREATE_TOPOLOGY call specifies the correct topology name and that the procedure is invoked from the correct schema.

ORA-13061: topology with the name *string* does not exist
Cause: The specified topology did not exist in the database.

Action: Verify that the current procedure/function call specifies the correct schema and topology name.

ORA-13062: topology IDs do not match in the feature table and the topology
Cause: The specified topology ID in the feature table did not match the topology ID stored in the topology metadata.

Action: Verify that the specified topology ID matches the topology ID stored in the topology metadata.

ORA-13063: relationship information table is missing data for feature table [*string*]
Cause: The topology relationship information table (xxx_RELATION$) did not have the matching partition corresponding to the feature table.

Action: Ensure the correct topology IDs and names are specified in the call to register the feature table with the topology.

ORA-13064: relationship information table has inconsistent data for feature table [*string*]
Cause: The topology_id and tg_layer_id values stored in the feature table did not match the values stored in the topology relationship information table (xxx_RELATION$).

Action: Ensure that the correct feature tables are specified in the call to register the feature table with the topology.

ORA-13065: cannot delete a child layer with a parent layer
Cause: A call was made to delete a feature layer which has a dependent layer defined on it.

Action: Ensure that all dependent feature layers are deleted before deleting the current feature layer.

ORA-13066: wrong feature geometry or element type
Cause: The SDO_TOPO_GEOMETRY object had the wrong geometry and/or element type.

Action: Correct the geometry and/or element type in the SDO_TOPO_GEOMETRY object.

ORA-13067: operator requires both parameters from the same topology
Cause: Both SDO_TOPO_GEOMETRY parameters did not come from the same topology.

Action: Ensure that both of the parameters to the operator are from the same topology. If this is not possible, consider using a signature of the operator that does not use two SDO_TOPO_GEOMETRY parameters.

ORA-13068: wrong table or column name in SDO_TOPO_GEOMETRY constructor
Cause: An SDO_TOPO_GEOMETRY constructor was invoked with incorrect parameters for table name and/or column name.

Action: Fix the parameters in the call and try again.

ORA-13069: incorrect degree value for SDO_GEOMETRY object
Cause: An incorrect degree value <=1 was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the degree value for the Non-Uniform Rational B-Spline curve.

ORA-13070: incorrect number of control points for SDO_GEOMETRY object
Cause: An incorrect number of control points was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the number of control points for the Non-Uniform Rational B-Spline curve.

ORA-13071: incorrect control points, degree for SDO_GEOMETRY object
Cause: An incorrect number of control points and degree was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure that the number of control points is greater than the degree for a Non-Uniform Rational B-Spline curve.

ORA-13072: incorrect number of knots for SDO_GEOMETRY object
Cause: An incorrect number of knot values was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the number of knot values passed for the Non-Uniform Rational B-Spline curve.

ORA-13073: incorrect control point weight value for a SDO_GEOMETRY object
Cause: An incorrect value was passed for the weight of a control point of a Non-Uniform Rational B-Spline curve.

Action: Ensure all weight values for control points are positive.

ORA-13074: incorrect knot value for SDO_GEOMETRY object
Cause: An incorrect knot value was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot values passed for the Non-Uniform Rational B-Spline curve are in non-decreasing order.

ORA-13075: incorrect knot value sequence for SDO_GEOMETRY object
Cause: An incorrect knot value sequence was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot values passed for the Non-Uniform Rational B-Spline curve have no more than a sequence of 'k' consecutive identical values or no more than 'k + 1' consecutive same values at the beginning or end of Non-Uniform Rational B-Spline curve.

ORA-13076: incorrect knot value sequence for SDO_GEOMETRY object
Cause: An incorrect knot value sequence was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot value sequence passed for the Non-Uniform Rational B-Spline curve is a normalized vector beginning at zero and ending at one.

ORA-13077: incorrect start or end point for subelement of a compound curve
Cause: The end point of a subelement for a compound curve was not equal to the start point of the next subelement, or the start point of a subelement was not equal to the end point of the previous subelement and one of the subelements was a NURBS curve.

Action: Ensure that the end point of each subelement is equal to the start point of the next subelement and that the start point of each subelement is equal to the end point of the previous subelement when one of the subelements is a NURBS curve.

ORA-13078: cannot commit a distributed transaction involving spatial index
Cause: An attempt was made to commit changes to a spatial table in a distributed transaction, but spatial indexes are not supported in distributed transactions.

Action: Perform all transactional changes to spatial tables (tables containing spatial geometry columns) in a local non-distributed transaction. For more information about this restriction, refer to the Oracle Spatial Data and Graph documentation.

ORA-13079: invalid schema name
Cause: The specified schema name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the schema name is valid.

ORA-13080: invalid index name
Cause: The specified spatial index name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the spatial index name is valid.

ORA-13081: invalid index table name
Cause: The specified index table name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the index table name is valid. The index table name typically starts with "MDRT_" prefix.

ORA-13082: invalid index partition name
Cause: The specified index partition name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the index partition name was valid.

ORA-13083: invalid index parameters
Cause: The specified index parameter or parameter combination was invalid.

Action: Check the list of index parameters to ensure that they are correctly specified and valid for the corresponding index operation.

ORA-13084: invalid table type: index organization not supported
Cause: An attempt was made to create the spatial index on an index- organized table (IOT).

Action: Spatial indexes cannot be created on index-organized tables.

ORA-13085: invalid column name
Cause: The specified column name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the index column name is valid. If the column name is a function, ensure the function name is properly spelled and case-sensitive.

ORA-13086: geometry cannot be an optimized geodetic MBR
Cause: An attempt was made to use optimized geodetic minimum bounding rectangles (MBR).

Action: The object tracker cannot be used on objects that are composed of optimized MBRs.

ORA-13087: incorrect number of query columns
Cause: The number of table columns specified for the PointInPolygon() function was incorrect.

Action: Ensure that there are at least two columns specified, and that the first two columns are of the NUMBER type, representing the X and Y coordinates.

ORA-13088: SQL cursor rows have been pre-fetched
Cause: It has been detected that 1 or more rows have been pre-fetched from the specified query cursor.

Action: One or more rows were pre-fetched from the specified query cursor.

ORA-13089: invalid tolerance
Cause: The specified tolerance value was invalid.

Action: The tolerance value must be greater than 0.0.

ORA-13090: geometry must be 2D
Cause: The specified geometry is not two-dimensional.

Action: Ensure the geometry is two-dimensional.

ORA-13091: unable to process query on geodetic MBR
Cause: The operation is not valid using geodetic MBRs.

Action: Ensure the geometry is not using geodetic MBRs.

ORA-13092: unable to process query
Cause: The operation failed.

Action: Contact Oracle Support Services.

ORA-13093: polygon Rings exceeded half the area of earth
Cause: The polygon ring size exceeded half the area of the earth.

Action: Contact Oracle Support Services.

ORA-13094: invalid cursor
Cause: The specified query cursor was invalid.

Action: Contact Oracle Support Services.

ORA-13095: Element number is wrong
Cause: The specified element number is incorrect.

Action: Ensure the specified element number is valid for the geometry.

ORA-13096: Wrong geometry type
Cause: The specified geometry type is incorrect.

Action: Ensure the specified geometry type (GTYPE) is valid for the geometry.

ORA-13097: wrong element type
Cause: The specified element type is incorrect.

Action: Ensure the specified element type (GTYPE) is valid for the geometry.

ORA-13098: more elements than specified
Cause: There are more elements than were specified.

Action: Ensure the specified number of elements is valid for the geometry.

ORA-13099: wrong RING topology
Cause: The geometry ring topology (inner or outer) is wrong.

Action: Contact Oracle Support Services.

ORA-13100: feature does not exist
Cause: The feature does not exist.

Action: Contact Oracle Support Services.

ORA-13101: invalid ptn_type parameter
Cause: An incorrect ptn_type parameter was specified.

Action: Ensure the ptn_type parameter value is correct.

ORA-13102: invalid ptn_capacity parameter
Cause: An incorrect ptn_capacity parameter was specified.

Action: Ensure the ptn_capacity parameter value is correct.

ORA-13103: invalid numdim parameter
Cause: An incorrect numdim parameter was specified.

Action: Ensure the numdim parameter value is correct.

ORA-13104: null values not allowed in input data
Cause: Null values cannot be specified in the supplied input data.

Action: Ensure that all null-values have been removed from the data.

ORA-13105: invalid Parameters for Partition_Table
Cause: One or more parameters for the Partition_Table() function are invalid.

Action: Ensure that the identified parameters are correctly specified.

ORA-13106: invalid MASK parameter
Cause: The specified MASK parameter was invalid.

Action: Ensure that the MASK parameter values are correctly specified.

ORA-13107: operation not supported for Non-Uniform Rational B-Spline type
Cause: This operation cannot be executed for Non-Uniform Rational B-Spline curves.

Action: Specify a geometry that does not contain a Non-Uniform Rational B-Spline curve type.

ORA-13108: spatial table *string* not found
Cause: The specified spatial table did not exist.

Action: Check the spatial data dictionary to ensure that the table is registered.

ORA-13109: spatial table *string* exists
Cause: The specified spatial table is registered in the Spatial data dictionary.

Action: Remove the existing table from the Spatial data dictionary or use a different name.

ORA-13110: cannot drop topology with associated topo_geometry tables
Cause: The drop_topology procedure was invoked for a topology that has assocated topo_geometry layers with it.

Action: Delete the topo_geometry layers from the topology before dropping the topology. Use SDO_TOPO.delete_topo_geometry_layer to delete topo_geometry layers from the topology.

ORA-13111: cannot add topo_geometry layer [*string*] to topology
Cause: It was not possible to add the specified TOPO_GEOMETRY layer to the topology.

Action: Ensure that the TOPO_GEOMETRY layer table exists in the database.

ORA-13112: cannot delete topo_geometry layer [*string*] from topology
Cause: It was not possible to delete the specified topo_geometry layer from the topology.

Action: Check USER_SDO_TOPO_METADATA to see if the specified topo_geometry layer is part of the topology. Only those topo_geometry layers which are part of the topology can be deleted from it.

ORA-13113: invalid tg_layer_id in sdo_topo_geometry constructor
Cause: An invalid layer_id was passed to the SDO_TOPO_GEOMETRY constructor.

Action: Valid layer_ids are obtained by adding a topo_geometry layer to the topology. Check USER_SDO_TOPO_METADATA to find out the layer_id for an existing topo_geometry layer.

ORA-13114: [*string*]_NODE$ table does not exist
Cause: The NODE$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13115: [*string*]_EDGE$ table does not exist
Cause: The EDGE$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13116: [*string*]_FACE$ table does not exist
Cause: The FACE$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13117: [*string*]_RELATION$ table does not exist
Cause: The RELATION$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13118: invalid node_id [*string*]
Cause: A topology node operation was invoked with an invalid node_id.

Action: Check the topology node$ table to see if the specified node_id exists in the topology.

ORA-13119: invalid edge_id [*string*]
Cause: A topology edge operation was invoked with an invalid edge_id.

Action: Check the topology edge$ table to see if the specified edge_id exists in the topology.

ORA-13120: invalid face_id [*string*]
Cause: A topology face operation was invoked with an invalid face_id.

Action: Check the topology face$ table to see if the specified face_id exists in the topology.

ORA-13121: layer type type mismatch with topo_geometry layer type
Cause: The tg_type in SDO_TOPO_GEOMETRY constructor did not match the type specified for the layer.

Action: Check the USER_SDO_TOPO_METADATA view to see the layer type for the layer and use it in the constructor.

ORA-13122: invalid topo_geometry specified
Cause: The SDO_TOPO_GEOMETRY object passed into the function/operator was not valid.

Action: Check the SDO_TOPO_GEOMETRY object and verify that it is a valid topo_geometry object.

ORA-13123: invalid *TOPOLOGY* name specified
Cause: The create_topo operation requires a unique TOPOLOGY name, that already does not exist in the database.

Action: Check to see if there is already an entry in the USER_SDO_TOPO_METADATA (or the MDSYS.SDO_TOPO_METADATA_TABLE) with this topology name.

ORA-13124: unable to determine column id for column *string*
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13125: partition key is already set
Cause: A partition key is already set for the spatial table.

Action: Only one partition key can be specified per spatial table.

ORA-13126: unable to determine class for spatial table *string*
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13127: failed to generate target partition
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13128: current tiling level exceeds user specified tiling level
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13129: HHCODE column *string* not found
Cause: The specified spatial column does not exist.

Action: Verify that the specified column is a spatial column by checking the Spatial data dictionary.

ORA-13135: failed to alter spatial table
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13136: null common code generated
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13137: failed to generate tablespace sequence number
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13138: could not determine name of object *string*
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13139: could not obtain column definition for *string*
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13140: invalid target type
Cause: The specified target type is not valid.

Action: Substitute a valid target type. Valid target types are TABLE and VIEW.

ORA-13141: invalid RANGE window definition
Cause: The RANGE window specified is not correctly defined.

Action: A RANGE window is defined by specifying the lower and upper boundary of each dimension as a pair of values (e.g.: lower_bound1,upper_bound1,lower_bound2,upper_bound2,...). There should be an even number of values.

ORA-13142: invalid PROXIMITY window definition
Cause: The PROXIMITY window specified is not correctly defined.

Action: A PROXIMITY window is defined by specifying a center point and a radius. The center point is defined by ND values. There should be ND+1 values.

ORA-13143: invalid POLYGON window definition
Cause: The POLYGON window specified is not correctly defined.

Action: A POLYGON window is defined by specifying N pairs of values that represent the vertices of the polygon. There should be an even number of values.

ORA-13144: target table *string* not found
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13145: failed to generate range list
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13146: could not find table substitution variable *string*
Cause: The partition name substitution variable %s was not found in the SQL filter.

Action: The substitution variable %s must be in the SQL filter to indicate where that partition name should be placed.

ORA-13147: failed to generate MBR
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13148: failed to generate SQL filter
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13149: failed to generate next sequence number for spatial table *string*
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13150: failed to insert exception record
Cause: Operation failed to insert a record into the exception table.

Action: Fix any other errors reported.

ORA-13151: failed to remove exception record
Cause: Operation failed to remove a record from the exception table.

Action: Fix any other errors reported.

ORA-13152: invalid HHCODE type
Cause: Specified HHCODE type is not valid.

Action: Substitute a valid HHCODE type. Valid HHCODE types are POINT and LINE.

ORA-13153: invalid high water mark specified
Cause: The high water mark was not greater than or equal to zero.

Action: Ensure that the high water mark is an integer greater than or equal to zero.

ORA-13154: invalid precision specified
Cause: The precision specified is out of range.

Action: The precision must be an integer greater than or equal to zero.

ORA-13155: invalid number of dimensions specified
Cause: The number of dimensions specified is out of range.

Action: The number of dimension must be between 1 and 32.

ORA-13156: table to be registered *string*.*string* is not empty
Cause: The specified table contained rows.

Action: Ensure that the table to be registered is empty.

ORA-13157: Oracle error ORA*string* encountered while *string*
Cause: The specified Oracle error was encountered.

Action: Correct the Oracle error.

ORA-13158: Oracle object *string* does not exist
Cause: The specified object does not exist.

Action: Verify that the specified object exists.

ORA-13159: Oracle table *string* already exists
Cause: The specified table already exists.

Action: Drop the specified table.

ORA-13181: unable to determine length of column *string*_SDOINDEX.SDO_CODE
Cause: The length of the SDO_CODE column in the *layer*_SDOINDEX table could not be determined.

Action: Ensure that the *layer*_SDOINDEX table exists with the SDO_CODE column. Verify that the appropriate privileges exist on the table. Then retry the operation.

ORA-13182: failed to read element *string.string.string*
Cause: The specified element could not be read from the *layer*_SDOGEOM table.

Action: Verify that the specified element exists in the table. Then retry the operation.

ORA-13183: unsupported geometric type for geometry *string.string*
Cause: The geometry type in the *layer*_SDOGEOM table is unsupported.

Action: Modify the geometry type to be one of the supported types.

ORA-13184: failed to initialize tessellation package
Cause: Initialization of the tessellation package failed.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13185: failed to generate initial HHCODE
Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13186: fixed tile size tessellation failed
Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13187: subdivision failed
Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13188: cell decode failed
Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13189: recursive SQL parse failed
Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13190: recursive SQL fetch failed
Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13191: failed to read SDO_ORDCNT value
Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13192: failed to read number of element rows
Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13193: failed to allocate space for geometry
Cause: There was insufficient memory to read the geometry from the database.

Action: Validate the geometry. Record the error messages that are returned and contact Oracle Support Services.

ORA-13194: failed to decode supercell
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13195: failed to generate maximum tile value
Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13196: failed to compute supercell for element *string.string.string*
Cause: The system was unable to compute the minimum bounding HHCODE or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13197: element *string.string.string* is out of range
Cause: Tessellation did not generate any tiles for this element. This error could be caused if the geometry definition puts the geometry outside the domain defined in the *layer*_SDODIM table.

Action: Verify that the geometry is valid and within the defined domain.

ORA-13198: Spatial error: *string*
Cause: Internal error in some Oracle Spatial stored procedure.

Action: Record the sequence of procedure calls or events that preceded this error, and contact Oracle Support Services if the error message text does not clearly specify the cause of the error.

ORA-13199: *string*
Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13200: internal error [*string*] in spatial indexing.
Cause: This is an internal error.

Action: Contact Oracle Support Services with the exact error text.

ORA-13201: invalid parameters supplied in CREATE INDEX statement
Cause: An error was encountered while trying to parse the parameters clause for the spatial CREATE INDEX statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for spatial index creation.

ORA-13202: failed to create or insert into the SDO_INDEX_METADATA table
Cause: An error was encountered while trying to create the SDO_INDEX_METADATA table or insert data into it.

Action: Verify that the current user has CREATE TABLE privilege and that the user has sufficient quota in the default or specified tablespace.

ORA-13203: failed to read USER_SDO_GEOM_METADATA view
Cause: An error encountered while trying to read the USER_SDO_GEOM_METADATA view.

Action: Check that USER_SDO_GEOM_METADATA has an entry for the current geometry table.

ORA-13204: failed to create spatial index table
Cause: An error was encountered while trying to create the index table.

Action: Check that user has CREATE TABLE privilege in the current schema and that the user has sufficient quota in the default or specified tablespace.

ORA-13205: internal error while parsing spatial parameters
Cause: An internal error was encountered while parsing the spatial parameters.

Action: Check that the parameters passed in the parameter string are all valid.

ORA-13206: internal error [*string*] while creating the spatial index
Cause: An internal error was encountered while creating the spatial index.

Action: Contact Oracle Support Services with the exact error text.

ORA-13207: incorrect use of the [*string*] operator
Cause: An error was encountered while evaluating the specified operator.

Action: Check the parameters and the return type of the specified operator.

ORA-13208: internal error while evaluating [*string*] operator
Cause: An internal error was encountered.

Action: Contact Oracle Support Services with the exact error text.

ORA-13209: internal error while reading SDO_INDEX_METADATA table
Cause: An internal error was encountered while trying to read the SDO_INDEX_METADATA table.

Action: Contact Oracle Support Services. Note this and accompanying error numbers.

ORA-13210: error inserting data into the index table
Cause: An error was encountered while trying to insert data into the index table. Likely causes are: - Insufficient quota in the current tablespace - User does not appropriate privileges

Action: Check the accompanying error messages.

ORA-13211: failed to tessellate the window object
Cause: An internal error was encountered while trying to tessellate the window object.

Action: Verify the geometric integrity of the window object using the VALIDATE_GEOMETRY_WITH_CONTEXT procedure.

ORA-13212: failed to compare tile with the window object
Cause: The spatial relationship between a generated tile and the specified window object could not be determined.

Action: This is an internal error. Verify the geometry using the VALIDATE_GEOMETRY_WITH_CONTEXT procedure. If the procedure does not return any errors, note any accompanying errors and contact Oracle Support Services.

ORA-13213: failed to generate spatial index for window object
Cause: Another error, indicating the real cause of the problem, should accompany this error.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13214: failed to compute supercell for window object
Cause: The system was unable to compute the minimum bounding tile or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13215: window object is out of range
Cause: Tessellation did not generate any tiles for this geometry. This error could be caused if the geometry definition puts the geometry outside the domain defined in the USER_SDO_GEOM_METADATA view.

Action: Verify that the geometry is valid and within the defined domain.

ORA-13216: failed to update spatial index
Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13217: invalid parameters supplied in ALTER INDEX statement
Cause: An error was encountered while trying to parse the parameters clause for the spatial ALTER INDEX statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for the spatial ALTER INDEX statement.

ORA-13218: max number of supported index tables reached for [*string*] index
Cause: An add_index parameter was passed to ALTER INDEX when the number of existing index tables is already at maximum.

Action: Delete one of the index tables before adding another index table.

ORA-13219: failed to create spatial index table [*string*]
Cause: An error was encountered while trying to create the index table.

Action: There is a table in the index's schema with the specified name. The CREATE INDEX statement will try to create an index table with this name. Either rename this table or change the name of the index.

ORA-13220: failed to compare tile with the geometry
Cause: The spatial relationship between a generated tile and the specified geometry could not be determined.

Action: This is an internal error. Validate the geometry using the VALIDATE_GEOMETRY_WITH_CONTEXT procedure. If the procedure does not return any errors, note any errors that accompany ORA-13220 and contact Oracle Support Services.

ORA-13221: unknown geometry type in the geometry object
Cause: The SDO_GTYPE attribute in the geometry object contains an invalid value

Action: Redefine the geometric type in the geometry table using one of the supported SDO_GTYPE values. See the Oracle Spatial documentation for an explanation of SDO_GTYPE and its possible values.

ORA-13222: failed to compute supercell for geometry in *string*
Cause: The system was unable to compute the minimum bounding tile or supercell for a geometry in the specified table.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13223: duplicate entry for *string* in SDO_GEOM_METADATA
Cause: There are duplicate entries for the given table and column value pair in the USER_SDO_GEOM_METADATA view.

Action: Check that the specified table and geometry column names are correct. There should be only one entry per table, geometry column pair in the USER_SDO_GEOM_METADATA view.

ORA-13224: zero tolerance specified for layer in USER_SDO_GEOM_METADATA
Cause: A tolerance of zero or NULL was supplied for a layer in the USER_SDO_GEOM_METADATA view.

Action: Check the tolerance specified to ensure that it is a positive value.

ORA-13225: specified index table name is too long for a spatial index
Cause: An index table name is specified which is longer than the supported length of the spatial index table name.

Action: Check the supported size of the index table name and reduce the size of the index name.

ORA-13226: interface not supported without a spatial index
Cause: The geometry table does not have a spatial index.

Action: Verify that the geometry table referenced in the spatial operator has a spatial index on it.

ORA-13227: SDO_LEVEL values for the two index tables do not match
Cause: The SDO_LEVEL values for the two index tables used in the spatial join operator do not match.

Action: Verify that two compatible indexes are used for the spatial join operator. Quadtree indexes are compatible if they have the same SDO_LEVEL and SDO_NUMTILES values

ORA-13228: spatial index create failed due to invalid type
Cause: An attempt was made to create a spatial index on a column of type other than SDO_GEOMETRY.

Action: Ensure that the index is created on a column of type SDO_GEOMETRY.

ORA-13230: failed to create temporary table [*string*] during R-tree creation
Cause: The specified temporary table either already exists or there is not enough tablespace.

Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace.

ORA-13231: failed to create index table [*string*] during R-tree creation
Cause: The specified index table either already exists or there is not enough tablespace.

Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace. If that fails to correct the problem, contact Oracle Support Services.

ORA-13232: failed to allocate memory during R-tree creation
Cause: This feature assumes a minimum of 64K memory for bulk creation.

Action: Create the index for a small subset of the data. Then, use transactional insert operations for the rest of the data.

ORA-13233: failed to create sequence number [*string*] for R-tree
Cause: The specified sequence number exists.

Action: Delete the sequence object, or contact Oracle Support Services.

ORA-13234: failed to access R-tree-index table [*string*]
Cause: The index table is either deleted or corrupted.

Action: Rebuild the index or contact Oracle Support Services with accompanying error messages.

ORA-13236: internal error in R-tree processing: [*string*]
Cause: An internal error occurred in R-tree processing.

Action: Contact Oracle Support Services with the message text.

ORA-13237: internal error during R-tree concurrent updates: [*string*]
Cause: An inconsistency is encountered during concurrent updates, possibly due to the use of serializable isolation level.

Action: Change the isolation level to "read committed" using the ALTER SESSION statement, or contact Oracle Support Services with the message text.

ORA-13238: spatial journal cache enabled; query requires transaction commit
Cause: The spatial transaction journal cache was enabled. When enabled, spatial functions that require use of the spatial index could not be used when uncommitted transaction data existed.

Action: Commit or roll back the current transaction, or flush the spatial transaction journal cache using the PL/SQL "SDO_UTIL.INVALIDATE_GTT_CACHE" procedure.

ORA-13239: sdo_dimensionality not specified during n-d R-tree creation
Cause: An error occurred in reading the dimensionality parameter

Action: Check the documentation for a valid range, and specify the dimensionality as a parameter.

ORA-13240: specified dimensionality greater than that of the query mbr
Cause: An error occurred because of too few values in the query minimum bounding rectangle (MBR).

Action: Omit the dimensionality, or use the dimensionality of the query.

ORA-13241: specified dimensionality does not match that of the data
Cause: An error occurred because the dimensionality specified in the CREATE INDEX statement does not match that of the data.

Action: Change the statement to reflect the data dimensionality.

ORA-13243: specified operator is not supported for 3- or higher-dimensional R-tree
Cause: Currently, an R-tree index with three or more index dimensions can be used only with the SDO_FILTER operator.

Action: Use the SDO_FILTER operator, and check the documentation for the querytype parameter for SDO_FILTER; or contact Oracle Support Services.

ORA-13249: *string*
Cause: An internal error was encountered in the extensible spatial index component. The text of the message is obtained from some other server component.

Action: Contact Oracle Support Services with the exact error text.

ORA-13250: insufficient privileges to modify metadata table entries
Cause: The user requesting the operation does not have the appropriate privileges on the referenced tables.

Action: Check that the specified feature and geometry table names are correct, and then verify that the current user has at least SELECT privilege on those tables.

ORA-13251: duplicate entry *string* in metadata table
Cause: The specified entry already exists in the metadata table.

Action: Check that the specified feature and geometry table names are correct. A feature-geometry table association should be registered only once.

ORA-13260: layer table *string* does not exist
Cause: Data migration source table *layer*_SDOGEOM does not exist.

Action: Ensure that the specified layer name is correct and that the corresponding spatial layer tables exist in the current schema.

ORA-13261: geometry table *string* does not exist
Cause: The specified geometry table does not exist in the current schema.

Action: Create a table containing a column of type SDO_GEOMETRY and a column of type NUMBER for the GID values.

ORA-13262: geometry column *string* does not exist in table *string*
Cause: The specified table does not have a column of type SDO_GEOMETRY.

Action: Alter or re-create the table such that it includes a column of type SDO_GEOMETRY and a column of type NUMBER.

ORA-13263: column *string* in table *string* is not of type SDO_GEOMETRY
Cause: The column intended for storing the geometry is not of type SDO_GEOMETRY.

Action: Alter the column definition to be of type SDO_GEOMETRY.

ORA-13264: geometry identifier column *string* does not exist in table *string*
Cause: The specified table does not contain a GID column.

Action: Confirm that the GID column name was correctly specified and that it exists in the specified table.

ORA-13265: geometry identifier column *string* in table *string* is not of type NUMBER
Cause: GID column is not of type NUMBER.

Action: Alter the table definition such that the column containing the geometry identifier (GID) is of type NUMBER.

ORA-13266: error inserting data into table *string*
Cause: An OCI error occurred, or the user has insufficient quota in the active tablespace, or the rollback segments are too small.

Action: There should be an accompanying error message that indicates the cause of the problem. Take appropriate action to correct the indicated problem.

ORA-13267: error reading data from layer table *string*
Cause: There was an error reading the geometry data from the *layer*_SDOGEOM table.

Action: Verify that *layer*_SDOGEOM and *layer*_SDODIM exist. If they do exist, run VALIDATE_LAYER_WITH_CONTEXT on the specified layer.

ORA-13268: error obtaining dimension from USER_SDO_GEOM_METADATA
Cause: There is no entry in the USER_SDO_GEOM_METADATA view for the specified geometry table.

Action: Insert an entry for the destination geometry table with the correct dimension information.

ORA-13269: internal error [*string*] encountered when processing geometry table
Cause: An internal error occurred.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13270: OCI error \n*string*
Cause: An OCI error occurred while processing the layer or geometry tables.

Action: Take the appropriate steps to correct the OCI-specific error.

ORA-13271: error allocating memory for geometry object
Cause: Insufficient memory.

Action: Make more memory available to the current session/process.

ORA-13272: geometric object *string* in table *string* is invalid
Cause: The specified object failed the geometric integrity checks performed by the validation function.

Action: Check the Oracle Spatial documentation for information about the geometric integrity checks performed by VALIDATE_GEOMETRY_WITH_CONTEXT and correct the geometry definition if required.

ORA-13273: dimension metadata table *string* does not exist
Cause: The *layer*_SDODIM table does not exist.

Action: Verify that the specified layer name is correct and that the *layer*_SDODIM table exists in the current schema.

ORA-13274: operator invoked with non-compatible SRIDs
Cause: A spatial operator was invoked with a window geometry with an SRID but the layer has no SRID; or the window has no SRID but the layer has an SRID.

Action: Ensure that the layer and window both have an SRID or that they both do not have an SRID.

ORA-13275: spatial index creation failure on unsupported type
Cause: An attempt was made to create a spatial index on a column that was not of type SDO_GEOMETRY.

Action: A spatial index can only be created on a column of type SDO_GEOMETRY. Ensure that the indexed column is of type SDO_GEOMETRY.

ORA-13276: internal error [*string*] in coordinate transformation
Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13278: failure to convert SRID to native format
Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13281: failure in execution of SQL statement to retrieve WKT
Cause: OCI internal error, or SRID does not match a table entry.

Action: Check that a valid SRID is being used.

ORA-13282: failure on initialization of coordinate transformation
Cause: Parsing error on source or destination coordinate system WKT, or incompatible coordinate systems.

Action: Check the validity of the WKT for table entries, and check if the requested transformation is valid.

ORA-13283: failure to get new geometry object for conversion in place
Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13284: failure to copy geometry object for conversion in place
Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13285: Geometry coordinate transformation error
Cause: A coordinate pair was out of valid range for a conversion/projection.

Action: Check that data to be transformed is consistent with the desired conversion/projection.

ORA-13287: can't transform unknown gtype
Cause: A geometry with a gtype of <= 0 was specified for transformation. Only a gtype >= 1 is allowed.

Action: Check the Oracle Spatial documentation for SDO_GTYPE values, and specify a value whose last digit is 1 or higher.

ORA-13288: point coordinate transformation error
Cause: An internal error occurred while transforming points.

Action: Check the accompanying error messages.

ORA-13290: the specified unit is not supported
Cause: An Oracle Spatial function was called with an unknown UNIT value.

Action: Check Spatial documentation for the supported units, and call the function with the correct UNIT parameter.

ORA-13291: conversion error between the specified unit and standard unit
Cause: Cannot convert the specified unit from/to standard unit for linear distance, angle, or area.

Action: Check the unit specification and respecify it.

ORA-13292: incorrect ARC_TOLERANCE specification
Cause: When a SDO_BUFFER or SDO_AGGR_BUFFER function is called on a geodetic geometry, or SDO_ARC_DENSIFY is called, ARC_TOLERANCE must be specified, and it should not be less than the tolerance specified for the geometry.

Action: Check the ARC_TOLERANCE specification and ensure that it is correct.

ORA-13293: cannot specify unit for geometry without a georeferenced SRID
Cause: An Oracle Spatial function with a UNIT parameter was called on a geometry without a georeferenced SRID.

Action: Ensure that spatial functions with UNIT parameters are only called on geometries with georeferenced SRIDs.

ORA-13294: cannot transform geometry containing circular arcs
Cause: An attempt was made to transform a 3-point representation of a circular arc without distortion.

Action: Ensure that a geometry does not contain circular arcs.

ORA-13295: geometry objects are in different coordinate systems
Cause: An Oracle Spatial function was called with two geometries that have different SRIDs.

Action: Transform geometry objects to be in the same coordinate system and call the spatial function.

ORA-13296: incorrect coordinate system specification
Cause: Wrong numbers in WKT for Earth radius or flattening for the current SRID.

Action: Check WKT in the MDSYS.CS_SRS table for Earth radius and inverse flattening.

ORA-13300: single point transform error
Cause: Low-level coordinate transformation error trap.

Action: Check the accompanying error messages.

ORA-13303: failure to retrieve a geometry object from a table
Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13304: failure to insert a transformed geometry object in a table
Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13330: invalid MASK
Cause: The MASK passed to the RELATE function is not valid.

Action: Verify that the mask is not NULL. See the Oracle Spatial documentation for a list of supported masks.

ORA-13331: invalid LRS segment
Cause: The given LRS segment was not a valid line string.

Action: A valid LRS geometric segment is a line string geometry in Oracle Spatial. It could be a simple or compound line string (made of lines or arcs, or both). The dimension information must include the measure dimension as the last element in the

Oracle Spatial metadata. Currently, the number of dimensions for an LRS segment must be greater than 2 (x/y or longitude/latitude, plus measure)

ORA-13332: invalid LRS point
Cause: The specified LRS point was not a point geometry with measure information.

Action: Check the given point geometry. A valid LRS point is a point geometry in Oracle Spatial with an additional dimension for measure.

ORA-13333: invalid LRS measure
Cause: The given measure for linear referencing was out of range.

Action: Redefine the measure.

ORA-13334: LRS segments not connected
Cause: The specified geometric segments are not connected.

Action: Check the start/end points of the given geometric segments.

ORA-13335: LRS measure information not defined
Cause: The measure information of a geometric segment was not assigned (IS NULL).

Action: Assign/define the measure information. An LRS geometric segment is defined if its start and end measure are assigned (non-null).

ORA-13336: failure in converting standard diminfo/geometry to LRS dim/geom
Cause: There is no room for the measure dimension in the given diminfo, or the specified standard geometry is not a point a line string.

Action: Check if the diminfo dimensions are less than 3 or if the geometry type is point or line string.

ORA-13337: failure in concatenating LRS polygons
Cause: Referencing system (LRS) concatenation involving LRS polygons is not supported.

Action: Check the geometry and element types to ensure that the concatenate operation is not called with a polygon type.

ORA-13338: failure in reversing LRS polygon/collection geometry
Cause: Reversing a referencing system (LRS) polygon or collection geometry produced an invalid geometry.

Action: Check the geometry type to ensure that this operation is called on non-polygon geometries.

ORA-13339: LRS polygon clipping across multiple rings
Cause: Clipping (dynseg) a polygon across multiple rings is not allowed.

Action: Polygon clipping is allowed only for a single ring.

ORA-13340: a point geometry has more than one coordinate
Cause: A geometry, specified as being a point, has more than one coordinate in its definition.

Action: A point has only one coordinate. If this geometry is intended to represent a point cluster, line, or polygon, set the appropriate SDO_GTYPE or SDO_ETYPE value. If this is a single point object, remove the extraneous coordinates from its definition.

ORA-13341: a line geometry has fewer than two coordinates
Cause: A geometry, specified as being a line, has fewer than two coordinates in its definition.

Action: A line must consist of at least two distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13342: an arc geometry has fewer than three coordinates
Cause: A geometry, specified as being an arc, has fewer than three coordinates in its definition.

Action: An arc must consist of at least three distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13343: a polygon geometry has fewer than four coordinates
Cause: A geometry, specified as being a polygon, has fewer than four coordinates in its definition.

Action: A polygon must consist of at least four distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13344: an arcpolygon geometry has fewer than five coordinates
Cause: A geometry, specified as being an arcpolygon, has fewer than five coordinates in its definition.

Action: An arcpolygon must consist of at least five coordinates. An arcpolygon consists of an ordered sequence of arcs, each of which must be described using three coordinates. Since arcs are connected the end-point of the first is the start of the second and does not have to be repeated. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13345: a compound polygon geometry has fewer than five coordinates
Cause: A geometry, specified as being a compound polygon, has fewer than five coordinates in its definition.

Action: A compound polygon must contain at least five coordinates. A compound polygon consists of at least one arc and one line, each of which must be described using three and at least two distinct coordinates respectively. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13346: the coordinates defining an arc are collinear
Cause: Invalid definition of an arc. An arc is defined using three non-collinear coordinates.

Action: Alter the definition of the arc, or set the SDO_ETYPE or SDO_GTYPE to the line type.

ORA-13347: the coordinates defining an arc are not distinct
Cause: Two or more of the three points defining an arc are the same.

Action: Alter the definition of the arc to ensure that three distinct coordinate values are used.

ORA-13348: polygon boundary is not closed
Cause: The boundary of a polygon does not close.

Action: Alter the coordinate values or the definition of the SDO_GTYPE or SDO_ETYPE attribute of the geometry.

ORA-13349: polygon boundary crosses itself
Cause: The boundary of a polygon intersects itself.

Action: Correct the geometric definition of the object.

ORA-13350: two or more rings of a complex polygon touch
Cause: The inner or outer rings of a complex polygon touch.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

ORA-13351: two or more rings of a complex polygon overlap
Cause: The inner or outer rings of a complex polygon overlap.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

ORA-13352: the coordinates do not describe a circle
Cause: The set of coordinates used to describe a circle are incorrect.

Action: Confirm that the set of coordinates actually represent points on the circumference of a circle.

ORA-13353: ELEM_INFO_ARRAY not grouped in threes
Cause: The ELEM_INFO_ARRAY in an SDO_GEOMETRY definition has more or fewer elements than expected.

Action: Confirm that the number of elements in ELEM_INFO_ARRAY is divisible by 3.

ORA-13354: incorrect offset in ELEM_INFO_ARRAY
Cause: The offset field in ELEM_INFO_ARRAY of an SDO_GEOMETRY definition references an invalid array subscript in SDO_ORDINATE_ARRAY.

Action: Confirm that the offset is a valid array subscript in SDO_ORDINATE_ARRAY.

ORA-13355: SDO_ORDINATE_ARRAY not grouped by number of dimensions specified
Cause: The number of elements in SDO_ORDINATE_ARRAY is not a multiple of the number of dimensions supplied by the user.

Action: Confirm that the number of dimensions is consistent with data representation in SDO_ORDINATE_ARRAY.

ORA-13356: adjacent points in a geometry are redundant
Cause: There are repeated points in the sequence of coordinates.

Action: Remove the redundant point.

ORA-13357: extent type does not contain 2 points
Cause: Extent type should be represented by two points: lower left and upper right.

Action: Confirm that there are only two points for an extent type.

ORA-13358: circle type does not contain 3 points
Cause: Circle type should be represented by three distinct points on the circumference.

Action: Confirm that there are only three points for a circle type.

ORA-13359: extent does not have an area
Cause: The two points representing the extent are identical.

Action: Confirm that the two points describing the extent type are distinct.

ORA-13360: invalid subtype in a compound type
Cause: This subtype is not allowed within the ETYPE specified.

Action: Check the Oracle Spatial documentation for type definitions.

ORA-13361: not enough sub-elements within a compound ETYPE
Cause: The compound type declare more sub-elements than actually defined.

Action: Confirm that the number of sub-elements is consistent with the compound type declaration.

ORA-13362: disjoint sub-element in a compound polygon
Cause: Compound polygon must describe an enclosed area.

Action: Confirm that all sub-elements are connected.

ORA-13363: no valid ETYPE in the geometry
Cause: None of the ETYPEs within the geometry is supported.

Action: Confirm that there is at least one valid ETYPE.

ORA-13364: layer dimensionality does not match geometry dimensions
Cause: The spatial layer had a geometry with a different dimensions than the dimensions specified for the layer.

Action: Ensure that all geometries in a layer have the same dimensions and that they match the dimensions in the SDO_DIM_ARRAY object for the layer in the USER_SDO_GEOM_METADATA view.

ORA-13365: layer SRID does not match geometry SRID
Cause: The spatial layer had a geometry with a different SRID than the SRID specified for the layer.

Action: Ensure that all geometries in a layer have the same SRID and that the SRIDs match the SRID for the layer in the USER_SDO_GEOM_METADATA view.

ORA-13366: invalid combination of interior exterior rings
Cause: In an Oracle Spatial geometry, interior and exterior rings were not used consistently.

Action: Ensure that the interior rings corresponding to an exterior ring follow the exterior ring in the ordinate array.

ORA-13367: wrong orientation for interior/exterior rings
Cause: In an Oracle Spatial geometry, the exterior and/or interior rings are not oriented correctly.

Action: Be sure that the exterior rings are oriented counterclockwise and the interior rings are oriented clockwise.

ORA-13368: simple polygon type has more than one exterior ring
Cause: In a polygon geometry there is more than one exterior ring.

Action: Set the type to be multipolygon if more than one exterior ring is present in the geometry.

ORA-13369: invalid value for etype in the 4-digit format
Cause: A 4-digit etype for a non-polygon type element is used, or the orientation is not a valid orientation for interior/exterior rings of the polygon.

Action: Correct the geometry definition.

ORA-13370: failure in applying 3D LRS functions
Cause: Only non-geodetic 3D line string geometries (made of line segments) are supported for 3D LRS functions.

Action: Check the geometry and element types and the SRID values.

ORA-13371: invalid position of measure dimension
Cause: LRS measure dimension has to be after spatial dimensions. The position has to be either 3rd or 4th in the dim_info_array.

Action: Check the geometry's gtype and its position in the dim_info_array.

ORA-13372: failure in modifying metadata for a table with spatial index
Cause: Modifying the metadata after the index is created will cause an inconsistency between the geometry's gtype and diminfo.

Action: Modify (or Prepare) metadata before creating an index on the SDO_GEOMETRY column.

ORA-13373: invalid line segment in geodetic data
Cause: A geodetic line segment was not less than half of a great circle.

Action: Densify the line by adding points.

ORA-13374: SDO_MBR not supported for geodetic data
Cause: The SDO_MBR functionality is not supported for geodetic data.

Action: Find an alternative function that can be used in this context.

ORA-13375: the layer is of type [*string*] while geometry inserted has type [*string*]
Cause: The layer has a type that is different or inconsistent with the type of the current geometry.

Action: Change the geometry type to agree with the layer type, or change the layer type to agree with the geometry type.

ORA-13376: invalid type name specified for layer_gtype parameter
Cause: An invalid type name is specified for the layer_gtype constraint.

Action: See the Spatial documentation for of valid keywords that can be used in defining a layer_gtype constraint.

ORA-13377: invalid combination of elements with orientation
Cause: An element of the geometry had orientation specified while some other element had no orientation specified (4-digit etype).

Action: Ensure that all of the polygon elements have orientation specified using the 4-digit etype notation.

ORA-13378: invalid index for element to be extracted
Cause: An invalid (or out of bounds) index was specified for extracting an element from a geometry.

Action: Ensure that the parameters to the extract function are in the valid range for the geometry.

ORA-13379: invalid index for sub-element to be extracted
Cause: An invalid (or out of bounds) index was specified for extracting a sub-element from a geometry.

Action: Ensure that the parameters to the extract function are in the valid range for the geometry.

ORA-13380: network not found
Cause: The specified network was not found in the network metadata.

Action: Insert the network information in the USER_SDO_NETWORK_METADATA view.

ORA-13381: table:*string* not found in network:*string*
Cause: The specified table was not found in the network metadata.

Action: Insert the table information in the USER_SDO_NETWORK_METADATA view.

ORA-13382: geometry metadata (table:*string* column:*string*) not found in spatial network:*string*
Cause: The specified geometry metadata was not found in the spatial network metadata.

Action: Insert the spatial metadata information in the USER_SDO_NETWORK_METADATA view.

ORA-13383: inconsistent network metadata: *string*
Cause: There was an inconsistency between the network metadata and the node/link information.

Action: Check the network metadata and the node/link information.

ORA-13384: error in network schema: *string*
Cause: The network table(s) did not have required column(s)

Action: Check the network schema.

ORA-13385: error in network manager: [*string*]
Cause: There was an internal error in network manager.

Action: Contact Oracle Customer Support for more help.

ORA-13386: commit/rollback operation error: [*string*]
Cause: The index-level changes were not fully incorporated as part of the commit or rollback operation.

Action: Correct the specified error and use the following statement: ALTER INDEX *index-name* PARAMETERS ('index_status=synchronize');

ORA-13387: sdo_batch_size for array inserts should be in the range [*number*,*number*]
Cause: The specified value for sdo_batch_size was too high or too low.

Action: Change the value to be in the specified range.

ORA-13388: invalid value for dst_spec parameter
Cause: The dst_spec parameter was specified in the wrong format.

Action: Check the documentation for this parameter.

ORA-13389: unable to compute buffers or intersections in analysis function
Cause: There was an internal error in computing the buffers or intersections in the specified spatial analysis function.

Action: Modify the tolerance value in the USER_SDO_GEOM_METADATA view before invoking the spatial analysis function.

ORA-13390: error in spatial analysis and mining function: [*string*]
Cause: There was an internal error in the specified analysis function.

Action: Contact Oracle Customer Support for more help.

ORA-13391: *string*
Cause: An attempt was made to violate GeoRaster management restrictions.

Action: Check the documentation for more detailed information.

ORA-13392: status report error: *string*
Cause: There was an error on status report related operation.

Action: Check the error message for details.

ORA-13393: null or invalid *string* parameter
Cause: The operation failed because the input parameter was null or invalid.

Action: Correct the parameter and try again.

ORA-13397: different dimension sizes in the input GeoRaster objects
Cause: The two input GeoRaster objects had different dimension sizes.

Action: Check the documentation and ensure that the dimension size is the same for both input GeoRaster objects.

ORA-13398: invalid expression parameter: *string*
Cause: The expression parameter was not a valid math expression.

Action: Check the documentation and ensure that the expression parameter is correct.

ORA-13399: invalid condition parameter: *string*
Cause: The condition parameter was not a valid boolean expression.

Action: Check the documentation and ensure that the condition parameter is correct.

ORA-13400: duplicate entry for *string* in USER_SDO_GEOR_SYSDATA view
Cause: The current operation caused a duplicate RASTER_DATA_TABLE and RASTER_ID combination to be inserted into the USER_SDO_GEOR_SYSDATA view.

Action: Ensure that the RASTER_DATA_TABLE and RASTER_ID combination to be inserted into the USER_SDO_GEOR_SYSDATA view is unique.

ORA-13401: duplicate entry for *string* in USER_SDO_GEOR_SYSDATA view
Cause: The RASTER_DATA_TABLE and RASTER_ID columns contained the same information in two or more rows in the USER_SDO_GEOR_SYSDATA view.

Action: Ensure that the RASTER_DATA_TABLE and RASTER_ID columns in the USER_SDO_GEOR_SYSDATA view contain the correct information, and that the value pair is unique for each row.

ORA-13402: the rasterType is null or not supported
Cause: The specified rasterType was null or not supported.

Action: Check the documentation for the rasterType number and/or formats supported by GeoRaster.

ORA-13403: invalid rasterDataTable specification: *string*
Cause: The raster data table name specified for a GeoRaster object was not unique among raster data table names in the database; or for a GeoRaster object, which was not empty and was not blank, or was used as an output GeoRaster object, one or more of the following requirements were not met. The raster data table must: - Exist. - Be visible in the current schema. - Be defined in the same schema as the GeoRaster data table. - Be an object table of SDO_RASTER type or a relational table with the same columns as the attributes of the SDO_RASTER type.

Action: Check the rasterDataTable specification and ensure that all relevant raster data table requirements are met.

ORA-13404: invalid ultCoordinate parameter
Cause: The ultCoordinate array parameter had the wrong length or contained an invalid value.

Action: Check the documentation and ensure that the ultCoordinate parameter is correct.

ORA-13405: null or invalid dimensionSize parameter
Cause: The dimensionSize array parameter was NULL, had the wrong length, or contained an invalid value.

Action: Check the documentation and ensure that the dimensionSize parameter is correct.

ORA-13406: null or invalid GeoRaster object for output
Cause: The GeoRaster object for output was NULL or invalid.

Action: Ensure that the GeoRaster object for output has been initialized properly.

ORA-13407: invalid storage parameter*string*
Cause: The storage parameter contained an invalid specification.

Action: Check the documentation and ensure that the storage parameter is correct.

ORA-13408: invalid blockSize storage parameter
Cause: The blockSize storage parameter had the wrong length or contained an invalid value.

Action: Check the documentation and ensure that the blockSize storage parameter is correct.

ORA-13409: null or invalid pyramidLevel parameter
Cause: The specified pyramidLevel parameter was NULL or invalid.

Action: Ensure that the pyramidLevel parameter specifies a valid pyramid level value for the GeoRaster object.

ORA-13410: invalid layerNumbers or bandNumbers parameter
Cause: The layerNumbers or bandNumbers parameter was invalid.

Action: Check the documentation and ensure that the layerNumbers or bandNumbers parameter is valid.

ORA-13411: subset results in null data set
Cause: The intersection of cropArea and source GeoRaster object was NULL.

Action: Check the documentation and ensure that the cropArea parameter is correct.

ORA-13412: invalid scale parameter*string*
Cause: The scale parameter contained an invalid specification.

Action: Check the documentation and ensure that the scale parameter is correct.

ORA-13413: null or invalid resampling parameter
Cause: The resampling parameter was NULL or invalid.

Action: Check the documentation and ensure that the resampling parameter is correct.

ORA-13414: invalid pyramid parameter
Cause: The pyramid parameter was invalid.

Action: Check the documentation and ensure that the pyramid parameter is correct.

ORA-13415: invalid or out of scope point specification
Cause: The point position specified by the <ptGeom, layerNumber> or <rowNumber, colNumber, bandNumber> parameter combination was invalid or out of scope.

Action: Ensure that the parameters specify a valid point that is or can be translated into a cell position inside the cell space of the GeoRaster object.

ORA-13416: invalid geometry parameter
Cause: The geometry parameter did not specify a valid single-point geometry.

Action: Specify a valid single-point geometry.

ORA-13417: null or invalid layerNumber parameter
Cause: The layerNumber parameter was null or out of scope.

Action: Specify a valid layerNumber parameter.

ORA-13418: null or invalid parameter(s) for set functions
Cause: A parameter for set metadata operations was null or invalid.

Action: Check the documentation for information about the parameters.

ORA-13419: cannot perform mosaic or append operation: *string*
Cause: An attempt to perform a mosaic or append operation failed.

Action: Check the error message for details.

ORA-13420: the SRID of the geometry parameter was not null
Cause: The input geometry was not in the GeoRaster cell space, which had a NULL SRID value.

Action: Ensure that the geometry parameter has a NULL SRID.

ORA-13421: NULL or invalid cell value
Cause: The cell value was NULL or out-of-scope.

Action: Ensure that the cell value is not NULL and is in the range as designated by the cellDepth definition of the specified GeoRaster object.

ORA-13422: invalid model coordinate parameter
Cause: The model coordinate array parameter had the wrong length or had NULL ordinate element(s).

Action: Ensure that the model coordinate parameter is valid.

ORA-13423: invalid cell coordinate parameter
Cause: The cell coordinate array parameter had the wrong length or had NULL ordinate element(s).

Action: Ensure that the cell coordinate parameter is valid.

ORA-13424: the GeoRaster object is not spatially referenced
Cause: The GeoRaster object was not spatially referenced.

Action: Ensure that the GeoRaster object is spatially referenced.

ORA-13425: invalid background filling value parameter
Cause: The background filling value parameter was invalid either because the array had the wrong size or because some of the element values were invalid.

Action: Ensure that the parameter that specifies the background filling value is valid. The size of the array must equal either 1 (the value is for all bands) or the exact band dimension size. The element values must be valid cell values as determined by the cell depth.

ORA-13426: invalid window parameter
Cause: The specified window parameter was invalid.

Action: Specify a valid window parameter. Check the documentation for details.

ORA-13427: invalid bitmap mask
Cause: The bitmap mask was not a valid 1-bit GeoRaster object, or it had the wrong dimension sizes.

Action: Ensure that the bitmap mask is a valid 1-bit GeoRaster object with only one band, and the row and column dimension sizes of the bitmap mask are the same as those of the target GeoRaster object.

ORA-13428: invalid modelCoordinateLocation
Cause: The program [or user] specified a modelCoordinateLocation that is not supported, or the modelCoordinateLocation of the GeoRaster object was wrong.

Action: Set or specify the modelCoordinateLocation to be CENTER (0) or UPPERLEFT (1).

ORA-13429: invalid xCoefficients or yCoefficients parameter(s)
Cause: An attempt to perform a georeference operation failed. Possible reasons include xCoefficients or yCoefficients having the wrong number of coefficients or invalid coefficients.

Action: Check the documentation for supported coefficient specifications.

ORA-13430: the GeoRaster object has null attribute(s)
Cause: The metadata or rasterType of the GeoRaster object was null.

Action: This object may only be used as an output parameter of procedures or functions. It is not valid for other purposes.

ORA-13431: GeoRaster metadata rasterType error
Cause: The rasterType in the metadata of the GeoRaster object was inconsistent with the GeoRaster rasterType attribute.

Action: Ensure that the rasterType in the metadata of the GeoRaster object and the GeoRaster rasterType attribute have the same value.

ORA-13432: NULL or invalid blankCellValue
Cause: The blankCellValue element could not be found in the metadata of a blank GeoRaster object, or the specified blankCellValue element value was NULL or invalid.

Action: Call the SDO_GEOR.setBlankCellValue package to add blankCellValue to the metadata whenever the isBlank element value is TRUE, and ensure that the specified blankCellValue element value is not NULL and is in the range as designated by the cellDepth definition of the GeoRaster object.

ORA-13433: GeoRaster metadata default RGB error
Cause: At least one of the defaultRed, defaultGreen, and defaultBlue values (logical layer numbers) was zero, negative, or out of range.

Action: Check the documentation for details.

ORA-13434: GeoRaster metadata cellRepresentation error
Cause: The cellRepresentation type was not supported.

Action: Check the documentation for supported cellRepresentation types.

ORA-13435: GeoRaster metadata dimension inconsistent
Cause: The specification of dimensions or totalDimensions was inconsistent with rasterType, or vice versa.

Action: Ensure that the dimension specifications are consistent.

ORA-13436: GeoRaster metadata dimensionSize error
Cause: Either the dimensionSize for each dimension was not specified, or an extraneous dimensionSize was specified.

Action: Add a dimsenionSize for each dimension of the GeoRaster object and delete extra dimensionSize elements.

ORA-13437: GeoRaster metadata blocking error
Cause: Either the wrong block number(s) or block size(s) along dimensions were specified, or the block numbers and sizes when taken together were not consistent.

Action: Check the documentation for details.

ORA-13438: GeoRaster metadata pyramid type error
Cause: The specified pyramid type was not supported.

Action: Check the documentation for supported pyramid types.

ORA-13439: GeoRaster metadata pyramid maxLevel error
Cause: The specified maxLevel exceeded the maximum level allowed by the specified pyramid type.

Action: Check the documentation for supported pyramid types and their total level limitations.

ORA-13440: GeoRaster metadata compression type error
Cause: The specified compression type was not supported.

Action: Check the documentation for supported compression types.

ORA-13441: GeoRaster metadata SRS error: *string*
Cause: The specified error related to the polynomialModel element in the spatial reference system (SRS) metadata.

Action: Check the documentation and ensure that a valid polynomial model is specified.

ORA-13442: GeoRaster object not registered: *string*
Cause: There was no SYSDATA entry for the specified GeoRaster object.

Action: Ensure that a sysdata entry has been inserted for the specified GeoRaster object.

ORA-13443: null or invalid values in *string*
Cause: There were NULL or invalid component values in the specified metadata.

Action: Check the documentation and ensure that all of the component values are valid.

ORA-13444: cannot perform mergeLayers operation
Cause: The two GeoRaster objects whose layers are to be combined together either had different row or column dimension sizes, or their georeferencing information did not match.

Action: Ensure that the objects have the same row and column dimension sizes. If neither is georeferenced, their ULTCoordinate values must be the same. Otherwise, they must be both georeferenced and cover the same area in the model space.

ORA-13445: NULL or invalid NODATA value or value range
Cause: There was an invalid NODATA value or value range in the metadata, or the specified NODATA value or value range was invalid.

Action: Ensure that the NODATA value or value range is not NULL and is completely contained in the range as designated by the cellDepth definition of the specified GeoRaster object.

ORA-13446: GeoRaster metadata TRS error
Cause: The GeoRaster Temporal Reference System was not supported.

Action: Set isReferenced to FALSE.

ORA-13447: GeoRaster metadata BRS error
Cause: The GeoRaster Band Reference System was not supported.

Action: Set isReferenced to FALSE.

ORA-13448: GeoRaster metadata BRS error
Cause: The GeoRaster spectral extent specification was incorrect.

Action: The MIN value must be less than the MAX value in the spectralExtent element.

ORA-13449: GeoRaster metadata ULTCoordinate error
Cause: The GeoRaster rasterInfo ULTCoordinate was not correct.

Action: Check the documentation for restrictions.

ORA-13450: GeoRaster metadata layerInfo error
Cause: The GeoRaster had more than one layerInfo element, or the layerDimension value was not supported.

Action: The current release only supports one layerInfo element; layer can only be defined along one dimension, and this dimension must be BAND.

ORA-13451: GeoRaster metadata scaling function error
Cause: The scaling function had a zero denominator.

Action: Ensure that the scaling function denominator is not zero.

ORA-13452: GeoRaster metadata BIN function error
Cause: The bin function data did not match its type.

Action: For EXPLICIT type, provide a binTableName element; otherwise, provide a binFunctionData element.

ORA-13453: GeoRaster metadata layer error
Cause: Too many subLayers were defined for the GeoRaster object, or layerNumber or layerDimensionOrdinate was not assigned correctly.

Action: The total number of logical layers cannot exceed the total number of physical layers, and each logical layer must be assigned a valid physical layer number following the same order. Check the documentation for more details.

ORA-13454: GeoRaster metadata is invalid
Cause: The GeoRaster metadata was invalid against its XML Schema.

Action: Run the schemaValidate routine to find the errors.

ORA-13455: GeoRaster metadata TRS error
Cause: The beginDateTime value was later than the endDateTime value.

Action: Ensure that the beginDateTime value is not later than the endDateTime value.

ORA-13456: GeoRaster cell data error: *string*
Cause: There was an error in the original GeoRaster cell data or in the cell data of the pyramids.

Action: If the error is related to the original GeoRaster cell data, the GeoRaster object is invalid and has to be deleted or manually repaired. If the error is related to pyramids, delete the pyramids and regenerate them.

ORA-13457: bitmap mask cell data error: *string*
Cause: There was an error in the cell data of an original bitmap mask or in the cell data of the pyramids of a bitmap mask.

Action: If the error is related to an original bitmap mask, remove the bitmap mask. If the error is related to the pyramids of a bitmap mask, delete the pyramids and regenerate them.

ORA-13458: GeoRaster metadata SRS error
Cause: The polynomial model did not match the requirements of a rectified GeoRaster object.

Action: Check the documentation for the requirements of the polynomial model for a rectified GeoRaster object, or set isRectified to be false.

ORA-13459: GeoRaster metadata SRS error
Cause: The polynomial model was not an six-parameter transformation, or the six-parameter transformation was not valid.

Action: Check the documentation and ensure that the polynomial model is a valid six-parameter affine transformation.

ORA-13460: GeoRaster metadata SRS error
Cause: The referenced GeoRaster object had a zero model space SRID or the specified model space SRID was zero.

Action: Set or specify the model space SRID to be a nonzero number.

ORA-13461: the interleaving type is not supported
Cause: The interleaving type of the GeoRaster object was not supported.

Action: Check the documentation for the interleaving types supported by GeoRaster. Use SDO_GEOR.changeFormatCopy to transform the image to a supported interleaving type.

ORA-13462: invalid blocking specification
Cause: The specified blocking configuration was invalid.

Action: Check the documentation for the blocking specification supported by GeoRaster.

ORA-13463: error retrieving GeoRaster data: *string*
Cause: An internal error occurred while retrieving GeoRaster data from the database.

Action: Check the error message for details.

ORA-13464: error loading GeoRaster data: *string*
Cause: An internal error occurred while loading GeoRaster data into the database.

Action: Check the error message for details.

ORA-13465: null or invalid table or column specification
Cause: The specified table or column did not exist, or the column was not a GeoRaster column.

Action: Ensure that the specified table exists and the specified column is a GeoRaster column.

ORA-13466: format not appropriate for specified compression method: *string*
Cause: The operation failed because the GeoRaster object had an inappropriate type or format for the specified compression method. The GeoRaster type or format is not supported for the specified compression.

Action: Check the error message for details. Check the documentation for the appropriate GeoRaster types and formats for each compression method. Use SDO_GEOR.changeFormatCopy to transform the GeoRaster object to an appropriate format, or apply another compression method.

ORA-13467: unsupported GeoRaster metadata specification: *string*
Cause: The GeoRaster metadata specification is not supported.

Action: Check the documentation for the supported GeoRaster metadata specifications.

ORA-13468: invalid blockMBR
Cause: Invalid blockMBR geometries were stored in the raster data table.

Action: Ensure that the blockMBR geometries stored in the raster data table are valid, or call the SDO_GEOR.generateBlockMBR() package to regenerate the blockMBR geometries.

ORA-13469: cannot perform updateRaster operation
Cause: The data of the source GeoRaster object could not be used to update that of the target GeoRaster object.

Action: Ensure that the source and the target GeoRaster objects have the same cell depth, and that both objects are either georeferenced or not georeferenced at all. If both are georeferenced, they should be in the same coordinate system and have the same spatial resolutions.

ORA-13470: target and source layers or bands mismatched
Cause: The number of specified target layers or bands and source layers or bands did not match.

Action: When updating layers or bands of a target GeoRaster object to reflect the associated layers or bands of the source GeoRaster object, specify the same number of layers or bands for both the source and the target objects. Check the documentation for details.

ORA-13471: unable to determine the owner of *string*
Cause: The owner of the specified raster data table could not be determined.

Action: Ensure that the GeoRaster object that refers to the raster data table has been registered by inserting the object into a GeoRaster table.

ORA-13472: invalid geometry parameter
Cause: The geometry parameter did not specify a valid geometry.

Action: Specify a valid 2D or 3D geometry. If the model SRID is null or indicates a 2D coordinate system, the geometry must be 2D. If the model SRID indicates a 3D coordinate system, the geometry must either be a 3D geometry or a 2D geometry that can be converted to 3D with the specified vertical axis (or vertical SRID) and ellipsoidal parameters.

ORA-13473: invalid rasterSpec parameter
Cause: The rasterSpec parameter contained an invalid specification.

Action: Check the documentation and ensure that the rasterSpec parameter contains only valid keywords and values.

ORA-13474: invalid rasterDataTable name: *string*
Cause: The rasterDataTable name was not a valid nonquoted identifier, it contained a period separator, or not all of the alphanumeric characters were uppercase.

Action: Ensure that the table name is a valid nonquoted identifier without any period separators, and that all the alphanumeric characters are uppercase.

ORA-13475: invalid GeoRaster object for output
Cause: The output GeoRaster object had the same RASTER_DATA_TABLE and RASTER_ID combination as that of an input GeoRaster object.

Action: Ensure that the output GeoRaster object is different from any of the input GeoRaster objects.

ORA-13476: invalid or out of scope point specification
Cause: The point position specified by the point geometry parameter or the rowNumber/colNumber parameter combination was null or out of scope.

Action: Ensure that the parameters specify a valid point that translates or can be translated into a cell position inside the cell space of the GeoRaster object.

ORA-13477: invalid GCP georeferencing specification: *string*
Cause: The specified functional fitting method was not supported, the number of GCPs was insufficient, some GCPs were invalid, or the distribution of the GCPs led to no solution or an unstable solution.

Action: Check the GeoRaster documentation for the supported functional fitting methods and the requirements of GCPs.

ORA-13478: the target SRID is the same as the source GeoRaster object's SRID
Cause: The target SRID was not different from the source GeoRaster object's SRID.

Action: Specify a different valid SRID for the target GeoRaster object.

ORA-13479: cannot reproject
Cause: Reprojection from source to destination projection produced a large distortion.

Action: Check the destination projection and ensure that it is suitable for the area covered by the source GeoRaster object. Check the GeoRaster documentation for more information about reprojection.

ORA-13480: the Source Type is not supported
Cause: The specified source type was not supported.

Action: Check the documentation for the source types (such as FILE and HTTP) supported by GeoRaster.

ORA-13481: the destination type is not supported
Cause: The specified destination type was not supported.

Action: Check the documentation for the destination types (such as FILE) supported by GeoRaster.

ORA-13482: GeoRaster object is not initialized for the image
Cause: No GeoRaster object has been initialized for the specified image.

Action: Initialize a GeoRaster object to hold this image before loading it into the database. Check the documentation for details.

ORA-13483: insufficient memory for the specified GeoRaster data
Cause: There was insufficient memory to hold the specified GeoRaster data for this operation.

Action: Use SDO_GEOR.subset to isolate a subset of the GeoRaster data, or reblock the GeoRaster data into smaller sized blocks. Check the documentation for details.

ORA-13484: the file format or compression type is not supported: *string*
Cause: The file format or compression type was not supported.

Action: Check the documentation for formats that are currently supported by GeoRaster.

ORA-13485: error occurred during compression or decompression: *string*
Cause: The operation could not be completed because an error occurred during compression or decompression. Check the error message for details.

Action: Check that the GeoRaster object is valid, that its metadata is valid for the specified compression format, and that valid parameters are passed into the compression or decompression operation.

ORA-13486: invalid or insufficient GeoTIFF metadata to georeference the GeoRaster object: *string*
Cause: The GeoTIFF metadata of the specified input image contained invalid or insufficient information to georeference the GeoRaster object.

Action: Check the error message for details.

ORA-13487: SRID not found for source coordinate system metadata
Cause: No SRID was found in the Oracle Spatial CS_SRS table to match the source coordinate system metadata.

Action: Add a user-defined coordinate reference system for this coordinate system, as explained in the Oracle Spatial documentation.

ORA-13488: cannot perform transformation: *string*
Cause: An attempt to perform a transformation operation failed.

Action: Check the error message for details.

ORA-13489: GeoRaster operation failed: *string*
Cause: There was an error in the GeoRaster operation, parameters, or compression types.

Action: Check the error message and take the appropriate action or contact Oracle Support Services for further assistance.

ORA-13495: The Oracle Spatial and Graph Option is needed for using this feature.
Cause: The specified option is not installed or enabled.

Action: Consider purchasing and installing the missing option or enabling the option if it was already installed.

ORA-13497: *string*
Cause: This is an internal GeoRaster error.

Action: Contact Oracle Support Services. You may want to ensure that the GeoRaster object is valid before you do so.

ORA-13498: *string*
Cause: An error related to an external plugin was encountered in the GeoRaster component.

Action: Check the documentation for the external plugin, or contact the plugin provider and supply the exact error text.

ORA-13499: *string*
Cause: This is an internal Oracle Spatial error.

Action: Contact Oracle Support Services.

ORA-13500: SYSAUX DATAFILE clause specified more than once
Cause: The CREATE DATABASE command contains more than one SYSAUX DATAFILE clause.

Action: Specify at most one SYSAUX DATAFILE clause.

ORA-13501: Cannot drop SYSAUX tablespace
Cause: Tried to drop SYSAUX tablespace

Action: None

ORA-13502: Cannot rename SYSAUX tablespace
Cause: An attempt to rename the SYSAUX tablespace failed.

Action: No action required.

ORA-13503: Creating SYSAUX tablespace with invalid attributes
Cause: An attempt to create the SYSAUX tablespace with invalid attributes.

Action: Create SYSAUX tablespace with ONLINE, PERMANENT, EXTENT MANAGEMENT LOCAL, SEGMENT SPACE MANAGEMENT AUTO attributes.

ORA-13504: No SYSAUX datafile clause specified
Cause: If Create Database has the datafile clause, then SYSAUX datafile clause has to be specified, unless using OMF.

Action: Specify the SYSAUX datafile clause.

ORA-13505: SYSAUX tablespace can not be made read only
Cause: Attempting to set the SYSAUX tablespace to read only. The SYSAUX tablespace must remain read write for database operation.

Action: Leave SYSAUX tablespace read write.

ORA-13506: operation failed due to invalid snapshot range (*string*, *string*)
Cause: An attempt was made to perform operation with an invalid Start/End Snapshot Pair.

Action: Choose a valid Start/End Snapshot Pair.

ORA-13509: error encountered during updates to a AWR table
Cause: An update error occurred during OCI operation due to an underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13510: invalid RETENTION *string*, must be in the range (*string*, *string*)
Cause: The user has specified a RETENTION setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid RETENTION setting and retry the operation.

ORA-13511: invalid INTERVAL *string*, must be in the range (*string*, *string*)
Cause: The user has specified a INTERVAL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid INTERVAL setting and retry the operation.

ORA-13514: Metric Capture too close to last capture, group *string*
Cause: The metric capture cannot be executed because it is too close to the last capture (within 1 centi-second).

Action: add some delay and reissue command to retry.

ORA-13515: Error encountered during Database Usage Statistics capture
Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13516: AWR Operation failed: *string*
Cause: The operation failed because AWR is not available. The possible causes are: AWR schema not yet created; AWR not enabled; AWR schema not initialized; or database not open or is running in READONLY or STANDBY mode.

Action: check the above conditions and retry the operation.

ORA-13517: Baseline (id = *string*) does not exist
Cause: The operation failed because the specified baseline ID does not exist in the Workload Repository.

Action: check the baseline id and retry the operation.

ORA-13518: Invalid database id (*string*)
Cause: The operation failed because the specified database ID does not exist in the Workload Repository.

Action: check the database id and retry the operation.

ORA-13519: Database id (*string*) exists in the workload repository
Cause: The operation failed because the specified database ID already exists in the Workload Repository.

Action: check the database id and retry the operation.

ORA-13520: Database id (*string*) not registered, Status = *string*
Cause: The operation failed because the specified database ID was not registered in the Workload Repository properly.

Action: check the status of database id and retry the operation.

ORA-13521: Unregister operation on local Database id (*string*) not allowed
Cause: The operation failed because the local database ID cannot be unregistered from the Workload Repository.

Action: check the database id and retry the operation.

ORA-13523: unable to allocate required space for return type
Cause: Out of memory to allocate the space for the return variable for an external procedure.

Action: Try operation again.

ORA-13524: error encountered while retrieving baseline information
Cause: A read error occurred during the OCI operation to retrieve the baseline information

Action: Check associated error. Correct problem and retry the operation.

ORA-13525: error with computing space usage for sysaux occupant
Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13526: baseline (*string*) does not exist
Cause: The operation failed because the specified baseline name does not exist in the Workload Repository.

Action: check the baseline name and retry the operation.

ORA-13527: invalid baseline name
Cause: The operation failed because the specified baseline name is invalid.

Action: check the baseline name and retry the operation.

ORA-13528: name (*string*) is already used by an existing baseline
Cause: The operation failed because the specified baseline name already exists in the Workload Repository.

Action: check the baseline name and retry the operation.

ORA-13529: Error occurred when flushing AWR table group
Cause: An error occurred during the flushing of a table group. Because of the error in the group, we are unable to flush this table.

Action: Check the error associated with the table group.

ORA-13530: invalid TOPNSQL *string*, must be in the range (*string*, *string*)
Cause: The user has specified a TOPNSQL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid TOPNSQL setting and retry the operation.

ORA-13531: SQL Text was purged from AWR before the operation completed
Cause: A SQL was purged from AWR before the operation completed.

Action: Retry the operation.

ORA-13532: SQL ID [*string*] already exists
Cause: The operation failed because the specified SQL ID already existed in the repository.

Action: Check the SQL ID and retry the operation.

ORA-13533: invalid SQL ID
Cause: The operation failed because the specified SQL ID was invalid.

Action: Check the SQL ID and retry the operation.

ORA-13534: Current SQL count(*string*) reached maximum allowed (*string*)
Cause: The operation failed because the maximum allowed colored SQL was exceeded.

Action: Check the count for colored SQL.

ORA-13535: name (*string*) is already used by an existing baseline template
Cause: The operation failed because the specified baseline template name already existed in the Workload Repository.

Action: Check the baseline template name and retry the operation.

ORA-13536: baseline template (*string*) does not exist
Cause: The operation failed because the specified baseline template name did not exist in the Workload Repository.

Action: Check the baseline template name and retry the operation.

ORA-13537: invalid input for create baseline template (*string*, *string*)
Cause: Invalid input was specified for the create baseline template routine.

Action: Check the argument displayed in the error message text.

ORA-13538: invalid value for baseline expiration (*string*)
Cause: An invalid value was specified for the expiration of a baseline. The expiration is specified in number of days, and the expiration must be at least one day.

Action: Check the value for expiration.

ORA-13539: invalid input for modify baseline window size (*string*, *string*)
Cause: Invalid input was specified for the modify baseline window size routine.

Action: Check the argument displayed in the error message text.

ORA-13540: operation not allowed on system moving window baseline (*string*)
Cause: The requested operation was not allowed on the system moving window baseline.

Action: Retry the operation with another baseline name.

ORA-13541: system moving window baseline size (*string*) greater than retention (*string*)
Cause: The system moving window baseline size must be less than the retention setting. The specified window size or retention violate this.

Action: Check the moving window baseline size or retention.

ORA-13542: baseline ID (*string*) does not exist
Cause: The operation failed because the specified baseline ID did not exist in the Workload Repository.

Action: Check the baseline ID and retry the operation.

ORA-13543: error encountered while retrieving baseline template information
Cause: A read error occurred during the OCI operation to retrieve the baseline template information.

Action: Check associated error. Correct problem and retry the operation.

ORA-13544: error encountered while automatically generating a baseline
Cause: An error occurred while automatically generating a baseline based on the template information.

Action: Look in the trace file for more error information.

ORA-13545: invalid baseline template name
Cause: The operation failed because the specified baseline template name was an invalid identifier.

Action: Check the baseline template name and retry the operation.

ORA-13546: Error encountered during maintenance of Adaptive Thresholds
Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13547: Unable to drop baseline since it is in use by *string*
Cause: The system is not able to drop the baseline since the baseline is in use by a functionality that depends on its existence.

Action: Note the name of the functionality using the baseline, and check if the functionality still needs the baseline.

ORA-13548: Unable to find valid snapshot IDs for the inputted baseline time range
Cause: The system is not able to find valid snapshot IDs for the inputted time range while attempting to create a baseline.

Action: Check that the inputted time range has at least two valid snapshots. The dba_hist_snapshot displays the snapshot id and time information.

ORA-13549: invalid input for create baseline with time range (*string*)
Cause: Invalid time input was specified for the create baseline routine.

Action: Check the argument displayed in the error message text.

ORA-13550: value "*string*" of length (*string*) exceeded maximum length (*string*) for parameter [*string*]
Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) registration routine.

Action: Check the argument displayed in the error message text.

ORA-13551: source database name [*string*] not found in AWR
Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) operation.

Action: Check the argument displayed in the error message text.

ORA-13552: parameter [*string*] of value [*string*] mismatched with AWR registered value [*string*]
Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) operation.

Action: Check the argument displayed in the error message text.

ORA-13553: operation failed - missing parameter [*string*]
Cause: The required parameter was missing for the Automatic Workload Repository (AWR) operation.

Action: Check the parameter name displayed in the error message text.

ORA-13554: baseline template (*string*) is a directory
Cause: The operation failed because the specified baseline template name was a directory.

Action: Check the baseline template name and retry the operation.

ORA-13555: purge operation failed - [*string*]
Cause: The purge operation failed due to the reason described in the error message.

Action: Correct the stated problem and retry the operation.

ORA-13556: snapshot on remote sources not enabled
Cause: The current database was not set up for snapshots on remote databases. See the description in the error message.

Action: Correct the system settings and retry the operation.

ORA-13557: reset operation failed - [*string*]
Cause: The Automatic Workload Repository (AWR) reset operation failed due to the reason described in the error message.

Action: Correct the stated problem and retry the operation.

ORA-13558: remote database registration mismatch; database ID (*string*)
Cause: The remote Automatic Workload Repository (AWR) operation failed because the remote database did not match the local registration data. The operation was aborted because it was meant for another database ID. Either the database or the remote database ID changed and needs to be updated or registered in the repository.

Action: Ensure that the database links for the affected database are still valid and point to the registered database. Use any additional errors reported to identify and rectify the the underlying issue. Correct the mismatch or unregister and register the affected database ID.

ORA-13559: CPU time or run time policy violation - *string*
Cause: The operation ran longer than the expected time.

Action: If this error persists, contact Oracle Support Services.

ORA-13560: SYSAUX tablespace cannot be brought offline; shut down if necessary
Cause: An attempt was made to bring a SYSAUX tablespace offline.

Action: Shut down the database if necessary and do a recovery.

ORA-13561: cannot drop SYSAUX tablespace
Cause: An attempt was made to drop a SYSAUX tablespace.

Action: None

ORA-13562: AWR operation failed because tablespace (*string*) is invalid.
Cause: The operation failed because the tablespace was invalid for the Automatic Workload Repository (AWR) or was not available.

Action: Provide a valid tablespace, ensure that the tablespace is available and retry the operation.

ORA-13563: AWR warehouse functionality is disabled.
Cause: The operation failed because the Automatic Workload Repository (AWR) warehouse feature was disabled.

Action: Enable AWR warehouse functionality and retry the operation.

ORA-13564: The database is already registered as a *string*.
Cause: The operation failed because the database was already registered as a warehouse server or a warehouse client.

Action: Reconfigure the existing warehouse setting and retry the operation.

ORA-13565: The database is not registered as a *string*.
Cause: The operation failed because the database was not registered as a warehouse server or a warehouse client.

Action: Configure the database as a warehouse server or warehouse client and retry the operation.

ORA-13566: failure to create a subdirectory under directory [*string*]
Cause: The operation failed because the system could not create a subdirectory under the specified mailbox directory.

Action: Check the operating system privileges to allow the database system to create subdirectories under the specified mailbox directory.

ORA-13567: DBID (%0!s) of client (%1!s) or the warehouse DBID (%2!s) were already registered in the warehouse.
Cause: The operation failed because either the DBID of the specified client or the specified warehouse DBID was already registered in the warehouse.

Action: Unregister the existing DBID and retry the operation.

ORA-13568: DBID (%0!s) of client (%1!s) was not registered in the warehouse.
Cause: The DBID of the client was not registered in the warehouse.

Action: Register the client and retry the operation.

ORA-13569: The registered directory object (*string*) is invalid.
Cause: The registered directory object was invalid.

Action: Create the directory object and retry the operation.

ORA-13570: unable to read label file (%0!s) in the directory (%1!s)
Cause: The operation failed because the database could not read the label file in the specified directory.

Action: Check the operating system privileges or the presence of the file or both.

ORA-13571: AWR import or export operation failed: *string*
Cause: The Automatic Workload Repository (AWR) import or export operation failed due to some errors. The possible causes were: - The specified database directory object was invalid. - The specified dump file existed in the specified directory. - The specified dump file did not exist in the specified directory. - Data Pump job encountered some errors. - The operation exceeded the maximum number of retries.

Action: In the log file, check the conditions and errors mentioned in the Cause, correct the problem, and retry the command.

ORA-13572: input parameters to AWR warehouse operation are invalid: *string*
Cause: The input parameters to the Automatic Workload Repository (AWR) warehouse were invalid.

Action: Correct the input parameters and retry the operation.

ORA-13573: Package (*string*) is being processed by the warehouse.
Cause: The specified package was reported to the warehouse previously. It was already being processed by the warehouse.

Action: None

ORA-13574: Input parameters to AWR operation are invalid: *string*
Cause: The input parameters to the Automatic Workload Repository (AWR) operation were invalid.

Action: Correct the input parameters and retry the operation.

ORA-13575: Import operation failed. Version *string* is outside the supported range [*string*, *string*].
Cause: The Automatic Workload Repository (AWR) version that exported the data was out of the range of the supported versions that could be imported in the local AWR.

Action: None

ORA-13600: error encountered in Advisor\n*string*
Cause: An error occurred in the Advisor. This message will be followed by a second message giving more details about the nature of the error.

Action: See the Advisor documentation for an explanation of the second error message.

ORA-13601: The specified Advisor *string* does not exist.
Cause: The user specified an advisor name that has not be defined in the advisor repository.

Action: Correct the advisor name and retry the operation.

ORA-13602: The specified parameter *string* is not valid for task or object *string*.
Cause: The user attempted to access a task parameter that does not exist for the specified advisor object. The parameter may be misspelled or the user has selected a parameter that is not supported by the particular advisor.

Action: Validate the parameter name and retry the operation.

ORA-13603: The specified parameter *string* cannot be fetched as a numeric value for task or object *string*.
Cause: The user attempted to retrieve a string parameter as a numeric value.

Action: Check the datatype for the task parameter and retry the operation.

ORA-13604: The specified parameter *string* cannot be fetched as a SQL table.
Cause: The user attempted to retrieve a non-table parameter as a table name.

Action: Check the datatype for the task parameter and retry the operation.

ORA-13605: The specified task or object *string* does not exist for the current user.
Cause: The user attempted to reference an advisor task or object using a name that does not exist in the Advisor repository.

Action: Adjust the name and retry the operation.

ORA-13606: the specified task parameter element *string* is out of range for parameter *string*.
Cause: The user attempted to reference an invalid parameter element.

Action: Adjust the element offset and retry the operation.

ORA-13607: The specified task or object *string* already exists
Cause: The user attempted to create the specified task or object using a name that already exists in the Advisor repository. Task names must be unique to the database user.

Action: Adjust the name and retry the operation.

ORA-13608: The specified name *string* is invalid.
Cause: An attempt was made to specify a name for a task, object, execution or directive instance, which contained invalid characters or an invalid wildcard specifier.

Action: Adjust the name and retry the operation.

ORA-13609: The specified task *string* must be executing to be cancelled or interrupted.
Cause: The user attempted to cancel or interrupt a task that is not currently executing.

Action: Check the status of the task and retry the operation.

ORA-13610: The directive *string* does not exist for task *string*.
Cause: The user attempted to access a task directive that does not exist.

Action: Validate the directive and retry the operation.

ORA-13611: The command *string* is not a valid advisor command.
Cause: The user attempted to specify a command that does not exist.

Action: Validate the command and retry the operation.

ORA-13612: The recommendation action *string*,*string* is not valid for task *string*.
Cause: The user attempted to access a recommendation action that does not exist in the task.

Action: Validate the recommendation-action and retry the operation.

ORA-13613: The requested operation is not supported for this advisor object.
Cause: The user attempted to perform an operation that is not supported for the particular advisor or task type.

Action: Validate the task or object and retry the operation.

ORA-13614: The template *string* is not compatible with the current advisor.
Cause: The user attempted to create a new task or object using an existing task or object that was not created by the same advisor.

Action: Validate the template and retry the operation.

ORA-13615: The task or object *string* is greater than the maximum allowable length of 30 characters.
Cause: The user attempted to create a new task or object using a name that is too long.

Action: Shorten the name and retry the operation.

ORA-13616: The current user *string* has not been granted the ADVISOR privilege.
Cause: The user attempted an advisor operation that requires privilege.

Action: Adjust the user's privileges and retry the operation.

ORA-13617: The specified task *string* already executing
Cause: The user attempted to execute a task that is currently executing.

Action: Wait for the task to finish before attempting any further task activities.

ORA-13618: The specified value is not a valid value for procedure argument *string*.
Cause: The user executed a procedure but failed to provide correct values for the argument.

Action: Correct the procedure arguments and retry the operation.

ORA-13619: The procedure argument *string* is greater than the maximum allowable length of *string* characters.
Cause: The user attempted to pass a character argument that is too long.

Action: Shorten the specified character argument and retry the operation.

ORA-13620: The task or object *string* is read-only and cannot be deleted or modified.
Cause: The user attempted to perform an operation that will update or delete a read-only task or object.

Action: Adjust the READ_ONLY property for the object and retry the operation.

ORA-13621: The task_or object *string* is marked as a template and cannot perform the requested operation.
Cause: The user attempted perform an unsupported operation on a task or object that is identified as a template.

Action: Choose a different object and retry the operation.

ORA-13622: invalid recommendation annotation
Cause: The user attempted to mark a recommendation using an invalid annotation. Valid annotation actions are ACCEPT, REJECT and IGNORE.

Action: Correct the action and retry the operation.

ORA-13623: The recommendation *string* is not valid for task *string*.
Cause: The user attempted to access a recommendation that does not exist in the task.

Action: Validate the recommendation and retry the operation.

ORA-13624: The task *string* is executing and cannot be deleted or modified.
Cause: The user attempted to access a task that currently executing.

Action: Wait for the task to complete and retry the operation.

ORA-13625: *string* is an invalid advisor object type.
Cause: The user has specified an invlaid object type.

Action: Refre to dba_advisor_object_types for all valid object types

ORA-13626: The specified object *string* is not valid for task *string*.
Cause: The user specified an non-existent object for the task

Action: Choose a different object and retry the operation.

ORA-13627: Setting of parameter *string* is disallowed until the task is reset.
Cause: The user attempted to set the value of a parameter before the task was reset. This parameter cannot be changed until the task is reset.

Action: Reset the task and retry the operation.

ORA-13628: Insufficient privileges to access the task belonging to the specified user
Cause: The user could not access dba_* views.

Action: Retry operation as owner of the task or after granting new privileges.

ORA-13629: The task or object *string* is being used by another operation.
Cause: The user attempted to access a task or object that is locked by another session.

Action: Wait for the task or object activity to complete and retry the operation.

ORA-13630: The task *string* contains execution results and cannot be executed.
Cause: The user attempted to execute a task that already contains execution results.

Action: Reset the task to its initial state and retry the operation.

ORA-13631: The most recent execution of task *string* contains no results.
Cause: The user attempted to create a report or script from a task that has not successfully completed an execution.

Action: Execute the task and then retry the operation

ORA-13632: The user cancelled the current operation.
Cause: The user signaled a cancel during a task or object operation.

Action: None

ORA-13633: The task *string* was interrupted and needs to be resumed.
Cause: The user attempted to execute a task that was interrupted.

Action: Resume the execution of the task via the RESUME_TASK API.

ORA-13634: The task *string* needs to be reset before being re-executed.
Cause: The task must be in an inital state to be executed.

Action: Reset the task to its initial state and retry the operation.

ORA-13635: The value provided for parameter *string* cannot be converted to a number.
Cause: A numeric parameter was incorrectly supplied in string form.

Action: Retry by supplying valid numeric value.

ORA-13636: The specified value provided for parameter *string* is not valid for this advisor.
Cause: The user supplied an invalid parameter value.

Action: Retry by supplying valid value.

ORA-13637: Executing or modifying task *string* is disallowed until the task is reset to its initial state.
Cause: The user attempted to execute or modify the task that is in not in its INITIAL state.

Action: Reset the task and retry the operation.

ORA-13638: The user interrupted the current operation.
Cause: The user signaled an interrupt during a task or object operation.

Action: None

ORA-13639: The current operation was interrupted because it timed out.
Cause: The task or object operation timed out.

Action: None

ORA-13640: The current operation was cancelled because it timed out, and was not in interruptible mode.
Cause: The task or object operation timed out.

Action: None

ORA-13641: Task cannot be interrupted yet. You may cancel it instead.
Cause: The user attempted to interrupt a task that has not reached interruptible mode.

Action: Wait until the task reaches interruptible mode, or cancel the task execution.

ORA-13642: The specified string *string* provided for *string* cannot be converted to a date. The acceptable date format is *string*.
Cause: The user supplied a date value in an incorrect format.

Action: Retry by supplying valid value.

ORA-13643: The task can not be interrupted or cancelled.
Cause: Request to interrupt or cancel task execution can not be granted because the task has not reached the appropriate mode.

Action: User should wait for a few seconds and try again.

ORA-13644: The user "*string*" is invalid.
Cause: Invalid user name specified to advisor framework

Action: User should specify a correct, case-sensitive, name

ORA-13645: The specified execution *string* does not exist for this task.
Cause: You attempted to reference an advisor task execution using a name that did not exist.

Action: Adjust the name and retry the operation.

ORA-13646: The specified execution *string* already exists
Cause: You attempted to perform a new execution using a name that already exists for the specified task. Execution names must be unique within the same task.

Action: Adjust the name and retry the operation.

ORA-13647: Setting of parameter *string* is disallowed during task execution.
Cause: You attempted to set the value of a parameter while the task was being executed. This parameter cannot be changed until the task finishes its execution.

Action: Verify the status of the task and retry the operation.

ORA-13648: The specified execution type does not exist for this advisor.
Cause: You attempted to use an advisor task execution type using a name that did not exist.

Action: Adjust the name and retry the operation.

ORA-13649: The type of execution is not specified for this advisor or task.
Cause: You attempted to execute a task for a multi-execution task advisor without specifying the type of execution to perform.

Action: Set the execution type and retry the operation.

ORA-13650: The specified object does not exist for this execution.
Cause: You attempted to associate an object to a task execution that id not contain the object.

Action: Adjust the execution name and object ID, and then retry the operation.

ORA-13651: The specified list of execution parameters is invalid.
Cause: The list did not include pairs of (parameter_name, parameter_value) where every parameter is a valide task parameter. Duplicates are not allowed.

Action: Adjust the content of the list, and then retry the operation.

ORA-13652: Cannot set execution parameters for this advisor
Cause: You attempted to set execution parameters for an advisor that did not support multiple executions of its tasks.

Action: Adjust the property of the advisor, and then retry the operation.

ORA-13653: The directive with definition id *string* was not found.
Cause: An invalid directive identifier was specified to advisor framework.

Action: User should specify a correct identifier number and retry the operation.

ORA-13654: The directive with instance id of *string* was not found.
Cause: An invalid instance identifier was specified to advisor framework.

Action: User should specify a correct instance identifier number and retry the operation.

ORA-13655: The directive document contains a syntax error and cannot be loaded.
Cause: An attempt was made to load an XML-based directive that does not conform to the documented DTD.

Action: Reformat the directive according the documented DTD.

ORA-13656: The parameter was not found in directive *string*.
Cause: The specified parameter name could not be located within the directive XML document.

Action: Verify the existence of the parameter in the specified directive.

ORA-13657: The filter Xpath specification has invalid syntax.
Cause: The specified filter could not be compiled within the directive XML document.

Action: Verify the syntax of the filter and retry the operation.

ORA-13658: The specified directive already has an instance
Cause: An attempt was made to create multiple instances of a directive when not permitted

Action: Verify the parent directive identifier and the instance name.

ORA-13659: A directive with domain "*string*" and name "*string*" already exists for advisor *string*.
Cause: The specified directive is not unique among the directives.

Action: Choose a directive name and domain that is distinct for the associated advisor.

ORA-13660: A directive instance with the name "*string*" already exists.
Cause: The specified directive instance is not unique among instances for this directive.

Action: Choose an instance name that is distinct for the associated directive.

ORA-13661: A directive instance with the name "*string*" was not found.
Cause: An attempt was made to update or delete a non-existent directive instance.

Action: Verify the parent directive identifier and the instance name.

ORA-13662: The specified value provided for parameter *string* is not valid for this task.
Cause: The supplied parameter value was not valid for the current task configuration.

Action: Retry by supplying valid value. Check the current task configuration.

ORA-13663: The task *string* contains no results for execution *string*.
Cause: An attempt was made to create a report or script from an execution that had not been successfully completed.

Action: Run a new execution and then retry the operation.

ORA-13664: A task-managed "SQL Tuning Set" already exists for task "*string*".
Cause: An attempt was made to create a task-managed SQL Tuning Set for a task that already had one.

Action: Create a new task to use a different SQL Tuning Set.

ORA-13665: Execution names are not correctly ordered.
Cause: The supplied execution names were not properly ordered by execution start date.

Action: Retry by supplying a valid order.

ORA-13666: Task ID *string* does not exist.
Cause: The supplied task ID was invalid.

Action: Check the task ID and try again.

ORA-13667: Execution ID *string* does not exist.
Cause: The supplied execution ID was invalid.

Action: Check the execution ID and try again.

ORA-13668: The current operation was aborted because it was blocking another session.
Cause: The task or object operation interrupted itself when it detected that it was blocking some other session.

Action: Retry the operation when the conflicting operations are not running.

ORA-13669: Execution provided has type "*string*", expected "*string*".
Cause: An execution was provided whose type did not match the one expected by the API.

Action: Check the execution name, and try again.

ORA-13670: No execution of type *string* exists for task provided.
Cause: No execution of the required type existed for the given advisor task.

Action: Check the task, and try again.

ORA-13699: Advisor feature is not currently implemented.
Cause: An attempt was made to execute an unsupported advisor operation.

Action: Verify the availability of the operation.

ORA-13700: Reserved for ADDM tracing.

ORA-13701: Snapshot pair [*string*, *string*] seems to be specified in reverse order.
Cause: The start snapshot id was greater than the end snapshot id.

Action: Swap the start and end snapshot ids.

ORA-13702: Snapshot IDs specified by the range [*string*, *string*] are equal.
Cause: The start snapshot id and end snapshot id were identical.

Action: Provide different start and end snapshot ids.

ORA-13703: The snapshot pair [*string*, *string*] for database_id *string* and instance_id *string* are not found in the current repository.
Cause: The snapshot ids or the database id or the instance id was invalid or the specified snapshots have already been purged.

Action: Set valid snapshot ids and retry.

ORA-13704: Invalid value "*string*" specified for parameter "*string*".
Cause: The parameter was not set before executing the ADDM.

Action: Set the parameter to a valid value and retry.

ORA-13705: There was a instance shutdown/startup between the snapshots in the range [*string*, *string*].
Cause: Instance was shut down and restarted between the two specified snapshots.

Action: Specify start and end snapshot ids that does not have a shutdown/startup in between them.

ORA-13706: Invalid value "*string*" specified for parameter "*string*" in "*string*" analysis mode.
Cause: The parameter was not set to an acceptable value for this particular mode of analysis.

Action: Set the parameter to a valid value and retry.

ORA-13707: Either the start snapshot *string* or the end snapshot *string* is incomplete or missing key statistics.
Cause: Either the start or the end snaphots was missing or purged or had encountered errors while creating them.

Action: Verify that AWR is done taking these two snapshots, or Look in DBA_HIST_SNAP_ERROR to find what tables are missing in the start/end snapshots. Use the ERROR_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that has valid start and end snapshots.

ORA-13708: Some snapshots in the range [*string*, *string*] were purged before the analysis was complete.
Cause: One or both of the snapshots have been purged from AWR.

Action: Verify that the AWR auto purging is not trying to purge these snapshots and re-run ADDM.

ORA-13709: Required parameter "*string*" must be set before execution.
Cause: The parameter needs to be set before running the ADDM

Action: Set the parameter to a valid value and retry.

ORA-13710: Parameter "*string*" must have a higher value than parameter "*string*". The values supplied were "*string*" and "*string*" respectively.
Cause: Invalid interaction between two parameter values.

Action: Set at least one of the values so the value of the first parameter is higher than the value of the second parameter.

ORA-13711: Some snapshots in the range [*string*, *string*] are missing key statistics.
Cause: Some AWR tables encountered errors while creating one or more snapshots in the given range. The data present in one or more of these missing tables is necessary to perform an ADDM analysis.

Action: Look in DBA_HIST_SNAP_ERROR to find what tables are missing in the given snapshot range. Use the ERROR_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that does not include any incomplete snapshots.

ORA-13712: Cannot perform ADDM analysis on AWR snapshots from previous releases. Snapshot version "*string*" do not match the database version "*string*".
Cause: ADDM analysis can only be performed on AWR snapshots taken in the current release.

Action: One can still generate AWR and ASH reports using ?/rdbms/admin/awrrpt and ?/rdbms/admin/ashrpt on these snapshots to analyze the data in them.

ORA-13713: Finding name "*string*" does not exist. Look in DBA_ADVISOR_FINDING_NAMES for all valid values
Cause: Attempt to refer to an advisor's finding name that does not exist.

Action: Specify a valid value. The list of all valid values is in DBA_ADVISOR_FINDING_NAMES

ORA-13714: "*string*" is not a valid SQL_ID value
Cause: The specified value of SQL_ID was not properly formatted.

Action: Specify a valid value consisting of a 13 character string with characters from '0' to '9' and from 'a' to 'z'.

ORA-13715: "*string*" is not recognized by ADDM as a parameter name
Cause: The specified value for a system parameter was not recognized by ADDM.

Action: Specify a value that appears in the NAME column of V$PARAMETER.

ORA-13716: Diagnostic Package License is needed for using this feature.
Cause: The specified value for system parameter CONTROL_MANAGEMENT_PACK_ACCESS indicated that the Diagnostic Package was disabled.

Action: Modify the parameter value if the Diagnostic Package License was purchased.

ORA-13717: Tuning Package License is needed for using this feature.
Cause: The specified value for system parameter CONTROL_MANAGEMENT_PACK_ACCESS indicated that the Tuning Package was disabled.

Action: Modify the parameter value if the Tuning Package License was purchased.

ORA-13718: Tuning Package License or Real Application Testing Option is needed for using this feature.
Cause: The specified package license and option were not installed.

Action: Consider purchasing and installing either the missing package licence or option. If the tuning package license was purchased, then check the value of system parameter CONTROL_MANAGEMENT_PACK_ACCESS.

ORA-13719: Imported AWR snapshots are from a database with an incompatible character set.
Cause: ADDM analysis was attempted on imported Automatic Workload Repository (AWR) snapshots with incompatible character set.

Action: Perform ADDM analysis using a database with the same version and character set as the original database.

ORA-13720: dimension name provided is too long
Cause: Active Session History (ASH) dimension name provided was longer than the limit of 30 characters.

Action: Correct the dimension name and retry the operation.

ORA-13721: dimension name provided is invalid
Cause: Active Session History (ASH) dimension name provided was invalid.

Action: Correct the dimension name and retry the operation.

ORA-13722: invalid input value for procedure argument *string*
Cause: An invalid value was passed an input for a procedure argument.

Action: Pass a valid value to the procedure.

ORA-13723: input value for procedure argument *string* exceeds maximum allowed length of *string*
Cause: The string input value was too long for the specific procedure argument.

Action: Pass a valid value to the procedure.

ORA-13750: User "*string*" has not been granted the "ADMINISTER SQL TUNING SET" privilege.
Cause: The user attempted an SQL Tuning Set operation that requires a specific privilege.

Action: Adjust the user's privileges and retry the operation.

ORA-13751: "SQL Tuning Set" "*string*" does not exist for owner "*string*" or user "*string*" does not have permission to access the "SQL Tuning Set".
Cause: The user attempted to access a SQL Tuning Set that does not exist or the user does have permission to access the SQL Tuning Set

Action: Check the existence of the "SQL Tuning Set" or adjust the user's privileges and retry the operation.

ORA-13752: User "*string*" must be SYS or must have the "ADMINISTER ANY SQL TUNING SET" privilege.
Cause: The attempted to create a SQL Tuning Set in another schema without having the right privilege.

Action: Connect as SYS or adjust the user's privilege and retry the operation.

ORA-13753: "SQL Tuning Set" "*string*" already exists for user "*string*".
Cause: The user attempted to create a "\SQL Tuning"\ Set using a name that already exists for that owner.

Action: Change the name of the SQL Tuning Set and retry the operation.

ORA-13754: "SQL Tuning Set" "*string*" does not exist for user "*string*".
Cause: The user attempted to access a SQL Tuning Set that does not exist.

Action: Check the speelling of the SQL Tuning Set name and retry the operation.

ORA-13755: invalid "SQL Tuning Set" name
Cause: The user attempted to specify a SQL Tuning Set name that is invalid. A name must not contain wildcards and its length must be less than 30 characters.

Action: Adjust the name and retry the operation.

ORA-13756: Cannot update attribute "*string*".
Cause: The user attempted to update an attribute element that cannot be modified. The only string attributes that can be updated are MODULE, ACTION, PARSING_SCHEMA_NAME, PRIORITY, and OTHER.

Action: Adjust the attribute name and retry the operation.

ORA-13757: "SQL Tuning Set" "*string*" owned by user "*string*" is active.
Cause: The user attempted to update an active SQL Tuning Set.

Action: Remove all reference to the SQL Tuning Set and retry the operation.

ORA-13758: "SQL Tuning Set" "*string*" owned by user "*string*" is in use.
Cause: The user attempted to modify a SQL Tuning Set or to add a reference to a SQL Tuning Set which is in use.

Action: Wait until the end of the previous operation and retry.

ORA-13759: User "*string*" cannot remove reference "*string*".
Cause: The user attempted to remove a SQL Tuning Set reference that does not exist. The user might not own the reference.

Action: Check the reference ID and the reference owner and retry the operation.

ORA-13760: This operation is not supported from a physical standby database.
Cause: An attempt was made to execute an operation that is not supported from a physical standby database.

Action: Execute this operation from a primary database.

ORA-13761: invalid filter
Cause: The user attempted to select data from a data source using an invalid filter. A filter is a WHERE clause on data source content.

Action: Correct the filter and retry the operation.

ORA-13762: The *string* ranking measure is invalid.
Cause: The user attempted to select data from a data source using an invlaid ranking measure. A ranking measure must represent a valid numerical expression.

Action: Correct the ranking measure and retry the operation.

ORA-13763: illegal ranking attribute "*string*"
Cause: The user attempted to use an attribute element that is not allowed in a ranking measure.

Action: Check the attribute in the ranking measure and retry the operation.

ORA-13764: Value "*string*" is illegal as a result percentage.
Cause: The user attempted to select data from a SQL Tuning Set using an invalid result percentage. The result percentage must be between 0 and 1.

Action: Correct the result percentage value and retry the operation.

ORA-13765: Value "*string*" is illegal for a result limit.
Cause: The user attempted to select data from a SQL Tuning Set using an invalid result limit. A result limit must be a positive interger.

Action: Correct the result limit value and retry the operation.

ORA-13766: A ranking measure is required.
Cause: The user attempted to select data from a SQL Tuning Set using a percentage argument without specifying a ranking measure.

Action: Add a ranking measure or remove the percentage argument and retry the operation.

ORA-13767: End snapshot ID must be greater than begin snapshot ID.
Cause: The user attempted to select data from the workload repository using an invalid snaphot ID range.

Action: Adjust the snapshot ID range and retry the operation.

ORA-13768: Snapshot ID must be between *string* and *string*.
Cause: The user attempted to select data from the workload repository using a snaphot ID which does not exist.

Action: Adjust the snapshot ID and retry the operation.

ORA-13769: Snapshots *string* and *string* do not exist.
Cause: The user attempted to select data from the workload repository using snapshots that do not exist.

Action: Check the snapshot identifiers and retry the operation.

ORA-13770: Baseline "*string*" does not exist.
Cause: The user attempted to access a baseline that does not exsit.

Action: Check the speelling of the baseline name and retry the operation.

ORA-13771: cannot obtain exclusive lock *string* on "SQL Tuning Set" "*string*" owned by user "*string*"
Cause: Unexpected error from DBMS_LOCK.REQUEST.

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

ORA-13772: unexpected deadlock on "SQL Tuning Set" "*string*" owned by user "*string*"
Cause: Unexpected error from DBMS_LOCK.REQUEST

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

ORA-13773: insufficient privileges to select data from the cursor cache
Cause: The user attempted to perform an operation without having the appropriate privileges on V$SQL and V$SQL_BIND_CAPTURE.

Action: Adjust the user's privileges and retry the operation.

ORA-13774: insufficient privileges to select data from the workload repository
Cause: The user attempted to perform an operation without having the appropriate privileges on views DBA_HIST_BASELINE, DBA_HIST_SQLTEXT, DBA_HIST_SQLSTAT, DBA_HIST_SQLBIND, DBA_HIST_OPTIMIZER_ENV, and DBA_HIST_SNAPSHOT.

Action: Adjust the user's privileges and retry the operation.

ORA-13775: inconsistent datatype in input cursor
Cause: The user attempted to load a SQL Tuning Set using an invalid input cursor. All rows in the cursor must match type SQLSET_ROW.

Action: Check the rows type in the cursor and retry the operation.

ORA-13776: User "*string*" has not been granted the "SELECT" privilege on the "SQL tuning set" DBA views.
Cause: The user attempted to read a SQL tuning set belonging to someone else without having SELECT privilege on the DBA views

Action: User should be granted the privilege or only access his own STS

ORA-13777: invalid list of attribute names
Cause: The user specified an attribute element that is not valid. The only attributes that can be selected are NULL, BASIC, TYPICAL, ALL or a comma separated list of the names including EXECUTION_STATISTICS, OBJECT_LIST, BIND_LIST and SQL_PLAN.

Action: Adjust the attribute list and retry the operation.

ORA-13778: no new name or owner specified for "SQL Tuning Set"
Cause: The user attempted to call remap_stgtab_sqlset without specifying either a new SQL tuning set name or a new SQL tuning set owner

Action: Specify at least one or the other argument as non-NULL

ORA-13779: invalid load option
Cause: The user attempted to call load_sqlset with a load option that is different than INSERT, UPDATE and MERGE.

Action: Adjust the load option and retry the operation.

ORA-13780: SQL statement does not exist.
Cause: The user attempted to tune a SQL statement that does not exist.

Action: Verify the sql_id and the plan hash value of the statement and retry the operation.

ORA-13781: cannot perform test-execute and explain plan operations on the automatic SQL tuning task
Cause: The user attempted to test-execute or generate explain plans for a SQL workload using the automatic SQL tuning task.

Action: Verify the name of the tuning task and retry the operation.

ORA-13782: The argument *string* to this API is only allowed for tasks created in a physical standby database.
Cause: "An attempt was made to pass an argument that is valid only for a physical standby database. "

Action: Remove the invalid argument and re-run the API.

ORA-13783: invalid tuning scope
Cause: The user attempted to specify a tuning task scope that is invalid. The possible values are LIMITED or COMPREHENSIVE.

Action: Check the scope value and retry the operation.

ORA-13784: cannot accept SQL profiles for all statements in the "*string*"
Cause: An attempt was made to accept SQL profiles for all statements in the input workload.

Action: Provide the object identifier corresponding to a statement in the workload and retry the operation.

ORA-13785: missing target object for tuning task "*string*"
Cause: The user attempted to perform an operation on a task without specifying a target object or by using an invalid object identifier.

Action: Check the identifier of the object and retry the operation.

ORA-13786: missing SQL text of statement object "*string*" for tuning task "*string*"
Cause: The user attempted to accept SQL profile for an object that has not a SQL text associated to it.

Action: Check the identifier of the object and retry the operation.

ORA-13787: missing SQL profile for statement object "*string*" for tuning task "*string*"
Cause: The user attempted to accept a SQL profile for an object that has not a SQL profile associated to it.

Action: Check the identifier of the object and retry the operation.

ORA-13788: invalid recommendation type
Cause: The user passed an invalid recommendation type in the rec_type argument to script_tuning_task. Possible values are ALL or any subset of a comma-separated list of PROFILES, STATISTICS and INDEXES.

Action: Check the rec_type arg and retry the operation.

ORA-13789: invalid process action
Cause: The user passed an invalid action to process a SQL statement. Possible value is any subset of a comma-seperated list of EXECUTE and EXPLAIN_PLAN.

Action: Check the action argument and retry the operation.

ORA-13790: invalid value for time limit
Cause: The user passed an invalid value for the time limit argument.

Action: Check the argument specified value and retry the operation.

ORA-13791: cannot resume a task created to process a single statement
Cause: An attempt was made to resume a task that was created for a single SQL statement. A task can be resumed only if it is used for a SQL Tuning Set.

Action: No action required.

ORA-13792: This operation requires a database link.
Cause: An attempt was made to execute an operation from a physical standby database that requires a valid database link to access a primary database.

Action: Provide a valid database link to access a primary database.

ORA-13793: invalid comparison metric
Cause: An invalid metric to compare SQL performance was specified.

Action: Use execution statistics to compare the result of two executions and optimizer_cost to analyze performance of two explain plan actions.

ORA-13794: execution type mismatch
Cause: An attempt was made to analyze the performance of a SQL workload using two executions that were generated using two different actions.

Action: check the name and type of task executions to analyze and retry the operation.

ORA-13795: missing task execution
Cause: An insufficient number of valid task executions to analyze the performance of a SQL workload were specified.

Action: run the task to generate two executions of the same type and retry the operation.

ORA-13796: invalid value *string* specified for problem type
Cause: An invalid problem type was specified to the SQL diagnosis advisor. Problem type should be one of the PROBLEM_TYPE_* defined in 'admin/dbmsdiag.sql'.

Action: Specify valid problem type.

ORA-13797: invalid SQL Id specified, *string*
Cause: Invalid SQL Id specified for conversion.

Action: Specify valid SQL Id.

ORA-13798: Parameter *string* cannot be NULL.
Cause: A call to GET_THRESHOLD procedure was made without a required parameter.

Action: Specify a valid value for this parameter.

ORA-13799: threshold not found
Cause: No threshold was found with the specified threshold key.

Action: No action required.

ORA-13800: concurrent DDL failure on SQL repository objects
Cause: A SQL repository object was the target of two concurrent DDL operations.

Action: Check the current state of the object and retry the operation that failed.

ORA-13801: invalid value for SQLTUNE_CATEGORY parameter
Cause: An invalid Oracle identifier was used as the value of the parameter.

Action: Specify the parameter conforming to the rules for Oracle identifiers.

ORA-13802: failed to purge SQL Tuning Base entry from sql$
Cause: An error occured while try to delete a SQL Tuning Base object.

Action: Look at the underlying error(s) on the error stack.

ORA-13810: The FORCED_TRACKING parameter can only have values of N or Y.
Cause: An invalid value was passed for the parameter.

Action: Check the value and input the correct value.

ORA-13811: A database operation is already monitoring this session.
Cause: An attempt was made to start a database operation in a session that was already being monitored.

Action: No action required.

ORA-13812: current session does not have database operation monitored
Cause: An attempt was made to end a database operation that did not exist.

Action: Check if the database operation is being monitored.

ORA-13813: database operation name or execution ID does not match
Cause: The database operation name or execution ID did not match.

Action: Call the interface with the right database operation name and execution ID.

ORA-13814: database operation name is invalid
Cause: The database operation name provided was invalid.

Action: Supply a database operation name not exceeding 30 characters.

ORA-13815: database operation execution ID is invalid
Cause: The database operation execution ID provided was invalid.

Action: Supply a database operation execution ID greater than 0.

ORA-13825: missing SQL statement text
Cause: No SQL text was provided to the create SQL profile or patch operation.

Action: Retry with properly specified SQL text.

ORA-13826: empty SQL profile or patch not allowed
Cause: No attributes were specified to the create SQL profile or patch operation.

Action: Retry with at least one hint specified.

ORA-13827: null or zero length attribute not allowed
Cause: One of the attributes within the SQL profile or patch was not properly specified.

Action: Retry with a fully specified SQL profile or patch.

ORA-13828: generated SQL profile or patch name *string* already exists
Cause: A SQL profile or patch already exists with the name generated by the system.

Action: Retry the operation as the generated name is time sensitive.

ORA-13829: SQL profile or patch named *string* already exists
Cause: A SQL profile or patch already exists with the name specified.

Action: Specify a different name or drop the existing SQL profile or patch.

ORA-13830: SQL profile or patch with category *string* already exists for this SQL statement
Cause: A SQL profile or patch already exists for the given SQL statement and category.

Action: Drop or update the existing SQL profile or patch.

ORA-13831: SQL profile or patch name specified is invalid
Cause: An invalid SQL profile or patch name was specified.

Action: Supply a name not exceeding 30 characters or look for the underlying error on the error message stack.

ORA-13832: category name specified is invalid
Cause: An invalid category name was specified.

Action: Supply a category name not exceeding 30 characters or look for the underlying error on the error message stack.

ORA-13833: SQL profile or patch named *string* doesn't exist
Cause: A SQL profile or patch name was specified that doesn't exist.

Action: Verify the name of the SQL profile or patch.

ORA-13834: name of SQL profile or patch to be cloned must be provided
Cause: A SQL profile or patch name was not provided as the from target of a clone SQL profile or patch operation.

Action: Provide the name of the SQL profile or patch being cloned.

ORA-13835: invalid attribute name specified
Cause: An invalid attribute name was specified for an alter SQL profile or patch operation.

Action: Verify the name of the attribute.

ORA-13836: invalid attribute value specified
Cause: An invalid attribute value was specified for an alter SQL profile or patch operation.

Action: Verify the attribute value.

ORA-13837: invalid HASH_VALUE
Cause: An invalid HASH_VALUE was passed to a create SQL profile operation

Action: Verify the HASH_VALUE.

ORA-13838: invalid ADDRESS value
Cause: An invalid ADDRESS value was passed to a create SQL profile operation.

Action: Verify the ADDRESS value.

ORA-13839: V$SQL row doesn't exist with given HASH_VALUE and ADDRESS.
Cause: A HASH_VALUE and ADDRESS combination passed to the create SQL profile operation doesn't coorespond to an existing V$SQL entry.

Action: Verify the HASH_VALUE and ADDRESS in V$SQL.

ORA-13840: Concurrent DDL Error in create SQL profile operation.
Cause: A concurrent DDL operation was performed during a create or replace sql profile operation.

Action: Try operation again

ORA-13841: SQL profile named *string* already exists for a different signature/ category pair
Cause: A SQL profile already exists with the name specified under a different signature/category pair so it cannot be replaced, even with FORCE specified.

Action: Specify a different name or drop the existing SQL profile.

ORA-13842: no SELECT privilege on DBA_SQL_PROFILES
Cause: A user has tried to perform an operation that requires SELECT privileges on the DBA_SQL_PROFILES view.

Action: Either perform the operation as another user or get the privilege

ORA-13843: no SQL profile with name like "*string*" exists for category like "*string*"
Cause: A user tried to perform an operation by specifying a profile name/ category filter that did not target any profiles

Action: Try a different filter after checking the profile name/category

ORA-13844: no new SQL profile name or category specified.
Cause: A user called remap_stgtab_sqlprof without specifying new values for the sql profile name or category. At least one is required.

Action: Specify either a new profile name, or a new category, or both

ORA-13845: invalid SQL profile XML specification provided
Cause: The supplied XML specification for the SQL profile did not adhere to the proper schema.

Action: Check the syntax and try again.

ORA-13846: Cannot create SQL plan baseline on the given plan
Cause: There are either multiple plans exist for the given value or the plan is not reproducible.

Action: Call Oracle Support.

ORA-13847: The plan with plan hash value *string* does not exist
Cause: The give plan does not exist.

Action: Check the available plans.

ORA-13848: Database link provided for the task operation was different than the one used with task creation API.
Cause: All SQL tuning advisor APIs executed from a physical standby database are required to use the same database link.

Action: Retry the operation by providing the database link used for task creation.

ORA-13850: Tracing for client identifier *string* is not enabled
Cause: Attempt to disable a client identifier tracing which was never enabled

Action: Supply correct client identifier

ORA-13851: Tracing for client identifier *string* is already enabled
Cause: Attempt to enable a client identifier tracing which has been already enabled

Action: Supply correct client identifier, or disable and re-enable tracing with different bind/wait options

ORA-13852: Tracing for service(module/action) *string* is not enabled
Cause: Attempt to disable a service-level tracing which was never enabled

Action: Supply correct service(module/action) name

ORA-13853: Tracing for service (module/action) *string* is already enabled
Cause: Attempt to enable a service-level tracing which has been already enabled

Action: Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

ORA-13854: Tracing for service(module/action) *string* on instance *string* is not enabled
Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: Supply correct service(module/action) name

ORA-13855: Tracing for service (module/action) *string* on instance *string* is already enabled
Cause: Attempt to enable a service-level tracing which has been already enabled on a specific instance

Action: Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

ORA-13856: Service name must be specified
Cause: Omitting service name while enabling/disabling tracing or aggregation

Action: Supply the service name

ORA-13857: Invalid module name
Cause: Module name is too long (exceeding 48 characters)

Action: Supply correct name

ORA-13858: Invalid action name
Cause: Action name is too long (exceeding 32 characters)

Action: Supply correct name

ORA-13859: Action cannot be specified without the module specification
Cause: Action name is specified, but the module name is not

Action: Supply the module name

ORA-13860: Invalid service name
Cause: Service name is too long (exceeding 64 characters)

Action: Supply correct name

ORA-13861: Statistics aggregation for client identifier *string* is already enabled
Cause: Attempt to enable a client identifier aggregation which has been already enabled

Action: Supply correct client identifier

ORA-13862: Statistics aggregation for client identifier *string* is not enabled
Cause: Attempt to disable a client identifier statistics aggregation which was never enabled

Action: Supply correct client identifier

ORA-13863: Statistics aggregation for service(module/action) *string* is not enabled
Cause: Attempt to disable a service-level statistics aggregation which was never enabled

Action: Supply correct service(module/action) name

ORA-13864: Statistics aggregation for service (module/action) *string* is already enabled
Cause: Attempt to enable a service-level statistics aggregation which has been already enabled

Action: Supply correct service(module/action)

ORA-13865: Module name must be specified
Cause: Attempt to enable/disable a service-level statistics aggregation without a module specification

Action: Supply module name

ORA-13866: Client identifier must be specified
Cause: Omitting client identifier while enabling/disabling tracing or aggregation

Action: Supply the client identifier

ORA-13867: Database-wide SQL tracing is already enabled
Cause: Attempt to enable a database-level tracing which has been already enabled

Action: Disable and re-enable tracing with different bind/wait options

ORA-13868: Instance-wide SQL tracing on instance *string* is not enabled
Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: No action required

ORA-13869: Instance-wide SQL tracing on instance *string* is already enabled
Cause: Attempt to enable an instance-level tracing which has been already enabled on a specific instance

Action: Disable and re-enable tracing with different bind/wait options

ORA-13870: Database-wide SQL tracing is not enabled
Cause: Attempt to disable a database-level tracing which was never enabled

Action: No action required

ORA-13871: Invalid instance name
Cause: Instance name is too long (exceeding 16 characters)

Action: Supply correct name

ORA-13900: missing or invalid parameter *string*
Cause: A call to SET_THRESHOLD procedure was either missing a parameter, or the parameter was invalid.

Action: Specify a valid value for this parameter.

ORA-13901: Object *string* was not found.
Cause: An object name was passed to SET_THRESHOLD procedure that did not map to a valid object.

Action: Specify a valid object name.

ORA-13902: The specified file *string* is not a data file.
Cause: The object name was passed to a SET_THRESHOLD procedure that did not map to a valid data file.

Action: Specify a valid data file name.

ORA-13903: Invalid combination of *string* threshold value and operator.
Cause: A non-positive number was used for "Blocked User Session Count" metrics while operator contains equal.

Action: Use a positive number for the threshold value or use "greater than" operator.

ORA-13904: The file has been dropped and recreated during the procedure call.
Cause: The file on which threshold is specified was dropped and recreated during the procedure call.

Action: Retry this operation.

ORA-13905: Critical or warning threshold have incorrect values
Cause: The tablespace threshold values can be in the range 0 to 100 only.

Action: Check the threshold values

ORA-13906: The tablespace is not of the right type.
Cause: An attempt was made to set a threshold on dictionary-managed tablespaces.

Action: Check the tablespace type and reissue the command.

ORA-13907: Threshold value is invalid.
Cause: An attempt was made to specify an invalid value for critical or warning thresholds.

Action: Use non-negative integers only for threshold values.

ORA-13908: Invalid combination of metrics id and object type parameters.
Cause: An attempt was made to specify an invalid combination of metrics id // and object type parameters.

Action: Specify a valid combination of metrics id and object type parameters.

ORA-13909: Invalid combination of threshold value and operator.
Cause: An attempt was made to specify an invalid combination of threshold value and operator.

Action: Check the operator and threshold values and reissue statement.

ORA-13910: Parameter *string* cannot be NULL.
Cause: An attempt was made to call GET_THRESHOLD procedure without a required parameter.

Action: Specify a valid value for this parameter.

ORA-13911: Threshold not found
Cause: The threshold did not exist with the specified threshold key.

Action: No action required.

ORA-13912: Critical threshold value is less than warning threshold value.
Cause: An attempt was made to call SET_THRESHOLD procedure with the critical threshold value less than the warning threshold value.

Action: Check the threshold values and reissue the statement.

ORA-13913: The threshold cannot be set when SYSAUX is offline.
Cause: SET_THRESHOLD procedure was called when SYSAUX tablespace was offline.

Action: Call SET_THRESHOLD procedure when SYSAUX is online.

ORA-13914: Threshold notification failed.
Cause: An error occurred when sending notification for this threshold.

Action: Ensure that you have enough space on SYSAUX tablespace and retry this operation.

ORA-13915: Critical byte based free space threshold value is greater than warning threshold value.
Cause: An attempt was made to call SET_THRESHOLD procedure with the bytes based critical threshold value greater than the warning threshold value.

Action: Check the threshold values and reissue the statement.

ORA-13916: Invalid value "*string*" specified for parameter "*string*"
Cause: An invalid value was specified for the the given parameter.

Action: Correct the value being specified for the parameter.

ORA-13917: Posting system alert with reason_id *string* failed with code [*string*] [*string*]
Cause: Connection to the database is dead, or invalid parameter to alert routine.

Action: If this condition repeats, please contact Oracle Support.

ORA-13918: Updating system alert with reason_id *string* failed; previous alert not found
Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from WRI$_ALERT_OUTSTANDING.

Action: Do not delete from WRI$_ALERT_OUTSTANDING. If this condition repeats, please contact Oracle Support.

ORA-13919: Cannot specify values for parameter "*string*" and for parameter "*string*"
Cause: Can only specify a value for one or the other.

Action: Pass just one of the parameters.

ORA-13920: Threshold cannot be set when database is in read-only mode.
Cause: SET_THRESHOLD procedure was called when database was open in read-only mode.

Action: Call SET_THRESHOLD procedure when database is open in read/write mode.

ORA-13951: MMON sub-action time limit exceeded
Cause: MMON sub-action did not complete within the system specified time frame.

Action: None

ORA-13970: Invalid name of "*string*" given
Cause: Passed an invalid component, report, or transformation name to the framework. Names must be alphanumeric and can contain the underscore (_) character.

Action: Try again with a valid name

ORA-13971: Unknown *string*
Cause: Passed an unknown component, report, or transformation to the framework.

Action: Give a different name

ORA-13972: Unknown *string* for this *string*
Cause: An object with the first name is unknown within the naming scope of the second name

Action: Change the parameters passed in or register the proper object

ORA-13973: Unknown *string* for this *string*
Cause: An object is unknown within the given naming scope

Action: Change the parameters passed in or register the proper object

ORA-13974: *string* with name "*string*" already exists
Cause: An object with the given name already exists

Action: Give a different name

ORA-13975: *string* with name "*string*" already exists for *string* "*string*"
Cause: An object with the first name already exists within the naming scope of the second name

Action: Give a different name

ORA-13976: Improperly-formed report tag
Cause: The top-level report tag was not built properly.

Action: Ensure that the report tag is built using the common tag library function.

ORA-13977: Invalid content type
Cause: An invalid content type was passed to the register format API

Action: Correct your code to use the values in dbmsrep.sql

ORA-13978: Invalid reference string parameter or value
Cause: An invalid parameter/value was passed to a dbms_report API

Action: Ensure that the parameter names and values are alphanumeric.

ORA-13979: Filename too long
Cause: An invalid file name was passed to STORE_FILE

Action: Ensure that the filename is less than 500 bytes

ORA-13980: Invalid file URL
Cause: A URL with invalid syntax was provided, either directly to the function or via an XML IMPORT or INCLUDE.

Action: Check the URL.

ORA-13981: Invalid file URL or path prefix
Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL

ORA-13982: Could not find file at URL provided
Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

ORA-13983: Missing *body* tag from HTML
Cause: An HTML document was passed to the function missing its *body* tag.

Action: Check the HTML source.

ORA-13984: Invalid reference string
Cause: The given reference string could not be parsed.

Action: Check the reference string syntax.

ORA-13985: Invalid URL provided to servlet
Cause: An invalid URL was provided to the servlet.

Action: Check the URL.

ORA-13986: Error \s*tring* received from XPath engine
Cause: An error was received from the xpath library during an xpath operation.

Action: Check xmlerr.h to understand the cause of the error.

ORA-13987: Invalid input to build common <*string*> tag
Cause: Invalid input was given when attempting to build a common tag.

Action: Check the function input to ensure that all necessary information is given.

ORA-13988: Invalid input given to variable argument list report function.
Cause: An invalid parameter was provided to one of the report framework variable argument list functions.

Action: Check the function input and try again.

ORA-13989: Invalid input given to structured argument list report function.
Cause: An invalid parameter was provided to one of the report framework structured argument list functions.

Action: Check the function input and try again.

ORA-13990: Invalid tag name given to common tag callout function.
Cause: An invalid tag name was provided to the report framework common tag callout function.

Action: Check the function input and try again.

ORA-13991: failed to stop report capture on all instances
Cause: This is an internal Server Manageability Error

Action: Contact Oracle Support Services

ORA-14000: only one LOCAL clause may be specified
Cause: CREATE INDEX statement contained more than one LOCAL clause

Action: Specify LOCAL option at most once

ORA-14001: LOCAL clause contradicts previosly specified GLOBAL clause
Cause: CREATE INDEX statement contained a GLOBAL clause and a LOCAL clause

Action: Specify LOCAL or GLOBAL clause, but not both

ORA-14002: only one GLOBAL clause may be specified
Cause: CREATE INDEX statement contained more than one GLOBAL clause

Action: Specify GLOBAL option at most once

ORA-14003: GLOBAL clause contradicts previosly specified LOCAL clause
Cause: CREATE INDEX statement contained a LOCAL clause and a GLOBAL clause

Action: Specify GLOBAL or LOCAL clause, but not both

ORA-14004: missing PARTITION keyword
Cause: keyword PARTITION missing

Action: supply missing keyword

ORA-14005: missing RANGE keyword
Cause: keyword RANGE missing

Action: supply missing keyword

ORA-14006: invalid partition name
Cause: a partition name of the form *identifier* is expected but not present.

Action: enter an appropriate partition name.

ORA-14007: missing LESS keyword
Cause: keyword LESS missing

Action: supply missing keyword

ORA-14008: missing THAN keyword
Cause: keyword THAN missing

Action: supply missing keyword

ORA-14009: partition bound may not be specified for a LOCAL index partition
Cause: while parsing a CREATE INDEX statement to create a LOCAL partitioned index, *partition-description* of one of partitions was found to contain VALUES LESS THAN clause which is illegal since a LOCAL index inherits partition bounds from its base table

Action: remove all VALUES LESS THAN clauses from descriptions of LOCAL index partitions

ORA-14010: this physical attribute may not be specified for an index partition
Cause: unexpected option was encountered while parsing physical attributes of an index partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of an index partition

ORA-14011: names assigned to resulting partitions must be distinct
Cause: Names of partitions resulting from splitting of an existing table or index partition are not distinct

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

ORA-14012: resulting partition name conflicts with that of an existing partition
Cause: Name of a partition resulting from splitting of an existing table or index partition is identical to that of some other existing partition of that table or index

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

ORA-14013: duplicate partition name
Cause: Name of a partition of a table or index being created is not unique

Action: rename partition(s) to ensure that their names are unique among partitions of the table or index being created

ORA-14014: maximum number of partitioning columns is 16
Cause: number of columns in a partitioning column list exceeded the legal limit of 16

Action: modify partitioning column list so that it consists of at most 16 columns

ORA-14015: too many partition descriptions
Cause: CREATE TABLE or CREATE INDEX contained too many partition descriptions; maximum number of partitions is 1048575 (1024K-1).

Action: Reduce number of partitions to not exceed 1048575 (1024K -1).

ORA-14016: underlying table of a LOCAL partitioned index must be partitioned
Cause: User attempted to create a LOCAL partitioned index on a non-partitioned table which is illegal. Only GLOBAL indices (partitioned or otherwise) may be created on a non-partitioned table.

Action: Correct the statement and reenter

ORA-14017: partition bound list contains too many elements
Cause: Partition bound list contained more elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14018: partition bound list contains too few elements
Cause: Partition bound list contained fewer elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14019: partition bound element must be one of: string, datetime or interval literal, number, or MAXVALUE
Cause: Partition bound list contained an element of invalid type (i.e. not a number, non-empty string, datetime or interval literal, or MAXVALUE)

Action: Ensure that all elements of partition bound list are of valid type

ORA-14020: this physical attribute may not be specified for a table partition
Cause: unexpected option was encountered while parsing physical attributes of a table partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE, and PCTUSED; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of a table partition

ORA-14021: MAXVALUE must be specified for all columns
Cause: In the VALUES LESS THAN clause for the highest (last) partition of a GLOBAL index, MAXVALUE must be specified for all columns

Action: Ensure that VALUES LESS THAN clause for the last partition of a GLOBAL index has MAXVALUE specified for all columns

ORA-14022: creation of LOCAL partitioned cluster indices is not supported
Cause: An attempt was made to create a LOCAL partitioned cluster index, which is currently illegal

Action: Remove LOCAL along with *partition description*s, if any, from the CREATE INDEX statement.

ORA-14023: creation of GLOBAL partitioned cluster indices is not supported
Cause: An attempt was made to create a GLOBAL partitioned cluster index, which is currently illegal

Action: Remove PARTITION BY RANGE clause along with *partition description*s from the CREATE INDEX statement.

ORA-14024: number of partitions of LOCAL index must equal that of the underlying table
Cause: User attempted to create a LOCAL partitioned index with a number of partitions which is different from that of the underlying table.

Action: Correct the CREATE INDEX statement to specify a correct number of partitions

ORA-14025: PARTITION may not be specified for a materialized view or a materialized view log
Cause: PARTITION option was encountered while parsing a definition of a materialized view or a materialized view log

Action: Ensure that a definition of a MATERIALIZED VIEW does not include invalid options

ORA-14026: PARTITION and CLUSTER clauses are mutually exclusive
Cause: definition of a table contained both PARTITION and CLUSTER clauses which is illegal

Action: Remove one of the conflicting clauses

ORA-14027: only one PARTITION clause may be specified
Cause: CREATE TABLE statement contained more than one PARTITION clause

Action: Specify PARTITION option at most once

ORA-14028: missing AT or VALUES keyword
Cause: keyword AT or VALUES missing

Action: supply missing keyword

ORA-14029: GLOBAL partitioned index must be prefixed
