PRVG-11382: The permissions on the SCAN listener socket file "{0}" do not match the expected octal value on node "{1}". [Expected = "{2}" ; Found = "{3}"]
Cause: The Cluster Verification Utility found that the permissions of the indicated file on the indicated node were different from the required permissions. This might lead to failure in starting the SCAN listener.

Action: Remove the indicated SCAN listener socket file on the indicated node and restart the SCAN listener.

PRVG-11383: The owner of the SCAN listener socket file "{0}" is not the CRS user on node "{1}". [Expected = "{2}" ; Found = "{3}"]
Cause: The Cluster Verification Utility found that the owner of the indicated file on the indicated node was not the CRS user. This might lead to failure in starting the SCAN listener.

Action: Remove the indicated SCAN listener socket file on the indicated node and restart the SCAN listener.

PRVG-11384: The list of invited nodes allowed to register with the SCAN listener "{0}" contains invalid or unresolvable names "{1}".
Cause: The Cluster Verification Utility found that the indicated invalid or unresolvable names were in the list of invited nodes for the indicated SCAN listener, which would lead to failure in starting or restarting the SCAN listener.

Action: Ensure that all the names in the list of invited nodes for the indicated SCAN listener are valid and resolvable.

PRVG-11400: Node role value is not valid.
Cause: The value passed to CVU for the node role parameter was not one of the allowed values: 'hub', 'leaf' or 'auto'. This is an internal error.

Action: Contact Oracle Support Services.

PRVG-11401: invalid new node list specified including both nodes with 'auto' role and nodes with 'hub' or 'leaf' role
Cause: The supplied list of new nodes consisted of a mix of nodes with the 'auto' role in combination with nodes having the 'hub' or 'leaf' role.

Action: Either supply a list of new nodes that all have the 'auto' role or supply a list of new nodes that have the 'hub' or 'leaf' role specified for each node, but not both.

PRVG-11402: New nodes cannot have AUTO node role unless the existing cluster consists entirely of AUTO nodes
Cause: An attempt to validate new nodes for addition supplied one or more AUTO role nodes for a cluster with no AUTO role nodes.

Action: Supply a list of new nodes with AUTO role only when the existing cluster contains nodes with AUTO role.

PRVG-11403: A Leaf Node cannot be added unless existing cluster contains at least one Hub Node.
Cause: An attempt was made to add a node with the 'leaf' role when the cluster did not have at least one node with the 'hub' role.

Action: Supply a list of new nodes with the 'leaf' role only when the existing cluster contains at least one node with the 'hub' role.

PRVG-11404: The addition of hub nodes will exceed the target hub size[{0}]
Cause: The request to validate new nodes specified enough hub nodes that the cluster target hub size would be exceeded.

Action: Specify fewer hub nodes.

PRVG-11405: API with node roles argument should be called for Flex Cluster only
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRVG-11406: API with node roles argument must be called for Flex Cluster
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRVG-11407: API called with unequal sized arrays for nodes and VIPs
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRVG-11408: API called with unequal sized arrays for nodes, VIPs and node roles
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRVG-11409: These nodes already appear to be part of the cluster: "{0}"
Cause: The supplied list of new nodes contains some nodes which are already part of the cluster.

Action: Specify new nodes that are not already in the cluster.

PRVG-11410: illegal specification of nodes with 'leaf' role for a non-Flex Cluster
Cause: An attempt was made to add a 'leaf' role node to a non-Flex Cluster.

Action: Remove the 'leaf' role node from the list of nodes being added to the cluster.

PRVG-11415: Password entry for user "{0}" in the database "{1}" did not exist in CVUDB wallet
Cause: No password entry for the specified user for the specified database was found in the CVUDB walllet.

Action: Add a password entry for the user to the CVUDB wallet using 'crsctl add wallet -type CVUDB -name *dbname*'

PRVG-11420: Storage type of the path "{0}" could not be determined
Cause: There was an error in determining storage type of the path.

Action: Examine any accompanying error messages for details.

PRVG-11421: Storage type of the path "{0}" could not be determined
Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRVG-11422: Missing GNS subdomain name.
Cause: GNS subdomain name was not provided.

Action: The subdomain name for GNS must be provided via the '-domain' parameter in Oracle Clusterware Version 11.2.

PRVG-11423: The password provided on the command line is not valid for user "{0}"
Cause: The provided password was wrong.

Action: Provide the correct password.

PRVG-11424: Missing GNS subdomain for dynamic public network
Cause: When checking GNS integrity, the public VIPs were configured to use dynamic addresses (DHCP or autoconfig), but the required GNS subdomain was not configured.

Action: Configure a GNS subdomain by using the command 'srvctl add gns'.

PRVG-11425: Failed to validate GNS credential in file "{0}"
Cause: An attempt to validate the Grid Naming Service (GNS) credential failed.

Action: Ensure that the credential file provided has been generated in a GNS server cluster by 'srvctl export gns -clientdata *filename*'.

PRVG-11426: IP address for GNS VIP "{0}" is not consistent across the cluster nodes.
Cause: The Cluster Verification Utility determined that the indicated GNS VIP entry in the hosts file or DNS did not resolve to the same IP address across the cluster nodes.

Action: Ensure that the entry in the hosts file or DNS resolving the IP address for the indicated GNS VIP is consistent across the cluster nodes and retry the CVU check.

PRVG-11427: GNS VIP "{0}" resolves to IP address "{1}" on the majority of cluster nodes but to address "{2}" on nodes "{3}".
Cause: The Cluster Verification Utility determined that the indicated GNS VIP resolved to the indicated different IP address on the indicated nodes.

Action: Ensure that the indicated GNS VIP resolves to the same IP address across the cluster nodes and retry the CVU check.

PRVG-11499: ACFS kernel version "{0}" is different from the version of the ACFS commands "{1}" on node "{2}".
Cause: The ACFS kernel version was found to be different from the version of the ACFS commands on the indicated node.

Action: Ensure that the ACFS kernel version is the same as the version of the ACFS commands on the indicated node.

PRVG-11500: ACFS file systems are not available on Leaf nodes "{1}"
Cause: The specified ACFS path was not suitable for Leaf nodes.

Action: Ensure that you have selected a path that is suitable for all the nodes.

PRVG-11501: Path "{0}" of type "{1}" is not suitable for usage as RAC database software for release "{2}". Supported storage types are "{3}".
Cause: The specified path is not found suitable for usage as RAC database software

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11502: Path "{0}" of type "{1}" is not suitable for usage as RAC database file for release "{2}". Supported storage types are "{3}".
Cause: The specified path is not found suitable for usage as RAC database file

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11503: Path "{0}" of type "{1}" is not suitable for usage as Oracle Clusterware storage for release "{2}". Supported storage types are "{3}".
Cause: The specified path is not found suitable for usage as Oracle Clusterware storage(OCR or Voting Disk).

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11504: Path "{0}" of type "{1}" is not suitable for usage as Single Instance database software for release "{2}". Supported storage types are "{3}".
Cause: The specified path is not found suitable for usage as Single Instance database software

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11505: Path "{0}" of type "{1}" is not suitable for usage as Single Instance database file for release "{2}". Supported storage types are "{3}".
Cause: The specified path is not found suitable for usage as Single Instance database file

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11506: Path "{0}" of type "{1}" is not suitable for ASM for release "{2}". Supported storage types are "{3}".
Cause: The specified path is not found suitable for ASM

Action: Ensure that you have selected a path that is suitable for the desired usage.

PRVG-11515: Nodes with mix of 'auto', 'hub' and 'leaf' roles were found in the Flex Cluster.
Cause: The Flex Cluster node role check found nodes with both the 'auto' role and either the 'hub' or 'leaf' roles defined.

Action: Use the 'crsctl set node role' command to make all node roles 'auto', or to make node roles a mix of 'hub' and 'leaf'.

PRVG-11516: New nodes "{0}" with 'hub' or 'leaf' role cannot be added to a Flex Cluster that has 'auto' role nodes.
Cause: An attempt was made to add nodes with the 'hub' or 'leaf' role to a Flex Cluster already having nodes with the 'auto' role.

Action: Only add nodes with the 'auto' role to the cluster.

PRVG-11517: New nodes "{0}" with 'auto' role cannot be added to a Flex Cluster already having nodes with the 'hub' and 'leaf' roles.
Cause: An attempt was made to add nodes with the 'auto' role to an Flex Cluster already having nodes with the 'hub' and 'leaf' role.

Action: Only add nodes with the 'hub' or 'leaf' role to the cluster.

PRVG-11518: Following error occurred during Flex Cluster node role configuration check
Cause: An error occurred while performing the Flex Cluster node role configuration check.

Action: Look at the accompanying messages for the cause of the failure.

PRVG-11550: Package "{0}" is missing on node "{1}"
Cause: The cvuqdisk RPM is not installed on the specified node. This package is required for shared disk validations. During installation, ASM disk validation cannot be performed without this RPM.

Action: Install the required version of the cvuqdisk RPM using fix up action or manual steps as listed in the documentation.

PRVG-11551: Required version of package "{0}" was not found on node "{1}" [Required = "{2}" ; Found = "{3}"].
Cause: The version of installed cvuqdisk RPM does not meet the requirement on the specified node. This package is required for shared disk validations. During installation, ASM disk validation cannot be performed without this RPM.

Action: Install the required version of the cvuqdisk RPM using fix up action or manual steps as listed in the documentation.

PRVG-11635: The ASM disks "{0}" are incorrectly sized
Cause: The indicated ASM disks had incorrect size information in the disk header.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-11640: The check "{0}" was not performed as it is disabled
Cause: The indicated check was suppressed.

Action: Suppressed checks usually occur at the request of Oracle Support; if this is unexpected, contact Oracle Support Services.

PRVG-11644: Failed to copy baseline to the remote nodes: "{0}"
Cause: An error occurred while copying the report to the remote nodes

Action: Examine the accompanying error messages for details.

PRVG-11658: Baseline could not be collected for database "{0}".
Cause: "An attempt to collect baseline information using the command 'cluvfy comp baseline -collect database' failed because the indicated database was not configured in clusterware."

Action: Ensure that the database is configured and retry the baseline collection command.

PRVG-11659: Baseline could not be collected for databases in the database home "{0}".
Cause: "An attempt to collect baseline information using the command 'cluvfy comp baseline -collect database' failed because the indicated database home was not installed and configured in clusterware."

Action: Ensure that the database home is installed and is configured and retry the baseline collection command.

PRVG-11671: reference baseline not specified
Cause: The request for baseline cross comparison omitted the required reference baseline.

Action: Retry the command, specifying two baselines with the '-compare' argument.

PRVG-11750: File "{0}" exists on node "{1}".
Cause: The specified file is not expected to be present on the node.

Action: Remove the specified file from the node.

PRVG-11754: Check for existence of directory "{0}" could not be performed on node "{1}".
Cause: An error occurred while checking the existence of the directory on the specified node.

Action: Examine the accompanying error messages for details.

PRVG-11755: Property "{0}" was not found in configuration file "{1}"
Cause: Could not find the specified property in the configuration file.

Action: Define the specified property in the configuration file. Otherwise, the validations needing this property will not be performed.

PRVG-11774: NIC bind order check failed on nodes: "{0}"
Cause: The NIC bind order on the specified nodes did not prioritize the public network above the private network.

Action: Ensure that the public network NIC takes precedence over the private network NIC in the configured network bind order.

PRVG-11775: Failed to retrieve the NIC bind order information on nodes: "{0}"
Cause: An attempt to retrieve the NIC bind order failed on the indicated nodes.

Action: Contact Oracle Support Services.

PRVG-11776: Failed to retrieve the NIC bind order information from all the nodes
Cause: An attempt to retrieve the NIC bind order information failed on all the nodes.

Action: Contact Oracle Support Services.

PRVG-11779: Metric value "{0}" for public interface "{1}" is higher than or equal to metric value "{2}" for private interface "{3}" on node "{4}".
Cause: The identified public interface metric value was higher or equal to the identified private interface metric value on the indicated node.

Action: Change the identified public interface metric value to a lower value than the identified private interface metric value.

PRVG-11780: Failed to convert string "{0}" to integer value
Cause: The network interface metric value could not be determined as the identified string to integer conversion failed.

Action: Look at the accompanying messages for details.

PRVG-11800: Failed to discover any devices using the discovery string "{0}" on node "{1}"
Cause: The specified discovery string could not discover any devices on the identified node.

Action: Specify a discovery string that will discover the devices on the given node and make sure the devices to be used as ASM disks have permissions that allow them to be discovered.

PRVG-11816: Windows user "{0}" is a domain user but a conflicting local user account "{1}" exists on node "{2}"
Cause: A conflicting local user account as indicated was found on the identified node.

Action: Ensure that the Windows user account used for Oracle installation and configuration is defined as a domain user on all nodes or as a local user on all nodes, but not a mixture of the two.

PRVG-11817: Windows user "{0}" is a local user but a matching local user account does not exist on nodes "{1}"
Cause: A local user account for an Oracle installation user was not found on the identified nodes.

Action: Ensure that the Windows user account used for Oracle installation and configuration is defined as a domain user on all nodes or as a local user on all nodes, but not a mixture of the two.

PRVG-11818: Windows user "{0}" is a domain user but a conflicting local user account was found on nodes "{1}"
Cause: A conflicting local user account as indicated was found on the identified nodes.

Action: Ensure that the Windows user account used for Oracle installation and configuration is defined as a domain user on all nodes or as a local user on all nodes, but not a mixture of the two.

PRVG-11819: Current Oracle Home User "{0}" is not a domain user
Cause: The current Oracle Home User was found to be a Windows user account local to this system.

Action: Specify a Windows domain user as the Oracle Home User.

PRVG-11820: Error retrieving the account details for user "{0}" from nodes "{1}"
Cause: An error occurred while retrieving the account details of indicated user.

Action: Examine the accompanying error messages for details.

PRVG-11825: Failed to get the Oracle Home user name for Oracle Home "{0}"
Cause: An attempt to retrieve the Oracle Home User for the indicated Oracle Home failed.

Action: Examine the accompanying error messages for details.

PRVG-11826: DNS resolved IP addresses "{0}" for SCAN name "{1}" not found in the name service returned IP addresses "{2}"
Cause: The name resolution setup check for the indicated SCAN name failed because one or more of the indicated IP addresses obtained from DNS could not be found in the IP addresses obtained from the name service on the system as configured in the '/etc/nsswitch.conf' configuration file.

Action: Make sure all the DNS resolved IP addresses are present in the IP addresses obtained from the name service on the system as configured in the '/etc/nsswitch.conf' configuration file by reconfiguring the '/etc/nsswitch.conf' for the indicated SCAN name. Check the Name Service Cache Daemon (/usr/sbin/nscd) by clearing its cache and restarting it.

PRVG-11827: Name service returned IP addresses "{0}" for SCAN name "{1}" not found in the DNS returned IP addresses "{2}"
Cause: The name resolution setup check for the indicated SCAN name failed because one or more of the indicated IP addresses obtained from name service on the system as configured in the '/etc/nsswitch.conf' configuration file could not be found in the IP addresses obtained from DNS.

Action: Make sure all the name service resolved IP addresses obtained from the '/etc/nsswitch.conf' configuration file are present in the DNS resolved IP addresses by reconfiguring '/etc/nsswitch.conf' configuration file for the indicated SCAN name. Check the Name Service Cache Daemon (/usr/sbin/nscd) by clearing its cache and restarting it.

PRVG-11850: The system call "{0}" failed with error "{1}" while executing exectask on node "{2}"
Cause: An attempt to execute exectask on the specified node failed.

Action: Examine the accompanying error message for details or contact Oracle Support Services.

PRVG-11851: The system call "connect" failed while executing exectask on node "{0}"
Cause: The connect system call failed on the specified node.

Action: Examine the accompanying error message for details. Check the firewall rules. Make sure the firewall rules do not affect the cluster interconnect interfaces, protocols and network address space. On Linux platform the iptable configuration may interfere with the network connections.

PRVG-11865: Oracle Home "{0}" for the administrator managed database "{1}" instances "{2}" does not exist on nodes "{3}"
Cause: The indicated Oracle Home for the indicated database was not found on the indicated nodes and the automatic root script execution was selected.

Action: Ensure that the indicated Oracle Home exists on the indicated nodes by running 'addNode.sh' or 'addNode.bat' from the indicated Oracle Home on a node that is already in the cluster before you run the 'root.sh' or 'root.bat' script. Alternatively, remove the indicated administrator managed database instances by using the command 'srvctl remove instance'.

PRVG-11866: Oracle Home "{0}" for the administrator managed database "{1}" instances "{2}" does not exist on nodes "{3}"
Cause: The indicated Oracle Home for the indicated database was not found on the indicated nodes.

Action: Ensure that the indicated Oracle Home exists on the indicated nodes by running 'addNode.sh' or 'addNode.bat' from the indicated Oracle Home on a node that is already in the cluster before you run the 'root.sh' or 'root.bat' script. Alternatively, remove the indicated administrator managed database instances by using the command 'srvctl remove instance'.

PRVG-11867: Oracle Home "{0}" for policy managed database "{1}" does not exist on nodes "{2}"
Cause: The indicated Oracle Home for the indicated database was not found on the indicated nodes.

Action: Ensure that the indicated Oracle Home exists on the indicated nodes by running 'addNode.sh' or 'addNode.bat' from the indicated Oracle Home on a node that is already in the cluster before you run the 'root.sh' or 'root.bat' script.

PRVG-11868: An internal command 'cvuhelper' failed to get the administrator and policy managed database information.
Cause: An attempt to execute an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-11869: An internal command 'cvuhelper' exited unexpectedly while getting the administrator and policy managed database information.
Cause: An attempt to execute an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-11870: failed to parse database information from the 'cvuhelper' command output
Cause: An attempt to parse output from an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-11884: Policy managed database home availability check failed
Cause: One or more policy managed database homes were not found on the nodes being added to the cluster.

Action: Ensure that all the policy managed database homes exist on the nodes being added to the cluster.

PRVG-11885: Oracle Home "{0}" for policy managed database "{1}" does not exist on nodes "{2}"
Cause: The indicated Oracle Home for the indicated database was not found on the indicated nodes and the automatic root script execution was selected.

Action: Ensure that the indicated Oracle Home exists on the indicated nodes by running 'addNode.sh' or 'addNode.bat' from the indicated Oracle Home on a node that is already in the cluster before you run the 'root.sh' or 'root.bat' script.

PRVG-11886: Command "{0}" to get the policy managed database information failed
Cause: An attempt to execute the displayed command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-11890: failed to determine the space used by directory "{0}" on node "{1}"
Cause: An attempt to determine the space used by the identified directory failed on the indicated node.

Action: Ensure that the current user has read and execute permissions for the directory cited in the message and its subdirectories. Look at the accompanying messages for more details.

PRVG-11891: Connectivity failed between interface "{0}" configured with IP address "{1}" on node "{2}" and interface "{3}" configured with IP address "{4}" on node "{5}" for the subnet "{6}".
Cause: Cluster Verification Utility (CVU) node connectivity checking detected the connectivity problem described in the message. Connectivity for the mentioned subnet could not be verified between the two identified interfaces on the identified nodes.

Action: Verify the interface configurations for the identified network interfaces on the identified nodes using utilities such as ipconfig or ping.

PRVG-11892: Connectivity failed between IP address "{0}" on node "{1}" and IP address "{2}" on node "{3}" for the subnet "{4}".
Cause: Cluster Verification Utility (CVU) node connectivity checking detected the connectivity problem described in the message. Connectivity for the mentioned subnet could not be verified between the two identified IP addresses on the identified nodes.

Action: Verify the IP configurations for the identified network interfaces on the identified nodes using utilities such as ipconfig or ping.

PRVG-11893: RDS connectivity failed between interface "{0}" configured with IP address "{1}" on node "{2}" and interface "{3}" configured with IP address "{4}" on node "{5}" for subnet "{6}".
Cause: Cluster Verification Utility (CVU) node connectivity checking detected the connectivity problem described in the message. Connectivity for the mentioned subnet could not be verified between the two identified interfaces using the 'rds-ping' command on the identified nodes.

Action: Verify the interface configurations for the identified network interfaces on the identified nodes using the utility '/usr/bin/rds-ping'.

PRVG-11894: RDS connectivity failed between IP address "{0}" on node "{1}" and IP address "{2}" on node "{3}" for subnet "{4}".
Cause: Cluster Verification Utility (CVU) node connectivity checking detected the connectivity problem described in the message. Connectivity for the mentioned subnet could not be verified between the two identified IP addresses using the 'rds-ping' command on the identified nodes.

Action: Verify the IP configurations for the identified network interfaces on the identified nodes using the utility '/usr/bin/rds-ping'.

PRVG-11900: Oracle Clusterware is not installed on this node.
Cause: An attempt to execute the command 'cluvfy comp software' was requested, but files associated with Oracle Clusterware installation were not found.

Action: Execute the 'cluvfy comp software' command only on nodes where Oracle Clusterware is installed.

PRVG-11901: Oracle Clusterware is not running on this node.
Cause: An attempt to execute a 'cluvfy' command that requires Oracle Clusterware to be running failed because Clusterware was not running on the node.

Action: Ensure that the Clusterware stack is running and retry 'cluvfy'. If required issue the command 'crsctl start crs' to start the clusterware stack.

PRVG-11902: Oracle Clusterware is not configured on node {0}.
Cause: A 'cluvfy comp software' command was issued on a system that does not have an Oracle Clusterware configuration.

Action: Issue the 'cluvfy comp software' command only on nodes where Oracle Clusterware is configured.

PRVG-11903: The specified destination CRS home {0} is the same as the currently configured CRS home {1}.
Cause: The pre-upgrade prerequisites check failed because the specified destination CRS home was the same as the currently configured CRS home.

Action: Retry the upgrade using the '-dest_crshome' option to specify a CRS home that is different from the currently configured CRS home.

PRVG-11904: The file 'oracle.key' does not exist for Oracle home {0} on node {1}.
Cause: The command 'cluvfy comp software' failed for the indicated node because it does not appear to have a valid Oracle home.

Action: Verify that the installation of Oracle software has completed successfully.

PRVG-11905: The file 'oracle.key' cannot be read on node {0}.
Cause: The command 'cluvfy comp software' failed for the indicated node because it does not have a valid 'oracle.key' file.

Action: Verify that the installation of Oracle software has completed successfully.

PRVG-11906: The Oracle home {0} does not exist.
Cause: The command 'cluvfy comp software' failed because the specified Oracle home could not be found.

Action: Verify that the installation of Oracle software has completed successfully.

PRVG-11907: The Oracle database edition cannot be obtained from file {0} on node {1}.
Cause: The command 'cluvfy comp software' failed because the file which indicates the database edition could not be accessed on the indicated node.

Action: Verify that the installation of Oracle software has completed successfully and that the specified file exists and is readable.

PRVG-11910: failed to locate Oracle base for home "{0}" on node "{1}"
Cause: An attempt to retrieve Oracle base using command <ORACLE_HOME>/bin/orabase failed.

Action: Verify that the installation of the Oracle software has completed successfully and that the Oracle home is set up correctly.

PRVG-11911: Database services count is not available for Oracle Clusterware versions prior to 11.2.
Cause: An attempt was made to retrieve the database services count for an Oracle Clusterware version lower than 11.2.

Action: Make sure that the configured Oracle Clusterware is version 11.2 or greater.

PRVG-11912: Command '{0}' to retrieve database services count failed.
Cause: An attempt to execute the displayed command failed. This is an internal error.

Action: Contact Oracle Support Services.

PRVG-11913: Syntax errors in the following lines from ONS configuration file "{1}" on node "{0}" :
Cause: Invalid lines were found in the ons.config file at the location and node indicated.

Action: Contact Oracle Support Services.

PRVG-11914: The ONS configuration file "{0}" does not exist on following nodes: {1}
Cause: The file specified did not exist on the nodes listed, but exists on other nodes.

Action: Contact Oracle Support Services.

PRVG-11915: ONS configuration file "{0}" does not exist on any node of the cluster. Skipping further checks.
Cause: The ONS configuration file was missing from all of the nodes.

Action: Contact Oracle Support Services.

PRVG-11919: Unable to create work area directory "{0}"
Cause: An attempt to create the specified directory failed on the local node.

Action: Make sure that the user running Cluster Verification Utility has the authority to create the indicated directory or specify a different (usable) directory using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVG-11920: Unable to delete CVU work files from directory "{0}"
Cause: An attempt to remove files from the specified directory failed.

Action: Make sure that the user running Cluster Verification Utility has the authority to create the indicated directory or specify a different (usable) directory using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVG-11921: Error copying ONS configuration file "{0}" from node "{1}" to node "{2}"
Cause: The specified file could not be copied from the specified source node to the destination node.

Action: Examine the accompanying error message for details.

PRVG-11924: Local and remote ONS ports are same on node "{0}"
Cause: The local and remote port specified in the ons.config were the same.

Action: Ensure that different local and remote ports were specified in the ONS configuration file.

PRVG-11928: 'remoteport' entry in the existing ONS configuration file "{0}" is inconsistent
Cause: The ONS configuration file had inconsistent 'remoteport' entries.

Action: Make sure that all nodes of the cluster have the same 'remoteport' entry in the specified file.

PRVG-11930: Path "{0}" is not writeable on nodes "{1}".
Cause: The identified path was not writeable on the indicated nodes.

Action: Ensure that write access is enabled for the current user on the identified path.

PRVG-11931: Path "{0}" is not writeable on node "{1}".
Cause: The identified path was not writeable by current user on the indicated node.

Action: Ensure that write access is enabled for the identified path by the current user.

PRVG-11932: Path "{0}" cannot be created on node "{1}".
Cause: The identified path can not be created on the indicated node.

Action: Ensure that the current user has authorization to create the identified path.

PRVG-11935: Unable to read file "{0}" copied to local scratch area from node: {1}
Cause: An error occurred while trying to read the specified file.

Action: Ensure that the user running Cluster Verification Utility has the authority to create the indicated directory, or specify a different (usable) directory using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory. Also, look for messages accompanying this message for details.

PRVG-11937: Oracle Database is not configured to run on nodes "{0}".
Cause: Oracle Database was not configured to run on the indicated nodes. For administrator-managed databases, the database instances were not configured to run on the indicated nodes. For policy-managed databases, the indicated nodes were not in any of the server pools of the database.

Action: Remove the nodes from the command line and rerun the check.

PRVG-11938: Oracle Database is not configured to run on any of the specified nodes.
Cause: Oracle Database was not configured to run on any of the specified nodes.

Action: Ensure that Oracle Database is configured to run on the specified nodes. For administrator-managed databases, ensure that the database instances are configured to run on the nodes. For policy-managed databases, ensure that the nodes are in the server pools of the database.

PRVG-11945: Oracle Database software home location "{0}" does not have required group permissions on node "{1}". [Expected = "{2}" ; Found = "{3}"].
Cause: CVU checking determined that the group permissions were incorrect on the indicated Oracle Database home location on the indicated node.

Action: Ensure that the specified home has the required permissions set and retry the CVU check. An operating system command 'chmod g+rwx' may be used along with the indicated home location to correct the permissions on the node.

PRVG-11946: Oracle Database software home location "{0}" does not have read permission for group on node "{1}".
Cause: CVU checking determined that the group permissions were incorrect on the indicated Oracle Database home location on the indicated node.

Action: Ensure that the specified home has read permission set and retry the CVU check. An operating system command 'chmod g+r' may be used along with the indicated home location to correct the permissions on the node.

PRVG-11947: Oracle Database software home location "{0}" does not have execute permission for group on node "{1}".
Cause: CVU checking determined that the group permissions were incorrect on the indicated Oracle Database home location on the indicated node.

Action: Ensure that the specified home has execute permission set and retry the CVU checks. An operating system command 'chmod g+x' may be used along with the indicated home location to correct the permissions on the node.

PRVG-11950: Executable "{0}" does not exist on any node. The specified home "{1}" is not a valid Oracle home.
Cause: The 'oracle' executable was not found in the expected location on any node.

Action: Specify a valid Oracle home.

PRVG-11951: Executable "{0}" does not exist on node "{1}".
Cause: The 'oracle' executable was not found in the expected location on the specified node.

Action: Ensure that the specified home is a valid Oracle home on the specified node.

PRVG-11960: Set user ID bit is not set for file "{0}" on node "{1}".
Cause: The set user ID bit was not set for the identified file on the indicated node.

Action: Log in as the root user and set the set user ID bit for the identified file using command 'chmod +s *file*'.

PRVG-11961: failed to check the set user ID bit for file "{0}" on nodes "{1}"
Cause: An attempt to verify the Set user ID bit for the identified file failed on the indicated nodes.

Action: Ensure that the identified file exists and that the user has read and execute permissions on it.

PRVG-11975: The I/O scheduler parameter of device "{0}" did not match the expected value on nodes "{1}". [Expected scheduler = "{2}" ; Found scheduler = "{3}"]
Cause: The I/O scheduler parameter of the indicated device was not the expected value on the indicated nodes.

Action: Change the I/O scheduler parameter using 'echo deadline > /sys/block/*device*/queue/scheduler' command of the indicated device to ensure it is the expected value.

PRVG-11976: The I/O scheduler parameter of device "{0}" that belongs to ASM disk "{1}" of the ASM disk group "{2}" did not match the expected value on nodes "{3}". [Expected scheduler = "{4}" ; Found scheduler = "{5}"].
Cause: The I/O scheduler parameter of the indicated device was not the expected value on the indicated node.

Action: Change the I/O scheduler parameter using 'echo deadline > /sys/block/*device*/queue/scheduler' command for the indicated device to ensure it is the expected value.

PRVG-11977: The I/O scheduler parameter is not configured for device "{0}" on nodes "{1}".
Cause: An attempt to obtain the I/O scheduler corresponding to the specified device failed on the node specified.

Action: Ensure that the specified device has a I/O scheduler parameter configured.

PRVG-11983: Grid Infrastructure home check failed
Cause: The Grid Infrastructure home path was not writable.

Action: Ensure that the Grid Infrastructure user has write permissions for the indicated path.

PRVG-12102: The time difference between nodes "{0}" and "{1}" is beyond the permissible offset of "{2}" seconds
Cause: The Cluster Verification Utility detected a time offset between the indicated nodes was more than the indicated permissible value.

Action: Ensure that the time difference between the indicated nodes is less than the indicated permissible value.

PRVG-12103: The current time offset of "{0}" seconds on node "{1}" is greater than the permissible offset of "{2}" when compared to the time on node "{3}"
Cause: The Cluster Verification Utility detected a time offset between the indicated nodes was more than the permissible value.

Action: Ensure that the time difference between the indicated nodes is less than the indicated permissible value.

PRVG-12104: Failed to retrieve the current time from node "{0}"
Cause: An attempt to retrieve the current time from the indicated node failed with the indicated error.

Action: Examine the accompanying error messages, correct the indicated issues, and then retry the operation.

PRVG-12802: ASM devices "{0}" are not ASM Filter Driver capable.
Cause: The indicated devices were not ASM filter driver capable.

Action: To make them AFD capable, ensure that the devices selected for ASM are configured as block devices on Linux or character devices on AIX and Solaris operating system platforms.

PRVG-12805: Device "{0}" cannot be managed by the ASM Filter Driver on node "{1}".
Cause: The indicated ASM device did not have a correct device type and hence was identified as not AFD capable.

Action: If you intend to use the ASM Filter Driver to manage this device, ensure that the device selected for ASM is a block device on Linux or a character device on AIX and Solaris operating system platforms.

PRVG-12806: failed to discover the device type of devices "{0}" on nodes "{1}"
Cause: An attempt to retrieve the device type of the indicated device failed on the identified nodes.

Action: Ensure that the device is correctly configured on the indicated node and that the user has permission to read its attributes.

PRVG-12807: failed to retrieve the device type of device "{0}" on node "{1}"
Cause: An attempt to retrieve the device type of the indicated devices failed on all the nodes.

Action: Ensure that the device is correctly configured and that the user has permission to read the device attributes. Examine the accompanying error messages for details.

PRVG-12808: ASMLib is installed on nodes "{0}"; ASM Filter Driver will not be used for managing ASM devices.
Cause: ASMLib was found installed on the indicated nodes.

Action: Ensure that ASMLib is not installed on cluster nodes if you plan to use the ASM Filter Driver to manage ASM devices.

PRVG-12809: 'remoteport' entry is missing from ONS configuration file "{1}" on nodes "{0}".
Cause: The Oracle Notification Sservices (ONS) configuration file was missing the remote port entry.

Action: Add the remote port entry to the ONS configuration file.

PRVG-12810: failed to expand the device path discovery string "{0}"
Cause: The requested operation could not be completed because the indicated device path discovery string argument could not be expanded to a list of ASM disk devices.

Action: Retry the request specifying a valid device path discovery string.

PRVG-12855: Configured private networks "{0}" with subnet masks "{1}" do not exist on nodes "{2}".
Cause: The indicated CRS private subnets did not match any subnet available on the identified node.

Action: The network configuration used for the existing CRS installation must be available networks on each of the cluster nodes. Use the 'oifcfg setif' command to correctly configure the subnets for the existing installation.

PRVG-12856: Configured public subnets "{0}" with subnet masks "{1}" do not exist on nodes "{2}".
Cause: The indicated CRS public subnets did not match any subnet available on the identified node.

Action: The network configuration used for the existing CRS installation must be available networks on each of the cluster nodes. Use the 'oifcfg setif' command to correctly configure the subnets for the existing installation.

PRVG-12857: Classfied subnet configuration of the current CRS home "{0}" does not match any existing subnets on nodes "{1}".
Cause: The indicated CRS subnet did not match any subnet available on the identified nodes.

Action: The network configuration used for the existing CRS installation must be available networks on each of the cluster nodes. Use the 'oifcfg setif' command to correctly configure the subnet for the existing installation.

PRVG-12858: Following error occurred during the network configuration consistency checks.
Cause: An error occurred while performing the network configuration consistency checks.

Action: Examine the accompanying messages for specific details on the network configuration problem, and rectify the issues.

PRVG-12861: 'options {0}' entry does not exist in resolver configuration file "{1}" on nodes "{2}"
Cause: The indicated option entry was specified on some nodes, but not all of them.

Action: Ensure that the indicated option is either specified consistently or not specified in the resolver configuration file on all cluster nodes.

PRVG-12864: The resolver configuration file "{0}" on the nodes "{1}" has more than one 'options {2}' entry
Cause: The indicated option entry was found more than once on nodes specified in the resolver configuration file indicated.

Action: Ensure that there is only one option entry in the file indicated.

PRVG-12867: 'options {0}' entries in the resolver configuration file "{1}" are inconsistent
Cause: A check of each node's resolv.conf files found inconsistent entries of the indicated option.

Action: Ensure that all nodes of the cluster have same indicated option entry in the file indicated.

PRVG-12869: The product of the 'attempts' option value "{0}" and the 'timeout' option value "{1}" in the resolver configuration file "{2}" is greater than the maximum allowed "{3}".
Cause: A check of node's resolv.conf files found values greater than the maximum allowed.

Action: "Ensure that the product of resolver 'attempts' and 'timeout' is within limits on all nodes.

PRVG-12884: Maximum (MTU) size packet check failed on subnets "{0}"
Cause: The network switch was not configured with jumbo frames or the identified subnets do not support jumbo frames.

Action: Ensure that the network switch is configured with jumbo frames and the network subnets support jumbo frames.

PRVG-12885: ICMP packet of MTU size "{0}" does not go through subnet "{1}".
Cause: The network switch was not configured with jumbo frames or the network subnet does not support the identified MTU size.

Action: Ensure that the network switch is configured with jumbo frames and the network subnet supports the identified MTU size.

PRVG-12886: Interface "{0}" has an invalid MTU value "{1}".
Cause: The retrieved MTU value from ip command contained other than decimal digits.

Action: Configure an MTU value for the identified interface with decimal digits only. Look at the accompanying messages for more details.

PRVG-12887: failed to get the MTU value for interface "{0}" using ip command "{1}" on node "{2}"
Cause: An attempt to obtain the MTU value for the identified interface failed on the indicated node.

Action: Ensure that the indicated executable accessible on the node. Look at the accompanying messages for more details.

PRVG-12893: User "{0}" failed to determine the permissions of path "{1}" on nodes "{2}".
Cause: An attempt to check the permissions of the indicated path failed on the indicated nodes.

Action: Ensure that the indicated path exists on all nodes.

PRVG-12894: Failed to get the groups of user "{0}" on nodes "{1}".
Cause: An attempt to get the groups of the indicated user failed on the indicated nodes.

Action: Ensure that the indicated user exists on the indicated nodes.

PRVG-12895: The group "{1}" of the path "{0}", does not have execute permissions for "others" "{2}" and "group" "{3}" configured on node "{4}".
Cause: The check found a bad permissions configuration of the indicated path on the indicated node.

Action: Ensure that the Grid user has execute permissions on all nodes.

PRVG-12896: The owning group "{0}" of path "{1}" is not in the groups "{2}" of the Grid user on node "{3}".
Cause: The check for permissions of the indicated path found that the group was not in the indicated groups of the Grid user on the indicated node.

Action: Ensure that the Grid user has execute permissions, either by group membership or by the path having execute permissions for others to the indicated groups of the Grid user on all nodes. 1) Change the group of the path to one of the indicated groups 2) Add the Grid user to the group of the path 3) Change the permissions for 'others' 4) Change the permissions for 'group'

PRVG-12914: Oracle Fence service file "{0}" is missing on nodes "{1}".
Cause: The Oracle Fence Service file was not found at the identified path on the indicated nodes.

Action: Install the Oracle Fence Service using the command '<GI_HOME>/bin/crssetup.exe installFence'.

PRVG-12915: The service "{0}" is not configured with the service type 'kernel' as expected on nodes "{1}".
Cause: The configuration of the identified Windows service did not specify the expected service type: 'kernel'.

Action: Configure the service by using 'sc.exe <server_name> config <serivce_name> type= kernel'.

PRVG-12916: The service "{0}" is not configured with the start type 'auto' as expected on nodes "{1}".
Cause: The configuration of the identified Windows service did not specify the expected start type: 'auto'.

Action: Configure the service by using 'sc.exe <server_name> config <service_name> start= auto'.

PRVG-12917: The service "{0}" is not running on nodes "{1}".
Cause: The identified Windows service was not running on the indicated nodes.

Action: Start the service by using 'net.exe start <service_name>'.

PRVG-12918: The service "{0}" does not exist on nodes "{1}".
Cause: The identified Windows service was not found on the indicated nodes.

Action: Install the Oracle Fence Service using the command '<GI_HOME>/bin/crssetup.exe installFence'.

PRVG-12934: The virtual memory manager tunable parameter "{0}" does not have expected "DEF" value on nodes "{1}" [Expected = "{2}"]
Cause: The identified parameter did not have the expected "DEF" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "DEF" value using command '/usr/sbin/vmo -p -o *parameter*=*value*'.

PRVG-12935: The virtual memory manager tunable parameter "{0}" does not have expected "BOOT" value on nodes "{1}" [Expected = "{2}"]
Cause: The identified parameter did not have the expected "BOOT" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "BOOT" value using command '/usr/sbin/vmo -r -o *parameter*=*value*'.

PRVG-12936: Processor folding parameter "{0}" is not disabled on nodes "{1}".
Cause: Processor folding was not turned off on the indicated nodes.

Action: Log in to the indicated nodes as the root user and turn off the processor folding using command '/usr/sbin/schedo -p -o *parameter*=-1'.

PRVG-12937: failed to convert string "{0}" to integer value
Cause: The identified string to integer conversion failed.

Action: Examine the accompanying messages for details.

PRVG-12938: An internal command 'cvuhelper' exited unexpectedly on node "{0}" while running a SQL query on ASM.
Cause: An attempt to execute an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-12939: An internal command 'cvuhelper' failed to produce any output on node "{0}" while running a SQL query on ASM.
Cause: An attempt to execute an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-12940: failed to parse 'cvuhelper' command output
Cause: An attempt to parse output from an internal cvuhelper command failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-12941: An internal command 'cvuhelper' failed to run a SQL query on ASM on node "{0}".
Cause: An ASM SQL query failed unexpectedly.

Action: Examine the accompanying error message and correct the problem indicated, if possible. Otherwise, contact Oracle Support Services.

PRVG-12942: failed to obtain ASM instance configuration on node "{0}"
Cause: An attempt to retrieve information about configuration of an ASM instance on the indicated node failed.

Action: Ensure that the ASM instance, if configured, is correctly configured and an ASM instance is up and running on the indicated node.

PRVG-12943: failed to load Oracle JDBC Driver
Cause: An attempt to load Oracle JDBC Driver failed.

Action: This is an internal error. Contact Oracle Support Services.

PRVG-12944: failed to obtain credentials to connect to ASM with role {0}
Cause: An attempt to obtain ASM credentials for the current OS user failed.

Action: If the specified role is SYSDBA then ensure that the current OS user is part of the OSDBA group. If the specified role is SYSASM then ensure that the current OS user is part of the OSASM group.

PRVG-12945: An error occurred while establishing connection to ASM with current OS user and connect descriptor:\n"{0}"
Cause: An attempt to connect to ASM failed.

Action: Examine the accompanying error message for details.

PRVG-12946: An error occurred while establishing connection to ASM using role {0}.
Cause: An attempt to connect to ASM failed.

Action: Examine the accompanying error message for details.

PRVG-12947: An internal command 'cvuhelper' failed to obtain ASM connection information on node "{0}".
Cause: An attempt to get ASM connection information failed.

Action: Examine the accompanying error message and correct the problem indicated, if possible. Otherwise, contact Oracle Support Services.

PRVG-12948: Failed to get ASM connection information. Verification cannot proceed.
Cause: Error occurred while attempting to get ASM connection information.

Action: Examine the accompanying error messages for details, resolve problems identified and retry.

PRVG-12949: Failed to get ASM connection. Verification cannot proceed.
Cause: An error occurred attempting to connect to ASM.

Action: Examine the accompanying error messages for details, resolve problems identified and retry.

PRVG-12950: An internal 'cvuhelper' command exited unexpectedly on node "{0}" while running a SQL query against the GIMR.
Cause: An internal 'cvuhelper' command exited unexpectedly while attempting to run a SQL query against the Grid Infrastructure Management Repository (GIMR). This was an internal error.

Action: Contact Oracle Support Services.

PRVG-12951: An internal 'cvuhelper' command failed to produce any output on node "{0}" while running a SQL query against the GIMR.
Cause: An internal 'cvuhelper' command failed to produce any output when running a SQL query against the Grid Infrastructure Management Repository (GIMR). This was an internal error.

Action: Contact Oracle Support Services.

PRVG-12952: failed to parse 'cvuhelper' command output
Cause: An attempt to parse the output of an internal 'cvuhelper' command failed. This was an internal error.

Action: Contact Oracle Support Services.

PRVG-12953: An internal 'cvuhelper' command encountered an error while running a SQL query against the GIMR on node "{0}".
Cause: A SQL query against the Grid Infrastructure Management Repository (GIMR) failed.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRVG-12954: GIMR is not online on node "{0}".
Cause: An attempt to run a SQL query against the Grid Infrastructure Management Repository (GIMR) failed because the GIMR was not online on the indicated node.

Action: Ensure that the GIMR instance is running on the indicated node. Use command "srvctl status mgmtdb" to check the status of the instance and retry the operation.

PRVG-12955: Management database not running on local node "{0}".
Cause: The Cluster Verification Utility (CVU) determined that management database was not running on the indicated local node, but was running on the remote node. CVU could not connect to the management database instance running on the remote node to get the required free space for Oracle base location.

Action: Ensure that either the management database is running on local node by relocating using 'srvctl relocate mgmtdb' command or perform the upgrade operation on the node where management database is running.

PRVG-12993: ASM is not running on any of the nodes. Verification cannot proceed.
Cause: No ASM instance was found running on any of the nodes while attempting to perform ASM health checks.

Action: Ensure that the ASM instances, if configured, are correctly configured and running on sufficient number of nodes. Use the command 'srvctl config asm' to determine the number of ASM instances that are supposed to be running.

PRVG-13001: target XML file "{0}" for task definition not found
Cause: An attempt to retrieve the task definition failed because the target XML file was missing.

Action: Ensure that the indicated target XML file is available.

PRVG-13122: encountered error in copying file "{0}" from node "{1}" to node "{2}"
Cause: An error was encountered while attempting to copy the indicated file from the indicated source node to the indicated destination node.

Action: Examine the accompanying error message for details. Resolve the issues raised and retry.

PRVG-13123: File "{0}" does not exist on following nodes: {1}.
Cause: File specified did not exist on the nodes listed, but exists on other nodes.

Action: Make sure that the file is either present on all nodes or is not present on any node.

PRVG-13125: unable to create the directory "{0}".
Cause: An attempt by CVU to create the indicated directory failed on the local node.

Action: Make sure that the user running CVU has read and write permissions on on the directory indicated or specify a different work area using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVG-13126: unable to delete files from directory "{0}".
Cause: An attempt by CVU to remove files from the indicated directory failed.

Action: Make sure that the user running CVU has read and write permissions for the directory indicated or specify a different work area using the CV_DESTLOC property in the cv/admin/cvu_config file under the software home directory.

PRVG-13127: unable to read file "{0}" copied to local scratch area from node {1}.
Cause: An error occurred while attempting to read the indicated file.

Action: Make sure that the CV_DESTLOC area was not being used by another process. Make sure that the user running CVU has read and write permissions for the directory. Also look for messages accompanying this message for details.

PRVG-13159: On node "{0}" the file "/etc/resolv.conf" could not be parsed because the file is empty.
Cause: Pre-requisite checking for Oracle grid infrastructure install failed

Action: Ensure that /etc/resolv.conf file is properly configured.

PRVG-13167: File access control is enabled for ASM disk groups "{0}".
Cause: The ASM disk group property ACCESS_CONTROL.ENABLED was set to TRUE for the indicated ASM disk groups

Action: Ensure that the ASM disk group property ACCESS_CONTROL.ENABLED is set to the value 'FALSE' by running the command 'asmcmd setattr -G <diskgroup_name> access_control.enabled FALSE' for each disk group.

PRVG-13168: failed to determine the value of ASM disk group property ACCESS_CONTROL.ENABLED
Cause: An ASM query failed unexpectedly.

Action: Examine the accompanying error messages for details. Ensure that the ASM disk group property ACCESS_CONTROL.ENABLED is set to the value 'FALSE' by running the command 'asmcmd setattr -G <diskgroup_name> access_control.enabled FALSE' for each disk group.

PRVG-13201: Internal error: {0}
Cause: An internal error occurred. The included value is an internal identifier.

Action: Contact Oracle Support Services and provide the internal identifier displayed in the message.

PRVG-13202: Stage verification is not supported for cluster of type '{0}'.
Cause: Cluster stage verification could not proceed because verificatlion is not possible for clusters of the indicated type.

Action: Make sure that the cluster type is Oracle Clusterware Application Cluster or do not apply this verification on this cluster.

PRVG-13203: Component verification is not supported for cluster of type '{0}'.
Cause: Cluster component verification could not proceed because verificatlion is not possible for clusters of the indicated type.

Action: Make sure that the cluster type is Oracle Clusterware Application Cluster or do not apply this verification on this cluster.

PRVG-13204: stage verification not possible for cluster type '{0}'.
Cause: Cluster stage verification could not proceed because verification was not possible for clusters of the indicated type. Requested verification applicable on Oracle Flex Cluster.

Action: Request the applicable stage verification for the indicated cluster type.

PRVG-13210: invalid request for SCAN component check for an Oracle Clusterware Application Cluster
Cause: SCAN component verification was requested for an Oracle Application Cluster.

Action: Specify a cluster that is not an Oracle Clusterware Application Cluster or omit the request for SCAN verification.

PRVG-13211: invalid request for node applications check for an Oracle Clusterware Application Cluster
Cause: Node application verification was requested for an Oracle Clusterware Application Cluster.

Action: Specify a cluster that is not an Oracle Clusterware Application Cluster or omit the request for node application verification.

PRVG-13215: CVU 'header.xml' not found in the report zip file.
Cause: The Cluster Verification Utility (CVU) baseline report could not be read because the 'header.xml' was not found in the report zip file.

Action: Ensure that the valid baseline report zip containing the complete CVU baseline report is specified and retry the baseline comparison.

PRVG-13301: The CRSD process identifier (PID) is not available in release "{0}".
Cause: An attempt to retrieve the process identifier for the CRSD process failed because the operation was not available in releases prior to 11.2.0.3.

Action: To use this feature, the Clusterware must be upgraded to a release greater or equal to 11.2.0.3

PRVG-13330: error getting the version of 'cvuqdisk' on node "{0}"
Cause: An attempt to retrieve the version of 'cvuqdisk' failed on the specified node.

Action: Ensure that 'cvuqdisk' is installed properly on the specified node. To check the installation use the command 'rpm -qi cvuqdisk'.

PRVG-13331: could not locate the disk for path "{0}"
Cause: An attempt to locate the disk for the specified path failed.

Action: Ensure that the disk is configured for the indicated path.

PRVG-13332: could not find any disk configured in partion file "{0}"
Cause: An attempt to retrieve the list of disks found no disk configured in the indicated partition file.

Action: Ensure that at least one disk is configured.

PRVG-13333: Path "{0}" is not a valid device path.
Cause: The indicated path does not end with a valid disk name.

Action: Provide a valid device path.

PRVG-13334: Path "{0}" is of unknown device type.
Cause: The type of the device path could not be determined.

Action: Provide a valid device path.

PRVG-13335: could not determine the version of OCFS on node "{0}"
Cause: The OCFS installation directories were not found on the indicated node.

Action: Ensure that the OCFS is installed properly on the specified node.

PRVG-13336: Path "{0}" is an invalid file system path.
Cause: The indicated path was neither a directory path nor a regular file path.

Action: Provide a valid file system path.

PRVG-13337: error getting details of block device on node "{0}"
Cause: An attempt to retrieve the details of the block device failed on the indicated node.

Action: Examine the accompanying error message for details.

PRVG-13338: format error in partition file "{0}" for the entry "{1}"
Cause: An attempt to read the indicated partition file failed because the indicated entry could not be parsed.

Action: Examine the the indicated partition file and correct the format of the entry.

PRVG-13339: could not resolve the path "{0}" on node "{1}"
Cause: The indicated path could not be resolved to produce an absolute pathname.

Action: Ensure that the indicated path is an existing path and that the current user has access permission for this path on identified node.

PRVG-13351: The virtual memory manager tunable parameter "{0}" does not have expected "CUR" value on nodes "{1}" [Expected = "{2}"]
Cause: The identified parameter did not have the expected "CUR" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "CUR" value using command '/usr/sbin/vmo -o *parameter=value*'.

PRVG-13356: The processor scheduler manager tunable parameter "{0}" does not have expected "CUR" value on nodes "{1}" [Expected = "{2}"]
Cause: The identified parameter did not have the expected "CUR" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "CUR" value using command '/usr/sbin/schedo -o *parameter=value*'.

PRVG-13357: The processor scheduler manager tunable parameter "{0}" does not have expected "DEF" value on nodes "{1}" [Expected = "{2}"]
Cause: The identified parameter did not have the expected "DEF" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "DEF" value using command '/usr/sbin/schedo -p -o *parameter=value*'.

PRVG-13358: The processor scheduler manager tunable parameter "{0}" does not have expected "BOOT" value on nodes "{1}" [Expected = "{2}"]
Cause: The identified parameter did not have the expected "BOOT" value on the indicated nodes.

Action: Log in to the indicated nodes as the root user and change the identified parameter "BOOT" value using command '/usr/sbin/schedo -r -o *parameter=value*'.

PRVG-13362: The loopback network interface configured with an IPv4 address was not found on nodes "{0}".
Cause: The Cluster Verification Utility determined that there was no loopback network interface configured with an IPv4 address "127.0.0.1/8" on the indicated nodes.

Action: Log in to the indicated nodes as the root user and configure the loopback network interface with an IPv4 address "127.0.0.1/8" on the indicated nodes.

PRVG-13363: The loopback network interface configured with an IPv6 address was not found on nodes "{0}".
Cause: The Cluster Verification Utility determined that there was no loopback network interface configured with an IPv6 address "::1/128" on the indicated nodes.

Action: Log in to the indicated nodes as the root user and configure the loopback network interface with an IPv6 address "::1/128" on the indicated nodes.

PRVG-13373: The failure flag parameter "{0}" status is panic in the file "{1}" on nodes: "{2}".
Cause: The failure flag parameter value was set to 2 in the identified file on the indicated nodes.

Action: Change the failure flag parameter value to either 0 or 1 to avoid node panic on the indicated nodes, and reboot the system for the changes to take effect.

PRVG-13374: The following lines in file "{0}" could not be parsed on node "{1}" as they are not in proper format:\n{2}
Cause: Invalid lines were found in the indicated file on the indicated node.

Action: Correct the errors indicated. The format of audit rules in the indicated file is "*parameter* <value(s)>". For more details refer to the audit.rules man page.

PRVG-13381: File "{0}" does not have required permissions for group on node "{1}". [Expected = "{2}" ; Found = "{3}"].
Cause: The indicated file was found with incorrect permissions for group on the indicated node.

Action: Ensure that the indicated file has the required permissions set. An operating system command 'chmod' may be used along with the indicated file to correct the permissions on the indicated node.

PRVG-13382: File "{0}" does not have required permissions for others on node "{1}". [Expected = "{2}" ; Found = "{3}"].
Cause: The indicated file was found with incorrect permissions for others on the indicated node.

Action: Ensure that the indicated file has the required permissions set. An operating system command 'chmod' may be used along with the indicated file to correct the permissions on the indicated node.

PRVG-13383: There are fewer than the recommended number of voting files in ASM disk group "{0}" of redundancy "{1}". [Expected = "{2}" ; Found = "{3}"].
Cause: The Cluster Verification Utility determined that one or more disks used for voting files in the indicated ASM disk group are offline.

Action: Either 1) Ensure that the offline disks in the indicated ASM diskgroup are online by using the command 'asmcmd online -G *disk group name* -D *disk name*. The command 'asmcmd lsdsk -p -G *disk group name*' can be used to obtain the status of disks in the indicated ASM disk group. or 2) Use the command 'crsctl query css votedsk' to obtain the list of voting files. Add more disks to the indicated ASM disk group to match the specified expectation.

PRVG-13400: Oracle Clusterware is not configured on nodes "{0}".
Cause: The Cluster Verification Utility (CVU) found that Oracle Clusterware had not been configured on the indicated nodes.

Action: Ensure that Oracle Clusterware is installed and configured on the indicated nodes.

PRVG-13410: The upgrade state of Oracle Clusterware is not as expected to allow upgrade or patch operation. [Expected = "{0}" ; Found = "{1}"]
Cause: The Cluster Verification Utility (CVU) pre-check found that Oracle Clusterware was in the middle of some other operation with the indicated state. An upgrade or a patch application could not be performed in the indicated state.

Action: Use the command 'crsctl query crs activeversion -f' to check the upgrade state of the cluster. Complete the pending clusterware upgrade or patching operation to ensure that Oracle Clusterware is in NORMAL state and retry the operation. Otherwise, contact Oracle Support Services.

PRVG-13411: Oracle Clusterware active patch level "{0}" does not match software patch level "{1}" on node "{2}".
Cause: The Cluster Verification Utility (CVU) found that the indicated Oracle Clusterware active patch level did not match the indicated software patch level on the indicated node. The patching operation was either in progress or not complete on all the nodes.

Action: Complete the patching operation to ensure the Oracle Clusterware active patch level matches the software patch level on all the nodes and retry the operation.

PRVG-13412: Oracle Clusterware active patch level "{0}" value in Oracle Cluster Registry (OCR) does not match the value in Oracle Local Registry (OLR) on node "{2}".
Cause: The Cluster Verification Utility (CVU) found that the indicated Oracle Clusterware active patch level values in OCR and OLR did not match. The patching operation was either in progress or not complete on the indicated node.

Action: Complete the patching operation to ensure the consistency of Oracle Clusterware active patch level and retry the operation.

PRVG-13600: Query of NTP daemon for its time sources could not be performed on all nodes on which NTP daemon was running.
Cause: An attempt to query the NTP daemon for its time sources failed on all the nodes of the cluster because the 'ntpq' command could not be executed successfully. The accompanying messages provide detailed failure information.

Action: Ensure that the NTP daemon query command 'ntpq' is available on all the nodes and the user running the CVU check has execute privileges for it. Examine the accompanying messages, resolve the issues identified, and then retry the operation.

PRVG-13601: Query of NTP daemon for its time sources could not be performed on node "{0}".
Cause: An attempt to query the NTP daemon for its time sources failed on the indicated node because the 'ntpq' command could not be executed successfully. The accompanying messages provide detailed failure information.

Action: Ensure that the NTP daemon query command 'ntpq' is available on the indicated node and the user running the CVU check has execute privileges for it. Examine the accompanying messages, resolve the issues identified, and then retry the operation.

PRVG-13602: NTP daemon is not synchronized with any external time source on node "{0}".
Cause: The output of the command 'ntpq -pn' executed on the indicated node did not list any external NTP daemon synchronization time source. The values of the tally code and 'refid' columns in the command output reported that the NTP daemon is

either not synchronized with any time source or it is synchronized with a locally connected reference clock.

Action: Examine the output of the command 'ntpq -pn'. Modify the NTP configuration to use one or more appropriate external time sources, or correct any problems accessing the currently configured external time sources. Rerun the command 'ntpq -pn' to confirm that the NTP daemon running on the indicated node is now synchronized with at least one external time source, and then retry the operation.

PRVG-13604: Query of chrony daemon for its time sources could not be performed on all nodes on which chrony daemon was running.
Cause: An attempt to query the chrony daemon for its time sources failed on all the nodes of the cluster because the 'chronyc sources' command could not be executed successfully. The accompanying messages provide detailed failure information.

Action: Ensure that the chrony daemon query command 'chronyc' is available on all the nodes and the user running the CVU check has execute privileges for it. Examine the accompanying messages, resolve the issues identified, and then retry the operation.

PRVG-13605: Query of chrony daemon for its time sources could not be performed on node "{0}".
Cause: An attempt to query the chrony daemon for its time sources failed on the indicated node because the 'chronyc sources' command could not be executed successfully. The accompanying messages provide detailed failure information.

Action: Ensure that the chrony daemon query command 'chronyc' is available on the indicated node and the user running the CVU check has execute privileges for it. Examine the accompanying messages, resolve the issues identified, and then retry the operation.

PRVG-13606: chrony daemon is not synchronized with any external time source on node "{0}".
Cause: The output of the command 'chronyc sources' executed on the indicated node did not list any external chrony daemon synchronization time source. The values of the mode and state columns in the command output reported that the chrony daemon is either not synchronized with any time source or is synchronized with a locally connected reference clock.

Action: Examine the output of the command 'chronyc sources'. Modify the chrony configuration to use one or more appropriate external time sources, or correct any problems accessing the currently configured external time sources. Rerun the command 'chronyc sources' to confirm that the chrony daemon running on the indicated node is now synchronized with at least one external time source, and then retry the operation.

PRVG-13609: The path "{0}" resolving to storage of type "{1}" is not suitable for usage as Oracle Clusterware software for release "{2}". Supported storage types are "{3}".
Cause: The Cluster Verification Utility check for storage suitability determined that the storage of the indicated type designated by the indicated path was not suitable for usage as Oracle Clusterware software.

Action: Retry the operation ensuring that the supplied storage path designates storage appropriate for Oracle Clusterware software.

PRVG-13610: No shared storage was found on nodes "{0}".
Cause: The Cluster Verification Utility shared storage discovery did not find any shared storage on the indicated nodes.

Action: Ensure the existence of shared storage on the indicated nodes and retry the operation.

PRVG-13620: Node application "{0}" is offline on node "{1}".
Cause: The indicated node application was found to be offline on the indicated node.

Action: Bring the indicated resource online on the indicated node using the 'srvctl' command.

PRVG-13631: IP address for host "{0}" is not consistent across the cluster nodes.
Cause: The Cluster Verification Utility determined that the indicated host did not resolve to the same IP address across the cluster nodes. The indicated host entry in the hosts file or DNS did not resolve to the same IP address across the cluster nodes.

Action: Ensure that the entry in the hosts file or DNS resolving the IP address for the indicated host is consistent across the cluster nodes and retry the CVU check.

PRVG-13632: Host "{0}" resolves to IP address "{1}" on the majority of cluster nodes but to address "{2}" on nodes "{3}".
Cause: The Cluster Verification Utility determined that the indicated host resolved to the different IP address on the indicated nodes.

Action: Ensure that the indicated host resolves to the same IP address across the cluster nodes and retry the CVU check.

PRVG-13633: Entry for non-loopback IP addresses "{0}" contains 'localhost' alias in the file "{1}" on node "{2}".
Cause: An attempt to validate the hosts file failed because non-loopback IP address entries were found with the 'localhost' alias in the indicated file on the indicated node.

Action: Ensure that the entries containing alias 'localhost' specify only loopback IP addresses.

PRVG-13634: Host VIP "{0}" resolves to multiple IP addresses "{1}" on node "{2}".
Cause: The Cluster Verification Utility determined that the indicated host VIP resolved to more than one IP address on the indicated node.

Action: Ensure that the indicated VIP name does not resolve to more than one IP address in the hosts file or via DNS.

PRVG-13635: Host VIP "{0}" of network type "{1}" resolves to more than two IP addresses "{2}" on node "{3}".
Cause: The Cluster Verification Utility determined that the indicated host VIP resolved to more than two IP addresses on the indicated node.

Action: Ensure that the indicated VIP name does not resolve to more than two IP addresses of the same address type in the hosts file or via DNS.

PRVG-13645: Command "{0}" to get VIP network information failed.
Cause: An attempt to execute the indicated command failed.

Action: Examine the accompanying error messages and correct the problems indicated, if possible. Otherwise, contact Oracle Support Services.

PRVG-13646: failed to parse VIP network information from the 'cvuhelper' command output
Cause: An attempt to parse the output from an internal cvuhelper command failed.

Action: Examine the accompanying error messages and correct the problems indicated, if possible. Otherwise, contact Oracle Support Services.

PRVG-13690: The state of Oracle Clusterware is not ONLINE on node "{0}". [Found state = "{1}"]
Cause: The Cluster Verification Utility (CVU) determined that the Oracle Clusterware state is not ONLINE on the indicated node.

Action: Verify the state of the Oracle clusterware using 'crsctl status server' and ensure Oracle Clusterware state is ONLINE on the indicated node.

PRVG-13702: RPM Package Manager database files are corrupt on nodes "{0}".
Cause: The Cluster Verification Utility (CVU) determined that the RPM Package Manager database files were corrupt on the indicated nodes.

Action: Clean and rebuild the RPM Package Manager database by running the command '/bin/rpm --rebuilddb' on the indicated nodes, and then retry the CVU operation.

PRVG-13712: CRS resource parameter "{0}" set to "{1}" on node "{2}". Oracle Clusterware does not allow starting resources on this node. [Expected = "{3}"]
Cause: The Cluster Verification Utility (CVU) determined that the indicated Cluster Ready Services (CRS) resource parameter did not match the expected value on the indicated node.

Action: Ensure that the indicated CRS resource parameter is set to the expected value on the indicated node using the command 'crsctl set resource use'.

146

PRVH-00100 to PRVH-01503

PRVH-00100: Restricted deletion flag is not set for path "{0}" on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated path did not have restricted deletion flag (sticky bit) set on the indicated node.

Action: Ensure that the indicated path has the restricted deletion flag set. Use the operating system command 'chmod +t *path*' to set the restricted deletion flag for the indicated file system path.

PRVH-00101: Restricted deletion flag is set for path "{0}" on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated path had a restricted deletion flag (sticky bit) set on the indicated node.

Action: Ensure that the indicated path does not have the restricted deletion flag set. Use the operating system command 'chmod -t *path*' to remove the restricted deletion flag for the indicated file system path.

PRVH-00102: File "{0}" does not exist on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated file did not exist on the indicated node.

Action: Ensure that the indicated file exists.

PRVH-00103: Directory "{0}" does not exist on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated directory did not exist on the indicated node.

Action: Ensure that the indicated directory exists.

PRVH-00104: Link "{0}" does not exist on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated file system link did not exist on the indicated node.

Action: Ensure that the indicated file system link exists.

PRVH-00105: Path "{0}" with permissions "{1}" does not have read permissions for the owner on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have read permissions for the owner on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for the owner.

PRVH-00106: Path "{0}" with permissions "{1}" does not have write permissions for the owner on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have write permissions for the owner on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the owner.

PRVH-00107: Path "{0}" with permissions "{1}" does not have execute permissions for the owner on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the owner.

PRVH-00108: Path "{0}" with permissions "{1}" does not have read permissions for the file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions for the file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for the file's group.

PRVH-00109: Path "{0}" with permissions "{1}" does not have write permissions for the file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions for the file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the file's group.

PRVH-00110: Path "{0}" with permissions "{1}" does not have execute permissions for the file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the file's group.

PRVH-00111: Path "{0}" with permissions "{1}" does not have read permissions for others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions for others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for others.

PRVH-00112: Path "{0}" with permissions "{1}" does not have write permissions for others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions for others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for others.

PRVH-00113: Path "{0}" with permissions "{1}" does not have execute permissions for others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for others.

PRVH-00114: Path "{0}" with permissions "{1}" does not have read permissions for the owner, file's group, and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner, file's group and other on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for user, file's group and others.

PRVH-00115: Path "{0}" with permissions "{1}" does not have write permissions for the owner, file's group, and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner, file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the owner, file's group and others.

PRVH-00116: Path "{0}" with permissions "{1}" does not have execute permissions for the owner, file's group, and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner, file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the owner, file's group and others.

PRVH-00117: Path "{0}" with permissions "{1}" does not have read permissions for the owner and file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for the owner and file's group.

PRVH-00118: Path "{0}" with permissions "{1}" does not have write permissions for the owner and file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the owner and file's group.

PRVH-00119: Path "{0}" with permissions "{1}" does not have execute permissions for the owner and file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the owner and file's group.

PRVH-00120: Path "{0}" with permissions "{1}" does not have read permissions for the owner and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for the owner and others.

PRVH-00121: Path "{0}" with permissions "{1}" does not have write permissions for the owner and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the owner and others.

PRVH-00122: Path "{0}" with permissions "{1}" does not have execute permissions for the owner and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the owner and others.

PRVH-00123: Path "{0}" with permissions "{1}" does not have read permissions for the file's group and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions for the file's group and others.

PRVH-00124: Path "{0}" with permissions "{1}" does not have write permissions for the file's group and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions for the file's group and others.

PRVH-00125: Path "{0}" with permissions "{1}" does not have execute permissions for the file's group and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions for the file's group and others.

PRVH-00126: Path "{0}" with permissions "{1}" does not have read permissions for the owner or file's group, or others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner, file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the owner or file's group or others.

PRVH-00127: Path "{0}" with permissions "{1}" does not have write permissions for the owner or file's group, or others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner, file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the owner or file's group or others.

PRVH-00128: Path "{0}" with permissions "{1}" does not have execute permissions for the owner or file's group, or others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner, file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the owner or file's group or others.

PRVH-00129: Path "{0}" with permissions "{1}" does not have read permissions for the owner or file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the owner or file's group.

PRVH-00130: Path "{0}" with permissions "{1}" does not have write permissions for the owner or file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the owner or file's group.

PRVH-00131: Path "{0}" with permissions "{1}" does not have execute permissions for the owner or file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the owner or file's group.

PRVH-00132: Path "{0}" with permissions "{1}" does not have read permissions for the owner or others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the owner or others.

PRVH-00133: Path "{0}" with permissions "{1}" does not have write permissions for the owner or others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the owner or others.

PRVH-00134: Path "{0}" with permissions "{1}" does not have execute permissions for the owner or others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the owner or others.

PRVH-00135: Path "{0}" with permissions "{1}" does not have read permissions for the file's group or others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the file's group or others.

PRVH-00136: Path "{0}" with permissions "{1}" does not have write permissions for the file's group or others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the file's group or others.

PRVH-00137: Path "{0}" with permissions "{1}" does not have execute permissions for the file's group or others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions for the file's group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the file's group or others.

PRVH-00138: Path "{0}" with permissions "{1}" does not have read permissions for the owner or file's group and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions either for the owner or owning group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the owner or file's group and others.

PRVH-00139: Path "{0}" with permissions "{1}" does not have write permissions for the owner or file's group and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions either for the owner or owning group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the owner or file's group and others.

PRVH-00140: Path "{0}" with permissions "{1}" does not have execute permissions for the owner or file's group and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions either for the owner or owning group and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the owner or file's group and others.

PRVH-00141: Path "{0}" with permissions "{1}" does not have read permissions for the file's group or owner and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions either for the file's group or the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for the file's group or the owner and others.

PRVH-00142: Path "{0}" with permissions "{1}" does not have write permissions for the file's group or owner and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions either for the file's group or the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for the file's group or the owner and others.

PRVH-00143: Path "{0}" with permissions "{1}" does not have execute permissions for the file's group or owner and others on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions either for the file's group or the owner and others on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for the file's group or the owner and others.

PRVH-00144: Path "{0}" with permissions "{1}" does not have read permissions for others or the owner and file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the read permissions either for others or the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the read permissions either for others or the owner and file's group.

PRVH-00145: Path "{0}" with permissions "{1}" does not have write permissions for others or the owner and file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the write permissions either for others or the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the write permissions either for others or the owner and file's group.

PRVH-00146: Path "{0}" with permissions "{1}" does not have execute permissions for others or the owner and file's group on node "{2}".
Cause: A check for file system attributes found that the indicated path did not have the execute permissions either for others or the owner and file's group on the indicated node.

Action: Change the permissions of the indicated path to grant the execute permissions either for others or the owner and file's group.

PRVH-00147: Set group ID bit is not set for file "{0}" on node "{1}".
Cause: The set group ID bit was not set for the identified file on the indicated node.

Action: Log in as the root user and set the set group ID bit for the identified file using command 'chmod g+s *file*'.

PRVH-00148: Set group ID bit is set for file "{0}" on node "{1}".
Cause: The set group ID bit was set for the identified file on the indicated node.

Action: Log in as the root user and remove the set group ID bit for the identified file using command 'chmod g-s *file*'.

PRVH-00149: Set user ID bit is set for file "{0}" on node "{1}".
Cause: The set user ID bit was set for the identified file on the indicated node.

Action: Log in as the root user and remove the set user ID bit for the identified file using command 'chmod -s *file*'.

PRVH-00150: failure to open file "{0}" to read on node "{1}". Operation failed with error "{2}"
Cause: An attempt to read the specified file failed on the indicated node because of the indicated error.

Action: Ensure that the file exists at the indicated path and the user running diagnostics operations has read permissions on the indicated file.

PRVH-00151: Directory "{0}" is not empty on node "{1}".
Cause: The identified directory path was found to be not empty on the indicated node.

Action: Ensure that the identified directory path is empty on the indicated node .

PRVH-00152: Directory "{0}" is an empty directory on node "{1}".
Cause: The identified directory path was found to be an empty directory on the indicated node.

Action: Ensure that the identified directory path is not an empty directory on the indicated node .

PRVH-00153: File "{0}" is not empty on node "{1}".
Cause: The identified path was found to be a non empty file on the indicated node.

Action: Ensure that the identified file path is empty on the indicated node .

PRVH-00154: File "{0}" is empty on node "{1}".
Cause: The identified path was found to be zero bytes file on the indicated node.

Action: Ensure that the identified file path is not empty on the indicated node .

PRVH-00158: User ID "{0}" does not exist on node "{1}".
Cause: The specified user ID did not exist on the specified node.

Action: Create the user with specified ID on the specified node.

PRVH-00159: Group ID "{0}" does not exist on node "{1}".
Cause: The specified group ID did not exist on the specified node.

Action: Create the group with specified group ID on the specified node.

PRVH-00161: File "{0}" is not expected on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated file already existed on the indicated node.

Action: Ensure that the indicated file does not exist.

PRVH-00162: Directory "{0}" is not expected on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated directory already existed on the indicated node.

Action: Ensure that the indicated directory does not exist.

PRVH-00163: Link "{0}" is not expected on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated file system link already existed on the indicated node.

Action: Ensure that the indicated file system link does not exist.

PRVH-00169: Checksum of the file "{0}" is inconsistent across nodes. [Found = "{1}"]
Cause: The Cluster Verification Utility (CVU) determined the checksum of the indicated file was not the same on all cluster nodes.

Action: Ensure the content of the indicated file is consistent on all nodes.

PRVH-00180: Path "{0}" is not a file on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated path was not a file but a directory on the identified node.

Action: Ensure that the indicated path exists as file on the identified node.

PRVH-00181: Path "{0}" is not a directory on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated path was not a directory on the indicated node.

Action: Ensure that the indicated path exists as directory on the identified node.

PRVH-00182: Path "{0}" is not a link on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated path was not a file system link on the identified node.

Action: Ensure that the indicated path exists as file system link on the identified node.

PRVH-00183: Path "{0}" is not expected to be owned by user "{1}" on node "{2}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated path was incorrectly owned by the indicated user on the identified node.

Action: Ensure that the indicated path is not owned by the indicated user on the identified node.

PRVH-00184: Path "{0}" is not expected to be owned by group "{1}" on node "{2}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated path was incorrectly owned by the indicated group on the identified node.

Action: Ensure that the indicated path is not owned by the indicated group on the identified node.

PRVH-00185: Path "{0}" does not allow execution on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated path did not allow execution of any executable on the identified node.

Action: Ensure that the indicated path does not have security settings restricting the execution of binaries on the identified node. Security enforced restrictions or Access Control Lists configuration limits the ability to execute binaries from the file system location. Examine the accompanying messages for details on the cause of the failure.

PRVH-00186: Path "{0}" is not owned by user "{1}" and user is not the member of group "{2}" of the path on node "{3}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated path was not owned by the indicated user and the user was not a member of the group of the path on the indicated node.

Action: Ensure that the indicated path is either owned by the indicated user or by a group of which the user is a member on the indicated node.

PRVH-00500: Server categories "{0}" exist with a leaf role.
Cause: Indicated server categories were found to be configured with a leaf role. An attribute setting of 'ACTIVE_CSS_ROLE=leaf' was found for each of these server categories. Nodes with CSS role of leaf are not supported in Oracle Clusterware 19c onward.

Action: Modify each of the indicated server categories to have an attribute setting of 'ACTIVE_CSS_ROLE=hub'. Otherwise, delete the indicated server categories after performing one of the following two corrective actions for each of the server pools which uses any of the indicated server categories: (1) Delete that server category from its SERVER_CATEGORY attribute, if multiple categories are indicated. Otherwise, delete the server pool. (2) Modify the SERVER_CATEGORY of the server pool to replace the indicated server category with a server category that is not configured with a leaf role.

PRVH-00501: ASM filter driver discovery diskstring "{0}" is invalid.
Cause: Cluster Verification Utility check found that the indicated ASM filter driver discovery diskstring contains path names that are invalid OS path names.

Action: Use the command 'asmcmd afd_dsget' to get the current discovery string. Ensure that the discovery string is set correctly to the path names that the OS accepts using the command 'asmcmd afd_dsset <afd_diskstring>' and retry the operation.

PRVH-00510: IPC protocol used by ASM instances is inconsistent across the cluster nodes. ASM instances use the "{0}" protocol on nodes "{1}" and "{2}" protocol on nodes "{3}".
Cause: Cluster Verification Utility (CVU) found that IPC protocol used by ASM instances was not consistent across the cluster nodes.

Action: Ensure that ASM instances use the same protocol on all the cluster nodes for IPC communication. Run the command 'make -f $ORACLE_HOME/rdbms/lib/ins_rdbms.mk ipc_rds ioracle' to change the protocol to 'rds' or command 'make -f $ORACLE_HOME/rdbms/lib/ins_rdbms.mk ipc_g ioracle' to change the protocol to 'udp' on the applicable nodes to make the IPC protocol consistent across the cluster nodes. Refer to MOS note 2345406.1 for more details.

PRVH-00511: ASM instances do not use the IPC protocol 'RDS' for IPC communication on nodes "{0}".
Cause: Cluster Verification Utility (CVU) found that IPC protocol used by ASM instances was not RDS on the indicated nodes.

Action: Ensure that the ASM instances use the RDS protocol for IPC communication on the indicated nodes by running the command 'make -f $ORACLE_HOME/rdbms/lib/ins_rdbms.mk ipc_rds ioracle'. Refer to MOS note 2345406.1 for more details.

PRVH-00512: ASM instances use the IPC protocol 'UDP' for IPC on nodes "{0}".
Cause: The Cluster Verification Utility (CVU) found that the Inter-process Communication (IPC) protocol used by ASM instances was not Reliable Datagram Sockets (RDS) on the indicated nodes. The User Datagram Protocol (UDP) linked Oracle binary upgrade failed on Oracle Exadata environments.

Action: Ensure that the ASM instances use the RDS protocol for IPC on the indicated nodes by running the command 'make -f $ORACLE_HOME/rdbms/lib/ins_rdbms.mk ipc_rds ioracle'. Refer to MOS note 2345406.1 for more details.

PRVH-00513: ASM instances use the IPC protocol 'RDS' for IPC on nodes "{0}".
Cause: The Cluster Verification Utility (CVU) found that the Inter-process Communication (IPC) protocol used by ASM instances was not User Datagram Protocol (UDP) on the indicated nodes. The Reliable Datagram Sockets (RDS) linked Oracle binary upgrade failed on non-Oracle Exadata environments.

Action: Ensure that the ASM instances use the UDP protocol for IPC on the indicated nodes by running the command 'make -f $ORACLE_HOME/rdbms/lib/ins_rdbms.mk ipc_g'.

PRVH-00516: failed to retrieve CVU remote execution framework version from node "{1}" during an attempt to setup remote execution framework directory "{0}"
Cause: An operation requiring remote execution could not complete because the attempt to retrieve CVU remote execution framework version failed. The accompanying message provides detailed failure information.

Action: Ensure that the user executing the checks has sufficient permissions to execute an executable under the indicated directory. Refer to the accompanying error messages for execution failure information, resolve the issues and retry the operation.

PRVH-00520: failed to generate HTML report
Cause: Error occurred while generating the requested HTML report for the Cluster Verification Utility operation.

Action: Examine the accompanying error message for details, resolve issues identified and retry the operation.

PRVH-00521: OS kernel parameter "{0}" does not have expected current value on node "{1}" [Expected = "{2}" ; Current = "{3}";].
Cause: The Cluster Verification Utility (CVU) found that the current value for an OS kernel parameter did not match the expected value.

Action: Modify the indicated kernel parameter current value to match the required value.

PRVH-00525: The specified command is only supported from the configured Cluster Ready Services (CRS) or High Availability (HA) home.
Cause: The specified command was not run from the configured CRS or HA home. The command is supported only from configured Cluster Ready Services (CRS) or High Availability (HA) home.

Action: Run the command from the configured CRS or HA home.

PRVH-00554: Grid Infrastructure Management Repository is not yet installed and configured on this cluster.
Cause: Grid Infrastructure Management Repository was selected during Install, however it was not found to be installed or configured.

Action: Ensure that the Grid Infrastructure Management Repository is installed and configured for this cluster.

PRVH-00555: Error encountered while trying to determine whether the Grid Infrastructure Management Repository is configured for the CRS home "{0}".
Cause: The current configuration status of Grid Infrastructure Management Repository for the indicated CRS home was not determined.

Action: Ensure that the Grid Infrastructure Management Repository is installed and configured for the indicated CRS home. Examine the accompanying error message, resolve the problems indicated there, and then retry the operation.

PRVH-00556: The specified command is not compatible with the configured home "{0}". Run command from the location "{1}".
Cause: The specified command was not compatible with the home from which it was run.

Action: Ensure that the command is run from the specified configured home.

PRVH-00557: The specified command is not compatible with the configured home "{0}". This command is only supported from the configured CRS home.
Cause: The specified command was not compatible with the home from which it was run. The command is supported only from configured Cluster Ready Services (CRS) home.

Action: Run the command from the configured CRS home.

PRVH-00558: TCP connectivity failed for the SCAN listeners on cluster "{0}" with SCAN name "{1}" on node "{2}".
Cause: Cluster Verification Utility (CVU) found that connection to SCAN listeners of shared SCAN client failed from the indicated node.

Action: Ensure that SCAN listeners on the indicated shared SCAN server cluster are running. Also, examine the accompanying messages for more details on the cause of failure.

PRVH-00570: Oracle ACFS was found configured with resources "{0}" from CRS home "{1}" but is not available in Oracle Clusterware release version "{2}" for the current operating system platform.
Cause: The Oracle Automatic Storage Management Cluster File System (Oracle ACFS) was found configured, but was not supported on the current operating system platform by the targeted Oracle Clusterware release.

Action: Ensure that the Oracle ACFS is not in use and that no ACFS resources such as volumes or file system resources are present in the current configuration. Deconfigure and remove the indicated Oracle ACFS resources before proceeding. No data will be available to be recovered after installation, as Oracle ACFS is not available in the latest release. Refer to My Oracle Support note 1369107.1 for more information regarding this requirement.

PRVH-00571: Failed to determine if Oracle ACFS resources are configured from CRS home "{0}" on node "{1}", command "{2}" with error {3}
Cause: An attempt to query Oracle Automatic Storage Management Cluster File System (Oracle ACFS) resources failed with the indicated error.

Action: Examine the accompanying error message, resolve the problems indicated there, and then retry the operation.

PRVH-00572: Oracle ACFS Remote was found configured on Indirect Storage Member Cluster with resources "{0}" from CRS home "{1}" but is not available in Oracle Clusterware release version "{2}" .
Cause: The Oracle Automatic Storage Management Cluster File System Remote (Oracle ACFS Remote) was found configured, but was not supported for Indirect Storage Member Clusters on the current operating system platform by the targeted Oracle Clusterware release.

Action: Contact Oracle Support Services.

PRVH-00573: Oracle ACFS driver from CRS home "{0}" is supported on the current kernel version of the operating system, but will not be supported on the specified target kernel "{1}"
Cause: The Oracle Automatic Storage Management Cluster File System (Oracle ACFS) was found supported on the current operating system kernel version, but was not compatible with the indicated kernel of the operating system.

Action: Ensure that the operating system is only upgraded to the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) supported kernel version. Upgrading the operating system to an unsupported kernel will result in complete loss of ACFS functionality.

PRVH-00574: Failed to determine if Oracle ACFS driver from CRS home "{0}" is compatible with kernel "{1}" , command "{2}" failed with error:
Cause: An attempt to check if Oracle Automatic Storage Management Cluster File System (Oracle ACFS) driver is compatible with the specified kernel failed with the indicated error.

Action: Examine the accompanying error message, resolve the problems indicated there, and then retry the operation.

PRVH-00577: Vendor cluster is detected from CRS home "{0}" but is not supported in Oracle Clusterware release version "{1}".
Cause: Cluster Verification Utility (CVU) detected that the indicated Cluster Ready Services (CRS) home has a vendor cluster configuration which is not supported in the target version of Oracle Clusterware.

Action: Ensure that the vendor cluster configuration is removed after the successful upgrade to the target version of Oracle Clusterware. Refer to My Oracle Support note 2638525.1 for more information regarding this requirement.

PRVH-00578: Vendor cluster is detected but is not supported in Oracle Clusterware release version "{0}".
Cause: Cluster Verification Utility (CVU) detected the vendor cluster configuration which is not supported in the installed version of Oracle Clusterware.

Action: Ensure that the vendor cluster configuration is removed. Refer to My Oracle Support note 2638525.1 for more information regarding this requirement.

PRVH-00580: Oracle ACFS mount points "{0}" are configured with ACFS replication version older than "{1}" release.
Cause: Cluster Verification Utility (CVU) detected that the indicated mount points of Oracle Automatic Storage Management Cluster File System (Oracle ACFS) were configured with the ACFS replication version which is older than the indicated minimum supported version.

Action: Ensure that the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) is configured with newer than the indicated version of ACFS replication. Examine the accompanying messages for more details. Refer to My Oracle Support note 2608560.1 for more information regarding this requirement.

PRVH-00591: Oracle ASM Filter Driver (AFD) from CRS home "{0}" is supported on the current kernel version of the operating system, but will not be supported on the specified target kernel "{1}"
Cause: The Oracle ASM Filter Driver (AFD) was found supported on the current operating system kernel version, but was not compatible with the indicated kernel of the operating system.

Action: Ensure that the operating system is only upgraded to the Oracle Oracle ASM Filter Driver (AFD) supported kernel version. Upgrading the operating system to an unsupported kernel will result in complete loss of Oracle Automatic Storage Management functionality.

PRVH-00592: Failed to determine if Oracle ASM Filter Driver (AFD) from CRS home "{0}" is compatible with kernel "{1}" , command "{2}" failed with error:
Cause: An attempt to check if Oracle ASM Filter Driver (AFD) is compatible with the specified kernel failed with the indicated error.

Action: Examine the accompanying error message, resolve the problems indicated there, and then retry the operation.

PRVH-00600: Exascale files "{0}" are not accessible on node "{1}".
Cause: The indicated Exascale paths were found to be not accessible on the indicated node.

Action: Ensure that the indicated Exascale vault and files are present and accessible on the indicated node and retry the operation.

PRVH-00601: The legacy domain sockets directory path "{0}" is not a filesystem symbolic link to the domain sockets directory "{1}" on nodes "{2}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated symbolic link did not exist on the indicated nodes.

Action: Ensure that the indicated symbolic link exists. If the indicated legacy domain sockets directory exists with contents, then stop the databases and other applications that are using SQL*Net, clear the contents of the directory, create the indicated symbolic link and restart the applications.

PRVH-00602: failed to set up passwordless SSH connectivity on nodes "{0}"
Cause: An operation to perform passwordless SSH connectivity setup failed. The accompanying message provides detailed failure information.

Action: Examine the accompanying error messages, resolve the problems indicated there, and then retry the operation. If the accompanying error messages suggest issues with invalidity or incompatibility of public or private keys, then refer to the Oracle Clusterware documentation to configure SSH manually on the cluster nodes.

PRVH-00611: IP addresses "{0}" of network interfaces "{1}" on the node "{2}" conflicted with High Availability IP (HAIP) usage.
Cause: The Cluster Verification Utility (CVU) determined that the indicated network interfaces had IP addresses in the range 169.254.0.0/19 with netmask 255.255.224.0, the range used by HAIP which can create routing conflicts.

Action: Ensure that there are no IP addresses in the range 169.254.0.0/19 on any network interfaces.

PRVH-00612: GIMR is not online.
Cause: The Cluster Verification Utility (CVU) determined that the Grid Infrastructure Management Repository (GIMR) was not online.

Action: Ensure that the GIMR is enabled and running for the Oracle Clusterware upgrade operation to succeed and retry the operation.

PRVH-00656: User with root privileges attempted to perform Cluster Verification Utility operation.
Cause: User with root privileges attempted an operation which is not supported to be performed as a root user.

Action: Retry the operation with a non-root user.

PRVH-00657: Software checks for software home "{0}" with software owner "{1}" was performed by user "{2}" with insufficient privileges.
Cause: The Cluster Verification Utility (CVU) determined that the software checks for the indicated software home were not performed by the indicated software owner.

Action: Ensure that the operation is performed by the indicated software owner.

PRVH-00662: VM resources exist which are registered with Oracle Virtual Machine Manager (OVMM)
Cause: Cluster Verification Utility (CVU) determined that there were Oracle Virtual Machine resources registered which were no longer supported.

Action: Remove all the Oracle Virtual Machine resources of type 'ora.vm.type' with the command 'srvctl remove vm' and retry the upgrade. Run 'srvctl config vm' command to find all the configured Virtual Machine (VM) resources.

PRVH-00663: Oracle Clusterware software patch level "{0}" value in Oracle Cluster Registry (OCR) does not match the value "{1}" in Oracle Local Registry (OLR) on node "{2}".
Cause: The Cluster Verification Utility (CVU) found that the indicated Oracle Clusterware software patch level values in OCR and OLR did not match. The patching operation was either in progress or not complete on the indicated node.

Action: Complete the patching operation to ensure the consistency of Oracle Clusterware software patch level and retry the operation.

PRVH-00664: Oracle Clusterware active patch level "{0}" does not match release patch level "{1}" on node "{2}".
Cause: The Cluster Verification Utility (CVU) found that the indicated Oracle Clusterware active patch level did not match the indicated release patch level on the indicated node. The patching operation was either in progress or not complete on the indicated node

Action: Complete the patching operation to ensure the consistency of Oracle Clusterware release patch level and retry the operation.

PRVH-00665: Oracle Clusterware upgrade state is not NORMAL. [Found = "{0}"]
Cause: The Cluster Verification Utility (CVU) pre-check found that Oracle Clusterware was in the middle of an upgrade with the indicated state.

Action: Use the command 'crsctl query crs activeversion -f' to check the upgrade state of the cluster. If the cluster is not intended to be in the middle of an upgrade, then complete the operation to ensure that the cluster is in NORMAL state and retry the operation.

PRVH-00666: No swap devices configured on node "{0}"
Cause: The Cluster Verification Utility (CVU) determined that swap devices were not configured on the indicated node.

Action: Ensure that swap devices configured on the indicated node to get the swap space information.

PRVH-00667: SPFILE "{0}" and SPFILE backup "{1}" for ASM are on the same Oracle ASM disk group.
Cause: The Cluster Verification Utility (CVU) check found that the indicated ASM SPFILE backup file was on the same Oracle ASM disk group as the SPFILE.

Action: Ensure that the ASM SPFILE backup is on a different Oracle ASM disk group than the SPFILE.

PRVH-00668: Version consistency check failed for OPatch utility of the software home "{0}".
Cause: The Cluster Verification Utility (CVU) check found that the version of OPatch utility was not consistent across the cluster.

Action: Refer to accompanying messages for node-wise information of OPatch utility version. Ensure that the OPatch utility version is consistent across the cluster.

PRVH-00676: The state of the Oracle ASM cluster is not as expected to allow patch operation. [Expected = "{0}" ; Found = "{1}"]
Cause: The Cluster Verification Utility (CVU) pre-check found that Oracle ASM cluster was in the middle of some other operation with the indicated state. A patch application could not be performed in the indicated state.

Action: Use the command 'asmcmd showclusterstate' to check the state of the cluster. Complete the Oracle ASM operation with the indicated state to ensure that Oracle ASM cluster is in NORMAL state and retry the operation.

PRVH-00679: Grid Infrastructure Management Repository validation failed on node "{0}".
Cause: The Cluster Verification Utility (CVU) found that Oracle GIMR was not configured properly.

Action: Examine the accompanying error messages for more details and fix the issues identified. Use the command 'mgmtca validateGIMR -report' to validate the configuration and retry the operation.

PRVH-00680: The socket send buffer size could not be set to the value of "{0}" bytes on the container node "{1}", maximum allowed send buffer size on this container node is "{2}" bytes.
Cause: The Cluster Verification Utility (CVU) pre-check found that the socket send buffer size could not be set to the indicated value on the identified container node.

Action: The container node may not control the value in its namespace and hence the required send buffer size may be configured by setting the wmem_max kernel parameter from the Linux host of the container.

PRVH-00681: The socket send buffer default size is not set to the minimum expected value on the container node "{0}". [Expected = "{1}" bytes ; Found = "{2}" bytes]
Cause: The Cluster Verification Utility (CVU) pre-check found that the default value of socket send buffer size was not be set to the indicated minimum expected value on the identified container node.

Action: The container node may not control the value in its namespace and hence the required send buffer size may be configured by setting the wmem_default kernel parameter from the Linux host of the container.

PRVH-00682: The socket receive buffer size could not be set to the value of "{0}" bytes on the container node "{1}", maximum allowed send buffer size on this container node is "{2}" bytes.
Cause: The Cluster Verification Utility (CVU) pre-check found that the socket receive buffer size could not be set to the indicated value on the identified container node.

Action: The container node may not control the value in its namespace and hence the required send buffer size may be configured by setting the rmem_max kernel parameter from the Linux host of the container.

PRVH-00683: The socket receive buffer default size is not set to the minimum expected value on the container node "{0}". [Expected = "{1}" bytes ; Found = "{2}" bytes]
Cause: The Cluster Verification Utility (CVU) pre-check found that the default value of socket receive buffer size was not be set to the indicated minimum expected value on the identified container node.

Action: The container node may not control the value in its namespace and hence the required send buffer size may be configured by setting the rmem_default kernel parameter from the Linux host of the container.

PRVH-00700: Oracle High availability managed resource "{0}" is found in state "{1}" but is expected to be in state "{2}" on node "{3}".
Cause: The Cluster Verification Utility (CVU) determined that the indicated resource was not in an ONLINE state on the identified node.

Action: Ensure that the indicated resource is enabled and is in an ONLINE state for stable behavior of the Oracle Clusterware functionality.

PRVH-00753: Policy managed database "{0}" was found configured from Oracle Home "{1}" and is not supported from the target release of the Oracle Clusterware
Cause: The Cluster Verification Utility (CVU) identified the indicated policy managed database configured from the specified home which was not supported by the target release of the Oracle Clusterware.

Action: Ensure that the identified policy managed database is converted to an administrator managed database before proceeding to upgrade the Oracle Clusterware home.

PRVH-00755: Policy "{0}" was found configured and is not supported from the target release of the Oracle Clusterware
Cause: The Cluster Verification Utility (CVU) identified the indicated policy configured, which was not supported by the target release of the Oracle Clusterware.

Action: Ensure that the identified policy is deleted using 'crsctl delete policy *name*' command before proceeding to upgrade the Oracle Clusterware home.

PRVH-00757: Server pool "{0}" was found configured and is not supported from the target release of the Oracle Clusterware
Cause: The Cluster Verification Utility (CVU) identified the indicated server pool configured, which was not supported by the target release of the Oracle Clusterware.

Action: Ensure that the identified server pool is deleted using 'crsctl delete sp *name*' command before proceeding to upgrade the Oracle Clusterware home.

PRVH-00979: CVU destination directory path "{0}" is shared on nodes "{1}"
Cause: The Cluster Verification Utility (CVU) determined that the indicated directory path was shared between the indicated nodes.

Action: Ensure that the indicated directory path is not shared between the identified nodes or select a different CVU destination location which is not shared.

PRVH-00997: Some of the verification checks will be skipped due to unavailability of required software in the specified destination CRS home path "{0}".
Cause: The Cluster Verification Utility (CVU) check found that the indicated destination CRS home location was either an empty directory or did not contain all of the required software bits.

Action: Ensure that the specified destination CRS home directory is complete and is an up-to-date copy of the targeted version of CRS home.

PRVH-00998: Selected trace location "{0}" does not meet the minimum requirement.
Cause: The Cluster Verification Utility (CVU) check found that the indicated trace location did not meet the minimum prerequisites.

Action: Examine the accompanying error messages for more details. An alternate trace location may be selected by setting an environment variable CV_TRACELOC to any writable directory with sufficient free space.

PRVH-01001: Failed to update the current clock source using command "{0}" on node "{1}". Detailed error: {2}
Cause: An attempt to update the current clock source with the indicated command failed on the indicated node.

Action: Examine the accompanying error messages for details and also ensure that the command executable exists at the identified path and the privilege delegation method used to run this command is run with correct credentials.

PRVH-01002: Parameter "UsePAM" set to "no" in the SSH daemon configuration file "{0}" on node "{1}".
Cause: The Cluster Verification Utility (CVU) determined that the secure shell (SSH) daemon configuration file was updated to not use the Pluggable Authentication Module (PAM) on the indicated node. The shell limits from the limits.conf file would not be in effect if PAM authentication is disabled instead, the default SSH daemon shell limits would be in effect.

Action: Ensure that PAM authentication is enabled by setting the parameter 'UsePAM' to 'yes' in the indicated file on the indicated node to enforce the shell limits from the limits.conf file and retry the fixup operation.

PRVH-01501: The location "{0}" for stand alone pluggable CVU home is not suitable to use.
Cause: The Cluster Verification Utility (CVU) determined that the indicated location did not contain the required software or the CVU software version was not supported.

Action: Ensure that the specified location contains the complete bits of CVU software in unzipped form and the CVU software version is greater than or equal to the current Grid Infrastructure software version.

PRVH-01502: failed to run the cluster verification checks from the stand alone pluggable CVU home location "{0}"
Cause: The Cluster Verification Utility (CVU) determined that the cluster verification checks could not be performed from the specified location.

Action: Ensure that the specified location contains the complete bits of CVU software in unzipped form and the CVU software version is greater than or equal to the current Grid Infrastructure software version. Examine the accompanying messages, resolve the issues, and retry the operation.

PRVH-01503: failed to run the cluster verification check "{0}" from the stand alone pluggable CVU home location "{1}"
Cause: The Cluster Verification Utility (CVU) determined that the indicated cluster verification check could not be performed from the specified location.

Action: Ensure that the specified location contains the complete bits of CVU software in unzipped form and the CVU software version is greater than or equal to the current Grid Infrastructure software version. Examine the accompanying messages, resolve the issues, and retry the operation.

147

PRVP-01001 to PRVP-05210

PRVP-01001: Invalid command line syntax.
Cause: The command was rejected because the specified syntax was incorrect.

Action: Look at the usage provided for this command and use the correct syntax.

PRVP-01041: value specified "{0}" for command line option '-port' is not a number
Cause: A non-numeric value was specified for command line option '-port'.

Action: Specify a numeric value for the command line option '-port'.

PRVP-01044: Error occurred while opening configuration file "{0}"
Cause: Configuration file could not be opened. It either does not exist or you are not allowed read access.

Action: Provide a usable configuration file.

PRVP-01049: Failed to read the root user password from standard input
Cause: An attempt to read the password for the root user from standard input failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVP-01050: Failed to read the password for 'sudo' user "{1}" from standard input
Cause: An attempt to read the password for specified 'sudo' user from standard input failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVP-01051: Failed to read the password for 'pbrun' user "{1}" from standard input
Cause: An attempt to read the password for specified 'pbrun' user for from standard input failed.

Action: Look at the accompanying messages for details on the cause of failure.

PRVP-01052: Command line option -method required when -dhcpport is less than 1024. The DHCP port value used is "{0}".
Cause: An attempt to check DHCP was rejected because the user did not have sufficient authority to listen on the specified DHCP port.

Action: DHCP checks when command line option -dhcpport is less than 1024 can be run only as root user. When command line option -dhcpport is not specified the default value of DHCP port used is 67. Make sure that required credentials are supplied using the command line option -method.

PRVP-01055: '-d <oracle_home>' cannot be specified in combination with '-collect cluster' option.
Cause: The specified command was rejected because it specified '-d <oracle_home>' with an incompatible '-collect' option. The option '-d <oracle_home>' can only be specified with '-collect database' or '-collect all'.

Action: Remove the '-d <oracle_home>' specification or change the '-collect' specification.

PRVP-01056: '-db <db_unique_name>' cannot be combined with the specified '-collect' option.
Cause: The specified command was rejected because it specified '-db <db_unique_name>' with an incompatible '-collect' option. The option '-db <db_unique_name>' can only be specified with '-collect database' or '-collect all'.

Action: Remove the '-db <db_unique_name>' specification or change the '-collect' specification.

PRVP-01057: '-d <oracle_home>' cannot be combined with the specified '-collect' option.
Cause: The specified command was rejected because it specified '-d <oracle_home>' with an incompatible '-collect' option. The option '-d <oracle_home>' can only be specified with '-collect database' or '-collect all'.

Action: Remove the '-d <oracle_home>' specification or change the '-collect' specification.

PRVP-01058: invalid combination of '-asm' option with '-s' option.
Cause: A submitted command was rejected because it specified the '-asm' option with the '-s' option. The options '-asm' and '-s' are mutually exclusive.

Action: Retry the command without specifying the '-asm' or '-s' option or by specifying either the '-asm' or '-s' option, but not both.

PRVP-01059: invalid combination of '-asm' option with '-t software' option
Cause: A submitted command was rejected because it specified the '-asm' option with the '-t software' option. The ASM disks are not suitable for storing Oracle RAC database software executables.

Action: Retry the command specifying the '-asm' option without the '-t software' option.

PRVP-01061: Ignoring domains for the following node names specified with domain "{0}". Verification will proceed with nodes "{1}"
Cause: Node names were specified with domain names, and the domain names were ignored.

Action: Make sure that node names are specified without domain names.

PRVP-01062: One of '{0}' options must be specified. See usage for detail.
Cause: The specified command was rejected because none of the options from the indicated list was specified. One or more options from the indicated list must be specified.

Action: Retry the command specifying the missing option.

PRVP-01070: cluvfy command with the arguments "{0}" not supported through REST API call. \n[Unsupported arguments = "{1}"]
Cause: cluvfy command was invoked with the indicated arguments which are not supported through a REST API call.

Action: Retry the command omitting the unsupported arguments.

PRVP-03514: -savedir flag not specified.
Cause: The -savedir flag was not specified while running the baseline collection command through 'runcluvfy'.

Action: Specify a valid value for -savedir flag.

PRVP-03563: Invalid command line option specified. The option '-serviceuser' is not valid with version "{0}".
Cause: Command line option '-serviceuser' was specified with release version earlier than 12c.

Action: Use '-serviceuser' option with 12c or later release.

PRVP-03564: Invalid command line option specified. The option '-serviceuser' is not valid with version "{0}".
Cause: Command line option '-serviceuser' was specified with pre-check for database 12c installation.

Action: Omit the '-serviceuser' option.

PRVP-03756: value specified "{0}" for command line option '-time_out' is not a number.
Cause: A non-numeric value was specified for command line option '-time_out'.

Action: Specify a numeric value for the command line option '-time_out'.

PRVP-03757: value specified "{0}" for command line option '-time_out' is less than the minimum value of 30 seconds
Cause: An insufficient value was specified for command line option '-time_out'.

Action: Specify a value greater than or equal to 30 seconds for the command line option '-time_out'.

PRVP-05104: Invalid value "{0}" found for the variable name "{1}" while parsing file "{2}".
Cause: An invalid value was found for the given variable while parsing the specified file.

Action: Verify that the variable exists in the specified file and has a valid value.

PRVP-05105: No value was found for the variable name "{0}" while parsing file "{1}".
Cause: An empty value was found for the given variable or the variable was not defined in the specified file.

Action: Verify that the variable exists in the specified file and has a valid value.

PRVP-05106: Failure group list size does not match the disk list size for the variable name "{0}" while parsing file "{1}".
Cause: Disks and their associated failure group names were not defined correctly for the indicated variable in the indicated file.

Action: Ensure that each disk has an associated failure group defined or that no failure group is defined for all the disks for the indicated variable in the indicated file.

PRVP-05107: Size of failure group list specified in variable "{0}" is not equal to size of disk list specified in variable "{1}" while parsing file "{2}".
Cause: The size of the failure group list and the size of the disk list defined for the indicated variable were not equal in the indicated file.

Action: Ensure that the size of the failure group list is equal to the size of the disk list defined for the indicated variable in the indicated file, and retry the operation.

PRVP-05200: Specified version string '{0}' for option '{1}' is not valid. Specify the version in the form 0.0.0.0.0. See usage for detail.
Cause: The specified command was rejected because the value for the indicated option is not in the format indicated.

Action: Retry the command specifying the version string for the indicated option in the correct format.

PRVP-05201: Cluster Ready Services configuration is not detected. See usage for detail.
Cause: An attempted check for Cluster Ready Services failed because Cluster Ready Services were not configured. The check is valid only when Cluster Ready Services are configured.

Action: Ensure that the Cluster Ready Services have been correctly installed and configured before attempting the check.

PRVP-05202: Oracle Restart configuration is not detected. See usage for detail.
Cause: An attempted check for Oracle Restart failed because Oracle Restart was not configured. The configuration check is valid only when Oracle Restart is configured.

Action: Ensure that the Oracle Restart has been correctly installed and configured before attempting the check.

PRVP-05203: Specified virtual ip address '{0}' for option '{1}' is not valid. Virtual IP address should be in the format {<IP_name>|<IP_address>}/<net_mask>/<interface_name>. See usage for detail.
Cause: The specified command was rejected because the value for the indicated option was not in the format indicated.

Action: Retry the command specifying the virtual IP address for the indicated option in the correct format.

PRVP-05205: Specified packet size "{0}" to test multicast connectivity is not in the allowed range 128 to 2048.
Cause: The specified packet size was not in the indicated range.

Action: Specify the packet size from the indicated range to test the multicast connectivity.

PRVP-05209: Specified iteration count "{0}" is not in the allowed range 5 to 60.
Cause: The specified iteration count was not within the indicated range.

Action: Specify an iteration count within the indicated range.

PRVP-05210: Specified interval "{0}" is not in the allowed range 2 to 30.
Cause: The specified interval was not within the indicated range.

Action: Specify an interval within the indicated range.

148

QSM-00501 to QSM-03288

QSM-00501: unable to initialize Summary Advisor environment
Cause: The Summary Advisor external procedure initialization process failed.

Action: Contact Oracle Worldwide Support.

QSM-00502: OCI error
Cause: A OCI callback routine reported an error

Action: Contact Oracle Worldwide Support.

QSM-00503: out of memory
Cause: Summary Advisor failed to allocate the necessary memory.

Action: Contact Oracle Worldwide Support.

QSM-00504: internal error
Cause: An internal error occurred.

Action: Contact Oracle Worldwide Support.

QSM-00505: syntax error
Cause: A syntax error occurred.

Action: Correct syntax error if possible or contact Oracle Worldwide Support.

QSM-00506: no fact-tables could be found
Cause: The fact-filter is not specified, and there are no fact-tables in the warehouse. A fact-table is a table having foreign-key constraints to one or more of the dimension-tables in the data warehouse.

Action: Check the fact-filter is correctly specified; check that appropriate constraints exist; and the user has privileges to access the tables

QSM-00507: no dimensions could be found
Cause: The database does not have any dimensions

Action: Create the dimensions in your warehouse

QSM-00508: statistics missing on tables/columns
Cause: The system metadata does not contain statistics on one or more tables or columns. The Advisor needs cardinalities of all fact-tables, and of the level-keys of all dimensions in the data warehouse.

Action: Run ANALYZE on the tables and summaries in the warehouse to collect statistics

QSM-00509: invalid parameter
Cause: The indicated parameter has an invalid value

Action: Supply a value in the proper range

QSM-00510: statistics missing on materialized views
Cause: The system metadata does not contain statistics on one or more materialized views. The Advisor needs cardinalities of all materialized views in the data warehouse.

Action: Run ANALYZE on the tables and materialized views in the warehouse to collect statistics.

QSM-00511: invalid fact-tables specified in fact-filter
Cause: The tables specified in the fact-filter are not valid fact-tables. A fact-table must have foreign-key constraints to one or more of the dimension-tables in the data warehouse.

Action: Check the fact-filter is correctly specified; check that appropriate constraints exist; and the user has privileges to access the tables

QSM-00512: invalid summaries specified in the retention-list
Cause: The summaries specified in the retention-list are not valid.

Action: Check the spelling of the summary-names; check that they are valid; and the user has privileges to access them.

QSM-00513: one or more of the workload tables is missing
Cause: One or both of the workload tables are missing. The two workload tables which should be present in the user's schema are V_192216243_F_5_E_14_8_1 and V_192216243_F_5_E_15_8_1; the former is mapped to WORK$_IDEAL_MVIEW and the latter to WORK$_MVIEW_USAGE. The workload tables are created by the Oracle Trace Formatter when the data-collection-file (oraclesm.dat) is formatted by the user.

Action: Check whether the Formatter succeeded in formatting the data collection. Sometimes the V_192216243_F_5_E_14_8_1 (i.e WORK$_IDEAL_MVIEW) may not be created whereas the other table is created. The most likely cause of this is the init.ora parameters needed to invoke mview-rewrite are not enabled. Check your documentation for all the init.ora parameters which need to be set for mview-rewrite to occur. Another possibility is no GROUP BY queries were issued during the time the data was collected, in which case, run the Trace collection for a longer time to get a representative sampling of the queries issued in the data warehouse.

QSM-00514: the size of must-retain summaries exceeds specified space limit
Cause: The specified space limit is greater than the size of must-retain summaries.

Action: Reduce the number of must-retain summaries or increase the space limit

QSM-00515: operation cancelled by user
Cause: The operation has been cancelled by the user

Action: None

QSM-00516: illegal status detected for run
Cause: The run has encountered an illegal value in the status field of the mview$_adv_log table. This could be internal error or an application error.

Action: Contact Oracle Worldwide Support.

QSM-00517: Summary Advisor requires a COMPATIBLE setting of 8.1.0.0 or greater
Cause: The current database has a compatibility setting that is earlier than the supported server version.

Action: Adjust the instance parameter COMPATIBLE to 8.1.0.0 or greater.

QSM-00518: Java is not enabled. Please execute INITJVM.SQL and INITQSMA.SQL
Cause: The current database has has not be created or upgraded to support Java stored procedures. Summary Advisor requires Java stored procedures.

Action: Log into the database with SYSDBA privileges. Execute the INITJVM.SQL script which is found in the ORACLE home directory under JAVAVM. Next, execute the INITQSMA.SQL script found in the ADMIN directory under the ORACLE home.

QSM-00519: Summary Advisor is not installed. Please execute INITQSMA.SQL.
Cause: The current database has has not be created or upgraded to support Summary Advisor. Summary Advisor requires several Java stored procedures.

Action: Log into the database with SYSDBA privileges. Execute the INITQSMA.SQL script found in the ADMIN directory under the ORACLE home. **** **** Messages 520-700 are in the 9i Summary Advisor Java modules 701-708 are Hypothetical Workload generator journal messages

QSM-00710: data access error in module *string*
Cause: SQL Access Advisor detected a severe error while accessing the advisor repository.

Action: See the accompanying error message for approprate actions.

QSM-00750: the specified value *string* for parameter *string* is invalid or contains an invalid item
Cause: The user attempted to set a task parameter using invalid data.

Action: Adjust the data value and retry the operation.

QSM-00751: the file *string* could not be opened for write access
Cause: Access Advisor could not create the script or report due to a file system error.

Action: Verify the location for file write access and retry the operation.

QSM-00752: the parameter *string* contains an invalid combination of options *string*
Cause: The user specified correct option keywords, but entered a combination that is not supported within Access Advisor.

Action: Validate the correct option usage and retry the operation.

QSM-00753: the specified value *string* is out of the acceptable range of *string* to *string* for parameter *string*
Cause: The user attempted to set a task parameter using invalid data.

Action: Adjust the data value and retry the operation.

QSM-00754: task *string* does not reference a valid workload and therefore cannot be executed
Cause: The user attempted to execute a advisor task that requires a workload.

Action: Specify a workload for the task and retry the operation.

QSM-00755: a set of workload statements already exists for workload *string*
Cause: The user attempted to save workload data into an existing workload that already contains data without specifying APPEND or REPLACE.

Action: Validate the import mode retry the operation.

QSM-00756: the specified workload *string* is being used by one or more advisor tasks
Cause: The user attempted to modify or delete a workload that is currently being used by another task.

Action: Remove the workload reference from the advisor task and retry the operation.

QSM-00757: the specified workload *string* is not referenced by task *string*
Cause: The user attempted to delete invalid workload reference from the task.

Action: Validate the workload reference and retry the operation.

QSM-00758: the specified parameter *string* is not valid for workload *string*
Cause: The user attempted to access a workload parameter that is does not exist for the specified workload. The parameter may be misspelled or the user selected a parameter that is not supported by the particular advisor.

Action: Validate the parameter name and retry the operation.

QSM-00759: the user *string* does not exist for the specified workload statement
Cause: The user attempted to add a new SQL statement with an invalid username.

Action: Adjust the name and retry the operation.

QSM-00760: the import mode *string* is invalid for the current operation
Cause: The user attempted to store data in the repository with an invalid import mode.

Action: Use one of the following valid values: NEW, APPEND, or REPLACE.

QSM-00761: the priority *string* is invalid for the current operation
Cause: The user attempted to store data in the repository with an invalid priority.

Action: Use one of the following valid values: 1, 2, 3.

QSM-00762: the specified Summary Advisor workload *string* does not exist
Cause: The user attempted to import an advisor workload from an invalid or non-existent Summary Advisor workload.

Action: Validate the Summary Advisor workload identifier and retry the operation.

QSM-00763: the owner *string* was not found while validating user-defined workload *string.string*
Cause: The user attempted to import an advisor workload from a user who may not access to the table.

Action: Validate the location of the user-defined workload.

QSM-00764: the column *string* was not found in the user-defined workload table *string.string*
Cause: The user attempted to import an advisor workload from a user table that does not contain the required column.

Action: Validate the user-defined workload table and retry the operation.

QSM-00765: cannot validate user-defined workload because table *string*.*string* is invalid.
Cause: The user attempted to import an advisor workload from a table that is not accessible.

Action: Validate the location of the user-defined workload.

QSM-00766: a SQL statement is required for the current workload operation
Cause: The user attempted to create an entry in a workload collection without specifying a SQL statement.

Action: Validate the SQL statement and retry the operation.

QSM-00767: a SQL cache is not available to user *string*
Cause: The user attempted to collect a workload from the SQL without having authorization.

Action: Validate the user account and retry the operation.

QSM-00768: the search condition is invalid for the requested operation
Cause: The user provided a invalid SEARCH argument to an Access Advisor workload operation. A search condition must be a valid SQL search condition using only the column names specified in the procedure documentation.

Action: Correct the search condition and retry the operation.

QSM-00769: the SQL statement *string* was not found for workload *string*
Cause: The user attempted to access a SQL statement that does not exist in the workload.

Action: Validate the SQL statement identifier and retry the operation.

QSM-00770: the specified workload *string* is already referenced by task *string*
Cause: The user attempted to add a workload reference to a task when the task already contains the reference.

Action: Validate the workload reference and retry the operation.

QSM-00771: the specified SQL statement cannot be stored in the workload because it has no valid table references
Cause: The user attempted to add a workload statement that contains table references that are either system-specified or user-specified invalid tables.

Action: Validate the workload statement and retry the operation.

QSM-00772: the specified SQL statement cannot be stored in the workload due to a statement error
Cause: The user attempted to add a workload statement that contains invalid SQL syntax or an invalid column reference.

Action: Validate the workload statement and retry the operation.

QSM-00773: the parameter *string* contains the invalid *string* name *string*
Cause: The task or workload parameter contains a name that is either too long or does not exist in the database.

Action: Validate the parameter value and retry the operation.

QSM-00774: there are no SQL statements to process for task *string*
Cause: While executing, the specified task found no valid SQL statements to analyze. Possible causes are: an empty workload, table filtering, or username filtering.

Action: Validate the workload and the appropriate task parameters and retry the operation.

QSM-00775: the specified SQL statement cannot be stored in the workload due to invalid table references
Cause: The user attempted to add a workload statement that contains one or more invalid identifier for the parsing user.

Action: Validate the workload statement and retry the operation.

QSM-00776: the user-defined workload *string* is missing the following column: *string*
Cause: The user attempted to import a workload from an external table; however, the table does not contain all of the required columns.

Action: Adjust the target workload table and retry the operation.

QSM-00777: the specified directive *string* is unsupported at this time
Cause: The user attempted to create a directive that is not currently supported.

Action: Check the advisor documentation for valid directives.

QSM-00778: the specified output filename *string* is invalid or cannot be accessed
Cause: The user attempted to create a report or script in a file that cannot be written or created.

Action: Adjust the file name or directory and retry the operation.

QSM-00779: the specified directive conflicts with the existing directive *string*
Cause: The user attempted to add a directive that cannot operate with an existing directive.

Action: Check the advisor documentation for valid directives.

QSM-00780: the task *string* could not be executed because the workload *string* is being modified
Cause: While attempting to execute a task, Access Advisor checks for exclusive access to all of the referenced workloads. If any cannot be reserved, then the execution fails.

Action: Wait until the referenced workloads are free for exclusive access retry the operation.

QSM-00781: the specified value *string* is invalid for parameter *string*. Valid keywords are *string*
Cause: The user attempted to set a task parameter using invalid data.

Action: Adjust the data value and retry the operation

QSM-00782: the specified value *string* is an invalid date format for parameter *string*
Cause: The user attempted to set a task parameter using invalid date formatting directives.

Action: See the Oracle documentation for valid date-formatting and retry the operation.

QSM-00783: the specified value *string* contains an invalid date for parameter *string*
Cause: The user attempted to set a task parameter using invalid date formatting.

Action: A date literal must be in the form DD/MM/YYYY HH24:MI:SS.

QSM-00784: the *string string* referenced in the list *string* is invalid for parameter *string*
Cause: The user attempted to set a task parameter using an invalid username or table specification.

Action: Validate the object name and retry the operation.

QSM-00785: the directive *string* is not supported for task *string* at this time
Cause: The user attempted to add an invalid directive to the current task.

Action: Validate the directive and retry the operation.

QSM-00786: the name *string* is invalid for directive *string*
Cause: The user attempted to add a directive that contains an empty or invalid object name.

Action: Correct the name and retry the operation.

QSM-00787: the tablespace *string* is invalid for directive *string*
Cause: The user attempted to add a directive that contains an empty or invalid tablespace name.

Action: Correct the name and retry the operation.

QSM-00788: The requested recommendation does not support direct implementation
Cause: The user attempted to use the DBMS_ADVISOR.IMPLEMENT_TASK procedure to implement a SQL Access Advisor recommendation that cannot be implemented due to its complexity.

Action: The user must generate a script and implement the recommendation outside of the SQL Access Advisor.

QSM-00789: The requested recommendation requires user editing and cannot be implemented
Cause: The user attempted to use the DBMS_ADVISOR.IMPLEMENT_TASK procedure to implement a SQL Access Advisor recommendation that cannot be implemented because it requires additional scripting information from the user.

Action: The user must generate a script and edit the results.

QSM-00790: the workload *string* cannot be modified or changed because it is being used by task *string*
Cause: The user attempted to change or delete a workload that is referenced by an active task.

Action: Remove references to a workload from any tasks that reference that workload, unless the task is in its initial task state.

QSM-00791: the specified SQL statement cannot be stored in the workload because is contains unsupported statement type
Cause: The user attempted to add a workload statement that contains an invalid statement type. Supported statement types are INSERT, DELETE, UPDATE, SELECT and MERGE.

Action: Validate the workload statement and retry the operation.

QSM-00792: the specified SQL statement cannot be stored in the workload because one or more tables have missing statistics
Cause: The user attempted to add a workload statement that contains a table without statistics. Access Advisor requires all referenced tables to have valid statistics.

Action: Validate the workload statement and retry the operation.

QSM-00793: the specified SQL Tuning Set *string* does not exist
Cause: The user specified a SQL Tuning Set that has not been defined in the SQL Tuning Set repository.

Action: Correct the SQL Tuning Set name and retry the operation.

QSM-00794: the statement can not be stored due to a violation of the *string* filter
Cause: The user attempted to manually add a workload statement that failed a filter test. Manual statements must meet the same filtering guidelines as imported statements.

Action: Adjust the attributes or the filter and retry the operation.

QSM-00795: the SQL Tuning Set repository has not been implemented
Cause: The user attempted to collect a workload from a SQL Tuning Set repository that has not yet been implemented or enabled.

Action: Validate the existence of the repository and retry the operation.

QSM-00796: the specified SQL statement cannot be stored in the workload because table *string* does not have valid statistics
Cause: The user attempted to add a workload statement that references a table with missing statistics.

Action: Gather statistics for the referenced table and retry the operation.

QSM-00797: the specified workload *string* does not exist for the current user
Cause: The user attempted to reference an Access Advisor workload using a name that does not exist in the Advisor repository.

Action: Adjust the name and retry the operation.

QSM-00798: the specified workload *string* already exists
Cause: The user attempted to create the specified workload using a name that already exists in the Advisor repository. Task names must be unique to the database user.

Action: Adjust the name and retry the operation.

QSM-00799: the user-defined workload table *string* cannot be found
Cause: The user has attempted to import a workload from an external table that does not exist or cannot be accessed.

Action: Adjust the target workload table and retry the operation.

QSM-00800: the specified workload name *string* is invalid
Cause: The user has specified an invalid workload name.

Action: Adjust the target workload name and retry the operation.

QSM-00801: the specified username *string* is invalid
Cause: The user has specified an invalid username.

Action: Adjust the target username and retry the operation.

QSM-00802: An error occurred while implementing action *string* (*string*)\n*string*.
Cause: While performing IMPLEMENT_TASK, a specific action operation failed.

Action: Make the necessary adjustments as specified in the secondary message and retry the operation.

QSM-00803: The STORAGE_CHANGE parameter value *string* cannot be zero or negative for partial workloads.
Cause: While performing EXECUTE_TASK, the user specified a STORAGE_CHANGE value that is incompatible with the type of workload data.

Action: Set a positive STORAGE_CHANGE value.

QSM-00804: not enough space for mandatory access structures
Cause: While performing EXECUTE_TASK, the user specified a STORAGE_CHANGE value that leaves no space for mandatory access structures, such as primary key indexes.

Action: Set a greater STROAGE_CHANGE value.

QSM-00805: the specified recommendation *string* value *string* is invalid
Cause: The user has specified an invalid value when attempting to change a recommendation attribute.

Action: Adjust the target attribute value and retry the operation.

QSM-00806: the *string* parameter value must be specified when STORAGE_MODE is set to TOTAL
Cause: While performing EXECUTE_TASK, the user specified a STORAGE_MODE of TOTAL, but failed to set the DEF_MVIEW_OWNER and DEF_INDEX_OWNER to valid owner names.

Action: Set the specified owner to a valid name

QSM-00807: the ANALYSIS_SCOPE parameter value contains an incomplete or invalid combination of options.
Cause: Though the ANALYSIS_SCOPE parameter supports several options, some combination are not supported.

Action: Enter a valid combination of options.

QSM-00808: parameter *string* only permits a single keyword. Choose one of the following: *string*
Cause: The user attempted to set a task parameter using multiple keywords.

Action: Adjust the data value and retry the operation

QSM-00809: the selected number of recommendations exceeds the maximum value of *string*
Cause: While executing GET_TASK_SCRIPT, an attempt was made to fetch a script having too many recommendations. The limit has been set in order to avoid possible performance and out-of-memory errors.

Action: Select a small set of recommendations prior to fetching the script

QSM-00999: Advisor feature is not currently implemented
Cause: The user attempted to execute an unsupported advisor operation.

Action: Verify the availability of the operation.

QSM-01001: query rewrite not enabled
Cause: When query rewrite is disabled, no query rewrite will take place.

Action: Enable query rewrite with ALTER SESSION SET QUERY_REWRITE ENABLE command.

QSM-01002: no query rewrite when OPTIMIZER_MODE is rule based
Cause: Query rewrite did not occur because the OPTIMIZER_MODE was set to RULE.

Action: Change the optimizer mode using the OPTIMIZER_MODE parameter.

QSM-01003: no query rewrite on DDL queries
Cause: If query contains any data definition operations, no query rewrite will take place.

Action: None

QSM-01004: no query rewrite before view merging
Cause: Internal session parameter _QUERY_REWRITE_2 is set to FALSE

Action: Change session parameter with ALTER SESSION command.

QSM-01005: no query rewrite when query has slave SQL
Cause: Current prcess is a kxfx slave

Action: None

QSM-01006: query rewrite disabled for this query block
Cause: During query rewrite, certain view query blocks cannot be rewritten.

Action: None

QSM-01007: query has NOREWRITE hint
Cause: When query contains a NOREWRITE hint, no query rewrite will take place for that query block.

Action: Remove the NOREWRITE hint from the query

QSM-01008: no query rewrite for update queries
Cause: If a query or part of it has any DML update operations, no query rewrite will take place.

Action: None

QSM-01009: query rewritten with materialized view, *string*, using text match algorithm
Cause: The query was rewritten using a materialized view, because query text matched the definition of the materialized view

Action: None

QSM-01010: table(s) in the query not found in materialized view, *string*
Cause: If the materialized view does not reference the base tables found in the query, it cannot be used for rewrite

Action: None

QSM-01011: when heuristic rewrite not set, rewrite hint required
Cause: When using a stored outline, a rewrite hint is required for query rewrite

Action: None

QSM-01012: SAMPLE clause present in FROM
Cause: If a query contains a SAMPLE clause, query rewrite will not take place

Action: None

QSM-01013: nested aggregates or CONNECT BY/START WITH clause present
Cause: If the query contains nested aggregates, CONNECT BY clause, or START WITH clause, query rewrite will not take place

Action: None

QSM-01014: top level operator in WHERE clause of the query is an OR
Cause: If the top-level operator in the WHERE clause is an OR and there is more than one table in the FROM list, then query rewrite will not take place.

Action: None

QSM-01015: GROUP BY clause has non-columns
Cause: No query rewrite, if there is no valid column in the GROUP BY clause.

Action: None

QSM-01016: Query rewrite does not support aggregate, *string*.
Cause: No query rewrite, if the query contained any DISTINCT aggregates other than COUNT, MIN, MAX or ANY_VALUE.

Action: None

QSM-01017: aggregate argument cannot be converted to canonical form
Cause: Argument of each aggregrate in the query needs to be convertible into a canonical form for query rewrite.

Action: None

QSM-01018: single table materialized join view rewrite not required
Cause: Materialized join view is more expensive for rewrite than using the base table

Action: None

QSM-01019: no suitable materialized view found to rewrite this query
Cause: There doesn't exist any materialized view in the dataware house that can be used to rewrite this query.

Action: Consider creating a new materialized view.

QSM-01020: materialized view, *string*, is ineligible
Cause: Materialized view is probably disabled or stale.

Action: Consider enabling the materialized view for rewrite or refreshing it.

QSM-01021: materialized view, *string*, not found in the hint list
Cause: There is a rewrite hint list specified in the query, but this materialized view is not among the hinted ones.

Action: Include this materialized view in the rewrite hint list.

QSM-01022: a more optimal materialized view than *string* was used to rewrite
Cause: Query Rewrite always chooses the most optimal materialized view based on certain parameters, such as cardinality of the materialized view, number of joins etc. The materialized view specified was found to be less optimal.

Action: To force using a materialized view, consider using a rewrite hint.

QSM-01023: materialized view, *string*, has GRANT errors
Cause: Materialized view probably has some metadata errors.

Action: Consider recreating it.

QSM-01024: materialized view, *string*, has unknown compile errors
Cause: Materialized view probably has some metadata errors.

Action: Consider recreating it.

QSM-01025: materialized view, *string*, not found
Cause: The specified materialized view is not found in the database.

Action: Check the spelling or create a new materialized view

QSM-01026: query rewrite is disabled for, *string*
Cause: Query rewrite could not use this materialized view, because query rewrite was not enabled for it.

Action: Enable query rewrite for the materialized view with ALTER MATERIALIZED VIEW "mv" ENABLE QUERY REWRITE command, where "mv" is the name of the materializev view.

QSM-01027: materialized view, *string*, is unusable
Cause: Materialized view probably has some metadata errors.

Action: Consider recreating it.

QSM-01028: materialized view, *string*, is currently being refreshed
Cause: Materialized view cannot be used for query rewrite while it is being refreshed

Action: Rerun the query, after the refresh operation is completed.

QSM-01029: materialized view, *string*, is stale in ENFORCED integrity mode
Cause: A stale materialized view cannot be used for query rewrite when the query rewrite integrity mode is set to ENFORCED.

Action: Refresh the materialized view or alter the rewrite integrity mode with ALTER SESSION QUERY_REWRITE_INTEGRITY = STALE TOLERATED command.

QSM-01030: materialized view, *string*, has PL/SQL functions in ENFORCED integrity mode
Cause: A materialized view with PL/SQL functions in its definition cannot be used for query rewrite when query rewrite integrity is set to ENFORCED.

Action: Consider running the query in STALE TOLERATED mode.

QSM-01031: materialized view, *string*, is stale in TRUSTED integrity mode
Cause: A stale materialized view cannot be used for query rewrite when the query rewrite integrity mode is set to TRUSTED.

Action: Refresh the materialized view or alter the rewrite integrity mode with ALTER SESSION QUERY_REWRITE_INTEGRITY = STALE TOLERATED command.

QSM-01032: materialized view, *string*, not found
Cause: There was no associated metadata for the materialized view.

Action: Check the spelling and re-run the query.

QSM-01033: query rewritten with materialized view, *string*
Cause: The specified materialized view was used to rewrite the given query.

Action: None

QSM-01034: materialized view, *string*, needs a dimension level to join table, *string*
Cause: One or more hierarchical relationship(s) in the table(s) could not be established.

Action: Consider adding a level in the dimension to provide the missing intra- table relationships.

QSM-01035: a row level security policy exists on this table
Cause: Any row level security policy that may exist on a base-table prevents exact text match query rewrite.

Action: None

QSM-01036: unmatched column, *string*, present in query after view merging
Cause: Clearing the columns after view merging failed due to some reasons - bug??

Action: None

QSM-01037: Query Rewrite failed to allocate the necessary query join graph
Cause: Join graph allocation and initialization failed, possibly due to one or more undetermined operand(s) in the query expression.

Action: None

QSM-01038: logical operator(s) could not be processed
Cause: One or more logical operator(s) in the query predicates could not be processed, possibly due to invalid operator(s).

Action: None

QSM-01039: selection present on right hand side of an outer join
Cause: Query cannot be rewritten if any predicate contains a selection on the right hand side of an outer join.

Action: None

QSM-01040: match between the materialized view (*string*) and query join graphs failed
Cause: Query rewrite will not take place if the joins in the query and the materialized view do not have any match.

Action: None

QSM-01041: materialized view, *string*, does not match with a measure in the query
Cause: If a measure (such as SUM, AVERAGE) in the query cannot be matched or computed from the materialized view, it will not be used for rewrite.

Action: None

QSM-01042: anchor and matching join arc check failed for *string*
Cause: If there is a lossy join in the materialized view that doesn't exist in the query, query rewrite will not take place.

Action: None

QSM-01043: join back attempted on a table to the RHS of a semi or anti join for *string*
Cause: Query Rewrite will not occur if a join back is required to a table that appears to the right hand side of a semi or anti-join.

Action: None

QSM-01044: join back attempted on a view for *string*
Cause: Query Rewrite will not occur if a join back to a table is required to find any missing columns.

Action: None

QSM-01046: complex join back on correlated columns not allowed (*string*)
Cause: Query Rewrite will not occur if a join back is required on a column that is referenced by a sub-query.

Action: None

QSM-01047: complex join back on non-MAV rewrite not allowed (*string*)
Cause: Query Rewrite can occur by means of a complex join back only during a MAV rewrite.

Action: None

QSM-01048: join back level(s) not present (*string*)
Cause: Query Rewrite requires joining back to a level of a dimension to find a missing information.

Action: Consider creating a dimension.

QSM-01049: semi-join check failed for materialized view, *string*
Cause: If there is a semi join in the query, then Query Rewrite will create (select distinct *pk-list*, *ref-col* from mjv) where *pk-list* is the list of rowids/pk of all mjv tables that don't correspond to a right side of a semi-join and *ref-col* are their columns. Query Rewrite will not occur if a join from the materialized view cannot match the semi-join from the query.

Action: None

QSM-01050: roll-up check failed for materialized view, *string*
Cause: A column in the query cannot be computed from the materialized view.

Action: Consider creating a dimension to supply the missing information

QSM-01051: no support for rollup when a window function is present on the column
Cause: No query rewrite if a window function is present on a column that requires a roll-up to compute a measure.

Action: None

QSM-01052: referential integrity constraint on table, *string*, not VALID in ENFORCED integrity mode
Cause: A join present in the materialized view requires validated primary/foreign key constraints in ENFORCED query rewrite integrity mode.

Action: Validate the constraint or change the integrity mode with ALTER SESSION SET QUERY_REWRITE_INTEGRITY = STALE_TOLERATED command.

QSM-01053: NORELY referential integrity constraint on table, *string*, in TRUSTED/ STALE TOLERATED integrity mode
Cause: A join present in the materialized view requires RELY mode to be set on the primary/ foreign key constraints.

Action: Set the RELY mode with ALTER TABLE *table* MODIFY CONSTRAINT *constraint* RELY command. Alternatively validate the constraint with ALTER TABLE *table* VALIDATE CONSTRAINT *constraint*.

QSM-01054: no join match between query and summary, *string*
Cause: There are no common joins between the query and the the materialized view

Action: None

QSM-01055: Query Rewrite failed to allocate the necessary materialized view join graph
Cause: Join graph allocation and initialization failed, possibly due to one or more undetermined operand(s).

Action: None

QSM-01056: no query rewrite for this DDL expression
Cause: Some SELECT statements which are part of a DDL expression may be eligible for rewrite. These include CREATE AS SELECT and CREATE OUTLINE statements. The given query expression is a DDL expression, which doesn't fall in this category.

Action: None

QSM-01057: no query rewrite for this DML expression
Cause: Current DML is being done using an updatable view, so it is not eligible for rewrite.

Action: None

QSM-01058: MV, *string*, does not have column, *string*, for a joinback
Cause: A GROUP BY column in the query is not present in the GROUP BY clause of of the materialized view. This usually requires a join back to a third table.

Action: None

QSM-01059: HAVING clause in the query block is malformed
Cause: An illegal HAVING clause has been specified in the query.

Action: Correct the query syntax and run the query again.

QSM-01060: illegal subquery in the HAVING clause
Cause: When a HAVING clause has a subquery, then any references to the tables in the outer query should only reference the tables in the GROUP BY clause.

Action: Correct error in the syntax and rerun the query.

QSM-01061: illegal query expression
Cause: An illegal query was specified. Specifically one of the following criteria was not satisfied: (a) All (non-constant, non-aggregate) SELECT expressions in the query should be made up of group expressions. (b) All column references in the HAVING clause should come from the GROUP BY expressions. (c) If there is an ORDER BY clause, then all column references should come from the GROUP BY or SELECT clause, depending on whether the query selects DISTINCT.

Action: Correct error in the syntax and rerun the query.

QSM-01062: query has one or more manual partition(s)
Cause: Query rewrite is not possible if query has any manual partitions.

Action: None

QSM-01063: query has a dictionary table or view
Cause: Query rewrite is not allowed if query references any dictionary tables/views.

Action: None

QSM-01064: query has a fixed table or view
Cause: Query rewrite is not allowed if query references any fixed tables/views

Action: None

QSM-01065: materialized view, *string*, cannot compute measure, *string*, in the query
Cause: If the materialized view cannot compute a measure in the query using the measures in its definition, then query rewrite will not occur.

Action: None

QSM-01066: materialized view, *string*, does not have the column, *string*, from query
Cause: Query rewrite will not occur, if the materialized view cannot provide all the columns that the query has

Action: None

QSM-01067: materialized view, *string*, cannot support the query measure, *string*
Cause: An attempt was made to push a grouping function through an expression specified in the query to transform a measure. Query rewrite will not occur if this measure transformation failed.

Action: None

QSM-01068: no dimensions present
Cause: An attempt was made to load a dimension from the dataware house, but there were no dimensions present.

Action: None

QSM-01069: summary join graph for, *string*, does not have table, *string*
Cause: An attempt to locate an object that is part of a join failed.

Action: None

QSM-01070: equivalence class manager was not found
Cause: An equivalence class manager is required to compute the transitive closure for the columns in an equivalence class.

Action: None

QSM-01071: query rewrite not possible because a join in materialized view % with table % has eliminated some rows found in query
Cause: All lossy joins in the materialized view must be present in the query for query rewrite to occur.

Action: None

QSM-01072: materialized view, *string*, and query have different joins between tables, *string*
Cause: Anchors, if any, in the MV and query match. But the joins between these anchors in the MV and query are different.

Action: None

QSM-01073: query rewrite not possible because materialized view, *string*, has a join not found in query
Cause: Query rewrite may not be possible if the materialized view has some joins that query does not have

Action: None

QSM-01074: query rewrite not possible because materialized view, *string*, and query have different number of joins between tables, *string*
Cause: Query rewrite may not be possible if the query has some joins that the materialized view does not have between the same pair of tables.

Action: n/a

QSM-01075: materialized view, *string*, does not support aggregate function, *string*
Cause: The specified aggregate function is not found in the materialized view.

Action: None

QSM-01076: no materialized join view was found
Cause: To support an MJV rewrite, we require a materialized join view.

Action: None

QSM-01077: materialized view, *string*, is grouping at a higher level than query
Cause: If a query column, which is not present in the materialized view, can be obtained by a rollup within the materialized view, then it should group at a higher level than the materialized view.

Action: None

QSM-01078: materialized view, *string*, is marked invalid
Cause: The materialized view's kglobsta field has KGLSINV bit set.

Action: none ??

QSM-01079: DML operation occurred on a table referenced by MV, *string*
Cause: If any dependent tables of a materialized view undergoes a DML operation, query rewrite may be restricted depending on the query rewrite integrity mode for the session. In this situation, query rewrite will take place only if the rewrite integrity mode is STALE_TOLERATED.

Action: Consider refreshing the materialized view chaning the rewrite integrity mode to STALE_TOLERATED.

QSM-01080: invalid dimension, *string*
Cause: This dimension table has authorization or compilation problems.

Action: None

QSM-01081: no primary key or row id found for table, *string*, in MV, *string*
Cause: In order to obtain a missing column, the materialized view needs to join back to the above table. But it lacks the primary key or rowid for the table.

Action: None

QSM-01082: Joining materialized view, *string*, with table, *string*, not possible
Cause: A column in the query is not found in the summary. To obtain the column, a join back of materialized view to the table by means of either the primary key, foreign key or rowid of the table is required. The specified materialized view does not have the primary key, foreign key or rowid of the table to perform the join operation.

Action: Consider building a dimension-table to provide the missing information.

QSM-01083: query text not available - possible inline view
Cause: During the query rewrite transformation, orignal query was possibly transformed into an inline view.

Action: None

QSM-01084: materialized view *string* has an anchor table *string* not found in query
Cause: A table in a materialized view is an anchor, (a) if it is not joined to any other table or (b) joined to other tables but each of its joins is either lossy or lossless with the above table being child-side table. If an anchor which is present in the materialized view is not found in the query, then query rewrite will not take place.

Action: None

QSM-01085: materialized view, *string*, has a lossy join between tables, *string*
Cause: There are no primary key, foreign key constraints between these tables. But query rewrite is still possible if the lossy join between the above tables also appear in the query

Action: None

QSM-01086: dimension(s) not present or not used in ENFORCED integrity mode
Cause: Query rewrite does not use dimensions in ENFORCED query rewrite integrity mode. If a suitable dimension is present, consider chaning the current integrity mode to either TRUSTED or STALE_ TOLERATED by using ALTER SESSION SET QUERY_REWRITE_INTEGRITY = command.

Action: None

QSM-01087: query grouping on a column that cannot be derived from materialized view, *string*
Cause: Query is grouping on undetermined columns.

Action: None

QSM-01089: an inline view in the query does not have a materialized view
Cause: General query rewrite is not possible if an inline view in the query does not have a matching materialized view in the meta data.

Action: None

QSM-01090: no query rewrite after view merging
Cause: Internal session parameter _QUERY_REWRITE_1 is set to FALSE

Action: Change session parameter with ALTER SESSION command.

QSM-01091: cost based optimizer found query rewrite is more expensive
Cause: When cost based optimizer is ON, cost of the rewritten cursor is compared to the cursor generated without query rewrite, and the cheaper one is chosen for execution.

Action: None

QSM-01092: mjv tries to rewrite a semi-join and primary key or rowid missing
Cause: Materialized join view tries to rewrite a semi-join (IN sub-query) and the primary keys or rowids of left tables of semi-joins are missing from MJV.

Action: None

QSM-01093: anti-join marker not found in materialized join view
Cause: Materialized join view has outer join while the query inner join. For rewrite to succeed MV must have an anti-join marker like the rowid or primary key of the right tables of outer join

Action: None

QSM-01094: outer-join filter not found in materialized join view
Cause: Materialized join view has outer join while the query inner join. For rewrite to succeed MV must have an anti-join marker like the rowid or primary key of the right tables of outer join

Action: None

QSM-01095: no suitable grouping_id found in MV with grouping sets
Cause: If materialized aggregate view contains grouping sets, then it also must contain the grouping_id() function. This function must contain all columns in the MV GROUP BY.

Action: None

QSM-01096: Materialized view with grouping sets contains duplicates
Cause: Materialized view with grouping sets contains duplicates and no rewrite is supported for it. For example, GROUP BY GROUPING SET ((a), (a)) is not supported for rewrite.

Action: None

QSM-01097: Materialized view with grouping sets has too long key
Cause: Materialized view with grouping sets has more that 64 different keys in its GROUP BY. No rewrite is supported then.

Action: None

QSM-01098: mv *string* clause more restrictive than query *string* clause
Cause: The materialized view contains a selection condition in the WHERE or HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01099: non-tolerated reference to stale portion of mv for table *string*
Cause: The materialized view is partially stale. It is stale with respect to one or more partitions in one or more of its detail tables. The request query references one or more such detail partitions.

Action: (1) Change the selection criteria of the request to restrict the query to only the fresh portion of the materialized view, or (2) ALTER {SYSTEM|SESSION} QUERY_REWRITE_INTEGRITY = STALE_TOLERATED or (3) refresh the materialized view.

QSM-01100: containment check failed for mv, *string*
Cause: The materialized view contains a selection condition in the WHERE or HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01101: rollup(s) took place on mv, *string*
Cause: If query's GROUP BY has one of the higher levels of columns found in the materialized view, then the lower level columns in the materialized view will be rolled up to compute the desired results.

Action: None

QSM-01102: materialized view, *string*, requires join back to table, *string*, on column, *string*
Cause: A column in the query does not appear in the materialized view. Query rewrite will try to obtain this column from the base table, by doing a join back to that column with the MV.

Action: None

QSM-01103: there is a remote table, *string*, referenced in the query
Cause: Query rewrite does not support query with remote tables.

Action: None

QSM-01104: query is using flashback
Cause: Query rewrite does not support flashback.

Action: None

QSM-01105: no primary key or row id in MV, *string*, is found for table, *string*
Cause: In order to obtain a missing column, the materialized view needs to join back to the above table. But it lacks the primary key or rowid for the table.

Action: None

QSM-01106: materialized view, *string*, is stale with respect to some partition(s) in the base table(s)
Cause: Query is requesting some data from the MV that are stale with respect to some partitions in the base tables due to some updates.

Action: refresh the stale partitions and rerun the query

QSM-01107: Partition Containment Tracking (PCT) rewrite is not allowed
Cause: Query rewrite is disabled for PCT through a session parameter

Action: None

QSM-01108: maximum number of disjuncts exceeded in the query *string*
Cause: Query rewrite engine cannot process the query if the number of disjuncts (OR's)in the WHERE clause exceeds the maximum allowed number. The number of disjuncts in the query and the maximum allowed disjuncts are given at the end of the message in the form of (no of disjuncts in query, maximum disjuncts allowed).

Action: None

QSM-01109: while rewriting with MV, *string*, table, *string*, migrated to query delta
Cause: There was an unmatched join on the MV, so a table involved in the join was pushed to the query delta to see if the query can be rewritten

Action: None

QSM-01110: query rewrite not possible with materialized view *string* because it contains a join between tables (*string*) that is not present in the query and that potentially eliminates rows needed by the query
Cause: All lossy joins in the materialized view must be present in the query for query rewrite to occur.

Action: None

QSM-01111: no partition key or partition marker found in MV, *string*
Cause: In order to do query rewrite with fresh partitions of an MV, the MV should have a partiton key or partition marker.

Action: None

QSM-01112: WHERE clause of mv, *string*, is more restrictive than query
Cause: The materialized view contains a selection condition in the WHERE clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01113: HAVING clause of mv, *string*, is more restrictive than query
Cause: The materialized view contains a selection condition in the HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01115: rollup took place on a column with a window function
Cause: There was a rollup to aggregate the data on a column with a window function.

Action: None

QSM-01116: window function computability checks failed
Cause: The window function in the query could not be computed from the materialized view.

Action: None

QSM-01120: recursive rewrite not allowed here
Cause: This query was possibly rewritten with an equivalence which doesn't allow further rewrites.

Action: None

QSM-01121: materialized view, *string*, is TRUSTED in ENFORCED integrity mode
Cause: A stale materialized view created with USING TRUSTED CONSTRAINTS clause cannot be used when the query rewrite integrity mode is set ENFORCED.

Action: Alter materialized view such that it has the ENFORCED CONSTRAINTS ALTER MATERIALIZED VIEW *mv* REFRESH USING ENFORCED CONSTRAINTS

QSM-01123: self-join algorithm could not resolve multiple instances
Cause: The generalized self-join algorithm could not resolve the mutliple instances, likely due to mismatch in joins or measures

Action: Consider using aliases in the query to match with the aliases in the materialized view

QSM-01124: set operator materialized view, *string*, doesn't have a marker column
Cause: The specified set operator materialized view does not have a marker column.

Action: Add a marker column to the specified materialized view.

QSM-01125: a more optimal set operator materialized view than *string* was used to rewrite
Cause: Query Rewrite always chooses the most optimal set operator materialized view based on parameters, such as cardinality of the set operator materialized view, number of branches that the set operator materialized view can rewrite etc. The set operator materialized view specified was found to be less optimal.

Action: To force using a set operator materialized view, consider using a rewrite hint.

QSM-01126: query rewritten with set operator materialized view, *string*
Cause: The specified set operator materialized view was used to rewrite the given query.

Action: None

QSM-01127: query rewritten with materialized view(s), *string*
Cause: The query was succesfully rewritten with multiple MVs

Action: None

QSM-01128: Multi MV rewrite is disabled
Cause: When multimv query rewrite is disabled, no multimv query rewrite will take place.

Action: Enable multimv query rewrite with ALTER SESSION SET "_MULTIMV_QUERY_REWRITE_ENABLED" = true .

QSM-01129: query has NO_MULTIMV_REWRITE hint
Cause: WHen the query has this hint no multimv rewrite will be tried for this query

Action: Remove hint from query

QSM-01130: Multi MV rewrite not allowed if at least one query block has no MVs
Cause: When only multimv query rewrite is enabled, every query block should have at least one MV in it's from clause

Action: Disable only multimv query rewrite with ALTER SESSION SET "_ONLY_MULTIMV_QUERY_REWRITE_ENABLED" = false .

QSM-01131: query has ONLY_MULTIMV_REWRITE hint
Cause: When the query has this hint no multimv rewrite will be done if the query has a query block with no MVs in the from clause

Action: Remove hint from query

QSM-01132: query has a named array type column
Cause: When the query has a column of named array type, query rewrite cannot be done

Action: None

QSM-01133: query has an ADT column
Cause: When the query has a column of ADT type, query rewrite cannot be done

Action: None

QSM-01134: query has a hidden or nested table column
Cause: When the query has a hidden or nested table column, query rewrite cannot be done

Action: None

QSM-01135: query has an LOB column
Cause: When the query has a column stored in LOB, query rewrite cannot be done

Action: None

QSM-01136: query has a nested table column
Cause: When the query has a nested table column, query rewrite cannot be done

Action: None

QSM-01137: dimension level, *string*, marked as SKIP WHEN NULL
Cause: Join back is not possible on a level marked as SKIP WHEN NULL in a dimension

Action: None

QSM-01138: Query rewrite is not allowed.
Cause: Query rewrite was not allowed during materialized view validation.

Action: None

QSM-01139: query rewrite with stale materialized view, *string*, requires join back
Cause: Query rewrite was not allowed with a stale materialized view if join back to a base table is required.

Action: None

QSM-01150: query did not rewrite
Cause: See the other messages from explain_rewrite() for explanation"

Action: None

QSM-01168: query rewrite not possible when Fine Grain Auditing is present on a base table
Cause: Query rewrite could not take place because Fine Grain Auditing (FGA) was present on a base table in the query

Action: None

QSM-01169: query rewrite not possible for a CREATE or ALTER VIEW statement
Cause: Query rewrite could not take place because the incoming query was either a CREATE or ALTER VIEW statement

Action: None

QSM-01170: no matching objects found between query and materialized view *string*
Cause: Matching objects were not found between the query and the materialized view. Materialized view may contain only editioning views.

Action: None

QSM-01202: query rewrite not possible when OPTIMIZER_MODE is set to rule based
Cause: Query rewrite did not occur because the OPTIMIZER_MODE was set to RULE.

Action: Change the optimizer mode using the OPTIMIZER_MODE parameter.

QSM-01203: query rewrite not possible on DDL queries
Cause: If query contains any data definition operations, no query rewrite will take place.

Action: None

QSM-01204: query rewrite not possible before view merging
Cause: Internal session parameter _QUERY_REWRITE_2 is set to FALSE

Action: Change session parameter with ALTER SESSION command.

QSM-01205: query rewrite not possible when query has slave SQL
Cause: Current prcess is a kxfx slave

Action: None

QSM-01207: query rewrite not possible when query has a NOREWRITE hint
Cause: When query contains a NOREWRITE hint, no query rewrite will take place for that query block.

Action: Remove the NOREWRITE hint from the query

QSM-01208: query rewrite not possible for update queries
Cause: If a query or part of it has any DML update operations, no query rewrite will take place.

Action: None

QSM-01209: query rewritten with materialized view, *string*, using text match algorithm
Cause: The query was rewritten using a materialized view, because query text matched the definition of the materialized view

Action: None

QSM-01210: query rewrite not possible because no common table(s) found between materialized view *string* and query
Cause: If the materialized view does not reference the base tables found in the query, it cannot be used for rewrite

Action: None

QSM-01211: query rewrite not possible when stored outline does not have a rewrite hint
Cause: When using a stored outline, a rewrite hint is required for query rewrite

Action: None

QSM-01212: query rewrite not possible when SAMPLE clause is present in FROM
Cause: If a query contains a SAMPLE clause, query rewrite will not take place

Action: None

QSM-01213: query rewrite not possible when nested aggregates or CONNECT BY clause or START WITH clause or recursive WITH clause is present
Cause: If the query contains nested aggregates, CONNECT BY clause, or START WITH clause, or recursive with clause, query rewrite will not take place

Action: None

QSM-01214: query rewrite not possible if OR is the top level operator in query WHERE clause
Cause: If the top-level operator in the WHERE clause is an OR and there is more than one table in the FROM list, then query rewrite will not take place.

Action: None

QSM-01215: query rewrite not possible when query GROUP BY clause has non-columns
Cause: No query rewrite, if there is no valid column in the GROUP BY clause.

Action: None

QSM-01218: query rewrite is likely more expensive due to a single table match between materialized view and query
Cause: Materialized join view is more expensive for rewrite than using the base table

Action: None

QSM-01219: no suitable materialized view found to rewrite this query
Cause: There doesn't exist any materialized view in the database that can be used to rewrite this query.

Action: Consider creating a new materialized view.

QSM-01220: materialized view, *string*, is disabled, stale or unusable
Cause: Materialized view is probably disabled or stale.

Action: Consider enabling the materialized view for rewrite or refreshing it.

QSM-01222: materialized view *string* is less optimal than *string*
Cause: Query Rewrite always chooses the most optimal materialized view based on certain parameters, such as cardinality of the materialized view, number of joins etc. The materialized view specified was found to be less optimal.

Action: To force using a materialized view, consider using a rewrite hint.

QSM-01241: query measure cannot be derived from the materialized view *string*
Cause: If a measure (such as SUM, AVERAGE) in the query cannot be matched or computed from the materialized view, it will not be used for rewrite.

Action: None

QSM-01244: join back could not be done on a view for *string*
Cause: Query Rewrite will not occur if a join back to a table is required to find any missing columns.

Action: None

QSM-01246: join back on correlated columns not allowed (*string*)
Cause: Query Rewrite will not occur if a join back is required on a column that is referenced by a sub-query.

Action: None

QSM-01247: join back cannot be done on a materialized view that does not have an aggregate (*string*)
Cause: Query Rewrite can occur by means of a complex join back only during a MAV rewrite.

Action: None

QSM-01248: materialized view does not have the join back level(s) (*string*)
Cause: Query Rewrite requires joining back to level of a dimension to find missing information.

Action: Consider creating a dimension.

QSM-01251: query rewrite cannot perform rollup due to the presence of a window function
Cause: No query rewrite if a window function is present on a column that requires a roll-up to compute a measure.

Action: None

QSM-01256: query rewrite not possible for this DDL statement
Cause: Some SELECT statements which are part of a DDL expression may be eligible for rewrite. These include CREATE AS SELECT and CREATE OUTLINE statements. The given query expression is a DDL expression, which doesn't fall in this category.

Action: None

QSM-01257: query rewrite not possible for this DML statement
Cause: Current DML is being done using an updatable view, so it is not eligible for rewrite.

Action: None

QSM-01263: query rewrite not possible when query references a dictionary table or view
Cause: Query rewrite is not allowed if query references any dictionary tables/views.

Action: None

QSM-01271: query rewrite not possible because a join in materialized view *string* with table *string* has eliminated some rows found in query
Cause: A join from the materialized view to any table that eliminates some rows should be be present in the query. Otherwise query rewrite will not occur.

Action: None

QSM-01273: query rewrite not possible because materialized view *string* has a join not found in query
Cause: Query rewrite may not be possible if the materialized view has some joins that query does not have

Action: None

QSM-01274: query rewrite not possible because materialized view *string* and query have different number of joins between tables *string*
Cause: Query rewrite may not be possible if the query has some joins that the materialized view does not have between the same pair of tables.

Action: n/a

QSM-01279: query rewrite not possible because DML operation occurred on a table referenced by materialized view *string*
Cause: If any dependent tables of a materialized view undergoes a DML operation, query rewrite may be restricted depending on the query rewrite integrity mode for the session. In this situation, query rewrite will take place only if the rewrite integrity mode is STALE_TOLERATED.

Action: Consider refreshing the materialized view changing the rewrite integrity mode to STALE_TOLERATED.

QSM-01281: query rewrite not possible because either a primary key or a row id is required to join table *string* with MV *string*
Cause: In order to obtain a missing column, the materialized view needs to join back to the above table. But it lacks the primary key or rowid for the table.

Action: None

QSM-01284: materialized view *string* has an anchor table *string* not found in query
Cause: A table in a materialized view is an anchor, (a) if it is not joined to any other table or (b) joined to other tables but each of its joins is not guaranteed to provide all the rows or joined with the above table being child-side table. If an anchor which is present in the materialized view is not found in the query, then query rewrite will not take place.

Action: None

QSM-01293: anti-join marker not found in materialized view with joins
Cause: Materialized view has outer join while the query has inner join. For rewrite to succeed MV must have an anti-join marker like the rowid or primary key of the right tables of outer join

Action: None

QSM-01295: no suitable grouping_id found in materialized view with grouping sets
Cause: If materialized view contains grouping sets, then it also must contain the grouping_id() function. This function must contain all columns in the MV GROUP BY.

Action: None

QSM-01296: query rewrite not possible because materialized view contains duplicate grouping sets
Cause: Materialized view with grouping sets contains duplicates and no rewrite is supported for it. For example, GROUP BY GROUPING SET ((a), (a)) is not supported for rewrite.

Action: None

QSM-01297: query rewrite not possible because materialized view with grouping sets has more than 176 different keys
Cause: Materialized view with grouping sets has more that 176 different keys in its GROUP BY. No rewrite is supported then.

Action: None

QSM-01298: materialized view *string* clause more restrictive than query *string* clause
Cause: The materialized view contains a selection condition in the WHERE or HAVING clause that is more restrictive than the corresponding selection condition in the request query.

Action: Change the selection criteria in the request query to be at least as restrictive as the selection criteria in the materialized view, or drop and recreate the materialized view using less restrictive selection criteria.

QSM-01299: query rewrite not possible because materialized view *string* is partially stale
Cause: The materialized view is partially stale. It is stale with respect to one or more partitions in one or more of its detail tables. The request query references one or more such detail partitions.

Action: (1) Change the selection criteria of the request to restrict the query to only the fresh portion of the materialized view, or (2) ALTER {SYSTEM|SESSION} QUERY_REWRITE_INTEGRITY = STALE_TOLERATED or (3) refresh the materialized view.

QSM-01303: query rewrite not possible because query references a remote table *string*
Cause: Query rewrite does not support query with remote tables.

Action: None

QSM-01304: query rewrite not possible because query is using flashback
Cause: Query rewrite does not support flashback.

Action: None

QSM-01307: Partition Containment Tracking (PCT) rewrite is not allowed
Cause: Query rewrite is disabled for PCT through a session parameter

Action: None

QSM-01308: number of 'OR's in query exceeded the maximum value *string*
Cause: Query rewrite engine cannot process the query if the number of disjuncts (OR's)in the WHERE clause exceeds the maximum allowed number. The number of disjuncts in the query and the maximum allowed disjuncts are given at the end of the message in the form of (no of disjuncts in query, maximum disjuncts allowed).

Action: None

QSM-01316: window function could not be computed from materialized view *string*
Cause: The window function in the query could not be computed from the materialized view.

Action: None

QSM-01321: query rewrite not possible because materialized view *string* has TRUSTED constraints in ENFORCED integrity mode
Cause: A stale materialized view created with USING TRUSTED CONSTRAINTS clause cannot be used when the query rewrite integrity mode is set ENFORCED.

Action: Alter materialized view such that it has the ENFORCED CONSTRAINTS ALTER MATERIALIZED VIEW *mv* REFRESH USING ENFORCED CONSTRAINTS

QSM-01332: query rewrite not possible because query has a named array type column
Cause: When the query has a column of named array type, query rewrite cannot be done

Action: None

QSM-01333: query rewrite not possible because query has an ADT column
Cause: When the query has a column of ADT type, query rewrite cannot be done

Action: None

QSM-01334: query rewrite not possible because query has a hidden or nested table column
Cause: When the query has a hidden or nested table column, query rewrite cannot be done

Action: None

QSM-01335: query rewrite not possible because query has an LOB column
Cause: When the query has a column stored in LOB, query rewrite cannot be done

Action: None

QSM-01336: the materialized view you specified (*string*) was not used to rewrite the query
Cause: A materialized view specified by the user in the input was not used to rewrite the query, either because query rewrite failed or another more optimal materialized view was used to rewrite.

Action: None

QSM-01339: rewrite not supported on inline view aggregate
Cause: Query has an inline view with an aggregate. Such inline views cannot be matched to any inline views in materialized views.

Action: None

QSM-01340: no inline view match found between query and materialized view(s)
Cause: Query's inline view does not have a match with any inline views in the materialized view

Action: None

QSM-01341: joins between materialized view *string* and query inline views are different
Cause: There is a mismatch between the joins in the query and materialized view inline views

Action: None

QSM-01342: query rewrite not possible because query has full outer join
Cause: When query block has a table involved in full outer join, query rewrite cannot be done

Action: None

QSM-01343: general inline view rewrite not possible on remote objects
Cause: The general inline view rewrite could not take place because the query had remote objects

Action: None

QSM-01344: general inline view rewrite not possible on this WHERE clause construct
Cause: The general inline view rewrite was not supported with this WHERE clause construct

Action: None

QSM-01345: general inline view rewrite not possible when inline view has subquery
Cause: The general inline view rewrite could not take place because there were subqueries

Action: None

QSM-01346: general inline view rewrite not possible with nested inline views
Cause: General inline view rewrite cannot take place with nested inline views

Action: None

QSM-01347: a query inline view could not be matched with any materialized view inline view
Cause: No materialized view inline views were found to match with a query inline view

Action: None

QSM-01348: an invalid predicate was found in an inline view
Cause: An inline view in the query contained an invalid WHERE clause predicate

Action: None

QSM-01349: general inline view cannot be supported on this inline view
Cause: Certain inline views are unsupported in general inline view rewrite

Action: None

QSM-01350: query rewrite cannot support this inline view
Cause: Certain inline views are unsupported in general inline view rewrite

Action: None

QSM-01351: query inline view has no matching objects with any materialized view inline views
Cause: There were no matching objects between the query inline view and materialized view inline views

Action: None

QSM-01352: SELECT lists of the query and materialized view inline views do not match
Cause: Query inline view's and materialized view inline view's SELECT list items did not match.

Action: None

QSM-01353: no query rewrite on remote objects unless integrity mode is set to stale_tolerated
Cause: Query rewrite's integrity mode should be set to stale_tolerated for query rewrite to occur on queries with remote objects

Action: Set the session parameter, QUERY_REWRITE_INTEGRITY to stale_tolerated

QSM-01354: query rewrite is disabled for remote objects
Cause: Query rewrite was disabled internally for queries referencing remote objects.

Action: None

QSM-01355: multi-mv rewrite not possible in the presence of remote objects
Cause: Multi-MV rewrite not possible for queries referencing remote objects.

Action: None

QSM-01356: query rewrite against cube-organized materialized views not possible when OLAP option is off
Cause: Query rewrite against cube-organized materialized views was not possible because the OLAP option was off.

Action: None

QSM-01357: query rewritten with a stale materialized view, *string*, by on query computation
Cause: Query is rewritten with a stale materialized view by doing on-query computation

Action: None

QSM-01509: equivalence, *string*, matched query text
Cause: The query was rewritten using an equivalence, because query text matched the source statement for this equivalence.

Action: None

QSM-01522: a more optimal equivlanece than *string* was used to rewrite
Cause: Query Rewrite always chooses the most optimal equivalence based on certain parameters, such as cardinality of the equivalence, number of joins etc. The equivalence view specified was found to be less optimal.

Action: None

QSM-01526: query rewrite is disabled for equivalence, *string*
Cause: Query rewrite could not use this equivalence, because this equivalence was created as disabled.

Action: Enable this equivalence using alter_rewrite_equivalence procedure from package, dbms_advanced_rewrite.

QSM-01533: query rewritten with equivalence, *string*
Cause: The specified equivalence was used to rewrite the given query.

Action: None

QSM-01565: equivalence, *string*, cannot compute measure, *string*, in the query
Cause: If a measure in the query cannot be computed using the measures in the equivalence, then query rewrite will not occur.

Action: None

QSM-01567: equivalence, *string*, cannot support the query measure, *string*
Cause: An attempt was made to push a grouping function through an expression specified in the query to transform a measure. Query rewrite will not occur if this measure transformation failed.

Action: None

QSM-01572: equivalence, *string*, and query have different joins between tables, *string*
Cause: Anchors, if any, in the equivalenceand query match. But the joins between these anchors in the equivalence and query are different.

Action: None

QSM-01582: Joining equivalence, *string*, with table, *string*, not possible
Cause: A column in the query is not found in the equivalence. To obtain the column, a join back of equivalence to the table by means of either the primary key, foreign key or rowid of the table is required. But join backs are not allowed for equivalence rewrite

Action: None

QSM-01584: equivalence, *string*, has anchor, *string*, not found in query
Cause: If an anchor which is present in the equivalence is not found in the query, then query rewrite will not take place.

Action: None

QSM-01601: rollup(s) took place on equivalence, *string*
Cause: If query's GROUP BY has one of the higher levels of columns found in the equivalence, then the lower level columns in the equivalence will be rolled up to compute the desired results.

Action: None

QSM-01602: equivalence, *string*, requires join back to table, *string*, on column, *string*
Cause: A column in the query does not appear in the equivalence. Query rewrite will try to obtain this column from the base table, by doing a join back to that column with a materialized view. But join backs are not allowed for equivalence rewrite as the required constraints are not guaranteed to be found on the tables in the destination statement of the equivalence.

Action: None

QSM-01610: a lossy join in equivalence, *string*, between tables, *string*, not found in query
Cause: All lossy joins in the equivalence must be present in the query for query rewrite to occur.

Action: None

QSM-01617: equivalence definition is disabled
Cause: There is an equivalence defition that could have been probably used by query rewrite to rewrite the query. But this equivalence is disabled.

Action: None

QSM-01618: equivalence, *string*, is enabled for text match rewrite only
Cause: This equivalence was created for text match rewrite only

Action: None

QSM-01619: equivalence cannot be used in ENFORCED integrity mode
Cause: An equivalence cannot be used for query rewrite when the query rewrite integrity mode is set to ENFORCED.

Action: None

QSM-01621: join backs to base tables not allowed with an equivalence
Cause: Query rewrite needs to do a join back to a base table column to answer this query. But join back is not allowed for an equivalence rewrite

Action: None

QSM-01709: query rewritten with equivalence, *string*, using text match algorithm
Cause: The query was rewritten using an equivalence because query text matched the definition of the equivalence

Action: None

QSM-01784: equivalence *string* has an anchor table *string* not found in query
Cause: A table in an equivalence is an anchor, if (a) it is not joined to any other table or (b) it is joined to other tables but each of its joins is not guaranteed to provide all

the rows or joined with the above table being child-side table. If an anchor which is present in the equivalence is not found in the query, then query rewrite will not take place.

Action: None

QSM-01837: recursive query rewrite on equivalence, *string*, not permitted
Cause: The source and destination statements of this equivalence MV are possibly identical. A recursive rewrite on this equivalence can lead to an infinite loop and thus not permitted.

Action: None

QSM-01838: semijoin transformation not supported on equivalence
Cause: There was a semijoin transformation attempted on an equivalence rewrite. Currently this is not allowed

Action: None

QSM-01841: query rewrite not supported after predicate pushdown
Cause: One or more filter predicates were pushed inside the named view. Query rewrite was not supported after this.

Action: None

QSM-02001: clustered mv container table
Cause: The capability in question is not supported on a materialized view that has a clustered container table.

Action: Recreate the materialized view using a conventional container table.

QSM-02002: DISTINCT aggregate measure in SELECT list
Cause: The capability in question is not supported when the materialized view uses the DISTINCT qualifier on an aggregate function.

Action: Remove the DISTINCT qualifier.

QSM-02003: aggregate function nested within an expression
Cause: The capability in question is not supported when the materialized view contains an aggregate function invocation nested within an outer expression.

Action: Re-phrase the expression such that the aggregate function invocation is not nested.

QSM-02004: grouping column omitted from SELECT list
Cause: The capability in question is not supported when the materialized view contains a column or expression in the GROUP BY clause that is not also present in the list of output select expressions.

Action: Include all GROUP BY expressions in the output select list.

QSM-02005: named view in FROM list
Cause: The capability in question is not supported when a named view appears in the FROM list.

Action: Remove the named view from the FROM list.

QSM-02006: subquery in FROM list
Cause: The capability in question is not supported when a subquery appears in the FROM list.

Action: Remove the subquery from the FROM list.

QSM-02007: multiple instances of the same table or view
Cause: The capability in question is not supported when the same table or view occurs more than once in the FROM list.

Action: Re-phrase the query to avoid multiple instances of the same table. For instance,

QSM-02008: non-join filter condition in WHERE or HAVING clause
Cause: The capability in question is not supported when the materialized view has a selection condition (an expression not representing a join) in the WHERE or HAVING clauses.

Action: Remove the selection filter expression.

QSM-02009: non-inner join
Cause: The capability in question is only supported with inner joins.

Action: Re-phrase the query using an inner join. Remove any outer joins.

QSM-02010: join predicate with operator other than equals (=)
Cause: The capability in question is not supported when the materialized uses a relationship operator other than equals ("=") in a join in the WHERE clause. This is known as a non-equijoin.

Action: Re-phrase the query to avoid the non-equijoin.

QSM-02011: a HAVING clause is present
Cause: The capability in question is not supported when the materialized view uses a HAVING clause.

Action: Remove the HAVING clause.

QSM-02012: a CONNECT BY clause is present
Cause: The capability in question is not supported when the materialized view uses a CONNECT BY clause.

Action: Re-phrase the query to avoid use of the CONNECT BY clause.

QSM-02013: SELECT list includes a RAW data type expression
Cause: The capability in question is not supported when the materialized view uses RAW data type in an expression.

Action: Remove the reference to the RAW expression.

QSM-02014: GROUP BY expression other than a column
Cause: The capability in question is not supported when the materialized view uses an expression other than a simple column reference in the GROUP BY clause.

Action: Re-phrase the query to use only simple column expressions in the GROUP BY clause.

QSM-02015: Index Organized Table (IOT) present in FROM list
Cause: The capability in question is not supported when the materialized view references an Index Organized Table in the FROM list.

Action: Remove the reference to the Index Organized Table.

QSM-02016: clustered table in FROM list
Cause: The capability in question is not supported when the materialized view references a clustered table in the FROM list.

Action: Remove the reference to the clustered table in the FROM list.

QSM-02017: subquery present in the HAVING clause
Cause: The capability in question is not supported when the materialized view uses a subquery in the HAVING clause.

Action: Re-phrase the query to avoid the subquery in the HAVING clause.

QSM-02018: subquery present in the WHERE clause
Cause: The capability in question is not supported when the materialized view uses a subquery in the WHERE clause.

Action: Re-phrase the query to avoid the subquery in the WHERE clause.

QSM-02019: mv references another mv in FROM clause
Cause: The capability in question is not supported when the materialized view is nested (i.e., when it references another materialized view in its FROM list).

Action: Re-phrase the query to avoid reference to the other materialized view.

QSM-02020: container column not in SELECT list with NOT NULL constraint
Cause: The capability in question is not supported when the materialized view's container table has a column that does not correspond to an output expression in the select list, and that column has a NOT NULL constraint. This situation can result in problems during refresh since any new rows inserted into the materialized view will set that column to NULL.

Action: Disable or remove the NOT NULL constraint.

QSM-02021: set operator encountered in mv
Cause: The capability in question is not supported when the materialized view uses set operators such as UNION, UNION ALL, MINUS, etc.

Action: Re-phrase the query to avoid the use of set operators.

QSM-02022: aggregate selections
Cause: The capability in question is not supported when the materialized view uses an aggregate expression in the HAVING clause.

Action: Re-phrase the query to avoid the use of an aggregate in the HAVING clause.

QSM-02023: nested cursor
Cause: The capability in question is not supported when the materialized view uses a nested cursor expression.

Action: Re-phrase the query to avoid use of a nested cursor expression.

QSM-02024: no GROUP BY clause
Cause: The capability in question is not supported when the materialized view does not use a GROUP BY clause.

Action: Re-phrase the query to use a GROUP BY clause.

QSM-02025: no aggregate functions
Cause: The capability in question is not supported when the materialized view uses no aggregate functions.

Action: Re-phrase the query to use aggregate functions.

QSM-02026: non-AND conjunction in WHERE clause
Cause: The capability in question is not supported when the materialized view uses a conjunction other than AND (such as OR) in the WHERE clause.

Action: Re-phrase the query to avoid use of the non-AND conjunction.

QSM-02027: group by ROLLUP
Cause: The capability in question is not supported when the materialized view uses the ROLLUP operator in the GROUP BY clause.

Action: Re-phrase the query to avoid use of the ROLLUP operator.

QSM-02028: group by CUBE
Cause: The capability in question is not supported when the materialized view uses the CUBE operator in the GROUP BY clause.

Action: Re-phrase the query to avoid use of the CUBE operator.

QSM-02029: PL/SQL function invocation
Cause: The capability in question is not supported when the materialized view invokes a PL/SQL function.

Action: Re-phrase the query to avoid use of PL/SQL functions.

QSM-02030: reduced precision specified for prebuilt mv
Cause: The capability in question is not supported when the materialized view is created with the WITH REDUCED PRECISION clause.

Action: DROP the materialized view and re-create it without using the WITH REDUCED PRECISION clause.

QSM-02031: materialized view cannot support any type of query rewrite
Cause: The materialized view cannot be used with query rewrite.

Action: Examine the other messages and documentation to determine the cause of the problem.

QSM-02032: no joins are present in the WHERE clause
Cause: The capability in question is not supported when the materialized view includes no join conditions in the WHERE clause.

Action: Re-phrase the query to include a join.

QSM-02033: no filter conditions are present in the WHERE clause
Cause: The capability in question is not supported when the materialized view includes no filter selection conditions in the WHERE clause.

Action: Add a filter condition.

QSM-02034: no joins are present in the HAVING clause
Cause: The capability in question is not supported when the materialized view includes no joins in the HAVING clause.

Action: Re-phrase the query to include a join.

QSM-02035: no filter conditions are present in the HAVING clause
Cause: The capability in question is not supported when the materialized view includes no filter condition in the HAVING clause.

Action: Re-phrase the query to include a join.

QSM-02036: in-list present in mv
Cause: The capability in question is not supported when the materialized view uses an IN list.

Action: Re-phrase the query to avoid the use of IN lists.

QSM-02037: cannot evaluate constant expression at compile time
Cause: The capability in question is not supported when the materialized view uses a compile-time non-constant expression in a filter condition in the WHERE or HAVING clauses. For example, WHERE X=1 uses a compile-time constant expression in a filter condition. WHERE X=MY_PLSQL_FUNCTION() uses a compile-time non-constant expression in a filter condition.

Action: Re-phrase the query to avoid the use of a compile-time non-constant expressions in filter conditions.

QSM-02038: Partition Change Tracking (PCT) is enabled
Cause: The Partition Change Tracking (PCT) capability is supported for this materialized view.

Action: No action is needed.

QSM-02039: top level mv query uses grouping sets
Cause: The capability in question is not supported when the materialized view use grouping sets.

Action: Re-phrase the query to avoid use of grouping sets.

QSM-02040: top level query contains GSets and the key is too long for rewrite
Cause: The capability in question is not supported when the materialized view uses a grouping set with too many keys.

Action: Reduce the number of grouping set keys.

QSM-02041: nested aggregate function
Cause: The capability in question is not supported when the materialized view nests an aggregate function invocation as an argument to another aggregate function.

Action: Re-phrase the query to avoid the nested aggregate function invocation.

QSM-02042: view or subquery in from list
Cause: The capability in question is not supported when the materialized view references a view or subquery in the FROM list.

Action: Re-phrase the query to avoid the use of views or subqueries in in the FROM list.

QSM-02044: ORDER BY clause in mv
Cause: The capability in question is not supported when the materialized view includes an ORDER BY clause.

Action: Remove the ORDER BY clause.

QSM-02045: START WITH clause in mv
Cause: The capability in question is not supported when the materialized view includes a START WITH clause.

Action: Re-phrase the query to avoid the use of the START WITH clause.

QSM-02047: window function in mv
Cause: The capability in question is not supported when the materialized view uses a window function.

Action: Re-phrase the query to avoid the use of window functions.

QSM-02048: outer join in mv
Cause: The capability in question is not supported when the materialized view uses an outer join.

Action: Re-phrase the query to avoid the use of outer joins.

QSM-02049: subquery using the ANY clause in mv
Cause: The capability in question is not supported when the materialized view uses the ANY clause with a subquery.

Action: Re-phrase the query to avoid the use of the ANY clause.

QSM-02050: subquery using the ALL clause in mv
Cause: The capability in question is not supported when the materialized view uses the ALL clause with a subquery.

Action: Re-phrase the query to avoid the use of the ALL clause.

QSM-02051: subquery using the NOT EXISTS clause in mv
Cause: The capability in question is not supported when the materialized view uses the NOT EXISTS with a subquery.

Action: Re-phrase the query to avoid the use of the NOT EXITS clause.

QSM-02052: subquery using a select list in mv
Cause: The capability in question is not supported when the materialized view uses a select list.

Action: Re-phrase the query to avoid the use of a select list.

QSM-02053: collection subquery in mv
Cause: The capability in question is not supported when the materialized view uses a collection subquery.

Action: Re-phrase the query to avoid the use of collection subqueries.

QSM-02054: DISTINCT clause in select list in mv
Cause: The capability in question is not supported when the materialized view uses the DISTINCT clause in the select list.

Action: Re-phrase the query to avoid the use of the DISTINCT clause.

QSM-02055: mv references a packed object table or view
Cause: The capability in question is not supported when the materialized view references a packed object table or view.

Action: Re-phrase the query to avoid the use of the packed object tables or views.

QSM-02056: correlated variable and outer join in mv
Cause: The capability in question is not supported when the materialized view uses a correlated variable and an outer join.

Action: Re-phrase the query to avoid the use of the correlated variables or outer joins.

QSM-02057: ROWNUM referenced in mv
Cause: The capability in question is not supported when the materialized view references the ROWNUM function.

Action: Re-phrase the query to avoid the use of the ROWNUM function.

QSM-02058: set operator in mv and compatibility mode is less than 9.0
Cause: The capability in question is not supported when the materialized view uses a set operator and the compatibility mode is less than 9.0.

Action: Re-phrase the query to avoid the use of set operators or set the compatibility mode to 9.0 or greater.

QSM-02059: join may produce duplicate rows in mv
Cause: The capability in question is not supported when the materialized view contains a join condition that can result in duplicate rows in the materialized view.

Action: Re-phrase the query to avoid the occurrence of duplicate rows in the materialized view.

QSM-02061: one or more joins present in mv
Cause: The capability in question is not supported when the materialized view contains joins.

Action: Re-phrase the query to avoid the use of the joins.

QSM-02062: GROUP BY clause in mv
Cause: The capability in question is not supported when the materialized view uses the GROUP BY clause.

Action: Re-phrase the query to avoid the use of the GROUP BY clause.

QSM-02063: aggregate function in mv
Cause: The capability in question is not supported when the materialized view uses an aggregate function.

Action: Re-phrase the query to avoid the use of the aggregate functions.

QSM-02064: subquery in mv
Cause: The capability in question is not supported when the materialized view uses a subquery.

Action: Re-phrase the query to avoid the use of the subqueries.

QSM-02066: Oracle error: see RELATED_NUM and RELATED_TEXT for details
Cause: The capability in question is not supported because an attempt to create the materialized view would result in an error.

Action: Examine the associated Oracle error code in the RELATED_NUM column and the Oracle error text in the RELATED_TEXT column and address the problem.

QSM-02067: no partition key or PMARKER or join dependent expression in select list
Cause: The capability in question is not supported when the materialized view unless the select list (and group by list if a GROUP BY clause is present) includes the partition key or PMARKER function reference to the table in question or an expression join dependent on the partitioning column of the table in question.

Action: Add the partition key or a PMARKER function reference or a join dependent expression to the select list (and the GROUP BY clause, if present).

QSM-02068: relation is not a partitioned table
Cause: The capability in question is not supported when the relation in question is not a partitioned table.

Action: Change the query to reference a partitioned table.

QSM-02069: PCT not supported with multi-column partition key
Cause: The capability in question is not supported when the table in is partitioned on a multi-column key.

Action: Re-phrase the query to reference a table partitioned on a single column key.

QSM-02070: PCT not supported with this type of partitioning
Cause: The capability in question is not supported when the table in question uses certain types of partitioning.

Action: Re-phrase the query to reference a table that is uses a type of partitioning that is supported for this capability.

QSM-02071: internal error: undefined PCT failure code
Cause: An internal Oracle error has occurred.

Action: Report the problem through your normal support channels.

QSM-02072: requirements not satisfied for fast refresh of nested mv
Cause: The capability in question is not supported because one or more of the requirements for this capability have not been satisfied.

Action: Examine the relevant nested materialized view documentation in the Warehouse Guide and address the problem.

QSM-02073: non-primary key RepAPI mv is not fast refreshable
Cause: Fast refresh is supported for RepAPI materialized views only if it is also a primary key materialized view.

Action: Re-design the materialized view to be a primary key materialized view.

QSM-02074: materialized view over Heterogeneous Services link
Cause: The capability in question is not supported when the materialized view uses a heterogeneous link.

Action: Re-design the materialized view to avoid the use of the heterogeneous links.

QSM-02075: materialized view on synonym
Cause: The capability in question is not supported when the materialized view references a synonym, if the compatible parameter is earlier than 10.2.0.

Action: Re-phrase the query to avoid the use of the synonyms.

QSM-02076: sequence number in the mv log is newer than last refresh
Cause: The timestamp of the sequence number in the mv log was after the last refresh time.

Action: A complete refresh is required before the next fast refresh.

QSM-02077: mv log is newer than last full refresh
Cause: The capability in question is not supported when the relevant materialized view log was created after the creation or most recent complete refresh of the materialized view.

Action: Perform a complete refresh of the materialized view.

QSM-02078: mv log must have new values
Cause: The capability in question is not supported when the relevant materialized view log omits new values.

Action: Re-create the materialized view log using the NEW VALUES clause.

QSM-02079: mv log must have ROWID
Cause: The capability in question is not supported when the relevant materialized view log omits ROWIDs.

Action: Re-create the materialized view log using the ROWID clause.

QSM-02080: mv log must have primary key
Cause: The capability in question is not supported when the relevant materialized view log omits primary keys.

Action: Re-create the materialized view log using the PRIMARY KEY clause.

QSM-02081: mv log does not have all necessary columns
Cause: The capability in question is not supported when the relevant materialized view log omits columns referenced in the select list of the materialized view.

Action: Re-create the materialized view log and include all columns referenced in the select list.

QSM-02082: problem with mv log
Cause: The capability in question is not supported because of a problem the materialized view log in question.

Action: Examine the relevant materialized view log and fast refresh documentation in the Warehouse Guide and address the problem.

QSM-02083: mv references PL/SQL function that maintains state
Cause: The capability in question is not supported when the materialized view references a PL/SQL function that maintains state and which may not return the same value every time it is invoked against the same set of rows.

Action: Re-phrase the query to avoid such a PL/SQL function. Or modify the PL/SQL function to avoid state maintenance and change its declaration accordingly.

QSM-02084: DISTINCT clause on a duplicate sensitive aggregate function
Cause: The capability in question is not supported when the materialized view uses the DISTINCT clause in this context.

Action: Re-phrase the query to avoid the use of the DISTINCT clause.

QSM-02086: mv uses the MIN, MAX or ANY_VALUE aggregate functions
Cause: The capability in question is not supported when the materialized view uses the MIN, MAX, or ANY_VALUE function.

Action: Re-phrase the query to avoid the use of the MIN, MAX or ANY_VALUE functions.

QSM-02087: materialized view uses the approximate aggregate detail functions
Cause: The capability in question was not supported when the materialized view used the approximate aggregate detail function.

Action: Rephrase the query to avoid using the approximate aggregate detail function.

QSM-02088: mv omits at least one grouping key from the select list
Cause: The capability in question is not supported when the materialized view omits any grouping expressions from the select list.

Action: Include all GROUP BY expressions in the select list.

QSM-02090: SELECT includes an expression that is not just a column
Cause: The capability in question is not supported when the materialized view uses an expression in the select list that is not a simple column reference.

Action: Re-phrase the query to avoid the use of the expressions that are not simple column references.

QSM-02091: mv references a non-repeatable or session-sensitive expression
Cause: The capability in question is not supported when the materialized view uses an expression that may not return the same value each time it is invoked against the same set of rows or that may return different values depending on session parameters.

Action: Re-phrase the query to avoid the use of such expressions.

QSM-02092: mv references a sequence number
Cause: The capability in question is not supported when the materialized view references a sequence number.

Action: Re-phrase the query to avoid the reference to sequence numbers.

QSM-02093: mv uses an object REF clause
Cause: The capability in question is not supported when the materialized view uses an object REF clause.

Action: Re-phrase the query to avoid the use of an object REF clause.

QSM-02096: mv references a named view
Cause: The capability in question is not supported when the materialized view references a view.

Action: Re-phrase the query to avoid references to views.

QSM-02099: mv references a remote table or view in the FROM list
Cause: The capability in question is not supported when the materialized view references a remote table or view in the FROM list.

Action: Re-phrase the query to avoid references to remote tables or views.

QSM-02101: mv references a synonym in the FROM list
Cause: The capability in question is not supported when the materialized view references a synonym in the FROM list.

Action: Re-phrase the query to avoid the reference to the synonym.

QSM-02102: mv FROM list references an object in the SYS schema
Cause: The capability in question is not supported when the materialized view references an object in the SYS schema.

Action: Re-phrase the query to avoid the reference to the SYS schema.

QSM-02104: aggregate function in a filter condition in the HAVING clause
Cause: The capability in question is not supported when the materialized view references an aggregate function in a filter condition in the HAVING clause.

Action: Re-phrase the query to avoid the use of aggregates in filter conditions in the HAVING clause.

QSM-02106: mv uses a filter condition in the WHERE or HAVING clause
Cause: The capability in question is not supported when the materialized view includes a filter condition in the WHERE or HAVING clause.

Action: Re-phrase the query to avoid the use of filter conditions in the WHERE or HAVING clauses.

QSM-02112: top level query has LEFT OUTER, RIGHT OUTER or FULL OUTER join
Cause: The capability in question is not supported when the materialized view uses these types of joins.

Action: Re-phrase the query to avoid the use of these types of joins.

QSM-02113: expression in select list references multiple tables or views
Cause: The capability in question is not supported when the materialized view includes an expression in the select list that references multiple tables or views.

Action: Re-phrase the query to avoid the use of the such expressions.

QSM-02114: no GROUP BY clause, no aggregates and not >= 9.0 compatibility
Cause: The capability in question is not supported when the materialized view has no GROUP BY clause, no aggregates and compatibility mode is less than 9.0.

Action: Re-phrase the query to avoid the include a GROUP BY clause or an aggregate function. Or set compatibility mode to 9.0 or greater.

QSM-02115: mv references a remote object and is refreshed ON COMMIT
Cause: The capability in question is not supported when the materialized view references a remote object and is refreshed ON COMMIT.

Action: Re-phrase the query to avoid the reference to the remote object or alter the materialized view to be refreshed ON DEMAND.

QSM-02116: mupltiple master sites
Cause: The capability in question is not supported when the materialized view references multiple remote objects that reside at different remote instances.

Action: Re-phrase the query to avoid the use of multiple master sites.

QSM-02117: missing GROUPING_ID or GROUPING functions on GROUP BY column(s)
Cause: The capability in question is not supported when the materialized view uses grouping sets but omits the relevant GROUPING_ID or GROUPING functions.

Action: Re-phrase the query to include the relevant GROUPING_ID or GROUPING functions.

QSM-02118: duplicate grouping sets
Cause: The capability in question is not supported when the materialized view redundantly references grouping sets.

Action: Re-phrase the query to avoid the use of the redundant grouping sets.

QSM-02119: internal error while analyzing required supporting aggregates
Cause: An internal Oracle error has occurred.

Action: Report the problem through your normal support channels.

QSM-02120: compatibility mode must be 9.0 or higher
Cause: The capability in question is not supported when the compatibility mode is less than 9.0.

Action: Set the compatibility mode to 9.0 or higher.

QSM-02121: set operator in a context not supported for fast refresh
Cause: The capability in question is not supported when the materialized view uses a set operator in this context.

Action: Re-phrase the query to avoid the use of the set operator.

QSM-02122: compatibility mode must be 8.1 or higher
Cause: The capability in question is not supported when the compatibility mode is less than 8.1.

Action: Set the compatibility mode to 8.1 or higher.

QSM-02123: subquery and UNION mv's must be primary key mv's
Cause: The capability in question is not supported when the materialized view is not a primary key materialized view and uses subqueries or the union operator in this context.

Action: Re-create the materialized view as a primary key materialized view.

QSM-02124: object type in WHERE clause
Cause: The capability in question is not supported when the materialized view references an object type in the WHERE clause.

Action: Re-phrase the query to avoid the reference to the object type.

QSM-02125: subquery join conditions don't meet requirements for capability
Cause: The capability in question is not supported when the materialized view uses a subquery in a join in this way.

Action: Examine the relevant replication documentation concerning subquery materialized views and address the problem.

QSM-02126: no rowid at master site
Cause: The capability in question is not supported when the materialized view references a remote site that does not support rowids.

Action: Re-phrase the query to avoid the reference to the remote site.

QSM-02127: not supported for this type mv by Oracle version at master site
Cause: The capability in question is not supported when the materialized view uses certain constructs and references an older version, remote Oracle instance.

Action: Re-phrase the query to avoid the use of the construct or upgrade the remote Oracle instance.

QSM-02128: does not meet the requirements of a primary key mv
Cause: The capability in question is not supported when the materialized view fails to meet the requirements of a primary key materialized view.

Action: Examine the relevant primary key materialized view replication documentation and address the problem.

QSM-02129: join or filter condition(s) are complex
Cause: The capability in question is not supported when the materialized view uses a complex join or filter condition.

Action: Re-phrase the query to simplify the join or filter condition.

QSM-02130: expression not supported for fast refresh
Cause: The capability in question is not supported when the materialized view references certain, complex expressions.

Action: Re-phrase the query to simplify the expression.

QSM-02131: agg(expr) requires correspondng SUM(expr) function
Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the SUM function on the same argument.

Action: Add the SUM function to the select list.

QSM-02132: agg(expr) requires correspondng COUNT(expr) function
Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the COUNT function on the same argument.

Action: Add the COUNT function to the select list.

QSM-02133: agg(expr) requires correspondng MIN(expr) function
Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the MIN function on the same argument.

Action: Add the MIN function to the select list.

QSM-02134: agg(expr) requires correspondng MAX(expr) function
Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the MAX function on the same argument.

Action: Add the MAX function to the select list.

QSM-02135: agg(expr) requires correspondng AVG(expr) function
Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the AVG function on the same argument.

Action: Add the AVG function to the select list.

QSM-02136: agg(expr) requires correspondng VARIANCE(expr) function
Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the VARIANCE function on the same argument.

Action: Add the VARIANCE function to the select list.

QSM-02137: agg(expr) requires correspondng STDDEV(expr) function
Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the STDDEV function on the same argument.

Action: Add the STDDEV function to the select list.

QSM-02138: agg(expr) requires correspondng agg(expr*expr) function
Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of that same aggregate function on the square of the same argument.

Action: Add an invocation of the same aggregate function on the square of the same argument (that is, the argument multiplied by itself).

QSM-02139: agg(expr) requires correspondng agg(expr+expr) function
Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of that same aggregate function on the same argument added to the same argument.

Action: Add the indicated aggregate function to the select list.

QSM-02140: agg(expr) requires correspondng SUM(expr*expr) function
Cause: The capability in question is not supported when the materialized view uses certain aggregate functions but omits an invocation of the SUM function on the square of the same argument (the argument multiplied by itself).

Action: Add the SUM function on the square of the argument.

QSM-02141: the reason why the capability is disabled has escaped analysis
Cause: The EXPLAIN_MV analysis engine has failed to capture the reason why the given capability is not possible.

Action: Report the problem through your normal problem reporting channels.

QSM-02142: COUNT(*) is not present in the select list
Cause: The materialized view query omits COUNT(*) from the select list.

Action: Add COUNT(*) to the select list.

QSM-02143: SUM(expr) without COUNT(expr)
Cause: SUM(expr) occurs in the select list without a corresponding COUNT(expr).

Action: Add COUNT(expr) to the select list.

QSM-02144: aggregate functions are present without a GROUP BY clause
Cause: One or more aggregate functions are present in the select list but a GROUP BY clause is not used.

Action: Add a GROUP BY clause.

QSM-02145: GROUP BY clause is present but no aggregate functions are used
Cause: A GROUP BY clause is used but no aggregate functions are present in the select list.

Action: Add an aggregate function to the select list.

QSM-02146: see the reason why REFRESH_FAST_AFTER_INSERT is disabled
Cause: REFRESH_FAST_AFTER_ONETAB_DML is disabled for the same reason that REFRESH_FAST_AFTER_INSERT is disabled.

Action: Correct the problem with REFRESH_FAST_AFTER_INSERT.

QSM-02147: default date format is sensitive to session settings
Cause: You have specified a date conversion operation using either the default format or an incomplete format. The default date format or an incomplete format is sensitive to session settings, and therefore may not be reproducible across different environments.

Action: Specify a complete date format string.

QSM-02148: many to many subquery joins require 9.0 compatibility or higher
Cause: You have specified a many to many join in your materialized view while running in less than 9.0 compatibility mode.

Action: Set your compatibility mode to 9.0 or higher or restructure the materialized view query.

QSM-02149: ON COMMIT with this MV requires 9.0 compatibility or higher
Cause: You have specified a materialized view that uses some combination of the following: joins aggregation filter conditions in the WHERE clause a remote relation in the FROM list a SUM(x) function without a corresponding COUNT(x) function an omitted COUNT(*) aggregate function a MIN() or MAX() aggregate function in combination with the REFRESH ON COMMIT option while running in less than 9.0 compatibility mode.

Action: Set your compatibility mode to 9.0 or higher or restructure the materialized view query.

QSM-02150: select lists must be identical across the UNION operator
Cause: You have specified a materialized view using the UNION operator and the respective queries on each side of the UNION operator do not have the same select list. The RELATED_NAME column shows the alias of the first different select list item. The RELATED_NUM column shows the offset from the SELECT keyword to the start of this select list item.

Action: Restructure the materialized view query such that the respective sides of the UNION operator have identical select lists.

QSM-02151: subquery or named view in FROM list and < 9.0 compatibility
Cause: You have specified a materialized view that references a subquery or named view in its top level FROM list while running in less than 9.0 compatibility mode.

Action: Set compatibility mode to 9.0 or higher or restructure the materialized view query.

QSM-02152: subquery or named view in FROM list even after view merging
Cause: You have specified a materialized view that references a subquery ore named view in its top level FROM list that could not be merged during the view merging process.

Action: Restructure the materialized view query.

QSM-02153: inline view or subquery in FROM list not supported for this type MV
Cause: You have specified a materialized view that references an inline view or a subquery. The indicated capability is not supported for this type of materialized view.

Action: Restructure the materialized view query.

QSM-02154: MV is not fast refreshable even with view merging
Cause: You have a materialized view with view in the FROM clause, however it does not meet the criteria for fast refresh after view merging.

Action: Restructure the materialized view query to remove the offending view or the complex construct in the view.

QSM-02161: see the reason why REFRESH_FAST_AFTER_ONETAB_DML is disabled
Cause: REFRESH_FAST_AFTER_ANY_DML is disabled for the same reason that REFRESH_FAST_AFTER_ONETAB_DML is disabled.

Action: Correct the problem with REFRESH_FAST_AFTER_ONETAB_DML.

QSM-02162: the detail table does not have a materialized view log
Cause: The fast refresh cannot be performed because the master table does not contain a materialized view log.

Action: Use the CREATE MATERIALIZED VIEW LOG command to create a materialized view log on the master table.

QSM-02163: cannot use object id columns from materialized view log
Cause: The materialized view log either does not have object id columns logged, or the timestamp associated with the object id columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add object id columns to the materialized view log, if required.

QSM-02169: the materialized view contains partition extended table name
Cause: Fast refresh of materialized aggregate views and/or materialized join views are not supported if they were defined using partition extended table names.

Action: Create the fast refreshable materialized view without using partition extended table names or create the materialized view as a complete refresh materialized view.

QSM-02170: tables must be identical across the UNION operator
Cause: You have specified a materialized view using the UNION operator and the tables on each side of the UNION operator do not match. Fast refresh is not supported in this context.

Action: Restructure the materialized view query such that the respective sides of the UNION operator have the same table.

QSM-02171: the materialized view has a join operation in the outer UNION block
Cause: Fast refresh is not supported if a materialized view having the UNION operator contains a join operation.

Action: Rewrite the materialized view query without the join.

QSM-02173: the unique constraints does not exist on the join columns of the inner table
Cause: If there are outer joins, unique constraints must exist on the join columns of the inner table. Othwerwise, the materialized view can not be fast refreshable.

Action: n/a

QSM-02174: the materialized view does not have a UNION ALL marker column
Cause: For a materialized view with UNION ALL to be fast refreshable, it must have a UNION ALL marker column. This is a constant column, at the same ordinal position in each query block and must have distinct values in each query block.

Action: Add a UNION ALL marker column to each query block in the UNION ALL query defining the materialized view.

QSM-02175: some query block in UNION ALL MV is not fast refreshable
Cause: For a materialized view with UNION ALL to be fast refreshable, each query block must conform to a fast refreshable materialized join view or materialized aggregate view.

Action: Check each query block in the UNION ALL to ensure it is either a materialized view with joins or aggregates.

QSM-02176: MV with UNION ALL in a view is too complex
Cause: If a materialized view has a view whose definition involves a UNION ALL query, then the materialized view's defining query cannot have any clauses other than SELECT or FROM. Other clauses such as WHERE, HAVING, CONNECT BY, or GROUP BY are not allowed. Further more, the FROM clause should have only one item.

Action: Remove any clauses besides SELECT and FROM from the materialized view's defining query.

QSM-02177: MV with UNION ALL in a view must match the view's SELECT list
Cause: If a materialized view has a view whose definition involves a UNION ALL query, then the materialized view's select list must match the underlying view's select list exactly. It must not have any expressions and must not have add/drop/reorder columns from the underlying view.

Action: Use select * when defining a materialized view with a UNION ALL in a view.

QSM-02178: MV has a view with UNION ALL that is not fast refreshable
Cause: The materialized view has a view whose definition involves a UNION ALL query that does not satisfy the requirements for fast refresh.

Action: Check that the defining query of the view being referenced in the materialized view satisfies conditions for fast refresh of a UNION ALL materialized view.

QSM-02179: MV with UNION ALL requires compatibility >= 9.2
Cause: The setting of the COMPATIBLE initialization parameter is less than 9.2.0.

Action: Set COMPATIBLE to 9.2.0 or higher.

QSM-02180: no primary key constraint in the master table
Cause: The explain_mview assumes that the materialized view is going to be created as the Primary Key materialized view. A Primary Key materialized view can not be created if the base table does not have a primary key constraint.

Action: Add a primary key constraint to the base table, or create the materialized view as Rowid MV by specifying the WITH ROWID option. If the materialized view is a Rowid MV, then it should be able to do complete refresh and even fast refresh, given that the materialized view log on the master table has a rowid.

QSM-02181: a SPREADSHEET clause is present
Cause: The capability in question is not supported when the materialized view uses a SPREADSHEET clause.

Action: Remove the SPREADSHEET clause.

QSM-02182: PCT is enabled through a join dependency
Cause: The capability in question is not supported when the materialized view does not contain some expression join dependent on the partitioning key of relation in question in the select list. For definition of join dependency, please look at Oracle documentation.

Action: Change the query to contain the partitioning key

QSM-02183: Expression to enable PCT not in PARTITION BY of analytic function or SPREADSHEET
Cause: The capability in question is not supported when the expression is not in the PARTITION BY clause

Action: Change the query so that the expression is in the PARTITION BY

QSM-02184: Expression to enable PCT cannot be rolled up
Cause: The capability in question is not supported when the expression is rolled up

Action: Change the query so that the expression is not rolled up

QSM-02185: no partition key or PMARKER in select list
Cause: The capability in question is not supported when the materialized view unless the select list (and group by list if a GROUP BY clause is present) includes either the partition key of or a PMARKER function reference to the table in question.

Action: Add the partition key or a PMARKER function reference to the select list (and the GROUP BY clause, if present).

QSM-02186: PARTITIONED OUTER JOIN is present
Cause: The capability in question is not supported when the materialized view has PARTITIONED OUTER JOIN.

Action: Remove PARTITIONED OUTER JOIN.

QSM-02187: materialized view on external table
Cause: The capability in question is not supported when the materialized view references an external table.

Action: Re-phrase the query to avoid the use of the external tables.

QSM-02188: named view in FROM list not supported for this type MV
Cause: You have specified a materialized view that references a named view The indicated capability is not supported for this type of materialized view.

Action: Restructure the materialized view query.

QSM-02189: materialized view definition changes
Cause: The definition of the materialized view has changed. Usually redefining the synonym or table in the definition can cause this. The materialized view can not be fast refreshed.

Action: Complete refresh or recreate the materialized view.

QSM-02190: SQL PIVOT or UNPIVOT is present
Cause: The capability in question is not supported when the materialized view has sql PIVOT or UNPIVOT operation.

Action: Remove sql PIVOT or UNPIVOT.

QSM-02191: types of MV logs are not compatible
Cause: The capability in question is not supported when the materialized view is defined on detail tables which do not have a compatible type of materialized view logs, either all timestamp based or commit SCN based.

Action: Complete refresh or recreate materialized view logs.

QSM-02192: commit SCN based MV log is not in consistent state
Cause: The capability in question is not supported when the relevant materialized view log is not in consistent state due to the failure when populating the mapping table of SYS.SNAP_XCMT$.

Action: Perform a complete refresh of the materialized view.

QSM-02193: unsupported MV on commit SCN based MV logs
Cause: The capability in question is not supported when the relevant materialized view is not supported to be defined on detail tables which have commit SCN based MV logs.

Action: None

QSM-02194: CASE expressions present in materialized view
Cause: The capability in question is not supported when the materialized view contain CASE expressions.

Action: Re-phrase the query to avoid the use of CASE expressions.

QSM-02195: PCT FAST REFRESH is not possible if query contains a named view
Cause: The capability in question was not supported because the materialized view query contained a named view.

Action: Rephrase the query to avoid the use of named views.

QSM-02196: PCT FAST REFRESH is not possible if query contains an inline view
Cause: The capability in question was not supported because the materialized view query contained an inline view.

Action: Rephrase the query to avoid the use of an inline view.

QSM-02197: PCT FAST REFRESH is not possible if query contains a remote table
Cause: The capability in question was not supported because the materialized view query contained a remote table.

Action: Rephrase the query to avoid the use of a remote table.

QSM-02198: PCT FAST REFRESH is not possible if HAVING clause includes a subquery
Cause: The capability in question was not supported because the materialized view query HAVING clause included a subquery.

Action: Rephrase the query to avoid the use of a subquery in the HAVING clause.

QSM-02199: PCT FAST REFRESH is not possible if WHERE clause includes a subquery
Cause: The capability in question was not supported because the materialized view query WHERE clause included a subquery.

Action: Rephrase the query to avoid the use of a subquery in the WHERE clause.

QSM-02200: PCT FAST REFRESH is not possible if query contains LEFT OUTER, RIGHT OUTER or FULL OUTER JOIN
Cause: The capability in question was not supported because the materialized view query contained LEFT OUTER, RIGHT OUTER or FULL OUTER JOIN.

Action: Rephrase the query to avoid the use of LEFT OUTER, RIGHT OUTER or FULL OUTER JOIN.

QSM-02201: PCT FAST REFRESH is not possible if there is a self join or self cartesian product in query
Cause: The capability in question was not supported because the materialized view query contained self join of self cartesian product in the query.

Action: Rephrase the query to avoid the use of self joins or self cartesian product in the query.

QSM-02202: PCT FAST REFRESH is not possible if query has ORDER BY clause
Cause: The capability in question was not supported because the materialized view query contained an ORDER BY clause.

Action: Rephrase the query to avoid the use of the ORDER BY clause.

QSM-02203: PCT FAST REFRESH is not possible if query has set operand query blocks
Cause: The capability in question was not supported because the materialized view query contained set operand query blocks.

Action: Rephrase the query to avoid the use of set operand query blocks.

QSM-02204: PCT FAST REFRESH is not possible if query has an inner query
Cause: The capability in question was not supported because the materialized view query contained an inner query.

Action: Rephrase the query to avoid the use of the inner query.

QSM-02205: PCT FAST REFRESH is not possible if there is a subquery inside select-list
Cause: The capability in question was not supported because the materialized view query contained a subquery inside a select-list.

Action: Rephrase the query to avoid the use of a subquery inside a select-list.

QSM-02206: PCT FAST REFRESH is not possible because this query join may produce extra duplicate rows
Cause: The capability in question was not supported because the materialized view contained a join condition that can result in duplicate rows in the materialized view.

Action: Rephrase the query to avoid the occurrence of duplicate rows in the materialized view.

QSM-02207: PCT FAST REFRESH is not possible for complex queries
Cause: The capability in question was not supported because the materialized view query was too complex.

Action: No action is necessary.

QSM-02208: subquery using the NOT IN clause in materialized view
Cause: The capability in question was not supported when the materialized view uses NOT IN with a subquery.

Action: Rephrase the query to avoid the use of the NOT IN clause.

QSM-02209: a MATCH_RECOGNIZE clause is present
Cause: The capability in question was not supported when the materialized view used a MATCH_RECOGNIZE clause.

Action: Remove the MATCH_RECOGNIZE clause.

QSM-03112: Invalid CREATE MATERIALIZED VIEW statement\n*string*
Cause: The CREATE MATERIALIZED VIEW statement that was passed into the procedure was not a valid one.

Action: Check the reason(s) following the error or the statement and retry the operation.

QSM-03113: Cannot tune the MATERIALIZED VIEW statement\n*string*
Cause: The MATERIALIZED VIEW statement could not be tuned.

Action: Check the reason(s) following the error or the statement and retry the operation.

QSM-03114: Cannot tune FOR UPDATE materialized view
Cause: The materialized view was created with the FOR UPDATE option.

Action: Rephrase the statement to avoid the use of the FOR UPDATE option.

QSM-03115: Cannot tune materialized view ON PREBUILT table
Cause: The materialized view was created on a prebuilt table.

Action: Rephrase the statement to avoid the use of the ON PREBUILT option.

QSM-03116: The materialized view is already optimal and cannot be tuned any further
Cause: The materialized view has the capabilities that are specified in the statement.

Action: None

QSM-03117: Cannot tune the materialized view to be fast refreshable
Cause: The materialized view could not be tuned or decomposed to be fast refreshable.

Action: Run the dbms_mview.explain_mview to find out the reason.

QSM-03118: Cannot tune the materialized view for general rewrite
Cause: The materialized view could not be tuned for supporting general rewrite.

Action: Run the dbms_mview.explain_mview to find out the reason.

QSM-03119: The WHERE/HAVING clause is too complex for general query rewrite
Cause: The WHERE/HAVING was too complex for general rewrite.

Action: Try to simplify the WHERE/HAVING clause in the materialized view defining query.

QSM-03120: Cannot create materialized view log on encrypted columns
Cause: There were encrypted columns in materialized view defining query.

Action: Try to remove the encrypted columns in the materialized view defining query.

QSM-03201: The table *string*.*string* is classified as a fact table.
Cause: This table has met the criteria of a fact table for the purposes of synchronous refresh.

Action: None. This is an informational message.

QSM-03202: The table *string*.*string* is classified as a dimension table.
Cause: This table has met the criteria of a dimension table for the purposes of synchronous refresh.

Action: None. This is an informational message.

QSM-03203: The table *string*.*string* is classified as neither a fact nor a dimension table.
Cause: This table has not met the necessary criteria of a fact table or a dimension table for the purposes of synchronous refresh. Synchronous refresh requires that the defining query of a materialized view conform to either the star or snowflake schema. A table can be either a fact or dimension table.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03204: The materialized view passes the join graph eligibility check for synchronous refresh.
Cause: The defining query of the materialized view (MV) conformed to the star or snowflake schema and, therefore, was eligible for synchronous refresh.

Action: None. This is an informational message.

QSM-03205: The materialized view fails the join graph eligibility check for synchronous refresh.
Cause: The defining query of the materialized view (MV) did not conform to the star or snowflake schema and, therfore, was not eligible for synchronous refresh.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03206: The fact table is partitioned by *string* and its partition key is *string*.
Cause: The fact table had the indicated partitioning method and key.

Action: None. This is an informational message.

QSM-03207: The materialized view is partitioned by *string* and its partition key is *string*.
Cause: The materialized view (MV) had the indicated partitioning method and key.

Action: None. This is an informational message.

QSM-03208: The partition key of the fact table functionally determines the partition key of the materialized view.
Cause: The analysis by synchronous refresh indicated that the partition key of the fact table functionally determined the partition key of the materialized view (MV), which is a requirement for synchronous refresh eligibility.

Action: None. This is an informational message.

QSM-03209: The materialized view passes the partition key dependency eligibility check for synchronous refresh.
Cause: The analysis by synchronous refresh indicated that the materialized view (MV) passed the partition key dependency eligibility check.

Action: None. This is an informational message.

QSM-03210: The materialized view does not pass the partition key functional dependency check and is not eligible for synchronous refresh.
Cause: The analysis by synchronous refresh indicated that the materialized view (MV) did not pass the partition key dependency eligibility check.

Action: Check the partition keys of both the fact table and materialized view and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03211: The partition key of the MV can be rolled up from the partition key of the fact table by a join between the fact table and the dimension table *string*.
Cause: The analysis by synchronous refresh indicated there was a rollup relationship between the partition keys of the fact table and the materialized view (MV).

Action: None. This is an informational message.

QSM-03212: The partition key of the MV corresponds to *string* column of the fact table and not to the partition key of the fact table.
Cause: The analysis by synchronous refresh indicated that the the partition key of the materialized view (MV) was related to a column of the fact table and not to the partition key of the fact table.

Action: Check the partition keys of both the fact table and materialized view and and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03213: The partition key of the MV corresponds to the partition key of the fact table.
Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) is the same as the partition key of the fact table.

Action: None. This is an informational message.

QSM-03214: The partition key of the MV is derived from table *string* whereas the partition key of the fact table is related by a join to dimension table *string*.
Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was related to a column of a dimension table that was not the dimension table to which the partition key of the fact table was joined.

Action: Check the partition keys of both the fact table and materialized view and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03215: The partition key of the MV is not a column related to the partition key of the fact table.
Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was not a column related to the partition key of the fact table.

Action: Check the partition keys of both the fact table and materialized view and check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03216: The partition key of the MV is related to the partition key of the fact table by a join between the fact table and the dimension table *string*.
Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was related to the partition key of the fact table by a join.

Action: None. This is an informational message.

QSM-03217: The table *string*.*string* is classified as both a fact and a dimension table.
Cause: This table has met the necessary criteria of both a fact table and a dimension table for the purposes of synchronous refresh. Synchronous refresh requires that the defining query of a materialized view conform to either the star or snowflake schema. A table can be either a fact or dimension table.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03218: More than one table is classified as a fact table.
Cause: More than one of the base tables of the materialized view was classified as a fact table for the purposes of synchronous refresh, which requires exactly one fact table. Synchronous refresh requires that the defining query of a materialized view conform to either the star or snowflake schema. A table can be either a fact or dimension table. However, only one (and exactly one) can be fact table and the rest must be dimension tables.

Action: Check the joins of the query to ensure they conform to the requirements.

QSM-03219: The materialized view is not partitioned and therefore is not eligible for synchronous refresh.
Cause: The materialized view was not partitioned and therefore was not eligible for synchronous refresh.

Action: Partition the materialized view so that it is eligible for synchronous refresh.

QSM-03220: The partition key of the MV belongs to a table other than the fact table.
Cause: The analysis by synchronous refresh indicated that the partition key of the materialized view (MV) was related to a table other than the fact table.

Action: Check the partition keys of both the fact table and materialized view and the check the joins of the materialized view to ensure the functional dependency check passes.

QSM-03221: The partition key of the fact table does not appear in the joins of the MV.
Cause: The analysis by synchronous refresh indicated that the partition key of the fact table did not appear in the joins of the materialized view (MV).

Action: Check the partition keys of both the fact table and materialized view and the joins.

QSM-03222: The partition key of the fact table could not be related to the partition key of the MV.
Cause: The analysis by synchronous refresh indicated that the partition key of the fact table cannot be related to the partition key of the materialized view (MV).

Action: Check the partition keys of both the fact table and materialized view and the joins.

QSM-03223: The partition method used in the table or MV is not supported by MV synchronous refresh.
Cause: An attempt was made to do synchronous refresh on a table or materialized view (MV) that used an unsupported partition method.

Action: Check the partition method used in the table or MV definition to make sure it is either range, range-range, range-list, or range-hash partition.

QSM-03224: rows being deleted or updated not in the base table
Cause: The staging log rows to be updated or deleted were not in the base table.

Action: Change the staging log key in the staging log table.

QSM-03225: rows being inserted in the base table
Cause: The staging log rows to be inserted were in the base table.

Action: Change the staging log key in the staging log table.

QSM-03226: Rows being updated had exactly the same old and new values on all columns.
Cause: The staging log rows to be updated had exactly the same old and new values on all columns.

Action: Change some of the column values of the rows being updated or delete the problematic rows from the staging log.

QSM-03227: The USING TRUSTED CONSTRAINTS clause is not specified in the materialized view definition.
Cause: The USING TRUSTED CONSTRAINTS clause was not specified in the materialized view (MV) definition. Therefore, the MV was not eligible for synchronous refresh.

Action: Alter the materialized view to use trusted constraints.

QSM-03228: The refresh option specified in the materialized view definition is not supported.
Cause: The refresh option specified in the materialized view (MV) definition was not supported for synchronous refresh. The only refresh option supported for synchronous refresh is REFRESH FORCE.

Action: Alter the materialized view refresh option to REFRESH FORCE.

QSM-03229: The ON COMMIT refresh option is not supported.
Cause: The ON COMMIT refresh option specified in the materialized view definition was not supported for synchronous refresh. The only refresh option supported for synchronous refresh is ON DEMAND.

Action: Alter the materialized view refresh option to ON DEMAND.

QSM-03230: The materialized view is in an invalid state or not fresh.
Cause: The materialized view was in an invalid state or not fresh. Synchronous refresh requires the materialized view (MV) to be in a valid and fresh state when it is registered or prepared.

Action: Recompile the MV and refresh it to esnure it is valid and fresh.

QSM-03231: ROWID is not allowed in the materialized view registered for synchronous refresh.
Cause: ROWID was used in the defining query of the materialized view.

Action: Remove the ROWID column from the defining query of the materialized view.

QSM-03232: RAW data type is not allowed in the materialized view registered for synchronous refresh.
Cause: RAW data type was used in the defining query of the materialized view.

Action: Remove the RAW data type column from the defining query of the materialized view.

QSM-03233: MIN or MAX is not allowed in the materialized view registered for synchronous refresh.
Cause: MIN or MAX was used in the defining query of the materialized view.

Action: Remove the MIN or MAX expression from the defining query of the materialized view.

QSM-03234: Set operator is not allowed in the materialized view registered for synchronous refresh.
Cause: The set operator was used in the defining query of the materialized view.

Action: Remove the set operator from the defining query of the materialized view.

QSM-03235: OUTER JOIN is not allowed in the materialized view registered for synchronous refresh.
Cause: OUTER JOIN was used in the defining query of the materialized view.

Action: Remove OUTER JOIN from the defining query of the materialized view.

QSM-03236: Subquery is not allowed in the materialized view registered for synchronous refresh.
Cause: A subquery was used in the defining query of the materialized view.

Action: Remove the subquery from the defining query of the materialized view.

QSM-03237: Trigger is not allowed in the base table *string*.*string* for synchronous refresh.
Cause: A trigger was used in the base table for synchronous refresh.

Action: Remove the trigger from the base table.

QSM-03238: The materialized view was not defined on the base table *string*.*string* for synchronous refresh.
Cause: There was no materialized view defined on the base table.

Action: Change the base table name.

QSM-03239: Group by CUBE, ROLLUP, or grouping-sets was not allowed in the materialized view registered for synchronous refresh.
Cause: A group by CUBE, ROLLUP, or grouping-sets was used in the defining query of the materialized view.

Action: Remove the group by CUBE, ROLLUP, or grouping-sets from the defining query of the materialized view.

QSM-03240: The object *string*.*string* used in a materialized view definition was not a table.
Cause: An object was used in the defining query of the materialized view, which was not a table type.

Action: Remove the object from the defining query of the materialized view.

QSM-03241: Currently there is no active operation on the specified synchronous refresh group.
Cause: Either EXECUTE_REFRESH or ABORT_REFRESH returned an error because there was no active operation on the specified synchronous refresh group.

Action: Check the catalog views to determine the status of the synchronous refresh group.

QSM-03242: The synchronous refresh group is in an invalid state for the requested operation.
Cause: Either PREPARE_REFRESH or EXECUTE_REFRESH returned an error because the specified operation was not valid for the specified synchronous refresh group.

Action: Check the catalog views to determine the status of the synchronous refresh group. Refer to the synchronous refresh documentation to find out which refresh operations are valid in the various possible states of the group.

QSM-03243: The synchronous refresh group cannot resume execution.
Cause: EXECUTE_REFRESH returned an error because all possible refresh subgroups had been processed and had a status of either COMPLETE or ABORT.

Action: Check the catalog views to determine the status of the synchronous refresh group and its objects. Refer to the synchronous refresh documentation to find out which refresh operations are valid in the various possible states of the group.

QSM-03244: The partition operations registered on table *string*.*string* are not valid.
Cause: Either an illegal partition operation was specified in the register partition operation or the partition name was incorrectly specified.

Action: Check that the partition_name belongs to a valid partition and that only one operation is registered for a partition.

QSM-03245: The partition operations registered on partition *string* of table *string*.*string* conflict with the data supplied in the staging logs.
Cause: The staging log contained changes to rows in the partition that were being registered. These changes occur due to changes specified in the staging log of the fact table or because of updates to dimension tables.

Action: Resolve these conflicts by either unregistering the partition or deleting the rows from the named partition in the staging log of the fact table. If the conflicts are due to dimension updates, provide all changes to the fact table in the staging log rather than attempting to register the partition operations directly.

QSM-03246: The owner of outside partition *string* is *string* whereas it should be *string*.
Cause: When registering the outside table, the user supplied the incorrect owner for the outside table.

Action: Unregister the outside table and register it with the correct owner, which should be the same as the owner of the base table.

QSM-03247: The staging log on table *string*.*string* has not been prepared.
Cause: PREPARE_REFRESH failed because the staging log for the specified table was not prepared with PREPARE_STAGING_LOG. All staging logs of tables of the group must be prepared before running PREPARE_REFRESH.

Action: Run PREPARE_STAGING_LOG on the specified table. Check that all other tables in the group have been prepared.

QSM-03248: The materialized view *string*.*string* is already registered.
Cause: The specified materialized view (MV) has already been registered. A MV can be registered only once.

Action: No action is necessary if the MV is in a valid state. If the MV is in an invalid state, unregister the MV and re-register it with REGISTER_MVIEWS.

QSM-03249: The table *string*.*string* does not have a staging log.
Cause: REGISTER_MVIEWS failed because the staging log for the specified table belonging to the materialized view (MV) being registered did not exist. All tables on a MV are required to have staging logs created on them for the MV to be registered for synchronous refresh.

Action: Create the staging log with the CREATE MATERIALIZED VIEW LOG statement with the FOR SYNCHRONOUS REFRESH clause. If the table already has an ordinary MV log, use the ALTER MATERIALIZED VIEW LOG instead.

QSM-03250: The fact table *string*.*string* is not referenced by any MV in the group and the changes to dimension tables contain deletes or updates.
Cause: PREPARE_REFRESH found that there was no materialized view (MV) registered for synchronous refresh that contained the specified fact table as one of its base tables and the changes to the dimension tables contained updates or deletes. This error will not occur if the changes to the dimension tables contain only inserts.

Action: There are many ways to handle this situation. Refer to the documentation for details. One way is to unregister all MV's, drop staging logs on the tables or alter them to ordinary logs and apply the changes to the tables. Then the MV's can be refreshed using conventional methods instead of synchronous refresh. If desired, the staging logs on the tables can be re-created and the MV's can be registered for synchronous refresh. Another way is to register a MV which references the specified fact table for synchronous refresh. If no such MV exists, the user can first create one before registering it.

QSM-03251: The fact table *string*.*string* is not referenced by any MV in the group and its staging log is not empty.
Cause: PREPARE_REFRESH found that there is no materialized view (MV) registered for synchronous refresh that contained the specified fact table as one of its base tables and the staging log for that table specified changes to it. PREPARE_REFRESH supports fact tables without MV's defined on them if they meet two conditions: a) the staging log for the fact table is empty; b) the staging logs for the dimension tables in the group do not specify deletes or updates.

Action: There are many ways to handle this situation. Refer to the documentation for details. Briefly, the two main ways are: 1. Register a MV which references the fact table for synchronous refresh. If no such MV exists, you can create one. 2. Unregister all the MVs in the group; drop staging log on the table or alter it to an ordinary MV log. Re-register the MVs which have been unregistered.

QSM-03252: The synchronous refresh group of table *string*.*string* is locked by another operation.
Cause: Either REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that the synchronous refresh group to which the table belonged had been locked by another synchronous refresh operation.

Action: Wait for the other operation to complete before attempting this operation again.

QSM-03253: The synchronous refresh group of table *string*.*string* has been unlocked by another operation.
Cause: Either REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that the synchronous refresh group to which the table belonged had been unlocked by another synchronous refresh operation. This is an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03254: The lock operation on synchronous refresh group *string* failed unexpectedly.
Cause: The lock operation on the specified synchronous refresh group failed unexpectedly. This is an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03255: The unlock operation on synchronous refresh group *string* failed unexpectedly.
Cause: The unlock operation on the specified synchronous refresh group failed unexpectedly. This is an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03256: The synchronous refresh group *string* is locked by another operation.
Cause: Either REGISTER_MVIEWS or PREPARE_REFRESH detected that the synchronous refresh group to be processed by the requested operation had been locked by another synchronous refresh operation.

Action: Wait for the other operation to complete before attempting this operation again.

QSM-03257: The synchronous refresh group *string* has been unlocked by another operation.
Cause: Either EXECUTE_REFRESH or ABORT_REFRESH detected that the synchronous refresh group to be processed by the requested operation had been unlocked by another synchronous refresh operation. This is an unexpected condition and may indicate an internal error.

Action: Contact Oracle Support Services for assistance.

QSM-03258: The value supplied for the parameter *string* is too long.
Cause: The value supplied for the specified parameter exceeded the maximum length allowed for that parameter.

Action: Supply a valid value for the specified parameter.

QSM-03259: The value supplied for the parameter *string* is malformed.
Cause: The value supplied for the specified parameter was invalid.

Action: Supply a valid value for the specified parameter.

QSM-03260: The materialized views being registered are not defined on tables.
Cause: The materialized views being registered were not defined on tables, but were defined on top of other types of objects such as views or materialized views. Synchronous refresh works only with materialized views defined on tables.

Action: Do not register such materialized views for synchronous refresh.

QSM-03261: The partition operation name *string* is not valid.
Cause: Either REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that the partition operation name did not belong to the DROP, EXCHANGE or TRUNCATE value.

Action: Check the parameter partition operation carefully, and change it to DROP, EXCHANGE or TRUNCATE.

QSM-03262: The object *string*.*string* is not registered for Synchronous Refresh.
Cause: REGISTER_PARTITION_OPERATION or UNREGISTER_PARTITION_OPERATION detected that either: - This object was not registered for synchronous refresh. - The synchronous refresh group was not in the current run. - The object was not a table type.

Action: Make sure this object is registered for synchronous refresh, the synchronous refresh group is in the current run, and the object is a table type.

QSM-03263: There is already a partition operation registered on *string*.*string* partition *string*.
Cause: REGISTER_PARTITION_OPERATION detected that there was already a partition maintenance operation (for example, DROP, EXCHANGE or TRUNCATE) registered on the specified partition of the base table.

Action: Use the UNREGISTER_PARTITION_OPERATION to unregister this partition first, and then run REGISTER_PARTITION_OPERATION.

QSM-03264: There is no partition named *string* in base table *string*.*string*.
Cause: REGISTER_PARTITION_OPERATION detected that there was no partition with the specified name in the base table.

Action: Check the parameter PARTITION_NAME, and make sure it is a valid partition in the base table.

QSM-03265: The outside table *string*.*string* does not exist.
Cause: REGISTER_PARTITION_OPERATION detected that the outside table schema or table name did not exist or was not valid.

Action: Check the parameters OUTSIDE_PARTN_TABLE_SCHEMA or OUTSIDE_PARTN_TABLE_NAME, and make sure the outside table exists.

QSM-03266: Tablespace of base table *string* does not match the tablespace of outside partition table *string*.
Cause: REGISTER_PARTITION_OPERATION detected that the tablespace of the base table for any partition or subpartition did not match the tablespace of the outside partition table.

Action: Alter the tablespace of outside partition table to match the tablespace of the base table, or check if the outside partition table is eligible for REGISTER_PARTITION_OPERATION or not.

QSM-03267: The outside partition table *string* contains at least one record that is not within the partition range of the base table *string*.
Cause: REGISTER_PARTITION_OPERATION detected that the outside partition table contained at least one record that was not within the partition range of the base table.

Action: Check the records to see if the outside partition table is eligible for the REGISTER_PARTITION_OPERATION.

QSM-03268: Synchronous refresh can only support top partition by RANGE.
Cause: REGISTER_PARTITION_OPERATION detected the base table was not partitioned by RANGE on top.

Action: The base table is not eligible for REGISTER_PARTITION_OPERATION.

QSM-03269: The number of partitions of the base table *string* and the outside table *string* do not match.
Cause: The base table was composite-partitioned. The partition number of the outside partition did not match the number of subpartitions inside the specified partition of the base table.

Action: Check the partitions to see if the outside partition table is eligible for the REGISTER_PARTITION_OPERATION.

QSM-03270: There is no partition operation registered on *string*.*string* partition *string*.
Cause: UNREGISTER_PARTITION_OPERATION detected that there was no partition maintenance operation (for example, DROP, EXCHANGE and TRUNCATE) registered on the specified partition of the base table.

Action: Use the REGISTER_PARTITION_OPERATION to register this partition first, and then run UNREGISTER_PARTITION_OPERATION.

QSM-03271: The partition name of outside partition table *string* does not match the subpartition name of base table *string*.
Cause: REGISTER_PARTITION_OPERATION detected that the partition name of the outside partition table did not match the subpartition name of base table.

Action: Alter the partition name of outside partition table to match the partition name of the base table, or check if the outside partition table is eligible for REGISTER_PARTITION_OPERATION or not.

QSM-03272: There are no changes loaded for any tables in this group.
Cause: There were no changes recorded for any tables in this group. The changes to a table can be provided in its staging log or by specifying partition change operations with REGISTER_PARTITION_OPERATION.

Action: Provide the appropriate changes to the tables in the group.

QSM-03276: The specified schema *string* of the staging log is different from the owning schema *string* of the base table.
Cause: The user-specified schema of the staging log was different from the owning schema of the base table. They must be in the same schema if the schema of the staging log is specified.

Action: Specify the owning schema of the base table as the schema of the staging log or do not specify the schema for the staging log.

QSM-03277: An internal error related to tracing messages to SYNCREF_MESG has occurred.
Cause: This is an internal error as noted in the message.

Action: Contact Oracle Support Services for assistance.

QSM-03278: The table SYNCREF_MESG is not present in the SYS schema.
Cause: This is an internal error related to tracing messages to the table SYNCREF_MESG. It occurs if the event 31904 is set to level 4 or 8 but the message table SYNCREF_MESG is not created in the SYS schema. Oracle does not support levels 4 and 8 in event 31904.

Action: Execute the command again after unsetting levels 4 and 8 in event 31904.

QSM-03280: One or more materialized views failed to refresh successfully.
Cause: The base tables in the group refreshed successfully but one or more materialized views in the group did not. The status of the group for synchronous refresh operation was set to PARTIAL in this case.

Action: To find the materialized views which failed, query the USER_SR_OBJ_STATUS catalog view. Take one of the following courses of action: * Issue the EXECUTE_REFRESH command again to retry refreshing the views. In this case EXECUTE_REFRESH will internally use the PCT refresh mode to refresh the materialized views. * Issue the ABORT_REFRESH command to abort the refresh of all objects in the group, including the base tables, and restore them to the original state.

QSM-03281: The specified GROUP_ID is not valid.
Cause: The GROUP_ID specified as input to the refresh operation was not valid and does not identify a valid synchronous refresh group.

Action: Provide the correct GROUP_ID. Use the DBMS_SYNC_REFRESH.GET_GROUP_ID to get the correct GROUP_ID.

QSM-03282: A materialized view is registered on a table related to *string*.*string*.
Cause: The staging log creation on the specified table failed because a table related to it by referential-integrity constraint has a materialized view which was registered for synchronous refresh with the REGISTER_MVIEWS command. Oracle requires that you first register the tables before registering any materialized view defined on them.

Action: Unregister the materialized views defined on the related tables with the UNREGISTER_MVIEWS command. Then, register the tables with synchronous refresh by creating staging logs on them. Finally, register any materialized views you wish to register for synchronous refresh with REGISTER_MVIEWS.

QSM-03283: The materialized view *string*.*string* has not been registered.
Cause: The specified materialized view was not registered for synchronous refresh.

Action: Register the materialized view with DBMS_SYNC_REFRESH.REGISTER_MVIEWS. Use the USER_SR_OBJ catalog view to verify the materialized view has been registered.

QSM-03284: There is no foreign key constraint defined on *string* referencing *string*.*string*.
Cause: The table of REGISTER_PARTITION_OPERATION did not define a foreign key constraint on its referred base table.

Action: Define a foreign key constraint on its referred base table and retry the operation.

QSM-03285: There is no primary key constraint defined on *string*.*string*.
Cause: The table of REGISTER_PARTITION_OPERATION did not define a primary key constraint on it.

Action: Define a primary key constraint on the table and retry the operation.

QSM-03286: Complex materialized view was not allowed for synchronous refresh.
Cause: There was a complex materialized view in the synchronous refresh group.

Action: Remove the complex materialized view in the synchronous refresh group.

QSM-03287: synchronous refresh internal error: [*string*]
Cause: This was an internal error in synchronous refresh.

Action: Contact Oracle Support Services with the complete message.

QSM-03288: Flashback is not allowed in the base table *string*.*string* for synchronous refresh.
Cause: A staging log was created on a flashback-enabled base table.

Action: Disable flashback on the base table.

149

RDE-00000 to RDE-08001

RDE-00000: no error
Cause: Operation was successful.

Action: No action needed.

RDE-00001: unspecified error
Cause: An unknown error occurred. This is an internal error.

Action: Contact Oracle Support Services and provide details about how and when the error occurred.

RDE-00002: provider busy
Cause: The provider is processing a request.

Action: This is not an error.

RDE-00003: no value found for service tag *string*.
Cause: A value was not found for the given service tag.

Action: This is normally not an error.

RDE-00004: operation timeout
Cause: A FIND or REGISTER operation timed out.

Action: For a FIND operation, this is only an error if the find was expected to successfully locate a service.

RDE-00005: invalid universe: "*string*"
Cause: An unknown universe was specified for the address.

Action: Specify a valid universe.

RDE-00006: invalid protocol: "*string*"
Cause: An invalid protocol was specified in an address.

Action: Specify a valid protocol.

RDE-00009: data too large for buffer. Buffer length: *number*. Required: *number*.\n
Cause: This error is internal and normally is not seen by users.

Action: Contact Oracle Support Services.

RDE-00010: not found
Cause: A value was not found in a list.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00011: invalid type: *number*
Cause: The type given for a piece of data was invalid.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00012: no list name specified.
Cause: A name was not given for a list.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00013: name busy.
Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00014: operation was interrupted.
Cause: An operation was interrupted.

Action: None. This normally is not an error.

RDE-00015: load of provider library failed.
Cause: The load of a library which implements the interface for a provider failed.

Action: Enable tracing to determine the exact error that occurred.

RDE-00016: no provider libraries found.
Cause: It was not possible to locate any provider libraries.

Action: Make sure that the provider libraries have been installed.

RDE-00017: provider error.
Cause: A provider generated an error.

Action: If errors follow, examine them to determine the exact error. Otherwise, enable tracing to determine the exact error.

RDE-00018: regular expression compilation failed. Pattern "*string*" Error: *number*.\n
Cause: The creation of a pattern for use in a comparison failed.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00019: pattern match failed. String: "*string*" Pattern: "*string*" Error: *number*.\n
Cause: A comparison against a regular expression failed.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00020: no host name or IP address
Cause: An address must contain either the name of the server or its IP address.

Action: Specify a host name or an IP address in the address.

RDE-00021: no providers found for universe "*string*".
Cause: A provider was not found for the specified universe.

Action: Either specify a different universe or obtain a provider library for that universe. Examine the errors that follow (if any) for more information.

RDE-00022: property not found.
Cause: A provider property was not found.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-00023: provider not found. Universe "*string*".
Cause: A provider was not found for the specified universe.

Action: Either specify a different universe or obtain a provider library for that universe.

RDE-00024: address invalid
Cause: The address is not in the correct format.

Action: Specify an address in the correct format. The syntax is described in rd.h.

RDE-00025: service type not specified.
Cause: The service type is not specified in the address.

Action: Specify an address with the service type.

RDE-00026: expected delimiter not found. Expected: "*string*" Found: "*string*"
Cause: The delimiter expected in the address was not found.

Action: Correct the address so that the delimiter is present.

RDE-00027: port number not found.
Cause: When a colon (":") follows the host name, it must be followed by a port number.

Action: Specify a port number.

RDE-00028: initialization failed.
Cause: Initialization of RD failed.

Action: Examine the errors that follow this one to determine the problem that is causing the error.

RDE-00029: no server found.
Cause: No server for the specified provider could be found to perform the desired operation.

Action: Start a server for the desired provider or use a different provider.

RDE-00030: memory allocation failure.
Cause: An operation failed because it was not possible to allocate enough process memory.

Action: If memory is low on the system, terminate other processes, or threads, or both, and try the operation again. Otherwise, this is an internal error and Oracle Support Services should be contacted.

RDE-00031: invalid domain: *number*.
Cause: The application specified an invalid number for the domain.

Action: Specify a correct domain. See rd.h for the allowed values.

RDE-00032: length of service type "*string*" (*number*) is greater than than the maximum allowed: *number*
Cause: The user specified a service type which is longer than that permitted by the provider.

Action: Use a shorter service type.

RDE-00033: no universe specified.
Cause: The user did not specify a universe in the address.

Action: Specify a universe.

RDE-00034: address not registered: "*string*"
Cause: The application attempted to use an address which does not exist.

Action: Specify a registered address.

RDE-00037: invalid service instance tag: *number*
Cause: The value for a service instance tag was incorrect.

Action: Specify a valid tag. They are listed in rd.h.

RDE-00038: invalid protocol type: "*string*" Valid protocols: *string*
Cause: The user specified a protocol which is not supported by the provider.

Action: Specify a valid protocol. The protocol must be at least one character which is not a period (".").

RDE-00039: invalid host name: "*string*"
Cause: The name of the host specified was not in the correct format.

Action: Use the correct host name format. The host name must be one of the following: 1. The name of the machine; 2. A valid IPv4 address (N.N.N.N); 3. A valid IPv6 address (N[:N]*).

RDE-00040: invalid search domain: "*string*"
Cause: The name of the domain searched by the service was not in the correct format.

Action: Use the correct domain name format. A domain is a series of one or more alphanumeric characters.

RDE-00041: no protocol or domain specified.
Cause: The service name was followed by a period separator, but no protocol or domain was found after it.

Action: Specify a valid protocol, or domain, or both.

RDE-00042: invalid port number: "*string*"
Cause: The port specified in the service address was not valid. A port number may only be a positive decimal number.

Action: Specifiy a valid port number.

RDE-00043: no search domain specified.
Cause: No search domain followed the period separator.

Action: Specify a valid search domain.

RDE-00044: no protocol specified.
Cause: No protocol was specified for the service.

Action: Specify a valid protocol.

RDE-00045: port number required to register with a generic address.
Cause: Because of the requirements of some providers, the port number must be specified when registering using a generic address.

Action: Specify a port number.

RDE-00046: invalid attribute
Cause: An attribute was specified using an incorrect format.

Action: An attribute should be specified using the following format: "name=value[, name1=value1 ...]"

RDE-00047: no name specified for attribute.
Cause: A value was given for an attribute but no name was specified.

Action: Specify a name for the attribute.

RDE-00048: no attribute specified.
Cause: An attribute was not found in the address where it was expected.

Action: Specify a valid attribute. An attribute is composed of a name followed by an equals sign ("=") and then by an optional value. The name and value may both contain spaces.

RDE-00049: expected separator not found. Expected: "*string*" Found: "*string*"
Cause: The separator expected to be present between the mandatory and optional sections of the address was not found.

Action: Specify the separator.

RDE-00050: provider initialization for universe "*string*" failed.
Cause: The operation failed because providers could not be initialized for the specified universe.

Action: The message(s) that follow describe the errors encountered by the providers.

RDE-00051: provider "*string*" error.
Cause: The specified provider failed to perform an operation.

Action: The message(s) that follow describe the errors encountered by the provider.

RDE-00052: invalid numeric value specified: "*string*".
Cause: The value specified as a number was not valid.

Action: Specify a valid number.

RDE-00053: invalid or null service instance.
Cause: The service instance used for an operation is either invalid or null.

Action: Specify a valid service instance.

RDE-00054: invalid operation: *number*.\n
Cause: The operation specified was not valid.

Action: Specify a valid operation.

RDE-00055: no providers available.
Cause: No providers were available for an operation. This may be caused by the failure of a process or service needed by the provider (e.g. the mDNS service).

Action: Examine the trace and log files for details. Ensure that the process or service required by the process is running.

RDE-00056: registration of service instance "*string*" failed.
Cause: The registration of the specified service instance failed.

Action: Examine the errors that follow for more information about the error.

RDE-00057: unregistration of service instance "*string*" failed.
Cause: The deletion of the registration of the specified service instance failed.

Action: Examine the errors that follow for more information about the error.

RDE-00058: confirmation of service instance "*string*" failed.
Cause: The confirmation of the specified service instance failed.

Action: Examine the errors that follow for more information about the error.

RDE-00059: location of service types "*string*" failed.
Cause: It was not possible to retrieve types of services supported by Resource Discovery.

Action: Examine the errors that follow for more information about the error.

RDE-00060: service instance "*string*" was not found.
Cause: The location of the specified service.

Action: Examine the errors that follow for more information about the error.

RDE-00061: retrieval of details about service instance "*string*" failed.
Cause: It was not possible to get details about the specified service instance.

Action: Examine the errors that follow for more information about the error.

RDE-00062: termination failed.
Cause: The call to terminate the use of Resource Discovery failed.

Action: Examine the errors that follow for more information about the error.

RDE-00063: operation failed.
Cause: A FIND or REGISTER operation failed.

Action: Examine the errors that follow for more information about the error.

RDE-00064: retrieval of a provider for universe "*string*" failed.
Cause: It was not possible to retrieve a provider descriptor for the specified universe.

Action: Examine the errors that follow for more information about the error.

RDE-00065: creation of service instance failed.
Cause: An error occurred while trying to assemble a service instance using components.

Action: Examine the errors that follow for more information about the error.

RDE-00066: parsing of service instance "*string*" failed.
Cause: An error occurred while trying to parse the specified address.

Action: Examine the errors that follow for more information about the error.

RDE-00067: location of domain failed.
Cause: An error occurred while trying to locate domains of the specified type.

Action: Examine the errors that follow for more information about the error.

RDE-00068: length of universe component "*string*" (*number*) is longer than the maximum: *number*.
Cause: The string specified for the universe-specific portion of the service instance is longer than the maximum allowed by the provider.

Action: Specify a universe component which is shorter than the maximum. If this error occurs when no universe-specific portion was specified, the provider may have used the service type for the universe-specific component. In that case, make sure that the length of the service type does not exceed the maximum.

RDE-00069: property "*string*" is read-only.
Cause: An error occurred while trying to set a property value. Property had read-only access and could not be altered.

Action: Specify a property name with read/write access.

RDE-01999: internal error
Cause: RD failed due to some unforeseen reason.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-02000: invalid service type: "*string*"
Cause: The user specified a service type which does not conform to the standard specifed by RFC's 1034 and RFC 1123. The service type must be one or more characters and must start and end with a letter or digit. The interior characters may be letters, digits, or hyphens.

Action: Specify a service type which conforms to the RFC.

RDE-02001: failed to connect to the mDNS responder.
Cause: The provider was unable to make a connection with the multicast / Domain Name Server (mDNS) responder.

Action: Check to ensure that the responder is running. If it is, this is an internal error and Oracle Support Services should be contacted.

RDE-04000: client waiting
Cause: The client uses this error to signal to the server that it is waiting for query results.

Action: This error is used for signaling between the client and the DNS server. It should not be visible to the user. If it occurs, contact Oracle Support Services

RDE-04001: no error
Cause: Operation was successful.

Action: No action needed.

RDE-04002: unknown error has occurred
Cause: An unknown error has occurred.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04003: no such name
Cause: A record could not be found with the given name.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04004: memory allocation failed
Cause: An operation failed because it was not possible to allocate enough process memory.

Action: If memory is low on the system, terminate other processes, or threads, or both, and try the operation again. Otherwise, this is an internal error and Oracle Support Services should be contacted.

RDE-04005: invalid parameter
Cause: A record contained an illegal or nonexisting value.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04006: invalid reference
Cause: An unknown DNS record was found.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04007: invalid state
Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04008: invalid flags
Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04009: unsupported operation
Cause: The provider interface attempted to perform an operation which is not supported by the provider.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04010: not initialized
Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04011: no cache allocated
Cause: A Domain Name Server (DNS) query failed because no cache was allocated.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04012: service already registered
Cause: The user attempted to register a service that was already registered.

Action: A service should only be registered once.

RDE-04013: service name conflict
Cause: The user attempted to register a service whose name already exists.

Action: A service should only be registered once.

RDE-04014: invalid record entry
Cause: The provider interface attempted to perform an operation whose record contained invalid or nonexistent data.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04015: client software incompatible with server
Cause: The version of the client software used by the provider interface is not compatible with the version of the server software.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04016: invalid interface
Cause: The provider interface attempted to use an unknown interface.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04017: cache size must be increased
Cause: The size of the cache maintained by the provider interface was insufficient and should be increased.

Action: This error is used as a status indicator. It should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04018: configuration changed
Cause: The server configuration changed during an operation.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-04019: client should free resources
Cause: This error is used as an internal status indicator and should not be visible outside of the provider.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06000: no more data
Cause: This error is used internally to signal that there is no more data to be passed by the SLP provider.

Action: This error is normal - no action is required.

RDE-06001: no error
Cause: Operation was successful.

Action: This error is normal - no action is required.

RDE-06002: language not supported
Cause: No service could be found that supports the language required.

Action: A service will have to be added or modified which supports the requested language.

RDE-06003: parse error
Cause: The SLP message rejected by a remote SLP agent.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06004: invalid registration
Cause: The SLP provider attempted to register a URL which is malformed.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06005: scope not supported
Cause: This is an internal error.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06006: authenticator not provided
Cause: The SLP provider failed to authenticate itself.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06007: authentication failed
Cause: The SLP provider failed to authenticate itself.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06008: invalid update
Cause: An update for a nonexisting registration was issued, or the update includes a service type or scope different than that in the initial registration.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06009: refresh rejected
Cause: Attempts were made to refresh a registration more frequently than the minimum refresh interval.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06010: feature unimplemented
Cause: An unimplemented feature was used.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06011: buffer overflow
Cause: An outgoing request overflowed the maximum network MTU size.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06012: network timed out
Cause: An reply to an SLP request did not arrive in the configured timeout interval.

Action: Check the network connection and retry the request.

RDE-06013: network initialization failure
Cause: The network failed to initialize properly.

Action: Check the network connection and retry the request.

RDE-06014: memory allocation failed
Cause: The SLP provider was unable to allocate enough process memory.

Action: If memory is low on the system, terminate other processes, or threads, or both, and try the operation again. Otherwise, this is an internal error and Oracle Support Services should be contacted.

RDE-06015: invalid parameter
Cause: The provider attempted to pass an invalid parameter.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06016: network error
Cause: The network failed to initialize properly.

Action: Check the network connection and retry the request.

RDE-06017: internal system error
Cause: The SLP subsystem failed for unknown reasons.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06018: handle in use
Cause: The SLP provider attempted to recursively use a handle.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06019: generic error
Cause: The provider failed for unknown reasons.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-06020: unicast query must be sent.
Cause: The provider must send a unicast query.

Action: This error should not be visible to the user. If it occurs, contact Oracle Support Services.

RDE-08000: invalid service type: "*string*".
Cause: This is an internal error.

Action: Contact Oracle Support Services.

RDE-08001: failed to connect to the GNS server.
Cause: A connection with the Grid Naming Service (GNS) server failed.

Action: Check to ensure that the Oracle Grid Naming Service Daemon (GNSD) resource is online. If it is, this is an internal error and Oracle Support Services should be contacted.

150
RDJ-00001 to RDJ-00137

RDJ-00001: OK ADDRESS
Cause: The operation succeeded.

Action: No further action is necessary.

RDJ-00002: invalid operation:
Cause: The operation specified was incorrect.

Action: Specify a valid operation.

RDJ-00003: Error parsing "*string*"\n*string*
Cause: An error occurred parsing an address.

Action: Correct the address using the other information in the error.

RDJ-00004: invalid trace level
Cause: The trace level specified was incorrect.

Action: Specify a valid trace level.

RDJ-00005: Operation: *string* failed. Error: *string*
Cause: An RD operation failed with the specified error.

Action: Re-try the operation with tracing enabled to to determine what happened.

RDJ-00006: invalid port number: *number*
Cause: The port number specified for a service is invalid.

Action: Specify a port number that is greater than zero.

RDJ-00008: invalid number specified:
Cause: The number specified contained non-numeric characters.

Action: Specify a number with only numeric characters.

RDJ-00009: invalid address format:
Cause: The format specified for an address was incorrect.

Action: Specify a valid format.

RDJ-00011: results processor may not be null
Cause: A null object was specified for the class that is to process the results of an operation.

Action: Specify a non-null object.

RDJ-00012: invalid instance uniqueness
Cause: The uniqueness value specified for an instance was not valid.

Action: Specify a valid uniqueness value.

RDJ-00013: Invalid service instance attribute
Cause: An attribute specified for a service instance was not valid.

Action: Specify an attribute in the correct format.

RDJ-00015: Invalid service instance tag: "*string*". Available tags:
Cause: The tag value specified for a service instance was incorrect.

Action: Specify a valid tag value.

RDJ-00017: invalid domain type: "*string*". Available domain types:
Cause: The type specified for a domain was not valid.

Action: Specify a valid domain type.

RDJ-00048: Unknown command: "*string*"
Cause: An invalid command was specified.

Action: Specify a valid command.

RDJ-00049: Unknown option: "*string*"
Cause: An invalid option was specified.

Action: Specify a valid option.

RDJ-00052: invalid flag value:
Cause: The value specified for a flag was not valid.

Action: Specify a valid flag value.

RDJ-00053: deletion of trace output file failed:
Cause: The tool attempted to remove a trace file so that it could create a new one. However, the attempt failed.

Action: Examine the accompanying exception for details about what happened.

RDJ-00054: deletion of error log file failed:
Cause: The tool attempted to remove an error log so that it could create a new one. However, the attempt failed.

Action: Examine the accompanying exception for details about what happened.

RDJ-00055: trace file already exists:
Cause: The trace file specified already exists.

Action: Remove the file or specify a file which does not exist.

RDJ-00056: error log already exists:
Cause: The error log specified already exists.

Action: Remove the file or specify a file which does not exist.

RDJ-00057: trace file is a directory:
Cause: The trace file specified is actually a directory.

Action: Specify a file name.

RDJ-00058: error log is a directory:
Cause: The error log specified is actually a directory.

Action: Specify a file name.

RDJ-00059: The trace file "*string*" cannot be created
Cause: The tool failed to create the trace file.

Action: Examine the accompanying exception for details about the error.

RDJ-00060: The error log "*string*" cannot be created. Check permissions on the parent directory:
Cause: The tool failed to create the error log.

Action: Examine the accompanying exception for details about the error.

RDJ-00061: The file stream cannot be created:
Cause: The tool failed to create the Java stream for a file.

Action: Examine the accompanying exception for details about the error.

RDJ-00062: The print stream cannot be created:
Cause: An error occurred when the tool tried to create a Java print stream for a file.

Action: Examine the accompanying exception for details about the error.

RDJ-00063: invalid time-to-live:
Cause: A non-numeric value was specified for the time to live.

Action: Specify a numeric value.

RDJ-00065: Option type must be greater than zero:
Cause: The type specified for an option was less than or equal to zero.

Action: Specify a type which is greater than zero.

RDJ-00134: unknown type:
Cause: The type specified is invalid.

Action: Specify a known type.

RDJ-00135: invalid stream type:
Cause: The stream type specified is invalid.

Action: Specify a known type.

RDJ-00136: invalid argument count:
Cause: The number of arguments specified is invalid.

Action: Specify a valid number of arguments.

RDJ-00137: SRVMContext init has failed.
Cause: An attempt to set up the process environment failed because an error occurred when Resource Discovery tool was initializing CLuSterware Backbone (CLSB) to enable trace file creation.

Action: Determine whether the environment variables ORACLE_HOME and ORACLE_BASE are set. Refer to the Oracle Grid Infrastructure Installation Guide to set them appropriately and retry the operation.

151

RMAN-00201 to RMAN-20517

RMAN-00201: Do you really want to execute the above repair (enter YES or NO)?
Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00202: Do you want to open the database (enter YES or NO)?
Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00203: Do you want to open resetlogs the database (enter YES or NO)?
Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00204: Do you really want to delete the above objects (enter YES or NO)?
Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00205: Do you really want to drop all backups and the database (enter YES or NO)?
Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00206: Do you really want to drop the database (enter YES or NO)?
Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00207: Do you really want to unregister the database (enter YES or NO)?
Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00208: Want to unregister the database with target db_unique_name (enter YES or NO)?
Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00209: Do you really want to change the above failures (enter YES or NO)?
Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00210: Do you really want to catalog the above files (enter YES or NO)?
Cause: This is a user prompt.

Action: Answer the question to proceed.

RMAN-00211: Error occurred getting response - assuming NO response
Cause: An error occurred reading user response.

Action: No action is required, this is an informational message only.

RMAN-00212: "*string*" is an invalid response - please re-enter.
Cause: An incorrect response was entered.

Action: Enter a correct response.

RMAN-00550: parser package failed to load
Cause: lpmloadpkg() return an error indication.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00551: initialization of parser package failed
Cause: The parser package initialization routine returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00552: syntax error in command line arguments
Cause: The arguments supplied to RMAN could not be parsed, or no arguments were supplied at all.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00553: internal recovery manager package failed to load
Cause: lpmloadpkg() return an error indication.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00554: initialization of internal recovery manager package failed
Cause: The internal package initialization routine returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00555: target database connect string must be specified
Cause: The TARGET parameter was not specified.

Action: Supply the necessary parameter.

RMAN-00556: could not open CMDFILE "*string*"
Cause: An error occurred when trying to open the file.

Action: Check that the file name was specified correctly and that the file exists and that the user running RMAN has read permission for the file.

RMAN-00557: could not open MSGLOG "*string*"
Cause: An error occurred when trying to open the file.

Action: Check that the file name was specified correctly and that the file exists and that the user running RMAN has write permission for the file.

RMAN-00558: error encountered while parsing input commands
Cause: The parser detected a syntax error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00562: username too long
Cause: The specified user name exceeds the maximum allowable username length.

Action: Correct the username.

RMAN-00563: password too long
Cause: The specified password exceeds the maximum allowable password length.

Action: Correct the password.

RMAN-00564: host data too long
Cause: The SQL*NET host connect string exceeds the maximum allowable length.

Action: Correct the host string.

RMAN-00565: unable to read input file
Cause: An error occurred while trying to read from STDIN or from the CMDFILE.

Action: Ensure that the cmdfile is readable. The cmdfile must be a text file with 1 line per record.

RMAN-00566: could not open TRACE "*string*"
Cause: An error occurred when trying to open the file.

Action: Check that the file name was specified correctly and that the user running RMAN has write permission for the file.

RMAN-00567: Recovery Manager could not print some error messages\n
Cause: An error occurred while trying to print the error message stack.

Action: If the associated error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-00568: user interrupt received
Cause: The user typed ^C or ATTN.

Action: No action is required.

RMAN-00569: =============== ERROR MESSAGE STACK FOLLOWS ===============
Cause: This message precedes an error message stack.

Action: The errors are printed in last-in first-out order. To interpret them correctly, read from the bottom to the top.

RMAN-00570: **end-of-file**
Cause: The end of an inline cmdfile was reached. This is just an informational message.

Action: No action is required.

RMAN-00571:
===
Cause: Displayed to highlight the error message stack.

Action: The errors are printed in last-in first-out order. To interpret them correctly, read from the bottom to the top.

RMAN-00572: waiting for DBMS_PIPE input
Cause: This message is used only when the PIPE option was specified.

Action: enqueue some RMAN input into the pipe

RMAN-00573: DBMS_PIPE.NEXT_ITEM_TIME returned unknown type code: *number*
Cause: This is an internal error.

Action: contact Oracle Support Services.

RMAN-00574: rman aborting due to errors reading/writing DBMS_PIPE
Cause: RMAN was run with input/output being sent to DBMS_PIPE. An error was encountered while reading from or writing to the pipe. This error should be preceded by information describing the error.

Action: RMAN terminates. Refer to the cause/action for the preceding errors.

RMAN-00575: timeout while trying to write to DBMS_PIPE
Cause: RMAN was running in DBMS_PIPE mode. A timeout occurred while calling DBMS_PIPE.SEND_MESSAGE. This occurs when the pipe is full and no process has dequeued any of the messages. This is usually caused by death of the process that was talking to rman.

Action: RMAN will abort.

RMAN-00576: PIPE cannot be used with CMDFILE
Cause: The PIPE and CMDFILE options cannot be used together. When using the PIPE option, RMAN must obtain its input from the input pipe.

Action: Remove either the PIPE or CMDFILE option.

RMAN-00577: PIPE requires that TARGET be specified on the command line
Cause: The PIPE option obtains its input from, and writes its output to, an Oracle database pipe in the target database. Therefore, the target database connection must be specified on the command line, so that RMAN can connect to the target database to receive its input from the pipe.

Action: Specify the TARGET option on the RMAN command line.

RMAN-00578: pipe *string* is not private and owned by SYS
Cause: The pipe that RMAN needs to use for its input or output is either a public pipe or a private pipe that is not owned by SYS. This is a potential security problem, because it allows a non-SYS user to issue commands to RMAN or to retrieve the RMAN output.

Action: If you are attempting to put data on the RMAN input pipe prior to starting RMAN, so RMAN will process the data on the pipe as soon as it starts, you must be connected as SYS and you must first use the DBMS_PIPE.CREATE_PIPE function to explicitly create the pipe as a private pipe.

RMAN-00579: SCRIPT cannot be used with CMDFILE
Cause: The SCRIPT and CMDFILE options cannot be used together. When using the SCRIPT option, RMAN executes only the specified script.

Action: Remove either the SCRIPT or CMDFILE option.

RMAN-00600: internal error, arguments [*string*] [*string*] [*string*] [*string*] [*string*]
Cause: An internal error in recovery manager occurred.

Action: Contact Oracle Support Services.

RMAN-00601: fatal error in recovery manager
Cause: A fatal error has occurred.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-00700: SCRIPT requires that TARGET be specified on the command line
Cause: A SCRIPT option was included on the RMAN command line without a specified TARGET database.

Action: Specify the TARGET option on the RMAN command line.

RMAN-00701: SCRIPT requires that CATALOG be specified on the command line
Cause: A SCRIPT option was included on the RMAN command line without a specified CATALOG recovery catalog.

Action: Specify the CATALOG option on the RMAN command line.

RMAN-00702: The command has no syntax errors
Cause: This is an informational message only.

Action: No action is required.

RMAN-00703: The cmdfile has no syntax errors
Cause: This is an informational message only.

Action: No action is required.

RMAN-01006: error signaled during parse
Cause: An error was signaled during parsing.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-01007: at line *number* column *number* file: *string*
Cause: This is an informational message indicating the line and column where a syntax error was detected.

Action: No action is required.

RMAN-01008: the bad identifier was: *string*
Cause: This is an informational message indicating the identifier token that caused a syntax error.

Action: No action is required.

RMAN-01009: syntax error: found "*string*": expecting one of: "*string*"
Cause: A syntax error was signaled during parsing.

Action: Correct the input.

RMAN-02000: wrong message file version (msg *number* not found)
Cause: The rmanxx.msb file is not the correct version.

Action: Check that the installation was done correctly. The RMAN binary (executable, load module, whatever it is called on your O/S) and the rmanxx.msb file must be from the same version, release, and patch level.

RMAN-02001: unrecognized punctuation symbol "*string*"
Cause: An illegal punctuation character was encountered.

Action: Remove the illegal character.

RMAN-02002: unexpected end of input file reached
Cause: This is probably caused by failure to supply the closing quote for a quoted string.

Action: Correct the input.

RMAN-02003: unrecognized character: *string*
Cause: An input character that is neither an alpha, digit, or punctuation was encountered.

Action: Remove the character.

RMAN-02004: quoted string too big
Cause: A quoted string longer than 2000 bytes was encountered.

Action: This may be caused by a missing close quote. If so, add the missing quote, otherwise shorten the string.

RMAN-02005: token too big
Cause: A token longer than 1000 bytes was encountered

Action: Tokens must be separated by whitespace or punctuation. Either add the missing whitespace or punctuation, or shorten the token.

RMAN-02006: script line too long
Cause: a line longer than 500 bytes was encountered

Action: break the line up into shorter lines

RMAN-02007: Integer value overflow
Cause: Parser failed to convert input string to integer

Action: Acceptable values for integer are from 0 to 2147483648. Retry command using valid integer value.

RMAN-02008: no value exists for variable "*string*"
Cause: The RMAN variable specified was either undefined or null

Action: Verify that a proper value has been given to that variable.

RMAN-02009: unexpected end of command file reached
Cause: This is probably caused by failure to supply the closing brace for a stored script in a command file.

Action: Correct the input.

RMAN-03000: recovery manager compiler component initialization failed
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03001: recovery manager command sequencer component initialization failed
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03002: failure of *string* command at *string*
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03003: command not implemented yet: *string*
Cause: The command is not implemented in the current version.

Action: Avoid using the command.

RMAN-03004: fatal error during execution of command
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03008: error while performing automatic resync of recovery catalog
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03009: failure of *string* command on *string* channel at *string*
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03010: fatal error during library cache pre-loading
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-03011: Recovery Manager*string*
Cause: This is the RMAN banner

Action: No action is required.

RMAN-03012: fatal error during compilation of command
Cause: A fatal error occurred during compilation of a command.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-03013: Copyright (c) 1995, 2003, Oracle Corporation. All rights reserved.
Cause: This is the copyright banner

Action: No action is required.

RMAN-03014: implicit resync of recovery catalog failed
Cause: This message is accompanied by other errors explaining the cause of the failure.

Action: No action is required.

RMAN-03015: error occurred in stored script *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-03017: recursion detected in stored script *string*
Cause: A stored script is calling itself or another script which calls itself.

Action: Remove the recursion.

RMAN-03018: asynchronous RPCs are working correctly
Cause: This is an informational message only.

Action: No action is required.

RMAN-03019: asynchronous RPCs are NOT working
Cause: The RPCTEST command has determined that RPCs are not executing asynchronously. Instead, they are blocking. This is caused by using a SQL*NET driver that does not support non-blocking UPI.

Action: Try using a different SQL*NET driver.

RMAN-03020: asynchronous RPC test will take 1 minute
Cause: This is an informational message only.

Action: No action is required.

RMAN-03023: executing command: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-03028: fatal error code for command *string* : *number*
Cause: Informational message. This precedes error 3012.

Action: No action is required.

RMAN-03029: echo set on
Cause: a SET ECHO ON command was issued

Action: No action is required.

RMAN-03030: echo set off
Cause: a SET ECHO OFF command was issued

Action: No action is required.

RMAN-03031: this option of set command needs to be used inside a run block
Cause: The option used with the SET command is not valid outside a run block.

Action: Change the SET command or place it inside a run block.

RMAN-03032: this option of set command needs to be used outside of a run block
Cause: The option used with the SET command is not valid inside of a run block.

Action: Change the SET command or place it outside a run block.

RMAN-03033: current log archived
Cause: "ALTER SYSTEM ARCHIVE LOG CURRENT" command completed successfully.

Action: None, this is an informational message.

RMAN-03034: LEVEL *number* is invalid. LEVEL must be between *string* and *string*
Cause: An invalid DEBUG LEVEL was used.

Action: Change the DEBUG LEVEL argument.

RMAN-03035: Debugging turned off
Cause: a DEBUG OFF command was issued

Action: No action is required.

RMAN-03036: Debugging set to level=*number*[*string*], types=*string*
Cause: a DEBUG command was issued

Action: No action is required.

RMAN-03037: Spooling started in log file: *string*
Cause: a SPOOL LOG TO ... command was issued

Action: No action is required.

RMAN-03038: Spooling started in trace file: *string*
Cause: a SPOOL TRACE TO ... command was issued

Action: No action is required.

RMAN-03039: Spooling for log turned off
Cause: a SPOOL LOG OFF command was issued

Action: No action is required.

RMAN-03040: Spooling for trace turned off
Cause: a SPOOL TRACE TO ... command was issued

Action: No action is required.

RMAN-03042: error while analyzing automatic repair options
Cause: This message is accompanied by other errors explaining the cause of the failure.

Action: No action is required.

RMAN-03090: Starting *string* at *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-03091: Finished *string* at *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-03098: *string*RMAN-*number*: *string*string
Cause: This is the message prefix with a possible indentation.

Action: No action is required.

RMAN-03099: job cancelled at user request
Cause: The user interrupted the current job.

Action: None

RMAN-03999: Oracle error occurred while converting a date: ORA-*number*: *string*
Cause: Internal error converting a date.

Action: Contact Oracle Support Services.

RMAN-04000: memory allocation failure
Cause: A memory allocation request could not be satisfied.

Action: Increase the amount of memory available to RMAN.

RMAN-04001: heap initialization failure
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04002: OCIPI failed, ORA-*string*
Cause: OCI process level initialization failed.

Action: This error should not normally occur.

RMAN-04003: OCIINIT failed
Cause: The call to OCIEnvInit failed.

Action: This error should not normally happen. Contact Oracle Customer Support.

RMAN-04004: error from recovery catalog database: *string*
Cause: Oracle error signaled by catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04005: error from target database: \n*string*
Cause: Oracle error signaled by target database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04006: error from auxiliary database: *string*
Cause: Oracle error signaled by auxiliary database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04007: warning from recovery catalog database: *string*
Cause: Non fatal Oracle error signaled by catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04008: warning from target database: \n*string*
Cause: Non fatal Oracle error signaled by target database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04009: warning from auxiliary database: *string*
Cause: Non fatal Oracle error signaled by auxiliary database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04010: target database Password:
Cause: No password was provided for the target database.

Action: Provide target database password.

RMAN-04011: recovery catalog database Password:
Cause: No password was provided for the recovery catalog database.

Action: Provide recovery catalog database password.

RMAN-04012: auxiliary database Password:
Cause: No password was provided for the auxiliary database.

Action: Provide auxiliary database password.

RMAN-04013: must connect before startup
Cause: A STARTUP command was attempted before connecting to the database.

Action: Connect to database before attempting STARTUP command.

RMAN-04014: startup failed: *string*
Cause: The database failed to startup.

Action: The cause of the failure is included in the error message. Correct the cause of the failure and retry the startup command.

RMAN-04015: error setting target database character set to *string*
Cause: An error was received while setting the session character set in the target database.

Action: This error should not normally happen. Contact Oracle Customer Support.

RMAN-04016: could not get OCI error handle
Cause: An error was received while initializing the OCI layer.

Action: This error should not normally happen. Contact Oracle Customer Support.

RMAN-04017: startup error description: *string*
Cause: This is an additional informational message that indicates the cause of failure.

Action: See accompanying error messages indicating the cause of failure. No action is required.

RMAN-04020: target database name "*string*" does not match channel's name: "*string*"
Cause: The CONNECT clause in the ALLOCATE command has resulted in a connection to a database which is not the same as the one used to connect to the target database.

Action: Verify that the CONNECT string connects to the same database as the one specified in the TARGET connection for the CONNECT command.

RMAN-04021: target database DBID *string* does not match channel's DBID *string*
Cause: The CONNECT clause in the ALLOCATE command has resulted in a connection to a database which is not the same as the one used to connect to the target database.

Action: Verify that the CONNECT string connects to the same database as the one specified in the TARGET connection for the CONNECT command.

RMAN-04022: target database mount id *string* does not match channel's mount id *string*
Cause: The CONNECT clause in the ALLOCATE command has resulted in a connection to a database which is not the same as the one used to connect to the target database.

Action: Verify that the CONNECT string connects to the same database as the one specified in the TARGET connection for the CONNECT command.

RMAN-04024: starting Oracle instance without parameter file for retrieval of spfile
Cause: The instance could not be started because no default parameter file (either PFILE or SPFILE) could be found. The instance will be started in restricted mode with default parameters.

Action: None - this is an informational message.

RMAN-04025: unable to generate a temporary file
Cause: Creation of a temporary file failed. If could be that the system does not have enough resources (disk space, memory or similar).

Action: Verify and free some system resources memory and try again.

RMAN-04026: unable to open a temporary file: "*string*"
Cause: Opening of a temporary file failed. If could be that the system does not have enough resources (disk space, memory or similar).

Action: Verify and free some system resources memory and try again.

RMAN-04027: unable to write to a temporary file: "*string*"
Cause: Writing to a temporary file failed. If could be that the system does not have enough resources (disk space, memory or similar).

Action: Verify and free some system resources memory and try again.

RMAN-04031: \ninitialization parameters used for automatic instance:\n*string*\n
Cause: This is an informational message only.

Action: No action is required.

RMAN-04032: using contents of file *string*
Cause: The specified file was included as part of the auxiliary database parameter file. This is an informational message.

Action: No action is required.

RMAN-04033: cannot open auxiliary parameter file *string*
Cause: An auxiliary parameter file was specified with SET AUXILIARY INSTANCE PARAMETER FILE command but the specified file cannot be found.

Action: Set the parameter file to an existent file or retry the command without setting AUXILIARY INSTANCE PARAMETER FILE.

RMAN-04034: source recovery catalog database Password:
Cause: A password was not provided for the source recovery catalog database.

Action: Provide source recovery catalog database password.

RMAN-04035: error from source recovery catalog database: *string*
Cause: Oracle error signaled by source recovery catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04036: warning from source recovery catalog database: *string*
Cause: Nonfatal Oracle error signaled by source recovery catalog database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-04037: Connection should be as SYSDBA or as SYSBACKUP
Cause: An unsupported mode was specified on a target or clone connection.

Action: Specify a valid mode and retry the connection.

RMAN-04038: Connection should not specify a mode
Cause: A connection specified a mode when no mode is supported for this kind of connection

Action: Remove the mode specification and retry the connection.

RMAN-05000: CONFIGURE AUXNAME required for datafile *string*
Cause: Either: -) The control file mounted by the auxiliary database does not have an entry for this data file, therefore file name conversion is not possible. -) A COPY DATAFILE TO AUXNAME command was issued, but no auxname was set for this data file.

Action: Use the CONFIGURE AUXNAME command to specify a file name that the auxiliary database can use as a restore destination.

RMAN-05001: auxiliary file name *string* conflicts with a file used by the target database
Cause: RMAN is attempting to use the specified file name as a restore destination in the auxiliary database, but this name is already in use by the target database.

Action: Use the CONFIGURE AUXNAME command to specify a name for the data file that does not conflict with a file name in use by the target db.

RMAN-05002: aborting Tablespace Point-in-Time Recovery
Cause: Previously encountered error(s) were issued which require corrective action.

Action: Resolve the error conditions, and then re-issue the RECOVER command.

RMAN-05003: Tablespace Point-in-Time Recovery is not allowed for tablespace *string*
Cause: The SYSTEM, SYSUAX or a tablespace containing rollback segments is not allowed in Tablespace Point-in-Time Recovery.

Action: Remove the indicated tablespace from the recovery set and retry the operation.

RMAN-05004: target database log mode is NOARCHIVELOG
Cause: An attempt was made to apply Tablespace Point-in-Time Recovery or Pluggable Database Point-in-Time Recovery to a database that is in NOARCHIVELOG mode.

Action: If all required archived log files are available for Tablespace Point-in-Time Recovery or Pluggable Database Point-in-Time Recovery, alter the target database log mode to ARCHIVELOG and retry the operation. Otherwise, Tablespace Point-in-

Time Recovery and Pluggable Database Point-in-Time Recovery cannot be applied to this database.

RMAN-05005: Tablespace Point-in-Time Recovery is not allowed for re-created tablespace *string*
Cause: The requested tablespace has been re-created and is not allowed in Point-in-Time Recovery.

Action: Remove the indicated tablespace from the recovery set and retry the operation.

RMAN-05006: cannot recover clone standby single tablespaces
Cause: Standby recover can only be performed for the whole database.

Action: Change the tablespace list to a database specification.

RMAN-05007: no channel allocated
Cause: A command was entered that requires a channel, and no channel is allocated.

Action: Use ALLOCATE CHANNEL before using the command

RMAN-05008: SKIP clause not valid for normal recovery
Cause: The SKIP clause was specified for non-Tablespace or Table Point-in-Time Recovery.

Action: Remove the UNDO TABLESPACE clause.

RMAN-05009: Block Media Recovery requires Enterprise Edition
Cause: The RECOVER...BLOCK command was specified.

Action: Remove the RECOVER...BLOCK command.

RMAN-05010: target database must be opened in READ WRITE mode for Tablespace Point-in-Time Recovery
Cause: The target database was not opened in read/write mode.

Action: Open the database in read/write mode.

RMAN-05011: auxiliary instance must be in NOMOUNT state for Tablespace Point-in-Time Recovery
Cause: The Auxiliary instance was not in NOMOUNT state.

Action: Open the auxiliary instance in NOMOUNT state.

RMAN-05013: auxiliary control file name *string* conflicts with a file used by the target database
Cause: RMAN is attempting to use the specified control file name for Tablespace Point-in-Time Recovery as a restore destination in the auxiliary database, but this name is already in use by the target database.

Action: Set control_files parameter in the auxiliary instance to a name that does not conflict with a file name in use by the target database.

RMAN-05014: Tablespaces with undo segments were not found in recovery catalog
Cause: The recovery catalog did not have information about tablespaces with undo segments.

Action: Manually specify the tablespaces with undo segments in the optional UNDO tablespaces clause of the RECOVER command.

RMAN-05015: warning: not enough information in recovery catalog for specified point-in-time recovery
Cause: The recovery catalog did not have information about the tablespaces with undo segments at the specified Point-in-Time. This happened because the current recovery catalog was not in use at the specified Point-in-Time. A list of tablespaces with undo segments was supplied.

Action: RMAN assumes that the current set of tablespaces with undo segments is the same set that was in use at the specified Point-in-Time. If the set of tablespaces with undo segments changes, the recovery fails. If recovery fails, use the optional UNDO TABLESPACE clause of the RECOVER command to specify the correct set of tablespaces.

RMAN-05016: failover to previous backup
Cause: This is an informational message to indicate the RMAN could not successfully restore the files using the specified backups. An attempt was made to restore the data file/archived logs/ control file/SPFILE using a previous existing backup.

Action: See accompanying additional error messages indicating the cause of the failover.

RMAN-05017: no copy of datafile *number* found to recover
Cause: A RECOVER COPY command was not able to proceed because no copy of indicated file was found to recover. Possible causes include the following: 1. no copy of indicated file exists on disk that satisfy the criteria specified in the user's recover operands. 2. copy of indicated data file exists on disk but no incremental backup was found to apply to the data file copy.

Action: One of the following: 1. Use or correct TAG specification to recover a different data file copy. 2. Use BACKUP FOR RECOVER OF COPY command to create necessary incremental backup or copy.

RMAN-05018: some datafile copies cannot be recovered, aborting the RECOVER command
Cause: This error message can follow one or more RMAN-5017 or RMAN-5019 error messages.

Action: See RMAN-5017 or RMAN-5019 error messages documentation for more information.

RMAN-05019: warning: no channel of required type allocated to recover copy of datafile *number*
Cause: A RECOVER COPY command could not proceed because incremental backup sets exist on a device type that has not been allocated.

Action: Use the LIST command to determine which device type is needed, then allocate a channel of that type.

RMAN-05020: cannot specify AUXILIARY DESTINATION option for normal recovery
Cause: The AUXILIARY DESTINATION option was specified for a normal recovery. It is only allowed for Tablespace or Table Point-in-Time Recovery.

Action: Remove the AUXILIARY DESTINATION option and rerun the RECOVER command.

RMAN-05021: this configuration cannot be changed for a BACKUP or STANDBY control file
Cause: The user attempted to modify the configuration which cannot be changed for a BACKUP or STANDBY control file while the mounted control file was either BACKUP or STANDBY. The following configurations can be changed only when connected to primary database instance that has CURRENT/CREATED control file type mounted: CONFIGURE RETENTION POLICY CONFIGURE EXCLUDE CONFIGURE ENCRYPTION CONFIGURE DB_UNIQUE_NAME

Action: Connect to primary database instance and execute the command.

RMAN-05022: TRANSPORT TABLESPACE may not be used with user-managed auxiliary instance
Cause: A user-managed auxiliary instance was specified.

Action: Retry the operation with an RMAN-managed auxiliary instance.

RMAN-05023: TABLESPACE DESTINATION required
Cause: A required TABLESPACE DESTINATION was not specified.

Action: Specify a TABLESPACE DESTINATION and retry the operation.

RMAN-05024: \nList of tablespaces presumed to have UNDO segments
Cause: Accompanying message to 5015.

Action: See action of message 5015.

RMAN-05025: Tablespace *string*
Cause: Accompanying message to 5015.

Action: See action of message 5015.

RMAN-05026: warning: presuming following set of tablespaces applies to specified point-in-time
Cause: RMAN assumes that the current set of tablespaces with undo segments is the same set that was in use at the specified Point-in-Time. If the set of tablespaces with undo segments changes, the recovery fails. If recovery fails, use the optional UNDO TABLESPACE clause of the RECOVER command to specify the correct set of tablespaces.

Action: RMAN assumes that the current set of tablespaces with undo segments is the same set that was in use at the specified Point-in-Time. If the set of tablespaces with undo segments changes, the recovery fails. If recovery fails, use the optional UNDO TABLESPACE clause of the RECOVER command to specify the correct set of tablespaces.

RMAN-05027: \nList of tablespaces expected to have UNDO segments
Cause: Accompanying message to 5026.

Action: See action of message 5026.

RMAN-05028: Tablespace *string*
Cause: Accompanying message to 5026.

Action: See action of message 5026.

RMAN-05029: UNDO TABLESPACE clause not valid for normal recovery
Cause: The UNDO TABLESPACE clause was specified for non-Tablespace or Table Point-in-Time Recovery.

Action: Remove the UNDO TABLESPACE clause.

RMAN-05030: CLONE clause only valid for normal recovery
Cause: The CLONE clause was specified for a Tablespace or Logical Point-in-Time Recovery.

Action: Remove the CLONE clause.

RMAN-05031: DATAPUMP DESTINATION clause is only valid for Table Point-in-Time Recovery
Cause: The DATAPUMP DESTINATION clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the DATAPUMP DESTINATION clause.

RMAN-05032: datafile *string* will be created automatically during restore operation
Cause: The specified data file did not have an available backup.

Action: None. This is an informational message displayed for VALIDATE or PREVIEW option of the RESTORE command.

RMAN-05033: Media recovery start SCN is *string*
Cause: The above system change number (SCN) would be starting media recovery SCN, if the specified files are restored.

Action: None. This is an informational message displayed for PREVIEW option of the RESTORE command.

RMAN-05034: Recovery must be done beyond SCN *string* to clear datafile fuzziness
Cause: The above system change number (SCN) identifies the minimum SCN beyond which the media recovery must be performed on the specific data file to clear the media recovery fuzziness for all data file.

Action: None. This is an informational message displayed for PREVIEW option of the RESTORE command.

RMAN-05035: archived logs generated after SCN *string* not found in repository
Cause: The recovery catalog or target database control file did not have a record of archived logs containing the redo generated after the specified system change number (SCN).

Action: None. To avoid this message, perform a log switch if the database is in open mode.

RMAN-05036: FOR DB_UNIQUE_NAME option cannot be used for this configuration
Cause: An attempt was made to set the configuration which cannot be used with FOR DB_UNIQUE_NAME option.

Action: Remove FOR DB_UNIQUE_NAME option and execute the command.

RMAN-05037: FOR DB_UNIQUE_NAME option cannot be used in nocatalog mode
Cause: An attempt was made to set the remote configuration in nocatalog mode.

Action: Connect to recovery catalog and execute the command.

RMAN-05038: unable to determine UNTIL SCN for TRANSPORT
Cause: No archived logs were found in the control file.

Action: Add UNTIL clause to TRANSPORT command and retry.

RMAN-05039: One or more auxiliary set of datafiles could not be removed
Cause: There was an error while performing Tablespace or Table Point-in-Time Recovery. Some of the restored data files had Oracle Managed Files (OMF) names and were not deleted.

Action: Manually remove the auxiliary set of data files that were not deleted.

RMAN-05040: \n\nList of tablespaces that have been dropped from the target database:
Cause: One or more tablespaces in the recovery set were not found in the control file of the target database.

Action: None. Informational message.

RMAN-05041: Error during export of metadata
Cause: Export of metadata received an error from Data Pump.

Action: This message is accompanied by other error message(s) indicating the cause of the error.

RMAN-05042: Error during import of metadata
Cause: Import of metadata received an error from Data Pump.

Action: This message is accompanied by other error message(s) indicating the cause of the error.

RMAN-05043: Tablespace *string*
Cause: Accompanying message to 5040.

Action: See Action of message 5040.

RMAN-05044: \nPerforming export of metadata...
Cause: This is an informational message only.

Action: No action is required.

RMAN-05045: \nPerforming import of metadata...
Cause: This is an informational message only.

Action: No action is required.

RMAN-05046: Export completed\n
Cause: This is an informational message only.

Action: No action is required.

RMAN-05047: Import completed\n
Cause: This is an informational message only.

Action: No action is required.

RMAN-05048: specified file name *string* conflicts with a file used by the target database
Cause: The specified file name was already in use by another data file in the database.

Action: Use SET NEWNAME command to specify a different name for the data file that does not conflict with a file name in use by the target database.

RMAN-05050: flashing back control file to SCN *string*
Cause: RESTORE command was issued with a SET UNTIL clause and Flashback Database enabled. The control file was flashed back to the SET UNTIL time.

Action: This is an informational message only.

RMAN-05051: analyzing automatic repair options; this may take some time
Cause: This is an informational message only.

Action: No action is required.

RMAN-05052: Repair *string* is not compatible with this version of RMAN.
Cause: The specified repair was not compatible with this version of Recovery Manager (RMAN).

Action: Use a newer version of the RMAN executable.

RMAN-05053: AUXILIARY DESTINATION is only valid when using a RMAN-managed auxiliary instance
Cause: AUXILIARY DESTINATION clause was specified while using an user-managed auxiliary instance.

Action: Do not specify AUXILIARY DESTINATION clause and retry the operation or use a RMAN-managed auxiliary instance.

RMAN-05054: recover block operand *string* cannot be used to recover datafile
Cause: The specified operand could not be used with RECOVER data file command.

Action: Delete the invalid operand and retry the command.

RMAN-05055: recover datafile operand *string* cannot be used to recover block
Cause: The specified operand could not be used with RECOVER block command.

Action: Delete the invalid operand and retry the command.

RMAN-05056: Table *string*.*string* belongs to SYS
Cause: A SYS table was specified to be recovered.

Action: Remove SYS table, SYS objects cannot be recovered.

RMAN-05057: Table *string*.*string* not found
Cause: The specified table was not found in the dictionary at the specified point-in-time.

Action: Verify the name of the schema and table, or change the point-in-time and retry the command.

RMAN-05058: Cannot determine tablespace for table *string*.*string*
Cause: The specified table was not found in the data pump views at the specified point-in-time.

Action: Verify the name of the schema and table, or change the point-in-time and retry the command.

RMAN-05059: Table *string*.*string* resides in tablespace *string*
Cause: The tablespace that contained the specified table did not allow Tablespace Point-in-Time Recovery.

Action: Remove the offending table before attempting the operation again.

RMAN-05060: block specifier must be specified to recover block
Cause: Block Specifier was not specified in the command.

Action: Specify block specifier and resubmit the command.

RMAN-05061: analyzing automatic repair options complete
Cause: This is an informational message only.

Action: No action is required.

RMAN-05062: image copy needs no roll forward
Cause: The image copy that would be rolled forward by the RECOVER COPY command is already more recent than the specified UNTIL time or system change number (SCN).

Action: Usually this is the result of a recent OPEN RESETLOGS operation, and no action is needed, because the daily backup strategy will start rolling this copy forward after it becomes old enough to be eligible for rolling forward. To force the copy to be rolled forward, specify a more recent UNTIL time or system change number (SCN).

RMAN-05063: Cannot recover specified tables
Cause: Previously encountered errors required corrective action.

Action: Resolve the error conditions and reissue the Table Point-in-Time Recovery command.

RMAN-05064: REMAP TABLE clause is only valid for Table Point-in-Time Recovery
Cause: The REMAP TABLE clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the REMAP TABLE clause.

RMAN-05065: REMAP TABLESPACE clause is only valid for Table Point-in-Time Recovery
Cause: The REMAP TABLESPACE clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the REMAP TABLESPACE clause.

RMAN-05066: NOTABLEIMPORT clause is only valid for Table Point-in-Time Recovery
Cause: The NOTABLEIMPORT clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the NOTABLEIMPORT clause.

RMAN-05067: Table *string* already specified
Cause: The specified table was already specified to be recovered.

Action: Remove the duplicated table and retry the command.

RMAN-05069: New table name *string* for user *string* was already specified for other table
Cause: The same table name for the same user has already been specified for a different table.

Action: Remove or change the duplicated table name and retry the command.

RMAN-05070: Running TRANSPORT_SET_CHECK on recovery set tablespaces
Cause: This is an informational message only.

Action: No action is required.

RMAN-05071: TRANSPORT_SET_CHECK completed successfully
Cause: This is an informational message only.

Action: No action is required.

RMAN-05072: TRANSPORT_SET_CHECK failed
Cause: SYS.TS_PITR_CHECK was not empty for recovery set tablespaces.

Action: Fix dependencies before attempting TSPITR again.

RMAN-05073: Tablespace *string* creation SCN *string* is ahead of point-in-time SCN *string*
Cause: The tablespace was found in the control file but the creation system change number (SCN) of the data file(s) is after the specified point-in-time. This can happen if a previous tablespace point-in-time recovery was performed, for the tablespace.

Action: If a previous TSPITR has been performed drop the tablespace and retry the command. Otherwise, verify the name of the tablespace and/or the point-in-time and resubmit the command.

RMAN-05074: Tablespace *string* does not exist at specified point-in-time SCN *string*
Cause: The tablespace was found in the control file but the creation system change number (SCN) of the data file(s) is after the specified point-in-time.

Action: Verify the name of the tablespace and/or the point-in-time and resubmit the command.

RMAN-05075: Remapped object *string* is not being recovered
Cause: The specified remapped object was not recovered.

Action: Add remapped object to object list or remove this remap specification.

RMAN-05076: Remapped tablespace *string* is not being recovered
Cause: The specified tablespace was not recovered. None of the objects being recovered belong to the specified tablespace.

Action: Revise the object list or remove the remapped tablespace specification.

RMAN-05077: New tablespace *string* does not exist in target database
Cause: The new tablespace in the REMAP TABLESPACE clause could not be found in the target database.

Action: Revise the object list or remove remapped tablespace specification.

RMAN-05078: Table Point-in-Time Recovery requires an UNTIL clause
Cause: Table Point-in-Time Recovery was specified without a point-in-time specification.

Action: Add a point-in-T\time specification and retry the command.

RMAN-05079: Table *string* already remapped
Cause: The same table appeared in another remap specification.

Action: Remove the duplicated remapped table and retry the command.

RMAN-05080: Not performing table import after point-in-time recovery
Cause: As requested, Data Pump Import was not performed after the point-in-time recovery was performed.

Action: Manually perform the Data Pump Import of the recovered tables into the target database.

RMAN-05081: Cannot use REMAP clauses if NOTABLEIMPORT clause is used
Cause: The NOTABLEIMPORT clause was specified together with either the REMAP TABLE or REMAP TABLESPACE clause. These clauses are used during importing of the tables and, therefore, are invalid.

Action: Remove the REMAP clauses or remove the NOTABLEIMPORT clause and retry the command.

RMAN-05082: Tablespace *string* already remapped
Cause: The same tablespace appeared in another remap specification.

Action: Remove the duplicated remapped tablespace and retry the command.

RMAN-05083: Partition *string*.*string*.*string* not found
Cause: The specified partition was not found in the dictionary at the specified point-in-time.

Action: Verify the name of the schema, table and partition, or change the point-in-time and retry the command.

RMAN-05084: \nPerforming export of tables...
Cause: This is an informational message only.

Action: No action is required.

RMAN-05085: \nPerforming import of tables...
Cause: This is an informational message only.

Action: No action is required.

RMAN-05086: DUMP FILE clause is only valid for Table Point-in-Time Recovery
Cause: The DUMP FILE clause was specified for a non-Table Point-in-Time Recovery.

Action: Remove the DUMP FILE clause.

RMAN-05087: \nPerforming export of metadata for specified tablespaces...
Cause: This is an informational message only.

Action: No action is required.

RMAN-05088: DB_CREATE_FILE_DEST is not set
Cause: TO NEW was specified for a RESTORE BACKUPPIECE command but DB_FILE_CREATE_DEST was not set for the target database.

Action: Specify DB_FILE_CREATE_DEST for the target database or specify FORMAT and retry the command.

RMAN-05089: Cannot specify *string* clause with cross-platform restore
Cause: The specified option was used for a cross-platform data file restore.

Action: Remove the option and resubmit the command.

RMAN-05090: FROM PLATFORM clause can only be used with cross-platform datafile restore
Cause: FROM PLATFORM clause was specified for a noncross-platform data file restore.

Action: Remove the clause and resubmit the command.

RMAN-05091: UNTIL cannot be used with cross-platform datafile restore
Cause: An UNTIL command was in effect or an UNTIL clause was specified for a cross-platform data file restore.

Action: Remove the UNTIL clause or command and resubmit the command.

RMAN-05092: Option *string* cannot be used when restoring whole database with cross-platform datafile restore
Cause: The specified option was specified for whole database cross-platform data file restore.

Action: Remove the option and resubmit the command.

RMAN-05093: Restore cannot be mixed with cross-platform datafile restore
Cause: A restore specification was found when a cross-platform data file specification was expected.

Action: Use only one kind of restore specification in a single restore command.

RMAN-05094: Cross-platform whole database restore requires that the database is not mounted
Cause: FOREIGN DATABASE specification was found but the database was not in the correct state.

Action: Make sure that the database is not mounted when performing whole database cross-platform restore.

RMAN-05095: Data Pump import requires the database to be open read/write
Cause: During a cross-platform tablespace restore, DUMP FILE was specified without NOIMPORT and database was not open in read/write mode.

Action: Remove DUMP FILE specification or add NOIMPORT to it or, alternatively, open the database in read/write mode before retrying the command.

RMAN-05096: FROM SERVICE option is not supported for archived logs
Cause: The FROM SERVICE option was supplied but does not apply to restoring archived logs.

Action: Remove the FROM SERVICE operand and reenter the command.

RMAN-05097: could not validate file header for datafile *string* from service *string*
Cause: The specified data file could not be accessed from the indicated service.

Action: Ensure that the data file exists on the service and has same creation SCN as that of target database file. If the error can be corrected, do so and retry the operation.

RMAN-05098: schema *string* already remapped
Cause: The same schema appeared in another remap specification.

Action: Remove the duplicated remapped schema and retry the command.

RMAN-05099: not connected to target database with a password
Cause: A command that restores SPFILE to the target instance from a service name was requested. Such a command requires a password to be present in the connect string used to connect to the target instance.

Action: Exit RMAN session and then connect to target database using command line or CONNECT TARGET command with a password.

RMAN-05100: not connected to auxiliary database with a password
Cause: A command that restores SPFILE to the auxiliary instance from a service name was requested. Such a command requires a password to be present in the connect string used to connect to the auxiliary instance.

Action: Exit RMAN session and then connect to auxiliary instance using command line or CONNECT AUXILIARY command with a password.

RMAN-05101: Point-in-Time Recovery without CATALOG and TARGET not open requires that UNDO TABLESPACE is specified
Cause: A Point-in-Time Recovery was attempted when target database was not open without connection to a recovery catalog. It is necessary that the list of tablespaces with undo segments is provided with the UNDO TABLESPACE clause.

Action: Retry the command specifying the list of tablespaces with undo segments using the UNDO TABLESPACE clause.

RMAN-05102: auxiliary instance must be in the NOMOUNT state for Pluggable Database Point-in-Time Recovery
Cause: The Auxiliary instance was not in the NOMOUNT state.

Action: Put the auxiliary instance into the NOMOUNT state.

RMAN-05103: aborting Pluggable Database Point-in-Time Recovery
Cause: Previously encountered error(s) were issued which require corrective action.

Action: Resolve the error conditions and then re-issue the RECOVER command.

RMAN-05104: Specifying more than one Pluggable Databases is not supported
Cause: The command was attempted on more than one Pluggable Databases. This is not supported.

Action: Separate the task into multiple RMAN commands so that each command operates on one Pluggable Database.

RMAN-05105: Specifying *string* database is not supported.
Cause: This operation was not supported for the Pluggable Database that was specified in the command.

Action: None. This is an informational message only.

RMAN-05106: datafile *string* conflicts with file used by database *string*
Cause: RMAN attempted to use the specified data file number as a restore destination, but this data file number was already in use by the specified database.

Action: Resolve the conflict and retry the command.

RMAN-05107: AUXILIARY DESTINATION option is not specified
Cause: The AUXILIARY DESTINATION option was not specified for Pluggable Database Point-in-Time Recovery or Flashback Pluggable Database. This is a mandatory option for these commands unless Fast Recovery Area is used.

Action: Specify the AUXILIARY DESTINATION option and retry the command.

RMAN-05108: Command is not supported for pluggable database
Cause: Pluggable database specified for this command. This is not supported.

Action: None - informational message only

RMAN-05109: UNTIL SCN (*string*) is orphan incarnation of Pluggable Database *string*
Cause: Specified UNTIL CHANGE was an orphan incarnation of the Pluggable Database.

Action: Check the UNTIL CHANGE or UNTIL RESTORE POINT. If the database needs to be restored to an orphan incarnation, use the RESET PLUGGABLE DATABASE command.

RMAN-05110: Pluggable Database *string* must be closed.
Cause: Pluggable Database Point-in-Time Recovery or Flashback Pluggable Datdabase was attempted while the Pluggable Database was open.

Action: Close the Pluggable Database and Retry the Command.

RMAN-05111: Pluggable Database Point-in-Time Recovery is not supported for standby
Cause: Pluggable Database Point-in-Time Recovery was attempted on standby. This is not supported.

Action: None - informational message only.

RMAN-05112: table "*string*"."*string*" already exists
Cause: The specified table was present in the dictionary in the target database.

Action: Verify the name of the schema and table, or change the table name using the REMAP option and retry the command.

RMAN-05113: import completed with errors; Oracle Data Pump dump file *string* is retained
Cause: Import completed with errors.

Action: See Data Pump Import output for details of the problem.

RMAN-05114: datafile *string* name *string* is already used by datafile *string*
Cause: RMAN attempted to use the specified data file name as a restore destination for the indicated data file, but this data file name was already in use by the specified database. This can happen during pluggable database point-in-time recovery to recover a dropped tablespace whose data file name was already in use by a pluggable database.

Action: Add a SET NEWNAME command prior to the RESTORE or RECOVER command to specify the restore destination for this file.

RMAN-05115: Cross-platform INSTANT RESTORE is not supported.
Cause: An instant restore was specified using a data file copy from a different platform.

Action: Specify a different data file copy that is formatted for the same platform where the restore is taking place.

RMAN-05116: feature was not enabled: *string*
Cause: The specified fature is not enabled.

Action: Do not attempt to use this feature.

RMAN-05117: archive logs missing from SCN *string* to SCN *string*
Cause: Archive logs were missing for the SCN range.

Action: Backup the missing archive logs for a successful recovery.

RMAN-05118: recovery will be done up to SCN *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-05119: recovery can not be done to a consistent state.
Cause: No archive logs or backups were found.

Action: Backup archive logs for a successful recovery.

RMAN-05120: failed to open the wallet for restore
Cause: An error occurred while opening the wallet with the specified password.

Action: Ensure that the wallet is configured properly and a correct password is specified.

RMAN-05121: decryption wallet open for *string* of *string* database
Cause: This is an informational message only.

Action: No action is required.

RMAN-05122: There is insufficient disk space *string* MB to perform table recovery of *string* MB.
Cause: The disk space required to perform restore exceeded the available space.

Action: Free the disk space or add more storage.

RMAN-05123: skipping data file *number* because it is not a plugged in data file
Cause: A RESTORE or RECOVER command omitted processing the indicated data file because it was not a plugged in data file.

Action: No action is required.

RMAN-05124: cannot specify *string* clause with PREPLUGIN option
Cause: The specified option was used for a PREPLUGIN data file restore or recover command. This is not supported.

Action: Remove the option and resubmit the command.

RMAN-05126: cannot specify FROM SPARSE or FROM NONSPARSE option for active duplicate
Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for an active duplicate. The option is only allowed for nonactive duplicate.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05127: cannot specify FROM SPARSE or FROM NONSPARSE option for restore from service
Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for a restore from service.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05128: cannot specify FROM SPARSE or FROM NONSPARSE option for normal recovery
Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for a normal recovery.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05129: cannot specify FROM SPARSE or FROM NONSPARSE option for instant restore
Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for an instant restore.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05130: cannot specify FROM SPARSE or FROM NONSPARSE option for cross-platform restore
Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for an ordinary restore with cross-platform caluse.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05131: cannot specify FROM SPARSE or FROM NONSPARSE option for non datafile restore
Cause: Either the FROM SPARSE or FROM NONSPARSE option was specified for restoring a non data file.

Action: Remove the FROM SPARSE or FROM NONSPARSE option and rerun the command.

RMAN-05133: cannot specify SPARSE or NONSPARSE option in proxy backup
Cause: Either the SPARSE or the NONSPARSE option was specified for a proxy backup.

Action: Remove the SPARSE or NONSPARSE option and rerun the command.

RMAN-05134: cannot specify SPARSE or NONSPARSE option in incremental backup
Cause: Either the SPARSE or NONSPARSE option was specified for an incremental backup.

Action: Remove the SPARSE or NONSPARSE option and rerun the command.

RMAN-05135: incompatible use of SPARSE or NONSPARSE option in backup
Cause: An attempt to specify the SPARSE or NONSPARSE option in the BACKUP AS command failed. The BACKUP AS command can only be used to take non-cross-platform FULL or LEVEL 0 backups of data files. However, the option is prohibited for taking inconsistent backups of data files.

Action: Remove the SPARSE or NONSPARSE option or modify the BACKUP command and device configuration.

RMAN-05136: UNTIL cannot be used with PREPLUGIN option
Cause: An UNTIL command was in effect or an UNTIL clause was specified for a PREPLUGIN data file restore or recover command. This is not supported.

Action: Remove the UNTIL clause or command and resubmit the command.

RMAN-05137: destination for foreign data file not specified in RESTORE
Cause: During restoration of a foreign data file, either the destination was not provided using the FORMAT option in the RESTORE command or Oracle Managed Files (OMF) were not configured.

Action: Configure OMF or provide a foreign data file destination using the FORMAT option in the RESTORE command.

RMAN-05138: UNTIL AVAILABLE REDO can only be used with the keyword DATABASE
Cause: UNTIL AVAILABLE REDO was specified with keywords DATAFILE, TABLESPACE or PLUGGABLE DATABASE.

Action: Specify RECOVER DATABASE UNTIL AVAILABLE REDO to recover the whole database.

RMAN-05139: incompatible use of AS ENCRYPTED or AS DECRYPTED option in restore
Cause: An attempt to specify the AS ENCRYPTED or AS DECRYPTED option in a RESTORE command failed. AS ECNRYPTED and AS DECRYPTED can only be specified for tablespace and database objects.

Action: Remove AS ENCRYPTED or AS DECRYPTED or specify a tablespace or the full database as the restore object.

RMAN-05140: cannot perform flashback PDB or PDB PITR across undo switch SCN
Cause: An attempt to flashback a pluggable database (PDB) or a PDB point-in-time recovery (PITR) across an undo switch system change number (SCN) failed.

Action: Flashback or PITR to an SCN or time after the undo switch SCN.

RMAN-05141: target database must be opened for flashback PDB or PDB point-in-time recovery
Cause: The target database was not opened.

Action: Open the database.

RMAN-05142: skipping excluded pluggable database *string* data files
Cause: An RMAN command such as BACKUP, DUPLICATE, FLASHBACK, RECOVER, RESTORE has omitted processing data files belonging to the indicated pluggable database (PDB). This was because the data files belong to the PDB that has been marked excluded from backup and restore operations.

Action: No action is required.

RMAN-05143: Command is not supported for excluded pluggable database *string*
Cause: Pluggable database specified for this command is excluded from backup and restore operations. This is not supported.

Action: None - informational message only.

RMAN-05144: schema *string* does not exist
Cause: The new schema required for remapping did not exist in the database.

Action: Either create the desired schema, or specify the name of a schema that already exists, and retry the command.

RMAN-05145: incompatible option for RECOVER STANDBY DATABASE: *string*
Cause: RECOVER STANDBY DATABASE statement was used to synchronize the standby database from the primary database and the only valid options are FROM SERVICE and PFILE.

Action: Remove the unsupported options and retry.

RMAN-05146: must be connected to standby database to issue RECOVER STANDBY DATABASE
Cause: An attempt was made to recover a standby database from a non-standby database.

Action: Connect to the standby database and reissue the command.

RMAN-05147: instance not started with server parameter file and no PFILE option provided
Cause: SPFILE or PFILE were not provided for the RECOVER STANDBY DATABASE command.

Action: Provide the PFILE option or restart the instance with the SPFILE option.

RMAN-05148: flashback needs to be reenabled on standby open
Cause: Flashback was enabled before the standby database was synchronized but could not be reenabled until the standby database was opened.

Action: Open the standby database in read-only mode and reenable flashback.

RMAN-05149: Either FROM SERVICE or NOREDO clause is required for RECOVER STANDBY DATABASE command.
Cause: Neither FROM SERVICE nor NOREDO clause was provided for the RECOVER STANDBY DATABASE command.

Action: Provide the FROM SERVICE or NOREDO clause and reissue the command.

RMAN-05150: Managed Recovery Process must be disabled before running RECOVER STANDBY DATABASE.
Cause: The Managed Recovery Process was enabled when an attempt was made to run the RECOVER STANDBY DATABASE command.

Action: Stop the Managed Recovery Process and reissue the command.

RMAN-05151: duplicate pluggable database does not support encryption
Cause: An encryption is not supported for duplicating a pluggable database.

Action: Use the SET ENCRYPTION OFF command to turn off encryption and retry the command.

RMAN-05152: data file *number* not processed because it is a plugged in data file
Cause: A RESTORE command omitted processing the indicated data file because it was a plugged in data file.

Action: None. informational message only.

RMAN-05153: ignoring sparse option for non-sparse data file *number*
Cause: The AS SPARSE option was used for a non-sparse data file which is not supported.

Action: None. This is an informational message only.

RMAN-05154: The RECOVER STANDBY DATABASE command does not support using both FROM SERVICE and NOREDO clauses together.
Cause: Both FROM SERVICE and NOREDO clauses were provided for the RECOVER STANDBY DATABASE command.

Action: Remove any one of the two clauses and reissue the command.

RMAN-05155: UNTIL clause not compatibile with FROM SERVICE clause
Cause: An UNTIL clause was provided with the RECOVER STANDBY DATABASE FROM SERVICE command.

Action: Remove the UNTIL clause or use NOREDO option.

RMAN-05156: aborting recovery of standby database
Cause: The previously encountered errors require corrective action.

Action: Resolve the error conditions, and reissue the RECOVER STANDBY command.

RMAN-05157: The database must not be mounted on any other instance for RECOVER STANDBY DATABASE command.
Cause: The RECOVER STANDBY DATABASE command was attempted while the database was mounted on another instance.

Action: Ensure that no other instances are mounted, then reissue the RECOVER STANDBY DATABASE command.

RMAN-05158: WARNING: auxiliary (*string*) file name *string* conflicts with a file used by the target database
Cause: Recovery Manager (RMAN) attempted to use the specified file name as a restore destination in the auxiliary database, but this name was already in use by the target database. If the auxiliary database instance can access the storage where the target data files are residing, then the target database file gets overwritten causing corruption in the target database.

Action: Use the CONFIGURE AUXNAME command to specify a name for the data files that do not conflict with a file name in use by the target database. Do not use the NOFILENAMECHECK option, unless you are sure that the target data file name using the given location is not accessible from the auxiliary database instance.

RMAN-05159: duplicating *string* to Oracle Managed File (OMF) location
Cause: This is an informational message only.

Action: No action is required.

RMAN-05160: incompatible use of USING KEY option in restore
Cause: An attempt to specify the USING KEY option in a RESTORE command failed. USING KEY can only be specified with AS ECNRYPTED clause.

Action: Remove USING KEY or specify AS ENCRYPTED.

RMAN-05161: cannot open backup piece *string*
Cause: When attempting to open the specified backup piece, an error was received.

Action: Verify that the specified backup piece exists and is accessible.

RMAN-05162: cannot apply incremental backupset on a foreign database
Cause: Restoring incremental backupsets for a foreign database was not supported.

Action: Use full backupsets when restoring a foreign database.

RMAN-05163: unable to switch data file number *number* with name *string*
Cause: A conflict existed in the current control file for the specified file. This conflict occurred due to a point in time recovery which requrested the switch of a file which conflicts either in file number or tablespace attribute with a file in the current control file.

Action: This is an informational message only. A separate switch and recovery of the file is required after pluggable database open resetlogs.

RMAN-05164: cannot perform flashback PDB of dropped PDB *string*
Cause: An attempt to flashback a pluggable database (PDB) which has been dropped was made.

Action: Dropped PDBs cannot be flashed back. Perform PDB point-in-time recovery or replug in the PDB.

RMAN-05165: no name provided for datafile *number* created during recovery
Cause: No name was found for the datafile specified which was created during recovery.

Action: Specify the convert parameter or exlicit new name, and retry the command.

RMAN-05166: PDB *string* created during recovery, offlining file *string*
Cause: Specified pluggable database (PDB) was created during recovery.

Action: This is an information message only. PDB should be dropped or recreated after recovery and open of the CDB is complete.

RMAN-05170: Plugin datafile *string* (*string*) cannot be created during recovery and will be offlined.
Cause: Specified datafile is a plugin datafile and cannot be recreated by RMAN during recovery. Plugin datafiles are datafiles present in a PDB when it is created within this CDB context.

Action: The datafile will be added to the controlfile after open resetlogs. If needed at the end of recovery, use any available backups to restore and recover the datafiles. If not needed, drop the PDB or tablespace after database open.

RMAN-05171: Datafile *string* (*string*) is part of skip list hence will not be created.
Cause: Specified datafile is part of a skip list during duplicate. This means the datafile is part of an explicitly skipped PDB or tablespace or it does not belong to an explicitly duplicated PDB or tablespace.

Action: RMAN will automatically decide to offline or offline drop the datafile.

RMAN-05172: Datafile *string* (*string*) is skipped forever and will be dropped.
Cause: Specified datafile was part of a skip forever clause of restore or recovery. RMAN did not create the datafile during recovery and dropped it in order to continue recovery.

Action: This is an information message only.

RMAN-05173: Pluggable databases will not be opened as some are in an invalid state.
Cause: ALTER PLUGGABLE DATABASE ALL OPEN could not be performed as some PDBs were created during recovery. Because of this, their datafiles were offlined and they cannot be opened.

Action: Additional messages will state which PDBs are in an unopenable state. Either restore and recover their datafiles or drop them in order to be able to perform alter pluggable database all open for the valid PDBs.

RMAN-05174: Pluggable database *string* was created during recovery and all of its datafiles are offline, it cannot be opened.
Cause: Specified pluggable database cannot be opened as all of its datafiles were offlined during recovery.

Action: If the PDB is still needed, a separate full restore and recovery session of the PDB needs to be performed. If it is not needed, the PDB should be dropped

RMAN-05500: the auxiliary database must be not mounted when issuing a DUPLICATE command
Cause: A DUPLICATE command was issued, but the auxiliary database is mounted.

Action: Dismount the auxiliary database.

RMAN-05501: aborting duplication of target database
Cause: Previously encountered errors require corrective action.

Action: Resolve the error conditions, and reissue the DUPLICATE command.

RMAN-05502: the target database must be mounted when issuing a DUPLICATE command
Cause: A DUPLICATE command was issued, but the target database control file is not mounted.

Action: Mount the target database control file by issuing ALTER DATABASE MOUNT via Enterprise Manager or Server Manager.

RMAN-05503: at least one auxiliary channel must be allocated to execute this command
Cause: No auxiliary channels were allocated.

Action: Allocate an auxiliary channel.

RMAN-05504: at least two redo log files or groups must be specified for this command
Cause: Only one redo log file or group was specified

Action: Specify at least one more redo log file or group

RMAN-05505: auxiliary file name conversion of '*string*' exceeds maximum length of *string*
Cause: When the given file name is converted to the name used for the auxiliary database, the converted name is larger than the maximum allowed file name.

Action: Change initialization parameter DB_FILE_NAME_CONVERT to convert to a valid file name.

RMAN-05506: error during recursive execution
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-05507: standby control file checkpoint (*string*) is more recent than duplication point-in-time (*string*)
Cause: A DUPLICATE FOR STANDBY command was issued, but the checkpoint of the control file is more recent than the last archived log or the specified point-in-time.

Action: If an explicit point-in-time was specified, change it to be at least the control file checkpoint; otherwise archive (and backup/copy) the current log.

RMAN-05510: Duplicate finished
Cause: This is an informational message only.

Action: No action is required.

RMAN-05511: Datafile *string* skipped by request
Cause: This is an informational message only.

Action: No action is required.

RMAN-05512: Tablespace *string* cannot be skipped from duplication
Cause: The SYSTEM and SYSAUX tablespaces were not included in the DUPLICATE DATABASE. They must be present.

Action: Remove the SYSTEM and/or SYSAUX tablespace from the SKIP list and retry the operation.

RMAN-05513: cannot duplicate, control file is not current or standby
Cause: Target database did not have a current or standby control file. DUPLICATE requires the target database to have a current or standby control file.

Action: Open database to make control file current or connect to a different database before retrying the command.

RMAN-05514: Tablespace *string* has undo information, cannot skip
Cause: All tablespaces that have undo information must be included in the duplication.

Action: Remove the specified tablespace from the SKIP list and retry the operation.

RMAN-05515: Duplicate for standby does not allow the use of SET UNTIL
Cause: A SET UNTIL clause was specified for the command.

Action: Remove the SET UNTIL clause and try again.

RMAN-05516: duplicate operand specified: *string*
Cause: The specified operand appears more than once in the same DUPLICATE option list

Action: Delete the duplicated operand.

RMAN-05517: tempfile *string* conflicts with file used by target database
Cause: RMAN attempted to use the specified tempfile as a restore destination in the auxiliary database, but this name was already in use by the target database.

Action: Use the SET NEWNAME FOR TEMPFILE command to specify a name for the indicated tempfile, making sure that the new name does not conflict with a file name in use by target database. Alternatively, use DB_FILE_NAME_CONVERT and retry the command.

RMAN-05518: Automatically adding tablespace *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-05519: warning: tablespace *string* is always included when duplicating
Cause: The SYSTEM and SYSAUX tablespaces were included in the DUPLICATE TABLESPACE command. They were automatically included by the command and did not need to be explicitly named.

Action: To avoid this warning,, remove the SYSTEM and/or SYSAUX tablespace from the tablespaces list and retry the operation.

RMAN-05520: database name mismatch, auxiliary instance has *string*, command specified *string*
Cause: The database name specified in the initialization parameter was not the same as the database name provided in the DUPLICATE command.

Action: Correct the database name in the command or adjust the database name of the auxiliary instance.

RMAN-05521: DUPLICATE without CATALOG and TARGET not open requires that UNDO TABLESPACE is specified
Cause: A DUPLICATE was attempted when target database was not open without connection to a recovery catalog. It is necessary that the list of tablespaces with undo segments is provided with the UNDO TABLESPACE clause.

Action: Retry the command specifying the list of tablespaces with undo segments using the UNDO TABLESPACE clause.

RMAN-05522: Skipping tablespace *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-05523: Tablespace *string* is read only and SKIP READONLY was specified
Cause: Conflicting parameters were provided.

Action: Remove SKIP READONLY or remove read-only tablespace from list of tablespaces to duplicate.

RMAN-05524: Tablespace *string* is offline
Cause: It was not possible to duplicate offline tablespaces.

Action: Remove offline tablespace from list or online tablespace to duplicate it.

RMAN-05525: SKIP TABLESPACE cannot be used when using DUPLICATE TABLESPACE
Cause: A SKIP TABLESPACE clause was specified for the command.

Action: Remove the SKIP TABLESPACE clause and try again.

RMAN-05526: datafile *number* not processed because file is OFFLINE IMMEDIATE
Cause: A DUPLICATE command omitted processing the indicated data file because it is offline immediate. The tablespace to which this data file belongs will also not be included. See message 5528.

Action: None, informational message only.

RMAN-05527: Tablespace *string* has one or more OFFLINE IMMEDIATE datafiles
Cause: It was not possible to duplicate a tablespace who had offline immediate tablespaces.

Action: Remove offending tablespace from list or recover data file which are offline immediate in the tablespace before attempting the command again.

RMAN-05528: datafile *number* not processed because file belongs to tablespace with one or more offline immediate datafile (*string*)
Cause: A DUPLICATE command omitted processing the indicated data file because it is part of a tablespace that has offline immediate data file. See message 5526.

Action: No action is required. This is an informational message only.

RMAN-05529: warning: DB_FILE_NAME_CONVERT resulted in invalid ASM names; names changed to disk group only.
Cause: It was not possible to convert ASM Oracle Managed Files names using DB_FILE_NAME_CONVERT parameter. RMAN changed these invalid names to the converted disk group name instead.

Action: No action is required. This is an informational message only. If the automatic change is incorrect, use one of the following options instead of using DB_FILE_NAME_CONVERT for ASM Oracle Managed Files: 1) use RMAN command SET NEWNAME for each Oracle Managed File. 2) set DB_CREATE_FILE_DEST initialization parameter in auxiliary instance and not specify DB_FILE_NAME_CONVERT.

RMAN-05530: an UNTIL TIME or SCN cannot be specified with FROM ACTIVE DATABASE
Cause: A DUPLICATE with FROM ACTIVE DATABASE was specified along with either a SET UNTIL statment or UNTIL clause on the command. This is not supported. A DUPLICATE FROM ACTIVE DATABASE always creates a copy as of the current time.

Action: Check the statement and remove the use of UNTIL.

RMAN-05531: a mounted database cannot be duplicated while datafiles are fuzzy
Cause: A DUPLICATE with FROM ACTIVE DATABASE command was specified while the database was mounted or open read-only. Unless the database is open read/write, the data files cannot be fuzzy.

Action: Open the database read/write, then shutdown cleanly before mounting.

RMAN-05532: PASSWORD FILE specified without FROM ACTIVE DATABASE
Cause: The PASSWORD FILE clause of the DUPLICATE command was specified but the FROM ACTIVE DATABASE clause was not. A password file can only be duplicated if the FROM ACTIVE DATABSE clause has been used.

Action: Remove the PASSWORD FILE clause from the command, or perform an online duplicate of the database by specifying the FROM ACTIVE DATABASE clause.

RMAN-05533: Command *string* is not supported on *string* database
Cause: The specified command is not supported on this type of database. The type of database can be STANDBY, CLONE, or RAC.

Action: Do not use the specified command against this database.

RMAN-05534: warning: LOG_FILE_NAME_CONVERT resulted in invalid ASM names; names changed to disk group only.
Cause: It was not possible to convert ASM Oracle Managed Files names using LOG_FILE_NAME_CONVERT parameter. RMAN changed these invalid names to the converted disk group name instead.

Action: If the automatic change is incorrect, use one of the following options instead of using LOG_FILE_NAME_CONVERT for ASM Oracle Managed Files: 1) Use the LOGFILE clause for online log files. 2) After DUPLICATE completes, create standby log files using the SQL ALTER DATABASE ADD STANDBY LOGFILE command.

RMAN-05535: warning: All redo log files were not defined properly.
Cause: It was not possible to define all the redo log files. This can occur when LOG_FILE_NAME_CONVERT initialization parameter is defined but fails to match all the names or causes names to be created that are not in valid directories.

Action: Query the V$LOGFILE view to see what redo log files are defined after DUPLICATE has completed. Use the ALTER DATABASE RENAME FILE SQL command to correctly name the existing redo log files.

RMAN-05536: auxiliary logfile name *string* conflicts with a file used by the target database
Cause: RMAN attempted to use the specified logfile name as a standby redo log file in the auxiliary database, but this name was already in use by the target database.

Action: Use or alter LOG_FILE_NAME_CONVERT so that unique logfile names can be generated. Or wait for the command to complete and create standby logfiles using the SQL ALTER DATABASE ADD STANDBY LOGFILE command.

RMAN-05537: DUPLICATE without TARGET connection when auxiliary instance is started with spfile cannot use SPFILE clause
Cause: A DUPLICATE was attempted when the auxiliary database was started with a server parameter file and the SPFILE sub-clause was specified. RMAN cannot restore the server parameter file if the auxiliary database is already started with a server parameter file.

Action: Start the auxiliary database with a client parameter file or do not specify SPFILE sub-clause and retry.

RMAN-05538: warning: implicitly using DB_FILE_NAME_CONVERT
Cause: The duplicated SPFILE had DB_FILE_NAME_CONVERT set and it has been used to produce data file names for the new database.

Action: No action is required. This is an informational message only. If this behavior was not intended, then do not duplicate the server parameter file, or explicitly set DB_FILE_NAME_CONVERT in the DUPLICATE command and retry the operation.

RMAN-05539: DUPLICATE TARGET DATABASE cannot be used without connecting to the TARGET
Cause: A DUPLICATE TARGET DATABASE was attempted and no connection to the TARGET database was established.

Action: Connect to TARGET or use DATABASE <db_name> clause.

RMAN-05540: no archived logs found in repository for database *string*
Cause: Recovery catalog did not have archived log records for the specified database. If database is running in NOARCHIVELOG mode, then specify NOREDO.

Action: Specify NOREDO for NOARCHIVELOG databases. Cannot duplicate an ARCHIVELOG database unless the recovery catalog or target database control file has archived redo log information about it.

RMAN-05541: no archived logs found in target database
Cause: Target database was running in archived log mode, but control file did not have any archived log records.

Action: Archive current log before retrying command.

RMAN-05542: Only UNTIL TIME can be used with DUPLICATE without TARGET and CATALOG connections
Cause: A DUPLICATE without TARGET and CATALOG connections was attempted specifying an UNTIL clause that was not TIME based.

Action: Retry the command with an UNTIL TIME clause or without an UNTIL clause.

RMAN-05543: DUPLICATE without TARGET connection requires that DATABASE is specified
Cause: A DUPLICATE without TARGET connection was attempted without specifying the database to duplicate.

Action: Retry the command specifying the DATABASE to duplicate.

RMAN-05544: Cannot specify ACTIVE DATABASE when not connected to target database
Cause: DUPLICATE from ACTIVE DATABASE required a connection to the target database.

Action: Connect to target database or remove from ACTIVE DATABASE and retry the command.

RMAN-05545: warning: Until SCN *string* is ahead of SCN of last full resync of recovery catalog: *string*
Cause: The specified point-in-time for duplication without a target connection was ahead of the last time that the data file information was resynced to the recovery catalog. Information about offline and read-only data files might be incorrect.

Action: If duplication fails due to incorrectly identified offline and/or read-only data files, specify a point-in-time before the last resync of the recovery catalog and retry the command. Or perform full resync of the target database and retry the command.

RMAN-05546: DUPLICATE without TARGET and CATALOG connections requires that BACKUP LOCATION is specified
Cause: A DUPLICATE without TARGET and CATALOG connections was attempted without specifying BACKUP LOCATION.

Action: Retry the command specifying a BACKUP LOCATION.

RMAN-05547: Checking that duplicated tablespaces are self-contained
Cause: This is an informational message only.

Action: No action is required.

RMAN-05548: The set of duplicated tablespaces is not self-contained
Cause: A DUPLICATE TABLESPACE has specified a set of tablespaces that cannot function independently.

Action: Retry the command without incomplete tablespaces or add other tablespaces to make the set self-contained.

RMAN-05549: The following SYS objects were found in skipped tablespaces
Cause: This is an informational message only.

Action: No action required.

RMAN-05550: TARGET database not open, cannot verify that set of tablespaces being duplicated does not have SYS objects
Cause: This is an informational message only.

Action: No action is required.

RMAN-05551: Not connected to TARGET, cannot verify that set of tablespaces being duplicated does not have SYS objects
Cause: This is an informational message only.

Action: No action is required.

RMAN-05552: Object *string* on tablespace *string*
Cause: A SYS object was found in one of the skipped tablespaces.

Action: Remove object if possible or include tablespace in duplicated tablespaces.

RMAN-05553: SYS objects in skipped tablespaces prevent duplication
Cause: Objects owned by SYS were found in the tablespaces that would not be duplicated.

Action: If using SKIP TABLESPACE, do not skip tablespaces that contain SYS objects. If using DUPLICATE TABLESPACE, make sure to specify all tablespaces containing SYS objects.

RMAN-05554: cannot specify INCARNATION when duplicating without TARGET and CATALOG connections
Cause: A DUPLICATE without TARGET and CATALOG connections was attempted when INCARNATION was also specified.

Action: Retry the command without specifying INCARNATION.

RMAN-05555: Not connected to TARGET or TARGET not open, cannot verify that subset of tablespaces is self-contained
Cause: This is an informational message only.

Action: No action is required.

RMAN-05556: not all datafiles have backups that can be recovered to SCN *string*
Cause: One or more data files being duplicated could not be restored as no available backups were found.

Action: Change the system change number (SCN) or make backups available for the specified data files and retry the command.

RMAN-05557: Target instance not started with server parameter file
Cause: SPFILE clause was used but target instance was not started with a server parameter file.

Action: Do not specify SPFILE clause, or restart target instance with server parameter file.

RMAN-05558: Must specify DB_UNIQUE_NAME with FOR STANDBY clause
Cause: A DUPLICATE FOR STANDBY ... SPFILE command was issued but DB_UNIQUE_NAME was not provided for the standby database.

Action: Specify a DB_UNIQUE_NAME in the SPFILE clause for the standby database.

RMAN-05559: error converting parameter *string*, string larger than *number*
Cause: While attempting to apply a PARAMETER_VALUE_CONVERT to the specified parameter value, the resulting string exceeded the maximum length for a value.

Action: Change the PARAMETER_VALUE_CONVERT so that, when converting the parameter, the maximum lenght is not reached.

RMAN-05560: Using previous duplicated file *string* for datafile *number* with checkpoint SCN of *string*
Cause: A data file copy from a previous duplicate attempt matching the duplicate name requested was found for the specified data file and will be used instead of restoring the data file from a backup.

Action: No action needed unless this behavior is not desire. In that case, either use a different name for the data file or use NORESUME to avoid using previous data file copies for all the data files.

RMAN-05561: CATALOG did not return information about tablespaces with undo segments
Cause: A DUPLICATE with no target connection was attempted, but the recovery catalog did not have information about the tablespaces with undo segments at the specified point in time. It is necessary that the list of tablespaces with undo segments is provided with the UNDO TABLESPACE clause.

Action: Retry the command specifying the list of tablespaces with undo segments using the UNDO TABLESPACE clause.

RMAN-05562: SPFILE backup not found for database *string* with DBID *number* created before *string* in *string*
Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05563: SPFILE backup not found for database with DBID *number* created before *string* in *string*
Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05564: SPFILE backup not found for database *string* created before *string* in *string*
Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05565: SPFILE backup created before *string* not found in *string*
Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05566: SPFILE backup not found for database *string* with DBID *number* in *string*
Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05567: SPFILE backup not found for database with DBID *number* in *string*
Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05568: SPFILE backup not found for database *string* in *string*
Cause: RMAN could not locate a backup of the SPFILE in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05569: SPFILE backup not found in *string*
Cause: RMAN could not locate a backup of the SPFILE in the specified location.

Action: Provide a different location and retry the command.

RMAN-05570: Duplicate for standby does not allow the use of LOGFILE
Cause: A LOGFILE clause was specified for the command.

Action: Remove the LOGFILE clause and try again.

RMAN-05571: DORECOVER specified for non standby duplication
Cause: A DORECOVER clause was specified and the duplicate did not specify FOR STANDBY.

Action: Remove the DORECOVER clause or add FOR STANDBY and try again.

RMAN-05572: CONTROLFILE backup not found for database *string* with DBID *number* created before *string* in *string*
Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05573: CONTROLFILE backup not found for database with DBID *number* created before *string* in *string*
Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05574: CONTROLFILE backup not found for database *string* created before *string* in *string*
Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05575: CONTROLFILE backup created before *string* not found in *string*
Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05576: CONTROLFILE backup not found for database *string* with DBID *number* in *string*
Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05577: CONTROLFILE backup not found for database with DBID *number* in *string*
Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05578: CONTROLFILE backup not found for database *string* in *string*
Cause: RMAN could not locate a backup of the control file in the specified location that satisfied the specified parameters.

Action: Change the parameters, or provide a different location and retry the command.

RMAN-05579: CONTROLFILE backup not found in *string*
Cause: RMAN could not locate a backup of the control file in the specified location.

Action: Provide a different location and retry the command.

RMAN-05580: Duplicate for standby does not allow the use of SKIP READONLY
Cause: A SKIP READONLY clause was specified for the command.

Action: Remove the SKIP READONLY clause and try again.

RMAN-05581: Duplicate for standby does not allow the use of SKIP TABLESPACE
Cause: A SKIP TABLESPACE clause was specified for the command.

Action: Remove the SKIP TABLESPACE clause and try again.

RMAN-05582: Duplicate for standby does not allow the use of OPEN RESTRICTED
Cause: An OPEN RESTRICTED clause was specified for the command.

Action: Remove the OPEN RESTRICTED clause and try again.

RMAN-05583: Duplicate for standby does not allow the use of TABLESPACE
Cause: A TABLESPACE clause was specified for the command.

Action: Remove the TABLESPACE clause and try again.

RMAN-05584: Duplicate for standby does not allow the use of NOREDO
Cause: A NOREDO clause was specified for the command.

Action: Remove the NOREDO clause and try again.

RMAN-05585: Duplicate for standby does not allow the use of UNDO TABLESPACE
Cause: A UNDO TABLESPACE clause was specified for the command.

Action: Remove the UNDO TABLESPACE clause and try again.

RMAN-05586: The following materialized objects were found in skipped tablespaces
Cause: This is an informational message only.

Action: No action required.

RMAN-05587: Materialized table *string* on tablespace *string*
Cause: A materialized table was found in one of the skipped tablespaces.

Action: Remove object if possible or include tablespace in duplicated tablespaces.

RMAN-05588: Materialized index *string* on tablespace *string*
Cause: A materialized index was found in one of the skipped tablespaces.

Action: Remove object if possible or include tablespace in duplicated tablespaces.

RMAN-05589: Materialized objects in skipped tablespaces prevent duplication
Cause: Materialized objects found in the tablespaces that would not be duplicated.

Action: If using SKIP TABLESPACE, do not skip tablespaces that contain materialized objects. If using DUPLICATE TABLESPACE, make sure to specify all tablespaces containing SYS objects.

RMAN-05590: Reenabling controlfile options for auxiliary database
Cause: This is an informational message only.

Action: No action is required.

RMAN-05591: Ignoring error, reattempt command after duplicate finishes
Cause: A sql error was received during the execution of command.

Action: Check the accompanying errors.

RMAN-05592: Dropping offline and skipped tablespaces
Cause: This is an informational message only.

Action: No action is required.

RMAN-05593: Could not drop tablespace *string* due to constraints, will reattempt removal after other tablespaces are removed
Cause: This is an informational message only.

Action: No action is required.

RMAN-05594: Could not drop tablespace *string* due to constraints
Cause: The tablespace failed to be dropped several times, no more attempts will be made.

Action: Drop the tablespace manually after duplicate finishes.

RMAN-05595: Leaving database unopened, as requested
Cause: User requested that the new database was not open.

Action: After the database is opened with resetlogs you might want to: - Catalog data file copies of read-only data files - Switch read-only data files to the cataloged data file copies - Online read-only tablespaces - Drop skipped tablespaces - Enable supplemental logging - Enable force logging - Enable change tracking

RMAN-05596: Error while removing created server parameter file
Cause: Server parameter file was not deleted. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors. Remove file manually.

RMAN-05597: Database started with server parameter file and PFILE clause used in command
Cause: A PFILE clause was specified for duplicate command, but database was started with a server parameter file causing a conflict.

Action: Remove PFILE clause from command or restart database without using a server parameter file.

RMAN-05598: SPFILE and PFILE clause specified in command
Cause: SPFILE and PFILE clauses were specified for duplicate command causing a conflict.

Action: Remove either one of the clauses and retry the command.

RMAN-05599: PASSWORD clause is not needed when duplicating for standby database from active database
Cause: PASSWORD clause was specified when creating a standby database from active database. This is not needed, it is automatic.

Action: No action is required. This is an informational message only.

RMAN-05600: Cannot specify UNTIL clause when duplicating from active database
Cause: An UNTIL clause in the command or with a SET UNTIL was in effect for an active database duplication.

Action: Remove UNTIL clause and reattempt duplication.

RMAN-05601: Failed to restore original settings to server parameter file
Cause: An error was received while duplicating the database after the server parameter file was modified by RMAN. An attempt was made to restore original settings to the server parameter file, but the original error was such that it was not possible to restore the settings.

Action: Before reattempting database duplication, the server parameter file needs to be fixed manually with the original values.

RMAN-05602: restarting auxiliary database without server parameter file
Cause: This is an informational message only.

Action: No action is required.

RMAN-05603: not connected to target database with a net service name
Cause: A command that restores files to the auxiliary instance from the target instance was requested. Such a command requires that a net service name be present in the connect string used to connect to the target instance.

Action: Exit RMAN session and then connect to target database using command line or CONNECT TARGET command with a net service name in the connect string. That service name must be valid on the auxiliary instance.

RMAN-05604: Cannot specify SECTION SIZE together with USING COPY
Cause: A SECTION SIZE clause was specified for the command. This option is valid only when USING BACKUPSET or USING COMPRESSED BACKUPSET option is specified.

Action: Remove the SECTION SIZE clause or specify USING BACKUPSET option and try again.

RMAN-05605: Cannot specify USING option when not using ACTIVE DATABASE option
Cause: A USING clause was specified for the command. This option is valid only when ACTIVE DATABASE option is specified.

Action: Remove USING option or specify ACTIVE DATABASE option and try again.

RMAN-05606: Cannot specify SECTION SIZE when not using ACTIVE DATABASE option
Cause: A SECTION SIZE clause was specified for the command. This option is valid only when ACTIVE DATABASE option is used.

Action: Remove SECTION SIZE option or specify ACTIVE DATABASE option and try again.

RMAN-05607: Cannot remove created server parameter file
Cause: Duplicate created a server parameter file that coould not be removed because no client parameter file was provided for the command.

Action: Remove manually the created server parameter file.

RMAN-05608: Tablespace *string* cannot be dropped due to partitioned table
Cause: A partitioned table was contained in the tablespaces that were not included in the new database, however the tablespaces cannot be dropped until the table is dropped.

Action: Manually drop the partitioned table and then the tablespaces.

RMAN-05609: Must specify a username for target connection when using active duplicate
Cause: An active duplication was attempted but no username was provided in the connection to the target database.

Action: Specify a username when connecting to the target and retry the operation.

RMAN-05610: Must specify a username for auxiliary connection when using active duplicate
Cause: An active duplication was attempted but no username was provided in the connection to the auxiliary database.

Action: Specify a username when connecting to the auxiliary and retry the operation.

RMAN-05611: Usernames for target and auxiliary connections must be the same when using active duplicate
Cause: An active duplication was attempted but the usernames provided in the connection to the target and auxiliary database are not the same.

Action: Specify the same username when connecting to the target and the auxiliary database and retry the operation.

RMAN-05612: Must specify a password for target connection when using active duplicate
Cause: An active duplication was attempted but no password was provided in the connection to the target database.

Action: Specify a password when connecting to the target and retry the operation.

RMAN-05613: Must specify a password for auxiliary connection when using active duplicate
Cause: An active duplication was attempted but no password was provided in the connection to the auxiliary database.

Action: Specify a password when connecting to the auxiliary and retry the operation.

RMAN-05614: Passwords for target and auxiliary connections must be the same when using active duplicate
Cause: An active duplication was attempted but the passwords provided in the connection to the target and auxiliary database are not the same.

Action: Specify the same passoword when connecting to the target and the auxiliary database and retry the operation.

RMAN-05615: SKIP and DUPLICATE PLUGGABLE DATABASE cannot be used together
Cause: SKIP PLUGGABLE DATABASE and DUPLICATE PLUGGABLE DATABASE were both specified in the same command. These options are incompatible and cannot be used together.

Action: Remove one of the incompatible options and retry the command.

RMAN-05616: pluggable database *string* cannot be skipped from duplication
Cause: The CDB$ROOT and PDB$SEED databases were not included in the DUPLICATE DATABASE. They must be present.

Action: Remove the CDB$ROOT and PDB$SEED database from the SKIP list and retry the operation.

RMAN-05617: duplicate operand DUPLICATE TABLESPACE *string* and PLUGGABLE DATABASE *string*
Cause: The specified operand refers to same PLUGGABLE DATABASE in the DUPLICATE option list.

Action: Delete the duplicate operand and retry the command.

RMAN-05618: Ignoring SKIP TABLESPACE *string* because whole PDB *string* is being skipped
Cause: This is an informational message only.

Action: No action is required.

RMAN-05619: SKIP PLUGGABLE DATABASE cannot be used with DUPLICATE TABLESPACE
Cause: A SKIP PLUGGABLE DATABASE clause was specified for the command.

Action: Remove the SKIP PLUGGABLE DATABASE clause and try again.

RMAN-05620: Skipping pluggable database *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-05621: password file location could not be found for the target database
Cause: The password file location did not exist for the target database instance.

Action: Set the password file location for the target database instance.

RMAN-05622: password file location could not be found for the auxiliary database
Cause: The password file location did not exist for the auxiliary database instance.

Action: Set the password file location for the auxiliary database instance.

RMAN-05623: number of patterns (*number*) to PARAMETER_VALUE_CONVERT must be even
Cause: An uneven number of patterns was specified.

Action: Specify one more or one less pattern.

RMAN-05624: data file name not found in the repository for data file number=*number*
Cause: The data file name corresponding to the specified data file number was not found in the control file or recovery catalog.

Action: Use the SET NEWNAME command for data file whose name is not found in the repository and rerun the command.

RMAN-05625: command not allowed when connected to a pluggable database
Cause: A command was attempted that can be performed only in the root container.

Action: Connect to the target and clone the database to the root container and retry the command.

RMAN-05626: The target database must be open.
Cause: A DUPLICATE with FROM ACTIVE DATABASE command was specified while the database was mounted or closed. To perform active database duplication of pluggable databases, the target database must be open in read-only or read/write mode.

Action: Open the target database in read-only or read/write mode and retry the command.

RMAN-05627: The clone database must be open in read/write mode.
Cause: A DUPLICATE with FROM ACTIVE DATABASE command was specified while the database was mounted or closed. To perform active duplication of pluggable databases, the clone database must be open in read/write mode.

Action: Open the target database in read/write mode and retry the command.

RMAN-05628: Target database pluggable database (*string*) does not exists.
Cause: The pluggable database being duplicated did not exist on the target database.

Action: Check the PDB name and retry the command.

RMAN-05629: The target pluggable database (*string*) must be open.
Cause: A DUPLICATE PLUGGABLE DATABASE with FROM ACTIVE DATABASE command was specified while the pluggable database was mounted or closed. When using the DUPLICATE command with pluggable databases, the specified target pluggable database must be open in read-only or read/write mode.

Action: Open the target pluggable database in read-only or read/write mode and retry the command.

RMAN-05630: Clone database pluggable database already exists: *string*.
Cause: The pluggable database specified in the DUPLICATE command was already in existence on the clone database.

Action: Specify a different name for the pluggable database and retry the command.

RMAN-05631: duplicate pluggable database does not allow the use of LOGFILE clause
Cause: A LOGFILE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the LOGFILE clause and try again.

RMAN-05632: duplicate pluggable database does not allow the use of USING COPY clause
Cause: A USING COPY clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the USING COPY clause and try again.

RMAN-05633: duplicate pluggable database does not allow the use of SKIP READONLY clause
Cause: A SKIP READONLY clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the SKIP READONLY clause and try again.

RMAN-05634: duplicate pluggable database does not allow the use of FOR FARSYNC clause
Cause: A FOR FARSYNC clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the FOR FARSYNC clause and try again.

RMAN-05635: duplicate pluggable database does not allow the use of FOR STANDBY clause
Cause: A FOR STANDBY clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the FOR STANDBY clause and try again.

RMAN-05636: duplicate pluggable database does not allow the use of PFILE/ SPFILE clause
Cause: A PFILE/SPFILE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the PFILE/SPFILE clause and try again.

RMAN-05637: duplicate pluggable database does not allow the use of SKIP TABLESPACE clause
Cause: A SKIP TABLESPACE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the SKIP TABLESPACE clause and try again.

RMAN-05638: duplicate pluggable database does not allow the use of SKIP PLUGGABLE DATABASE clause
Cause: A SKIP PLUGGABLE DATABASE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the SKIP PLUGGABLE DATABASE clause and try again.

RMAN-05639: duplicate pluggable database does not allow the use of OPEN RESTRICTED clause
Cause: A OPEN RESTRICTED clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the OPEN RESTRICTED clause and try again.

RMAN-05640: duplicate pluggable database does not allow the use of TABLESPACE clause
Cause: A TABLESPACE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the TABLESPACE clause and try again.

RMAN-05641: duplicate pluggable database does not allow the use of PASSWORDFILE clause
Cause: A PASSWORDFILE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the PASSWORDFILE clause and try again.

RMAN-05642: duplicate pluggable database does not allow the use of NOREDO clause
Cause: A NOREDO clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the NOREDO clause and try again.

RMAN-05643: duplicate pluggable database does not allow the use of UNDO TABLESPACE clause
Cause: A UNDO TABLESPACE clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the UNDO TABLESPACE clause and try again.

RMAN-05644: duplicate pluggable database does not allow the use of BACKUP LOCATION clause
Cause: A BACKUP LOCATION clause was specified, but this clause is not supported for duplicating pluggable database.

Action: Remove the BACKUP LOCATION clause and try again.

RMAN-05645: target database change tracking not enabled
Cause: For DUPLICATE pluggable databases, the specified target database must have change tracking enabled.

Action: Enable change tracking on the target database and retry the command.

RMAN-05646: duplicate pluggable database supported only with active duplicate
Cause: Duplicate pluggable database is allowed only for active duplication.

Action: Add FROM ACTIVE DATABASE clause and retry the command.

RMAN-05647: duplicate pluggable database does not allow the use of AS ENCRYPTED or AS DECRYPTED clause
Cause: An AS ENCRYPTED or AS DECRYPTED clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the AS ENCRYPTED or AS DECRYPTED clause and try again.

RMAN-05648: duplicate pluggable database does not allow the use of DORECOVER clause
Cause: A DORECOVER clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the DORECOVER clause and try again.

RMAN-05649: duplicate pluggable database does not allow the use of UNTIL SCN or TO RESTORE POINT clause
Cause: A UNTIL SCN or TO RESTORE POINT clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the UNTIL SCN or TO RESTORE POINT clause and try again.

RMAN-05650: duplicate pluggable database does not allow the use of NOREMOVE clause
Cause: A NOREMOVE clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the NOREMOVE clause and try again.

RMAN-05651: duplicate pluggable database does not allow the use of NOCHECK clause
Cause: A NOCHECK clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the NOCHECK clause and try again.

RMAN-05652: duplicate pluggable database does not allow the use of FORCE clause
Cause: A FORCE clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the FORCE clause and try again.

RMAN-05653: duplicate pluggable database does not allow the use of NOOPEN clause
Cause: A NOOPEN clause was specified, but this clause is not supported for duplicating a pluggable database.

Action: Remove the NOOPEN clause and try again.

RMAN-05654: target database local undo not enabled
Cause: For DUPLICATE pluggable databases (PDBs) or point-in-time recovery of application root PDB or application PDB, the specified target database did not have local undo enabled.

Action: Enable local undo on the target database and retry the command.

RMAN-05655: specified REMOTE_RECOVERY_FILE_DEST parameter is NULL
Cause: For DUPLICATE pluggable databases, the specified clone instance SPFILE REMOTE_RECOVERY_FILE_DEST parameter was NULL.

Action: Set the valid REMOTE_RECOVERY_FILE_DEST parameter at SPFILE and try again.

RMAN-05656: found backup of database ID *string*
Cause: This is an information message only.

Action: No action is required.

RMAN-05657: There are multiple database IDs present.
Cause: There were multiple database IDs present in the BACKUP LOCATION specified. RMAN did not know which database ID to use for the DUPLICATE command.

Action: Use the SET DBID command to specify the database ID before the DUPLICATE command and retry the command.

RMAN-05658: searching for database ID
Cause: This is an information message only.

Action: No action is required.

RMAN-05659: failed to load XML file *string*
Cause: The XML file did not exist or has an invalid format.

Action: Ensure that the XML file exists and has a valid format.

RMAN-05660: error parsing XML file *string*
Cause: XML file has an invalid format.

Action: Ensure that the XML file has a valid format.

RMAN-05661: multiple channel types not allowed for BACKUP LOCATION FROM FILE
Cause: Disk and non-disk channels were allocated for the BACKUP LOCATION FROM FILE option in the DUPLICATE command. Only one channel type can be used when using this option.

Action: Allocate only one channel type and retry the command.

RMAN-05662: The file name for data file *number* of excluded tablespace *string* is missing in the control file.
Cause: The data file was missing. The excluded tablespace was treated as a skipped tablespace but not dropped after DUPLICATE with the existing CONFIGURE EXCLUDE FOR TABLESPACE command was issued.

Action: Issue the ALTER DATABASE RENAME statement to correct the control file and then bring the excluded tablespace online or drop tablespace.

RMAN-05663: One or more multisection pieces are missing.
Cause: One or more multisections pieces were not provided in the backup set list.

Action: Provide the correct list of multisection backup pieces for the RESTORE command.

RMAN-06000: could not open recovery manager library file: *string*
Cause: The "recover.bsq" file could not be opened.

Action: Check that the file was installed correctly and that the user running RMAN has authority to read the file.

RMAN-06001: error parsing job step library
Cause: A syntax error was encountered while parsing "recover.bsq".

Action: Ensure that the correct version of the file is installed and that it has not been modified in any way.

RMAN-06002: command not allowed when not connected to a recovery catalog
Cause: A command that is allowed only when a recovery catalog connect string was supplied was attempted.

Action: Avoid using the command, or restart RMAN and supply a recovery catalog connect string via the CATALOG parameter.

RMAN-06003: Oracle error from target database: \n*string*
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06004: Oracle error from recovery catalog database: *string*
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06005: connected to target database: *string* (DBID=*string*)
Cause: This is an informational message only.

Action: No action is required.

RMAN-06006: connected to target database: *string* (not mounted)
Cause: This is an informational message only.

Action: No action is required.

RMAN-06007: target database not mounted and db_name not set in init.ora
Cause: The target database has not mounted the control file, and its "init.ora" file does not specify the DB_NAME parameter.

Action: MOUNT the target database, or add the DB_NAME parameter to its "init.ora" and restart the instance.

RMAN-06008: connected to recovery catalog database
Cause: This is an informational message only.

Action: No action is required.

RMAN-06009: using target database control file instead of recovery catalog
Cause: This is an informational message only.

Action: No action is required.

RMAN-06010: error while looking up datafile: *string*
Cause: An error occurred while looking up the specified data file in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the file name is entered correctly. If the data file was added recently, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06011: invalid level specified: *number*
Cause: An invalid incremental backup level was specified.

Action: Incremental backup level must be between 0 and 4.

RMAN-06012: channel: *string* not allocated
Cause: A RELEASE command was found for a channel identifier that was not yet allocated.

Action: Correct the channel identifier, or add an ALLOCATE CHANNEL command.

RMAN-06013: duplicate channel identifier found: *string*
Cause: A channel identifier was reused without first releasing the channel.

Action: Add a RELEASE CHANNEL command.

RMAN-06014: command not implemented yet: *string*
Cause: Not all commands are implemented for the beta version.

Action: Avoid using the command.

RMAN-06015: error while looking up datafile copy name: *string*
Cause: An error occurred while looking up the specified data file copy name in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the file name is entered correctly. If the data file copy was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06016: duplicate backup operand specified: *string*
Cause: The specified operand appears more than once in the same backup specifier or backup command.

Action: Delete the duplicated operand.

RMAN-06017: initialization of parser failed
Cause: The parser package initialization routine returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06018: duplicate operand specified in backup specification: *string*
Cause: A backup specification operand appears more than once in a backup specification.

Action: Delete the duplicate operand.

RMAN-06019: could not translate tablespace name "*string*"
Cause: An error occurred while looking up the specified tablespace name in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the tablespace is entered correctly. If the tablespace was added recently, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06020: connected to auxiliary database (not started)
Cause: This is an informational message only.

Action: No action is required.

RMAN-06021: FROM DATAFILECOPY/BACKUPSET may not be specified with archived logs
Cause: The FROM DATAFILECOPY/BACKUPSET option applies only to data file and control file restores.

Action: Use this option only for data file and control file restores.

RMAN-06022: invalid level specified for image copy: *number*
Cause: An invalid incremental backup level was specified for an image copy.

Action: Incremental backup level must be 0 for image copies.

RMAN-06023: no backup or copy of datafile *number* found to restore
Cause: A data file, tablespace, or database restore could not proceed because no backup or copy of the indicated file was found. It may be the case that a backup or copy of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06024: no backup or copy of the control file found to restore
Cause: A control file restore could not proceed because no backup or copy of the control file was found. It may be the case that a backup or copy of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06025: no backup of archived log for thread *number* with sequence *number* and starting SCN of *string* found to restore
Cause: An archived log restore restore could not proceed because no backup of the indicated archived log was found. It may be the case that a backup of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06026: some targets not found - aborting restore
Cause: Some of the files specified for restore could not be found. Message 6023, 6024, or 6025 is also issued to indicate which files could not be found. Some common reasons why a file can not be restored are that there is no backup or copy of the file that is known to recovery manager, or there are no backups or copies that fall within the criteria specified on the RESTORE command, or some data file copies have been made but not cataloged.

Action: The Recovery Manager LIST command can be used to display the backups and copies that Recovery Manager knows about. Select the files to be restored from that list.

RMAN-06027: no archived logs found that match specification
Cause: An archived log record specifier did not match any archived logs in the recovery catalog or target database control file.

Action: Resubmit the command with a different archived log record specifier. The Recovery Manager (RMAN) LIST command can be used to display all archived logs that RMAN knows about.

RMAN-06028: duplicate operand specified in restore specification: *string*
Cause: The CHANNEL, TAG, FROM, PARMS, VALIDATE, DEVICE TYPE, CHECK READONLY or DB_UNIQUE_NAME option was specified more than once in the restore command or in one of the restore specifications.

Action: Correct and resubmit the command.

RMAN-06029: the control file may be included only in a datafile backup set
Cause: The "include current/standby control file" option was specified for an archived log backup set.

Action: Use this option only for data file backup sets.

RMAN-06030: the DELETE [ALL] INPUT option may not be used with a datafile backup set
Cause: The DELETE [ALL] INPUT option was specified for a backup that contains the current control file or data file.

Action: Remove the option and resubmit the command.

RMAN-06031: could not translate database keyword
Cause: An error was received when calling DBMS_RCVMAN

Action: This message should be accompanied by other error messages indicating the cause of the error.

RMAN-06032: at least 1 channel of TYPE DISK must be allocated to execute a COPY command
Cause: No channel of TYPE DISK was allocated.

Action: Allocate a channel of TYPE DISK and re-issue the command.

RMAN-06033: channel *string* not allocated
Cause: An rman command requests a specific channel, but the requested channel has not been allocated.

Action: ALLOCATE the channel, or correct the channel identifier.

RMAN-06034: at least 1 channel must be allocated to execute this command
Cause: No channels were allocated.

Action: ALLOCATE a channel.

RMAN-06035: wrong version of recover.bsq, expecting *string*, found *string*
Cause: The "recover.bsq" file is incompatible with the RMAN executable.

Action: Install the correct version of recover.bsq.

RMAN-06036: datafile *number* is already restored to file *string*
Cause: A SET NEWNAME command was issued to restore a data file to a location other than the original data file, and Recovery Manager determined that the best candidate for restoring the file is the data file copy with the same name, therefore the file is already restored and no action need be taken.

Action: None - this is an informational message.

RMAN-06038: recovery catalog package detected an error
Cause: A call to DBMS_RCVMAN returned an error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06039: SET NEWNAME command has not been issued for datafile *string*
Cause: A SWITCH command was specified for a data file, but no destination was specified and no SET NEWNAME command has been previously issued for that file. An explicit file to switch to must be specified if no SET NEWNAME command has been issued.

Action: Correct and resubmit the SWITCH command.

RMAN-06040: control file is already restored to file *string*
Cause: The best candidate control file for restoration is the one that is named in the RESTORE CONTROLFILE command, hence no action need be taken.

Action: None - this is an informational message.

RMAN-06041: cannot switch file *number* to copy of file *number*
Cause: An attempt was made to switch a data file to a copy of a different data file.

Action: Correct and resubmit the SWITCH command.

RMAN-06042: PLUS ARCHIVELOG option is not supported with non-datafile backups
Cause: The PLUS ARCHIVELOG option was supplied but does not apply to this type of backup.

Action: Remove the PLUS ARCHIVELOG operand and reenter the command.

RMAN-06043: TAG option not supported for archived log copies
Cause: The tag option was supplied but does not apply to this type of copy.

Action: Remove the TAG operand and reenter the command

RMAN-06045: LEVEL option not supported for archived log or current/standby control file copies
Cause: The LEVEL option was supplied but does not apply to this type of copy.

Action: Remove the LEVEL operand and reenter the command.

RMAN-06046: archived log name: *string*
Cause: An error occurred while translating an archived log name to its recovery catalog RECID/time stamp. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06047: duplicate datafile *number* specified for restoration from copy
Cause: The indicated data file was specified more than once in the same restore command.

Action: Correct and resubmit the RESTORE command.

RMAN-06048: duplicate control file specified for restoration from copy
Cause: The control file was specified more than once in the same RESTORE command.

Action: Correct and resubmit the RESTORE command.

RMAN-06049: CHECK LOGICAL option not supported for archived log or current/standby control file copies
Cause: The check logical option was supplied but does not apply to this type of copy.

Action: Remove the CHECK LOGICAL operand and reenter the command

RMAN-06050: archived log for thread *number* with sequence *number* is already on disk as file *string*
Cause: An archived log which was requested to be restored (either explicitly or via a range specification) does not need to be restored because it already exists on disk.

Action: None - this is an informational message

RMAN-06051: DELETE INPUT option not implemented yet
Cause: This option was specified in a backup specification.

Action: Remove the DELETE INPUT option.

RMAN-06052: no parent backup or copy of datafile *number* found
Cause: An incremental backup at level 1 or higher could not find any parent backup or copy of the indicated data file. A level 0 backup of the data file will be taken automatically.

Action: This is an informational message only.

RMAN-06053: unable to perform media recovery because of missing log
Cause: This message is accompanied with another message identifying the missing log. The log would be needed to perform the media recovery, but the log is not on disk and no backup set containing the log is available.

Action: Determine if a backup set containing the log can be made available. If so, then use the CHANGE command to make the backup set available and retry the command. If not, then a point-in-time recovery up to the missing log is the only alternative.

RMAN-06054: media recovery requesting unknown archived log for thread *string* with sequence *string* and starting SCN of *string*
Cause: Media recovery is requesting a log whose existence is not recorded in the recovery catalog or target database control file.

Action: If a copy of the log is available, then add it to the recovery catalog and/or control file via a CATALOG command and then retry the RECOVER command. If not, then a point-in-time recovery up to the missing log is the only alternative and database can be opened using ALTER DATABASE OPEN RESETLOGS command.

RMAN-06055: could not find archived log with sequence *string* for thread *string*
Cause: A log which was on disk at the start of media recovery or which should have been restored from a backup set could not be found.

Action: Check the Recovery Manager message log to see if the log was restored by a previous job step. If so, then check the V$ARCHIVED_LOG view to see if the log is listed in the control file. If so, then validate that the log exists on disk and is readable. If the log was not restored, or was restored but no record of the log exists in V$ARCHIVED_LOG, then contact Oracle Support Services.

RMAN-06056: could not access datafile *number*
Cause: A backup or copy could not proceed because the data file header could not be read or the header was not valid.

Action: Make the data file accessible or skip it.

RMAN-06057: a standby control file cannot be included along with a current control file
Cause: "current control file" was specified along with "standby control file".

Action: Remove "current control file" or "standby control file" from backup specification.

RMAN-06058: a current control file cannot be included along with a standby control file
Cause: "standby control file" was specified along with "current control file".

Action: Remove "standby control file" or "current control file" from backup specification.

RMAN-06059: expected archived log not found, loss of archived log compromises recoverability
Cause: The archived log was not found. The recovery catalog or target database control file thinks it does exist. If the archived log has in fact been lost and there is no backup, then the database is no longer recoverable across the point-in-time covered by the archived log. This may occur because the archived log was removed by an outside utility without updating the recovery catalog or target database control file.

Action: If the archived log has been removed with an outside utility and the archived log has already been backed up, then you can synchronize the recovery catalog or target database control file by running CROSSCHECK ARCHIVELOG ALL. If the archived log has not been previously backed up, then you should take a full backup of the database and archived logs to preserve recoverability. Previous backups are not fully recoverable.

RMAN-06060: warning: skipping datafile compromises tablespace *string* recoverability
Cause: SKIP INACCESSIBLE or SKIP OFFLINE option resulted in skipping data file during BACKUP. If the data file has in fact been lost and there is no backup, then the tablespace is no longer recoverable without ALL archived logs since data file creation. This may occur because the data file was deleted by an outside utility or the data file is made OFFLINE [DROP].

Action: If there is no backup of skipped data file and the tablespace has to be recoverable without ALL archived logs since data file creation, then you should make these data file available for backup.

RMAN-06061: warning: skipping archived log compromises recoverability
Cause: SKIP INACCESSIBLE option resulted in skipping archived logs during BACKUP. If the archived log has in fact been lost and there is no backup, then the database is no longer recoverable across the point-in-time covered by the archived log. This may occur because archived log was removed by an outside utility without updating the recovery catalog or target database control file.

Action: If the archived log has been removed with an outside utility and the archived log has already been backed up, then you can synchronize the recovery catalog or target database control file by running CROSSCHECK ARCHIVELOG ALL. If the archived log has not been previously backed up, then you should take a full backup of the database and archived logs to preserve recoverability. Previous backups are not fully recoverable.

RMAN-06062: can not backup SPFILE because the instance was not started with SPFILE
Cause: A backup command requested a backup of the SPFILE, but no SPFILE was used to startup the instance.

Action: Create an SPFILE and re-start the instance using the SPFILE or modify the command.

RMAN-06063: DBID is not found in the recovery catalog
Cause: DBID is not found in the recovery catalog.

Action: Verify that the DBID is correct and restart the command.

RMAN-06064: creating datafile file number=*string* name=*string*
Cause: RESTORE/RECOVER command was issued and there were no backup available for the data file.

Action: This is an informational message only.

RMAN-06065: The operand [*string*] conflicts with another specified operand.
Cause: An attempt was made to use two (or more) conflicting operands within the same statement.

Action: Remove one or both of the conflicting operands.

RMAN-06066: the target database must be mounted when issuing a RECOVER command
Cause: A RECOVER command was issued, but the target database control file is not mounted.

Action: Mount the target database control file by issuing ALTER DATABASE MOUNT via Enterprise Manager or Server Manager.

RMAN-06067: RECOVER DATABASE required with a backup or created control file
Cause: The control file has been restored from a backup or was created via ALTER DATABASE CREATE CONTROLFILE.

Action: Use the RECOVER DATABASE command to perform the recovery.

RMAN-06068: recovery aborted because of missing datafiles
Cause: This error should be accompanied by one or more instances of message ORA-06094.

Action: Refer to message ORA-06094.

RMAN-06069: the file name for datafile *string* is missing in the control file
Cause: Media recovery of a backup control file added this data file to the control file, but it does not set the file name because that is unsafe.

Action: If the data file is on disk, then issue ALTER DATABASE RENAME to correct the control file. Otherwise, RESTORE the data file, and then use SWITCH to make it known to the control file. If the tablespace containing this data file will be dropped, then reissue the RECOVER command with a SKIP clause to skip recovery of this tablespace.

RMAN-06070: DBWR could not identify datafile *string*
Cause: DBWR could not find the specified data file.

Action: Ensure that the data file exists and is accessible.

RMAN-06071: could not open datafile *string*
Cause: An error was encountered when trying to open the specified data file.

Action: Ensure that the data file exists and is accessible.

RMAN-06073: file header is corrupt for datafile *string*
Cause: Oracle detected a corruption in the file header. A media failure has probably occurred.

Action: RESTORE the data file to a new location, then do a SWITCH, and then retry the RECOVER command.

RMAN-06074: file *string* is not an Oracle datafile
Cause: The file header indicates that this file is not a data file. The file may have been overlaid or corrupted.

Action: RESTORE the data file to a new location, then do a SWITCH, and then retry the RECOVER command.

RMAN-06075: datafile *string* does not belong to this database
Cause: The file header indicates that this file belongs to some other Oracle database.

Action: RESTORE the data file to a new location, then do a SWITCH, and then retry the RECOVER command.

RMAN-06076: datafile *string* contains wrong datafile
Cause: The data file header indicates the file contains a different data file number.

Action: RESTORE the data file, and then retry the RECOVER command.

RMAN-06077: datafile *string* is a different version than contained in the control file
Cause: The control file entry for this data file specifies a different version of this data file. Different versions of a data file can exist when a tablespace is dropped, and a new tablespace is created which reuses the same data file numbers.

Action: If the data file is correct, the fix the control file by using the SWITCH command. Otherwise, RESTORE the correct version of this data file and retry the RECOVER command.

RMAN-06078: the control file is older than datafile *string*
Cause: The control file appears to be older than the specified data file, but it is not marked as a backup control file. This indicates that the control file has been replaced with an older version. This error does not occur when a backup control file which was created via Recovery Manager or the ALTER DATABASE BACKUP CONTROLFILE command is restored because such control files are marked as backups.

Action: RESTORE a control file and perform RECOVER DATABASE.

RMAN-06079: database must be mounted to perform recovery
Cause: A RECOVER command was issued, but the target database is not mounted.

Action: Issue ALTER DATABASE MOUNT.

RMAN-06080: SWITCH required for datafile *string*
Cause: The control file record for this data file is for an older incarnation of the data file. A SWITCH command must be issued to updated the control file before doing RECOVER.

Action: Issue SWITCH command then retry RECOVER.

RMAN-06081: error reading datafile header for datafile *string*, code *string*
Cause: X$KCVFH returned the specified code in the HXERR column when it was queried for the specified data file.

Action: Ensure the data file exists and is readable. Using a newer version of Recovery Manager may return a more meaningful error message. If you have no newer version of Recovery Manager, contact Oracle Support Services.

RMAN-06082: datafile copy tag *string* is ambiguous
Cause: The specified tag refers to multiple data file copies belonging to different data files.

Action: Specify the data file copy by file name rather than by tag.

RMAN-06083: error when loading stored script *string*
Cause: The recovery catalog database returned an error. This error explains the cause of the problem.

Action: Correct the problem and retry.

RMAN-06084: the target database may not be mounted when issuing REPLICATE
Cause: A REPLICATE command was issued, but the target database is already mounted.

Action: dismount the target database control file by issuing ALTER DATABASE CLOSE and ALTER DATABASE DISMOUNT via Enterprise Manager or Server Manager.

RMAN-06085: must use SET NEWNAME command to restore datafile *string*
Cause: A RESTORE command for the specified data file could not find a destination name for the specified data file.

Action: Add a SET NEWNAME command prior to the RESTORE command to specify the restore destination for this file.

RMAN-06086: offline files may only be skipped in a datafile backup set
Cause: The SKIP OFFLINE option was specified for an archived log backup set.

Action: Use this option only for data file backup sets.

RMAN-06087: read-only files may only be skipped in a datafile backup set
Cause: The SKIP READONLY option was specified for an archived log backup set.

Action: Use this option only for data file backup sets.

RMAN-06088: datafile copy *string* not found or out of sync with catalog
Cause: The indicated file is not found, or is found but is not the same file that the recovery catalog thinks it is. It is likely that some operation outside of Recovery Manager has altered the file, or that Recovery Manager has not resynced with the target database.

Action: Re-catalog the file and retry the operation.

RMAN-06089: archived log *string* not found or out of sync with catalog
Cause: The indicated file is not found, or is found but is not the same file that the recovery catalog thinks it is. It is likely that some operation outside of Recovery Manager has altered the file, or that Recovery Manager has not resynced with the target database.

Action: Re-catalog the file and retry the operation.

RMAN-06090: error while looking up control file copy: *string*
Cause: An error occurred while looking up the specified control file copy in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the file name is entered correctly. If the control file copy was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06091: no channel allocated for maintenance (of an appropriate type)
Cause: A command was entered that requires a maintenance channel, and no maintenance channel is allocated, or none of the appropriate type.

Action: Use ALLOCATE CHANNEL FOR MAINTENANCE before deleting backup pieces, or using the CROSSCHECK or DELETE EXPIRED commands. Proxy copies require a non-DISK channel.

RMAN-06092: error while looking up backup piece
Cause: An error occurred while looking up the specified backup piece in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the name or key is entered correctly. If the backup piece was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06093: recovery catalog contains obsolete version of datafile *string*
Cause: The specified data file number was dropped and then reused. The control file mounted by the target database contains the newer version of the data file, but the recovery catalog contains information about only the older version.

Action: Issue a RESYNC command to update the recovery catalog, then reissue the failing command. If the error persists, contact Oracle Support Services.

RMAN-06094: datafile *string* must be restored
Cause: A RECOVER command was issued, and the recovery catalog indicates the specified data file should be part of the recovery, but this data file is not listed in the control file, and cannot be found on disk.

Action: Issue a RESTORE command for this data file, using the same UNTIL clause specified to the RECOVER command (if any), then reissue the RECOVER.

RMAN-06095: a backup control file must be restored to recover datafile *string*
Cause: The control file currently mounted by the target database contains a newer incarnation of the data file than the recovery catalog indicates is appropriate for the Point-in-Time being recovered to.

Action: Restore the control file, using the same UNTIL clause specified on the failing RECOVER command, then reissue the command. If no control file can be restored, then you should issue a CREATE CONTROLFILE command.

RMAN-06096: SWITCH required for newname of datafile *string* to take effect
Cause: A SET NEWNAME was issued for this data file, but no SWITCH command was issued before the RECOVER command.

Action: Issue a SWITCH command to make the newname take effect before doing RECOVER.

RMAN-06098: the target database must be mounted when issuing a BACKUP command
Cause: A BACKUP command was issued, but the target database control file is not mounted.

Action: Mount the target database control file by issuing ALTER DATABASE MOUNT via Enterprise Manager or Server Manager.

RMAN-06099: error occurred in source file: *string*, line: *number*
Cause: See accompanying error.

Action: See accompanying error.

RMAN-06100: no channel to restore a backup or copy of datafile *number*
Cause: A data file, tablespace, or database restore could not proceed because the backup of the indicated file exists on a device type that was not allocated for restore.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06101: no channel to restore a backup or copy of the control file
Cause: A control file restore could not proceed because the backup of the indicated file exists on a device type that was not allocated for restore.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06102: no channel to restore a backup or copy of archived log for thread *number* with sequence *number* and starting SCN of *string*
Cause: An archived log restore restore could not proceed because the backup of the indicated file exists on a device type that was not allocated for restore.

Action: None - this is an informational message. See message 6026 for further details.

RMAN-06103: duplicate qualifier found in REPORT command: *string*
Cause: The indicated qualifier appears more than once in a REPORT qualifier list.

Action: delete the duplicate qualifier

RMAN-06104: number of times not backed up must be greater than zero
Cause: The NOT BACKED UP clause of the BACKUP command specified 0 times.

Action: Specify a multiplier value of 1 or greater for the number of times not backed up.

RMAN-06105: duplicate qualifier found in LIST command: *string*
Cause: The indicated qualifier appears more than once in a LIST qualifier list.

Action: delete the duplicate qualifier

RMAN-06106: this command requires that target database be mounted
Cause: A command was issued that requires the target database to be mounted, but the target database is not mounted.

Action: Mount the target database control file by issuing ALTER DATABASE MOUNT via Enterprise Manager or Server Manager.

RMAN-06107: warning: control file is not current for REPORT NEED BACKUP DAYS
Cause: The REPORT NEED BACKUP DAYS command may report some files as requiring backups when they really do not, because the most current online status of the file is not known unless a current control file is mounted.

Action: No action is required, however, a current control file should be mounted, if possible, to get the most accurate REPORT output.

RMAN-06108: changed datafile copy unavailable
Cause: This is an informational message only.

Action: No action is required.

RMAN-06109: changed archived log unavailable
Cause: This is an informational message only.

Action: No action is required.

RMAN-06110: changed control file copy unavailable
Cause: This is an informational message only.

Action: No action is required.

RMAN-06111: changed backup piece unavailable
Cause: This is an informational message only.

Action: No action is required.

RMAN-06112: changed datafile copy available
Cause: This is an informational message only.

Action: No action is required.

RMAN-06113: changed archived log available
Cause: This is an informational message only.

Action: No action is required.

RMAN-06114: changed control file copy available
Cause: This is an informational message only.

Action: No action is required.

RMAN-06115: changed backup piece available
Cause: This is an informational message only.

Action: No action is required.

RMAN-06116: cannot crosscheck unavailable object
Cause: An attempt was made to crosscheck an object which is unavailable.

Action: Make object available and try again or don't crosscheck object.

RMAN-06117: cannot do DELETE EXPIRED on an object which is not expired
Cause: An attempt was made to DELETE EXPIRED an object which is not expired.

Action: Remove EXPIRED keyword, crosscheck object, or don't delete object.

RMAN-06118: a backup control file older than SCN *string* must be used for this recovery
Cause: An attempt was made to recover the database, but some files had no backup, and were not present in the control file at the beginning of the restore. This happens when the control file used during the recovery is a backup control file taken before the creation of some of the files that had no backup. In this situation, the control file that is used must be taken before the creation of all files that have no backup. This will enable RMAN to automatically re-create all of the files that had no backup.

Action: Restore a control file that was backed up before the specified system change number (SCN). The following RMAN commands can be used to do this: SET UNTIL SCN *x*; (where *x* is the SCN displayed in the message) RESTORE CONTROLFILE;

RMAN-06119: uncataloged datafile copy
Cause: This is an informational message only.

Action: No action is required.

RMAN-06120: uncataloged archived log
Cause: This is an informational message only.

Action: No action is required.

RMAN-06121: uncataloged control file copy
Cause: This is an informational message only.

Action: No action is required.

RMAN-06122: CHANGE .. UNCATALOG not supported for BACKUPSET
Cause: The CHANGE BACKUPSET .. UNCATALOG command was entered. The UNCATALOG operation is not supported with backup set.

Action: Use CHANGE BACKUPSET .. DELETE instead.

RMAN-06123: operation not supported without the recovery catalog or mounted control file
Cause: A command was used which requires a connection to a recovery catalog database or the target database to be mounted. The command cannot be used when no backup repository is available.

Action: If a recovery catalog database is available, then connect to the recovery catalog and retry the command, otherwise enter a different command.

RMAN-06124: error while looking up datafile copy key: *number*
Cause: An error occurred while looking up the specified data file copy key in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure.

RMAN-06125: error while looking up archived log key: *number*
Cause: An error occurred while looking up the specified archived log key in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure.

RMAN-06126: skipping offline file *string*
Cause: The indicated file will not be included in the backup set because it is offline and the SKIP OFFLINE option was specified.

Action: No action is required.

RMAN-06127: skipping read-only file *string*
Cause: The indicated file could not be included in the backup set because it was read-only and the SKIP READONLY option was specified.

Action: No action is required.

RMAN-06128: skipping inaccessible file *string*
Cause: The indicated file will not be included in the backup set because it could not be read, and the SKIP INACCESSIBLE option was specified.

Action: No action is required.

RMAN-06129: invalid reserved channel ID: *string*
Cause: The specified channel id is invalid. DELETE and DEFAULT are reserved channel names and may not be specified by users.

Action: Specify a different channel ID.

RMAN-06131: SKIP OFFLINE and SKIP READONLY are only allowed with current control file
Cause: The target database control file was not current. The SKIP OFFLINE and SKIP READONLY options are only permitted when the target database control file is current. When the target control file is not current, it is not possible to obtain a data file's offline or read-only status.

Action: Remove the SKIP option or mount a current control file on the target database.

RMAN-06132: cannot backup datafile *string* because it is not in the control file
Cause: A backup command was issued that includes the specified data file, but the data file is not listed in the control file. The control file is not current (it is a backup or a created control file).

Action: Recover the control file to make it current, then retry the backup command.

RMAN-06133: recovery catalog may have obsolete data for datafile *string*
Cause: A RESTORE UNTIL was issued, and the recovery catalog choose an older incarnation of the data file than is listed in the control file.

Action: If the recovery catalog has correct data for the data file, then restore a backup control file using the same UNTIL clause, then retry the data file restore. Otherwise, restore a backup of the incarnation of the data file listed in the control file.

RMAN-06134: host command complete
Cause: An operating system command has completed.

Action: None - this is an informational message.

RMAN-06135: error executing host command: *string*
Cause: A host command returned a non-zero return code.

Action: Correct the offending command.

RMAN-06136: Oracle error from auxiliary database: *string*
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06137: must have recovery catalog for REPORT SCHEMA AT TIME
Cause: A 'REPORT SCHEMA at_clause' command was issued, but there is no recovery catalog database.

Action: If you are not using a recovery catalog, then you may only issue the 'REPORT SCHEMA' command with no at_clause.

RMAN-06138: control file not mounted - must specify AT clause with REPORT command
Cause: A 'REPORT SCHEMA' with no at_clause was issued, and there is no recovery catalog, and there is also no control file mounted at the target database, so there is no place to get the information about the current list of files comprising the database.

Action: Use a recovery catalog or mount a control file at the target database.

RMAN-06139: warning: control file is not current for REPORT SCHEMA
Cause: A 'REPORT SCHEMA' with no at_clause was issued, and there is no recovery catalog, and the control file mounted by the target instance is not current, so the information about the current list of data files may not be current.

Action: Use a recovery catalog or mount a current control file.

RMAN-06140: cannot specify TAG option with LIST INCARNATION
Cause: The TAG option was specified with LIST INCARNATION. This is not permitted because there is no TAG associated with a database incarnation.

Action: Remove the TAG option and re-run the LIST command.

RMAN-06141: cannot specify ARCHIVELOG LIKE option with RESTORE
Cause: The ARCHIVELOG LIKE option was specified with RESTORE. This is not permitted because recovery catalog contains only those records that are not deleted from disk.

Action: Remove the ARCHIVELOG LIKE option and re-run the command.

RMAN-06142: DEVICE TYPE cannot be specified with this command
Cause: The DEVICE TYPE option was specified with a command that does not support it.

Action: Remove the DEVICE TYPE option and re-run the command.

RMAN-06143: LIKE may only be specified with COPY
Cause: The LIKE option was specified with a RMAN command. This is not permitted because only copies of data files, control files or archived logs have file names that may be tested with a LIKE operand.

Action: Remove the LIKE option and re-run the RMAN command.

RMAN-06144: FROM or UNTIL may not be specified with LIST INCARNATION
Cause: The FROM or UNTIL option was specified with LIST INCARNATION. This is not permitted because there is no time associated with a database incarnation.

Action: Remove the FROM or UNTIL option and re-run the LIST command.

RMAN-06145: control file is not current - obsolete file list may be incomplete
Cause: A CHANGE or REPORT command needs to compute the list of backups that are redundant and may be deleted. If the mounted control file is not current, it may not be possible to determine if a satisfactory backup exists for files which have been offline since the last OPEN RESETLOGS.

Action: No action need be taken - this is an informational message only. To ensure a complete report of obsolete backups, mount a current control file.

RMAN-06146: changes found for file *number* beyond offline SCN
Cause: A CHANGE or REPORT command needs to compute the list of backups that are redundant and may be deleted. A backup was found for a file which is shown as offline in the target database control file, but the backup contains changes beyond the system change number(SCN) when the file went offline. This is most likely because the target database control file is not really current, but is a restored copy of an older control file.

Action: Mount a current control file or a backup control file.

RMAN-06147: no obsolete backups found
Cause: A CHANGE or REPORT command could find no files that meet the specified criteria for obsoleteness.

Action: None - this is an informational message.

RMAN-06148: redundancy count must be greater than zero
Cause: The REDUNDANCY operand specified for a CHANGE or REPORT OBSOLETE command was zero.

Action: Specify a REDUNDANCY operand of 1 or greater.

RMAN-06149: cannot BACKUP DATABASE in NOARCHIVELOG mode
Cause: A BACKUP DATABASE command was issued, but the target database was in NOARCHIVELOG mode and was open in READ/WRITE mode.

Action: Mount the target database control file by issuing ALTER DATABASE ARCHIVELOG using the Enterprise Manager or Server Manager.

RMAN-06150: auxiliary name for datafile *number* set to: *string*
Cause: This message is issued in response to a CONFIGURE AUXNAME command.

Action: None - this is an informational message.

RMAN-06151: datafile *string* creation SCN *string*
Cause: This is an informational message. It should be accompanied by other messages.

Action: None

RMAN-06152: copy number *number* does not exist
Cause: An attempt was made to specify an invalid copy number in the VALIDATE or RESTORE VALIDATE command.

Action: Specify a valid copy number or run without the FROM COPY option.

RMAN-06153: validation failed for datafile copy
Cause: The CHANGE DATAFILECOPY VALIDATE command discovered that the data file copy could not be found or no longer contains the same data, so its record was deleted from the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06154: validation succeeded for datafile copy
Cause: The CHANGE DATAFILECOPY VALIDATE command discovered that the data file copy still matches its data in the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06155: validation failed for control file copy
Cause: The CHANGE CONTROLFILECOPY VALIDATE command discovered that the control file copy could not be found or no longer contains the same data, so its record was deleted from the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06156: validation succeeded for control file copy
Cause: The CHANGE CONTROLFILECOPY VALIDATE command discovered that the control file copy still matches its data in the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-06157: validation failed for archived log
Cause: The CROSSCHECK ARCHIVELOG command determined that the archived log could not be found or no longer contained the same data, so its record was marked expired.

Action: None - this is an informational message.

RMAN-06158: validation succeeded for archived log
Cause: The CROSSCHECK ARCHIVELOG command or VALIDATE HEADER option determined that the archived log still matches its data.

Action: None - this is an informational message.

RMAN-06159: error while looking up backup set
Cause: An error occurred while looking up the specified backup set in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the key is entered correctly. If the backup set was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06160: no backup pieces found for backup set key: *number*
Cause: No backup pieces for the requested backup set were found in the recovery catalog, or the target database control file.

Action: Specify an existing backup set.

RMAN-06161: error when inspecting auxiliary file name: *string*
Cause: This error is accompanied by other errors explaining the cause.

Action: Correct the auxiliary file name if it is wrong via the CONFIGURE AUXNAME command.

RMAN-06162: sql statement: *string*
Cause: This is the sql statement about to be executed for a SQL command.

Action: None, informational message only.

RMAN-06163: some datafiles cannot be recovered, aborting the RECOVER command
Cause: This message should be followed by one or more 6162 or 6164 messages.

Action: Check the accompanying errors.

RMAN-06164: warning: no channel of required type allocated to recover datafile *number*
Cause: A RECOVER command could not proceed because incremental backup sets or archived log backup sets exist on a device type that has not been allocated.

Action: Use the LIST command to determine which device type is needed, then allocate a channel of that type.

RMAN-06165: datafile *string* is too old to recover, restore a more recent copy
Cause: The archived logs and/or incremental backup sets required to recover the data file do not exist, but a more recent backup of the data file exists which can be recovered.

Action: Issue a RESTORE for the data file, then reissue the RECOVER command.

RMAN-06166: datafile *string* cannot be recovered
Cause: Incremental backups or archived redo logs needed to recover the data file cannot be found, and no recoverable full backup or data file copy exists.

Action: Use the LIST command to see if there is a backup set or data file copy that can be made AVAILABLE. If not, then the data file is unrecoverable. If a full or data file copy exists, then a Point-in-Time Recovery may be possible.

RMAN-06167: already connected
Cause: a CONNECT command was issued, but RMAN is already connected to the specified database.

Action: RMAN has no DISCONNECT command, so to connect to a different instance, exit RMAN and start it again.

RMAN-06168: no backup pieces with this tag found: *string*
Cause: A tag was used to specify a list of backup pieces, but no backup pieces with this tag could be found.

Action: Make sure the tag is specified correctly.

RMAN-06169: could not read file header for datafile *string* error reason *string*
Cause: The specified data file could not be accessed. The reason codes are: 1 - file name is MISSINGxx in the control file 2 - file is offline 3 - file is not verified 4 - DBWR could not find the file 5 - unable to open file 6 - I/O error during read 7 - file header is corrupt 8 - file is not a data file 9 - file does not belong to this database 10 - file number is incorrect 12 - wrong file version 15 - control file is not current

Action: If the error can be corrected, do so and retry the operation. The SKIP option can be used to ignore this error during a backup.

RMAN-06170: no control file copy found with offline range RECID *string* STAMP *string* datafile *string*
Cause: This offline range is needed for recovering the specified data file, but the offline range record has aged out of the current control file and no control file copy with the record could be accessed. At least 1 control file copy containing the offline range was found in the recovery catalog and was in AVAILABLE status.

Action: Query the RC_CONTROLFILE_COPY view for the names of all control file copies, then issue a CHANGE CONTROLFILECOPY ... VALIDATE; command for them. Then reissue the RECOVER command.

RMAN-06171: not connected to target database
Cause: A command was issued but no connection to the target database has been established.

Action: Issue a CONNECT TARGET command to connect to the target database.

RMAN-06172: no AUTOBACKUP found or specified handle is not a valid copy or piece
Cause: A restore could not proceed because no AUTOBACKUP was found or specified handle is not a valid copy or backup piece. In case of restore from AUTOBACKUP, it may be the case that a backup exists, but it does not satisfy the criteria specified in the user's restore operands. In case of restore from handle, it may be the handle is not a backup piece or control file copy. In may be that it does not exist.

Action: Modify AUTOBACKUP search criteria or verify the handle.

RMAN-06173: SET NEWNAME command has not been issued for datafile *string* when restore auxiliary
Cause: Auxiliary type was specified for the control file, but no SET NEWNAME command has been previously issued for a data file.

Action: Issue SET NEWNAME command for every data file in the recovery set.

RMAN-06174: not connected to auxiliary database
Cause: An auxiliary command was issued but no connection to a auxiliary database has been established.

Action: Issue a CONNECT AUXILIARY command to connect to the auxiliary database.

RMAN-06175: deleted script: *string*
Cause: A DELETE SCRIPT command was executed.

Action: None, informational message only.

RMAN-06176: no recovery required; all files are read-only, offline, or excluded
Cause: An attempt was made to recover files that were offline or read-only or excluded. A RECOVER DATABASE command does not need to recover any files because all of the files to be recovered are offline or read-only or excluded. This can only occur when the SKIP clause includes the SYSTEM tablespace or all files are excluded from backup, restore, and recover. All data files of a proxy pluggable database are implicitly excluded.

Action: None. This is an informational message only.

RMAN-06177: restore not done; all files read only, offline, excluded, or already restored
Cause: A RESTORE command does not need to restore any files, because all of the files to be restored are offline, read-only, excluded, or are already restored to their correct destinations.

Action: None, informational message only

RMAN-06178: datafile *number* not processed because file is offline
Cause: A RESTORE DATABASE or RECOVER DATABASE command omitted processing the indicated data file because it is offline clean at the desired point-in-time.

Action: None, informational message only

RMAN-06179: datafile *number* not processed because file is read-only
Cause: A RESTORE DATABASE or RECOVER DATABASE command omitted processing the indicated data file because it is part of a read-only tablespace at the desired point-in-time.

Action: None, informational message only

RMAN-06180: incremental backups require Enterprise Edition
Cause: A BACKUP command with INCREMENTAL LEVEL > 0 was specified.

Action: Use FULL, or INCREMENTAL LEVEL 0.

RMAN-06181: multiple channels require Enterprise Edition
Cause: Attempt to allocate more than 1 channel in a job.

Action: Remove all except one ALLOCATE CHANNEL command.

RMAN-06182: archived log *string* of thread *string* with sequence *string* larger than MAXSETSIZE
Cause: A BACKUP ARCHIVELOG command specified the MAXSETSIZE operand too low. The specified archived log is larger than MAXSETSIZE will allow.

Action: Increase MAXSETSIZE limit.

RMAN-06183: datafile or datafile copy *string* (file number *string*) larger than MAXSETSIZE
Cause: A BACKUP DATAFILE(copy) command specified the MAXSETSIZE operand too low. The specified data file is larger than MAXSETSIZE will allow.

Action: Increase MAXSETSIZE limit.

RMAN-06184: duplicate object in backup specifier: *string string*
Cause: A backup command specifies the same data file or copy of a data file multiple times.

Action: Eliminate the duplicates.

RMAN-06185: Recovery Manager incompatible with *string* database: RMAN *number.number.number.number* to *number.number.number.number* required
Cause: This version of recovery manager was incompatible with the indicated database or the DBMS_BACKUP_RESTORE package installed in the indicated database.

Action: If the database has been upgraded from an earlier version, ensure that the catxxxx.sql script has been run successfully. Re-install dbmsbkrs.sql and prvtbkrs.plb if necessary. Otherwise, use a version of RMAN within the range specified in the error message.

RMAN-06186: PL/SQL package *string.string* version *string* in *string* database is too old
Cause: The specified PL/SQL package is a version that is too old to work with this version of the Recovery Manager (RMAN).

Action: If the database indicated is CATALOG, then you can use the UPGRADE CATALOG command to upgrade the recovery catalog to the most current version. If the database is TARGET or AUXILIARY, then you must either upgrade the specified database or use an older version of RMAN.

RMAN-06187: control file copy *string* not found or out of sync with catalog
Cause: The indicated file is not found, or is found but is not the same file that the recovery catalog thinks it is. It is likely that some operation outside of Recovery Manager has altered the file, or that Recovery Manager has not resynced with the target database.

Action: Re-catalog the file and retry the operation.

RMAN-06188: cannot use command when connected to a mounted target database
Cause: An attempt was made to issue a command that can be used only when there is no connection to the target database or when the target database is not mounted.

Action: Dismount the database or restart RMAN and use the command before connecting to the target database.

RMAN-06189: current DBID *number* does not match target mounted database (*number*)
Cause: SET DBID was used to set a DBID that does not match the DBID of the database to which RMAN is connected.

Action: If the current operation is a restore to copy the database, do not mount the database. Otherwise, avoid using the SET DBID command, or restart RMAN.

RMAN-06190: PL/SQL package *string.string* version *string* in *string* database is not current
Cause: RMAN detected an old version of the specified package. RMAN will execute in backwards-compatible mode.

Action: No action is required, but certain features and bug-fixes may not be available when RMAN runs in backwards-compatible mode. If the database is CATALOG, then you can use the UPGRADE CATALOG command to upgrade the recovery catalog to the most current version. If the database is TARGET or AUXILIARY, then you must either upgrade the specified database or use an older version of RMAN. The files that must be run to upgrade the target or auxiliary database are dbmsrman.sql and prvtrman.plb.

RMAN-06191: PL/SQL package *string.string* version *string* in *string* database is too new
Cause: RMAN detected an incompatible version of the specified package.

Action: Use a newer version of recovery manager. Message 6439 indicates the minimum required version of recovery manager.

RMAN-06192: maximum value for MAXPIECESIZE or MAXSETSIZE must be between 1 KB and 2048 GB
Cause: Input size for MAXPIECESIZE or MAXSETSIZE was out of range.

Action: Specify a valid size and retry the command.

RMAN-06193: connected to target database (not started)
Cause: This is an informational message only.

Action: The database must be started before any other RMAN commands are issued.

RMAN-06194: target database instance not started
Cause: A command was issued that requires the target database instance be started.

Action: Issue a STARTUP command to start the instance.

RMAN-06195: auxiliary database not started
Cause: A command was issued that requires the auxiliary database instance be started.

Action: Issue a STARTUP AUXILIARY command.

RMAN-06196: Oracle instance started
Cause: A STARTUP command completed successfully.

Action: None, this is an informational message.

RMAN-06197: Total System Global Area *string* bytes
Cause: This is an informational message only.

Action: No action is required.

RMAN-06198: *string string* bytes
Cause: This is an informational message only.

Action: No action is required.

RMAN-06199: database mounted
Cause: This is an informational message only.

Action: No action is required.

RMAN-06200: Changed *string* objects to AVAILABLE status
Cause: This is an informational message only.

Action: No action is required.

RMAN-06201: Deleted *string* objects
Cause: This is an informational message only.

Action: No action is required.

RMAN-06202: Deleted *string* EXPIRED objects
Cause: This is an informational message only.

Action: No action is required.

RMAN-06203: Changed KEEP options for *string* objects
Cause: This is an informational message only.

Action: No action is required.

RMAN-06204: Changed *string* objects to UNAVAILABLE status
Cause: This is an informational message only.

Action: No action is required.

RMAN-06205: Uncataloged *string* objects
Cause: This is an informational message only.

Action: No action is required.

RMAN-06206: Crosschecked *string* objects
Cause: This is an informational message only.

Action: No action is required.

RMAN-06207: warning: *string* objects could not be deleted for *string* channel(s) due
Cause: This is an informational message only.

Action: No action is required.

RMAN-06208: to mismatched status. Use CROSSCHECK command to fix status
Cause: This is an informational message only.

Action: No action is required.

RMAN-06209: List of failed objects
Cause: This is an informational message only.

Action: No action is required.

RMAN-06210: List of Mismatched objects
Cause: This is an informational message only.

Action: No action is required.

RMAN-06211: ==========
Cause: This is an informational message only.

Action: No action is required.

RMAN-06212: Object Type Filename/Handle
Cause: This is an informational message only.

Action: No action is required.

RMAN-06213: ---------- ----------
Cause: This is an informational message only.

Action: No action is required.

RMAN-06214: *string string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06215: List of objects that must perform same operation at other database
Cause: This is an informational message only.

Action: The specified list of objects were not accessible at connected target database. Re-run the CROSSCHECK command after connecting to database that has DB_UNIQUE_NAME displayed in output for the specified object.

RMAN-06216: warning: db_unique_name mismatch - *string* objects could not be updated
Cause: This is an informational message only.

Action: Run CROSSCHECK command after connecting to a primary or physical standby database that can access the specified objects.

RMAN-06217: not connected to auxiliary database with a net service name
Cause: A command that moves files from the target instance to the auxiliary instance was requested. Such a command requires a net service name be present in the connect string used to connect to the auxiliary instance.

Action: Issue a CONNECT AUXILIARY command and include a net serice name in the connect string. That service name must be valid on the target instance.

RMAN-06218: List of objects requiring same operation on database with db_unique_name *string*
Cause: This is an informational message only.

Action: The specified list of objects were not accessible by the target database. Re-run the same command after connecting to database that has DB_UNIQUE_NAME displayed in output for the specified object.

RMAN-06219: List of objects not associated with all known db_unique_names
Cause: This is an informational message only.

Action: The specified list of objects were not accessible by the target database. Re-run the same command after connecting to primary database or physical standby database that can access the specified objects.

RMAN-06220: \nCreating automatic instance, with SID='*string*'
Cause: No connection to the auxiliary instance was provided, but the command requires an auxiliary instance.

Action: No action is required unless you want to create a permanent database, in which case you should stop the command and re-run it, providing an auxiliary instance connection.

RMAN-06221: \nRemoving automatic instance
Cause: RMAN is removing the automatic auxiliary instance that was created for this command.

Action: No action is required.

RMAN-06223: starting up automatic instance *string*\n
Cause: This is an informational message only.

Action: No action is required.

RMAN-06224: Automatic instance created
Cause: This is an informational message only.

Action: No action is required.

RMAN-06225: shutting down automatic instance *string*\n
Cause: This is an informational message only.

Action: No action is required.

RMAN-06226: Automatic instance removed
Cause: This is an informational message only.

Action: No action is required.

RMAN-06230: List of Stored Scripts in Recovery Catalog
Cause: This message is issued in response to a LIST SCRIPT NAMES command. The following fields are shown for each script that is stored in the recovery catalog: Header indicating to what database the script belongs. Script Name: name of the script. Description: comment associated with this script.

Action: No action is required.

RMAN-06238: List of Databases
Cause: This message is issued in response to a LIST DB_UNIQUE_NAME command. The following fields are shown for each database that is known to the recovery catalog: DB Key: This is the unique key which identifies this database in the recovery catalog. DB Name: The name of the database. DB ID: The database ID. This is a number which remains the same for the life of the database, even if the database name is changed. DB_UNIQUE_NAME: db_unique_name value for the database.

Action: No action is required.

RMAN-06246: List of Database Incarnations
Cause: This message is issued in response to a LIST INCARNATION OF DATABASE command. The following fields are shown for each database that is registered with the recovery catalog: DB Key: This is the unique key which identifies this database in the recovery catalog. Inc Key: This is the unique key which identifies this incarnation of the database in the recovery catalog. DB Name: The name of the database. DB ID: The database ID. This is a number which remains the same for the life of the database, even if the database name is changed. Status: 'YES' if this is the current incarnation of this database, otherwise 'NO'. Reset SCN: system change number (SCN) of the most recent RESETLOGS operation. Reset Time: Time of the most recent RESETLOGS operation.

Action: No action is required.

RMAN-06250: Report of files that need backup due to unrecoverable operations
Cause: An unlogged change (such as 'create table unrecoverable') has been made to this file, and the most recent backup of the file does not contain those changes.

Action: Take a backup of this file. If this file is lost before a backup is taken, then the unlogged modifications will be lost. The message indicates whether a full backup is required or whether a incremental backup will suffice.

RMAN-06263: *string string string*
Cause: This message is issued in response to the REPORT NEED BACKUP INCREMENTAL command, for those files which would use more than the specified number of incrementals during recovery.

Action: To reduce the number of incremental backups which would be used during recovery of this data file, take a new full backup of this file now.

RMAN-06270: Report of files whose recovery needs more than *number* days of archived logs
Cause: This message is issued in response to the REPORT NEED BACKUP DAYS command for those files which need more than the specified number of days' archived logs for recovery.

Action: To reduce the number of log files needed for recovery of this data file, take a new full or incremental backup now.

RMAN-06274: Report of files that must be backed up to satisfy *number* days recovery window
Cause: This message is issued in response to the REPORT NEED RECOVERY WINDOW OF n DAYS command for those files that must be backed up to satisfy specified retention policy.

Action: To satisfy specified recovery window for this data file, take a new full or incremental backup now.

RMAN-06275: invalid number of days specified for report : *string* days
Cause: This message is issued in response to the REPORT NEED RECOVERY WINDOW OF n DAYS or REPORT NEED BACKUP DAYS n command when an invalid number of days was specified in input command.

Action: The number of days specified in REPORT command must be greater than zero.

RMAN-06280: Report of obsolete backups and copies
Cause: This message is issued in response to the REPORT OBSOLETE command. Each of the files listed is obsolete because it is more redundant than the level of redundancy specified in the REPORT command.

Action: Depending on your needs, you might need to take new backups.

RMAN-06290: Report of database schema for database with db_unique_name *string*
Cause: This message is issued in response to the REPORT SCHEMA command. The report shows the physical schema of the database at the indicated time. The following fields are shown for each data file and tempfile: File: The file number. Size(MB): The size of the file in mega bytes. Tablespace: The name of the tablespace which contains this file. RB segs: YES if this file is part of a tablespace containing rollback segments, otherwise NO. Datafile/Tempfile Name: The file name. Maxsize(MB): Maximum file size to which file can be extended

Action: No action is required.

RMAN-06300: Report of files with less than *number* redundant backups
Cause: This message is issued when the REPORT NEED BACKUP REDUNDANCY command is used for those files which have less than the specified number of backups which can be used for recovery.

Action: Take another backup of the data files listed.

RMAN-06306: ==========
Cause: This message is issued in response to a LIST BACKUP DATABASE/TABLESPACE/DATAFILE command when some backups were taken with the PROXY option. If a recovery catalog is in use, then the information comes from the recovery catalog, otherwise it comes from the target database control file. The following fields are shown for each proxy data file backup. Key: This is the unique key which identifies this proxy backup in the recovery catalog. This value can be used in a CHANGE command to change its status. If the target database control file is being used as the recovery catalog, then this field uniquely identifies this copy in the control file. File: The file number that this file was copied from. Status: This is the status of the file. Possible values are: A - Available U - Unavailable D - Deleted X - Expired Status 'U' will not be used if the target database control file is being used as the recovery catalog. Completion time: This is the date and time when the backup was created. This column will be printed in the default Oracle date format, unless overridden with a NLS_DATE_FORMAT environment variable. Ckp SCN: This is the checkpoint system change number (SCN) of the backup. The file contains all changes made at or before this SCN. Ckp time: This is the time that the file was last checkpointed. Handle: This is the media manager handle of the proxy backup.

Action: No action is required.

RMAN-06378: List of Backup Sets
Cause: This message is issued in response to a LIST BACKUP command.

Action: No action is required.

RMAN-06400: database opened
Cause: This is an informational message only.

Action: No action is required.

RMAN-06401: database is already started
Cause: A STARTUP command without the FORCE option was issued, but the target database is already started.

Action: Use the FORCE option if you want to restart the database.

RMAN-06402: Oracle instance shut down
Cause: This is an informational message only.

Action: No action is required.

RMAN-06403: could not obtain a fully authorized session
Cause: The most likely cause of this error is that one of the databases to which RMAN had previously connected is not started or has has been shutdown. Other error messages should identify exactly which database is the problem.

Action: Startup the database causing the problem.

RMAN-06404: database dismounted
Cause: This is an informational message only.

Action: No action is required.

RMAN-06405: database closed
Cause: This is an informational message only.

Action: No action is required.

RMAN-06406: deleted archived log
Cause: This is an informational message only.

Action: No action is required.

RMAN-06407: auxiliary instance file *string* deleted
Cause: This is an informational message only.

Action: No action is required.

RMAN-06408: recovery catalog upgraded to version *string*
Cause: This is an informational message issued by the UPGRADE CATALOG command. It indicates the version of the recovery catalog schema to which the recovery catalog was just upgraded. Note that this version number may not reflect the version number of your rman executable or target database, because the recovery catalog schema is not changed with each Oracle version.

Action: No action is required.

RMAN-06409: LIKE clause in LIST BACKUP OF ARCHIVELOG is not supported
Cause: LIST BACKUP OF ARCHIVELOG LIKE was used, which is not supported.

Action: Remove LIKE clause from command.

RMAN-06410: cannot use command when channels are allocated
Cause: An attempt was made to issue a command that can be used only when there are no allocated channels.

Action: Do not use the command, or de-allocate channels and use the command when no channels are allocated.

RMAN-06411: backup copies setting out of range (1-4): *number*
Cause: An attempt was made to set backup copies to an invalid value.

Action: Use a value in the specified range.

RMAN-06412: no proxy copy channel found
Cause: A proxy copy was started, but no allocated channel supports proxy copy. This could be because the media management software used by the target database does not support proxy copy, or because all of the allocated channels are of type DISK, which never support proxy copy.

Action: If this is a backup, then either allocate a non-disk channel, or do not use the PROXY option. If this is a restore, then a channel of the same type which created the proxy backup was allocated, but now does not support proxy copy. If proxy copy is no longer supported by the media management software at the target database, the CROSSCHECK or CHANGE commands should be used so that those backups will not be considered for further restores.

RMAN-06413: channel *string* does not support proxy copy
Cause: The channel which was specified for this backup or restore does not support proxy copy. This could be because the media management software used by the target database does not support proxy copy, or because the channel is of type DISK, which never supports proxy copy.

Action: If this is a backup, then either allocate a non-disk channel, or do not use the PROXY option. If this is a restore, then a channel of the same type which created the proxy backup was allocated, but now does not support proxy copy. If proxy copy is no longer supported by the media management software at the target database, the CROSSCHECK command should be used so that those backups will not be considered for further restores.

RMAN-06414: target database COMPATIBLE option does not support proxy copy
Cause: PROXY was specified, and the target database uses a media manager that supports proxy copy, but the COMPATIBLE initialization parameter of the target database must be 8.1.0 or greater to create proxy backups. If the database is downgraded to the earlier version that is specified in the COMPATIBLE parameter, then it will no longer be able to restore proxy backups.

Action: Either take a non-proxy backup or change the target database COMPATIBLE parameter.

RMAN-06415: file *string* cannot be proxy backed up
Cause: The PROXY option was specified, but the media management software used by the target database cannot back up the specified file using proxy copy. If PROXY ONLY was specified, then the backup is terminated. If PROXY was specified, then this file will be placed into a non-proxy backup set.

Action: Remove the ONLY option to place the files into a regular backup set, or contact the media management vendor if you believe that the media management software should support proxy copy of this file.

RMAN-06416: PROXY ONLY was specified and some files could not be proxy copied
Cause: PROXY ONLY was specified, and some of the files to be backed up could not be backed up by the media management software used by the target database. Message 6415 is issued for each file that cannot be proxy copied.

Action: Remove the ONLY option to place the files into a regular backup set, or contact the media management vendor if you believe that the media management software should support proxy copy of these files.

RMAN-06417: command not allowed when connected to a virtual private catalog
Cause: The command that was entered cannot be used while connected to a virtual private catalog.

Action: Connect to the base catalog and re-execute the command.

RMAN-06418: proxy incremental backups with level > 0 not supported
Cause: PROXY was specified for a non-level-zero incremental backup. Proxy backups may only be full or level 0 backups.

Action: Remove one of the conflicting options.

RMAN-06419: file *string* cannot be proxy restored from handle *string*
Cause: The media management software used by the target database indicated that it cannot restore the specified file from the specified backup handle.

Action: Consult the media management software documentation to find out why this restriction exists or contact the media management vendor.

RMAN-06420: some files could not be proxy restored - aborting restore
Cause: Some of the files to be restored could not be restored by the media management software used by the target database. Message 6419 is issued for each file that cannot be restored.

Action: Contact the media management vendor if you believe that the media management software should support proxy copy of these files. The CROSSCHECK or CHANGE commands can be used to remove these proxy copies from the catalog to prevent the RESTORE command from trying to restore from them.

RMAN-06421: sent command to channel: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06422: no channels found for SEND command
Cause: No channels with the specified names or device types were found. If no channel qualifiers were specified, then no channels were allocated.

Action: Specify a different channel type or allocate a channel of the desired type.

RMAN-06423: requested limit of *number* exceeds vendor limit of *number*
Cause: A command was used to set the backup piece size limit, but the media management software used by the target database cannot create backup pieces that large.

Action: Specify a smaller backup piece limit.

RMAN-06424: error while looking up proxy copy
Cause: An error occurred while looking up the specified proxy copy in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. Ensure that the name or key is entered correctly. If the proxy copy was created when the recovery catalog was not available, then a RESYNC CATALOG must be done to update the recovery catalog.

RMAN-06425: *datafile pathname not available*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06426: RECOVERY_CATALOG_OWNER role must be granted to user *string*
Cause: The CREATE CATALOG or UPGRADE CATALOG command was used, but the USERID that was supplied in the CATALOG connect string does not have the RECOVERY_CATALOG_OWNER role granted as a DEFAULT role.

Action: Grant the RECOVERY_CATALOG_OWNER role to the recovery catalog owner.

RMAN-06427: recovery catalog already exists
Cause: The CREATE CATALOG command cannot be used when the recovery catalog already exists.

Action: Use the UPGRADE CATALOG command to upgrade your recovery catalog to the most current version without losing any existing backup data. Use the DROP CATALOG command to remove an existing recovery catalog.

RMAN-06428: recovery catalog is not installed
Cause: A recovery catalog database connection has been made, but the recovery catalog tables and views have not been installed.

Action: If you mis-typed the recovery catalog owner USERID, then correct the USERID and reconnect to the recovery catalog. If this is the first time that you have signed on to Recovery Manager with this recovery catalog owner USERID, then use the CREATE CATALOG command to create the recovery catalog schema. Alternatively, exit RMAN and connect without specifying a recovery catalog connection.

RMAN-06429: *string* database is not compatible with this version of RMAN
Cause: The indicated database is not compatible with this version of the Recovery Manager (RMAN). Other messages have also been issued which detail the cause of the error.

Action: See the other messages. If the database is CATALOG, then you may be able to use the CREATE CATALOG or UPGRADE CATALOG commands to correct the problem. If the database is TARGET or AUXILIARY, then you must either upgrade the target database or use a newer version of the RMAN executable.

RMAN-06430: recovery catalog USERID cannot be SYS
Cause: A recovery catalog connection was made to USERID SYS. The recovery catalog must be created in a USERID other than SYS.

Action: Specify a different USERID in the CATALOG connect string.

RMAN-06431: recovery catalog created
Cause: This is an informational message issued by the CREATE CATALOG command.

Action: No action is required.

RMAN-06432: recovery catalog dropped
Cause: This is an informational message issued by the DROP CATALOG command.

Action: No action is required.

RMAN-06433: error installing recovery catalog
Cause: An error was received from the recovery catalog database while it was being installed. Another error message shows the error message from the server.

Action: The most common reasons for failure to install the recovery catalog are: - Lack of space in the recovery catalog database: allocate more space, use the DROP CATALOG command to remove any partially installed recovery catalog, and retry the command. - Object already exists: This is caused by a partial recovery catalog installation. Use the DROP CATALOG command to remove the partially installed recovery catalog and retry the command.

RMAN-06434: some errors occurred while removing recovery catalog
Cause: Some errors were received from the recovery catalog database while removing the recovery catalog.

Action: Correct the error(s) and retry the command. Note that Recovery Manager intercepts and ignores common errors, such as 'object not found', which can happen while removing a

partially installed recovery catalog. Only serious errors will be displayed while removing the recovery catalog.

RMAN-06435: recovery catalog owner is *string*
Cause: This is an informational message issued by the UPGRADE CATALOG and DROP CATALOG commands.

Action: No action is required.

RMAN-06437: cannot drop catalog - catalog is newer than this RMAN
Cause: The DROP CATALOG command was entered, but the recovery catalog was created by a newer version of the Recovery Manager (RMAN). This version of RMAN may not be able to drop the entire recovery catalog.

Action: Use the version of RMAN which most recently created or upgraded the recovery catalog.

RMAN-06438: error executing package DBMS_RCVMAN in *string* database
Cause: Recovery Manager requires the DBMS_RCVMAN package in the SYS schema of the indicated database. Normally this package is installed during database creation. To re-create the package, run the files dbmsrman.sql and prvtrmns.plb.

Action: re-create the DBMS_RCVMAN package in the SYS schema.

RMAN-06439: RMAN must be upgraded to version *string* to work with this package
Cause: This message indicates the minimum version of recovery manager required to use the package which was specified in message 6191.

Action: A newer version of RMAN must be used with this package.

RMAN-06440: virtual catalog dropped
Cause: This is an informational message issued by the DROP CATALOG command, when connected to a virtual private catalog. Note that dropping a virtual private catalog does not delete any data, because the catalog data is owned by the base catalog.

Action: No action is required.

RMAN-06441: cannot upgrade catalog - catalog is already newer than this RMAN
Cause: The recovery catalog is already at a version level that is greater than this version of the Recovery Manager. The UPGRADE CATALOG command is not needed.

Action: Either upgrade to a more recent Recovery Manager, or continue to use the current version. Message 6191 will be issued if the recovery catalog is too new to work with this version of Recovery Manager.

RMAN-06443: error upgrading recovery catalog
Cause: An error was received from the recovery catalog database while upgrading the recovery catalog.

Action: Correct the error and retry the command. Note that the Recovery Manager intercepts and ignores common errors, such as 'column already exists,' which can

happen if the recovery catalog has already been partially upgraded. Only serious errors will be displayed while upgrading the recovery catalog.

RMAN-06444: error creating *string*
Cause: During the CREATE CATALOG or UPGRADE CATALOG command, the indicated object could not be created due to errors.

Action: Make sure that the RECOVER.BSQ file has not been modified or damaged, and then if this error persists, contact Oracle Support Services If the error refers to one of the RMAN PL/SQL packages, connect to the recovery catalog owner and query the USER_ERRORS view to find out the details of the compilation errors.

RMAN-06445: cannot connect to recovery catalog after NOCATALOG has been used
Cause: The CONNECT CATALOG command was used after the user had already specified the NOCATALOG option.

Action: Re-start rman if you wish to use a recovery catalog.

RMAN-06446: changed proxy copy unavailable
Cause: This is an informational message only.

Action: No action is required.

RMAN-06447: changed proxy copy available
Cause: This is an informational message only.

Action: No action is required.

RMAN-06448: uncataloged proxy copy
Cause: This is an informational message only.

Action: No action is required.

RMAN-06449: deleted proxy copy
Cause: This is an informational message only.

Action: No action is required.

RMAN-06450: crosschecked proxy copy: found to be '*string*'
Cause: This is an informational message only.

Action: No action is required.

RMAN-06451: proxy copy handle=*string* RECID=*string* STAMP=*string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06452: *string* package upgraded to version *string*
Cause: This is an informational message issued by the UPGRADE CATALOG command. It indicates the version to which the indicated package was just upgraded. Note that this version number may not reflect the version number of your rman executable or target database, because the recovery catalog packages are not changed with each Oracle version.

Action: No action is required.

RMAN-06453: RECOVERABLE may only be used with datafile objects
Cause: An attempt was made to use LIST ... RECOVERABLE .. with OF CONTROLFILE or OF ARCHIVELOG.

Action: Remove the RECOVERABLE keyword and try again.

RMAN-06454: duplexed backups require Enterprise Edition
Cause: The SET COPIES or CONFIGURE BACKUP COPIES command was used to create more than one copy of each backup piece, but Enterprise Edition is not installed.

Action: Do not attempt to create more than one copy of each backup piece.

RMAN-06455: Tablespace Point-in-Time Recovery requires Enterprise Edition
Cause: Tablespace Point-in-Time Recovery was attempted, but Enterprise Edition is not installed.

Action: Do not attempt Tablespace Point-in-Time Recovery.

RMAN-06456: command is obsolete
Cause: This is an informational message only.

Action: No action is required.

RMAN-06457: UNTIL SCN (*string*) is ahead of last SCN in archived logs (*string*)
Cause: UNTIL SCN cannot be more than the last system change number (SCN) of the last archived log

Action: Check the UNTIL SCN.

RMAN-06458: AS COPY option cannot be used with RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST
Cause: The RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST was specified with AS COPY.

Action: Remove the AS COPY option and resubmit the command.

RMAN-06459: BACKUP <VALIDATE|DURATION> is not supported with PROXY
Cause: BACKUP <VALIDATE|DURATION> and PROXY were specified in the same backup command.

Action: Remove the incompatible option.

RMAN-06460: control file copy *string* cannot be backed up by proxy.
Cause: The PROXY option was specified, but proxy copy of control file is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message.

RMAN-06461: current control file cannot be backed up by proxy.
Cause: The PROXY option was specified, but proxy copy of control file is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message.

RMAN-06462: no backup sets found on device DISK that match specification
Cause: A backup set record specifier did not match an backup set on device DISK in the recovery catalog.

Action: Resubmit the command with a different backup set record specifier. The Recovery Manager (RMAN) LIST command can be used to display all backup sets that RMAN knows about.

RMAN-06463: Backup set key *string* cannot be backed up by proxy.
Cause: The PROXY option was specified, but proxy copy of backup set is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message.

RMAN-06464: BACKUP BACKUPSET is not supported with VALIDATE option
Cause: BACKUP BACKUPSET and VALIDATE were specified in the same backup command.

Action: To validate a backup set, use the VALIDATE BACKUPSET or RESTORE VALIDATE command.

RMAN-06465: configuration not implemented: *string*
Cause: The configuration is not implemented in the current version.

Action: Avoid using the command.

RMAN-06466: error parsing configuration string (*string*)
Cause: Unsupported configuration string is stored in recovery catalog or target database control file.

Action: Check compatibility matrix rman executable and target database and recover catalog. Use DBMS_BACKUP_RESTORE.DELETECONFIG to remove problematic configuration.

RMAN-06467: could not translate DBA: *number*
Cause: An error was received when calling DBMS_RCVMAN

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06468: Invalid Data Block Address: *number*
Cause: The DBA specified doesn't belong to the mentioned tablespace

Action: Check the DBA

RMAN-06469: could not translate corruption list
Cause: An error was received when calling DBMS_RCVMAN

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-06470: DEVICE TYPE is supported only when automatic channels are used
Cause: The DEVICE TYPE option was specified with a BACKUP, RESTORE, RECOVER, DUPLICATE, CHANGE, VALIDATE, CROSSCHECK, or DELETE EXPIRED command. This option is allowed only when automatically allocated channels are used.

Action: Remove the DEVICE TYPE option and re-run the command. Or Remove all ALLOCATE commands and re-run the script so that channels are automatically allocated.

RMAN-06471: no configuration found to allocate channels for *string*
Cause: Device type configuration was not found in recovery catalog

Action: Setup device type configuration using configure command for required device type

RMAN-06472: channel id *string* is automatically allocated
Cause: Channel id was used on ALLOCATE/RELEASE command.

Action: Use other channel id that does not belong to reserved channel id's name space

RMAN-06473: SET DATABASE can only be used in case of DUPLICATE without TARGET connection
Cause: A SET DATABASE command was specified when connected to target database or not connected to an auxiliary instance.

Action: Specify the command only when not connected to a target database and when connected to an auxiliary instance in preparation to DUPLICATE without TARGET connection.

RMAN-06474: maintenance channels are not allocated
Cause: RELEASE CHANNEL was used without allocating any maintenance channels.

Action: Allocate maintenance channel before executing this command.

RMAN-06475: parallelism setting out of range (1-254): *number*
Cause: Parallelism for the device type in CONFIGURE PARALLELISM command is out of range

Action: Enter value of parallelism that are within the allowed range.

RMAN-06476: channel number out of range (1-254): *number*
Cause: Channel number entered in CONFIGURE CHANNEL command is out of range.

Action: Enter channel number within allowed range and retry the command. for this device and retry the command

RMAN-06477: configuration value length exceeds 1024
Cause: CONFIGURE CHANNEL command entered has configuration value greater than 1024 bytes.

Action: Reduce the length of CONFIGURE CHANNEL command options

RMAN-06478: warning: datafile copy '*string*' cannot be found on disk
Cause: The CHANGE DATAFILECOPY AVAILABLE command was used, but the data file copy cannot be found on disk.

Action: If the storage containing the data file copy has been removed from the host, restore it and retry the command. If the data file copy is permanently gone, then issue the CHANGE DATAFILECOPY DELETE command for this data file.

RMAN-06479: warning: control file copy '*string*' cannot be found on disk
Cause: The CHANGE CONTROLFILECOPY AVAILABLE command was used, but the control file copy cannot be found on disk.

Action: If the storage containing the control file copy has been removed from the host, restore it and retry the command. If the control file copy is permanently gone, then issue the CHANGE CONTROLFILECOPY DELETE command for this control file.

RMAN-06480: warning: archived log '*string*' cannot be found on disk
Cause: The CHANGE ARCHIVELOG AVAILABLE command was used, but the archived log cannot be found on disk.

Action: If the storage containing the archived log has been removed from the host, restore it and retry the command. If the archived log is permanently gone, then issue the CHANGE ARCHIVELOG DELETE command for this archived log.

RMAN-06481: warning: backup piece '*string*' cannot be found on the storage medium
Cause: The CHANGE BACKUPPIECE AVAILABLE command was used, but the backup piece cannot be found on the storage medium.

Action: If the storage containing the backup piece has been removed from the host, restore it and retry the command. If the backup piece is permanently gone, then issue the CHANGE BACKUPPIECE DELETE command for this backup piece.

RMAN-06482: warning: proxy copy '*string*' cannot be found on the storage medium
Cause: The CHANGE PROXY AVAILABLE command was used, but the proxy copy cannot be found on disk.

Action: If the storage containing the proxy copy has been removed from the host, restore it and retry the command. If the proxy copy is permanently gone, then issue the CHANGE PROXY DELETE command for this proxy copy.

RMAN-06483: changed datafile copy expired
Cause: This is an informational message only.

Action: No action is required.

RMAN-06484: changed control file copy expired
Cause: This is an informational message only.

Action: No action is required.

RMAN-06485: changed archived log expired
Cause: This is an informational message only.

Action: No action is required.

RMAN-06486: changed backup piece expired
Cause: This is an informational message only.

Action: No action is required.

RMAN-06487: changed proxy copy expired
Cause: This is an informational message only.

Action: No action is required.

RMAN-06488: restore from AUTOBACKUP does not allow any other modifiers
Cause: A control file or SPFILE restore from AUTOBACKUP was attempted and other restore options were used.

Action: Do not specify any other options for the control file AUTOBACKUP restore.

RMAN-06489: no configuration found to allocate clone channel *number* for device type *string*
Cause: Target channel configuration could not be used for clone channel as it contains CONNECT option.

Action: Setup clone channel configuration using CONFIGURE CLONE command for required number and type of channels.

RMAN-06490: warning: limit of AUTOBACKUPS for the day has been reached
Cause: No more control file AUTOBACKUPS are possible in this day.

Action: This is a warning message, no action is required.

RMAN-06491: control file AUTOBACKUP format "*string*" contains more than one "*string*" format specifier
Cause: A CONTROLFILE AUTOBACKUP FORMAT cannot have more than one reserved format specifier.

Action: Specify only one reserved format specifier or use an alternative format.

RMAN-06492: control file AUTOBACKUP format "*string*" must specify a "*string*" format specifier
Cause: A reserved format specifier was not specified for the CONTROLFILE AUTOBACKUP FORMAT

Action: Add a specifier to the CONTROLFILE AUTOBACKUP FORMAT

RMAN-06493: only UNTIL TIME clause is allowed when performing a restore from AUTOBACKUP, found: *string*
Cause: For restoring a control file AUTOBACKUP only SET UNTIL TIME can be used. It is not possible to translate the others to a precise day.

Action: Specify SET UNTIL TIME to indicate the day to start the restore of a control file AUTOBACKUP.

RMAN-06494: *string* = *string* is out of range (*string*-*string*)
Cause: The specified parameter for restoring a control file AUTOBACKUP is out of the valid range.

Action: Change the parameter value to a valid number or do not specify it.

RMAN-06495: must explicitly specify DBID with SET DBID command
Cause: Restore of a control file AUTOBACKUP or ADVISE FAILURE was attempted when the database is not mounted.

Action: Specify the DBID of the database using SET DBID or mount the database.

RMAN-06496: must use the TO clause when the database is mounted or open
Cause: A control file restore was attempted when the database is mounted or open and no alternate destination was specified.

Action: Specify an alternate destination with the TO clause or dismount the database.

RMAN-06497: warning: control file is not current, control file AUTOBACKUP skipped
Cause: Control file AUTOBACKUP is not possible without a current control file.

Action: This is a warning message, no action is required.

RMAN-06498: skipping datafile *string*; already backed up *string* time(s)
Cause: The indicated data file will not be included in the backup set. It is already backed up on the device requested and file is offline/read-only data file. Use the FORCE option to override backup optimization.

Action: No action is required.

RMAN-06499: skipping archived log of thread *string* with sequence *string*; already backed up
Cause: The indicated log file will not be included in the backup set because it is already backed up on the device requested. Use FORCE option to override backup optimization.

Action: No action is required.

RMAN-06500: skipping backup set key *string*; already backed up *string* time(s)
Cause: The indicated backup set will not be copied because it is already backed up on the device requested. Use FORCE option to override backup optimization.

Action: No action is required.

RMAN-06501: skipping datafile *string*; already backed up on *string*
Cause: The indicated data file will not be included in the backup set. It is already been backed up once, or before the since time specified.

Action: No action is required.

RMAN-06502: skipping archived logs of thread *string* from sequence *string* to *string*; already backed up
Cause: Some archived logs were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06503: skipping backup set key *string*; already backed up on *string*
Cause: The indicated backup set will not be backed up. It has already been backed up on the device once, or before the since time specified.

Action: No action is required.

RMAN-06504: PROXY option with multiple backup copies is not supported
Cause: Multiple backup copies and PROXY option were specified in BACKUP command.

Action: Resolve the conflict.

RMAN-06505: specified DATABASE: *string* does not match previous DATABASE: *string*
Cause: SET DBID was used to set a DBID that translated into a database name that does not match newly specified database name or a previous SET DATABASE set a different database name.

Action: Verify that the correct DBID was specified or avoid using the SET DATABASE command.

RMAN-06506: the MAXSETSIZE option cannot be used with a backup backup set
Cause: The MAXSETSIZE option was specified for a backup backup set command.

Action: Remove the option and resubmit the command.

RMAN-06507: trying alternate file for archived log of thread *number* with sequence *number*
Cause: This is an informational message, appearing when an archived log was found out of sync with catalog database.

Action: No action is required.

RMAN-06508: MAXSETSIZE *string* KBYTES should be greater than block size *string* bytes
Cause: MAXSETSIZE configured or specified in backup command should be greater than database block size.

Action: Specify a larger MAXSETSIZE limit.

RMAN-06509: only SPFILE or control file can be restored from AUTOBACKUP
Cause: A data file or archived log restore from AUTOBACKUP was attempted.

Action: Do not specify DATAFILE or ARCHIVELOG for restore from AUTOBACKUP.

RMAN-06510: RMAN retention policy is set to recovery window of *number* days
Cause: This is an informational message only.

Action: No action is required.

RMAN-06511: RMAN retention policy is set to redundancy *number*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06512: copy will be obsolete on date *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06513: copy will never be obsolete
Cause: This is an informational message only.

Action: No action is required.

RMAN-06514: archived logs required to recover from this copy will not be kept
Cause: This is an informational message only.

Action: No action is required.

RMAN-06515: archived logs required to recover from this copy will expire when this copy expires
Cause: This is an informational message only.

Action: No action is required.

RMAN-06516: time specified in KEEP UNTIL clause must be after today
Cause: KEEP UNTIL support only a future time.

Action: Correct the time and retry the command.

RMAN-06517: KEEP option is not supported for archived log backups
Cause: The KEEP option is not supported for archived logs.

Action: Either remove KEEP option and retry the command or don't specify archived logs for this backup.

RMAN-06518: backup will be obsolete on date *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06519: backup will never be obsolete
Cause: This is an informational message only.

Action: No action is required.

RMAN-06520: archived logs will not be kept or backed up
Cause: This is an informational message only.

Action: No action is required.

RMAN-06521: archived logs required to recover from this backup will expire when this backup expires
Cause: This is an informational message only.

Action: No action is required.

RMAN-06522: KEEP FOREVER option is not supported without the recovery catalog
Cause: The KEEP FOREVER option was used, but it requires a connection to a recovery catalog database. The KEEP FOREVER option cannot be used when the backup repository is the target database control file. This is because information about this backup cannot be permanently stored. (If information is stored just in the control file it will be aged out depending on CONTROL_FILE_RECORD_KEEP_TIME initialization parameter.)

Action: If a recovery catalog database is available, then connect to the recovery catalog and retry the command, otherwise use a different KEEP option. 6523, 1, "unused"

RMAN-06524: RMAN retention policy will be applied to the command
Cause: This is an informational message only.

Action: No action is required.

RMAN-06525: RMAN retention policy is set to none
Cause: Command DELETE OBSOLETE and REPORT OBSOLETE requires that either: * RMAN retention policy is not NONE or, * RMAN retention policy is specified with REPORT/ DELETE command.

Action: Either configure RMAN retention policy with CONFIGURE command or specify it at the end of DELETE/REPORT command.

RMAN-06526: KEEP option cannot be used with incremental backup
Cause: The KEEP option was specified for a incremental backup.

Action: Remove the option and resubmit the command.

RMAN-06527: KEEP option is not supported for backup of backup sets
Cause: The KEEP option is not supported for backup of backup sets.

Action: Either remove KEEP option and retry the command or don't specify backup sets for this backup.

RMAN-06528: CHANGE ... KEEP not supported for BACKUPPIECE
Cause: The CHANGE BACKUPPIECE ... KEEP command was entered. KEEP attributes cannot be specified for backup pieces.

Action: Use CHANGE BACKUPSET ... KEEP instead.

RMAN-06529: CHANGE ... KEEP not supported for ARCHIVELOG
Cause: The CHANGE ARCHIVELOG ... KEEP command was entered. KEEP attributes cannot be specified for archived logs.

Action: Use CHANGE BACKUPSET ... KEEP instead.

RMAN-06530: CHANGE ... KEEP LOGS not supported for backup set which contains archived logs
Cause: The CHANGE BACKUPSET ... KEEP command was entered, but the BACKUPSET contained archived logs. Backup sets with archived logs cannot have KEEP attributes.

Action: Do not specify backup set with archived logs for the CHANGE BACKUPSET ... KEEP command.

RMAN-06532: redundancy count must be greater than zero
Cause: The REDUNDANCY operand specified for the retention policy was zero.

Action: Specify a REDUNDANCY operand of 1 or greater.

RMAN-06533: KEEP ... NOLOGS option cannot be used when datafiles are fuzzy
Cause: The KEEP ... NOLOGS option was specified for a backup or copy of files in a fuzzy state. This kind of backup requires archived logs for recovery, so archived logs must be kept.

Action: Remove the KEEP ... NOLOGS option or make sure the files are not in a fuzzy state and resubmit the command.

RMAN-06534: archived logs required to recover from this backup will be backed up
Cause: This is an informational message only. An archivelog backup will be created and kept so the specified backup can be recovered to a consistent state.

Action: No action is required.

RMAN-06535: LIST COPY OF SPFILE is not supported
Cause: LIST COPY OF SPFILE was used, which is not supported because SPFILE cannot have a copy.

Action: Remove SPFILE from the command.

RMAN-06536: BACKED UP ... TIMES option is supported only for archived logs
Cause: The BACKUP UP ... TIMES option was used as a qualifier. This option is supported only for archived logs.

Action: Remove the option and resubmit the command.

RMAN-06537: CHANGE ... KEEP not supported for BACKUP
Cause: The CHANGE BACKUP... KEEP command was entered. KEEP attributes cannot be specified for copies and backup pieces in a single command.

Action: Use CHANGE BACKUPSET ... KEEP instead.

RMAN-06538: The expected DB_UNIQUE_NAME is *string*, but found *string*
Cause: The is an informational message.

Action: Check other error messages associated with this message.

RMAN-06539: invalid time specified in KEEP UNTIL clause
Cause: Invalid time was specified in the KEEP UNTIL clause. The KEEP UNTIL clause only supports future time until the year 2120.

Action: Correct the time and retry the command.

RMAN-06540: Tablespace *string* will be excluded from future whole database backups
Cause: This is an informational message only.

Action: No action is required.

RMAN-06541: Tablespace *string* will be included in future whole database backups
Cause: This is an informational message only.

Action: No action is required.

RMAN-06542: file *string* is excluded from whole database backup
Cause: The indicated file will not be included in the backup set because its tablespace is configured as excluded from backup.

Action: No action is required.

RMAN-06543: duplicate or conflicting LIST options: *string* and *string*
Cause: The indicated options conflict with each other or appear more than once in a LIST command.

Action: remove the duplicate/conflicting option from the command.

RMAN-06547: SYSTEM tablespace cannot be excluded from whole database backup
Cause: The SYSTEM tablespace must be included in whole database backup.

Action: Remove the SYSTEM tablespace from the CONFIGURE ... EXCLUDE and retry the operation.

RMAN-06548: connected to auxiliary database: *string* (DBID=*string*)
Cause: This is an informational message only.

Action: No action is required.

RMAN-06549: connected to auxiliary database: *string* (not mounted)
Cause: This is an informational message only.

Action: No action is required.

RMAN-06550: clone database not mounted and db_name not set in init.ora
Cause: The clone database "init.ora" file does not specify the DB_NAME parameter.

Action: Add the DB_NAME parameter to the clone database "init.ora" and restart the instance.

RMAN-06551: error while looking up datafile copy for file number: *string*
Cause: An error occurred while looking up the specified data file copy in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure. If the data file copy was created during a RESTORE with a new name, ensure that the RESTORE completed successfully.

RMAN-06552: newname for datafile *number* was set to NEW, but file was not restored
Cause: A SWITCH command was specified for a data file, but the newname was set to NEW and the file was not restored. If newname is set to NEW, the file must be restored before issuing a SWITCH command.

Action: Correct and resubmit the SWITCH command.

RMAN-06553: DB_CREATE_FILE_DEST must be set for SET NEWNAME ... TO NEW
Cause: The SET NEWNAME ... TO NEW option was specified but the OMF destination init parameter DB_CREATE_FILE_DEST is not set.

Action: Supply a full name to the SET NEWNAME command or set DB_CREATE_FILE_DEST at the target database.

RMAN-06554: warning: file *string* is in backup mode
Cause: A file which is being backed up or copied is in backup mode. RMAN will back up the file anyway, but files do not need to be put into backup mode before backing them up with RMAN.

Action: Use the ALTER TABLESPACE ... END BACKUP statement, at the target database server, to take the files out of backup mode.

RMAN-06555: datafile *string* must be restored from backup created before *string*
Cause: An incomplete recovery session was started, but the file is in newer than the UNTIL TIME clause.

Action: Check the UNTIL TIME clause or restore the file from a sufficient old backup.

RMAN-06556: datafile *string* must be restored from backup older than SCN *string*
Cause: An incomplete recovery session was started, but the file is newer than the UNTIL clause.

Action: Check the UNTIL clause or restore the file from a sufficient old backup.

RMAN-06557: unable to restore archived log of thread *number* with sequence *number*
Cause: Restore of the specified archived log failed because the size of the archived log is larger than available disk space.

Action: One of the following: 1) Increase the MAXSIZE parameter and retry the command. 2) Free up disk space in the recovery area.

RMAN-06558: archived log size of *number* kb is bigger than available space of *number* kb
Cause: This message should be followed by one or more 6557 messages.

Action: Check the accompanying errors.

RMAN-06559: MAXSIZE must be larger than 1 kb
Cause: The MAXSIZE parameter is out of range.

Action: Specify a valid size and retry the command.

RMAN-06560: warning: backup set with key *number* will be read *number* times
Cause: This message should be followed by one or more 6562 messages.

Action: Check the accompanying messages.

RMAN-06561: available space must be larger than *number* kb
Cause: The recovery failed because it requires more disk space. One of the following could have caused this error: 1) The MAXSIZE option is used but is not large enough to restore files. 2) Files should be restored to recovery area, but available disk space is not large enough to restore files.

Action: One of the following: 1) Increase the MAXSIZE parameter and retry the command. 2) Free up disk space in the recovery area.

RMAN-06562: available space of *number* kb needed to avoid reading the backup set multiple times
Cause: A backup set is read more than once. Multiple reads of a backup set can slow restore performance. One of the following could have caused this: 1) The MAXSIZE option is used but is not large enough to restore files. 2) Files should be restored to a recovery area, but the available disk space is not large enough to restore files.

Action: One of the following: 1) Increase the MAXSIZE parameter and retry the command. 2) Free up disk space in the recovery area.

RMAN-06563: control file or SPFILE must be restored using FROM AUTOBACKUP
Cause: RESTORE CONTROLFILE or RESTORE SPFILE was specified without the FROM AUTOBACKUP option when RMAN is not connected to the recovery catalog.

Action: If the recovery catalog is available, connect to the recovery catalog and retry the restore. If the recovery catalog in not available, following is the procedure to restore control file or SPFILE: 1. Specify the DBID of the database with the SET DBID command. 2. If the AUTOBACKUP was created with non-default AUTOBACKUP format, then specify the AUTOBACKUP format using the SET CONTROLFILE AUTOBACKUP FORMAT command. 3. If the backup was created with SBT device, then allocate an SBT channel using the ALLOCATE CHANNEL command. 4. Restore control file or SPFILE by starting the RESTORE ... FROM AUTOBACKUP command.

RMAN-06564: must use the TO clause when the instance is started with SPFILE
Cause: A restore of the SPFILE from AUTOBACKUP was attempted when the instance is started with SPFILE and no alternate destination was specified.

Action: Specify an alternate destination with the TO clause.

RMAN-06565: warning: *string*: sqlcode *number* was caught, automatic retry #*number*
Cause: The RMAN client caught a transient error and will automatically retry several times.

Action: No action required, this is an informational message.

RMAN-06566: target database incarnation not found in control file
Cause: RESETLOGS CHANGE# and/or time of the target database doesn't match any database incarnation in the control file.

Action: One of the following actions can be taken to resolve this error 1) Restore the control file from the incarnation. 2) To populate the new incarnation, inspect or restore an archived log/data file/data file copy/backup set from the target incarnation

RMAN-06567: connected to auxiliary database: *string* (DBID=*string*, not open)
Cause: This is an informational message only.

Action: No action is required.

RMAN-06568: connected to target database: *string* (DBID=*string*, not open)
Cause: This is an informational message only.

Action: No action is required.

RMAN-06569: DATABASE: *string* does not match previous DATABASE: *string*
Cause: SET DBID or SET DATABASE was used to specify the target database name which does not match specified database name in DUPLICATE command.

Action: Verify that the correct DBID or the correct DATABASE was specified or avoid specifying DATABASE in DUPLICATE command.

RMAN-06570: datafile *number* switched to datafile copy "*string*"
Cause: This message was issued in response to a SWITCH command.

Action: No action is required, this is an informational message.

RMAN-06571: datafile *number* does not have recoverable copy
Cause: The SWITCH command with the option TO COPY was specified but the data file has no valid copy to switch to.

Action: Verify whether the data file has a valid data file copy.

RMAN-06572: database is open and datafile *number* is not offline
Cause: The SWITCH command with the option TO COPY was specified, but data file is not offline and database is open.

Action: Either make sure the data file is offline or the database must be mounted but not opened.

RMAN-06573: specified DBID: *string* does not match previous DBID: *string*
Cause: The DBID in the DUPLICATE command did not match the previously specified DBID in the SET DBID command.

Action: Verify that the correct DBID was specified or avoid using DBID in the DUPLICATE command.

RMAN-06575: platform id *number* found in datafile *string* header is not a valid platform id
Cause: The platform id found in the data file header was not recognized.

Action: Verify that this is a valid data file.

RMAN-06576: platform '*string*' (*number*) found in header of datafile *string* does not match specified platform name '*string*' (*number*)
Cause: The platform specified in the command did not match the platform found in the data file header.

Action: Specify the correct platform name and retry the command.

RMAN-06577: FROM TAG option may only be used with datafile copies
Cause: The FROM TAG option was specified for data files.

Action: Remove the option and resubmit the command.

RMAN-06578: INCREMENTAL LEVEL > 0 must be specified with FOR RECOVER OF
Cause: The FOR RECOVER OF option was specified without specifying INCREMENTAL LEVEL > 0.

Action: Specify INCREMENTAL LEVEL > 0 and resubmit the command.

RMAN-06580: the *string* option cannot be used with AS COPY
Cause: The specified option was specified for a backup as copy command.

Action: Remove the option and resubmit the command.

RMAN-06581: option *string* not supported
Cause: This option was specified and it is not supported.

Action: Remove the specified option.

RMAN-06582: AS COPY option cannot be used when backing up backup sets
Cause: The backup set was specified with AS COPY.

Action: Remove the AS COPY option or remove the backup sets.

RMAN-06583: at least 1 channel of TYPE DISK must be allocated to use AS COPY option
Cause: No channel of TYPE DISK was allocated.

Action: Allocate a channel of TYPE DISK and re-issue the command or remove AS COPY.

RMAN-06584: warning: AS BACKUPSET option added due to allocation of multiple channel types
Cause: DISK and non DISK channels were allocated for a backup command. Configuration indicates to produce image copies to DISK, however due to the mixed channel types BACKUPSETS will be created on DISK.

Action: Do not allocate non DISK channels to produce image copies to DISK or allocate only non DISK channels to produce BACKUPSETS only.

RMAN-06585: no copy of datafile *number* found
Cause: An available data file copy for the specified data file could not be found.

Action: make sure that all specified data files have a copy available.

RMAN-06586: no copy of datafile *number* with tag *string* found
Cause: An available data file copy for the specified data file could not be found.

Action: make sure that all specified data files have a copy available.

RMAN-06587: one or more datafile copies were not found
Cause: This error message was accompanied by an additional error message or messages indicating the cause of the error.

Action: Follow the recommended actions of the additional error message or messages.

RMAN-06588: number of patterns (*number*) to DB_FILE_NAME_CONVERT should be even
Cause: An uneven number of patterns was specified.

Action: Specify one more or one less pattern.

RMAN-06589: cannot specify DB_FILE_NAME_CONVERT option without AS COPY
Cause: The DB_FILE_NAME_CONVERT option was specified without AS COPY. This is not permitted for backup set backups where multiple files are combined into a set.

Action: Remove the DB_FILE_NAME_CONVERT option and re-run the BACKUP command.

RMAN-06590: Tablespace *string* cannot be converted
Cause: The system tablespaces could not be transported to other platforms.

Action: Remove the specified tablespace from the CONVERT command and retry the operation.

RMAN-06591: ALLOW INCONSISTENT can only be used with cross-platform backup
Cause: ALLOW INCONSISTENT was specified in a non cross-platform backup command.

Action: Remove ALLOW INCONSISTENT or add a cross-platform backup modifier.

RMAN-06593: platform name '*string*' specified in FROM PLATFORM is not valid
Cause: The platform name was not recognized.

Action: Specify a valid platform name.

RMAN-06594: platform name '*string*' specified in TO PLATFORM is not valid
Cause: The platform name was not recognized.

Action: Specify a valid platform name.

RMAN-06595: platform name '*string*' does not match database platform name '*string*'
Cause: The platform name specified did not match the name of the database performing the conversion.

Action: Specify the correct platform name.

RMAN-06596: *string* requires target database compatibility *string*, currently set to *string*
Cause: A command or option was used that requires a higher database compatibility than is currently set at the target database.

Action: Raise the compatibility of the database before attempting the command again.

RMAN-06597: conversion between platforms '*string*' and '*string*' is not implemented
Cause: Conversion of Oracle data files between the specified platforms was not supported.

Action: Do not do the conversion.

RMAN-06599: Tablespace *string* is not read-only
Cause: A conversion was attempted on a tablespace which is not read-only.

Action: Change the tablespace to read-only and retry the operation.

RMAN-06600: old RMAN configuration parameters:
Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06601: new RMAN configuration parameters:
Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06602: TO DESTINATION option can be used only for disk device
Cause: The TO DESTINATION option was specified for non-disk device.

Action: Remove the TO DESTINATION option and resubmit the command.

RMAN-06603: TO DESTINATION option must be specified with RECOVERY AREA, RECOVERY FILES or DB_RECOVERY_FILE_DEST on disk device
Cause: RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST option was specified in BACKUP command on disk device without specifying TO DESTINATION option.

Action: Specify TO DESTINATION option and retry the command.

RMAN-06604: new RMAN configuration parameters are successfully stored
Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06605: old RMAN configuration parameters are successfully deleted
Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06606: RMAN configuration parameters are successfully reset to default value
Cause: This message is issued in response to a CONFIGURE command.

Action: No action is required, this is an informational message only.

RMAN-06607: RMAN configuration parameters for database with db_unique_name *string* are:
Cause: This message is issued in response to a SHOW command.

Action: No action is required, this is an informational message only.

RMAN-06608: RMAN configuration has no stored or default parameters
Cause: This message is issued in response to a SHOW command.

Action: No action is required, this is an informational message only.

RMAN-06609: AS COPY can be configured only for disk device
Cause: The AS COPY option was specified for non-disk device.

Action: Remove the AS COPY option and resubmit the command.

RMAN-06610: For record type *string* RECIDS from *number* to *number* are re-used before resync
Cause: This messages is issued when the control file records were re-used before resyncing to catalog database.

Action: Increase control_file_keep_record_time setting or issue BACKUP command that it will generate fewer control file records, e.g., backup few tablespaces instead of the complete database in one BACKUP command.

RMAN-06611: Following RMAN configuration applied before deleting logs:
Cause: This message is issued in response to a DELETE command.

Action: No action is required, this is an informational message only.

RMAN-06612: Incompatible options were specified for archivelog deletion policy
Cause: Incompabitle options were specified on CONFIGURE ARCHIVELOG DELETION POLICY command.

Action: Remove incompabitle options and retry the command. BACKED UP option can be used individually or combined with SHIPPED or APPLIED option. Following are invalid combination of options: a) TO NONE cannot be used with other options b) SHIPPED ON STANDBY and SHIPPED ON ALL STANDBY cannot be used together. c) APPLIED ON STANDBY and APPLIED ON ALL STANDBY cannot be used together. d) SHIPPED and APPLIED cannot be used together.

RMAN-06613: Connect identifier for DB_UNIQUE_NAME *string* not configured
Cause: The connect identifier for the specified DB_UNIQUE_NAME initialization parameter was not configured.

Action: Do one of the following: - If the DB_UNIQUE_NAME belongs to a connected target database, then define the DB_UNIQUE_NAME parameter in LOG_ARCHIVE_DEST_n at the remote database from where the resynchronization is performed. Otherwise, define DB_UNIQUE_NAME parameter in LOG_ARCHIVE_DEST_n at the target database. Or, - Configure the appropriate

connect identifier using the CONFIGURE DB_UNIQUE_NAME RMAN command and rerun the command.

RMAN-06614: DB_UNIQUE_NAME string is too long
Cause: The DB_UNIQUE_NAME initialization parameter string was too long.

Action: Configure the appropriate DB_UNIQUE_NAME initialization parameter string and re-run the command.

RMAN-06615: resyncing from database with DB_UNIQUE_NAME *string*
Cause: Resync was performed remotely for the specified DB_UNIQUE_NAME initialization parameter without connecting to it as target database. This type of remote resync has limitations. For example, RMAN output cannot be resynced. Please refer to RMAN documentation for a complete set of limitations.

Action: This is an informational message.

RMAN-06616: RMAN output not resynced for database with DB_UNIQUE_NAME *string*
Cause: V$RMAN_OUTPUT contents were not rescyned when the RESYNC CATALOG FROM DB_UNIQUE_NAME command was executed."

Action: This is an informational message.

RMAN-06617: UNTIL TIME (*string*) is ahead of last NEXT TIME in archived logs (*string*)
Cause: UNTIL TIME was more than the last NEXT TIME of the last archived log.

Action: Check the UNTIL SCN.

RMAN-06618: RMAN client and database version mismatch; indicated database version is *number.number.number.number*
Cause: This version of Oracle Recovery Manager (RMAN) was incompatible with either the indicated database or the DBMS_BACKUP_RESTORE package installed in the indicated database.

Action: If the database is upgraded from an earlier version, ensure that the catuxxx.sql script has run successfully. Reinstall dbmsbkrs.sql and prvtbkrs.plb, if necessary. Otherwise, ensure that the RMAN client version is the same as the target database version.

RMAN-06619: recovery catalog schema version *string* is newer than RMAN version
Cause: The Oracle Recovery Manager (RMAN) client version did not match the catalog schema version number for the database.

Action: This is an informational message. No action is required.

RMAN-06700: error parsing text script in file *string*
Cause: Incorrect syntax or invalid commands were found.

Action: Fix text script and retry the command.

RMAN-06701: could not construct path for file: "*string*"
Cause: An error was encountered when trying to construct the full pathname for the specified file.

Action: Ensure that the path is correct.

RMAN-06702: could not initialize for input file: "*string*"
Cause: An error was encountered when trying to initialize the specified file for input.

Action: Ensure that the file exists.

RMAN-06703: could not open file: "*string*" (reason=*string*)
Cause: An error was encountered when trying to open the specified file.

Action: Ensure that the file has correct permissions.

RMAN-06705: text script line is too long (>1024)
Cause: A text script contained a line longer than the permitted maximum length.

Action: Split the line in smaller lines an retry the operation.

RMAN-06706: could not close file: "*string*" (reason=*string*)
Cause: An error was encountered when trying to close the specified file.

Action: Ensure that the file has correct permissions and still exists.

RMAN-06707: could not initialize for output file: "*string*"
Cause: An error was encountered when trying to initialize the specified file for output.

Action: Ensure that the file exists.

RMAN-06708: short write while writing file "*string*". Wrote *string* bytes instead of *string* bytes
Cause: An attempt was made to write to a file system that was full.

Action: Ensure that the file system has room for the file. Check system logs.

RMAN-06709: \n No scripts in recovery catalog
Cause: An attempt was made to list the scripts in the catalog, but no scripts could be found in the specified recovery catalog.

Action: No action required, this is an informational message only.

RMAN-06710: script *string* not found in catalog
Cause: An attempt was made to call a script that could not be found in the target database or as a global script in the specified catalog.

Action: Verify the script name and retry the command.

RMAN-06711: global scripts require a TARGET connection
Cause: Connection to a TARGET database was not specified.

Action: Provide a TARGET connection and retry the command.

RMAN-06716: skipping datafile *number*; already restored to file *string*
Cause: Recovery Manager determined that this file is already restored. Use FORCE option to override this optimization.

Action: No action required, this is an informational message only.

RMAN-06717: Could not delete auxiliary instance file *string*
Cause: Auxiliary instance file was not deleted. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06724: backup not done; all files already backed up
Cause: A BACKUP command does not need to backup any files, because all of the files to backup are already backed up.

Action: No action required, this is an informational message only.

RMAN-06725: database not open: sort area size too small
Cause: sort area size too small to execute RMAN commands.

Action: open the database or increase sort_area_size.

RMAN-06726: could not locate archived log *string*
Cause: The specified archived log could not be found on any allocated channel.

Action: Allocate additional channels on other nodes of the cluster or, if the archived logs has been deleted, use the CROSSCHECK ARCHIVELOG command to correct the recovery catalog or target database control file entries.

RMAN-06727: could not locate datafile copy *string*
Cause: The specified data file copy could not be found on any allocated channel.

Action: Allocate additional channels on other nodes of the cluster or if the data file copy has been deleted, use the CROSSCHECK DATAFILECOPY command to correct the recovery catalog or target database control file entries.

RMAN-06728: could not locate control file copy *string*
Cause: The specified control file copy could not be found on any allocated channel.

Action: Allocate additional channels on other nodes of the cluster or if the control file copy has been deleted, use the CROSSCHECK CONTROLFILECOPY command to correct the recovery catalog or target database control file entries.

RMAN-06729: no backup of the SPFILE found to restore
Cause: A SPFILE restore could not proceed because no backup of the SPFILE was found. It may be the case that a backup of this file exists but does not satisfy the criteria specified in the user's restore operands.

Action: Modify options for the SPFILE restore.

RMAN-06730: no channel to restore a backup of the SPFILE
Cause: A SPFILE restore could not proceed because the backup on a device type that was not allocated for restore.

Action: No action required, this is an informational message only. See message 6026 for further details.

RMAN-06731: command *string*:*string*%% complete, time left *number*:*number*:*number*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06732: database dropped
Cause: This is an informational message only.

Action: No action is required.

RMAN-06733: database unregistered from the recovery catalog
Cause: This is an informational message only.

Action: No action is required.

RMAN-06737: database name "*string*" does not match target database name "*string*"
Cause: The UNREGISTER DATABASE command was used with a database name that does not match the name of the database to which RMAN is connected.

Action: Specify the correct database name or avoid specifying the database name when connected to the target database.

RMAN-06738: database name "*string*" is not unique in the recovery catalog
Cause: The UNREGISTER DATABASE command was used with a database name that is ambiguous.

Action: Use the SET DBID command to specify the database id and resolve the ambiguity.

RMAN-06739: database "*string*" is not found in the recovery catalog
Cause: The UNREGISTER DATABASE command was used with a database name that was not found in the recovery catalog.

Action: Make sure the database name specified in the DROP DATABASE command syntax is correct.

RMAN-06740: database name is not specified
Cause: The command failed because of the following: o RMAN is not connected to the target database o The database name is not specified in the command o DBID is not set with the SET DBID command

Action: Any one of the following actions will fix the problem: o Connect to the target database o Specify database name o Set DBID with SET DBID command

RMAN-06741: database name is "*string*" and DBID is *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06742: platform name '*string*' longer than *number* characters
Cause: The specified platform name exceeded the maximum allowed platform name.

Action: Correct the platform name.

RMAN-06743: specification does not match any backup set in the repository
Cause: The specified backup sets were not found in the recovery catalog or target database control file.

Action: Verify backup set existence and retry the command.

RMAN-06744: specification does not match any datafile copy in the repository
Cause: The specified data file copies were not found in the recovery catalog or target database control file.

Action: Verify data file copy existence and retry the command.

RMAN-06745: skipping datafile copy *string*; already backed up *string* time(s)
Cause: The indicated data file copy was not included in the backup set because it was already backed up on the device requested.

Action: Use FORCE option to override backup optimization.

RMAN-06746: backup cancelled because there are no files to backup
Cause: There were no files or all files were skipped for this backup set, therefore no backup set was created.

Action: This message is informational only.

RMAN-06747: at least 1 channel of tertiary storage must be allocated to execute this command
Cause: The executed command requires a SBT channel, but no channels of type SBT were configured or allocated.

Action: ALLOCATE or CONFIGURE a SBT channel.

RMAN-06748: more than one channel types were allocated
Cause: RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST option was specified in BACKUP command, but more than one channel types was used and no DEVICE TYPE or CHANNEL option was specified.

Action: Specify CHANNEL or DEVICE TYPE option and retry the command.

RMAN-06749: restore point *string* does not exist.
Cause: The specified restore point does not exists in v$restore_point table of the target database.

Action: Check the name of restore point and retry the command.

RMAN-06750: SPFILE cannot be backed up by proxy.
Cause: The PROXY option was specified, but proxy copy of SPFILE is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message only.

RMAN-06751: ASM file *string* cannot be proxy backed up.
Cause: The PROXY option was specified, but proxy copy of ASM file is not supported. This file will be placed into a non-proxy backup set.

Action: No action required, this is an informational message only.

RMAN-06752: error while looking up tempfile: *string*
Cause: An error occurred while looking up the specified tempfile in the recovery catalog or target database control file.

Action: This error is accompanied by other errors describing the reason for the failure; see those error messages for further information. One possible problem is that the tempfile name was not entered correctly.

RMAN-06753: tempfile not found in the repository
Cause: The specified tempfile is not found in the control file or recovery catalog.

Action: Make sure that the tempfile name is correct and retry

RMAN-06754: INCREMENTAL FROM SCN option is not supported with [*string*]
Cause: The INCREMENTAL FROM SCN option was supplied but does not apply to this type of backup.

Action: Remove the INCREMENTAL FROM SCN operand and reenter the command.

RMAN-06755: warning: datafile *string*: incremental-start SCN is too recent; using checkpoint SCN *string* instead
Cause: The incremental-start sysetm change number (SCN) which was specified when starting an incremental data file backup is greater than the data file checkpoint SCN, which could cause some blocks to be missed.

Action: Specify a smaller incremental-start system change number (SCN).

RMAN-06756: cannot flashback database to non-guaranteed restore point *string* when flashback is off
Cause: The indicated restore point was not guaranteed and flashback was disabled. When flashback is disabled, Oracle can flashback only to guaranteed restore point.

Action: Specify a guaranteed restore point or turn on flashback and retry the command. the command.

RMAN-06757: DB_UNIQUE_NAME "*string*" does not match target database ("*string*")
Cause: The value specified in the FOR DB_UNIQUE_NAME option did not match the DB_UNIQUE_NAME parameter setting of the target database.

Action: Use the RMAN STARTUP command, with no parameter file option, to start the target database without a parameter file, then run the RESTORE SPFILE command again.

RMAN-06758: DB_UNIQUE_NAME is not unique in the recovery catalog
Cause: RMAN could not identify which SPFILE to restore for this target database, because the recovery catalog contained two or more different instances of this database, each with different DB_UNIQUE_NAME values.

Action: Use the FOR DB_UNIQUE_NAME option to specify the name of the instance whose parameter file you want to restore.

RMAN-06759: skipping datafile copies that are already backed up
Cause: Some data file copies were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06760: skipping archived logs that are already backed up
Cause: Some archived logs were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06761: skipping backup sets that are already backed up
Cause: Some backup sets were not be backed up because they were already backed up on the device requested.

Action: No action is required. You can use the FORCE option to override backup optimization and force these files to be backed up.

RMAN-06762: ignoring encryption for proxy or image copies
Cause: This information message is displayed when the RMAN client is generating proxy or image copies and encryption was enabled for the input files.

Action: This is an informational message only.

RMAN-06763: specified encryption algorithm not supported
Cause: An encryption algorithm not supported by the database is specified during backup.

Action: Refer to contents of v$rman_encryption_algorithms view for the list of supported encryption algorithm. Specify a valid encryption algorithm and retry the command.

RMAN-06764: *string*
Cause: An error occurred when processing user request.

Action: n/a

RMAN-06765: Tablespace *string* will be encrypted in future backup sets
Cause: This is an informational message only.

Action: No action is required.

RMAN-06766: Tablespace *string* will not be encrypted in future backup sets
Cause: This is an informational message only.

Action: No action is required.

RMAN-06767: Tablespace *string* will default to database encryption configuration
Cause: This is an informational message only.

Action: No action is required.

RMAN-06768: duplicate or conflicting options are specified: *string* and *string*
Cause: An error occurred when processing the command because user specified two duplicate options or the two options are not allowed to be used together.

Action: Remove one of the above options and retry the command.

RMAN-06769: length of password must be greater than zero
Cause: Zero length password was specified for encrypted backups.

Action: Retry the command using a password with non-zero length.

RMAN-06771: cannot do IMPORT CATALOG after NOCATALOG has been used
Cause: The IMPORT CATALOG command was used after the NOCATALOG option was already specified.

Action: Restart RMAN and connect to recovery catalog if you wish to IMPORT CATALOG.

RMAN-06772: cannot do IMPORT CATALOG before connecting to recovery catalog
Cause: The IMPORT CATALOG command was used before connecting to the recovery catalog.

Action: Connect to recovery catalog using CONNECT CATALOG command if you wish to IMPORT CATALOG.

RMAN-06773: connected to source recovery catalog database
Cause: This is an informational message only.

Action: No action is required.

RMAN-06774: must specify a TNS service name for source recovery catalog database
Cause: The connect string does not contain TNS service name. IMPORT CATALOG without TNS service name is not supported.

Action: Specify a service name and resubmit the command.

RMAN-06775: not connected to source recovery catalog database
Cause: IMPORT CATALOG command was issued but no connection to the source recovery catalog database has been established.

Action: Resubmit IMPORT CATALOG command with correct connect string.

RMAN-06776: source recovery catalog database not started
Cause: IMPORT CATALOG command was issued which requires the source recovery catalog to be open.

Action: Open the source recovery catalog database and re-submit the command.

RMAN-06777: Oracle error from source recovery catalog database: *string*
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-06778: warning: *string*: sqlcode *number* was caught, automatic retry #*string*
Cause: The RMAN client caught a transient error during temporary resource allocate for IMPORT CATALOG command and will automatically retry several times.

Action: No action required, this is an informational message.

RMAN-06779: import validation complete
Cause: This is an informational message only.

Action: No action required.

RMAN-06780: database unregistered from the source recovery catalog
Cause: This is an informational message only.

Action: No action is required.

RMAN-06781: *string* package version *string* in source database is not of version *string*
Cause: The catalog schema version of the source recovery catalog is not the same as the target recovery catalog. The two catalog

Action: UPGRADE source recovery catalog schema and recovery catalog schema to same version and retry the command.

RMAN-06782: Datafile headers of locally managed datafiles need to be updated.
Cause: This is an informational message only.

Action: No action is required.

RMAN-06783: Update of datafile headers of locally managed datafiles finished.
Cause: This is an informational message only.

Action: No action is required.

RMAN-06784: One or more datafile headers of locally managed datafiles were not updated.
Cause: Errors prevented the update of one or more data file headers.

Action: See trace file for details of the problem.

RMAN-06785: This operation might take some time.
Cause: This is an informational message only.

Action: No action is required.

RMAN-06786: could not read file header for datafile *string* to do FLASHBACK.
Cause: The indicated data file header could not be read to do FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

RMAN-06787: warning: TAG *string* option is ignored; backups will be tagged with *string*
Cause: WITH TAG option and TAG option were used together. When WITH TAG option is used, all the backups created by the command will have tag specified with WITH TAG option.

Action: The TAG option can be removed to not display the message.

RMAN-06791: changed the DB_UNIQUE_NAME value from *string* to *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06792: database db_unique_name is "*string*", db_name is "*string*" and DBID is *string*
Cause: UNREGISTER DB_UNIQUE_NAME or CHANGE DB_UNIQUE_NAME command was executed, hence RMAN displayed the database information for which DB_UNIQUE_NAME the metadata will be removed/renamed in the recovery catalog.

Action: No action required, this is an informational message only.

RMAN-06793: database with db_unique_name *string* unregistered from the recovery catalog
Cause: UNREGISTER DB_UNIQUE_NAME command was executed.

Action: No action required, this is an informational message only.

RMAN-06795: Flashback database logging is not on.
Cause: A FLASHBACK DATABASE command was tried but flashback database logging has not been enabled.

Action: Flashback database logging must be enabled via the ALTER DATABASE FLASHBACK ON command before a FLASHBACK DATABASE command can be tried. If the database must be taken back in time then a restore and incomplete recovery must be performed.

RMAN-06796: Not enough flashback database log data to do FLASHBACK.
Cause: There was not enough flashback database log data to do the FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

RMAN-06797: Grant succeeded.
Cause: This is an informational message issued in response to a GRANT command.

Action: No action required.

RMAN-06798: Revoke succeeded.
Cause: This is an informational message issued in response to a REVOKE command.

Action: No action required.

RMAN-06799: found eligible base catalog owned by *string*
Cause: When creating a virtual private catalog, an 11g base catalog was found, owned by the specified user, and the currently connected catalog user has been granted privileges on this catalog, and can therefore create a virtual private catalog using this base catalog. This is an informational message issued in response to a CREATE VIRTUAL CATALOG command.

Action: No action required.

RMAN-06800: found ineligible base catalog owned by *string*
Cause: When creating a virtual private catalog, an 11g base catalog was found, owned by the specified user, and the currently connected catalog user has not been granted any privileges on this catalog. This is an informational message issued in response to a CREATE VIRTUAL CATALOG command.

Action: No action required.

RMAN-06801: no base catalog found
Cause: When trying to create a virtual catalog, either no base catalog was found, or this user has no privilege to create a virtual catalog against any existing base catalog.

Action: Establish the correct privileges and re-create the virtual catalog.

RMAN-06802: too many eligible base catalogs found
Cause: When trying to create a virtual catalog, more than one base catalog was found that is eligible to be the base catalog for this virtual catalog.

Action: Revoke privileges so that the current catalog user has privileges on only one base catalog, then re-issue the CREATE VIRTUAL CATALOG command.

RMAN-06803: created virtual catalog against base catalog owned by *string*
Cause: A virtual private catalog was created, where the base catalog data is owned by the specified user. This is an informational message issued in response to a CREATE VIRTUAL CATALOG command.

Action: No action required.

RMAN-06804: Enter value for *string*:
Cause: This is a user prompt.

Action: Enter a substitution value to proceed.

RMAN-06805: SET NEWNAME command has not been issued for tempfile *string*
Cause: A SWITCH command was specified for a tempfile, but no destination was specified and no SET NEWNAME command has been previously issued for that file. An explicit file to switch to must be specified if no SET NEWNAME command has been issued.

Action: Correct and resubmit the SWITCH command.

RMAN-06806: compression algorithm '*string*' of release *string* not found
Cause: An unsupported compression algorithm was specified for the backup.

Action: Query the V$RMAN_COMPRESSION_ALGORITHM view for the list of suppmrted compression algorithms. Specify a valid compression algorithm and retry the command.

RMAN-06807: compression algorithm '*string*' of release *string* cannot be used because database compatibility is less than *string*
Cause: The compression algorithm is not supported because the current compatibility level of the database is too low.

Action: Query the V$RMAN_COMPRESSION_ALGORITHM view for the list of supported compression algorithms. Specify a valid compression algorithm and retry the command.

RMAN-06808: SECTION SIZE cannot be used when piece limit is in effect
Cause: The SECTION SIZE backup option was used together with the MAXPIECESIZE channel limit. These options are mutually exclusive, because they are independant methods of creating multiple backup pieces with one backup command.

Action: Use one option or the other, but not both.

RMAN-06809: compression algorithm '*string*' of release *string* requires advanced compression option
Cause: The compression algorithm was not supported because it requires advanced compression option to be enabled.

Action: Enable advanced compression option by setting advanced_compression_option_usable=true or specify a different compression algorithm.

RMAN-06810: specification does not match any datafile copy in the repository
Cause: No data file copies were found that match specification in the recovery catalog or target database control file.

Action: Check the specifier.

RMAN-06811: specification does not match any control file copy in the repository
Cause: No control file copies were found that match specification in the recovery catalog or target database control file.

Action: Check the specifier.

RMAN-06812: specification does not match any backup in the repository
Cause: No backups were found that match specification in the recovery catalog or target database control file.

Action: Check the specifier.

RMAN-06813: could not translate pluggable database *string*
Cause: An error occurred while looking up the specified pluggable database in the repository.

Action: Ensure that the database name is entered correctly and retry the command.

RMAN-06814: cannot connect to pluggable database *string*
Cause: An error was received when connecting to database because the database is a pluggable database.

Action: Connect to the root database and retry the command.

RMAN-06815: cannot change the container in RMAN session.
Cause: An attempt was made by to change the container using the ALTER SESSION SET CONTAINER statement.

Action: This operation is not allowed in RMAN session.

RMAN-06817: Pluggable Database *string* cannot be backed up in NOARCHIVELOG mode.
Cause: Backing up the Pluggable Database when database was in NOARCHIVELOG mode is not allowed.

Action: Pluggable Database backups are not allowed when the database is in NOARCHIVELOG mode. Close the container database and backup the complete database using the BACKUP DATABASE command.

RMAN-06818: warning: last archived log from primary database not received at standby database
Cause: An archived log was switched at the primary database during backup at the standby database and this log was not shipped to the standby database. The backup created at the standby database will need more logs to recover.

Action: Check whether the standby database is configured correctly to receive logs from the primary database.

RMAN-06819: current log archived at primary database
Cause: The ALTER SYSTEM ARCHIVE LOG CURRENT command completed successfully at the primary database because the connected target instance was a physical standby database. The switched archived logs were included in the backup so that the backed up files could be recovered to a consistent point-in-time.

Action: None. This is an informational message.

RMAN-06820: warning: failed to archive current log at primary database
Cause: An attempt to switch the archived log at the primary database failed.

Action: Resolve the error messages associated with this message to avoid the warning.

RMAN-06821: backup is not consistent because the last archived log was not received at the standby database
Cause: As part of the KEEP backup operation, the archived log at the primary database was switched but was not shipped to the standby database.

Action: Check whether the standby database is configured correctly to receive logs from the primary database.

RMAN-06822: backup not consistent because switching of archived log failed at the primary
Cause: As part of the KEEP backup operation, the attempt to switch the archived log at the primary database failed.

Action: Resolve the error messages associated with this message to avoid the warning.

RMAN-06823: flashback command failed due to low value of DB_FLASHBACK_RETENTION_TARGET
Cause: An attempt to flashback failed due to the NULL value for OLDEST_FLASHBACK_SCN or OLDEST_FLASHBACK_TIME in V$FLASHBACK_DATABASE_LOG. This failure can happen when the initial creation of standby is not consistent or when there is not enough space in FRA for 1 hours worth of flashback data.

Action: Increase the value for DB_FLASHBACK_RETENTION_TARGET to a higher value and check the value of OLDEST_FLASHBACK_SCN and OLDEST_FLASHBACK_TIME in V$FLASHBACK_DATABASE_LOG.

RMAN-06824: cannot connect to remote database
Cause: Connecting to the remote server specified by the database connect string failed.

Action: Check additional error messages for more information.

RMAN-06825: skipping data file copy *string* because it belongs to dropped PDB
Cause: The indicated data file copy was not included in the backup because it belonged to a dropped pluggable database (PDB).

Action: No action is required.

RMAN-06826: skipping backup piece *string* because it belongs to dropped PDB
Cause: The indicated backup piece will not be backed up because it belonged to a dropped pluggable database (PDB).

Action: No action is required.

RMAN-06827: GUID may only be specified with backup
Cause: The GUID option was specified with an RMAN command. This is not permitted because only copies and backups of data files, control files and SPFILE may be tested with a GUID operand.

Action: Remove the GUID option and re-run the RMAN command.

RMAN-06828: no backup pieces with this GUID found: *string*
Cause: A GUID was used to specify a list of backup pieces, but no backup pieces with this tag could be found.

Action: Ensure that GUID is specified correctly.

RMAN-06829: number of times backed up must be greater than zero
Cause: A value less than one was specified for the BACKED UP clause of the BACKUP command.

Action: Specify a value of one or greater for the BACKED UP clause.

RMAN-06830: skipping archived logs when connected to a PDB
Cause: An attempt was made to back up, delete, or validate archived logs when the target was a pluggable database (PDB).

Action: No action is required. This is an informational message.

RMAN-06831: skipping accessible file *string*
Cause: The indicated file could not be restored because the file header could be read, and the SKIP ACCESSIBLE option was specified.

Action: No action is required.

RMAN-06832: invalid mirror number specified: *number*
Cause: An attempt was made to validate data file, database, tablespace, or data file copy with the mirror number 0, 4294967295, or higher.

Action: Use a valid mirror number and retry the command.

RMAN-06833: validate with the mirror option is permitted only for data files
Cause: An attempt was made to validate backup set, archived log, recovery file, control file, or SPFILE with the mirror option.

Action: No action is required. This is an informational message.

RMAN-06834: pluggable database *string* does not have any data files
Cause: An attempt was made to back up data files from a pluggable database (PDB) that did not have any data files.

Action: Remove the PDB from the command and retry.

RMAN-06835: specification does not match any data file in the respository
Cause: No data file found that match specification in the recovery catalog or target database control file. An attempt was made to back up or restore data files of pluggable databases, but none of the specified pluggable database had a data file.

Action: Check the pluggable database specifier.

RMAN-06836: command not supported for far sync instance
Cause: A far sync instance did not have user data files.

Action: No action is required. This is an informational message only.

RMAN-06896: cannot resolve circular path of synonym *string*
Cause: Synonym forms a circular reference that causes an infinite loop.

Action: Drop self-referential synonyms.

RMAN-06897: procedure, function, package, sequence, or type is not supported here
Cause: RMAN does not support DESCRIBE for procedures, functions, packages, sequences, or types.

Action: Use DESCRIBE for tables or views only.

RMAN-06898: recovery catalog is partially upgraded to *string*
Cause: The recovery catalog database was not completely upgraded to the specified version. Either there were some errors during execution of UPGRADE CATALOG or UPGRADE CATALOG was cancelled before completion.

Action: Execute UPGRADE CATALOG again.

RMAN-06899: updating recovery catalog with new database incarnation
Cause: The target database has a new incarnation that has not already been seen by the recovery catalog. This usually happens because a Point-in-Time Recovery was done. RMAN has made the necessary updates to the recovery catalog.

Action: This is an informational message only.

RMAN-06900: warning: unable to generate V$RMAN_STATUS or V$RMAN_OUTPUT row
Cause: The routine createRmanStatusRow() or createRmanOutputRow() could add new row into V$RMAN_STATUS or V$RMAN_OUTPUT.

Action: Check the associated error messages. If the associated error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-06901: warning: disabling update of the V$RMAN_STATUS and V$RMAN_OUTPUT rows
Cause: Informational message only.

Action: No action required.

RMAN-06903: backup of datafile *string* was cancelled
Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run the BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06904: backup of archived log for thread *number* with sequence *number* and starting SCN of *string* was cancelled
Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06905: backup of backup set key *number* was cancelled
Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06906: backup of control file was cancelled
Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06907: MINIMIZE LOAD option not allowed for the specified input files
Cause: This option was specified in a backup command specification for BACKUP BACKUPSET or BACKUP CURRENT CONTROLFILE command.

Action: Remove the MINIMIZE LOAD option and retry the command.

RMAN-06908: warning: operation will not run in parallel on the allocated channels
Cause: RMAN allocated more than one channel for a job, but the job will not run in parallel on these channels because parallelism require Enterprise Edition.

Action: None

RMAN-06909: warning: parallelism require Enterprise Edition
Cause: RMAN allocated more than one channel for a job, but the job will not run in parallel on these channels because parallelism require Enterprise Edition.

Action: None

RMAN-06910: can not invoke parallel recovery for test recovery
Cause: Recover database was called with TEST and PARALLEL option

Action: Call recover database with either just the TEST or PARALLEL option

RMAN-06911: only one PARALLEL or NOPARALLEL clause may be specified
Cause: Recover database was called with PARALLEL and NOPARALLEL option

Action: Call recover database with either just the PARALLEL or NOPARALLEL option.

RMAN-06912: backup of spfile was cancelled
Cause: This is an informational message displayed when PARTIAL option of DURATION option was specified on the BACKUP command and backup could not be completed within the given duration time.

Action: Run BACKUP command to backup cancelled files, or let the next backup window backup the cancelled files. It should be noted that the files that were skipped in the current job will be given preference to other files for next the BACKUP command with DURATION option.

RMAN-06913: validate cancelled because there are no files to validate
Cause: All files for this validate command were skipped, therefore no files to validate.

Action: This message is informational only.

RMAN-06914: BLOCK *string* must be greater or equal to BLOCK *string*
Cause: The value of TO block number was less than the value of from block number.

Action: Increase the value of TO BLOCK past the value of from BLOCK and retry the command.

RMAN-06915: restore point *string* already exists
Cause: The specified restore point already exists on this database.

Action: Use LIST RESTORE POINT to see existing names and retry the command with a unique restore point name.

RMAN-06916: RECOVER DATABASE required for SNAPSHOT TIME recovery
Cause: RECOVER DATABASE must be used for SNAPSHOT TIME recovery.

Action: Use the RECOVER DATABASE command to perform the recovery.

RMAN-06917: skipping backup sets; RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST option cannot validate backup set
Cause: The RECOVERY FILES, RECOVERY AREA or DB_RECOVERY_FILE_DEST was specified in VALIDATE command to validate backup set. This is not supported.

Action: To validate a backup set, use the VALIDATE BACKUPSET or RESTORE VALIDATE command.

RMAN-06918: warning: allocated SBT channel to the Recovery Appliance in NOCATALOG mode
Cause: The Recovery Appliance might have run out of resources because congestion control could not be enabled in NOCATALOG mode.

Action: Use CATALOG mode to connect RMAN to a Recovery Appliance instance.

RMAN-06919: command not allowed when the Recovery Appliance is running
Cause: The command specified could not be used when the Recovery Appliance was running.

Action: Shut down the Recovery Appliance and retry the command.

RMAN-06920: database *string* is not open read-only
Cause: CONVERT DATABASE attempted on a database that was not open read-only.

Action: Open the database in read-only mode and retry the operation.

RMAN-06921: Convert database check failed
Cause: This database could not be transported because DBMS_TDB.CHECK_DB returned FALSE.

Action: None

RMAN-06922: External table *string*.*string* found in the database
Cause: An external table was found in the database.

Action: Redefine the table in the transported database.

RMAN-06923: Directory *string*.*string* found in the database
Cause: A directory object was found in the database.

Action: Redefine the directory in the transported database.

RMAN-06924: BFILE *string*.*string* found in the database
Cause: A BFILE was found in the database.

Action: Redefine the BFILE in the transported database.

RMAN-06925: BFILEs are used in the system, please redefine them in the transported database
Cause: BFILEs may or may not exist in the database. Automatically performed BFILE check failed because database was open read-only and could not allocate temporary space. This does not affect CONVERT DATABASE operation.

Action: Use DBMS_TDB.CHECK_EXTERNAL to perform BFILE check when the database is open in read/write mode.

RMAN-06926: User *string* with *string* privilege found in password file
Cause: Password file was used.

Action: Re-create the password file on the target platform using ORAPWD for the transported database.

RMAN-06927: Cannot specify NEW DATABASE clause more than once
Cause: NEW DATABASE clause specified more than once

Action: Remove redundant NEW DATABASE clause and retry the operation.

RMAN-06928: Cannot specify ON TARGET PLATFORM clause more than once
Cause: ON TARGET PLATFORM clause specified more than once

Action: Remove redundant ON TARGET PLATFORM clause and retry the operation.

RMAN-06929: Cannot specify TRANSPORT SCRIPT clause more than once
Cause: TRANSPORT SCRIPT clause specified more than once

Action: Remove redundant ON TARGET PLATFORM clause and retry the operation.

RMAN-06930: Cannot specify SKIP clause more than once
Cause: SKIP clause specified more than once

Action: Remove redundant SKIP clause and retry the operation.

RMAN-06931: Cannot specify FROM PLATFORM clause
Cause: CONVERT DATABASE command cannot use FROM PLATFORM clause.

Action: Change FROM PLATFORM clause and retry.

RMAN-06932: Database name '*string*' longer than *number*
Cause: The specified database name exceeded the maximum allowable database name length.

Action: Correct the database name.

RMAN-06933: Transport script name too long
Cause: The specified transport script name exceeded the maximum allowable script name length.

Action: Correct the script name.

RMAN-06934: Format string too long
Cause: The specified format string exceeded the maximum allowable format string length.

Action: Correct the format string.

RMAN-06935: Convert script name too long
Cause: The specified convert script name exceeded the maximum allowable script name length.

Action: Correct the script name.

RMAN-06936: at least 1 channel of TYPE DISK must be allocated to use CONVERT
Cause: A channel of TYPE DISK was not allocated.

Action: Allocate a channel of TYPE DISK and reissue the command.

RMAN-06937: invalid format specifier '*string*'
Cause: An invalid format specifier was found in an RMAN command.

Action: Correct the format specifier and retry the command.

RMAN-06941: Database must be closed and mounted EXCLUSIVE and RESTRICTED.
Cause: DROP DATABASE was attempted while the database was open or not mounted EXCLUSIVE and RESTRICTED.

Action: Change the database state to mounted EXCLUSIVE and RESTRICTED.

RMAN-06942: OPTION *number* is invalid; OPTION must be between *string* and *string*
Cause: An invalid OPTION was used.

Action: Change the OPTION argument.

RMAN-06943: no automatic repair OPTION *number* was listed in ADVISE FAILURE
Cause: The OPTION specified was not one of the automatic repair options listed by ADVISE FAILURE or there were no options listed by the ADVISE FAILURE command.

Action: Change the OPTION argument or resubmit ADVISE FAILURE with a different set of failures.

RMAN-06944: contents of repair script:
Cause: This is an informational message only.

Action: No action is required.

RMAN-06945: no repair script present for REPAIRID *string*
Cause: REPAIRID option specified in the command was invalid or the repair script had been purged from Automated Diagnostic Repository.

Action: Retry REPAIR FAILURE command with a different OPTION number.

RMAN-06946: executing repair script
Cause: This is an informational message only.

Action: No action is required.

RMAN-06947: searching flashback logs for block images until SCN *string*
Cause: Starting the flashback log search for RECOVER...BLOCK command. The log is searched until the indicated system change number (SCN).

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06948: searching flashback logs for block images
Cause: Starting the flashback log search for RECOVER...BLOCK command. The log is searched until the end of the log.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06949: finished flashback log search, restored *string* blocks
Cause: Flashback log search finished for RECOVER...BLOCK command.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06950: invalid validate option specified: *string*
Cause: The specified object was invalid with VALIDATE command.

Action: Delete the invalid operand.

RMAN-06951: repair failure complete
Cause: This is an informational message only.

Action: No action is required.

RMAN-06952: database needs to be restarted
Cause: The target database control file was missing.

Action: Restart the instance and repair the database.

RMAN-06953: no automatic repairs were listed by ADVISE FAILURE
Cause: There were no automatic repairs listed by the ADVISE FAILURE command.

Action: Choose a different failure, submit ADVISE FAILURE command, and then submit REPAIR FAILURE command.

RMAN-06954: REPAIR command must be preceded by ADVISE command in same session
Cause: The ADVISE command was not issued in the same session as the REPAIR command.

Action: Submit ADVISE command and then submit the REPAIR command in same session.

RMAN-06955: Network copies are only supported for nonsection image copies.
Cause: An attempt was made to specify BACKUP AUXILIARY FORMAT without specifying the AS COPY clause. A network copy is only supported with an image copy without sections.

Action: Seek an alternate method of copying the desired files.

RMAN-06956: create datafile failed; retry after removing *string* from OS
Cause: An attempt was made to re-create a database file. This attempt failed.

Action: If the indicated file already exists, remove the file from operating system and retry the RMAN command.

RMAN-06957: finished standby search, restored *string* blocks
Cause: Standby search finished for RECOVER...BLOCK command.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06958: Executing: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06959: warning: repair completed but could not verify that failures were fixed by it
Cause: RMAN repair command successfully completed but could not check if the failures were fixed.

Action: Use LIST FAILURE command to verify repair results.

RMAN-06960: EXPDP> *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06961: IMPDP> *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-06962: Error received during export of metadata
Cause: Data Pump could not perform export of tablespace metadata.

Action: See accompanying datapump messages indicating the cause of the error.

RMAN-06963: Error received during import of metadata
Cause: Data Pump could not perform import of tablespace metadata.

Action: See accompanying datapump messages indicating the cause of the error.

RMAN-06964: option *string* cannot be used with *string*
Cause: Incompatible options were specified that caused the command to fail.

Action: Remove one of the options from the command and retry.

RMAN-06965: Datapump job has stopped
Cause: A Data Pump error has caused the job to stop.

Action: See accompanying datapump messages or look for a Data Pump trace file for the cause of the error.

RMAN-06966: Invalid release number *string*
Cause: An incorrectly formatted release number was specified.

Action: Specify a valid release number in n.n.n.n.n format.

RMAN-06967: finished primary search, recovered *string* blocks
Cause: Primary Database search finished for RECOVER...BLOCK command.

Action: None. This is an informational message displayed for RECOVER...BLOCK command.

RMAN-06968: duplicate DUMP FILE specification
Cause: DUMP FILE specification already encountered for this command.

Action: Remove duplicate DUMP FILE specification and retry the command.

RMAN-06969: duplicate DATAPUMP specification
Cause: DATAPUMP specification already encountered for this command.

Action: Remove duplicate DATAPUMP specification and retry the command.

RMAN-06970: NEWNAME '*string*' for database must include %*number* or %%U format
Cause: The newname in SET NEWNAME FOR DATABASE did not include a format specifier to produce different newnames for the data files.

Action: Include %f or %U in the newname or use SET NEWNAME FOR DATABASE TO NEW to ensure data files get different data file names.

RMAN-06971: NEWNAME '*string*' for tablespace must include %*number* or %%U format
Cause: The newname in SET NEWNAME FOR TABLESPACE did not include a format specifier to produce different newnames for the data files.

Action: Include %f or %U in the newname or use SET NEWNAME FOR TABLESPACE ... TO NEW to ensure data files get different data file names.

RMAN-06980: The following errors need to be fixed before peforming this command
Cause: The tablespaces failed validation by DBMS_TTS.TRANSPORT_SET_CHECK.

Action: Fix accompanying violations before attempting the command again.

RMAN-06981: Violation: *string*
Cause: This message was issued to show a violation obtained from the DBMS_TTS.TRANSPORT_SET_CHECK.

Action: Fix violation before attempting the command again.

RMAN-06982: SQL command with length of *string* exceeds maximum length of *string*
Cause: The SQL command issued exceeded the maximum allowed length.

Action: Retry the command removing unnecessary spaces or use a shorter command.

RMAN-06983: unsupported data type *string* in column *string* for select
Cause: The select list included an unsupported data type. Not all SQL data types are supported by RMAN. Only simple data types are supported.

Action: Remove the column from select list or use a conversion function to change it to a simple data type.

RMAN-06985: \n*string* rows selected
Cause: This is an informational message only.

Action: No action is required.

RMAN-06986: Statement processed
Cause: This is an informational message only.

Action: No action is required.

RMAN-06987: NUMWIDTH option *string* out of range (*number* through *number*)
Cause: Value for NUMWIDTH option was out of the specified range.

Action: Check the limits of the option and enter a value that is within the range.

RMAN-06988: Only SELECT statements are supported for CATALOG modifier
Cause: SQL CATALOG was specified for a non-SELECT statement.

Action: Do not specify CATALOG or change the statement to be a SELECT statement.

RMAN-06989: \nno rows selected
Cause: This is an informational message only.

Action: No action is required.

RMAN-06990: Error in select list
Cause: The specified select list could not be processed.

Action: See accompanying errors for corrective action.

RMAN-06991: Name Null? Type
Cause: This is an informational message only.

Action: No action is required.

RMAN-06992: ---------- -------- ----------
Cause: This is an informational message only.

Action: No action is required.

RMAN-06993: LONG option *string* out of range (*number* through *number*)
Cause: Value for LONG option was out of the specified range.

Action: Check the limits of the option and enter a value that is within the range.

RMAN-06994: cannot issue *string* command in CATALOG mode when database is a SNAPSHOT STANDBY
Cause: An attempt was made to run a command in CATALOG mode when connected to a SNAPSHOT STANDBY database.

Action: Execute the command in NOCATALOG mode.

RMAN-06995: AT ANY SCN option can be used for DATAFILECOPY only
Cause: AT ANY SCN option was not used with DATAFILE COPY.

Action: No action required.

RMAN-07000: List of SPFILE Backups
Cause: This message is issued in response to a LIST BACKUP OF SPFILE command.

Action: No action is required.

RMAN-07025: *string* is not supported for foreign archived log
Cause: The specified option was not supported for foreign archived log.

Action: Do not use the specified command for foreign archived log.

RMAN-07200: no failures found that match specification
Cause: A failure specifier did not match any failures in the Automated Diagnostic Repository.

Action: Resubmit the command with a different failure specifier. You can use the LIST FAILURE ALL command in Recovery Manager to display all failures known to RMAN.

RMAN-07207: changed *string* failures to HIGH priority
Cause: This is an informational message only.

Action: No action is required.

RMAN-07208: changed *string* failures to LOW priority
Cause: This is an informational message only.

Action: No action is required.

RMAN-07209: closed *string* failures
Cause: This is an informational message only.

Action: No action is required.

RMAN-07210: new failures after most recent LIST FAILURE command
Cause: New failures were found since last LIST FAILURE command in this RMAN session.

Action: No action is required. This is an informational message only.

RMAN-07211: failure option not specified
Cause: ALL, CRITICAL, HIGH, LOW, or list of failure numbers was not specified.

Action: Specify a failure option and resubmit the command.

RMAN-07212: skipping failure *string* because it was CLOSED
Cause: The specified failure has been already closed, so ADVISE FAILURE or CHANGE FAILURE cannot be executed on this failure.

Action: This is an informational message only. No action is required.

RMAN-07213: Mandatory Manual Actions
Cause: This is an informational message only.

Action: No action is required.

RMAN-07215: Automated Repair Options
Cause: This is an informational message only.

Action: No action is required.

RMAN-07220: no manual actions available
Cause: This is an informational message only.

Action: No action is required.

RMAN-07222: ==========
Cause: This is an informational message only.

Action: No action is required.

RMAN-07251: Repair script: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-07252: ==========
Cause: This is an informational message only.

Action: No action is required.

RMAN-07253: ==========
Cause: This is an informational message only.

Action: No action is required.

RMAN-07255: priority change for failure *string* failed
Cause: An attempt was made to change the priority of a child failure.

Action: Specify the parent failure ID to change the child failure.

RMAN-07256: cannot change priority of child failure
Cause: An attempt was made to change the priority of child failure.

Action: This message should be followed by one or more 7255 messages.

RMAN-07259: *string* critical failures exist; cannot exclude from ADVISE FAILURE
Cause: ADVISE FAILURE was executed for HIGH or LOW priority failures when CRITICAL failures existed.

Action: Execute ADVISE FAILURE with the CRITICAL or ALL options.

RMAN-07262: no automatic repair options available
Cause: This is an informational message only.

Action: No action is required.

RMAN-07263: Database Role: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-07500: searching for all files that match the pattern *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-07501: searching for all files in the recovery area
Cause: This is an informational message only.

Action: No action is required.

RMAN-07502: List of Files Unknown to the Database
Cause: This message is issued in response to a CATALOG command.

Action: No action is required.

RMAN-07505: no files found to be unknown to the database
Cause: This is an informational message displayed by the CATALOG command. The command either found no files, or all files that matched the specified search pattern were already present in the target database control file.

Action: No action is required.

RMAN-07507: cataloging files...
Cause: This is an informational message only.

Action: No action is required.

RMAN-07508: cataloging done
Cause: This is an informational message only.

Action: No action is required.

RMAN-07509: List of Cataloged Files
Cause: This message is issued in response to a CATALOG command.

Action: No action is required.

RMAN-07513: List of Files Which Were Not Cataloged
Cause: This message is issued in response to a CATALOG command.

Action: No action is required.

RMAN-07514: ==========
Cause: This is an informational message only.

Action: No action is required.

RMAN-07515: File Name: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-07516: Reason: Error reading
Cause: This is an informational message only.

Action: No action is required.

RMAN-07517: Reason: The file header is corrupted
Cause: Either the file is not an Oracle file or the file header is corrupted.

Action: Delete the file using OS utility.

RMAN-07518: Reason: Foreign database file DBID: *string* Database Name: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-07519: Reason: Error while cataloging. See alert.log.
Cause: This is an informational message only.

Action: No action is required.

RMAN-07520: Reason: Data pump dump file
Cause: This is an informational message only.

Action: No action is required.

RMAN-07521: cannot create recovery catalog in database version *string*; version *string* required
Cause: An attempt was made to use a version of the recovery catalog schema that was incompatible with the version of the database.

Action: Upgrade the catalog database to at least the required version or install the catalog schema in a different database which is of at least the required version.

RMAN-07522: CREATE TYPE privilege must be granted to user *string*
Cause: The CREATE CATALOG or UPGRADE CATALOG command was used, but the USERID that was supplied in the CATALOG connect string does not have the CREATE TYPE privilege granted.

Action: Grant CREATE TYPE privilege to the recovery catalog owner.

RMAN-07523: List of files in Recovery Area not managed by the database
Cause: This message was issued in response to a CATALOG RECOVERY AREA command.

Action: No action is required.

RMAN-07524:
==========
Cause: This is an informational message only.

Action: No action is required.

RMAN-07525: Reason: File is not a supported file type in Recovery Area
Cause: This message should be accompanied by other message(s) indicating the name of file that was not supported in recovery area. Any file other than current control file, online log, archived log, RMAN backups and flashback log is not supported in recovery area. This is an informational message only.

Action: No action is required.

RMAN-07526: Reason: File is not an Oracle Managed File
Cause: This message should be accompanied by other message(s) indicating the name of file that was not a oracle managed file. This is an informational message only.

Action: No action is required.

RMAN-07527: Reason: File was not created using DB_RECOVERY_FILE_DEST initialization parameter
Cause: This message should be accompanied by other message(s) indicating the name of file that was not created using DB_RECOVERY_FILE_DEST initialization parameter. One of the following scenarios caused this error: 1) This is an archived log file and was created when the LOG_ARCHIVE_DEST_n initialization parameter was set explicitly to recovery area location. For example, LOG_ARCHIVE_DEST_1='location=+FRA' where '+FRA' was also your DB_RECOVERY_FILE_DEST value. 2) This is an RMAN backup file and was created in a recovery area using the FORMAT option of the BACKUP command. 3) This is an online log file or current control file and was created prior to setting the recovery area. 4) This file fits none of the above scenarios and is not supported by the recovery area.

Action: All of following actions will resolve future occurrences of this error: 1) To create archived logs in recovery area, set the LOG_ARCHIVE_DEST_n initialization parameter to 'location=USE_DB_RECOVERY_FILE_DEST'. Do not explicitly set the LOG_ARCHIVE_DEST_n initialization parameter to a recovery area location. 2) To create RMAN backups in recovery area, do not use the FORMAT option of the BACKUP command. All of following actions will resolve current problem: 1) If this is an archived log file or an RMAN backup file, use the CATALOG command to re-catalog the files. 2) If this is an online log file or a current control file to be managed by the recovery area, re-create the file using the DB_RECOVERY_FILE_DEST initialization parameter.

RMAN-07528: number of files not managed by recovery area is *string*, totaling *string*
Cause: This message should be accompanied by other message(s) indicating the list of files. Either the files listed are not known to the database or not managed by recovery area. The number and size of the files are shown. This is an informational message only.

Action: No action is required.

RMAN-07529: Reason: catalog is not supported for this file type
Cause: The CATALOG command encountered one or more files of types that cannot be cataloged. These file types include online redo logs, flashback logs, block change tracking files, and data pump files. This message will be accompanied by other messages indicating the names of the file's that could not be cataloged.

Action: No action is required.

RMAN-07530: Reason: This file type is not requested for cataloging
Cause: This is an informational message only.

Action: No action is required.

RMAN-07531: skipping datafile *number*; already restored to SCN *string*
Cause: Recovery Manager determined that this file was already restored to the specified SCN.

Action: No action required, this is an informational message only.

RMAN-07532: skipping datafilecopy *string*; already recovered to SCN *string*
Cause: Recovery Manager determined that this data file copy was already recovered to the specified SCN.

Action: No action required, this is an informational message only.

RMAN-07535: waiting for ASM instance to release file state object
Cause: This is an informational message only.

Action: No action is required.

RMAN-07536: command not allowed when connected to a Pluggable Database
Cause: A command was attempted that can only be performed in the root container.

Action: Connect to the root container and retry the command.

RMAN-07537: command only allowed in a container database
Cause: A command was attempted that is only allowed in a CDB.

Action: Connect to a CDB and retry the command.

RMAN-07538: Pluggable Database qualifier not allowed when connected to a Pluggable Database
Cause: A command was attempted with Pluggable Database name qualifier. This is not allowed when connected to a Pluggable Database.

Action: Connect to the root container or remove the Pluggable Database qualifier and retry the command.

RMAN-07539: insufficient privileges to upgrade the catalog schema
Cause: UPGRADE CATALOG command was attempted, but the current recovery catalog connection does not have the privileges required to upgrade the catalog schema.

Action: 1. Execute '?/rdbms/admin/dbmsrmanvpc.sql -vpd *owner*' after connecting to a catalog database as SYS to grant VPD-required privileges to the base catalog owner. 2. Connect to RMAN base catalog and perform UPGRADE CATALOG. 3. Execute '?/rdbms/

admin/dbmsrmanvpc.sql *owner*' after connecting to a catalog database as SYS to cleanup VPC users schemas associated with this base recovery catalog.

RMAN-07540: Cleanup is required for the VPC user schema
Cause: The VPC user specified in the connect string does have extra privileges granted.

Action: Execute '?/rdbms/admin/dbmsrmanvpc.sql' after connecting to a catalog database as SYS to cleanup VPC users schemas.

RMAN-07541: checkpoint of the data file is more recent than the last archived log
Cause: The checkpoint system change number (SCN) of the data file in the backup was higher than the SCN of the most recent archived log. THE RMAN DUPLICATE command will use the checkpoint SCN of the most recent backup data file as the UNTIL SCN value during restore and recovery.

Action: This is an informational message only.

RMAN-07542: switched to preplugin container *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-07543: recovery catalog does not have VPD support enabled
Cause: An attempt was made to use virtual recovery catalog features without a proper VPD setup for the base catalog.

Action: 1. Execute '?/rdbms/admin/dbmsrmanvpc.sql -vpd *owner*' after connecting to a catalog database as SYS to grant VPD-required privileges to the base catalog owner. 2. Reconnect to RMAN base catalog and perform UPGRADE CATALOG. 3. Retry the failed operation.

RMAN-07544: Execute '?/rdbms/admin/dbmsrmanvpc.sql *string*' as SYS to cleanup VPC users schemas
Cause: There are existing VPC users schemas assiciated with this base recovery catalog that have to be migrated to the new VPD model.

Action: Execute '?/rdbms/admin/dbmsrmanvpc.sql *owner*' after connecting to a catalog database as SYS to cleanup VPC users schemas associated with this base recovery catalog.

RMAN-07545: skipping data file *string* because it belongs to container *string*
Cause: A RESTORE or RECOVER command omitted processing the indicated data file because it belongs to different PDB from the preplugin container. RESTORE or RECOVER of data files from more than one pluggable database (PDB) in one command is not supported because it belongs to different PDB from the preplugin container.

Action: No action is required.

RMAN-07546: no preplugin container set
Cause: An attempt was made to use the PREPLUGIN clause but no preplugin container was set.

Action: Use the SET PREPLUGIN CONTAINER command to set the preplugin container and retry the command.

RMAN-07547: PREPLUGIN option requires the database to be opened
Cause: The PREPLUGIN option was specified, but the database was not opened.

Action: Open the database and then retry the command. If the database could not be opened, then retry the command after connecting to the target database with the ROOT credential.

RMAN-07548: cannot upgrade catalog using Recovery Appliance RMAN executable
Cause: The recovery catalog that was not a Recovery Appliance catalog could not be upgraded using a Recovery Appliance RMAN executable.

Action: Use an RMAN executable from a database shiphome and upgrade the recovery catalog schema.

RMAN-07549: cannot upgrade catalog using non Recovery Appliance RMAN executable
Cause: Recovery Appliance catalog could not be upgraded using this RMAN executable.

Action: Use RMAN executable from Recovery Appliance shiphome and upgrade the recovery catalog schema.

RMAN-07550: preplugin repository not found for container *string*
Cause: The specified pluggable database (PDB) did not have a preplugin repository.

Action: Check the PDB name and retry the command.

RMAN-07551: data file *string* must be restored or preplugin recovery must be completed
Cause: A RECOVER command was issued, and the recovery catalog indicates the specified data file should be part of the recovery. But this data file is not listed in the control file, and cannot be found on disk or preplugin recovery was incomplete.

Action: Issue a RESTORE command for this data file or complete RECOVER FROM PREPLUGIN to complete preplugin recovery and then reissue the RECOVER.

RMAN-07552: VPC support required when target database is pluggable database
Cause: An attempt was made to use recovery catalog when the target database was a Pluggable Database (PDB). This is supported only when Virtual Private Catalog (VPC) is enabled.

Action: Enable VPC support in the recovery catalog schema and retry the command.

RMAN-07553: warning: RECOVERY WINDOW is more than CONTROL_FILE_RECORD_KEEP_TIME
Cause: The specified RECOVERY WINDOW was more than the CONTROL_FILE_RECORD_KEEP_TIME initialization parameter on target database. Using RMAN without a recovery catalog in such a configuration would result in losing backup information.

Action: Use the recovery catalog or ensure that the RECOVERY WINDOW is not more than CONTROL_FILE_RECORD_KEEP_TIME parameter by changing the RECOVERY WINDOW or CONTROL_FILE_RECORD_KEEP_TIME parameter value. Oracle highly recommends using the recovery catalog to keep backup information for more than a month.

RMAN-07554: warning: CONTROL_FILE_RECORD_KEEP_TIME is too large (*string* days)
Cause: The CONTROL_FILE_RECORD_KEEP_TIME initialization parameter value was too high. A large value would increase the size of control file and can cause performance issues.

Action: Use the recovery catalog or reduce the CONTROL_FILE_RECORD_KEEP_TIME initialization parameter on target database to less than a month. Oracle highly recommends using the recovery catalog to keep backup information for more than a month.

RMAN-08000: channel *string*: copied datafile *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08001: restore not complete
Cause: All of the backup pieces have been successfully applied, but DBMS_BACKUP_RESTORE package indicates that the restore conversation is not complete. This usually means that the backup set contained corrupt data.

Action: Restore the files from a different backup set, if possible. The Recovery Manager CHANGE BACKUPPIECE UNAVAILABLE can be used to prevent Recovery Manager from attempting to restore from the corrupt backup piece(s).

RMAN-08002: starting full resync of recovery catalog
Cause: This is an informational message only.

Action: No action is required.

RMAN-08003: channel *string*: reading from backup piece *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08004: full resync complete
Cause: This is an informational message only.

Action: No action is required.

RMAN-08005: new incarnation of database registered in recovery catalog
Cause: This is an informational message only.

Action: No action is required.

RMAN-08006: database registered in recovery catalog
Cause: This is an informational message only.

Action: No action is required.

RMAN-08028: channel *string*: copy current control file failed
Cause: This is an informational message only.

Action: No action is required.

RMAN-08029: snapshot control file name set to default value: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08030: allocated channel: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08031: released channel: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08032: channel *string*: RECID *string* STAMP *string* does not match recovery catalog
Cause: The record that identifies the source file for a copy or backup database does not contain the same data as is stored in the recovery catalog.

Action: Perform a full resync and retry the operation. If the problem persists, then contact Oracle.

RMAN-08033: channel *string*: including datafile copy of datafile *string* in backup set
Cause: This is an informational message only.

Action: No action is required.

RMAN-08034: full resync skipped, target database not mounted
Cause: This is an informational message only.

Action: No action is required.

RMAN-08035: partial resync skipped, target database not mounted
Cause: This is an informational message only.

Action: No action is required.

RMAN-08036: channel *string*: could not create control file record for *string string*
Cause: The record identifying the named file was no longer present in the target database control file, and repeated attempts to inspect the file were unsuccessful in creating the record. This could be because the circular-reuse section of the control file which holds information about the specified type of file is too small and there is other database activity which is causing the record to be overwritten before it can be used.

Action: Try increasing either the size of the control file circular-reuse section for this file type (data file copy or archived log, as indicated in the error message, or the CONTROL_FILE_RECORD_KEEP_TIME initialization parameter. If neither of those remedies works then contact Oracle.

RMAN-08037: channel *string*: unexpected validation return code *string*
Cause: This is an internal error that should never be issued.

Action: Contact Oracle Support Services

RMAN-08038: channel *string*: starting piece *string* at *string*

Cause: This is an informational message only.

Action: No action is required.

RMAN-08100: channel *string*: starting proxy validation
Cause: This is an informational message only.

Action: No action is required.

RMAN-08101: channel *string*: proxy validation complete
Cause: This is an informational message only.

Action: No action is required.

RMAN-08102: channel *string*: located backup piece: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08103: channel *string*: could not locate backup piece: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08104: channel *string*: input backup set: count=*string*, stamp=*string*, piece=*string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08105: channel *string*: backup cancelled because no pieces were found
Cause: All backup sets specified has no pieces. Therefore, no backup set is created.

Action: This is an informational message only.

RMAN-08106: channel *string*: restoring block(s)
Cause: This is an informational message only.

Action: No action is required.

RMAN-08107: skipping inaccessible backup set count=*string* STAMP=*string*
Cause: The indicated backup set will not be backed up because one or more pieces of the backup set could not be read, and the SKIP INACCESSIBLE option was specified.

Action: No action is required.

RMAN-08108: channel *string*: specifying block(s) to restore from backup set
Cause: This is an informational message only.

Action: No action is required.

RMAN-08109: channel *string*: restored block(s) from backup piece *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08110: failover to next copy of backup piece
Cause: This is an informational message only.

Action: No action is required.

RMAN-08111: some blocks not recovered: See trace file for details
Cause: Some blocks not recovered due to errors.

Action: See trace file for details of the problem.

RMAN-08112: archived log failover was done on *string*, check alert log for more info
Cause: This is an informational message to indicate the server found a corrupted block in an archived log and had to switch to another copy of the same archived log in an alternate archived log destination to get corresponding un-corrupted block.

Action: If backup is done with delete input option, nothing needs to be done. Otherwise delete the archived log that has corrupted block(s) as recovery on applying this log would fail. Alert log contains name of the log that has corrupted block(s).

RMAN-08113: including current SPFILE in backup set
Cause: This is an informational message only.

Action: No action is required.

RMAN-08114: channel *string*: restoring SPFILE to PFILE
Cause: This is an informational message only.

Action: No action is required.

RMAN-08115: channel *string*: restoring SPFILE
Cause: This is an informational message only.

Action: No action is required.

RMAN-08116: output file name is original SPFILE location
Cause: This is an informational message only.

Action: No action is required.

RMAN-08117: channel *string*: the AUTOBACKUP does not contain an SPFILE
Cause: The requested AUTOBACKUP does not contain a SPFILE. This is because the instance was not started with a SPFILE when the AUTOBACKUP was created.

Action: No action is required. RMAN will try three older AUTOBACKUPS before signaling ORA-19687.

RMAN-08118: warning: could not delete the following archived redo log
Cause: The routine deleteArchivedLog() could not delete an archived redo log on the target instance.

Action: Check the accompanying file specification and the associated error messages. The file specification indicates what archived redo log on the target instance RMAN was trying to delete and the error messages indicate why RMAN was unable to delete it. Resolve the problem by first confirming that the archived redo log in question has been backed up, do the deletion manually, and then do a crosscheck so that RMAN is aware of the deletion.

RMAN-08119: skipping backup piece handle *string*; already exists
Cause: A BACKUP command does not need to backup control file AUTOBACKUP pieces, because they already exists.

Action: This is an informational message, no action is required.

RMAN-08120: warning: archived log not deleted, not yet applied by standby
Cause: This is an informational message to alert the user that an archived log that should have been deleted was not as it has not been applied to the standby database. The next message identifies the archived log

Action: Archivelog can be deleted after it has been applied to standby database.

RMAN-08121: keep attributes for the backup are deleted
Cause: This is an informational message only.

Action: No action is required.

RMAN-08122: keep attributes for the backup are changed
Cause: This is an informational message only.

Action: No action is required.

RMAN-08123: keep attributes for the datafile/control file copy are deleted
Cause: This is an informational message only.

Action: No action is required.

RMAN-08124: keep attributes for the datafile/control file copy are changed
Cause: This is an informational message only.

Action: No action is required.

RMAN-08125: keep attributes for the proxy copy are deleted
Cause: This is an informational message only.

Action: No action is required.

RMAN-08126: keep attributes for the proxy copy are changed
Cause: This is an informational message only.

Action: No action is required.

RMAN-08127: channel *string*: cataloged backup piece
Cause: This is an informational message only.

Action: No action is required.

RMAN-08128: uncataloged backup piece
Cause: This is an informational message only.

Action: No action is required.

RMAN-08129: failover to piece handle=*string* tag=*string*
Cause: This is an informational message to indicate the server found a corrupted block in a piece and had to switch to another copy of piece to get corresponding un-corrupted block.

Action: See alert log for information on corruption block(s) and the name of the piece that has the corrupted block(s).

RMAN-08130: failover to copy on device type *string*
Cause: This is an informational message to indicate the RMAN could not successfully restore the database using the specified backups. An attempt was made to restore the data files/archived logs/ control file/SPFILE using the same backup set on a different device type.

Action: See accompanying additional error messages indicating the cause of the failover.

RMAN-08131: channel *string*: specifying datafile copies to recover
Cause: This is an informational message only.

Action: No action is required.

RMAN-08132: warning: cannot update recovery area reclaimable file list
Cause: This error should be accompanied by other errors giving the cause of failure to update reclaimable file list.

Action: Check the accompanying error.

RMAN-08133: channel *string*: the AUTOBACKUP does not contain a standby control file.
Cause: The requested AUTOBACKUP did not contain a standby control file.

Action: No action is required, RMAN will try three older AUTOBACKUPS before signaling ORA-19687.

RMAN-08135: some corrupt blocks found during conversion of file *string*
Cause: While converting the specified file from one platform to another, some corrupt blocks were discovered in the specified file. Details about the corruption have been written to a server trace file.

Action: If these corrupt blocks are unexpected, you may be able to use Block Media Recovery at the source database to fix the problem, then re-convert the files.

RMAN-08136: channel *string*: deleting incremental backup(s)
Cause: This is an informational message only.

Action: No Action Required.

RMAN-08137: warning: archived log not deleted, needed for standby or upstream capture process
Cause: An archived log that should have been deleted was not as it was required by upstream capture process or Data Guard. The next message identifies the archived log.

Action: This is an informational message. The archived log can be deleted after it is no longer needed. See the documentation for Data Guard to alter the set of active Data Guard destinations. See the documentation for Streams to alter the set of active streams.

RMAN-08138: warning: archived log not deleted - must create more backups
Cause: An archived log that should have been deleted was not as it it did not meet the user specified archive log deletion policy of number of backups required before deleting the logs.

Action: This is an informational message. The archived log can be deleted after more backups are created to satify archivelog deletion policy.

RMAN-08139: warning: archived redo log not deleted, needed for guaranteed restore point
Cause: An archived log that should have been deleted was not because it is required for guaranteed restore point.

Action: This is an informational message. The archived redo log can be deleted after backups are created or after deleting the guaranteed restore point that requires the log.

RMAN-08140: channel *string*: starting validation of datafile
Cause: This is an informational message only.

Action: No action is required.

RMAN-08141: channel *string*: specifying datafile(s) for validation
Cause: This is an informational message only.

RMAN-08159: executing global script: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08160: script commands will be loaded from file *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08161: contents of Memory Script:
Cause: This is an informational message only.

Action: No action is required.

RMAN-08162: executing Memory Script
Cause: This is an informational message only.

Action: No action is required.

RMAN-08163: validation succeeded for backup piece
Cause: The VALIDATE HEADER option determined that the backup piece still matches its data.

Action: None - this is an informational message.

RMAN-08164: validation succeeded for proxy copy
Cause: The VALIDATE HEADER option determined that the proxy copy still matches its data.

Action: None - this is an informational message.

RMAN-08165: could not locate proxy copy *string*
Cause: The specified proxy copy could not be found on proxy channel.

Action: If the proxy copy has been deleted, use the CROSSCHECK BACKUP command to correct the recovery catalog or target database control file entries.

RMAN-08166: validation succeeded for datafile copy and control file copy
Cause: The VALIDATE HEADER option discovered that the data file copy and control file copy still matches its data in the recovery catalog or target database control file.

Action: None - this is an informational message.

RMAN-08167: warning: *string* encountered a piece that was in use
Cause: The backup piece is currently in use by another BACKUP, RESTORE or DELETE operation.

Action: Use LIST to determine if backup has been deleted. If not deleted, then check if any process is hung while accessing the piece and terminate them before retrying DELETE. If using SBT device, then check Media Manager as well. Alternatively, consider the command DELETE FORCE.

RMAN-08168: channel *string*: using compressed network backup set from service *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08169: channel *string*: using network backup set from service *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08180: channel *string*: restore complete, elapsed time: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08181: media recovery complete, elapsed time: *string*
Cause: This is an informational message only.

Action: No action is required.

Cause: This is an informational message only.

Action: No action is required.

RMAN-08183: channel *string*: block restore complete, elapsed time: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08184: added tempfile *string* to tablespace *string* in control file
Cause: This is an informational message only.

Action: No action is required.

RMAN-08185: renamed tempfile *string* to *string* in control file
Cause: This is an informational message only.

Action: No action is required.

RMAN-08186: tempfile *string* size altered in control file
Cause: One of tempfile size attributes AUTOEXTEND, MAXSIZE, NEXTSIZE was altered. This is an informational message only.

Action: No action is required.

RMAN-08187: warning: media recovery until SCN *string* complete
Cause: Media recovery was completed until the indicated system change number (SCN) because the database was in NOARCHIVELOG mode.

Action: This is an informational message only. No action is required.

RMAN-08190: validate found one or more corrupt blocks
Cause: Backup validate found that one or more blocks were corrupt in the specified data files. This message should be followed by 8191 message.

Action: Repair them at your earliest convenience.

RMAN-08191: See trace file *string* for details
Cause: This is an informational message only.

Action: No action is required.

RMAN-08192: uncatalog BACKUPPIECE *string* in NOCATALOG mode
Cause: BACKUPPIECE could not resync due to 'set_stamp' and 'set_count' conflict. This message should be followed by message 20110.

Action: See the action associated with message 20110.

RMAN-08193: skipped datafile file number=*string* name=*string*
Cause: The indicated data file was missing after the initial discovery by RMAN during backup.

Action: Check if the pluggable database or tablespace to which this file belongs is dropped. If so, this is expected behavior.

RMAN-08195: skipping data file *string* because the file was restored
Cause: The specified data file did not have its checkpoint advanced since the previous backup, therefore, it does not need a new incremental backup.

Action: This is an informational message only.

RMAN-08241: starting recovery of nonlogged blocks
Cause: This is an informational message only.

Action: No action is required.

RMAN-08242: recovery of nonlogged blocks complete, elapsed time: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08300: Run SQL script *string* on the target platform to create database
Cause: This is an informational message only.

Action: No action is required.

RMAN-08301: Edit init.ora file *string*. This PFILE will be used to create the database on the target platform
Cause: This is an informational message only.

Action: No action is required.

RMAN-08302: Run RMAN script *string* on target platform to convert datafiles
Cause: This is an informational message only.

Action: No action is required.

RMAN-08303: To recompile all PL/SQL modules, run utlirp.sql and utlrp.sql on the target platform
Cause: This is an informational message only.

Action: Transport script invokes utlirp.sql and utlrp.sql.

RMAN-08304: To change the internal database identifier, use DBNEWID Utility
Cause: This is an informational message only.

Action: Transport script does not invoke DBNEWID Utility automatically.

RMAN-08305: channel *string*: starting to check datafiles
Cause: This is an informational message only.

Action: No action is required.

RMAN-08306: channel *string*: datafile checking complete, elapsed time: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08400: Running TRANSPORT_SET_CHECK on specified tablespaces
Cause: This is an informational message only.

Action: No action is required.

RMAN-08401: Cannot specify AS COPY when producing a cross-platform backup
Cause: Cross-platform backup modifier was specified and the type of backup is not a BACKUPSET.

Action: Use CONVERT command instead or specify AS BACKUPSET.

RMAN-08402: Cannot include controlfile in a cross-platform backup
Cause: Cross-platform backup modifier was specified and controlfile backup was also requested.

Action: Do not include controlfile in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08403: Cannot include SPFILE in a cross-platform backup
Cause: Cross-platform backup modifier was specified and SPFILE backup was also requested.

Action: Do not include SPFILE in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08404: Cannot backup a BACKUPSET in a cross-platform backup
Cause: Cross-platform backup modifier was specified and BACKUPSET clause was also requested.

Action: Do not include BACKUPSET clause in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08405: Cannot backup datafile copies in a cross-platform backup
Cause: Cross-platform backup modifier was specified and data file copies were also requested.

Action: Do not include data file copies in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08406: Cannot include archived logs in a cross-platform backup
Cause: Cross-platform backup modifier was specified and ARCHIVELOG clause was also requested.

Action: Do not include ARCHIVELOG clause in cross-platform backup or remove cross-platform backup modifiers.

RMAN-08407: Cannot translate DATAPUMP DESTINATION *string* (reason: *string*)
Cause: The specified DATAPUMP DESTINATION was invalid.

Action: Retry the command with a valid DATAPUMP DESTINATION

RMAN-08408: Cannot specify *string* clause when producing cross-platform backups
Cause: A clause that cannot be used with cross-platform backup was specified.

Action: Do not include the specified clause or remove cross-platform backup modifiers.

RMAN-08409: FROM PLATFORM only allowed with BACKUPPIECE clause
Cause: A BACKUP FROM PLATFORM command was specified with backup objects other than BACKUPPIECE.

Action: Remove FROM PLATFORM or specify BACKUPPIECE clause.

RMAN-08410: Cross-platform backups require the database to be open in read/write mode
Cause: Cross-platform backup modifier was specified, but the database was not open in read/write mode.

Action: Open the database in read/write mode or remove cross-platform backup modifiers.

RMAN-08411: DATAPUMP can only be used with cross-platform backup
Cause: DATAPUMP was specified but TO PLATFORM or FOR TRANSPORT clauses were not used.

Action: Do not specify DATAPUMP clause or specify either TO PLATFORM or FOR TRANSPORT.

RMAN-08412: DATAPUMP cannot be used with whole database cross-platform backup
Cause: DATAPUMP was specified together with whole database cross-platform backup.

Action: Do not specify DATAPUMP clause for a whole database cross- platform backup or specify only tablespaces.

RMAN-08413: Cross-platform backup of backup pieces requires FORMAT clause
Cause: A BACKUP BACKUPPIECE command was specified without FORMAT clause.

Action: Add a FORMAT clause to command and retry.

RMAN-08416: ALLOW INCONSISTENT allowed only for datafile backup
Cause: ALLOW INCONSISTENT was specified for a BACKUP BACKUPPIECE command.

Action: Do not specify ALLOW INCONSISTENT clause for BACKUP BACKUPPIECE command.

RMAN-08417: standby database must be open to do KEEP backups
Cause: KEEP backup was attempted on a standby database that was not open.

Action: Open the standby database in READ ONLY or READ ONLY WITH APPLY mode and retry the command.

RMAN-08418: KEEP or CONSISTENT backups are allowed only with current or standby control file
Cause: KEEP or CONSISTENT backup was attempted on a control file that was not current or standby.

Action: Convert the control file to current or standby and retry the command.

RMAN-08419: KEEP backups cannot find archivelog to make the backup consistent
Cause: Archived logs could not be found to make keep the backup consistent.

Action: Check if the database is opened and if archive logs can be created and retry the command.

RMAN-08420: running UNPLUG on the specified pluggable database: *string*
Cause: This is an informational message only.

Action: This is an informational message only.

RMAN-08421: running UNPLUG or PLUG for cross-endian platform not supported
Cause: There was an attempt to use cross-platform backups to convert the whole database to a different endianess.

Action: No action is required.

RMAN-08423: ALLOW INCONSISTENT cannot be used with UNPLUG during cross-platform backup
Cause: The ALLOW INCONSISTENT clause was specified in a cross-platform backup command.

Action: Remove the ALLOW INCONSISTENT clause.

RMAN-08424: UNPLUG file path : *string*
Cause: This is an informational message only.

Action: This is an informational message only.

RMAN-08425: The USING clause to PLUG can only be used with FROM BACKUPSET clause
Cause: The USING clause was specifieed in a non-xttrestore conversation.

Action: Specify FROM BACKUPSET.

RMAN-08426: incompatible PDB : *string*
Cause: DBMS_PDB.CHECK_PLUG_COMPATIBILITY did not pass.

Action: Check your plugin.xml file.

RMAN-08427: PDB already exists: *string*
Cause: There was an attempt to plug in an existing pluggable database.

Action: Perform UNPLUG and DROP before performing the restore or plugin.

RMAN-08428: incompatible plugin.xml file for PDB: *string*
Cause: The pluggable database did not have the correct plugin.xml file.

Action: Correct the entries in the plugin.xml file if possible.

RMAN-08429: The FILE_NAME_CONVERT clause can be used only with the USING clause
Cause: The USING clause was not used with the FILE_NAME_CONVERT clause.

Action: Use the USING clause along with the FILE_NAME_CONVERT clause.

RMAN-08430: channel *string*: plugging file *string* for *string*
Cause: An informational message was provided.

Action: This is an informational message only.

RMAN-08431: FILE_NAME_CONVERT missing pattern
Cause: Replacement file name pattern was missing or invalid in the FILE_NAME_CONVERT clause.

Action: Correct the FILE_NAME_CONVERT clause and reissue the statement.

RMAN-08432: Trying to add a data file that is part of a pluggable database with an OMF file name
Cause: There was an attempt to add a data file as an Oracle Managed File (OMF) to the database.

Action: Retry the backup operation with a format specifier.

RMAN-08433: CONSISTENT option can be used to backup database or pluggable database
Cause: The CONSISTENT option was specified to backup an object other than a database or oluggable database. The option can only be used for creating full backups of database or pluggable database in the backup set mode.

Action: Modify and retry the command.

RMAN-08434: Datafile number *number* was dropped from the database hence not backed up
Cause: This is an informational message only.

RMAN-08622: channel *string*: restoring all foreign files in backup piece
Cause: This is an informational message only.

Action: No action is required.

RMAN-08623: channel *string*: restoring all files in foreign tablespace *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08624: channel *string*: restoring foreign file *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08625: channel *string*: restoring Data Pump dump file to *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08626: channel *string*: restoring foreign file *string* to *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08627: channel *string*: foreign piece handle=*string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08628: channel *string*: restoring foreign datafilecopy *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-08629: waiting for resources on the Recovery Appliance for *string* channels
Cause: The number of channels required to complete this operation was not available. Channels will be allocated when they become available.

Action: No action is required. This is an informational message only.

RMAN-08630: allocating the required resources on the Recovery Appliance
Cause: The required resources were allocated on a Recovery Appliance.

Action: No action is required. This is an informational message only.

RMAN-08631: channel *string*: starting compressed piece *string* at *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-10000: error parsing target database connect string "*string*"
Cause: An invalid target connect string was supplied.

Action: Specify a valid connect string and re-run the job.

RMAN-10001: error parsing recovery catalog connect string "*string*"
Cause: An invalid recovery catalog connect string was supplied.

Action: Specify a valid connect string and re-run the job.

RMAN-10002: Oracle error: *string*
Cause: The specified Oracle error was received. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-10003: unable to connect to target database
Cause: Recovery manager was unable to connect to the target database. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Ensure that that the target database is started, and that the connect string is valid.

RMAN-10004: unable to connect to recovery catalog
Cause: Recovery manager was unable to connect to the recovery catalog

Action: Ensure that that the recovery catalog is started, and that the connect string is valid. This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-10005: error opening cursor
Cause: An error was received while trying to open a cursor. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10006: error running SQL statement: *string*
Cause: An error message was received while running the SQL statement shown.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10007: error closing cursor
Cause: An error was received while trying to close a cursor. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10008: could not create channel context
Cause: An error was received while trying create a channel context. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If the associated Oracle error message indicates a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10009: error logging off of Oracle
Cause: An error was received while disconnecting from Oracle. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: This is an informational message only.

RMAN-10010: error while checking for RPC completion
Cause: Recovery Manager's channel context had an error while checking to see if a remote procedure call had completed. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10011: synchronization error while polling for rpc *number*, action=*string*
Cause: Recovery Manager could not synchronize properly with a remote procedure call.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10012: KGU error: *string*
Cause: An error occurred while initializing the KGU subsystem

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10013: error initializing PL/SQL
Cause: An error occurred while initializing the PL/SQL subsystem.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10014: PL/SQL error *number* on line *number* column *number*: *string*
Cause: PL/SQL error

Action: The text of this message will be issued by the PL/SQL subsystem. See the PL/SQL error message manual.

RMAN-10015: error compiling PL/SQL program
Cause: An error occurred while compiling a PL/SQL program.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10018: error cleaning up channel context
Cause: An error was received during inter-step cleanup of a channel context.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10020: error initializing Recovery Manager execution layer
Cause: An error was received while initializing the Recovery Manager execution layer in preparation for running a job. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10022: error in system-dependent sleep routine
Cause: An error was received while waiting for a remote RPC to complete. The error occurred in the system-dependent sleep routine.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10023: RPC attempted to unrecognized package
Cause: The Recovery Manager internal RPC router received a package name that it could not understand.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10024: error setting up for rpc polling
Cause: The Recovery Manager could not create the RPC polling context which is required to test for RPC completion. This message should be accompanied by other error message(s) indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-10025: connection is already registered for events
Cause: The Recovery Manager could not enable the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10026: network error *number-number* occurred registering connection
Cause: An network error occurred while attempting to register the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. The message numbers are issued by the Sql*Net layer. Contact Oracle Support Services

RMAN-10027: could not locate network layer context
Cause: Recovery Manager could not locate a necessary context area while attempting to register the target database connection to test for RPC completion.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10028: network error *number-number* occurred during remote RPC
Cause: An network error occurred while waiting for a remote RPC to complete.

Action: This is an internal error that should not be issued. The message numbers are issued by the Sql*Net layer. Contact Oracle Support Services

RMAN-10029: unexpected return code *number* from PL/SQL execution
Cause: PL/SQL returned an unexpected return code while executing one channel program.

Action: This is an internal error that should not be issued. Contact Oracle Support Services

RMAN-10030: RPC call appears to have failed to start on channel *string*
Cause: An RPC to a target database instance was issued, but was not observed to start within 5 timeouts.

Action: This error is probably accompanied by other error messages giving the precise cause of the failure.

RMAN-10031: RPC Error: ORA-*number* occurred during call to *string*.*string*
Cause: An RPC to the target database or recovery catalog database encountered an error.

Action: This error is accompanied with the error message from the server where the error occurred.

RMAN-10032: unhandled exception during execution of job step *number*: \n*string*
Cause: An unhandled PL/SQL exception occurred during a job step.

Action: This error is accompanied by the error messages describing the exception.

RMAN-10033: error during compilation of job step *number*: *string*
Cause: PL/SQL detected a problem during the compilation of a job step

Action: This error message is accompanied by the error messages describing

RMAN-10034: unhandled exception during execution of job step *number*, error unknown
Cause: PL/SQL detected an unhandled exception during execution of a job step, but no further information available

Action: n/a

RMAN-10035: exception raised in RPC: \n*string*
Cause: A call to a remote package resulted in an exception.

Action: The exception should indicate what went wrong.

RMAN-10036: RPC call OK on channel *string*
Cause: This is just an informational message. It should be preceded by message 10030.

Action: No action is required.

RMAN-10037: RPC anomaly detected on channel *string*, UPINBLT=*number*
Cause: This is an debugging message and can be ignored.

Action: No action is required.

RMAN-10038: database session for channel *string* terminated unexpectedly
Cause: The database connection for the specified channel no longer exists. Either the session was terminated by some external means or the channel terminated because of an internal error.

Action: Check for an oracle trace file for detailed information on why the session terminated.

RMAN-10039: error encountered while polling for RPC completion on channel *string*
Cause: This error should be accompanied by other errors giving the cause of the polling error.

Action: Check the accompanying errors.

RMAN-10040: asynchronous support not detected, RMAN will run synchronously
Cause: The database connection does not support asynchronous operation, so RMAN will not multi-task work among multiple channels. Multiple channels can still be allocated, but they will not run work concurrently.

Action: Use a connection type that supports asynchronous operations.

RMAN-10041: Could not re-create polling channel context following failure.
Cause: The RPC polling context, which is required to test for RPC completion, failed and Recovery Manager could not re-create this channel. This message should be accompanied by other error messages indicating the cause of the error.

Action: If other error messages indicate a condition that can be corrected, do so, otherwise contact Oracle.

RMAN-11000: message number *number* not found in recovery manager message file
Cause: Recovery manager message file is out of date.

Action: Make sure that the recovery manager error message file is current and installed in the correct location.

RMAN-11001: Oracle Error: \n*string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-11002: could not open a cursor to the target database
Cause: This is an informational message only.

Action: No action is required.

RMAN-11003: failure during parse/execution of SQL statement: *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-11004: format requires %*character* when duplexing
Cause: SET_DUPLEX=ON was specified, but %c was not part of the format.

Action: Include %c in format, or use %U.

RMAN-11005: conflicting media information for piece "*string*"
Cause: While restoring the specified backup piece, RMAN received conflicting information about the physical location of the piece from the Media Management software. This can cause poor restore performance.

Action: If RMAN does not parallelize the restore from all of the available channels, then you should contact the Media Management vendor.

RMAN-11006: warning: test recovery results: \n*string*
Cause: User called recover database with the test option

Action: None required

RMAN-11007: new media label is "*string*" for piece "*string*"
Cause: This is an informational message indicating that the backup piece was moved from one media to another by media management software.

Action: No action is required.

RMAN-12000: execution layer initialization failed
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12001: could not open channel *string*
Cause: An ALLOCATE CHANNEL command could not be processed.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

RMAN-12005: error during channel cleanup
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12007: cannot allocate more than *number* channels
Cause: The maximum number of RMAN channels has been exceeded. Note that one channel is reserved for RMAN.

Action: Allocate fewer channels. Contact Oracle if you have a need for more channels in a single job.

RMAN-12008: could not locate backup piece *string*
Cause: There was at least 1 backup set that could not be accessed by any of the allocated channels.

Action: Allocate additional channels on other nodes of the cluster

RMAN-12009: command aborted because some backup pieces could not be located
Cause: Same as 7008.

Action: Refer to 7008.

RMAN-12010: automatic channel allocation initialization failed
Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

RMAN-12011: multiple records for default device type found in repository
Cause: Configuration for default device type was not consistent.

Action: Re-run CONFIGURE DEFAULT DEVICE TYPE command to set device type.

RMAN-12012: multiple records for *string* parallelism found in repository
Cause: Configuration for device parallelism was not consistent.

Action: Re-run CONFIGURE PARALLELISM command for device to set parallelism.

RMAN-12013: multiple records for *string* channel *number* found in repository
Cause: Configuration for the channel was not consistent.

Action: Re-run CONFIGURE CHANNEL command to configure this channel.

RMAN-12014: multiple records for default channel configuration for *string* found in repository
Cause: Configuration for the channel was not consistent.

Action: Re-run CONFIGURE CHANNEL command to configure the channel.

RMAN-12015: configuration for *string* channel *number* is ignored
Cause: This is an informational message only. Parallelism for the device is less than associated channel number.

Action: To use this configuration increase parallelism for this device. To clear this configuration use CONFIGURE CHANNEL... CLEAR command.

RMAN-12016: using channel *string*
Cause: This is an informational message only.

Action: No action is required.

RMAN-12017: could not locate pieces of backup set key *string*
Cause: Copies of the specified backup set key could not be accessed on any of the allocated channels.

Action: Allocate additional channels on other nodes of the cluster or, if the backup pieces has been deleted, use the CROSSCHECK BACKUP command to correct the recovery catalog or target database control file entries.

RMAN-12018: channel *string* disabled, job failed on it will be run on another channel
Cause: This is an informational message displayed whenever a retryable error occurs for the job and there are channels available to run this step.

Action: No action is required.

RMAN-12019: continuing other job steps, job failed will not be re-run
Cause: This is an informational message displayed whenever there is a non-retryable error occurred for the job.

Action: No action is required.

RMAN-12020: error on step filtered for normal output \n*string*
Cause: This message is added when stacking errors for failed jobs after channel failover was performed. It will be filtered from normal output.

Action: No action is required.

RMAN-12021: device type exceeds maximum length of *string*
Cause: The device type indicated was invalid.

Action: Supply a correct device type and retry the allocation.

RMAN-20000: abnormal termination of job step
Cause: A job step encountered an error and could not recover. This error should be followed by other errors indicating the cause of the problem.

Action: Check the accompanying error.

RMAN-20001: target database not found in recovery catalog
Cause: The target database was not found in the recovery catalog.

Action: Ensure that the target database is registered in the recovery catalog. If the target database is a pluggable database, then ensure that CDB$ROOT has resynced it to recovery catalog.

RMAN-20002: target database already registered in recovery catalog
Cause: target database is already registered in the recovery catalog

Action: if the target database is really registered, there is no need to register it again. Note that the recovery catalog enforces that all databases have a unique DBID. If the new database was created by copying files from an existing database, it will have the same DBID as the original database and cannot be registered in the same recovery catalog.

RMAN-20003: target database incarnation not found in recovery catalog
Cause: RESETLOGS CHANGE# and/or time of the target database doesn't match any database incarnation in the recovery catalog.

Action: if target database was opened with RESETLOGS option then use 'reset database' to register the new incarnation.

RMAN-20004: target database name does not match name in recovery catalog
Cause: name of the target database doesn't match the one stored in the recovery catalog

Action: This is an internal error.

RMAN-20005: target database name is ambiguous
Cause: two or more databases in the recovery catalog match this name

Action: n/a

RMAN-20006: target database name is missing
Cause: target database instance is not started or db_name initialization parameter is not set

Action: startup the instance and make sure that db_name parameter is set

RMAN-20009: database incarnation already registered
Cause: this incarnation is already registered in the recovery catalog

Action: No action is required.

RMAN-20010: database incarnation not found
Cause: database incarnation does not match any database incarnation in the recovery catalog

Action: specify a valid database incarnation key

RMAN-20011: target database incarnation is not current in recovery catalog
Cause: the database incarnation that matches the RESETLOGS CHANGE# and time of the mounted target database control file is not the current incarnation of the database

Action: If 'reset database to incarnation *key*' was used to make an old incarnation current then restore the target database from a backup that matches the incarnation and mount it. You will need to do 'STARTUP NOMOUNT' before you can restore the control file using RMAN. Otherwise use 'reset database to incarnation *key*' make the intended incarnation current in the recovery catalog.

RMAN-20012: not authorized to register new database
Cause: You attempted to register a new database with this recovery catalog, but you are using a virtual private catalog, and you have not been granted permission by the catalog administrator to register this database with this recovery catalog

Action: Ask the catalog administrator to grant permission for you to register this database.

RMAN-20013: error upgrading virtual private catalog
Cause: An error occurred while automatically upgrading a virtual private catalog.

Action: Ensure that the virtual private catalog userid has all of the required privileges, such as being granted the RECOVERY_CATALOG_OWNER role.

RMAN-20014: virtual private catalog owner must be granted RECOVERY_CATALOG_OWNER role
Cause: An attempt was made to establish a virtual private RMAN catalog in a schema that is not granted the RECOVERY_CATALOG_OWNER role.

Action: Grant RECOVERY_CATALOG_OWNER to the virtual private catalog owner.

RMAN-20015: not authorized to share this catalog
Cause: You attempted to share a recovery catalog but were not authorized to do this by the catalog administrator.

Action: Ask the catalog administrator to grant permission for you to share this catalog.

RMAN-20016: virtual private catalog user cannot modify global scripts
Cause: A virtual private catalog user attempted to create, delete, or modify a global script. Virtual private catalog users cannot modify global scripts.

Action: Connect to the catalog owner userid and retry the global script operation.

RMAN-20017: illegal script update operation
Cause: An illegal script operation was performed.

Action: None

RMAN-20018: database not found in recovery catalog
Cause: An attempt was made to grant or revoke catalog access to a database whose name was not registered in the recovery catalog.

Action: Correct the database name and re-issue the GRANT or REVOKE command. If this is an attempt to grant or revoke access to a database that is not yet registered, then re-issue the command using the database ID of the desired database.

RMAN-20019: database name not unique in recovery catalog
Cause: An attempt was made to grant or revoke catalog access to a database whose name is not unique in the recovery catalog.

Action: Re-issue the command specifying the database ID of the desired database.

RMAN-20022: user not found
Cause: An attempt was made to grant a privilege to a user that does not exist.

Action: Reissue the command specifying a user that exists.

RMAN-20023: pluggable database not found in recovery catalog
Cause: An attempt was made to grant or revoke catalog access to a pluggable database whose name was not registered in the recovery catalog.

Action: Correct the pluggable database name and reissue the GRANT or REVOKE command. If this is an attempt to grant or revoke access to a pluggable database that is not yet registered, then reissue the command after registering the desired database.

RMAN-20024: pluggable database name not unique in recovery catalog
Cause: An attempt was made to grant or revoke catalog access to a pluggable database whose name was not unique in the recovery catalog.

Action: Reissue the command specifying the GUID of the desired pluggable database.

RMAN-20025: full resync from CDB$ROOT database is not done
Cause: Resync from pluggable database detected that a full resync from CDB$ROOT database is required. One of the following events on target database may have caused this error: 1) database role was changed 2) new database site was found

Action: Perform full resync after connecting to the CDB$ROOT and retry the command.

RMAN-20026: operation only allowed by CDB$ROOT
Cause: A command was attempted that is only allowed by CDB$ROOT.

Action: Connect as CDB$ROOT and retry the command.

RMAN-20029: cannot make a snapshot control file
Cause: another operation that needs the snapshot control file is in progress

Action: try again later if necessary

RMAN-20030: resync in progress
Cause: this procedure cannot be called while a resync is in progress

Action: This is an internal error.

RMAN-20031: resync not started
Cause: this procedure can only be called in a resync

Action: This is an internal error.

RMAN-20032: checkpoint CHANGE# too low
Cause: the checkpoint change# is less than the one of the previous resync or the checkpoint change# is null

Action: make sure that the right control file is used

RMAN-20033: control file SEQUENCE# too low
Cause: the control file sequence is less than the one of the previous resync

Action: make sure that the right control file is used

RMAN-20034: resync not needed
Cause: the control file has not changed since the previous resync

Action: nothing since the recovery catalog is in sync

RMAN-20038: must specify FORMAT for CONVERT command
Cause: No FORMAT was specified when using CONVERT command.

Action: Resubmit the command using FORMAT clause.

RMAN-20039: format requires *character* when duplexing
Cause: SET_DUPLEX=ON was specified, but %c was not part of the format.

Action: Include %c in format, or use %U.

RMAN-20044: invalid tablespace name
Cause: An invalid tablespace name was encountered due to the following possible reasons: 1. The specified tablespace name was too long. 2. The prepended pluggable database (PDB) name was part of the tablespace name.

Action: This is an internal error. Check the documentation for the allowed tablespace name length or the correct format for the prepended PDB name.

RMAN-20045: must specify FORMAT for BACKUP INCREMENTAL FROM SCN command
Cause: No FORMAT was specified when using BACKUP INCREMENTAL FROM SCN command.

Action: Resubmit the command using FORMAT clause.

RMAN-20072: full resync from noncurrent control file
Cause: A full resync was attempted from either a standby control file or a backup control file. Only the current control file can do so. Allowing to do otherwise can result in unexpected changes in catalog metadata.

Action: This is an internal error.

RMAN-20073: warning: resync skipped for PDB *string* as a dictionary integrity check is required
Cause: An attempt was made to resync the Pluggable Database (PDB) information to the recovery catalog when the PDB was not open in read/write mode for the primary database.

Action: Open the PDB in read/write mode and retry the resync command.

RMAN-20079: full resync from primary database is not done
Cause: Resync from standby detected that a full resync from primary database is required. One of the following events on primary database may have caused this error: 1) one or more tablespaces or data files were added 2) one or more tablespaces or data files were dropped 3) one or more data files status changed

Action: Perform full resync after connecting to the primary database.

RMAN-20081: change stamp for the record
Cause: A record with same recid and stamp is already known to catalog.

Action: None. This error is automatically handled by RMAN client by changing the stamp in control file during resync.

RMAN-20108: control file for remote database cannot be updated
Cause: RESYNC CATALOG FROM DB_UNIQUE_NAME command was attempted, but the control file at the database with DB_UNIQUE_NAME needs to be resynced directly instead of through the current target.

Action: Directly connect as target to the remote database with the specified DB_UNIQUE_NAME and resync.

RMAN-20109: remote database has different database ID
Cause: Command RESYNC CATALOG FROM DB_UNIQUE_NAME was executed and the database ID of the remote database was different than the connected target database.

Action: The remote database should have the same database ID as the database connected as the target database. Fix the connect identifier for the remote database and retry the command.

RMAN-20110: set_stamp set_count conflict
Cause: Resync detected multiple backup sets having the same 'set_stamp' and 'set_count'.

Action: Uncatalog BACKUPPIECE associated with message 8192.

RMAN-20140: database not yet registered in the Recovery Appliance
Cause: The database was not registered in the Recovery Appliance.

Action: Add a database to the Recovery Appliance schema by making a call to ADD_DB call.

RMAN-20141: target database ID mismatch with registered database in the Recovery Appliance
Cause: The database with the same DB_UNIQUE_NAME was already registered in a Recovery Appliance, but the database ID was different than the target database.

Action: Connect to the proper target database, or change the DB_UNIQUE_NAME and register it again in the Recovery Appliance.

RMAN-20142: version stamp of backup XML set is different
Cause: A new backup XML set was generated at the Recovery Appliance since the last read of watermarks.

Action: Retry the reconcile operation.

RMAN-20143: no records found to resync for incarnation view
Cause: The reconcile code at the Recovery Appliance expected incarnation records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20144: no records found to resync for tablespace view
Cause: The reconcile code at the Recovery Appliance expected tablespace records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20145: no records found to resync for data file view
Cause: The reconcile code at the Recovery Appliance expected data file records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20146: no records found to resync for thread view
Cause: The reconcile code at the Recovery Appliance expected thread records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20147: no records found to resync for online redo log view
Cause: The reconcile code at the Recovery Appliance expected online redo log records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20148: no records found to resync for offline range view
Cause: The reconcile code at the Backup Appaliance expected offline range records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20149: required records are purged from the backup XML set at the Recovery Appliance
Cause: The recovery catalog was not reconciled from the Recovery Appliance recently, and records from backup XML set were purged at the Recovery Appliance.

Action: A new backup XML set must be created at the Recovery Appliance.

RMAN-20150: no records found to resync for Pluggable Database view
Cause: The reconcile code at the Recovery Appliance expected Pluggable Database records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20151: no records found to resync for Pluggable Database incarnation view
Cause: The reconcile code at the Recovery Appliance expected Pluggable Database incarnation records, but they were not sent by the recovery catalog.

Action: This is an internal error.

RMAN-20201: datafile not found in the recovery catalog
Cause: The specified data file is not found in the recovery catalog

Action: make sure that the data file name is correct and that the recovery catalog is up-to-date

RMAN-20202: Tablespace not found in the recovery catalog
Cause: the specified tablespace is not found in the recovery catalog

Action: make sure that the tablespace name is correct and that the recovery catalog is up-to-date

RMAN-20203: translation in progress
Cause: this procedure can not be called when name translation is in progress

Action: This is an internal error.

RMAN-20204: translation not started
Cause: GETDATAFILE procedure was called before TRANSLATETABLESPACE

Action: This is an internal error.

RMAN-20205: incomplete UNTIL clause
Cause: The sequence# was NULL

Action: This is an internal error.

RMAN-20206: log sequence not found in the repository
Cause: The specified log sequence does not exists in log history of the current database incarnation

Action: check the thread# and sequence#

RMAN-20207: UNTIL TIME or RECOVERY WINDOW is before RESETLOGS time
Cause: UNTIL TIME and RECOVERY WINDOW cannot be less than the database creation time or RESETLOGS time.

Action: Check the UNTIL TIME or RECOVERY WINDOW. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20208: UNTIL CHANGE is before RESETLOGS change
Cause: UNTIL CHANGE cannot be less than the database RESETLOGS change.

Action: Check the UNTIL CHANGE. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20209: duplicate datafile name
Cause: Two data files have the same name

Action: This is an internal error.

RMAN-20211: FROM TIME is before RESETLOGS time
Cause: FROM TIME cannot be less than the database creation time or RESETLOGS time.

Action: Check the FROM TIME. If the database needs to be restored to an old incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20212: UNTIL CHANGE is an orphan incarnation
Cause: Specified UNTIL CHANGE was an orphan incarnation.

Action: Check the UNTIL CHANGE or UNTIL RESTORE POINT. If the database needs to be restored or flashed back to an orphan incarnation, use the RESET DATABASE TO INCARNATION command.

RMAN-20213: UNTIL TIME could not be translated to a valid SCN
Cause: Specified UNTIL TIME could not be translated to a valid SCN.

Action: Use a more recent UNTIL TIME.

RMAN-20215: backup set not found
Cause: The specified backup set key was not found in the recovery catalog or target database control file.

Action: Specify a different backup set key.

RMAN-20217: datafile not part of the database
Cause: the data file does not exists or did not exist at until time/scn

Action: check the data file name or number. This is an internal error. for restore database or tablespace.

RMAN-20218: datafile not found in repository
Cause: This is an internal error.

Action: Contact Oracle Support Services.

RMAN-20220: control file copy not found in the repository
Cause: The specified control file was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the file name

RMAN-20221: ambiguous control file copy name
Cause: more than one control file copy in the recovery catalog match the specified name.

Action: n/a

RMAN-20222: datafile name not found in recovery catalog or is ambiguous
Cause: The specified data file name is not the name of a data file that is currently part of the target database, or an UNTIL clause has been specified and the file name was for a different data file at the time specified by the UNTIL clause than it is now.

Action: Use a data file number to specify the data file you want to RESTORE or RECOVER.

RMAN-20223: DB_UNIQUE_NAME mismatch in snapshot control file
Cause: The DB_UNIQUE_NAME value in the snapshot control file was incorrect. This error can occur in Oracle RAC when the snapshot control file location is not shared across nodes and virtual IPs are setup in the remote database from where resynchronization is done using RESYNC CATALOG FROM DB_UNIQUE_NAME commnad.

Action: To avoid this error, one of the following actions can be taken: 1) Share the control file snapshot location. The snapshot location can be displayed by executing SHOW SNAPSHOT CONTROLFILE NAME at the RMAN prompt. 2) Do not use Virtual IPs in the service name used to define the connect identifiers. The connect identifiers can be displayed using SHOW DB_UNIQUE_NAME command at the RMAN prompt.

RMAN-20230: datafile copy not found in the repository
Cause: The specified data file was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the data file copy name or key

RMAN-20231: ambiguous datafile copy name
Cause: more than one control file copy in the recovery catalog match the specified name.

Action: use the data file copy key to uniquely specify the data file copy

RMAN-20240: archived log not found in the repository
Cause: The specified archived log was not found in the recovery catalog or target database control file or it was marked deleted.

Action: check the archived log name or key

RMAN-20241: ambiguous archived log name
Cause: more than one archived log in the recovery catalog match the specified name

Action: use the archived log key to uniquely specify the archived log

RMAN-20242: specification does not match any archived log in the repository
Cause: No archived logs found that match specification in the recovery catalog or target database control file.

Action: check the archived log specifier

RMAN-20243: database db_unique_name is not known to the recovery catalog
Cause: the user specified DB_UNIQUE_NAME not known to the recovery catalog.

Action: change the database DB_UNIQUE_NAME to a known database value. To display list of known db_unique_names execute LIST DB_UNIQUE_NAME OF DATABASE

RMAN-20244: can not change currently connected database db_unique_name
Cause: the user specified currently connected DB_UNIQUE_NAME value to unregister.

Action: use the DB_UNIQUE_NAME other than connected target database's DB_UNIQUE_NAME value.

RMAN-20245: can not specify db_unique_name option in nocatalog mode
Cause: the user specified DB_UNIQUE_NAME in nocatalog mode.

Action: remove the DB_UNIQUE_NAME option from the command.

RMAN-20246: new db_unique_name is already known to the recovery catalog
Cause: the user specified known DB_UNIQUE_NAME value when renaming a DB_UNIQUE_NAME in the recovery catalog.

Action: change the database DB_UNIQUE_NAME to an known DB_UNIQUE_NAME value; or unregister the new DB_UNIQUE_NAME before renaming an old DB_UNIQUE_NAME value for a database. To display the list of all DB_UNIQUE_NAME for the databases LIST DB_UNIQUE_NAME OF DATABASE command can be executed.

RMAN-20247: specification does not match any foreign archived log in the repository
Cause: No foreign archived logs found that match specification in the recovery catalog or target database control file.

Action: check the foreign archived log specifier

RMAN-20250: offline range not found in the repository
Cause: The specified offline was not found in the recovery catalog or target database control file.

Action: check that recovery catalog is current

RMAN-20260: backup piece not found in the repository
Cause: The specified backup piece was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the backup piece handle or key

RMAN-20261: ambiguous backup piece handle
Cause: more than one backup piece in the recovery catalog match the specified handle

Action: use the backup piece key to uniquely specify the backup piece

RMAN-20272: no parent backup found for the incremental backup
Cause: no available backup or copy that could be used as the parent of the incremental backup was found in the recovery catalog.

Action: take a level 0 backup or copy of the data file first

RMAN-20280: too many device types
Cause: more than 8 device types were allocated

Action: make sure that the job allocates at most 8 different device types

RMAN-20298: DBMS_RCVCAT package not compatible with the recovery catalog
Cause: The version of the recovery catalog tables does not work with this version of the DBMS_RCVCAT package.

Action: Check that the recovery catalog packages and schema are installed correctly. The UPGRADE CATALOG command can be used to upgrade the recovery catalog tables and packages to the most current version.

RMAN-20299: DBMS_RCVMAN package not compatible with the recovery catalog
Cause: The version of the recovery catalog tables does not work with this version of the DBMS_RCVMAN package.

Action: Check that the recovery catalog packages and schema are installed correctly. The UPGRADE CATALOG command can be used to upgrade the recovery catalog tables and packages to the most current version.

RMAN-20310: proxy copy not found in the repository
Cause: The specified proxy copy was not in the recovery catalog or target database control file or it was marked deleted.

Action: check the proxy copy handle or key

RMAN-20311: ambiguous proxy copy handle
Cause: more than one proxy copy in the recovery catalog matches the specified handle

Action: use the proxy copy key to uniquely specify the proxy copy

RMAN-20401: script already exists
Cause: a CREATE SCRIPT was issued, but a script with the specified name already exists.

Action: use a different name or use REPLACE SCRIPT.

RMAN-20501: redo logs from parent database incarnation cannot be applied
Cause: A RESTORE or RECOVER of a data file was requested, but recovery of the data file would require applying redo logs that were generated before the most recent OPEN RESETLOGS.

Action: If a full backup or data file copy from the current database incarnation exists, ensure that it is marked AVAILABLE, and that a channel of the correct device type is allocated. It may also be necessary to remove the FROM BACKUPSET or FROM DATAFILECOPY or FROM TAG operands if these have been specified.

RMAN-20502: DELETE EXPIRED cannot delete objects that exist - run CROSSCHECK
Cause: A DELETE EXPIRED command was run, but the object was actually found to exist. This means the recovery catalog or target database control file is out of sync with reality.

Action: Run CROSSCHECK.

RMAN-20503: DELETE cannot delete expired objects - run CROSSCHECK or DELETE EXPIRED
Cause: A DELETE command was run without EXPIRED option, but the object doesn't exist. This means the recovery catalog or target database control file is out of sync with reality.

Action: Run CROSSCHECK.

RMAN-20504: corruption list not found in recovery catalog
Cause: corruption list is empty

Action: make sure that one or more blocks are marked corrupted in v$copy_corruption and v$backup_corruption and recovery catalog is up-to-date.

RMAN-20505: create datafile during recovery
Cause: applying of archived log caused a create data file redo-entry to to terminate recovery.

Action: none. This message is never displayed. RMAN automatically detects this case and creates the data file.

RMAN-20506: no backup of archived log found
Cause: during the recover process, no backup was found from which the archived logs could be restored.

Action: this message should be followed by a list of missing archived logs. Please make the necessary archived log backups available and try again.

RMAN-20507: some targets are remote - aborting restore
Cause: during the restore process, one or more backup files were unavailable locally for the restore operation.

Action: This message should be accompanied with the list of remote backup files. Recall these backups from remote location and retry the RESTORE command.

RMAN-20508: temporary resource already in use
Cause: Temporary resource that was allocated for IMPORT CATALOG command was already in use.

Action: Retry IMPORT CATALOG command.

RMAN-20509: temporary resource not found
Cause: Temporary resource that was allocated for IMPORT CATALOG command was not found.

Action: Retry IMPORT CATALOG command.

RMAN-20510: database not found in source recovery catalog database
Cause: Database that was specified in IMPORT CATALOG command was not found in the source recovery catalog database.

Action: Make sure that the database is registered in the source recovery catalog database.

RMAN-20511: database name is ambiguous in source recovery catalog database
Cause: Two or more databases in the source recovery catalog database match this name.

Action: Use DBID option in IMPORT CATALOG command to specify the source database.

RMAN-20512: source database already registered in recovery catalog
Cause: Source database was already registered in the recovery catalog.

Action: If the source database is really registered, there is no need to register it again. Note that the recovery catalog enforces that all databases have a unique DBID. If the new database was created by copying files from an existing database, it will have the same DBID as the original database and cannot be registered in the same recovery catalog.

RMAN-20513: UNTIL TIME or SCN is before Pluggable Database CREATION SCN
Cause: The UNTIL TIME or SCN specified was less than the Pluggable Database CREATION SCN. UNTIL TIME or SCN cannot be less than the Pluggable Database CREATION SCN.

Action: Check the UNTIL TIME or SCN and retry the command.

RMAN-20514: feature requires Oracle Recovery Appliance recovery catalog
Cause: The specified command required the Oracle Recovery Appliance recovery catalog.

Action: Connect to the Oracle Recovery Appliance recovery catalog and retry the command.

RMAN-20516: cannot upgrade the catalog when other RMAN sessions are connected to catalog
Cause: An attempt was made to execute the upgrade catalog command when there were other RMAN sessions already connected to the catalog.

Action: Close all other RMAN sessions that are connected to this catalog and retry the upgrade.

RMAN-20517: UPGRADE CATALOG is in progress. Waiting for it to complete
Cause: An attempt was made to connect to the recovery catalog while the catalog was being upgraded from a separate RMAN session.

Action: No action required. The connection to the recovery catalog will be made once the upgrade operation on the catalog is completed.

152
SCLC-01000 to SCLC-01037

SCLC-01000: Failed to retrieve address of {0}, {1}
Cause: Failed to retrieve current address of the resource.

Action: Make sure that resource is running and that user has read permission on resource profile and try again.

SCLC-01003: Failed to retrieve tier names registered with {0}, {1}
Cause: Failed to retrieve tier names.

Action: Make sure that resource is running and try again.

SCLC-01004: Failed to retrieve members of tier {0} registered with {1}, {2}
Cause: Failed to retrieve tier members.

Action: Make sure that resource is running and try again.

SCLC-01005: Failed to get member tiers, {0}
Cause: Failed to get member tiers.

Action: Make sure that tier specific representatives are running and try again.

SCLC-01006: Failed to get cluster tier instance, {0}
Cause: Failed to get cluster tier instance.

Action: Make sure that cluster tier is configured and try again.

SCLC-01007: Failed to get discovery information for tier {0}, {1}
Cause: Failed to get tier discovery information

Action: Retry after resolving cause stated in message

SCLC-01008: Failed to get filters at location {0} for tier {1}
Cause: Failed to get filters registered at the given location of the tier.

Action: Retry after resolving cause stated in message

SCLC-01009: Failed to set filters {0} at location {1} of the tier {2}, {3}
Cause: Failed to set filters at the given location of the tier.

Action: Retry after resolving cause stated in message

SCLC-01010: Failed to create Discovery Server, {0}
Cause: Failed to initialize Discovery Server

Action: Retry after resolving cause stated in message.

SCLC-01011: Failed to get Discovery Server reference, {0}
Cause: Failed to get Discovery Server reference

Action: Discovery server is not configured properly, contact Oracle support.

SCLC-01013: Failed to get Super Cluster Representative reference, {0}
Cause: Failed to get Super Cluster Representative reference

Action: Super Cluster Representative is not running, start it and retry.

SCLC-01014: Address {0} is not a multicast address
Cause: Given IP Address is not a multicast address and therefore cannot be used for multicast discovery.

Action: Supply a multicast IP address and try again.

SCLC-01015: Failed to retrieve configured multicast address for tier {0}
Cause: Failed to retrieve multicast address.

Action: Retry after resolving cause stated in message

SCLC-01016: Failed to retrieve discovery method for tier {0}
Cause: Failed to retrieve discovery method for the given tier.

Action: Retry after resolving cause stated in message

SCLC-01017: Multicast discovery method is not configured for tier {0}, {1}
Cause: Multicast discovery method is not configured.

Action: This operation is applicable only for Multicast discovery method. Try it after configuring multicast discovery method for this tier.

SCLC-01018: Discovery Server discovery method is not configured for tier {0}, {1}
Cause: Discovery Server discovery method is not configured.

Action: This operation is applicable only for Discovery Server discovery method.

SCLC-01019: Failed to retrieve member list for tier {0}, {1}
Cause: Failed to current retrieve member list for the tier.

Action: Retry after resolving cause stated in message

SCLC-01021: Failed to retrieve name of tier {0}
Cause: Failed to retrieve name of the tier.

Action: Retry after resolving cause stated in message.

SCLC-01022: Failed to update name of the tier {0}, {1}
Cause: Failed to update name of the tier.

Action: Retry after resolving cause stated in message.

SCLC-01025: Failed to retrieve count of representatives for tier {0}
Cause: Failed to retrieve number of representatives configured for the given tier.

Action: Retry after resolving cause stated in message.

SCLC-01026: Failed to update count of representatives for tier {0}, {1}
Cause: Failed to update number of representatives for the given tier.

Action: Retry after resolving cause stated in message.

SCLC-01027: Failed to start {0}, {1}
Cause: Failed to start given server.

Action: Retry after resolving cause stated in message.

SCLC-01028: Failed to stop {0}, {1}
Cause: Failed to stop given server.

Action: Retry after resolving cause stated in message.

SCLC-01029: Failed to check status of {0}, {1}
Cause: Failed to check status of given server.

Action: Retry after resolving cause stated in message.

SCLC-01030: {0} server is not running
Cause: Server is not running.

Action: Retry after starting the server.

SCLC-01031: Illegal argument : {0}
Cause: Given argument is illegal.

Action: See command usage.

SCLC-01032: Usage: {0} {1} {2}
Cause: Prints given action script usage.

Action: None

SCLC-01033: Failed to create super cluster client for tier {0}, {1}
Cause: Failed to create super cluster client for tier.

Action: Retry after resolving cause stated in message.

SCLC-01034: No argument was supplied to {0}
Cause: The tool was invoked without any arguments, see its usage.

Action: Invoke the tool with arguments as documented in its usage.

SCLC-01035: Failed to configure logger for {0}
Cause: An error was encountered while configuring logger for given program. The message is followed by an exception message that contains more information. Most likely source of error is lack of privileges to create/update files in <crs_home>/log/*hostname*/srvm directory.

Action: Fix the error reported in the exception message by granting privileges to the current user to create/update files in <crs_home>/log/*hostname*/srvm directory.

SCLC-01036: Failed to start the status listener for the EONS server {0}, {1}
Cause: The specified EONS server failed to either obtain an available port or create the status listener thread.

Action: Check if there are available ports on this system.

SCLC-01037: Failed to create the port file for the EONS server {0} on node {1}
Cause: An error occurred while creating a file in the <crs_home>/eons/init directory.

Action: Ensure that file system permissions are correct and that disk space is available.

153
SCLS-01000 to SCLS-01005

SCLS-01000: Failed to create super cluster representative server for tier {0}, {1}
Cause: Failed to create super cluster representative server for the given tier.

Action: Retry after resolving cause stated in message.

SCLS-01001: Failed to get ONS runtime of {0}
Cause: Failed to get ONS runtime of the given server.

Action: Retry after resolving cause stated in message.

SCLS-01002: Failed to get current member list of tier {0}
Cause: Failed to get current member list of the given tier.

Action: Retry after resolving cause stated in message.

SCLS-01003: eONS runtime was not running for tier {0}
Cause: eONS runtime was stopped abnormally.

Action: In cluster environment, try srvctl stop nodeapps -n *node* and srvctl start nodeapps -n *node*. In Oracle Restart environment, try srvctl stop eons and srvctl start eons.

SCLS-01004: Failed to set listening port to {0} for {1}
Cause: Failed to update listening port of the eONS runtime for this tier.

Action: Make sure that user has permission to update resource attribute. In cluster environment make sure that the clusterware stack is up.

SCLS-01005: Invalid listening port {0} specified for eONS
Cause: The specified eONS listening port number is invalid.

Action: Valid port numbers on Unix are from 1025 to 65535. Provide a valid port number for eONS to listen on.

154
SQL-01075 to SQL-02159

SQL-01075: you are currently logged on
Cause: There is already a connection on this host.

Action: Do not attempt the second connection.

SQL-02100: Out of memory (i.e., could not allocate)
Cause: SQLLIB was unable to allocate enough memory to execute the program.

Action: Allocate more memory to the user session, then rerun the program. If the error persists, call customer support for assistance.

SQL-02101: Inconsistent cursor cache. Unit cursor/global cursor mismatch
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02102: Inconsistent cursor cache. No global cursor entry.
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02103: Inconsistent cursor cache. Out of range cursor cache reference
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02104: Inconsistent host cache. No cursor cache available
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02105: Inconsistent cursor cache. Global cursor not found
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02106: Inconsistent cursor cache. Invalid Oracle cursor number
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02107: Program too old for runtime library; please re-precompile it
Cause: The program was precompiled by an older version of the Oracle Precompilers, which is incompatible with this release of SQLLIB.

Action: Precompile the program with a newer version of the Oracle Precompilers.

SQL-02108: Invalid descriptor passed to run-time library
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02109: Inconsistent host cache. Host reference is out of range
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02110: Inconsistent host cache. Invalid host cache entry type
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02111: Heap consistency error
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02112: SELECT..INTO returns too many rows
Cause: A SELECT...INTO statement returned more rows than can be stored in the host variable provided.

Action: There are 3 possible solutions: 1. Use the precompiler option select_error=no. 2. Declare a host variable with a larger array dimension. 3. Declare a cursor or cursor variable for the select statement.

SQL-02113: Unable to open message file
Cause: SQLLIB was unable to find or open the sqllib message file sql*.msb

Action: Check that the file exists in the mesg directory and that it is readable

SQL-02114: Invalid SQL Cursor usage: trying to CLOSE a CLOSEd cursor
Cause: An attempt was made to CLOSE a cursor that was already CLOSEd with MODE={ANSI|ANSI14}. A CLOSEd cursor can be re-CLOSEd only when MODE={ORACLE|ANSI13}.

Action: When MODE={ANSI|ANSI14}, verify that a cursor is not already CLOSEd before trying to CLOSE it. Specify MODE={ORACLE|ANSI13} if a CLOSEd cursor is to be re-CLOSEd.

SQL-02115: Code interpretation problem -- check COMMON_NAME usage
Cause: With PRO*FORTRAN, this error occurs if the precompiler option COMMON_NAME is specified incorrectly. With other Oracle Precompilers, this error occurs when the precompiler cannot generate a section of code.

Action: With Pro*FORTRAN, when using COMMON_NAME to precompile two or more source modules, make sure to specify a different common name for each module. With other Oracle Precompilers, if the error persists, call customer support for assistance.

SQL-02116: FATAL ERROR: Reentrant code generator gave invalid context
Cause: This internal error typically indicates a memory-related error.

Action: Check the program for memory-related errors, such as invalid pointers or array-bounds violations.

SQL-02117: Invalid SQL Cursor usage: trying to OPEN an OPENed cursor
Cause: An attempt was made to OPEN a cursor that was already OPENed with MODE={ANSI|ANSI14|ANSI13}. An open cursor can be re-OPENed only when MODE=ORACLE.

Action: When MODE={ANSI|ANSI14|ANSI13}, verify that a cursor is not already OPENed before trying to OPEN it. Specify MODE=ORACLE if an OPENed cursor is to be re-OPENed.

SQL-02118: Invalid row for a WHERE CURRENT OF operation
Cause: An attempt was made to reference a nonexistent row using the CURRENT OF clause in an UPDATE or DELETE statement. This happens when no FETCH has been executed or when FETCH returns a "no data found" error that the program fails to trap.

Action: Check that the last cursor operation succeeded and that the current row of the cursor is valid. The outcome of a cursor operation can be checked in two ways: implicit checking with the WHENEVER statement or explicit checking of SQLCODE in the SQLCA.

SQL-02119: Invalid HSTDEF argument
Cause: A non-null ptr was given for a hstdef as the second argument to a call to sqlrcn when the first argument was also used. Either the first or the second argument to SQLRCN must be null.

Action: Pass a null pointer in either the first or second argument to SQLRCN. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlrcn if this error occurs.

SQL-02120: First and second arguments to SQLRCN both null
Cause: Both the first and second arguments to sqlrcn were null. An HSTDEF must be passed into SQLRCN in either the form of an OCI lda (first argument) or as an HSTDEF pointer itself (second argument).

Action: Pass in either an OCI LDA or an HSTDEF, but not both. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlrcn if this error occurs.

SQL-02121: Invalid host name
Cause: The host name passed into a SQLFCN call was not used in a previous call to SQLRCN.

Action: Use the same identifier used in the corresponding SQLRCN call. *Note: This error *msg* is never actually used. The error *number* is used, given as the return value of sqlfcn if this error occurs.

SQL-02122: Invalid OPEN or PREPARE for this database connection
Cause: An attempt was made to execute an OPEN or a PREPARE statement using a cursor that is currently open for another database connection and, therefore, cannot be used for this connection.

Action: Close the cursor to make it available for this connection or use a different cursor for this connection.

SQL-02123: Context referenced in EXEC TOOLS GET CONTEXT statement not found
Cause: The context name given in the EXEC TOOLS GET CONTEXT statement was never stored with an EXEC TOOLS SET CONTEXT statement.

Action: Use the EXEC TOOLS SET CONTEXT statement to save any contexts to be retrieved later.

SQL-02124: NULL value returned by EXEC TOOLS statement
Cause: A NULL value was returned by EXEC TOOLS for a host variable that lacks an indicator variable. This error is returned only when MODE=ANSI. When MODE=ORACLE, although the value of the host variable is indeterminate, no error is generated.

Action: Associate an indicator variable with each host variable to which nulls might be returned.

SQL-02125: Connect error, can't get error text
Cause: No connection (not even to the default host) was available, so SQLLIB could not get the message text for the Oracle error that occurred. However, SQLLIB returns the Oracle error number, which can be used to look up the message.

Action: Look up the appropriate message in the Oracle7 Server Messages manual, and follow the Cause and Action information provided.

SQL-02126: Count of array elements cannot be negative (i.e. < 0)
Cause: The precompiler found a negative number of array elements in the the N or F element of the SQLDA (SQL Descriptor Area, which is used with dynamic SQL Method 4). Before executing the DESCRIBE statement, N must be set to the dimension of the descriptor arrays. After executing the DESCRIBE statement, N must be reset to the actual number of variables DESCRIBEd, which is stored in the F variable.

Action: Check that the N or F variables are set to non-negative values.

SQL-02127: Precompiler/SQLLIB version mismatch
Cause: The program was linked to an older version of SQLLIB, which is incompatible with this release of the Oracle Precompilers.

Action: Relink the program with a newer version of SQLLIB

SQL-02128: Sessions still exist, not logged off
Cause: A host was not removed ("logged off") from SQLLIB because XA still has sessions associated with that host.

Action: Before calling SQLXDH to drop a host, XA must either drop all sessions for that host or set the "doit_anyway" flag. *Note: This error *msg* is never actually used.

The error *number* is used, given as a possible return value to the sqllib xa function sqlxdh.

SQL-02129: Fetched number of bytes is odd.
Cause: The program tried to FETCH an invalid column value into a multi-byte NLS host variable. Specifically, the column did not contain valid double-byte data.

Action: Make sure the column contains only double-byte data. To verify this, use SQL*Plus or Server Manager.

SQL-02130: EXEC TOOLS interface is not available.
Cause: An attempt was made to link with a version of an Oracle tool that does not support the EXEC TOOLS interface. EXEC TOOLS interface.

Action: Either upgrade the Oracle tool, or use the EXEC IAF interface.

SQL-02131: Runtime context in use
Cause: Your application attempted to execute a SQL statement using a runtime context that is already in use.

Action: Rewrite the application to either wait for one thread to complete before executing another SQL statement with the same runtime context, or to allocate and use a separate runtime context for each thread.

SQL-02132: Unable to allocate runtime context sdfla asdjklfajs jfja ajsdf
Cause: An attempt to allocate a runtime context failed.

Action: This error typically occurs when the process memory is low. Allocate more memory and run the application again.

SQL-02133: Unable to initialize process for use with threads
Cause: This is an internal error.

Action: Call customer support.

SQL-02134: Invalid runtime context
Cause: The runtime context associated with this statement has not been properly allocated.

Action: Rewrite the application to execute the EXEC SQL CONTEXT ALLOCATE statement before executing any SQL statements.

SQL-02135: Unable to initialize date format using supplied mask
Cause: The runtime library was unable to issue a set date format statement with the date format mask supplied.

Action: Check the validity of the date format and correct if necessary. Check the ORA error number for further information.

SQL-02136: Invalid NCHAR character set id
Cause: An attempt was made to bind or define an NCHAR host variable, and the NLS_NCHAR variable was not set correctly.

Action: Set the NLS_NCHAR environment variable to a valid fixed width character set id and run the application again.

SQL-02137: Multi-threaded agent with no RETURNING clause present
Cause: The EXEC SQL REGISTER CONNECT statement does not contain a RETURNING clause and the agent is running in threaded mode.

Action: Re-code the statement to use a RETURNING clause that references a declared sql_context host variable.

SQL-02138: No external procedure context exists
Cause: The external procedure context passed in the EXEC SQL REGISTER CONNECT statement is not valid.

Action: Ensure that you have done the following: 1. Created the PL/SQL procedure/ function with a CONTEXT parameter. 2. Included OCIExtProcContext in the formal parameter list of the external procedure 3. Correctly passed the OCIExtProcContext to the EXEC SQL REGISTER CONNECT statement.

SQL-02139: Unable to get the OCI handles
Cause: The call to OCIExtProcGetEnv failed.

Action: Ensure that the OCIExtProcContext that the external procedure has been created with a CONTEXT parameter and that this context is correctly referenced in the EXEC SQL REGISTER CONNECT statement.

SQL-02140: An unnamed connection already exists
Cause: An attempt to register an external procedure context was made when an unnamed connection already exists for the runtime context.

Action: Do not attempt to establish any connections with the EXEC SQL CONNECT statement from external procedures.

SQL-02141: Collection descriptor has not been allocated
Cause: An unallocated collection descriptor was referenced in a COLLECTION SET or COLLECTION GET statement.

Action: Allocate the collection descriptor with the EXEC SQL ALLOCATE statement. e.g. EXEC SQL ALLOCATE :coldesc_p;

SQL-02142: Collection is NULL
Cause: The collection referenced in an EXEC SQL COLLECTION statement is null.

Action: Check the status of the associated indicator variable prior to executing an EXEC SQL COLLECTION statement.

SQL-02143: Target object has not been properly allocated
Cause: An attempt was made to retrieve elements from a collection into an unallocated object pointer.

Action: Allocate the object pointer with the EXEC SQL ALLOCATE statement.

SQL-02144: Invalid ANSI dynamic usage
Cause: An ANSI allocate, deallocate, get or set descriptor statement was encountered when dynamic option was not set.

Action: Precompile your source with option dynamic=ansi.

SQL-02145: Invalid dynamic descriptor
Cause: An attempt to access an unallocated or invalid descriptor was encountered.

Action: For ANSI descriptors, check that descriptor name is valid and descriptor has been allocated and not previously deallocated. Or if using Oracle descriptors (sqlda) with mode=ansi also use dynamic=oracle.

SQL-02146: Attempt to allocate an existing descriptor
Cause: An attempt allocated a descriptor which has previously been allocated was encountered.

Action: Use and unique descriptor name or deallocate the descriptor before attempting to reallocate it.

SQL-02147: ANSI Dynamic occurrence value out of range
Cause: The value clause in a dynamic GET or SET statement is less than one or greater than MAX given for descriptor allocation.

Action: Supply a number for the VALUE clause between 1 and the MAX occurrences supplied when the descriptor was allocated.

SQL-02148: ANSI Dynamic count value out of range
Cause: The count in a dynamic GET or SET statement is less than one or greater than MAX given for descriptor allocation.

Action: Supply a number for the COUNT clause between 1 and the MAX occurrences supplied when the descriptor was allocated.

SQL-02149: ANSI Dynamic insufficient item descriptor areas
Cause: The SQL statement being described contains more output items (or columns) than were allocated in the descriptor.

Action: Increase the MAX number of occurrences when allocating the descriptor.

SQL-02150: Encountered zero length in ANSI dynamic SET statement
Cause: An invalid length of zero was encountered in an ANSI dynamic statement.

Action: Set the length to a non-zero value

SQL-02151: Invalid host variable for exact numeric SET statement item
Cause: An host variable with an invalid type or length was used to get or set an exact numeric item in an ANSI dynamic statement.

Action: Make sure your host variable is and int or short for C or for COBOL, S9(4) or S9(9) binary/comp/display sign leading separate.

SQL-02152: Invalid numeric variable for use in an array GET/SET statement
Cause: An host variable with type other than int or short for C or S9(4) or S9(9) binary or comp was used for an exact numeric with and array size > 1.

Action: Use only int or short for C or S9(4) or S(9) binary or comp for COBOL when supplying an exact numeric in conjunction with the for clause to indicate arrays. Specifically, display sign leading separate is not allowed in this context.

SQL-02153: Invalid character variable for use in a GET/SET statement
Cause: An host variable with type other than character, string or varchar was found as an item name (other than DATA item) in an ANSI Dynamic GET or SET descriptor statement.

Action: Host variable types for character items (other than the DATA item) in ANSI dynamic GET or SET descriptor statements must not be of type LONG or LONG VARCHAR. Redeclare the variable to be character, string or varchar type

SQL-02154: Invalid or unset data type for host variable in ANSI Dynamic
Cause: An ANSI Dynamic SET statement with item name DATA was encountered with out a valid TYPE having been previously set and option mode=ansi was used

Action: With mode=ansi, you must set the TYPE before setting the DATA. Issue a SET statement with correct item TYPE or, for output issue a DESCRBE to set the item type. Or use mode=oracle which allows the type to default to the type of the bind/ define host variable

SQL-02155: Date Time Interval only valid with Dynamic=ANSI
Cause: An attempt to access the datetime interval code or precision was encountered when type_code option not set to ANSI

Action: Use precompiler option type_code=ansi to access the date time interval code or date time interval precision

SQL-02156: Invalid type for Indicator or Returned Length
Cause: A host variable associated with the item Indicator or Returned Length must be of type short or s9(4) comp. If value semantics and scalar they may also be gotten into display sign leading separate host variables

Action: Use signed short for indicator, ref indicator and returned length, ref returned length host variables in C. For COBOL use s9(4) comp. for GETs only with non-arrays and you may use display sign leading separate host variables

SQL-02157: Source or destination lob is invalid
Cause: One of the lobs used in the lob append call is invalid or possibly null.

Action: Make sure the lobs used in the append call are non-null.

SQL-02158: Unable to establish savepoint
Cause: An internal error occurred while establishing an internal savepoint.

Action: Check trace files for errors and rerun your application.

SQL-02159: exceeded the maximum allowed number of descriptors
Cause: The application exceeded the maximum number of descriptors.

Action: Close the unused descriptors in the application.

155
TNS-00001 to TNS-12699

TNS-00001: INTCTL: error while getting command line from the terminal
Cause: Improper standard input connection from the terminal.

Action: Normally not visible to the user. Start the INTCTL program again. If error persists, contact Oracle Customer Support.

TNS-00002: INTCTL: error while starting the Interchange
Cause: The Interchange could not be started.

Action: Check the Interchange configuration files (INTCHG.ORA, TNSNET.ORA and TNSNAV.ORA) for errors and confirm that no other programs are using the ADDRESS(es) specified. If error continues, turn on tracing in the Interchange components and examine the trace files to determine the cause of the problem. Be sure to turn tracing off when the problem has been rectified.

TNS-00003: INTCTL: error while sending request to the Interchange
Cause: Improper command sent to the Interchange or the Interchange is not responding. Not normally visible to the user.

Action: Verify that the command sent to the Interchange is valid. Also check that the Interchange is running by using the INTCTL STATUS command. If necessary, start the Interchange using the INTCTL START command.

TNS-00004: INTCTL: error while starting the Navigator
Cause: The Navigator could not be started.

Action: Check to make sure that executables for the Navigator (navgatr) are present in the ORACLE executable directory on your platform. Check the configuration files TNSNET.ORA and TNSNAV.ORA for errors. If error continues, turn on tracing in the Interchange components and examine the trace files to determine the cause of the problem. Be sure to turn tracing off when the problem has been rectified.

TNS-00005: INTCTL: error while sending request to the Navigator
Cause: The Navigator is not responding. Either the Navigator is not running or another process is responding.

Action: Check that the Navigator is running by using the STATUS command of the Interchange Control Utility. Verify that the correct addresses are listed in the TNSNAMES.ORA, TNSNET.ORA, and TNSNAV.ORA configuration files.

TNS-00006: INTCTL: HOST variable is not defined
Cause: The HOST variable was not set.

Action: Set the variable HOST properly and restart the INTCTL program.

TNS-00007: INTCTL: unknown host
Cause: The pointer HOST is set to an unknown hostname.

Action: Set the pointer HOST properly and restart INTCTL program.

TNS-00008: INTCTL: could not contact destination Navigator
Cause: Connection could not be properly established to a Navigator. This may be because the Navigator specified is not running or the Navigator addresses are incorrect.

Action: Check that the Navigator is running by using the STATUS command of the Interchange Control Utility; if necessary, start the Navigator using the START command of the Interchange Control Utility. If it is running and the error persists, contact Oracle Customer Support.

TNS-00009: INTCTL: could not contact destination Connection Manager
Cause: Connection could not be properly established to a Connection Manager. This may be because the Connection Manager (Interchange) specified is not running or the Connection Manager addresses are incorrect.

Action: Make sure the Connection Manager is running by using the STATUS command of the Interchange Control Utility; if necessary, start the Connection Manager using the START command of the Interchange Control Utility. If it is running and the error persists, contact Oracle Customer Support.

TNS-00010: Error while flushing NS context
Cause: Internal NS error; connection may be lost.

Action: Make sure the connection is properly established. If the error persists, then contact Oracle Customer Support.

TNS-00011: INTCTL: error while starting the Connection Manager
Cause: The Connection Manager could not be started.

Action: Assure that the executable can be found in the standard Oracle executable area. Check the configuration file INTCHG.ORA for errors and confirm that no other process is using the ADDRESS(es) for this Connection Manager as specified in TNSNET.ORA. Tracing can also be turned on in the Connection Manager and detailed information about the reason for the error determined. Consult the MultiProtocol Interchange Administrator's Guide and Chapter 2 of this manual for how to turn on tracing.

TNS-00012: INTCTL: error while processing Connection Manager request
Cause: An improper command was sent to the Connection Manager or it is not responding. Not normally visible to the user.

Action: Verify that the correct addresses are listed in the TNSNAMES.ORA, TNSNET.ORA, and TNSNAV.ORA configuration files. Also check that the Connection Manager is running by using the STATUS command of the Interchange Control Utility. If the error persists, contact Oracle Customer Support.

TNS-00013: INTCTL: error while performing NS disconnect command
Cause: Internal NS error. Error in closing down connections.

Action: Make sure the networking protocol being used is properly installed on the machine. If the error persists contact Oracle Customer Support.

TNS-00014: INTCTL: error while opening terminal input channel
Cause: Could not open standard terminal input. Internal error.

Action: Normally not visible to the user. Restart the INTCTL program. If error persists, contact Oracle Customer Support.

TNS-00015: INTCTL: error while closing terminal input channel
Cause: Could not close terminal input channel. Internal error.

Action: Normally not visible to the user. Restart the INTCTL program. If error persists, contact Oracle Customer Support.

TNS-00016: INTCTL: error while performing NS send command
Cause: Internal NS error. Connection may be lost.

Action: If the error persists contact Oracle Customer Support.

TNS-00017: INTCTL: error while performing NS receive command
Cause: Internal NS error. Connection may be lost.

Action: If the error persists contact Oracle Customer Support.

TNS-00018: INTCTL: TNS_ADMIN not defined
Cause: The TNS_ADMIN pointer is improperly set.

Action: No action necessary; TNS_ADMIN need only be set if you want to use a different network environment.

TNS-00019: INTCTL: error initializing the national language interface
Cause: The message file could not be found.

Action: Make sure that the ORACLE environment is set and that the message file is in the correct place.

TNS-00020: INTCTL: missing NAVIGATOR_DATA in TNSNAV.ORA
Cause: TNSNAV.ORA does not contain the NAVIGATOR_DATA component.

Action: Define the ADDRESS(es) for the Navigator, then restart the INTCTL program.

TNS-00021: INTCTL: missing INTERCHANGE_DATA in INTCHG.ORA
Cause: INTCHG.ORA does not contain an INTERCHANGE_DATA component.

Action: Define the correct data for the Connection Manager, then restart the INTCTL program.

TNS-00022: INTCTL: missing CMANAGER_NAME in INTCHG.ORA
Cause: INTCHG.ORA does not contain a CMANAGER_NAME component.

Action: Define the correct name for the CMANAGER_NAME, then restart the INTCTL program.

TNS-00023: INTCTL: missing ADDRESS(es) in config files
Cause: Configuration files do not contain an ADDRESS/ADDRESS_LIST component.

Action: Define the Connection Manager ADDRESS(es) in the TNSNET.ORA file and check the Navigator ADDRESS(es) in the TNSNAV.ORA file, then restart the INTCTL program.

TNS-00024: INTCTL: Unable to contact Navigator to obtain Connection Manager address
Cause: The Navigator is not running.

Action: Verify that the Navigator is running by doing a status request on the Navigator (use the Interchange Control Utility command STATUS). If necessaary, start the Navigator using the Interchange Control Utility. Verify that the network is properly configured; if the error persists, contact Worldwide Customer Support.

TNS-00025: INTCTL: The ORACLE environment is not set up correctly
Cause: The ORACLE environment is incorrectly set up.

Action: Refer to the Oracle operating system specific documentation for your platform for information on how the ORACLE environment should be set. Correct it and rerun INTCTL. Make sure the ORACLE environment includes the correct directories.

TNS-00026: INTCTL: TNS_ADMIN directory set, and is being used
Cause: The TNS_ADMIN environment variable is set properly. INTCTL will use the TNS_ADMIN directory. This is only an informative message. If you do not want it to be used, and want the default directory to be used instead, then unset TNS_ADMIN and reexecute.

Action: None

TNS-00027: INTCTL: Could not resolve Navigator's name/address
Cause: The Navigator's name to address definition is missing.

Action: Check TNSNAMES.ORA file and make sure to include a definition for the name specified.

TNS-00028: INTCTL: Could not resolve Connection Manager's name/address
Cause: The Connection Manager's name does not have a definition that the Navigator knows about, nor is the name/address available in the TNSNAMES.ORA file. The name may also be incorrect in the INTCHG.ORA file.

Action: Verify that the Connection Manager's name is in the TNSNET.ORA file read by the Navigator or in the TNSNAMES.ORA file. Be sure that INTCHG.ORA is correct.

TNS-00031: INTCTL: internal NT error
Cause: Problem interfacing to the protocol adapters installed.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00032: INTCTL: internal NS error
Cause: Problem interfacing with TNS.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00033: INTCTL: internal NL error
Cause: Problem with internal TNS module NL.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00034: INTCTL: internal NR error
Cause: Problem with internal Interchange routines.

Action: Normally not visible to the user. Try starting INTCTL again. If the error persists, check the product installation. If it is correct, contact Oracle Customer Support.

TNS-00035: INTCTL: error while constructing full file name
Cause: Problem while constructing the full path for a file name because the path name to the file or the environment variables are incorrect. Files looked up include TNSNAMES.ORA, TNSNAV.ORA, INTCHG.ORA and the error files for the Navigator and Connection Manager.

Action: Check that all environment variables are defined correctly and that all configuration files exist in their correct places.

TNS-00036: INTCTL: error reading from Navigator or Connection Manager error files
Cause: Problem while reading from Navigator or Connection Manager error files generated by the Navigator or Connection Manager when they fail to start.

Action: Check that a standard Network Error directory exists and that all privileges on the directory are appropriate.

TNS-00037: INTCTL: error opening Navigator or Connection Manager error files
Cause: Failed to open Navigator or Connection Manager error files when they have failed to start.

Action: Check that a Network Error directory exists and that all privileges on the directory are appropriate.

TNS-00038: INTCTL: Poorly formed address or command string
Cause: An unacceptable string was encountered while attempting to send a message to either the Navigator or Connection Manager. The addresses provided for either the Navigator or Connection Manager may be incorrectly constructed.

Action: Check all address strings in configuration files (TNSNAMES.ORA, TNSNAV.ORA or TNSNET.ORA) and assure that they are properly formed. Regenerate the files, if possible. If all is correct, please contact Worldwide Customer Support.

TNS-00039: INTCTL: error while spawning a process
Cause: An error was encountered while spawning a process due to an internal operating system dependent problem. Machine resources may be limited.

Action: Retry command. Check permissions on Interchange executables and the current setting of the search path. If necessary, terminate other applications to free up machine resources. If the error persists, contact Oracle Customer Support.

TNS-00040: INTCTL: failed to initialize trace context- Continuing anyway
Cause: Problem while opening specified trace file because of errors in INTCHG.ORA or because the user has incorrect privileges, or the file does not exist.

Action: Check the privileges on the configuration files and ensure that all of them exist in their proper locations.

TNS-00041: INTCTL: Navigator already running. Start operation cancelled
Cause: There is a Navigator already running and listening on the same addresses.

Action: None; the Navigator is already running.

TNS-00042: INTCTL: CMANAGER already running. Start operation cancelled
Cause: There is a Connection Manager already running and listening on the same addresses.

Action: None; the Connection Manager is already running.

TNS-00043: The CMANAGER has active connections, do you still want to stop it (y/n)?
Cause: The CMANAGER that is being stopped has active connections going through. This is the confirmation message.

Action: Respond by pressing y or n. Answering y will cause the active database connection to be dropped; this is not generally recommended.

TNS-00044: INTCTL: You must have an INTCHG.ORA file to contact the Connection Manager
Cause: There was an attempt to contact a default Connection Manager (Interchange) where there was no INTCHG.ORA present in the correct directory.

Action: Create an INTCHG.ORA file. Make sure it is placed in the correct directory and includes the correct name for the Connection Manager you wish to contact.

TNS-00045: INTCTL: Could not contact the Navigator on address
Cause: There was an attempt to contact a Navigator on a specific address which is not responding.

Action: Check the TNSNAV.ORA file for that address. Or check that the Navigator is actually listening on that address.

TNS-00046: INTCTL: Could not contact the CMANAGER on address
Cause: There was an attempt to contact a CMANAGER on a specific address which is not responding.

Action: Verify that the TNSNET.ORA file contains that address. Also check that the CMANAGER is actually listening on that address by using the INTCTL STATUS command. If necessary, start the Connection Manager using the INTCTL START command.

TNS-00060: INTCTL: Bad command: only the STATUS command can be used on remote Interchanges
Cause: The user entered a command that does not exist, or the user tried to make a request other than STATUS to a remote Interchange.

Action: Check the MultiProtocol Interchange Administrator's Guide for a list of INTCTL commands or type HELP for a list of valid commands.

TNS-00061: INTCTL: Bad command or syntax error: You must specify a trace level
Cause: The user did not specify a trace level.

Action: Specify a trace level and retry command.

TNS-00062: INTCTL: Bad command or syntax error: For help type help/h/?
Cause: The user entered an invalid command.

Action: Check the MultiProtocol Interchange Administrator's Guide or type HELP for a list of valid commands.

TNS-00063: INTCTL: Failed to allocate memory for buffers
Cause: INTCTL was unable to allocate memory for internal buffers.

Action: Check the amount of available memory on your machine to ensure that there is enough memory to run this executable. If necessary, free up memory by running fewer programs, then try again.

TNS-00064: INTCTL: Failed to find CMANAGER_NAME in INTCHG.ORA
Cause: INTCTL was unable to find the CMANAGER_NAME parameter in INTCHG.ORA.

Action: Check that the INTCHG.ORA file is properly constructed.

TNS-00065: INTCTL: Command cannot be executed remotely
Cause: A command other than status and version has been attempted remotely.

Action: If you desire execute any command other than status and version, you must run intctl on the interchange machine.

TNS-00070: INTCTL usage: [intctl] *command* <process_name> [argument]\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00071: where *command* is one of following: \n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00072: * start - start up process_name\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00073: * stop/abort - stop the process_name\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00074: * status - get statistics from the process_name\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00075: NOTE: the user may get the status info of a remote\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00076: component by specifying the component name in\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00077: the argument field\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00078: * log_on - ask process_name to turn logging on\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00079: * log_off - ask process_name to turn logging off\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00080: * force_log - ask process_name to dump its state\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00081: * trace_on - ask process name to turn tracing on\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00082: NOTE: the user MUST specify a trace level\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00083: (USER or ADMIN) in the argument field\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00084: * trace_off - ask process name to turn tracing off\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00085: * reread - ask the process name to reread parameter files\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00086: * reload - ask the Navigator to reload TNSNET.ORA\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00087: * version - ask the process name to display its version number\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00088: * exit - quit the Interchange controller\n\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00089: process_name is one of Interchange, CMANAGER, or Navigator\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00090: * Interchange - will ask the Interchange\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00091: * Navigator (or navgatr) - will ask the Navigator only\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00092: * CMANAGER (or intlsnr) - will ask the Cmanager only\n\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00093: argument is only supplied to either status or trace_on\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00094: * to status - argument is considered the remote process_name\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00095: * to trace_on - argument is considered the trace level\n\n
Cause: Help message displayed by INTCTL.

Action: None

TNS-00100: Unable to allocate memory
Cause: Out of memory on the machine.

Action: Add more memory or run fewer processes.

TNS-00101: File operation error
Cause: Error in accessing reading or writing a particular file.

Action: Check existence of or operating system access to the log and trace file locations.

TNS-00102: Keyword-Value binding operation error
Cause: Not normally visible to the user. May indicate a shortage of memory.

Action: If error persists contact Oracle Customer Support.

TNS-00103: Parameter file load error
Cause: Parameter file process failed.

Action: Check to make sure that all parameter files necessary for the Interchange are present (TNSNAV.ORA, TNSNET.ORA and INTCHG.ORA). If these files are present and properly configured, turn on tracing and repeat the operation. Turn off tracing when the trace is complete. Look in the trace file for errors in the parameter loading process. If error persists contact Oracle Customer Support.

TNS-00104: Data stream open/access error
Cause: Unable to open or access data stream for either log or trace files for the Interchange.

Action: Check read/write permissions on Oracle files and directories.

TNS-00105: Could not initialize tracing
Cause: The INTCHG.ORA file is improperly configured. Verify the trace parameters specified.

Action: If error persists contact Oracle Customer Support.

TNS-00106: Failed to open log file
Cause: Unable to access or obtain write permission to create log file.

Action: Check existence of or access to log file directory.

TNS-00107: Unable to initialize TNS global data
Cause: Not normally visible to the user.

Action: If error persists contact Oracle Customer Support.

TNS-00108: TNS_ADMIN not defined
Cause: TNS_ADMIN pointer is not set.

Action: Set the TNS_ADMIN pointer before running application

TNS-00109: Message could not be printed; not enough memory
Cause: Printing of message failed due to lack of memory. Not normally visible to user.

Action: Increase the resources on your machine. If error persists contact Oracle Customer Support.

TNS-00110: Could not initialize network from file TNSNET.ORA
Cause: Poorly formed network information in network file.

Action: Fix network configuration data to assure that at least one Interchange is defined in TNSNET.ORA.

TNS-00111: Failed to get configuration data from file
Cause: Poorly formed configuration information in network files TNSNET.ORA or TNSNAV.ORA.

Action: Check TNSNET.ORA and TNSNAV.ORA and confirm that they are correct.

TNS-00112: Failed to find configuration file name
Cause: Name specified for configuration file was incorrect.

Action: Check for presence of the configuration file.

TNS-00113: Failed to open error log file
Cause: Could not open log file during startup of Navigator or Connection Manager due to read or write permission problems or non-existent error directory.

Action: Create the standard error directory or assure that if one is present the Interchange executables can write to it.

TNS-00114: Internal error- Allocation of addresses not performed
Cause: Internal error. Should not normally occur.

Action: Contact Oracle Customer Support.

TNS-00115: Could not allocate pump global buffers
Cause: Not enough memory to allocate pump buffers.

Action: Decrease the number of PUMP_BUFFERS in INTCHG.ORA.

TNS-00116: Pump failed during initial bequeath
Cause: Error in assigning connection to a new pump. This error may be caused by insufficient machine resources.

Action: Attempt the connection again. The pump should recover from such a failure. If machine resources appear to be the problem, add more resources // or shut down some active applications. If problem persists, contact Oracle Customer Support.

TNS-00117: Internal error- No data passed through pump
Cause: Internal error. Data expected has not arrived yet.

Action: If error persists, contact Oracle Customer Support.

TNS-00119: Missing PUMP_CONNECTIONS in INTCHG.ORA
Cause: No PUMP_CONNECTIONS parameter specified in INTCHG.ORA.

Action: Add PUMP_CONNECTIONS parameter to INTCHG.ORA.

TNS-00120: Missing PUMPS in INTCHG.ORA
Cause: No PUMPS parameter specified.

Action: Add an appropriate number of PUMPS to INTCHG.ORA.

TNS-00121: Missing CMANAGER_NAME in INTCHG.ORA
Cause: No CMANAGER_NAME parameter specified.

Action: Define the CMANAGER_NAME parameter in INTCHG.ORA; it must match the CMANAGER_NAME parameter used in TNSNET.ORA for that Interchange.

TNS-00122: Missing ADDRESS(es) in TNSNET.ORA file
Cause: No ADDRESS or ADDRESS_LIST parameter specified in TNSNET.ORA.

Action: Define a valid set of ADDRESSes for the Connection Manager in the TNSNET.ORA file.

TNS-00123: Unable to perform a listen on configured ADDRESS(es)
Cause: Another process is already listening on this address or the ADDRESS is incorrectly defined.

Action: Check the ADDRESS(es) defined in TNSNET.ORA (for the Connection Manager) for errors. Verify that another program is not using them.

TNS-00124: Internal error - Unable to create empty address
Cause: - Internal error. Should not normally occur.

Action: If problem persists contact Oracle Customer Support.

TNS-00125: Failed to get number of Interchanges in TNSNET.ORA
Cause: Error in the TNSNET.ORA file.

Action: Check the contents of TNSNET.ORA and eliminate errors. Regenerate the configuration files.

TNS-00126: Missing Connection Manager name and address in TNSNET.ORA
Cause: The Interchange name specified in INTCHG.ORA is not defined in the TNSNET.ORA file.

Action: Define one Connection Manager name and set of addresses for each Interchange in the network. Regenerate the configuration files.

TNS-00127: Missing Connection Manager name in TNSNET.ORA
Cause: One or more Connection Manager names are missing.

Action: Ensure that each Connection Manager name is defined in TNSNET.ORA. Regenerate TNSNET.ORA.

TNS-00128: Missing COMMUNITY in TNSNET.ORA
Cause: One or more ADDRESSes does not have a COMMUNITY assigned.

Action: Ensure that all addresses have a COMMUNITY defined in TNSNET.ORA.

TNS-00129: Internal error - Failed to create new community
Cause: Internal Error. Should not normally occur. There may be a resource limitation problem on the machine.

Action: Stop and restart Interchange. If possible, make more memory available on the machine. If problem persists, contact Oracle Customer Support.

TNS-00130: Failed to create Interchange's internal address
Cause: There is an error in one of the addresses listed in TNSNET.ORA.

Action: Check the file for errors in defining Interchanges.

TNS-00131: Missing COMMUNITY in COMMUNITY_COST_LIST in TNSNET.ORA
Cause: A COMMUNITY keyword-value pair is missing within the COMMUNITY_COST_LIST in TNSNET.ORA.

Action: Define the communities with a COMMUNITY name and associated COST in COMMUNITY_COST_LIST.

TNS-00132: COST value must be an integer greater than 0
Cause: A community has been defined in TNSNET.ORA with a COST of 0.

Action: Assign an alternate value that is greater than 0.

TNS-00133: Missing LOCAL_COMMUNITIES field in TNSNAV.ORA
Cause: Improperly configured TNSNAV.ORA file.

Action: Define the LOCAL_COMMUNITIES fields correctly in TNSNAV.ORA.

TNS-00134: Missing COMMUNITY component in addresses for the Navigator in TNSNAV.ORA
Cause: The addresses specified for the Navigator have no COMMUNITY name.

Action: Ensure that all addresses in the NAVIGATOR_ADDRESSES field have a COMMUNITY entry in the TNSNAV.ORA file.

TNS-00135: Missing TNS error message file
Cause: No error message file present.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00136: Did not register product/facility for TNS error message
Cause: Error message file error.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00137: Failed to get TNS error message file entry
Cause: No TNS error message file present.

Action: Ensure that the ORACLE environment is correctly set for your platform and that there is a message directory that contains the correct error message file.

TNS-00138: Failed to find ORACLE executable directory
Cause: The ORACLE environment is not correctly set.

Action: Ensure that the ORACLE environment is correctly set and the error messages file is in the correct place.

TNS-00139: Internal - Data passed from the Interchange listener is poorly formed
Cause: Internal error in Interchange.

Action: Check that you are using compatible components of the Interchange product, using the INTCTL VERSION command. If problem persists call Oracle Customer Support.

TNS-00140: Interchange specified was not found in network tables
Cause: Could not find the Interchange specified in a control request.

Action: Check that the Interchange specified is indeed in TNSNET.ORA.

TNS-00141: Failed to get file stream information
Cause: Error in the file stream package.

Action: None

TNS-00142: Community mismatch in TNSNAV.ORA
Cause: The communities in the LOCAL_COMMUNITIES entry in TNSNAV.ORA do not correspond with all the communities in the NAVIGATOR_ADDRESSES entry.

Action: Assure that all communities in the NAVIGATOR_ADDRESSES correspond to those in the LOCAL_COMMUNITIES component.

TNS-00143: Illegal PREFERRED_CMANAGERS entry in TNSNAV.ORA
Cause: PREFERRED_CMANAGERS entry in the TNSNAV.ORA used by the Connection Manager. There should only be a PREFERRED_NAVIGATORS entry in the TNSNAV.ORA on an Interchange.

Action: Remove the PREFERRED_CMANAGERS entry from TNSNAV.ORA and assure that either no PREFERRED_NAVIGATORS entry is present or that it is correct.

TNS-00144: PUMP_CONNECTIONS value in INTCHG.ORA is too large.
Cause: The number of PUMP_CONNECTIONS specified in INTCHG.ORA is too large to be supported on this platform.

Action: Consult the Oracle operating system specific manual for the maximum value for the number of PUMP_CONNECTIONS.

TNS-00145: PUMPS value in INTCHG.ORA is too large.
Cause: The number of PUMPS specified in INTCHG.ORA is too large to be supported on this platform.

Action: Consult the Oracle operating system specific manual for the maximum value for the number of PUMPS.

TNS-00146: Internal-- Retry data request withing pump.
Cause: The data space provided in order to receive data from the pump is to small.

Action: Operation must be retried with a larger buffer.

TNS-00147: Failed to start a pre-spawned pump.
Cause: The Connection Manager was unable to start a pump during startup.

Action: Check all configuration parameters and assure that they are correct. Turn on tracing to determine the area that the failure ocurred in.

TNS-00200: Unable to do nsanswer on context\nresult=*string*\n
Cause: Requester of service may have aborted or options negotiation failed.

Action: Try making the connection again. If the problem persists call Oracle Customer Support.

TNS-00201: Unable to read answer connection data :*string*:\n
Cause: Improperly formed connect data sent to the Interchange listener.

Action: If problem persists, check the application using the Interchange (it may be closing down or crashing). Call Oracle Customer Support if the problem cannot be located.

TNS-00202: Failure in redirecting call : \nOriginal to *string*\n\t Redirect to *string*\n
Cause: Internal - error could not redirect call to a pump or other Interchange listener. The cause may be insufficient network or machine resources.

Action: Add resources or close some running applications in order to free up resources. If error persists, call Oracle Customer Support.

TNS-00203: Unable to start tracing in intlsnr\n
Cause: Failure in setting up tracing for Interchange listener.

Action: Check file permissions in Network trace directory also check to make sure that if trace file names and directories are specified in INTCHG.ORA, they are correct.

TNS-00204: Started tracing in intlsnr\n
Cause: Internal message- Successfully started tracing information.

Action: None

TNS-00205: Turning off tracing in intlsnr\n
Cause: Internal message - Turned off tracing in the Interchange listener.

Action: None

TNS-00206: \n\nStatus Information for Interchange *string*:\n
Cause: Message sent back by Interchange as header for status request.

Action: None

TNS-00207: \tUptime : *number* days *number* hr. *number* min. *number* sec\n
Cause: Part of status request.

Action: None

TNS-00208: \tLogging : *string*\n
Cause: Part of status request.

Action: None

TNS-00209: \tTracing : *string*\n
Cause: Part of status request Interchange.

Action: None

TNS-00210: \tTotal Pumps Available : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00211: \tTotal Active Pumps : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00212: \tTotal Pumps Started : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00213: \tAvailable Connections : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00214: \tTotal Connections in Use : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00215: \tTotal Successful Connections : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00216: \tTotal Failed Connections : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00217: \tTotal Bytes of Data : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00218: \tCurrent Bytes/Sec. : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00219: \tPump Strategy : *string*\n
Cause: Part of status request.

Action: None

TNS-00220: \tPump Breakdown\n\t----------\n
Cause: Part of status request.

Action: None

TNS-00221: \tPump Connections Total Data Bytes/Second\n
Cause: Part of status request.

Action: None

TNS-00222: \t----------\n
Cause: Part of status request.

Action: None

TNS-00223: \t*numbernumbernumbernumber*\n
Cause: Part of status request.

Action: None

TNS-00224: No more connections available\n
Cause: More connections were made to the Interchange than are configured in INTCHG.ORA.

Action: Wait until the Interchange is not as busy or change the number of connections allowed in INTCHG.ORA and restart the Interchange.

TNS-00225: Unable to bequeath connection to pump\n
Cause: Unable to start a pump because either the executable cannot be found or too many processes aare currently running on a particular machine.

Action: Reduce the number of processes on the machine or increase the resources on the machine.

TNS-00226: Unable to contact pump *number* to send broadcast message *string*\n
Cause: Could not call a particular pump.

Action: None, but if the problem persists call Oracle Customer Support.

TNS-00227: Unable to contact pump; Connection Manager declared pump dead\n
Cause: A pump became an orphaned process. A protocol adapter is not working properly or machine network resources are being over used.

Action: This error is not immediately fatal; the orphaned pump may continue to function. Restart the Interchange when convenient. If the problem persists, call Oracle Customer Support.

TNS-00228: Failure in finding pump data\n
Cause: Internal problem with data passed back from pump.

Action: None

TNS-00229: Error in call: unable to deliver message\n:*string*:\n*string*\n*string*\n*string*\n
Cause: Destination for call is unavailable.

Action: None

TNS-00230: Cannot start new pump process:\n*string*\n*string*\nProtocol Adapter errors:*number*
Cause: Unable to create a new process; possibly there are too many processes on the machine.

Action: Free machine resources by exiting other applications on the Interchange machine. If the problem continues you may need more memory on the machine. If you believe there are sufficient resources on the machine but the problem persists, contact Oracle Customer Support.

TNS-00231: Pump is alive\n
Cause: Pump log message sent to Interchange listener.

Action: None

TNS-00232: Unable to setup connection\n
Cause: Error log message sent from pump to indicate failure in initiating connection because of errors in the call string: network problem or resource limitations.

Action: None

TNS-00233: Interchange failed to make contact with destination with errors:\n*string*\n*string*\n*string*\n
Cause: Pump call to destination failed.

Action: Check destination.

TNS-00234: Connect data for failed call:\nCALL DATA =\n*string*\nRECEIVE DATA = :*string*:\n
Cause: Connect data supplied for error 00233.

Action: None

TNS-00235: Aborting connection:\nProtocol Apapter errors:\n*string*;*number*,*number*\n*string*;*number*,*number*\n
Cause: Pump aborting connection because connection has been up too long, or some other network error on the connection.

Action: None

TNS-00236: Failed to initialize tracing\n
Cause: Pump failed to initialize tracing.

Action: Check that INTCHG.ORA is properly configured.

TNS-00237: Failed to refuse connection\n
Cause: Connection may have aborted before error took place in Pump.

Action: None

TNS-00238: Pump *number* @: *string*:
Cause: Prepended message to all pump log messages.

Action: None

TNS-00239: Connection Manager has been stopped
Cause: Message sent back to control program from Interchange.

Action: None

TNS-00240: Connection Manager: Logging is now ON
Cause: Message sent back to control program from Interchange.

Action: None

TNS-00241: Connection Manager: Logging is now OFF
Cause: Message sent back to control program from Interchange.

Action: None

TNS-00242: Connection Manager: Tracing is now ON
Cause: Message sent back to control program from Interchange.

Action: None

TNS-00243: Connection Manager: Tracing is now OFF
Cause: Message sent back to control program from Interchange.

Action: None

TNS-00244: Connection Manager: Request Failed
Cause: Message sent back to control program from Interchange.

Action: None

TNS-00245: Connection Manager: Failed to open log file
Cause: Message sent back to control program from Interchange.

Action: None

TNS-00246: Connection Manager: Failed to start tracing
Cause: Message sent back to control program from Interchange.

Action: None

TNS-00247: Unable to allocate memory for configuration data from TNSNET.ORA file
Cause: Navigator failed to allocate enough memory for TNSNET.ORA configuration file.

Action: Increase machine resources available for running the Interchange or remove some other running applications from the machine.

TNS-00248: Unable to get information from file :*string*:\nExiting with NR error:*number*\n
Cause: TNSNAV.ORA poorly configured or addresses provided are already being used by another application.

Action: Check the syntax of the TNSNAV.ORA file; if necessary, assign new addresses.

TNS-00249: Unable to read network configuration data from file *string*\n with error:\n *string*\n
Cause: Network configuration file TNSNET.ORA is missing or poorly configured.

Action: Check to make sure that TNSNET.ORA is properly configured.

TNS-00250: Navigator has been started\n
Cause: Message to log file on Navigator startup.

Action: None

TNS-00251: Failure in nstest: \n
Cause: NS test operation failed due to internal error.

Action: If the problem persists there may be a network problem or resource limitations on the machine. If these do not seem to be causing the problem, call Oracle Customer Support.

TNS-00252: Unable to handle route request:\n*string*\n
Cause: Command requested did not exist.

Action: None

TNS-00253: Error in reading network configuration data from file *string*\n with error\n*string*\n
Cause: TNSNET.ORA is poorly configured or nonexistent.

Action: Check to make sure that TNSNET.ORA is properly configured.

TNS-00254: Navigator has been stopped\n
Cause: Message sent to Interchange control program by Navigator confirming it has been stopped.

Action: None

TNS-00255: Closing down log, stopping Navigator\n
Cause: Log message when Navigator is stopped.

Action: None

TNS-00256: Status of Navigator:\n
Cause: Navigator status message component

Action: None

TNS-00257: \tNumber of Successful Requests : *number*\n
Cause: Navigator status message component

Action: None

TNS-00258: \tNumber of Failed Requests : *number*\n
Cause: Navigator status message component

Action: None

TNS-00259: \tDisabled Interchange list:\n\t\n
Cause: Navigator status message component

Action: None

TNS-00260: \t----------\n
Cause: Navigator status message component

Action: None

TNS-00261: \tInterchange Name Community Link Down Time Remaining (secs) \n
Cause: Navigator status message component

Action: None

TNS-00262: *stringstringnumber*\n
Cause: Navigator status message component

Action: None

TNS-00263: Navigator: Request Failed
Cause: Response from Navigator when a particular request failed.

Action: None

TNS-00264: Navigator: Failed to reload configuration data
Cause: Message sent to the Interchange control program when reload of network configuration failed. TNSNET.ORA Poorly configured or missing.

Action: None

TNS-00265: Navigator: Reloaded network configuration data
Cause: Message sent to Interchange control program when reload of network is successful.

Action: None

TNS-00266: Navigator: Unknown Request
Cause: Request was made to Navigator that it knows nothing about.

Action: None

TNS-00267: Navigator: Internal Error
Cause: Generated when a request was made to the Navigator it knows nothing about.

Action: None

TNS-00268: ON
Cause: On component of message.

Action: None

TNS-00269: OFF
Cause: Off component of message.

Action: None

TNS-00270: *string*: Terminal Error\n*string*\n
Cause: Message put out in error file of executable when it fails to start.

Action: None

TNS-00271: Connection Manager
Cause: Name of the Connection Manager.

Action: None

TNS-00272: Navigator
Cause: Name for the Navigator.

Action: None

TNS-00273: Navigator: Logging is now ON
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00274: Navigator: Logging is now OFF
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00275: Navigator: Tracing is now ON
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00276: Navigator: Tracing is now OFF
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00277: Navigator: Request Failed
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00278: Navigator: Failed to Open Log file
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00279: Navigator: Failed to Start Tracing
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00280: \tMax Avg Bytes/Sec : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00281: Connection Manager: Forced Log output\n
Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00282: Connection Manager: Failed to force log, logging is off\n
Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00283: \nListening on the following TNS addresses:\n\n
Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00284: \tImm Max Avg Bytes/Sec : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00285: \tAvg Connect Time (secs) : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00286: \tMax Connect Time (secs) : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00287: \tMin Connect Time (secs) : *number*\n
Cause: Part of status request for Connection Manager.

Action: None

TNS-00288: Navigator: Failed to Disable Interchange
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00289: Navigator: Disabled Interchange
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00290: Navigator: Failed to Enable Interchange
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00291: Navigator: Enabled Interchange
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00292: \tLog File Name :\n\t\t*string*\n
Cause: Message sent back to control program showing log file name

Action: None

TNS-00293: \tTrace File Name :\n\t\t*string*\n
Cause: Message sent back to control program showing trace file name

Action: None

TNS-00294: Connection Manager: Security is enabled, you cannot STOP the Interchange\n
Cause: Message sent back to control program indicating that the connection manager is secure.

Action: None

TNS-00295: Navigator: Security is enabled, you cannot STOP the Navigator\n
Cause: Message sent back to control program indicating that the Navigator is secure.

Action: None

TNS-00296: \tStoppable : *string*\n
Cause: Message sent back to control program indicating whether program can be stopped.

Action: None

TNS-00297: \tLogging Level : *string*\n
Cause: Message sent back to control program indicating whether program can be stopped.

Action: None

TNS-00298: Request to Navigator:\n*string*\n
Cause: Log entry for request to Navigator.

Action: None

TNS-00299: Response from Navigator:\n*string*\n
Cause: Log entry for request to Navigator.

Action: None

TNS-00300: ***Disabling Interchange : *string*\n
Cause: Log entry for disabling a particular Interchange.

Action: None

TNS-00301: ***Enabling Interchange : *string*\n
Cause: Log entry for disabling a particular Interchange.

Action: None

TNS-00302: Connection Manager: Unknown Request
Cause: Request sent by Interchange control program is unknown.

Action: None

TNS-00303: Connection Manager: Reread parameter data
Cause: Request sent by control manager to control programming indicating that parameter data was read.

Action: None

TNS-00304: Status Information for Connection Manager:\n
Cause: Message sent back by Interchange as header for status request.

Action: None

TNS-00305: The Navigator encountered an invalid/unknown trace level\n
Cause: Message sent back by the Navigator indicating an invalid trace level.

Action: Reattempt the request with a correct trace level.

TNS-00306: Connection Manager encountered an invalid/unknown trace level\n
Cause: Message sent back by the Connection Manager indicating an invalid trace level.

Action: Reattempt the request with a correct trace level.

TNS-00307: Navigator: Reread parameter data
Cause: Request sent by the Navigator to control program indicating that parameter data was read.

Action: None

TNS-00308: Navigator: Failed to open log while rereading parameter data
Cause: Request sent by the Navigator to control program indicating that it could not reopen log file after rereading parameter data.

Action: None

TNS-00309: Connection Manager: Failed to open log while re-reading parameter data
Cause: Request sent by the Connection Manager to control program indicating that it could not reopen log file after rereading parameter data.

Action: None

TNS-00310: Navigator: Failed to start tracing after rereading parameter data
Cause: Message sent back to control program from Navigator.

Action: None

TNS-00311: Connection Manager: Failed to start tracing after rereading parameter data
Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00312: Connection Manager: Failed to get version information
Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00313: Navigator: Failed to get version information
Cause: Message sent back to control program from Connection Manager.

Action: None

TNS-00314: Protocol Adapter Errors: *number*,*number*\n
Cause: Protocol Adapter errors which go with message 233

Action: None

TNS-00315: Failed to allocate larger connect data area for getting pump data: *number*\n
Cause: Could not allocate a large enough area to get pump statistics; continue without them.

Action: None

TNS-00316: Ran out of data buffers in the pump\n
Cause: The Interchange is resource limited by having too few data buffers in the pump.

Action: If the problem persists (that is, there are a lot of log messages), increase the number of pump buffers by increasing the value of the parameter PUMP_BUFFERS in INTCHG.ORA. Then shutdown and restart the Interchange to make the changes take effect.

TNS-00317: Failed to contact Connection Manager
Cause: Connection Manager is not running.

Action: Start the Connection Manager and retry

TNS-00501: Cannot allocate memory
Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-00502: Invalid argument
Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00503: Illegal ADDRESS parameters
Cause: An illegal set of protocol adapter parameters was specified.

Action: Check the parameters within the ADDRESS section of the TNSNAMES.ORA file. It may be helpful to turn on tracing and look at the addresses specified in the trace file, checking for spelling or other errors. Be sure to turn tracing off when the trace is complete.

TNS-00504: Operation not supported
Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00505: Operation timed out
Cause: The requested operation could not be completed within the timeout period.

Action: Check the network of the failed connection for connectivity and congestion. For further details, turn on tracing and reexecute the operation.

TNS-00506: Operation would block
Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

TNS-00507: Connection closed
Cause: Normal "end of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

TNS-00508: No such protocol adapter
Cause: The protocol adapter requested for this connection does not exist.

Action: Install the protocol adapter or use one that is available. Be sure that the correct protocols are listed in the configuration files.

TNS-00509: Buffer overflow
Cause: Too much data for buffer.

Action: Reexecute with larger receive buffer or smaller send buffer.

TNS-00510: Internal limit restriction exceeded
Cause: Too many files or sockets open simultaneously (or some other resource has been depleted).

Action: For further details, trace the operation for protocol details.

TNS-00511: No listener
Cause: The connect request could not be completed because no application is listening on the address specified, or the application is unable to service the connect request in a sufficiently timely manner.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange. Start the listener on the remote machine.

TNS-00512: Address already in use
Cause: Specified listener address is already being used.

Action: Start your listener with an unused address.

TNS-00513: Destination host unreachable
Cause: Contact cannot be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-00514: Contexts have different wait/test functions
Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00515: Connect failed because target host or object does not exist
Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.)

TNS-00516: Permission denied
Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-00517: Lost contact
Cause: Partner has unexpectedly gone away.

Action: Investigate partner application for abnormal termination.

TNS-00518: Incomplete read or write
Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00519: Operating system resource quota exceeded
Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-00520: Syntax error
Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor for correct syntax.

TNS-00521: Missing keyword
Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

TNS-00522: Operation was interrupted
Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00523: Previous operation was busy
Cause: Operation tried could not be successfully completed because the requested resource was busy.

Action: Attempt the operation again. If error persists, contact Oracle Customer Support.

TNS-00524: Current operation is still in progress
Cause: Internal operation is still in progress but will complete.

Action: None; wait for operation to complete.

TNS-00525: Insufficient privilege for operation
Cause: Operating system failed to complete operation because user lacked sufficient privileges.

Action: Check your platform-specific privileges.

TNS-00526: No caller (false async event)
Cause: Internal error.

Action: For further details, turn on tracing and reexecute the operation.

TNS-00527: Protocol Adapter not loadable
Cause: On some platforms (for example OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that could not be loaded.

TNS-00528: Protocol Adapter not loaded
Cause: On some platforms (for example OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-00530: Protocol adapter error
Cause: A generic protocol adapter error occurred.

Action: For further details, turn on tracing and reexecute the operation.

TNS-00532: No previous async operation to wait on
Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00533: Connection dissolved or not yet made
Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00534: Failed to grant connection ownership to child
Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00535: Failed to send or receive disconnect message
Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00536: Connection entered inappropriate state
Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00537: Index into protocol adapter table is out of legal range
Cause: Internal protocol adapter error.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-00539: Network or Protocol services are down
Cause: The Network services on or from your node are not running or have stopped running.

Action: Restart your network or protocol services on this platform. If error persists, contact Oracle Customer Support.

TNS-00540: SSL protocol adapter failure
Cause: The SSL protocol adapter encountered an error.

Action: In most cases, this error should only be pair with a more meaningful ORA- error.

TNS-00541: underlying transport does not exist.
Cause: The SSL protocol adapter was unable to locate an adapter for the protocol that it is going to use as the data transport.

Action: In most cases, the underlying transport is TCP. Make sure that the Oracle Net TCP/IP adapter was installed.

TNS-00542: SSL Handshake failed
Cause: The SSL protocol adapter was unable to connect to another process.

Action: This error can be caused by a variety of problems including the termination of the peer process. Enable Oracle Net tracing and attempt the connection again. The trace file should give some clues as to what the exact problem is.

TNS-00543: internal error
Cause: The SSL protocol adapter encountered an unexpected error.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00544: unsupported operation
Cause: The SSL adapter could not perform a given command.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00545: parameter retrieval failure
Cause: The SSL protocol adapter was not able to retrieve a configuration parameter for some reason.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00546: control failure
Cause: The SSL protocol adapter was unable to perform a command.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00547: user information retrieval failed
Cause: The SSL protocol adapter was unable to retrieve information about the remote user.

Action: Examine the first error in the error stack. It should describe the error in more detail.

TNS-00548: value specified for client authentication parameter is not boolean
Cause: The value specified for the parameter that specifies that SSL client authentication is to be used was not boolean.

Action: Specify a correct value for the parameter.

TNS-00549: value specified for the SSL version is not valid
Cause: The value specified for the SSL version is not valid.

Action: Specify a valid value for the SSL version.

TNS-00550: disconnection error
Cause: The SSL protocol adapter encountered an error when the underlying transport disconnected.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00551: underlying transport connection failed
Cause: The underlying transport adapter used by the SSL adapter failed to connect.

Action: Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00552: no valid cipher suites were specified
Cause: SSL cipher specs were specified, but none were valid.

Action: Specify correct cipher suites.

TNS-00553: read failed
Cause: The SSL adapter failed to read data from its connection.

Action: Examine the contents of sqlnet.log for more information. Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00554: write failed
Cause: The SSL adapter failed to send data over its connection.

Action: Examine the contents of sqlnet.log for more information. Enable Oracle Net tracing and try the connection again. If the connection fails, examine the trace file to determine the cause.

TNS-00555: no directory specified for wallet resource locator
Cause: It was specified that a file was to be used from which to retrieve a wallet, but no directory was specified for the wallet.

Action: Specify the directory where the wallet is located.

TNS-00556: no method specified for wallet retrieval
Cause: A wallet resource locator was specified, but no method was given for the retrieval of the wallet.

Action: Specify the method by which the method is to be retrieved.

TNS-00557: unsupported wallet retrieval method
Cause: The method specified for wallet retrieval is not supported. Currently, only files are supported for wallet retrieval.

Action: Specify "FILE" as the wallet retrieval method.

TNS-00558: Entrust login failed
Cause: Entrust failed to authenticate the username, password, and/or profile name that was presented.

Action: Specify correct values for the username, password or profile name. If no data was prompted for, contact Oracle support.

TNS-00559: load of Entrust certificate failed
Cause: An error occurred while attempting to validate the provided Entrust certificate.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00560: extraction of name from Entrust certificate failed
Cause: An error occurred while attempting to extract a name from an Entrust certificate.

Action: This error is not normally visible to users. Enable Oracle Net tracing and attempt to reproduce the error. If it occurs, contact Oracle customer support.

TNS-00563: could not parse SSL_CIPHER_SUITES
Cause: An error occurred while attempting to parse SSL_CIPHER_SUITES in sqlnet.ora.

Action: Check the value of SSL_CIPHER_SUITES specified in sqlnet.ora. For further details, turn on tracing and reexecute the operation.

TNS-00565: SSL protocol adapter failed to locate wallet
Cause: An error occurred while attempting to locate wallet for SSL/TLS

Action: Check and ensure that the parameter WALLET_LOCATION is correctly specified in sqlnet.ora. For further details, turn on tracing and reexecute the operation.

TNS-00566: SSL protocol adapter failed to open wallet
Cause: An error occurred while attempting to open wallet for SSL/TLS

Action: Check and ensure that the parameter WALLET_LOCATION is correctly specified in sqlnet.ora. For further details, turn on tracing and reexecute the operation.

TNS-00580: Read failed due to closed or invalid transport connection
Cause: Read attempt was made on a transport connection which was previously terminated or is somehow deemed to be invalid.

Action: Indicates a substantial transport level failure. Check the O/S configuration for the particular transport or contact the transport provider. For further details, turn on tracing and reexecute the operation.

TNS-00581: Send failed due to timeout
Cause: The send operation did not complete within the allowed time interval.

Action: Error is informational. Note, repeated receipt of this error could indicate an attempted Denial-Of-Service attack. Also, if the receipt of this error interferes w/ a customer's normal operations, the customer may wish to lengthen the timeout.

TNS-00582: Receive failed due to timeout
Cause: The receive operation did not complete within the allowed time interval.

Action: Error is informational. Note, repeated receipt of this error could indicate an attempted Denial-Of-Service attack. Also, if the receipt of this error interferes w/ a customer's normal operations, the customer may wish to lengthen the timeout.

TNS-00583: Valid node checking: unable to parse configuration parameters
Cause: Valid node checking was unable to parse the configuration due to syntactical errors.

Action: Ensure that the configuration syntax matches the Oracle reference manual documented syntax. For further details, turn on tracing and reexecute the operation.

TNS-00584: Valid node checking configuration error
Cause: Valid node checking specific Oracle Net configuration is invalid.

Action: Ensure the hosts specified in the "invited_nodes" and "excluded_nodes" are valid. For further details, turn on tracing and reexecute the operation.

TNS-00586: Operation aborted due to interruption
Cause: The operation is aborted because it is interrupted by the upper layer.

Action: None

TNS-00587: Invalid HTTP response or response parse error.
Cause: HTTP upgrade response got either invalid HTTP Status line or the response headers are invalid.

Action: Please turn on network trace for further diagnosis.

TNS-00588: Invalid HTTP request or request parse error.
Cause: HTTP upgrade request got either invalid HTTP request line or the request headers are invalid.

Action: Please turn on network trace for further diagnosis.

TNS-00589: Websocket upgrade request failed
Cause: HTTP upgrade failed either becuase the server does not support or the request cannot be fulfilled at this time.

Action: Please turn on network trace for further diagnosis. Look for full HTTP response reason code in the network trace file.

TNS-01000: spawn [<listener_name>] <spawn_alias> [<(ARGUMENTS='arg0, arg1,...')>]\n
Cause: Control program usage message.

Action: None

TNS-01001: start [<listener_name>] : start listener\n
Cause: Control program usage message.

Action: None

TNS-01002: stop [<listener_name>] : stop listener\n
Cause: Control program usage message.

Action: None

TNS-01003: status [<listener_name>] : get the status of listener\n
Cause: Control program usage message.

Action: None

TNS-01004: reload [<listener_name>] : reload the parameter files and SIDs\n
Cause: Control program usage message.

Action: None

TNS-01005: trace OFF | USER | ADMIN | SUPPORT [<listener_name>] : set tracing to the specified level\n
Cause: Control program usage message.

Action: None

TNS-01006: set password : set the password for subsequent calls\n
Cause: Control program usage message.

Action: None

TNS-01007: quit | exit : exit LSNRCTL\n
Cause: Control program usage message.

Action: None

TNS-01008: version [<listener_name>] : get the version information of the listener\n
Cause: Control program usage message.

Action: None

TNS-01009: service [<listener_name>] : get the service information of the listener\n
Cause: Control program usage message.

Action: None

TNS-01013: set|show trc_{ } [*value*]: set|show trace parameters of current listener\n
Cause: Control program usage message.

Action: None

TNS-01014: set|show log_{ } [*value*]: set|show log parameters of current listener\n
Cause: Control program usage message.

Action: None

TNS-01015: set|show parm_name [*value*]: sets|shows current listener parm values\n
Cause: Control program usage message.

Action: None

TNS-01016: change_password [<listener_name>]: changes the password of the listener\n
Cause: Control program usage message.

Action: None

TNS-01017: set|show current_listener [<listener_name>]: sets|shows current listener\n
Cause: Control program usage message.

Action: None

TNS-01018: save_config [<listener_name>]: saves configuration changes to parameter file\n
Cause: Control program usage message.

Action: None

TNS-01019: set rawmode ON | OFF: set output mode for services and status commands\n
Cause: Control program usage message.

Action: None

TNS-01020: STATUS of the LISTENER\n
Cause: Control program status message.

Action: None

TNS-01021: ----------\n
Cause: Control program status message.

Action: None

TNS-01022: Alias *string*\n
Cause: Control program status message.

Action: None

Cause: Listener logging message.

Action: None

TNS-01098: TIMESTAMP * CONNECT DATA * ADDRESS * [PRESENTATION *] COMMAND * ERROR\nTIMESTAMP * [INSTANCE NAME *] [ADDRESS *] [PRESENTATION *] COMMAND * ERROR\n----------
Cause: Listener logging message.

Action: None

TNS-01099: *string * string * string * string * number*
Cause: Listener logging message.

Action: None

TNS-01100: TNS returned error *number* when attempting to start the listener
Cause: The bequeath (BEQ) mechanism that LSNRCTL uses to start the listener failed.

Action: If NS error code 12538 is also returned then the BEQ driver is not installed; call Oracle Worldwide Support as the BEQ driver should always be installed. If this is not the problem then the error is probably caused by the fact that the TNSLSNR executable cannot be found in the place expected in your platform's ORACLE environment. Verify that the full pathname of the TNSLSNR executable as displayed by LSNRCTL is correct.

TNS-01101: Could not find listener name or service name *string*
Cause: The listener name or service name could not be resolved by name-lookup.

Action: Verify that the listener name or service name specified to LSNRCTL has the correct name and address defined in LISTENER.ORA or in TNSNAMES.ORA.

TNS-01102: TNS application contacted was not the listener
Cause: Another TNS application such as the Interchange was listening at the address contacted. There may be another TNS application listening at the address contacted and the data returned is not in the appropriate format.

Action: Verify that the listener name or service name specified to LSNRCTL has the correct name and address defined in LISTENER.ORA or in TNSNAMES.ORA.

TNS-01103: Protocol specific component of the address is incorrectly specified
Cause: The ADDRESS used to contact the listener is not correctly specified. This error occurs because the address fails to specify the destination of the listener. The address is well formed (for example, there are no missing parentheses) but it is missing a protocol specific component. For example, this is the error returned when the HOST component is missing from a TCP/IP address string.

Action: Edit the ADDRESS in LISTENER.ORA to include the required protocol-specific keywords. For more information about the keywords required by different protocol adapters, see the Oracle operating system specific documentation for your platform.

TNS-01106: Listener using listener name *string* has already been started
Cause: Another listener is already listening on one of the ADDRESSes specified.

Action: Shutdown the previous listener specified by the listener name before starting this one.

TNS-01107: A valid trace level was not specified
Cause: Failed to specify a valid trace level for the LSNRCTL trace command.

Action: Specify one of OFF, USER, ADMIN, or SUPPORT. Type "LSNRCTL help trace" for more information or consult Chapter 2 of this manual for an introduction to the concepts of tracing.

TNS-01108: Listener password prompt failed
Cause: Password not entered via tty

Action: Enter the listener password on a tty device

TNS-01109: Listener password encryption failed
Cause: Possibly garbled password entered

Action: Re-enter the listener password, using valid ASCII characters. If problem persists, contact Oracle Customer Support.

TNS-01110: Mismatch - password unchanged
Cause: New password and reentered new password are different"

Action: Re-enter the listener password, make sure that New password and reentered new password are the same

TNS-01111: Log status can either be ON or OFF
Cause: Failed to specify a log status value for the LSNRCTL log_status command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set log_status" for more information or consult Chapter 2 of this manual for an introduction to the concepts of logging.

TNS-01112: Plug and play can either be ON or OFF
Cause: Failed to specify a valid value for the LSNRCTL use_plugandplay command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set use_plugandplay" for more information.

TNS-01113: save_config_on_stop can either be ON or OFF
Cause: Failed to specify a valid value for the LSNRCTL save_config_on_stop command.

Action: Specify one of ON or OFF. Type "LSNRCTL help set save_config_on_stop" for more information.

TNS-01114: LSNRCTL could not perform local OS authentication with the listener
Cause: LSNRCTL failed to obtain system resources (heap memory, or shared memory) needed to perform local OS authentication with the listener.

Action: Make sure that system resources like shared memory and heap memory are available for LSNRCTL tool to execute properly.

TNS-01115: OS error *string* creating shared memory segment of *string* bytes with key *string*
Cause: The shared memory segment could not be created as requested. For example, a segment with the provided key may already exist, or the size may be outside of system allowed range.

Action: Use the error code to determine the exact cause of the problem. In certain cases the problem may be resolved by adjusting the system-imposed limits such as the maximum number of allowed shared memory segments, or their maximum and minimum sizes. In other cases, resources need to be freed up first for the operation to succeed.

TNS-01116: Listener alias name given as connect identifier is too long
Cause: The listener alias name you were attempting to resolve was too long.

Action: The maximum length of a listener alias name is 255 bytes; this limit has been exceeded. Use a smaller listener alias name.

TNS-01117: Invalid argument was specified for stop command
Cause: Failed to specify a valid argument for the LSNRCTL stop command.

Action: Make sure a valid argument is specified with stop command.

TNS-01150: The address of the specified listener name is incorrect
Cause: The address on which the listener attempted to listen contains a syntax error.

Action: For the listener name or service name specified to LSNRCTL, check that the address or connect descriptor is well-formed. You can find the listener name in LISTENER.ORA, or you can access the listener through the service name is TNSNAMES.ORA.

TNS-01151: Missing listener name, *string*, in LISTENER.ORA
Cause: The listener could not find the listener name specified.

Action: Make sure valid addresses on which to listen are specified for the listener name in LISTENER.ORA.

TNS-01152: All addresses specified for the listener name, *string*, failed
Cause: The listener failed to listen on any of the specified addresses.

Action: Make sure that another application is not listening on the addresses specified or check that the appropriate protocol adapters are installed. Turn on tracing and execute again for more information.

TNS-01153: Failed to process string: *string*
Cause: The string specified is not well-formed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01154: SID detected in old format that is no longer supported
Cause: One of the SIDs was specified in an obsolete format.

Action: Check LISTENER.ORA for a line of the form: *sid* = (SID=(ORACLE_HOME=<oracle_home>)) OR *sid* = (SID_DESC=(ORACLE_HOME=<oracle_home>)) The above format is no longer supported and SID_LIST_<listener_name> format described in the Oracle9i Net Services Reference Guide should be used. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=*sid*)(ORACLE_HOME=<oracle_home>)))

TNS-01155: Incorrectly specified SID_LIST_*string* parameter in LISTENER.ORA
Cause: SID_LIST_<listener_name> in LISTENER.ORA has an error in it.

Action: Be sure this parameter is specified as described in the Oracle9i Net Services Reference Guide. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=*sid*)(ORACLE_HOME=<oracle_home>)))

TNS-01156: Missing or inappropriate PROTOCOL, TIMEOUT or POOL_SIZE parameter from PRESPAWN_DESC
Cause: PRESPAWN_DESC in each SID_DESC does not have required fields.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=*sid*)(PRESPAWN_MAX=5) (ORACLE_HOME=<oracle_home>)(PRESPAWN_DESC=(PROTOCOL=tcp)

(POOL_SIZE=10)(TIMEOUT=30)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01157: Can only listen on *number* addresses - ignoring *string*
Cause: Too many addresses were given to listen on.

Action: Reduce the number of addresses to listen on and use another listener to listen on the remaining addresses.

TNS-01158: Internal connection limit reached, preventing dispatcher from connecting
Cause: The internal Oracle Net connection list is full. Too many dispatchers are connected to the listener; therefore, no more dispatchers are allowed to connect.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01159: Internal connection limit has been reached; listener has shut down
Cause: The internal Oracle Net connection list is full. The listener is configured to use too many Oracle Net connections.

Action: Reduce the number of listen addresses or services connected to the listener. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01160: Trace level was not specified
Cause: Failed to specify a trace level for the trace command.

Action: Specify one of OFF, USER, ADMIN, or SUPPORT. Users should not see this error if LSNRCTL is being used.

TNS-01161: Spawn alias *string* was not found. Check listener parameter file
Cause: The alias specified to spawn a program was not found in LISTENER.ORA.

Action: This is not seen in normal use of Oracle Net.

TNS-01162: Syntax error in the address resolved from the spawn alias: *string*
Cause: The alias specified to spawn a program was not a valid NVstring.

Action: This is not seen in normal use of Oracle Net.

TNS-01163: Failed to spawn process: *string*
Cause: The process failed to start correctly.

Action: This is not seen in normal use of Oracle Net.

TNS-01164: No spawn alias sent to listener
Cause: The spawn command was issued without an alias.

Action: This is not seen in normal use of Oracle Net.

TNS-01165: Spawn alias has no program name set in it
Cause: The spawn alias in LISTENER.ORA is incorrectly specified.

Action: This is not seen in normal use of Oracle Net.

TNS-01166: Listener rejected registration or update of service ACL
Cause: Received registration or update information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle

TNS-01167: The command *string* is not supported by the listener contacted
Cause: The listener does not recognize the command.

Action: This is caused when a newer version of LSNRCTL contacts an old listener. Upgrade listener if executing this command is important.

TNS-01168: Cannot allocate memory
Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-01169: The listener has not recognized the password
Cause: The listener has the password security mechanism enabled and requires the correct password to execute any command other than VERSION. The user attempted to issue one of the privileged administrative commands, but could not be successfully authenticated with the password provided.

Action: If an authorized user is attempting the command, then use the SET PASSWORD command at the LSNRCTL prompt with the listener password. If you do not know the password, then you are trying to execute an inappropriate command.

TNS-01170: Event detection broke for address: *string*
Cause: The event detection mechanism for the address specified returned an error.

Action: Future attempts to detect events on this address will fail. The listener will deallocate the listen address and connections will no long be accepted for this address. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01171: Event detection broke for dispatcher: *string*
Cause: The event detection mechanism for the dispatcher specified returned an error.

Action: Future attempts to detect events on this dispatcher will fail. The listener will deallocate the dispatcher and connections will no long be redirected to this dispatcher. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01172: Listener has shut down since all listen addresses have been deallocated
Cause: The event detection mechanism broke and caused all listen addresses to be removed.

Action: Error 1170 has occured and caused all the listen addresses to be deallocated. Since all the listen addresses have been removed, no more connections can be established to this listener so it shuts itself down. This error is not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-01173: Missing or inappropriate PRESPAWN_MAX parameter from SID_DESC
Cause: PRESPAWN_MAX in each SID_DESC does not have required fields.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=*sid*)(PRESPAWN_MAX=15) (ORACLE_HOME=<oracle_home>)(PRESPAWN_DESC=(PROTOCOL=tcp) (POOL_SIZE=10)(TIMEOUT=30)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01174: The sum of the POOL_SIZEs from each PRESPAWN_DESC is greater than the PRESPAWN_MAX
Cause: The minimum value for PRESPAWN_MAX should be the sum of the POOL_SIZEs.

Action: Be sure the parameters required for PRESPAWN_DESC are specified in each SID_DESC. For example, SID_LIST_LISTENER = (SID_LIST=(SID_DESC=(SID_NAME=*sid*)(PRESPAWN_MAX=15) (ORACLE_HOME=<oracle_home>)(PRESPAWN_DESC=(PROTOCOL=tcp) (POOL_SIZE=10)(TIMEOUT=30))(PRESPAWN_DESC=(PROTOCOL=ipc) (POOL_SIZE=5)(TIMEOUT=15)))) Add or correct these parameters in the LISTENER.ORA file

TNS-01175: Password unchanged\n
Cause: Unable to set the new password

Action: Be sure to see that the new password has legal ASCII characters. Try to set the password again.

TNS-01176: Error in loading the new parameter value\n
Cause: Illegal values given for the parameters

Action: Make sure that the parameter values are valid refer to the manual for the legal values for paramters

TNS-01177: Log Status is OFF. Log file/directory unchanged\n
Cause: Log status needs to be set ON for changing the log file

Action: use command set log_status ON to set the log status of the listener ON.

TNS-01178: Trace Level is 0. Trace file/directory unchanged\n
Cause: Trace Level needs to be set for changing the trace file/directory

Action: use command set trc_level ON to set the trace level

TNS-01179: Listener cannot load instance class "*string*"\n
Cause: Instance tried to register as a class unknown to listener.

Action: check LISTENER.ORA and/or instance configuration, and reference platform documentation to find the instance classes available for the listener on this platform.

TNS-01180: Missing listener object *string* in Directory Server
Cause: The listener could not find the listener object specified.

Action: Make sure the listener object is present in the Directory Server.

TNS-01181: Internal registration connection limit reached
Cause: The number of registration connections has reached the maximum. No more registrations are allowed until some of the existing registration connections are completed.

Action: Disconnect existing registration connections if they are no longer needed.

TNS-01182: Listener rejected registration of service "*string*"
Cause: Received registration information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01183: Listener rejected registration or update of instance "*string*"
Cause: Received registration or update information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01184: Listener rejected registration or update of service handler "*string*"
Cause: Received registration or update information could not be processed because it was invalid, or an internal error occurred.

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Customer Support.

TNS-01185: Registration attempted from a remote node
Cause: It was determined that the registering instance is not located on the same node as the listener. It is required that the instance be colocated with the listener for this type of service registration.

Action: Check the configuration of the registering instance. Ensure that local_listener parameter specifies only local listeners. Use remote_listener parameter to specify remote listeners.

TNS-01186: Client connection was dropped based on a filtering rule
Cause: Listener was configured with a filtering rule which explicitly specified that the client connection should be terminated without returning an error to the client.

Action: Modify the filtering rules if the client should be allowed access to the requested service.

TNS-01187: No proxy service handler available
Cause: One of the following conditions has occurred: - the proxy service was not registered - the proxy service was registered, but was blocking new connections - all of the registered proxy service handlers were blocking new connections

Action: If the proxy service is not registered it may need to be restarted. If the proxy service handlers are busy and not accepting new connections more of them may need to be started to handle the load.

TNS-01188: Listener cannot operate with incompatible transport protocols
Cause: Listener was configured with multiple listening addresses with different and incompatible transport protocols. Listener cannot operate efficiently in such configuration.

Action: Modify the existing listener configuration by removing the listening address that caused the error. Configure a separate listener to listen on this address.

TNS-01189: The listener could not authenticate the user
Cause: The user attempted to issue a privileged administrative command, but could not be successfully authenticated by the listener using the local OS authentication mechanism. This may occur due to one of the following reasons: 1. The user is running a version of LSNRCTL that is lower than the version of the listener. 2. The user is attempting to administer the listener from a remote node. 3. The listener could not obtain the system resources needed to perform the authentication. 4. The local network connection between the listener and LSNRCTL was terminated unexpectedly during authentication message exchange, such as if LSNRCTL program was suddenly aborted. 5. The communication between the listener and LSNRCTL is being intercepted by a malicious user. 6. The software that the user is running is not following the authentication protocol, indicating a malicious user.

Action: Make sure that administrative commands are issued using the LSNRCTL tool that is of a version equal or greater than the version of the listener, and that the tool and the listener are running on the same node. You can issue the VERSION command to find out the version of the listener. If a malicious user is suspected, use the information provided in the listener log file to determine the source and nature of the requests. Enable listener tracing for more information. If the error persists, contact Oracle Support Services.

TNS-01190: The user is not authorized to execute the requested listener command
Cause: Most of the listener administrative commands are only intended to be issued by privileged users, for example DBAs or system administrators. If the listener password is not set, then the listener only accepts administrative requests from LSNRCTL running with the same OS credentials, or running as a local administrator (also referred to as super user).

Action: If an authorized user is attempting the command, then make sure that LSNRCTL is executed with the same OS user credentials as the running listener, or as a local administrator.

TNS-01191: Failed to initialize the local OS authentication subsystem
Cause: Initialization of the security subsystem failed during listener startup or reload. The listener could not obtain system resources (memory, or file descriptors) needed for local OS authentication security mechanism.

Action: Make sure that system resources like shared memory and heap memory are available for listener to execute properly. For further details, turn on tracing and execute the operation again. If the error persists, contact Oracle Support Services.

TNS-01192: Missing SID_LIST_ value left of equation for SID description in LISTENER.ORA
Cause: SID description in LISTENER.ORA had an error in it.

Action: Make sure the lines of code in LISTENER.ORA containing SID_DESC or SID begin with SID_LIST_<listener_name> on the left side of the equation. For example, SID_LIST_LISTENER =(SID_LIST=(SID_DESC=(SID_NAME=*sid*) (ORACLE_HOME=<oracle_home>)))

TNS-01193: Listener cannot operate with specified secure transport
Cause: Listener was configured with transport protocols which are either invalid or none of the secure transport protocols are present in listening addresses.

Action: Modify the existing listener configuration by specifying a valid tranport protocol in secure transport list.

TNS-01194: The listener command did not arrive in a secure transport
Cause: Most of the listener administrative commands are only intended to be issued in a secure transport, which are configured in secure_control_ parameter. If the parameter is set, then the listener accepts administrative requests only on those secure transports.

Action: Make sure the command is issued using a transport specified in secure transport list.

TNS-01196: Unable to initialize GSM IPC channel
Cause: IPC API returned an error

Action: Not normally visible to the user. For further details, turn on tracing and restart the instance. If error persists, contact Oracle Support Services.

TNS-01197: Listener failed to create the end point
Cause: Internal error. Unable to get subnet mask for the ip address.

Action: OS failure. Turn on tracing for further details

TNS-01198: Listener failed to initialize valid node list
Cause: VNCR options are not properly initialized in listener.ora or OS API failed.

Action: Check VNCR options i.e. valid_node_checking_for_registration, registration_invited_nodes, registration_excluded_nodes in listener.ora For further details, turn on tracing.

TNS-01199: Warning! Different databases have registered the same service
Cause: Different databases have registered the same service.

Action: In a multitenant container database (CDB) setup, this error indicates the usage of identical Oracle Net service name by multiple CDBs. The default Oracle Net service name for a pluggable database (PDB) in a CDB is derived from PDB name, so ensure that multiple CDBs registering with the same listener are not using identical PDB names. However, this error can be safely ignored if the usage of identical Oracle Net service name across multiple databases is intentional.

TNS-01200: The listener must be suid root
Cause: The ownership privileges of the TNSLSNR executable are incorrect.

Action: Contact your DBA or system administrator to change the ownership of the file to be suid root and restart the listener. This action is necessary because the user that started the process should claim ownership.

TNS-01201: Listener cannot find executable *string* for SID *string*
Cause: The executable for the Oracle dedicated server process cannot be found.

Action: Check the appropriate SID_DESC in LISTENER.ORA to make sure that the ORACLE_HOME component is pointing to a valid location. If this component is not set, then check the value of the ORACLE_HOME environment variable.

TNS-01202: Missing the dba group (*string*) specified by DBA_GROUP in SID_DESC
Cause: The dba group specified is missing from /ETC/GROUP.

Action: Check the DBA_GROUP parameter in the SID_DESC in LISTENER.ORA and verify it has a valid entry in /ETC/GROUP.

TNS-01203: Missing the account (*string*) specified by DEFAULT_USER_ACCOUNT in SID_DESC
Cause: The unprivileged OS account is missing from /etc/passwd.

Action: Check the DEFAULT_USER_ACCOUNT parameter in the SID_DESC in LISTENER.ORA and verify it has a valid entry in /etc/passwd. This is the account that the Oracle shadow process will be started with if the the connecting client has database privileges or does not exist on this machine.

TNS-01204: Unprivileged account (*string*) is in dba group (*string*)
Cause: The unprivileged account has DBA privileges. The unprivileged account specified by DEFAULT_USER_ACCOUNT in the SID_DESC in LISTENER.ORA is a member of the dba group specified by DBA_GROUP in SID_DESC. The unprivileged account cannot belong to the dba group because this would be a security violation with OPS$ logins.

Action: Remove the unprivileged account from the dba group.

TNS-01250: Failed to get ADR Path for trace/alert directory
Cause: The diagnosability API to get the service path returned an error

Action: None

TNS-01251: Cannot set trace/log directory under ADR
Cause: ADR trace and log directories cannot be set by the user.

Action: None

TNS-01300: \nERROR at *string*\n
Cause: Listener logging message.

Action: None

TNS-01301: TNS error structure:
Cause: Listener logging message.

Action: None

TNS-01302: nr err code: *number*
Cause: Listener logging message.

Action: None

TNS-01303: ns main err code: *number*
Cause: Listener logging message.

Action: None

TNS-01304: ns secondary err code: *number*
Cause: Listener logging message.

Action: None

TNS-01305: nt main err code: *number*
Cause: Listener logging message.

Action: None

TNS-01306: nt secondary err code: *number*
Cause: Listener logging message.

Action: None

TNS-01307: nt OS err code: *number*
Cause: Listener logging message.

Action: None

TNS-01351: Listener failed to initialize log suppress node list
Cause: log suppress nodes options are not properly initialized in listener.ora.

Action: Check LOG_SUPPRESS_NODES in listener.ora For further details, turn on tracing.

TNS-01400: Instance "*string*"\t\t has *number* handlers.
Cause: Control program status message.

Action: None

TNS-01401: Class: *string*
Cause: Control program status message.

Action: None

TNS-01402: TYPE: *string*
Cause: Control program status message.

Action: None

TNS-01403: Load: *string*
Cause: Control program status message.

Action: None

TNS-01404: Max Load: *string*
Cause: Control program status message.

Action: None

TNS-01405: Host: *string*
Cause: Control program status message.

Action: None

TNS-01406: ID: *string*
Cause: Control program status message.

Action: None

TNS-01407: Status: *string* Total handlers: *string* Relevant handlers: *string*
Cause: Control program status message.

Action: None

TNS-01408: Instance "*string*", status *string*, has *string* handler(s) for this service...
Cause: Control program status message.

Action: None

TNS-01409: Instance "*string*"
Cause: Control program status message.

Action: None

TNS-01410: Service "*string*"\t\thas *number* instances.
Cause: Control program status message.

Action: None

TNS-01411: Service "*string*" has *number* instance(s).
Cause: Control program status message.

Action: None

TNS-01412: Handler(s):
Cause: Control program status message.

Action: None

TNS-01413: "*string*" established:*string* refused:*string* current:*string* max:*string* state:*string*
Cause: Control program status message.

Action: None

TNS-01414: "*string*", state *string*, established *string*, refused *string*, current *string*, max *string*
Cause: Control program status message.

Action: None

TNS-01415: Listening Endpoints Summary...\n
Cause: Control program status message.

Action: None

TNS-01416: Process ID *string*\n
Cause: Control program status message.

Action: None

TNS-01417: "*string*" established:*string* refused:*string* state:*string*
Cause: Control program status message.

Action: None

TNS-01418: Proxy service "*string*" has *number* instance(s).
Cause: Control program status message.

Action: None

TNS-01419: Instance "*string*": *string* failure(s), status *string*...
Cause: Control program status message.

Action: None

TNS-01420: Presentation: *string*
Cause: Control program status message.

Action: None

Cause: Control program status message.

Action: None

TNS-01422: Default Service *string*\n
Cause: Control program status message.

Action: None

TNS-01423: ACL(s):
Cause: Control program status message.

Action: None

TNS-01424: *string* has *string* item(s)
Cause: Control program status message.

Action: None

TNS-01425: Services with Tenantkey Summary:\n
Cause: Control program status message.

Action: None

TNS-01426: Instance:*string* TenantKey:*string*
Cause: Control program status message.

Action: None

TNS-01441: Number of filtering rules currently in effect: *number*
Cause: Control program status message

Action: None

TNS-01442: No filtering rules currently in effect.
Cause: Control program status message

Action: None

TNS-02020: set displaymode RAW | COMPAT | NORMAL | VERBOSE: output mode for lsnrctl display\n
Cause: Control program usage message.

Action: None

TNS-02021: DIRECT_HANDOFF can be either ON or OFF.\n
Cause: Invalid value for the LSNRCTL direct_handoff parameter.

Action: Specify one of ON or OFF.

TNS-02022: show rules: Show rules that are currently in effect\n
Cause: Control program usage message.

Action: None

TNS-02023: shutdown [<listener_name>] : shutdown all non-admin endpoints of listener\n
Cause: Control program usage message.

Action: None

TNS-02024: servacls [<listener_name>] : get the service ACLs information of the listener\n
Cause: Control program usage message.

Action: None

TNS-02025: tenantkey [<listener_name>] : get the service tenantkey information of the listener\n
Cause: Control program usage message.

Action: None

TNS-02401: gbname *string* too long, allowed *number* characters
Cause: gbname or domain name too long.

Action: Check the gbname parameter in listener.ora, shorten it.

TNS-02402: Bad CLBGNAMES parameter in tnsnames.ora
Cause: CLBGNAMES parameter in tnsnames.ora is bad.

Action: Check the CLBGNAMES parameter format and correct it. Make sure that the tnsnames.ora file is there.

TNS-02403: Bad alias *string* or alias not present in tnsnames.ora
Cause: An alias was expected in tnsnames.ora but was not found or was not correctly formed.

Action: Check the tnsnames.ora for the alias and make sure it is correctly formed.

TNS-02404: Service *string* contains no local handlers
Cause: The listener found no suitable handler to redirect to.

Action: Make sure that there is at least one handler for this node.

TNS-02405: GMS call failed, check GMS logs.
Cause: A GMS call made by the listener failed.

Action: Check if the GMS is up and running. See GMS-client trace files for more information.

TNS-02501: Authentication: no more roles
Cause: When a process attempted to retrieve a role from the authentication service, no more were available.

Action: None. This error is used internally and occurs in the normal course of events.

TNS-02502: Authentication: unable to find initialization function
Cause: The native authentication service was unable to call the initialization function for the specified service because it does not exist.

Action: If this service adaptor came directly from Oracle, contact Oracle Customer Support, as this error should never happen. Otherwise, add an initialization function for the service being used.

TNS-02503: Parameter retrieval failed
Cause: The native service layer was unable to retrieve a parameter from a configuration file.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02504: Parameter count retrieval failed
Cause: The native service layer was unable to determine the number of arguments given for a configuration parameter.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02505: Authentication: null context pointer provided
Cause: The function nau_ini() was passed a null pointer as the pointer to the context that it is supposed to use.

Action: Call nau_ini() with a pointer to a context structure.

TNS-02506: Authentication: no type string
Cause: An authentication context structure does not contain a string that describes the authentication service being used.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02507: Encryption: algorithm not installed
Cause: After picking an algorithm, the server was unable to find an index for it in its table of algorithms. This should be impossible because the algorithm was chosen (indirectly) from that list.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02508: Encryption: server negotiation response in error
Cause: The server's response in negotiation was in error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02509: Authentication: invalid process state
Cause: The state in which a process is running does not correspond to any of the values which are valid.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02510: Invalid numeric data type
Cause: The type of a piece of numeric data that was received does not correspond to one of the valid values.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02511: Invalid data type
Cause: The type of a piece of data that was received or to be transmitted did not correspond to any of the correct values.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02512: Invalid status received
Cause: A process received a value as a status flag which was unknown.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02513: Requested data type does not match retrieved type
Cause: A service requested data whose type does not match that of the segment which was sent from the other process.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02514: Invalid packet received
Cause: A process received a data packet which was not meant for the native services layer.

Action: If it is possible, enable tracing and attempt to reproduce the problem. In any event, contact Oracle Customer Support.

TNS-02515: Encryption/crypto-checksumming: unknown control type
Cause: An encryption or crypto-checksumming algorithm "control" function was called, but did not recognize the "type" argument it was given.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-02516: No data available
Cause: A native service attempted to retrieve data but no data was available to be received.

Action: The error is not normally visible as it usually is only used to signal the end of a data stream. If the error becomes visible, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02517: key smaller than requested size
Cause: The key returned by negotiation was smaller than the size requested by some service (either encryption or crypto-checksumming).

Action: The error is not normally visible. If the error persists, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02518: key negotiation error
Cause: An error occurred while the two sides of the connection were negotiating an encryption or crypto-checksumming key.

Action: The error is not normally visible. If the error persists, enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02519: no appropriate key-negotiation parameters
Cause: No appopriate key-negotiation parameters are available for the key size requested either by encryption or by crypto- checksumming.

Action: The error is not normally visible. Enable tracing to reproduce the problem and contact Oracle Customer Support.

TNS-02520: encryption/crypto-checksumming: no Diffie-Hellman seed
Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

TNS-02521: encryption/crypto-checksumming: Diffie-Hellman seed too small
Cause: The "sqlnet.crypto_seed" parameter in the SQLNET.ORA parameter file for Oracle Net is too small.

Action: Add more randomly-chosen text to it.

TNS-02524: Authentication: privilege check failed
Cause: An error occurred when the authentication service attempted to verify that a user had a specific database privilege.

Action: This error should not happen normally. Enable tracing and attempt to repeat the error. Contact Customer Support.

TNS-02525: encryption/crypto-checksumming: self test failed
Cause: The encryption/crypto-checksumming service detected an error while running tests on the active encryption or checksumming algorithm.

Action: Contact Customer Support.

TNS-02526: server proxy type does not match client type
Cause: The authentication type selected by the server does not match that picked by the client.

Action: Contact Oracle Customer Support

TNS-03501: OK
Cause: The operation succeeded.

Action: No action necessary.

TNS-03502: Insufficient arguments. Usage: tnsping *address* [*count*]
Cause: Some required command-line arguments are missing.

Action: Re-enter the command using the correct arguments.

TNS-03503: Could not initialize NL
Cause: The network library could not be initialized.

Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03504: Service name too long
Cause: The service name you are attempting to ping is too long.

Action: Re-enter the command using the correct service name.

TNS-03505: Failed to resolve name
Cause: The service name you provided could not be found in TNSNAMES.ORA, an Oracle Names server, or a native naming service.

Action: Verify that you entered the service name correctly. You may need to ensure that the name was entered correctly into the network configuration.

TNS-03506: Failed to create address binding
Cause: The TNSPING utility found the requested address or service name, but received an internal error when trying to use it.

Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03507: Failure looking for ADDRESS keyword
Cause: The TNS address did not contain an ADDRESS keyword.

Action: If you entered the TNS address on the command line, be sure that the syntax is correct. If you entered a service name on the command line, the address contains the wrong information. You should verify that the information was entered correctly.

TNS-03508: Failed to create address string
Cause: The TNSPING utility received an internal error when generating an address.

Action: This is an internal error which should not normally be visible. Ensure that memory is available to run the application and that there are no other operating system problems, and then attempt the command again.

TNS-03509: OK (*number* msec)
Cause: The operation succeeded, in this amount of time.

Action: No action necessary.

TNS-03510: Failed due to I/O error
Cause: An I/O operation failed, perhaps due to a resource failure or premature window termination.

Action: This is an internal error which should not normally be visible. Do not close the TNSPING window before all I/O operations have completed.

TNS-03511: Used parameter files:\n*string*\n
Cause: Prints out the path of the parameter files(sqlnet.ora,tnsnames.ora) used in the process of resolving the NAME.

Action: None

TNS-03512: Used *string* adapter to resolve the alias\n
Cause: Prints out the name of the adapter which resolved the TNS alias.

Action: None

TNS-03513: Attempting to contact *string*\n
Cause: Attempting to contact a given TNS address.

Action: None

TNS-03601: Failed in route information collection
Cause: The route could either not connect, or encountered an unsupported version of Oracle Net.

Action: Check if Oracle Net along all nodes is version 2.3 or greater.

TNS-03602: Insufficient arguments. Usage: trcroute *address*
Cause: Some required command-line arguments are missing.

Action: Re-enter the command using the correct arguments.

TNS-03603: Encountered a node with a version eariler than SQL*Net 2.3
Cause: Versions of SQL*Net before 2.3 do not support trcroute.

Action: Find the node that isn't responding to trcroute.

TNS-04001: *string*
Cause: CMCTL general message.

Action: None

TNS-04002: The command completed successfully.
Cause: Not applicable.

Action: None

TNS-04003: Syntax Error.
Cause: The command issued has a wrong syntax.

Action: Check for the command issue syntax, and correct the problem.

TNS-04004: Unable to encrypt the supplied password.
Cause: The password that was supplied to the ADMINISTER command could not be encrypted.

Action: Change the password to something acceptable. See Oracle Net Services documentation for valid password values.

TNS-04005: Unable to resolve address for *string*.
Cause: The alias name supplied with the ADMINISTER command could not be resolved to an Oracle Connection Manager address.

Action: Check if your an entry for the alias is present in either CMAN.ORA file or in TNSNAMES.ORA file.

TNS-04006: Invalid password
Cause: The password given with the ADMINISTER command could not be verified by the Oracle Connection Manager instance.

Action: Retry with the correct password.

TNS-04007: Internal error *number*.
Cause: Not normally visible to the user.

Action: If error persists, contact Oracle Support Services.

TNS-04008: *string* | *string*
Cause: String parameter value.

Action: None

TNS-04009: *string* | *number*
Cause: Integer parameter value.

Action: None

TNS-04010: Command cannot be issued before the ADMINISTER command.
Cause: A command was issued before administering the Oracle Connection Manager instance.

Action: Enter the ADMINISTER command before retrying this command.

TNS-04011: Oracle Connection Manager instance not yet started.
Cause: A command was issued when Oracle Connection Manager was not yet started or already shutdown.

Action: Start Oracle Connection Manager.

TNS-04012: Unable to start Oracle Connection Manager instance.
Cause: CMCTL was unable to start the Oracle Connection Manager instance. Some of the possible reasons include: cmadmin not present in ORACLE_HOME/bin, Invalid parameter in configuration repository, wrong parameter values, or log directory not present.

Action: 1. Check whether log directory is present, and is writable. Log directory can be found at ORACLE_HOME/network/log, or as specified by the LOG_DIRECTORY parameter in CMAN.ORA. 2. Turn on logging or tracing to get more information about this error. 3. Correct any parameter errors (or mismatched paranthesis), and retry starting Oracle Connection Manager. 4. If the problem persists, contact Oracle Support Services.

TNS-04013: CMCTL timed out waiting for Oracle Connection Manager to start
Cause: Oracle Connection Manager internal registrations have not been completed.

Action: Turn on logging or tracing to get more information about this error. If the problem persists, contact Oracle Support Services.

TNS-04014: Current instance *string* is already started
Cause: An ADMINISTER command was issued to administer an Oracle Connection Manager instance that is already started.

Action: None

TNS-04015: Current instance *string* is not yet started
Cause: An ADMINISTER command was issued to an instance that has not yet been started.

Action: None

TNS-04016: Connecting to *string*
Cause: CMCTL is connecting to the the specified Oracle Connection Manager address.

Action: None

TNS-04017: Please wait. Shutdown in progress.
Cause: A command which cannot be used while Oracle Connection Manager is shutting down was issued.

Action: Wait for some time before retrying the command.

TNS-04018: Instance already started
Cause: The STARTUP command was issued to an instance which was already started.

Action: None

TNS-04019: Starting Oracle Connection Manager instance *string*. Please wait...
Cause: The STARTUP command was issued for an Oracle Connection Manager instance. CMCTL is waiting for the instance to start.

Action: None

TNS-04020: CMCTL Version: *number.number.number.number.number*
Cause: None.

Action: None

TNS-04021: The SET command is unsuccessful for parameter *string*.
Cause: The value set for the parameter was out of range.

Action: See Oracle Net Services documentation for value ranges for the parameters.

TNS-04022: *string* parameter *string* set to *string*.
Cause: Parameter value was successfully set.

Action: None

TNS-04023: Command failed.
Cause: The command issued failed to complete successfully.

Action: Retry command. If problem persists, contact Oracle Support Services.

TNS-04037: Connections refer to *string*.
Cause: The ADMINISTER command resolved to the address in the specified message string.

Action: None

TNS-04044: Specified gateways do not exist.
Cause: One or more specified gateway IDs do not exist.

Action: Specify correct gateway IDs.

TNS-04045: Invalid specification of time
Cause: The time specified with the GT (greater than) option was invalid.

Action: Check Oracle Net Services documentation for valid time specification.

TNS-04046: Invalid specification for source
Cause: The source specified with the FROM option was invalid.

Action: Check Oracle Net Services documentation for valid source specification.

TNS-04047: Invalid specification for destination
Cause: The destination specified with the TO option was invalid.

Action: Check Oracle Net Services documentation for valid destination specification.

TNS-04048: Specified service does not exist.
Cause: The service specified with the FOR option did not exist.

Action: None

TNS-04049: Specified connections do not exist
Cause: One or more connection IDs do not exist.

Action: None

TNS-04050: Invalid specification for gateway ID.
Cause: The gateway ID specified is invalid.

Action: Check Oracle Net Services documentation for a valid gateway ID specification.

TNS-04063: Remote administration disabled in the Oracle Connection Manager instance.
Cause: CMCTL attempted to connect to a remote Oracle Connection Manager instance in which remote administration was disabled.

Action: Set parameter remote_admin=on in the remote instance before starting it.

TNS-04064: The number of CMCTL sessions exceeds MAX_CMCTL_SESSIONS.
Cause: The Oracle Connection Manager instance already has MAX_CMCTL_SESSIONS number of CMCTLs connected to it.

Action: Use an already connected CMCTL, or, use a higher value for the parameter MAX_CMCTL_SESSIONS in the CMAN.ORA file.

TNS-04065: The number of remote CMCTL sessions exceeds (MAX_CMCTL_SESSIONS-1)
Cause: The Oracle Connection Manager instance already has (MAX_CMCTL_SESSIONS-1) number of remote CMCTL sessions connected to it.

Action: Use an already connected CMCTL, or, use a higher value for the parameter MAX_CMCTL_SESSIONS in the CMAN.ORA file.

TNS-04066: The following log events can be enabled or disabled:
Cause: None

Action: None

TNS-04067: Number of connections: *number*.
Cause: Either no information qualifier (COUNT/DETAIL) was present in SHOW CONNECTIONS command, or, COUNT was used as the information qualifier.

Action: None

TNS-04068: Cannot start an Oracle Connection Manager instance remotely.
Cause: CMCTL was used to start Oracle Connection Manager instance in a remote host.

Action: Use a local CMCTL to start the Oracle Connection Manager.

TNS-04069: Sleeping for *number* seconds...
Cause: CMCTL is idle for specified seconds. This feature is only provided for testing purposes.

Action: None

TNS-04070: Cannot administer a remote Oracle Connection Manager instance which is not yet started.
Cause: An attempt was made to administer a remote Oracle Connection Manager instance which is not yet started.

Action: Use a local CMCTL session to start the Oracle Connection Manager instance before trying to administer it remotely.

TNS-04071: Connections closed successfully. Number closed: *number*.
Cause: The specified connections were closed successfully.

Action: None

TNS-04072: Unable to suspend atleast one of the gateways.
Cause: CMCTL was unable to suspend one or more gateways. Possible reason could be suspending a gateway that was already suspended or suspending a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04073: Passwords do not match.
Cause: The new password and its confirmation do not match

Action: Use SET PASSWORD again.

TNS-04074: Invalid value for the parameter *string*.
Cause: The parameter value set using the SET command is invalid.

Action: See Oracle Net Services documentation for the valid values of the parameter.

TNS-04075: Cannot use ADMINISTER directly from the command line.
Cause: ADMINISTER can only be issued from the CMCTL> prompt.

Action: Use the -c option with any command instead of ADMINISTER.

TNS-04076: Invalid specification for state.
Cause: The state specified with "in" option is invalid.

Action: Check Oracle Net Services documentation for valid state specification.

TNS-04077: WARNING: No password set for the Oracle Connection Manager instance.
Cause: A connection to the Oracle Connection Manager instance was made with no password from the user.

Action: Ignore the warning if the Oracle Connection Manager is secure enough. Otherwise, use SET PASSWORD command to set a new password for the instance.

TNS-04078: Unable to resume atleast one of the gateways.
Cause: CMCTL was unable to resume one or more gateways. Possible reason could be resuming a gateway that was ready for connections, or resuming a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04079: Cannot administer Oracle Connection Manager with no CMAN.ORA, and port = *number*.
Cause: CMAN.ORA is not present or address not configured in CMAN.ORA, and the net service name in the TNSNAMES.ORA contains a nondefault Oracle Connection Manager port.

Action: Either change the TNSNAMES.ORA entry to use the default port, or configure the CMAN.ORA file with the Oracle Connection Manager's address.

TNS-04080: Failed to reload
Cause: Oracle Connection Manager failed to reload the new configuration due to errors in the configuration file.

Action: Set log_level to support and retry operation. Error encountered will be logged in the log file of CMADMIN.

TNS-04081: Event groups:
Cause: None

Action: None

TNS-04082: *string* event *string* set to *string*.
Cause: Event value was successfully set.

Action: None

TNS-04083: Failed to save password
Cause: Oracle Connection Manager failed to save the password in the configuration file.

Action: Check for the permissions on the configuration file. The file should have WRITE permissions.

TNS-04084: WARNING: Non-reloadable parameters have retained their values.
Cause: Values of non-reloadable parameters were changed, or, one or more non-reloadable parameters having non-default values were added to the parameter file.

Action: See Oracle Net Services documentation for a list of non-reloadable parameters.

TNS-04085: Password not changed since last save.
Cause: Password has not been changed since it was last saved.

Action: None

TNS-04086: Invalid value for the event *string*.
Cause: The event value set using the SET EVENT command is invalid.

Action: See Oracle Net Services documentation for the valid values of the event.

TNS-04087: Unable to shutdown atleast one of the gateways.
Cause: CMCTL was unable to shutdown one or more gateways. Possible reason could be shutting down a gateway that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04088: Unable to close atleast one of the connections.
Cause: CMCTL was unable to close one or more connections. Possible reason could be closing a connection that was not present.

Action: Turn on tracing and logging, retry operation. Information in the log files would help.

TNS-04089: Alias name too long.
Cause: User entered an alias name that exceeded 64 characters.

Action: Retry with a shorter alias name. Alias names have to be less than 65 characters.

TNS-04090: *string* : *number*
Cause: Integer parameter value.

Action: None

TNS-04091: *string* : *string*
Cause: Integer parameter value.

Action: None

TNS-04096: Command not supported in Traffic Director mode.
Cause: This command is not supported by CMAN in Traffic Director mode.

Action: None

TNS-04140: Migration completed successfully.
Cause: CMMIGR has successfully completed the migration of the old CMAN.ORA file to the new format.

Action: None

TNS-04141: Unable to find CMAN.ORA file.
Cause: CMMIGR was not able to find CMAN.ORA file.

Action: Check whether CMAN.ORA file is present in $TNS_NAME/admin, or in $ORACLE_HOME/network/admin, or in the path specified in the command line.

TNS-04142: CMAN.ORA file has an invalid format.
Cause: CMMIGR was unable to recognize the format of CMAN.ORA file.

Action: Check for the syntax errors in CMAN.ORA file, and correct them.

TNS-04143: Unable to write the new CMAN.ORA file.
Cause: CMMIGR was unable to create the new CMAN.ORA file due to insufficient perimissions.

Action: Set WRITE permissions to the directory in which CMAN.ORA file is to be written.

TNS-04144: Nothing to migrate
Cause: CMMIGR did not find anything in the old CMAN.ORA file that has an equivalent in the new format.

Action: None

TNS-04191: invalid CMAN in Traffic Director mode configuration\n
Cause: An attempt was made to connect to CMAN in Traffic Director mode with invalid configuration.

Action: Correct the configuration of CMAN in Traffice Director mode before starting it. Check and correct the wallet credentials and proxy authorization. Check with CMAN in Traffic Director mode admin to get more info from traces and sqlnet.log.

TNS-04201: Trace Assistant Usage ERROR: Missing File name\n
Cause: Trace file name argument is missing

Action: Put the trace file name as the last command line argument for for this tool.

TNS-04202: Trace Assistant Usage ERROR: Not enough arguments \n
Cause: The *file name* and/or the *options* arguments are missing

Action: Put the right number of command line arguments.

TNS-04203: Trace Assistant Usage ERROR: Invalid options \n
Cause: The options provided are not valid

Action: Check the valid options for this tool.

TNS-04204: Trace Assistant Internal ERROR: Couldn't Open trace file\n
Cause: The trace file name given doesn't exist or it is not accessible for this user.

Action: Check the spelling, and permissions of the trace file.

TNS-04205: Trace Assistant Internal ERROR: Memory\n
Cause: Possible memory problem

Action: Verify the amount of available memory on the system.

TNS-04206: Trace Assistant Internal ERROR: Packet Type\n
Cause: The packet type read by trcAsst is not valid.

Action: Verify that your trace file is not corrupted. If trace file looks OK, with not strange characters in it, contact World Wide Support and provide trace file to them.

TNS-04207: Trace Assistant Internal ERROR: Packet Length\n
Cause: The packet being decode is corrupted.

Action: Verify that your trace file is not corrupted. If trace file looks OK, with not strange characters in it, contact World Wide Support and provide trace file to them.

TNS-04208: Trace Assistant Internal ERROR: Fatal\n
Cause: Fatal internal error

Action: Contact World Wide Support.

TNS-04209: Trace Assistant Internal ERROR: Type Error \n
Cause: Internal type error,

Action: Contact World Wide Support.

TNS-04210: Trace Assistant Internal ERROR: End of File\n
Cause: Reaching End of File to soon. Not able to decode trace file. Your trace file appears to be truncated.

Action: Generate another trace file. This trace file can not be decoded.

TNS-04211: Trace Assistant Internal ERROR: CORE\n
Cause: Internal System Error

Action: Contact World Wide Support.

TNS-04212: Trace Assistant Internal ERROR: NACOM Type Error \n
Cause: Not able to decode Network Authentication information

Action: Contact World Wide Support.

TNS-04231: Trace Assistant WARNING: Assuming Oracle trace format\n
Cause: This trace file may not be a Network trace file. The default format (Oracle Trace) will be assumed.

Action: None

TNS-04232: Trace Assistant WARNING: Not retrieving all rows \n
Cause: Trace Assitante won't retrieve all the rows data.

Action: None

TNS-04233: Trace Assistant WARNING: Going beyond Packet length\n
Cause: Trying to read beyond packet length. The trace file may be corrupted

Action: None

TNS-04234: Trace Assistant WARNING: won't decode TTC \n
Cause: Trace assistant does not have enough information to decode TTC data. This maybe an old trace file or from a platform that trace assistant does not understand.

Action: None

TNS-04235: Trace Assistant WARNING: Unknown TTC protocol\n
Cause: Trace Assistant has reached a point in which the TTC protocol can not be understood.

Action: None

TNS-12150: TNS:unable to send data
Cause: Unable to send data. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12151: TNS:received bad packet type from network layer
Cause: Internal error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12152: TNS:unable to send break message
Cause: Unable to send break message. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12153: TNS:not connected
Cause: Not currently connected to a remote host.

Action: Reestablish connection.

TNS-12154: TNS:could not resolve the connect identifier specified
Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net

Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

TNS-12155: TNS:received bad datatype in NSWMARKER packet
Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12156: TNS:tried to reset line from incorrect state
Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12157: TNS:internal network communication error
Cause: Internal error during network communication.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12158: TNS:could not initialize parameter subsystem
Cause: Unable to locate parameter file.

Action: Verify that a valid parameter file exists, and is readable.

TNS-12159: TNS:trace file not writeable
Cause: The trace file to be generated is not writeable by this user.

Action: If the user does not have write permissions in the directory to which the trace file will be written, contact an administrator to get the proper permissions or set the TRACE_DIRECTORY_CLIENT parameter in the net profile (SQLNET.ORA file) to a directory the user can write to.

TNS-12160: TNS:internal error: Bad error number
Cause: Corrupt error reporting subsystem.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12161: TNS:internal error: partial data received
Cause: The connection may be terminated.

Action: Reconnect and try again. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12162: TNS:net service name is incorrectly specified
Cause: The connect descriptor corresponding to the net service name in TNSNAMES.ORA or in the directory server (Oracle Internet Directory) is incorrectly specified.

Action: If using local naming make sure there are no syntax errors in the corresponding connect descriptor in the TNSNAMES.ORA file. If using directory naming check the information provided through the administration used for directory naming. If using ORACLE_SID, please check if ORACLE_SID is// set.

TNS-12163: TNS:connect descriptor is too long
Cause: The connect descriptor corresponding to the net service name specified as the connect identifier is too long. The maximum length for a connect descriptor is 512 bytes and this limit has been exceeded.

Action: Check the net service name's connect descriptor in the local naming file (TNSNAMES.ORA) or in the directory server (Oracle Internet Directory). Use a smaller connect descriptor. If this is not possible, contact Worldwide Customer Support.

TNS-12164: TNS:Sqlnet.fdf file not present
Cause: The sqlnet.fdf file doesn't exist in $ORACLE_HOME/network/admin.

Action: The sqlnet.fdf file is required for Oracle Tracing to occur. Either install the sqlnet.fdf file in $ORACLE_HOME/network/admin or turn off tracing in your ORA file.

TNS-12165: TNS:Trying to write trace file into swap space.
Cause: Oracle Trace doesn't allow writing trace information into your swap space.

Action: Oracle Trace cannot write trace information into swap space so either disable tracing or redirect trace files to be written to another area of your disk.

TNS-12166: TNS:Client can not connect to HO agent.
Cause: NVstring contained DESCRIPTION/HO.

Action: Call HO agent from integrating server.

TNS-12168: TNS:Unable to contact LDAP Directory Server
Cause: Cannot contact LDAP directory server to get Oracle Net configuration.

Action: Verify that the directory server is up and accessible from the network. Verify that directory access configuration is correct. For more information see the Oracle Internet Directory Administrators Guide or the Oracle Net Administrators Guide.

TNS-12169: TNS:Net service name given as connect identifier is too long
Cause: The net service name you are attempting to resolve is too long.

Action: The maximum length of a net service name is 255 bytes; this limit has been exceeded. Use a smaller net service name. If this is not possible, contact Worldwide Customer Support.

TNS-12170: TNS:Connect timeout occurred
Cause: The server shut down because connection establishment or communication with a client failed to complete within the allotted time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the server.

Action: If the error occurred because of a slow network or system, reconfigure one or all of the parameters SQLNET.INBOUND_CONNECT_TIMEOUT, SQLNET.SEND_TIMEOUT, SQLNET.RECV_TIMEOUT in sqlnet.ora to larger values. If a malicious client is suspected, use the address in sqlnet.log to identify the source and restrict access. Note that logged addresses may not be reliable as they can be forged (e.g. in TCP/IP).

TNS-12171: TNS:could not resolve connect identifier: *string*
Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRETORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

TNS-12196: TNS:received an error from TNS
Cause: The navigation layer received an error from TNS.

Action: See the error log file for the specific TNS error.

TNS-12197: TNS:keyword-value resolution error
Cause: The navigation layer received an error while trying to look up a value for a keyword.

Action: Check the syntax of the connect descriptor.

TNS-12198: TNS:could not find path to destination
Cause: Could not navigate a path through Interchanges to the destination. This error occurs if an invalid community is in the address string, or the address includes a protocol that is not available or the TNSNAV.ORA file does not have a correct CMANAGER address specified or the Interchange is down.

Action: Assure that Interchanges necessary to get to the desired destination are up and have available capacity for an additional connection. Also check that the correct community and protocol have been specified in the CMANAGER address used.

TNS-12200: TNS:could not allocate memory
Cause: Out of memory on machine.

Action: Reconfigure machine to have more storage or run fewer applications while the Interchange is running.

TNS-12201: TNS:encountered too small a connection buffer
Cause: TNS connection buffer supplied by the application was too small to retrieve the data sent back.

Action: Supply a larger connection buffer. If problem persists, call Worldwide Customer Support.

TNS-12202: TNS:internal navigation error
Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

TNS-12203: TNS:unable to connect to destination
Cause: Invalid address specified or destination is not listening. This error can also occur because of underlying network or network transport problems.

Action: Verify that the net service name you entered was correct. Verify that the ADDRESS portion of the connect descriptor which corresponds to the net service name is correct. Ensure that the destination process (for example the listener) is running at the remote node.

TNS-12204: TNS:received data refused from an application
Cause: The application using Connection Manager refused the connection at the listener.

Action: Make sure that the application listener at the destination is functioning correctly. If it is and the problem persists, contact Worldwide Customer Support.

TNS-12205: TNS:could not get failed addresses
Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

TNS-12206: TNS:received a TNS error during navigation
Cause: Internal navigation error because of an unexpected TNS error.

Action: Look at the log file to find the TNS error. If necessary, turn on tracing and repeat the operation.

TNS-12207: TNS:unable to perform navigation
Cause: Improperly configured navigation file TNSNAV.ORA.

Action: Check the syntax of the TNSNAV.ORA file on the application`s machine, and verify that it lists the correct communities.

TNS-12208: TNS:could not find the TNSNAV.ORA file
Cause: Either the ORACLE environment is not set up correctly, or the TNSNAV.ORA file is not present.

Action: Ensure that the ORACLE environment is set up appropriately on your platform and that a TNSNAV.ORA file is present.

TNS-12209: TNS:encountered uninitialized global
Cause: Application calling navigation routine has not properly configured the global variables. There are no TNSNAV.ORA files available, or they are defective.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

TNS-12210: TNS:error in finding Navigator data
Cause: Application calling navigation routine has not properly configured the TNSNAV.ORA file.

Action: Check the syntax of the TNSNAV.ORA file.

TNS-12211: TNS:needs PREFERRED_CMANAGERS entry in TNSNAV.ORA
Cause: TNSNAV.ORA does not have a PREFERRED_CMANAGERS defined.

Action: Add a PREFERRED_CMANAGERS entry to the TNSNAV.ORA file.

TNS-12212: TNS:incomplete PREFERRED_CMANAGERS binding in TNSNAV.ORA
Cause: The PREFERRED_CMANAGERS binding in the client's TNSNAV.ORA file does not have a CMANAGER_NAME specified.

Action: Define the CMANAGER_NAME as part of the PREFERRED_CMANAGERS binding. Use of the Oracle Network Manager should eliminate this error.

TNS-12213: TNS:incomplete PREFERRED_CMANAGERS binding in TNSNAV.ORA
Cause: The PREFERRED_CMANAGERS binding in the client's TNSNAV.ORA file does not have an ADDRESS specified.

Action: Define the ADDRESS as part of the PREFERRED_CMANAGERS binding.

TNS-12214: TNS:missing local communities entry in TNSNAV.ORA
Cause: There is no LOCAL_COMMUNITIES entry in TNSNAV.ORA.

Action: Define the LOCAL_COMMUNITIES for this node in the TNSNAV.ORA file.

TNS-12215: TNS:poorly formed PREFERRED_NAVIGATORS Addresses in TNSNAV.ORA
Cause: Address binding for PREFERRED_NAVIGATORS entry is improperly entered. entry.

Action: Check your PREFERRED_NAVIGATORS entry and fix it in TNSNAV.ORA

TNS-12216: TNS:poorly formed PREFERRED_CMANAGERS addresses in TNSNAV.ORA
Cause: Address binding for the PREFERRED_CMANAGERS entry in the client's TNSNAV.ORA file is improperly entered.

Action: Define the ADDRESS as part of the PREFERRED_CMANAGERS binding.

TNS-12217: TNS:could not contact PREFERRED_CMANAGERS in TNSNAV.ORA
Cause: There is a syntax error in the PREFERRED_CMANAGERS entry, or addresses specified are wrong, or the intended Connection Managers are unavailable.

Action: Check the PREFERRED_CMANAGERS entries in the client's TNSNAV.ORA file and correct them or talk with your network administrator to determine if the specified Connection Managers are available. Verify that the Interchanges are active by using the INTCTL STATUS command.

TNS-12218: TNS:unacceptable network configuration data
Cause: Poorly formed network configuration data. For example, a PREFERRED_CMANAGERS entry may have an incorrect CMANAGER_NAME in the client's TNSNAV.ORA file. Or an Interchange downtime parameter (TIMEOUT_INTERVAL) on the Navigator may be set to zero in INTCHG.ORA.

Action: Check the entries in TNSNAV.ORA and the Interchange configuration files and correct them. If necessary, talk with your network administrator to determine if the specified Interchanges (Connection Managers) are available and properly configured. Use the Oracle Network Manager to generate the configuration files if necessary.

TNS-12219: TNS:missing community name from address in ADDRESS_LIST
Cause: This error occurs when an ADDRESS_LIST has some ADDRESSes in it that have no COMMUNITY component and others that do have a COMMUNITY component.

Action: Check that in the connect descriptors you are using either all the ADDRESSes have a COMMUNITY component or all do not.

TNS-12221: TNS:illegal ADDRESS parameters
Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA or in the directory. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation or the Oracle Net Administrator's Guide. Protocols that resolve names at the transport layer are vulnerable to this error if not properly configured or names are misspelled.

TNS-12222: TNS:no support is available for the protocol indicated
Cause: The protocol requested in the ADDRESS portion of the connect descriptor identified through the net service name is not available. If the supplied ADDRESS is typographically correct then support for that protocol is not installed.

Action: Install support for the protocol or correct typographical error, as appropriate. Note: if the supplied address was derived from resolving the net service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA) or in the directory server.

TNS-12223: TNS:internal limit restriction exceeded
Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

TNS-12224: TNS:no listener
Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

TNS-12225: TNS:destination host unreachable
Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-12226: TNS:operating system resource quota exceeded
Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-12227: TNS:syntax error
Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

TNS-12228: TNS:protocol adapter not loadable
Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

TNS-12229: TNS:Interchange has no more free connections
Cause: One or more Interchanges along the path to the destination desired has no more free connections available to be used for this call.

Action: Try again later when the Interchanges are less busy, or contact your network administrator to have him determine which interchange it is, and increase the number of connections available on that interchange.

TNS-12230: TNS:Severe Network error occurred in making this connection
Cause: This error is reported by an interchange which fails to make contact with the destination due to a physical network error while calling a destination.

Action: Try again later when the network service may have been fixed or report the problem to your Network Administrator so that he may fix the problem.

TNS-12231: TNS:No connection possible to destination
Cause: This error is reported by an interchange which fails to find a possible connection along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12232: TNS:No path available to destination
Cause: This error is reported by an interchange which fails to find a possible path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12233: TNS:Failure to accept a connection
Cause: This error is reported by an interchange which fails to accept a connection due to a redirect failure.

Action: Report the problem to your Network Administrator so that he may isolate the interchange problem.

TNS-12234: TNS:Redirect to destination
Cause: This error is reported by an interchange which determines that this interchange is not the right gateway and needs to redirect the connection to another gateway along the path to the destination.

Action: None

TNS-12235: TNS:Failure to redirect to destination
Cause: This error is reported by an interchange which fails to redirect a connection to another interchange along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

TNS-12236: TNS:protocol support not loaded
Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-12238: TNS: NT Operaion is aborted
Cause: The NT operation is aborted because it is interrupted by upper layer to cleanup the database session.

Action: None

TNS-12268: server uses weak encryption/crypto-checksumming version
Cause: Encryption/crypto-checksumming version used by server is not supported by client configuration.

Action: Upgrade the server to use strong version of the encryption and crypto-checksumming adapter. If support for weaker version is needed, add the following to sqlnet.ora file to allow connections to weak servers: sqlnet.allow_weak_crypto = true CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the server cannot be updated to run stronger version of the encryption and crypto-checksumming adapter. User is strongly advised to consider the implications of this parameter before configuring it to allow weak connections.

TNS-12269: client uses weak encryption/crypto-checksumming version
Cause: Encryption/crypto-checksumming version used by client is not supported by server configuration.

Action: Upgrade the client to use stronger version of the encryption and crypto-checksumming adapter. If support for weaker version is needed, add the following to sqlnet.ora file to allow connections to weak clients: sqlnet.allow_weak_crypto_clients = true CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the client cannot be updated to run stronger version of the encryption and crypto-checksumming adapter. User is strongly advised to consider the implications of this parameter before configuring it to allow weak connections.

TNS-12500: TNS:listener failed to start a dedicated server process
Cause: The process of starting up a dedicated server process failed. The executable could not be found or the environment may be set up incorrectly.

Action: Turn on tracing at the ADMIN level and reexecute the operation. Verify that the ORACLE Server executable is present and has execute permissions enabled. Ensure that the ORACLE environment is specified correctly in LISTENER.ORA. The Oracle Protocol Adapter that is being called may not be installed on the local hard drive.

Please check that the correct Protocol Adapter are successfully linked. If error persists, contact Oracle Customer Support.

TNS-12502: TNS:listener received no CONNECT_DATA from client
Cause: No CONNECT_DATA was passed to the listener.

Action: Check that the service name resolved from TNSNAMES.ORA has the CONNECT_DATA component of the connect descriptor.

TNS-12503: TNS:listener received an invalid REGION from client
Cause: Invalid REGION was passed to the listener.

Action: Check the REGION name specified in the CONNECT_DATA component of the connect descriptor.

TNS-12504: TNS:listener was not given the SERVICE_NAME in CONNECT_DATA
Cause: The listener was not configured with a default service and SERVICE_NAME was missing from the CONNECT_DATA received by the listener.

Action: Possible solutions are: - Configure DEFAULT_SERVICE parameter in LISTENER.ORA with a valid service name. Reload the listener parameter file using reload [<listener_name>]. This should be done by the LISTENER administrator. - If using a service name, Check that the connect descriptor corresponding to the service name in TNSNAMES.ORA has a SERVICE_NAME or SID component in the CONNECT_DATA.

TNS-12505: TNS:listener does not currently know of SID given in connect descriptor
Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a SID for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: lsnrctl services *listener name* - Check that the SID parameter in the connect descriptor specifies an instance known by the listener. - Check for an event in the listener.log file.

TNS-12506: TNS:listener rejected connection based on service ACL filtering
Cause: The client is not present in Service Access Control List.

Action: Add the client's address in Service ACL.

TNS-12508: TNS:listener could not resolve the COMMAND given
Cause: The COMMAND given to listener is not supported.

Action: This is not seen in normal use of Oracle Net.

TNS-12509: TNS:listener failed to redirect client to service handler
Cause: The dispatcher terminated unexpectedly

Action: Attempt to connect again and if the same error occurs, contact the DBA to check the state of the dispatchers for this SID. If the problem persists, turn on tracing in the listener to determine the TNS error caused by the redirect.

TNS-12510: TNS:database temporarily lacks resources to handle the request
Cause: The dispatchers appear to be busy handling other requests.

Action: Attempt the connection again. If error persists, ask the DBA to increase the number of dispatchers and/or dispatchers' limit on number of connections/sessions that they can accept.

TNS-12511: TNS:service handler found but it is not accepting connections
Cause: The dispatchers notified the listener that they temporarily do not accept new connections.

Action: Attempt the connection again. If error persists, contact the DBA to check the state of the dispatchers and/or ask him to increase the number of dispatchers.

TNS-12513: TNS:service handler found but it has registered for a different protocol
Cause: The dispatchers registered for this service are connected to the listener by way of a different network protocol than that of the client.

Action: Contact the DBA to register a dispatcher on your protocol.

TNS-12514: TNS:listener does not currently know of service requested in connect descriptor
Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a service name for a service (usually a database service) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which services are currently known by the listener by executing: lsnrctl services *listener name* - Check that the SERVICE_NAME parameter in the connect descriptor of the net service name used specifies a service known by the listener. - If an easy connect naming connect identifier was used, check that the service name specified is a service known by the listener. - Check for an event in the listener.log file.

TNS-12515: TNS:listener could not find a handler for this presentation
Cause: None of the listener's known service handlers are registered as supporting the presentation protocol required by the connecting client.

Action: Check that the destination service is configured to accept the presentation protocol.

TNS-12516: TNS:listener could not find available handler with matching protocol stack
Cause: None of the known and available service handlers for the given SERVICE_NAME support the client's protocol stack: transport, session, and presentation protocols.

Action: Check to make sure that the service handlers (e.g. dispatchers) for the given SERVICE_NAME are registered with the listener, are accepting connections, and that they are properly configured to support the desired protocols.

TNS-12518: TNS:listener could not hand off client connection
Cause: The process of handing off a client connection to another process failed.

Action: Turn on listener tracing and re-execute the operation. Verify that the listener and database instance are properly configured for direct handoff. If problem persists, call Oracle Support.

TNS-12519: TNS:no appropriate service handler found
Cause: The listener could not find any available service handlers that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener, and are accepting connections.

TNS-12520: TNS:listener could not find available handler for requested type of server
Cause: None of the known and available service handlers for requested type of server (dedicated or shared) are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that the appropriate handlers are accepting connections.

TNS-12521: TNS:listener does not currently know of instance requested in connect descriptor
Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified in addition to the service name an instance name for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: lsnrctl services *listener name* - Check that the INSTANCE_NAME parameter in the connect descriptor specifies an instance name known by the listener. - Check for an event in the listener.log file.

TNS-12522: TNS:listener could not find available instance with given INSTANCE_ROLE
Cause: There are not any available and appropriate database instances registered with the listener, that are part of the service identified by SERVICE_NAME given in the connect descriptor and that have the specified INSTANCE_ROLE (and INSTANCE_NAME, if specified).

Action: Check to make sure that the INSTANCE_ROLE specified is correct. Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that they are ready to accept connections.

TNS-12523: TNS:listener could not find instance appropriate for the client connection
Cause: The listener could not find any available (database) instances, that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) are registered with the listener, and have status READY.

TNS-12524: TNS:listener could not resolve HANDLER_NAME given in connect descriptor
Cause: The HANDLER_NAME in the CONNECT_DATA was not found in the listener's tables for the specified SERVICE_NAME and INSTANCE_NAME.

Action: Check to make sure that the HANDLER_NAME specified is correct.

TNS-12525: TNS:listener has not received client's request in time allowed
Cause: The listener disconnected the client because the client failed to provide the necessary connect information within the allowed time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the listener.

Action: If the error occurred because of a slow network or system, reconfigure INBOUND_CONNECT_TIMEOUT to a larger value. If a malicious client is suspected, use the address in listener.log to identify the source and restrict access. Turn on tracing for more information.

TNS-12526: TNS:listener: all appropriate instances are in restricted mode
Cause: Database instances supporting the service requested by the client were in restricted mode. The Listener does not allow connections to instances in restricted mode. This condition may be temporary, such as during periods when database administration is performed.

Action: Attempt the connection again. If error persists, then contact the database administrator to change the mode of the instance, if appropriate.

TNS-12527: TNS:listener: all instances are in restricted mode or blocking new connections
Cause: All appropriate database instances supporting the service requested by the client reported that they either were in restricted mode or were blocking the new connections. The Listener does not allow connections to such instances. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the database administrator to check the status of the instances.

TNS-12528: TNS:listener: all appropriate instances are blocking new connections
Cause: All instances supporting the service requested by the client reported that they were blocking the new connections. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the administrator to check the status of the instances.

TNS-12529: TNS:connect request rejected based on current filtering rules
Cause: Connection Manager and its listener were configured with filtering rules specifying that the connect request be rejected.

Action: If this connect request should be allowed, then contact the administrator to modify the filtering rules.

TNS-12530: TNS:listener: rate limit reached
Cause: Listener has reached connection or service rate limit and hence rejected the connection.

Action: Attempt the connection again. If the error occurs frequently, contact the database administrator to increase connection or service rate limit.

TNS-12531: TNS:cannot allocate memory
Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

TNS-12532: TNS:invalid argument
Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12533: TNS:illegal ADDRESS parameters
Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation for your platform. Protocols that resolve names at the transport layer (such as DECnet object names) are vulnerable to this error if not properly configured or names are misspelled.

TNS-12534: TNS:operation not supported
Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12535: TNS:operation timed out
Cause: The requested operation could not be completed within the time out period.

Action: Look at the documentation on the secondary errors for possible remedy. See SQLNET.LOG to find secondary error if not provided explicitly. Turn on tracing to gather more information.

TNS-12536: TNS:operation would block
Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

TNS-12537: TNS:connection closed
Cause: "End of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

TNS-12538: TNS:no such protocol adapter
Cause: The protocol adapter requested (by way of the "(PROTOCOL=..)" keyword-value pair in a TNS address) is unknown. If the supplied address is typographically correct then the protocol adapter is not installed.

Action: Install the protocol adapter or correct typographically error, as appropriate. Note: if the supplied address was derived from resolving the service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA or SQLNET.ORA).

TNS-12539: TNS:buffer over- or under-flow
Cause: Buffer too small for incoming data or too large for outgoing data.

Action: This restriction (which is associated with CONNECT DATA) is not normally visible to the user. For further details, turn on tracing and reexecute the operation; contact Oracle Customer Support.

TNS-12540: TNS:internal limit restriction exceeded
Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

TNS-12541: TNS:no listener
Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

TNS-12542: TNS:address already in use
Cause: Specified listener address is already being used.

Action: Start your listener with a unique address.

TNS-12543: TNS:destination host unreachable
Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

TNS-12544: TNS:contexts have different wait/test functions
Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12545: Connect failed because target host or object does not exist
Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.) If the protocol is TCP/IP, edit the TNSNAMES.ORA file to change the host name to a numeric IP address and try again.

TNS-12546: TNS:permission denied
Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-12547: TNS:lost contact
Cause: Partner has unexpectedly gone away, usually during process startup.

Action: Investigate partner application for abnormal termination. On an Interchange, this can happen if the machine is overloaded.

TNS-12548: TNS:incomplete read or write
Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12549: TNS:operating system resource quota exceeded
Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

TNS-12550: TNS:syntax error
Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

TNS-12551: TNS:missing keyword
Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

TNS-12552: TNS:operation was interrupted
Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12554: TNS:current operation is still in progress
Cause: An internal operation is still in progress.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12555: TNS:permission denied
Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

TNS-12556: TNS:no caller
Cause: TNS detected an incoming connect request but there was no caller.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12557: TNS:protocol adapter not loadable
Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

TNS-12558: TNS:protocol adapter not loaded
Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

TNS-12560: TNS:protocol adapter error
Cause: A generic protocol adapter error occurred.

Action: Check addresses used for proper protocol specification. Before reporting this error, look at the error stack and check for lower level transport errors. For further details, turn on tracing and reexecute the operation. Turn off tracing when the operation is complete.

TNS-12561: TNS:unknown error
Cause: A generic protocol error occurred.

Action: For further details, turn on tracing and reexecute the operation.

TNS-12562: TNS:bad global handle
Cause: Internal error - bad 'gbh' argument passed to TNS from caller. System may have been linked with old libraries.

Action: Not normally visible to the user, contact Oracle Customer Support.

TNS-12563: TNS:operation was aborted
Cause: NT operation was interrupted by the uppper layer.

Action: None

TNS-12564: TNS:connection refused
Cause: The connect request was denied by the remote user (or TNS software).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation.

TNS-12566: TNS:protocol error
Cause: An unexpected TNS protocol error has occurred.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12569: TNS:packet checksum failure
Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If the error is persistent, turn on tracing and reexecute the operation.

TNS-12570: TNS:packet reader failure
Cause: An error occurred during a data receive.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12571: TNS:packet writer failure
Cause: An error occurred during a data send.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12574: TNS:Application generated error
Cause: This error was generated by peer application. Please see secondary errors for the actual cause.

Action: Action should be taken on secondary error.

TNS-12575: TNS:dhctx busy
Cause: The handoff over a dhctx failed as dhctx was already busy with an ongoing handoff.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12576: TNS:handoff not supported for this session
Cause: Handoff of a established session was attempted which either had tcps as its transport or NA options were enabled for this session.

Action: Check the transport setting as well as NA options. If error persists, contact Oracle Customer Support.

TNS-12578: TNS:wallet open failed
Cause: An error was encountered while trying to open the specified wallet.

Action: For further details, turn on tracing and re-execute the operation.

TNS-12579: TNS:transport connection failed
Cause: An error was encountered while trying to create transport connection.

Action: Likely reasons include host may be down, outbound transport connection may be blocked by network or any other transport connectivity issue. If error persists, contact Oracle Customer Support.

TNS-12582: TNS:invalid operation
Cause: An internal function received an invalid request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12583: TNS:no reader
Cause: A send operation has been requested but partner has already disconnected.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12585: TNS:data truncation
Cause: A receive operation has completed with insufficient data to satisfy the user's request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12589: TNS:connection not bequeathable
Cause: An attempt to hand-off a connection from one process to another has failed because the protocol provider does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12590: TNS:no I/O buffer
Cause: An attempt to perform an I/O operation failed because no buffer was available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12591: TNS:event signal failure
Cause: The TNS software is unable to signal an event occurrence.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12592: TNS:bad packet
Cause: An ill-formed packet has been detected by the TNS software.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12593: TNS:no registered connection
Cause: An attempt to solicit network event activity has failed because no connections are registered for event notification.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12595: TNS:no confirmation
Cause: TNS is unable to get requested confirmation acknowledgment from remote partner.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12596: TNS:internal inconsistency
Cause: TNS has detected an internal inconsistency.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12597: TNS:connect descriptor already in use
Cause: Internal error - illegal use of connect descriptor.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12598: TNS:banner registration failed
Cause: The registration of a product banner with the Oracle server failed.

Action: This is an error which is not normally visible externally. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12599: TNS:cryptographic checksum mismatch
Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If error persists, check (and correct) the integrity of your physical connection.

TNS-12600: TNS: string open failed
Cause: The creation of a string in ORACLE NLS format failed.

Action: This is an internal error, enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12601: TNS:information flags check failed
Cause: The TNS information flags set by the process prior to connection negotiation were not present after the negotiation was finished.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12602: TNS: Connection Pooling limit reached
Cause: The operation failed because maximum active current connections has been reached. It may not be a real error when the Connection Pooling feature is enabled. It is possible that the application later reissues the operation and successfully grabs the connection pool slot and proceeds.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

TNS-12606: TNS: Application timeout occurred
Cause: A network session did not reach an application-defined stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

TNS-12607: TNS: Connect timeout occurred
Cause: A network session did not reach a predefined connect stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

TNS-12608: TNS: Send timeout occurred
Cause: The send or write operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the send timeout value if necessary.

TNS-12609: TNS: Receive timeout occurred
Cause: The receive or read operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the receive timeout value if necessary.

TNS-12611: TNS:operation is not portable
Cause: Attempted operation is not portable.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12612: TNS:connection is busy
Cause: Attempted operation failed because it conflicts with an ongoing action or status of the connection.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12615: TNS:preempt error
Cause: A request to service an event failed because no event notification has yet been posted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12616: TNS:no event signals
Cause: The operation failed because the type of data specified is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12618: TNS:versions are incompatible
Cause: The two machines are running incompatible versions of TNS.

Action: Check the version numbers, and upgrade the machine with the smaller one.

TNS-12619: TNS:unable to grant requested service
Cause: The connect request failed because requested service could not be provided by the local TNS software.

Action: If appropriate, reexecute with reduced service requirements.

TNS-12620: TNS:requested characteristic not available
Cause: The connect request failed because a requested transport characteristic could not be supported by the remote TNS software.

Action: If appropriate, reexecute with reduced requirements.

TNS-12622: TNS:event notifications are not homogeneous
Cause: An attempt to register a connection for event notification failed because the event notification type conflicts with existing registrations.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12623: TNS:operation is illegal in this state
Cause: Connection is half-duplex and a full-duplex operation was attempted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

TNS-12624: TNS:connection is already registered
Cause: An attempt to register a connection for event notification failed because the connection is already registered.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12625: TNS:missing argument
Cause: An operation failed because an argument was missing"

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12626: TNS:bad event type
Cause: An attempt to register a connection for event notification failed because the event type is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12628: TNS:no event callbacks
Cause: An attempt to register a connection for event notification failed because asynchronous callbacks are not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12629: TNS:no event test
Cause: An attempt to register a connection for event notification failed because the ability to test for events is not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

TNS-12630: Native service operation not supported
Cause: An operation requested by a user is not supported by the native services component.

Action: This may be an internal error if the operation should have been supported.

TNS-12631: Username retrieval failed
Cause: The authentication service failed to retrieve the name of a user.

Action: Enable tracing to determine which routine is failing.

TNS-12632: Role fetch failed
Cause: The authentication service failed to retrieve one of the user's roles.

Action: Enable tracing to determine which routine is failing.

TNS-12633: No shared authentication services
Cause: The list of authentication services specified by the user does not match those supported by the process.

Action: Either specify another list or relink the executable with the desired services.

TNS-12634: Memory allocation failed
Cause: Process was unable to allocate memory.

Action: Terminate other processes in order to reclaim needed memory.

TNS-12635: No authentication adapters available
Cause: The executable was not linked with any authentication service adapters but the sqlnet.ora parameter that determines whether or not authentication is required was set to true.

Action: Either disable the parameter or relink the executable with service adapters.

TNS-12636: Packet send failed
Cause: A process was unable to send a packet to another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

TNS-12637: Packet receive failed
Cause: A process was unable to receive a packet from another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

TNS-12638: Credential retrieval failed
Cause: The authentication service failed to retrieve the credentials of a user.

Action: Enable tracing to determine the exact error.

TNS-12639: Authentication service negotiation failed
Cause: No match was found between the types of authentication services that the client supports and those that the server is using.

Action: Possible solutions: 1. Change the entry in sqlnet.ora that determines which services are to be used. 2. Relink the client with at least one of the authentication service adapters that the server supports. 3. Relink the server with at least one of the authentication service adapters that the client supports. 4. Disable authentication on both the client and server.

TNS-12640: Authentication adapter initialization failed
Cause: The function specified in the authentication table entry for the service failed.

Action: Enable tracing to determine the exact error.

TNS-12641: Authentication service failed to initialize
Cause: The authentication service failed during initialization.

Action: Enable tracing to determine the exact error.

TNS-12642: No session key
Cause: A process has no session key associated with it because the authentication service being used does not use one.

Action: If a session key is required, use another authentication service.

TNS-12643: Client received internal error from server
Cause: The client process received an error from the server that indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If successful in recreating the problem, contact Oracle Customer Support.

TNS-12645: Parameter does not exist.
Cause: A sqlnet.ora parameter from which a value was needed does not exist.

Action: Set the parameter in the parameter file.

TNS-12646: Invalid value specified for boolean parameter
Cause: The value specified for a parameter was set to a value other than true/false or on/off.

Action: Correct the value of the parameter.

TNS-12647: Authentication required
Cause: The parameter that controls whether authentication is required was set to true, but the executable does not have an authentication service linked in.

Action: Either re-link the executable with an authentication service adapter or disable the parameter.

TNS-12648: Encryption or data integrity algorithm list empty
Cause: A list-of-algorithms parameter was empty, e.g. "()".

Action: Change the list to contain the name of at least one installed algorithm, or remove the list entirely if every installed algorithm is acceptable.

TNS-12649: Unknown encryption or data integrity algorithm
Cause: A list-of-algorithms parameter included an algorithm name that was not recognized.

Action: Either remove that algorithm name, correct it if it was misspelled, or install the driver for the missing algorithm.

TNS-12650: No common encryption or data integrity algorithm
Cause: The client and server have no algorithm in common for either encryption or data integrity or both.

Action: Choose sets of algorithms that overlap. In other words, add one of the client's algorithm choices to the server's list or vice versa.

TNS-12651: Encryption or data integrity algorithm unacceptable
Cause: The algorithm the server chose to use for encryption or data integrity was not one of the choices acceptable to the client. This is either the result of an internal error, of a network data transmission error, or of deliberate tampering with the transmitted data.

Action: For further details, turn on tracing, re-execute the operation, and contact Oracle Customer Support.

TNS-12652: String truncated
Cause: Not enough memory was allocated for a string so it had to be truncated

Action: If it is OK that the string is truncated, then it is not an error. Otherwise, call the routine that reported the error again with a larger string buffer.

TNS-12653: Authentication control function failed
Cause: The control function utilized by the authentication service driver failed.

Action: Enable tracing to determine the exact error.

TNS-12654: Authentication conversion failed
Cause: The authentication service was unable to convert the credentials of a user from the format specific to the format into the ORACLE format.

Action: Enable tracing to determine the exact error.

TNS-12655: Password check failed
Cause: The authentication service being used was unable to verify the provided password.

Action: Enable tracing to determine the exact error.

TNS-12656: Cryptographic checksum mismatch
Cause: The cryptographic checksum received with a packet of incoming data didn't match the checksum computed by the receiving end. This indicates that the packet was tampered with or otherwise corrupted in transit.

Action: Look for sources of data corruption, perhaps including deliberate tampering.

TNS-12657: No algorithms installed
Cause: The near side of the connection required the use of a service (either encryption or checksumming) when no algorithms for that service were installed.

Action: Remove the "ON" requirement for that service.

TNS-12658: ANO service required but TNS version is incompatible
Cause: A client process that is running an earlier version of TNS attempted to connect but the connection failed because the server process required that an ANO service (authentication, encryption, etc.) be used.

Action: Relink the calling executable and retry the connection or eliminate the requirement that the service be used on the server side.

TNS-12659: Error received from other process
Cause: An error was received by one or more services from the process on the other side of the connection.

Action: Enable tracing to determine the exact error(s). The error(s) is (are) not returned directly because an error generated by a server may not make sense on the client side and vice-versa.

TNS-12660: Encryption or crypto-checksumming parameters incompatible
Cause: One side of the connection specified "REQUIRED" for encryption or crypto-checksumming, while the other side specified "REJECTED".

Action: Change the "REQUIRED" side to "REQUESTED" if the you want encryption or crypto-checksumming to be optional, or change the "REJECTED" side to "ACCEPTED" if you do not want the service to be optional.

TNS-12661: Protocol authentication to be used
Cause: The authentication service has determined that the Oracle Net transport protocol in use is to be utilized to authenticate a user's identity.

Action: This error is used solely to communicate information between the authentication service and the Oracle Net session layer and should not normally be visible. If the error is seen, contact Oracle Worldwide Support.

TNS-12662: proxy ticket retrieval failed
Cause: The authentication adapter used by Oracle Net failed to retrieve the credentials needed to authenticate a database link.

Action: Enable tracing to determine the exact error.

TNS-12663: Services required by client not available on the server
Cause: Service(s) that was (were) required by the client process were not available on the server process.

Action: Configure the server with the services required by the client (best solution) or delete the requirement from the configuration file of the client (least secure).

TNS-12664: Services required by server not available on the client
Cause: Service(s) that was (were) required by the server process were not available on the client process.

Action: Configure the client with the services required by the server (best solution) or delete the requirement from the configuration file of the server (least secure).

TNS-12665: NLS string open failed
Cause: A native service was unable to make a string available for use by the National Language Support component.

Action: Make sure the National Language Support component has been properly. If it has, enable tracing and report the problem to Customer Support.

TNS-12666: Dedicated server: outbound transport protocol different from inbound
Cause: The protocol specified for an externally-identified outbound connection from a dedicated server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the dedicated server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection.

TNS-12667: Shared server: outbound transport protocol different from inbound
Cause: The protocol specified for an externally-identified outbound connection from a shared server (database link) was not the same as as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the shared server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection

TNS-12668: Dedicated server: outbound protocol does not support proxies
Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a dedicated server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must the same as that used for the connection from the client to the server.

TNS-12669: Shared server: outbound protocol does not support proxies
Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a shared server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must the same as that used for the connection from the client to the server.

TNS-12670: Incorrect role password
Cause: A password supplied for a role could not be validated by the authentication service.

Action: Supply the correct password.

TNS-12671: Shared server: adapter failed to save context
Cause: The adapter for the authentication service failed when it tried to save the data needed for proxy connections (database links) through the shared server.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support if the reason is not obvious.

TNS-12672: Database logon failure
Cause: The authentication service adapter in use encountered an error it attempted to validate the logon attempt of a user.

Action: Enable tracing to determine the exact error encountered by the adapter.

TNS-12673: Dedicated server: context not saved
Cause: A connection was marked as being a proxy connection (database link) from a dedicated server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

TNS-12674: Shared server: proxy context not saved
Cause: A connection was marked as being a proxy connection (database link) from a shared server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

TNS-12675: External user name not available yet
Cause: The authentication service in use was not able to return the external name of a user of the ORACLE server because it is not available to the service yet.

Action: This is just an informational message and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

TNS-12676: Server received internal error from client
Cause: The server process received an error from the client which indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If the problem recurs, contact Oracle Customer Support.

TNS-12677: Authentication service not supported by database link
Cause: The authentication service used by the proxy process (database link) was unable to find the adapter being used by the client in its list of authentication mechanisms.

Action: Specify an authentication adapter that is shared by the client and the server being used for the database link.

TNS-12678: Authentication disabled but required
Cause: The configuration parameters that control whether authentication is disabled or required were both set to TRUE.

Action: Set one or both of the parameters to FALSE.

TNS-12679: Native services disabled by other process but required
Cause: The remote process has disabled native services but the local process requires them.

Action: Enable native services on the remote process or disable them locally.

TNS-12680: Native services disabled but required
Cause: The process has disabled native services but at least one service is required.

Action: Enable native services or change the configuration file so that none of the available services are required.

TNS-12681: Login failed: the SecurID card does not have a pincode yet
Cause: The SecurID card that is used to logon to Oracle, does not have a pincode assigned to it.

Action: Use one of the programs supplied by Security Dynamics to assign a pincode to the card.

TNS-12682: Login failed: the SecurID card is in next PRN mode
Cause: The SecurID card and the SecurID server are out of sync and the server requires the next cardcode to resynchronize the card.

Action: Use one of the programs supplied by Security Dynamics to resynchronize the SecurID card.

TNS-12683: encryption/crypto-checksumming: no Diffie-Hellman seed
Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

TNS-12684: unsupported encryption/crypto-checksumming version
Cause: Encryption/crypto-checksumming version used by remote is not supported by this configuration.

Action: Upgrade the remote client/server to use higher version of encryption/crypto-checksumming adapter. If the support for lower version is needed, add the following to sqlnet.ora file: CLIENT: (to allow connections to weak servers) sqlnet.allow_weak_crypto = true SERVER: (to allow connections from weak clients) sqlnet.allow_weak_crypto_clients = true CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the remote endpoint cannot be updated to run the higher version of the encryption adapter. User is strongly advised to carefully consider the implications of this parameter before configuring it to allow weak connections.

TNS-12685: Native service required remotely but disabled locally
Cause: A native service is required by the remote process but native services have been disabled locally.

Action: Enable native services locally or change the configuration parameters on the remote host so that no native services are required.

TNS-12686: Invalid command specified for a service
Cause: An operation which does not exist was specified for a native service.

Action: This is a programming error and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

TNS-12687: Credentials expired.
Cause: The credentials that are used to authenticate the user for the requested connection have expired.

Action: Renew your credentials. Refer to the documentation specific for your Network Authentication Adapter on how to do this.

TNS-12688: Login failed: the SecurID server rejected the new pincode
Cause: There are a number of reasons why the SecurID server would refuse a pincode: - The user might not have permission to make up his own pincode. - The pincode was either too short or too long. Valid pincodes consist of minimal four, but no more than eight characters. - The pincode contains any non alphanumeric characters.

Action: Reexecute the operation and make sure to use a pincode that satisfies the above requirements. If the problem persists, turn on tracing at the Oracle Server side of the connection and examine the trace file for the exact error.

TNS-12689: Server Authentication required, but not supported
Cause: Server Authentication is required for this connection, but not supported by both sides of the connection.

Action: Make sure both sides of the connection have the correct version of Advanced Networking Option, and that the Authentication Adapter supports Server Authentication.

TNS-12690: Server Authentication failed, login cancelled
Cause: Server Authentication is required, but the server's credentials were found invalid by the client.

Action: Make sure that the server has a valid set of credentials. Refer to your authentication adapter specific documentation on how to do this.

TNS-12691: TTC RPC (*string*) not supported by Oracle Connection Manager in Traffic Director mode
Cause: Oracle Connection Manager in Traffic Director mode does not support the specified Two-Task Common (TTC) Remote Procedure Call(RPC).

Action: Do not use functionality that issues the specified TTC RPC which was disallowed by Oracle Connection Manager in Traffic Director mode

TNS-12692: functionality (*string*) not supported by Oracle Connection Manager in Traffic Director mode
Cause: Oracle Connection Manager in Traffic Director mode does not support the specified functionality.

Action: Do not use functionality that is not supported by Oracle Connection // Manager in Traffic Director mode.

TNS-12693: PRCP is not configured in Oracle Connection Manager in Traffic Director mode
Cause: The client was attempting to connect using Proxy Resident Connection Pool (PRCP) while PRCP is not configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should use PRCP connections only when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

TNS-12694: non-PRCP connection requested when PRCP is configured in Oracle Connection Manager in Traffic Director mode
Cause: The client was attempting a non Proxy Resident Connection Pool (PRCP) connection while PRCP was configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should only use PRCP connections when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

TNS-12695: This statement cannot be executed with Oracle Connection Manager in Traffic Director mode with PRCP enabled
Cause: The client did not send enough information to execute the statement with Oracle Connection Manager in Traffic Director mode with Proxy Resident Connection Pooling (PRCP) enabled.

Action: This client needs a patch that will fix the issue. Alternatively, it needs to be upgraded to Oracle Database Release 18.1 or later. Contact Oracle Customer Support for the patch.

TNS-12696: Double Encryption Turned On, login disallowed
Cause: The user is using a Secure Protocol Adapter that has Encryption turned ON as well as ANO Encryption.

Action: Turn OFF either ANO Encryption or the Protocol Adapter Encryption if possible. Refer to the Administrator's Guide on how to do this.

TNS-12697: PRCP: Internal error\n
Cause: Invalid PRCP state detected while collecting statistics

Action: Check with CMAN in Traffice Director mode admin to get more info from traces and sqlnet.log.

TNS-12699: Native service internal error
Cause: An internal error occurred in the native services component.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support.

156
UDE-00001 to UDE-00054

UDE-00001: user requested cancel of current operation\n
Cause: User has requested a cancellation of current job.

Action: No action is needed.

UDE-00002: invalid username or password
Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

UDE-00003: all allowable logon attempts failed
Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

UDE-00004: operation generated ORACLE error *number*
Cause: The operation unexpectedly produced the specified error. Refer to the description of that error for more information.

Action: Refer to the description of the reported error for possible actions.

UDE-00005: unexpected End-Of-File encountered while reading input\n
Cause: Encountered an End-Of-File while reading the user input.

Action: If input to export is being redirected, check the file for errors.

UDE-00006: failed to allocate memory of size *number*
Cause: Unable to allocate the necessary memory.

Action: Record the messages that follow and report this to Oracle Customer Support as an Export internal bug.

UDE-00007: attempt to free unallocated memory
Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Worldwide Support

UDE-00010: multiple job modes requested, *string* and *string*.
Cause: Multiple job modes were specified.

Action: Specify only one valid mode, then retry.

UDE-00011: parameter *string* is incompatible with parameter *string*
Cause: An invalid combination of parameters was specified.

Action: Refer to documentation for the set of valid modes, then retry.

UDE-00012: table mode exports only allow objects from one schema
Cause: Multiple schemas were selected for export.

Action: Retry export specifying only one schema.

UDE-00013: internal expdp error.
Cause: Fatal internal Data Pump client error.

Action: Contact Oracle Customer Support

UDE-00014: invalid value for parameter, '*string*'.
Cause: Could not parse the specified parameter or parameter value.

Action: Refer to documentation for valid parameter values.

UDE-00015: invalid context or job state for parameter, '*string*'.
Cause: Invalid job state or context for specified parameter.

Action: Refer to documentation for correct parameter usage.

UDE-00016: '*string*' parameter requires a value.
Cause: Parameter was specified without a value.

Action: Refer to documentation for correct parameter usage.

UDE-00017: Data Pump job is already executing.
Cause: Incorrect Data Pump job state for requested operation.

Action: Refer to documentation for correct usage.

UDE-00018: Data Pump client is incompatible with database version *string*
Cause: The Export utility is at a higher version than the database version and is thereby incompatible.

Action: Use the same version of Export utility as the database.

UDE-00019: '*string*' parameter list is too long.
Cause: Requested parameter list exceeds 4000 character maximum.

Action: Reduce the specified number of parameter values and rerun.

UDE-00020: Data Pump client is incompatible with Data Pump API.
Cause: The Export utility is at a higher version than the Data Pump server and is thereby incompatible.

Action: Use the same version of Export utility as the server.

UDE-00022: unsupported administrative privilege specified in connect string\n
Cause: The connect string specified an administrative privilege that was not supported by the data pump.

Action: Specify an administrative privilege that the data pump supports. These are SYSDBA and SYSBACKUP.

UDE-00050: Unable to setup parameter processing.
Cause: An unexpected error occurred during parameter manager initialization.

Action: Record the messages that follow and report this to Oracle Customer Support as an Export internal bug.

UDE-00051: unable to set NLS_NUMERIC_CHARACTERS to required defaults.
Cause: Export was unable to set NLS_NUMERIC_CHARACTERS to '.,'

Action: Record the accompanying messages and report this as an Export internal error to Oracle customer support.

UDE-00052: incorrect Data Pump client for operation: *string*
Cause: Export client attempted to attach to import job.

Action: Use appropriate client when attaching to an existing job

UDE-00053: unrecognized client command '*string*'
Cause: Invalid interactive client command.

Action: Refer to documentation for valid client commands.

UDE-00054: Deprecated Legacy Mode parameter '*string*' specified at or on: *string*
Cause: The Legacy Mode parameter specified has no corresponding Data Pump mapping.

Action: Review the location referred to in the error message ((either 'Command Line', 'Parameter File', or 'Environment Variable') and remove the parameter.

157
UDI-00001 to UDI-00054

UDI-00001: user requested cancel of current operation\n
Cause: User has requested a cancellation of current job.

Action: No action is needed.

UDI-00002: invalid username or password
Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

UDI-00003: all allowable logon attempts failed
Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

UDI-00004: operation generated ORACLE error *number*
Cause: The operation unexpectedly produced the specified error. Refer to the description of that error for more information.

Action: Refer to the description of the reported error for possible actions.

UDI-00005: unexpected End-Of-File encountered while reading input.\n
Cause: Encountered an End-Of-File while reading the user input.

Action: If input to import is being redirected, check the file for errors.

UDI-00006: failed to allocate memory of size *number*
Cause: Unable to allocate the necessary memory.

Action: Record the messages that follow and report this to Oracle Customer Support as an Import internal bug.

UDI-00007: attempt to free unallocated memory
Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Customer Support

UDI-00010: multiple job modes requested, *string* and *string*.
Cause: Invalid job mode was specified.

Action: Specify only one valid mode, then retry.

UDI-00011: parameter *string* is incompatible with parameter *string*
Cause: An invalid combination of parameters was specified.

Action: Refer to documentation for the set of valid modes, then retry.

UDI-00012: table mode imports only allow objects from one schema
Cause: Multiple schemas were selected for import.

Action: Retry import specifying only one schema.

UDI-00013: internal impdp error.
Cause: Fatal internal Data Pump client error.

Action: Contact Oracle Customer Support.

UDI-00014: invalid value for parameter, '*string*'
Cause: Could not parse the specified parameter or parameter value.

Action: Refer to documentation for valid parameter values.

UDI-00015: invalid context or job state for parameter, '*string*'.
Cause: Invalid job state or context for specified parameter.

Action: Refer to documentation for correct parameter usage.

UDI-00016: '*string*' parameter requires a value.
Cause: Parameter was specified without a value.

Action: Refer to documentation for correct parameter usage.

UDI-00017: Data Pump job is already executing.
Cause: Incorrect Data Pump job state for requested operation.

Action: Refer to documentation for correct usage.

UDI-00018: Data Pump client is incompatible with database version *string*
Cause: The Import utility is at a higher version than the database version and is thereby incompatible.

Action: Use the same version of Import utility as the database.

UDI-00019: '*string*' parameter list is too long.
Cause: Requested parameter list exceeds 4000 character maximum.

Action: Reduce the specified number of parameter values and rerun.

UDI-00020: Data Pump client is incompatible with Data Pump API.
Cause: The Export utility is at a higher version than the Data Pump server and is thereby incompatible.

Action: Use the same version of Export utility as the server.

UDI-00022: unsupported administrative privilege specified in connect string\n
Cause: The connect string specified an administrative privilege that was not supported by the data pump.

Action: Specify an administrative privilege that the data pump supports. These are SYSDBA and SYSBACKUP.

UDI-00050: unable to setup parameter processing.
Cause: An unexpected error occurred during parameter manager initialization.

Action: Record the messages that follow and report this to Oracle Customer Support as an Import internal bug.

UDI-00051: unable to set NLS_NUMERIC_CHARACTERS to required defaults.
Cause: Import was unable to set NLS_NUMERIC_CHARACTERS to '.,'

Action: Record the accompanying messages and report this as an Import internal error to Oracle Customer Support.

UDI-00052: incorrect Data Pump client for operation: *string*
Cause: Import client attempted to attach to export job.

Action: Use appropriate client when attaching to an existing job

UDI-00053: unrecognized client command '*string*'
Cause: Invalid interactive client command.

Action: Refer to documentation for valid client commands.

UDI-00054: Deprecated Legacy Mode parameter '*string*' specified at or on: *string*
Cause: The Legacy Mode parameter specified has no corresponding Data Pump mapping.

Action: Review the location referred to in the error message ((either 'Command Line', 'Parameter File', or 'Environment Variable') and remove the parameter.

158

SQL*Loader-00100 to SQL*Loader-03120

SQL*Loader-00100: Syntax error on command-line\n
Cause: Possible causes for this error include: placing a positional argument after keyword arguments, misspelling a keyword, not balancing parentheses or quotes, or leaving space between the operator, '=', and an argument.

Action: Check the command syntax and the spelling, then retry.

SQL*Loader-00101: Invalid argument for username/password\n
Cause: The username/password argument specified on the command line was not recognized. Another argument (not identified by a keyword) could be in the position where username/password is expected.

Action: Check the format of the username/password argument, which is the first argument on the command line, if arguments are given without keywords.

SQL*Loader-00102: Invalid control file name on command line\n
Cause: The control file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. One possible cause is the existence of a space between username and password. See error 101, above. Another is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00103: Invalid log file name on command line\n
Cause: The log file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00104: Invalid bad file name on command line\n
Cause: The bad file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Correct it.

SQL*Loader-00105: Invalid data file name on command line\n
Cause: The datafile name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00106: Invalid discard file name on command line\n
Cause: The discard file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. Another possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00107: Invalid maximum number of discards\n
Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00108: Invalid number of logical records to load\n
Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00109: Invalid number of logical records to skip\n
Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00110: Invalid maximum number of errors\n
Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00111: Invalid number of rows for bind array or data saves\n
Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00112: Invalid maximum bind array size\n
Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00113: Invalid silent mode option\n
Cause: The only valid options for the SILENT command-line argument are ALL, ERROR, FEEDBACK, or HEADER. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00114: Error in OPTIONS statement\n
Cause: Command line options specified in the SQL*Loader control file with the OPTIONS clause were found to be incorrect.

Action: Check the format of the OPTIONS clause in the SQL*Loader control file.

SQL*Loader-00115: Invalid direct path option\n
Cause: The only valid options for the DIRECT command-line argument are TRUE or FALSE. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00116: Error prompting for password\n
Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00118: Invalid parallel load option\n
Cause: The command-line argument used for the parallel load is incorrect.

Action: Use only TRUE or FALSE as the value for the parallel load option.

SQL*Loader-00119: Invalid parallel file (data file) name on command line\n
Cause: The command-line argument for the parallel file was entered incorrectly. One possible cause is that the specified file name caused an overflow of the output buffer.

Action: Check the command line argument and retry the operation.

SQL*Loader-00120: Invalid _synchro option string\n
Cause: The command-line argument _synchro is incorrect.

Action: Use only one of the allowed modes: see ulminv[].

SQL*Loader-00121: Invalid skip_unusable_indexes option\n
Cause: The command line argument for skip_unusable_indexes is incorrect.

Action: Use only TRUE or FALSE as the value for the skip_unusable_indexes option.

SQL*Loader-00122: Invalid skip_index_maintenance option\n
Cause: The command line argument for skip_index_maintenance is incorrect.

Action: Use only true or falseas the value for the skip_index_maintenance option. (Note: only on direct loads!)

SQL*Loader-00123: specified value for bindsize(*number*) less than readsize(*number*)\n
Cause: The command line argument specified for bindsize was less than the value of readsize.

Action: No action is required. SQL*Loader automatically adjusts the value of bindsize to equal the value of readsize.

SQL*Loader-00124: specified value for readsize(*number*) less than bindsize(*number*)\n
Cause: The command line argument specified for readsize was less than the value of bindsize.

Action: No action is required. SQL*Loader automatically adjusts the value of readsize to equal the value of bindsize.

SQL*Loader-00125: specified value for readsize(*number*) less than max_record_size(*number*)\n
Cause: The command line argument specified for readsize was less than the value of max_record_size.

Action: No action is required. SQL*Loader automatically adjusts the value of readsize to equal the value of max_record_size.

SQL*Loader-00126: Invalid read size\n
Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00127: Invalid maximum record size\n
Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00128: unable to begin a session\n
Cause: An error occurred when attempting to start a session on the database.

Action: See the message that follows this message for information on the cause of the error.

SQL*Loader-00129: Invalid number of rows for direct path column array\n
Cause: The argument's value is inappropriate

Action: Check the command line and retry.

SQL*Loader-00130: Invalid direct path stream size\n
Cause: The argument's value is inappropriate

Action: Check the command line and retry.

SQL*Loader-00131: Invalid multithreading option\n
Cause: The only valid options for the MULTITHREADING command-line argument are TRUE or FALSE. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00132: invalid argument for external table option\n
Cause: The command line argument specified for external_tables was not TRUE or FALSE

Action: Check the command line and retry.

SQL*Loader-00133: Can't specify both direct path and external tables\n
Cause: Both options for direct path and exrernal tables were indicated. Only one of these can be applied at a time.

Action: Change at least one of the parameters to enable only one.

SQL*Loader-00134: invalid option specified for EXTERNAL_TABLE parameter\n
Cause: An invalid value was specified for the EXTERNAL_TABLE parameter.

Action: Specify one of the following values. NOT_USED disables use of external tables. GENERATE_ONLY generates the SQL statements that will use external tables to load the data. EXECUTE both generates the SQL statements and then executes them.

SQL*Loader-00135: Invalid argument for RESUMABLE\n
Cause: The command line argument specified for RESUMABLE was not TRUE or FALSE.

Action: Check the command line and retry.

SQL*Loader-00136: Invalid argument for RESUMABLE_NAME\n
Cause: The command line argument specified for RESUMABLE_NAME was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00137: Invalid value for RESUMABLE_TIMEOUT\n
Cause: The command line argument specified for RESUMABLE_TIMEOUT was not a valid positive integer.

Action: Check the command line and retry.

SQL*Loader-00138: Invalid value for DATE_CACHE\n
Cause: The command line argument specified for DATE_CACHE was not a valid positive integer.

Action: Check the command line and retry.

SQL*Loader-00144: Conflicting load methods: *string*/*string* specified.\n
Cause: External table mode and direct path mode were both specified.

Action: Specify only one load method.

SQL*Loader-00145: Invalid value for NO_INDEX_ERRORS\n
Cause: The command line argument specified was not a valid boolean.

Action: Check the command line and retry.

SQL*Loader-00146: Invalid value for PARTITION_MEMORY\n
Cause: The command line argument specified was not -1, 0, or positive.

Action: Check the command line and retry.

SQL*Loader-00147: Warning: The NO_INDEX_ERRORS parameter is ignored for direct path parallel loads.\n
Cause: The NO_INDEX_ERRORS parameter was specified for a parallel load.

Action: Do not use the NO_INDEX_ERRORS parameter for parallel loads.

SQL*Loader-00148: Invalid value for the TABLE parameter.\n
Cause: The command line argument specified for the TABLE parameter was not a valid string. It is also possible that the schema name or the table name overflowed the output buffer which allows for the maximum identifier size in the database character set.

Action: Check the command line and retry.

SQL*Loader-00149: Control file cannot be specified with the TABLE parameter.\n
Cause: A control file was specified along with the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the TABLE parameter.

SQL*Loader-00174: conflicting values for PARALLEL and DEGREE_OF_PARALLELISM parameters\n
Cause: Conflicting values were specified for the parallel setting. This could be caused by: 1) having PARALLEL=TRUE and DEGREE_OF_PARALLELISM=NONE(or 1) 2) PARALLEL=FALSE and DEGREE_OF_PARALLELISM being set to a value other than NONE or 1.

Action: Verify the values for PARALLEL and DEGREE_OF_PARALLELISM.

SQL*Loader-00175: invalid number of Direct NFS (dNFS) read buffers\n
Cause: The argument's value was inappropriate.

Action: Check the command line and retry.

SQL*Loader-00176: Invalid value for the DATE_FORMAT parameter.\n
Cause: The command line argument specified for the DATE_FORMAT parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00177: The DATE_FORMAT parameter can only be specified with the TABLE parameter.\n
Cause: A control file was specified along with the DATE_FORMAT parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the DATE_FORMAT parameter.

SQL*Loader-00178: Invalid value for the TERMINATED_BY parameter.\n
Cause: The command line argument specified for the TERMINATED_BY parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00179: Invalid hexadecimal value for the TERMINATED_BY parameter.\n
Cause: The command line argument specified for the TERMINATED_BY parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00180: Invalid hexadecimal value for the table-level NULLIF parameter.\n
Cause: The command line argument specified for the table-level NULLIF parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00181: The TERMINATED_BY parameter cannot be specified without the TABLE parameter.\n
Cause: The TERMINATED_BY parameter was specified without the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the TABLE parameter and omit the control file. If you are not doing an express mode load, omit the TERMINATED_BY parameter.

SQL*Loader-00182: Invalid value for the ENCLOSED_BY parameter.\n
Cause: The command line argument specified for the ENCLOSED_BY parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00183: invalid hexadecimal value for the ENCLOSED_BY parameter: *string*\n
Cause: The command line argument specified for the ENCLOSED_BY parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00184: The ENCLOSED_BY parameter cannot be specified with the OPTIONALLY_ENCLOSED_BY parameter.\n
Cause: Both the ENCLOSED_BY parameter and the OPTIONALLY_ENCLOSED_BY parameter were specified.

Action: Check the command line and retry. Specify only the ENCLOSED_BY parameter or the OPTIONALLY_ENCLOSED_BY parameter.

SQL*Loader-00185: The ENCLOSED_BY parameter cannot be specified without the TABLE parameter.\n
Cause: The ENCLOSED_BY parameter was specified without the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the TABLE parameter and omit the control file. If you are not doing an express mode load, omit the ENCLOSED_BY parameter.

SQL*Loader-00186: Invalid value for the OPTIONALLY_ENCLOSED_BY parameter.\n
Cause: The command line argument specified for the OPTIONALLY_ENCLOSED_BY parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00187: invalid hexadecimal value for the OPTIONALLY_ENCLOSED_BY parameter: *string*\n
Cause: The command line argument specified for the OPTIONALLY_ENCLOSED_BY parameter was not a valid hexadecimal string.

Action: Check the command line and retry.

SQL*Loader-00188: The OPTIONALLY_ENCLOSED_BY parameter cannot be specified with the ENCLOSED_BY parameter.\n
Cause: Both the OPTIONALLY_ENCLOSED_BY parameter and the ENCLOSED_BY parameter were specified.

Action: Check the command line and retry. Specify only the OPTIONALLY_ENCLOSED_BY parameter or the ENCLOSED_BY parameter.

SQL*Loader-00189: The OPTIONALLY_ENCLOSED_BY parameter cannot be specified without the TABLE parameter.\n
Cause: The OPTIONALLY_ENCLOSED_BY parameter was specified without the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the TABLE parameter and omit the control file. If you are not doing an express mode load, omit the OPTIONALLY_ENCLOSED_BY parameter.

SQL*Loader-00190: Invalid value for the CHARACTERSET parameter.\n
Cause: The command line argument specified for the CHARACTERSET parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00191: The CHARACTERSET parameter can only be specified with the TABLE parameter.\n
Cause: A control file was specified along with the CHARACTERSET parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the CHARACTERSET parameter.

SQL*Loader-00192: The CHARACTERSET parameter cannot be specified without the TABLE parameter.\n
Cause: The CHARACTERSET parameter was specified without the TABLE parameter.

Action: Check the command line and retry. If you are doing an express mode load, include the TABLE parameter and omit the control file. If you are not doing an express mode load, omit the CHARACTERSET parameter.

SQL*Loader-00193: Invalid value for the DEGREE_OF_PARALLELISM parameter.\n
Cause: The command line argument specified for the DEGREE_OF_PARALLELISM parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00194: Option *string* specified and ignored for *string* path load.\n
Cause: An option was specified that is not supported for conventional path or direct path.

Action: Do not specify the unsupported option or do not use conventional path or direct path load.

SQL*Loader-00195: Invalid value for the TRIM parameter.\n
Cause: The command line argument specified for the TRIM parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00196: Invalid value for the CSV parameter.\n
Cause: The command line argument specified for the CSV parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00197: Invalid value for the TIMESTAMP_FORMAT parameter.\n
Cause: The command line argument specified for the TIMESTAMP_FORMAT parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00198: The TIMESTAMP_FORMAT parameter can only be specified with the TABLE parameter.\n
Cause: A control file was specified along with the TIMESTAMP_FORMAT parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the TIMESTAMP_FORMAT parameter.

SQL*Loader-00199: Invalid value for the NULLIF parameter.\n
Cause: The command line argument specified for the NULLIF parameter was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00200: FORMAT clause should not be present - flat data files only\n
Cause: SQL/DS FORMAT clause is not supported.

Action: Remove the FORMAT command from the SQL*Loader control file or

SQL*Loader-00201: There is an invalid value for the CSV clause.\n
Cause: The control file clause specified for CSV was neither CSV WITH EMBEDDED or CSV WITHOUT EMBEDDED.

Action: Check the control file CSV clause syntax and retry.

SQL*Loader-00202: shift-based character sets not supported with CSV format files with embedded record terminators\n
Cause: A CSV format file with embedded record terminators was specified with a shift-based character set.

Action: Either use a nonshift-based character set or do not use CSV format files with embedded record terminators.

SQL*Loader-00203: The NULLIF parameter can only be specified with the TABLE parameter.\n
Cause: A control file was specified along with the NULLIF parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the NULLIF parameter.

SQL*Loader-00204: Invalid value for the FIELD_NAMES parameter.\n
Cause: The command line argument specified for the FIELD_NAMES parameter was not a valid string. You must specify FIRST, FIRST_IGNORE, ALL, ALL_IGNORE, or NONE.

Action: Check the command line and retry.

SQL*Loader-00205: The FIELD_NAMES parameter can only be specified with the TABLE parameter.\n
Cause: A control file was specified along with the FIELD_NAMES parameter.

Action: Check the command line and retry. If you are doing an express mode load, omit the control file. If you are not doing an express mode load, omit the FIELD_NAMES parameter.

SQL*Loader-00206: Empty field name for field *number* in the FIELD NAMES record in data file\n
Cause: A field name in the FIELD NAMES record was empty.

Action: Specify a valid field name and retry the operation.

SQL*Loader-00207: Missing one or more field names in the FIELD NAMES record in the data file. Found *number* fields, there should be *number* fields.\n
Cause: One or more field names was not listed in the FIELD NAMES record. However, it was listed in the access parameter list for the external table.

Action: Include all field names in the data file and retry the operation.

SQL*Loader-00208: Error on the FIELD NAMES record for table *string*, field *stringstringstring* was not found in the control file.\n
Cause: The listed field was not found in the control file field list. The next error message lists the name of the data file where the error was found.

Action: Check the listed field and fix it. Then retry the operation.

SQL*Loader-00209: error processing the FIELD NAMES record in data file *string*.\n
Cause: An error occurred while processing the FIELD NAMES record for the data file.

Action: See messages that preceed this one for more details. Fix the error and retry the operation.

SQL*Loader-00210: first data file is empty, cannot process the FIELD NAMES record\n
Cause: The data file listed in the next message was empty. Therefore, the FIELD NAMES FIRST FILE directive could not be processed.

Action: Check the listed data file and fix it. Then retry the operation.

SQL*Loader-00211: Field name *stringstringstring* in the FIELD NAMES record in the data file is too long.\n
Cause: The field name exceeded the maximum of 30 characters.

Action: Specify at most 30 characters.

SQL*Loader-00212: The field level ENCLOSED BY clause is not allowed with the CSV WITH EMBEDDED clause.\n
Cause: A field level ENCLOSED BY clause was specified with the CSV WITH EMBEDDED clause. All fields must use the same ENCLOSED BY or OPTIONALLY ENCLOSED BY clause for CSV files with embedded record terminators.

Action: Either remove the field level ENCLOSED BY clause, or, if the data file does not contain embedded record terminators, change CSV WITH EMBEDDED to CSV WITHOUT EMBEDDED.

SQL*Loader-00213: Invalid value for the table parameter\n
Cause: The table name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place. The schema name or the table name may have been too long for a valid database identifier in the database character set.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00214: Invalid value for the table name in the INTO TABLE clause\n
Cause: The table name specified in the INTO TABLE clause was not recognized. The schema name or the table name may have been too long for a valid database identifier in the database character set.

Action: Check the name and try again with a valid table name.

SQL*Loader-00215: Invalid data file name in INFILE statement\n
Cause: The datafile name specified in INFILE statement was not recognized. It could be misspelled, or the length may exceed the maximum file specification allowed on the platform.

Action: Check the spelling and length of the data file specification.

SQL*Loader-00216: Invalid bad file name in BADFILE statement\n
Cause: The bad file name specified in the BADFILE statement was not recognized. It could be misspelled, or the length may exceed the maximum file specification allowed on the platform.

Action: Check the spelling and length of the bad file specification.

SQL*Loader-00217: Invalid discard file name in DISCARDFILE statement\n
Cause: The discard file name specified in the DISCARDFILE statement was not recognized. It could be misspelled, or the length may exceed the maximum file specification allowed on the platform.

Action: Check the spelling and length of the discard file specification.

SQL*Loader-00218: Specified command-line parameter *string* ignored since not an express mode load.\n
Cause: A command-line parameter was specified that is supported only for express mode and not for loads which use a control file.

Action: Omit the option which is not supported if the option is not needed or use the control file syntax for the option. For example, use the CSV WITH EMBEDDED or CSV WITHOUT EMBEDDED control file syntax.

SQL*Loader-00219: Invalid value for parameter SDF_PREFIX\n
Cause: The value for the SDF_PREFIX parameter was not recognized or the value of the parameter was too long.

Action: Verify the value specified and shorten it if possible.

SQL*Loader-00220: invalid value for the exceptions table name in the REENABLE clause\n
Cause: The table name specified for the exceptions table in the REENABLE disabled constraints clause was not recognized. The schema name or the table name may have been too long for a valid database identifier in the database character set.

Action: Check the name and try again with a valid table name.

SQL*Loader-00221: invalid value for the partition or subpartition name\n
Cause: The name specified for the partition or subpartition was not recognized. The name may have been too long for a valid database identifier in the database character set.

Action: Check the name and try again with a valid partition or subpartition name.

SQL*Loader-00222: invalid option specified for DEFAULTS parameter\n
Cause: An invalid value was specified for the DEFAULTS parameter.

Action: Specify one of the following values: - IGNORE to disable loading of default values. - EVALUATE_ONCE to load default values, but evaluate default expressions once at the beginning of the load. - EVALUATE_EVERY_ROW to load default values and evaluate default expressions for each row. - IGNORE_UNSUPPORTED_EVALUTE_ONCE to load default values where supported, ignore otherwise. Evaluate defaults once. - IGNORE_UNSUPPORTED_EVALUTE_EVERY_ROW to load default values where supported, ignore otherwise. Evaluate defaults every row.

SQL*Loader-00223: Warning: The DEFAULTS parameter is ignored for non-direct path loads.\n
Cause: The DEFAULTS parameter was specified for a non-direct path load.

Action: Do not use the DEFAULTS parameter for non-direct path loads.

SQL*Loader-00248: multiple *string* format masks specified at table level for table *string*\n
Cause: Multiple format masks were specified for the listed datetime data type at the table level for the listed table.

Action: Remove one of the mask specifications and try the operation again.

SQL*Loader-00249: Unexpected error occurred while processing datetime format mask (*string*).\n
Cause: An unexpected error occurred while processing the datetime format mask.

Action: Check the mask and try the operation again with a correct mask. If the problem still occurs, contact Oracle Support Services.

SQL*Loader-00250: Work data sets are not used by SQL*Loader\n
Cause: The SQL*Loader control file contains a WRKDDN statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00251: Sort devices are not used by SQL*Loader\n
Cause: The SQL*Loader control file contains a SORTDEVT statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00252: Sort data sets are not used by SQL*Loader\n
Cause: The SQL*Loader control file contains a SORTNUM statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00253: DB2 partition number has no significance -- ignored\n
Cause: The SQL*Loader control file contains a PART statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00254: Cannot have DISCARDFILE specs here when multiple data files\n
Cause: The SQL*Loader control file contained multiple INFILE statements and a DISCARDFILE statement was found below the RESUME clause.

Action: Move the DISCARDFILE statement above the RESUME clause, so it is adjacent to one of the INFILE statements.

SQL*Loader-00255: Log file for error recovery not used by SQL*Loader\n
Cause: The SQL*Loader control file contains a LOG statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00256: SORTED INDEXES option allowed only for direct path\n
Cause: The SQL*Loader control file contains a SORTED INDEXES statement, but it was not used in a direct path load.

Action: Specify a direct path load with DIRECT=TRUE on the command line, remove the statement from the SQL*Loader control file, or

SQL*Loader-00257: TERMINATED BY EOF option not valid with ENCLOSED BY option\n
Cause: A field description in the SQL*Loader control file contains both the TERMINATED BY EOF and the ENCLOSED BY options. These options are mutually exclusive.

Action: Remove either or both of the clauses.

SQL*Loader-00258: Maximum number of SORTED INDEXES (*number*) exceeded on table *string*\n
Cause: There are too many indexes in the SORTED INDEX clause. The message displays the maximum number that are permitted.

Action: Reduce the number of indexes specified in the SORTED INDEX clause or use the conventional path load instead of the direct path load.

SQL*Loader-00259: Could not escalate DDL share lock to exclusive on table *string*\n
Cause: This error occurs when another user has a parse lock on the table, for example, when another user is doing a select on the table. The parse lock should clear momentarily.

Action: Give the parse lock a chance to clear and then retry or else use the conventional path load.

SQL*Loader-00260: TERMINATED BY EOF option available only with LOBFILE option\n
Cause: The TERMINATED BY EOF option can be used only when describing data to be loaded from a LOBFILE. It cannot be specified at the table level and it cannot be for data in "regular" data files.

Action: Verify that you have specified the correct option for TERMINATED BY and verify that the TERMINATED BY option is specified for the correct fields.

SQL*Loader-00261: illegal use of TERMINATED BY for RAW field\n
Cause: The TERMINATED BY option cannot be used for loading data of type RAW from the data file. The only exception is when loading RAW data from LOBFILES. In that case, you may specify the TERMINATED BY EOF option.

Action: Remove the TERMINATED BY option from the RAW field in the SQL*Loader control file.

SQL*Loader-00262: PIECED keyword (on column *string*) allowed only when path is direct\n
Cause: The PIECED keyword cannot be used in a conventional path load.

Action: Remove the PIECED keyword or use the direct path load.

SQL*Loader-00263: PIECED column *string* must be last specified column in table *string*\n
Cause: A column that is not the last column was specified as PIECED.

Action: Remove the PIECED keyword or place the column last.

SQL*Loader-00264: File mode token *string* parsed but ignored\n
Cause: An obsolete file mode token was used in the SQL*Loader control file. As of Release 1.1 of SQL*Loader, the file-processing options string is used to control file processing, rather than keywords like STREAM, RECORD, FIXED, and VARIABLE.

Action: No action required. This message is informational. Removing the obsolete keywords will eliminate the message without changing the way in which the datafile is processed.

SQL*Loader-00265: Unable to get default character set name.\n
Cause: SQL*Loader was unable to locate the default character set name for the environment.

Action: Supply a character set name with the CHARACTERSET keyword.

SQL*Loader-00266: Unable to locate character set handle for *string*.\n
Cause: SQL*Loader could not find the character set handle for the named character set.

Action: Correct the character set name.

SQL*Loader-00267: Control file must be first data file.\n
Cause: The SQL*Loader control file is specified as containing data using the INFILE "*" clause, but other datafiles were named first.

Action: Move the INFILE "*" clause so that it is the first datafile declared in the SQL*Loader control file.

SQL*Loader-00268: UNRECOVERABLE keyword may be used only in direct path.\n
Cause: The UNRECOVERABLE keyword can only be specified in the direct path load.

Action: Use the direct path load or remove the keyword. (Conventional path loads are always recoverable).

SQL*Loader-00269: Null string not allowed as clause comparison text.\n
Cause: A clause is being compared to a null string.

Action: Modify the clause to compare to at least one character.

SQL*Loader-00270: TERMINATED BY EOF valid only for CHAR or RAW datatypes\n
Cause: A field description in the SQL*Loader control file used the TERMINATED BY EOF option when the field was not a RAW or CHAR datatype.

Action: Modify the SQL*Loader control file to either remove the TERMINATED BY EOF clause or change the datatype for the field to be CHAR or RAW.

SQL*Loader-00271: Not a Parallel load. Table level OPTIONS statement ignored.\n
Cause: A table-level OPTIONS statement was specified for a non-parallel load.

Action: Remove the OPTIONS statement from the SQL*Loader control file.

SQL*Loader-00272: Table level OPTIONS statement ignored.\n
Cause: In the parallel load option, the file specified on the command line overrides the file specified in the SQL*Loader control file.

Action: Remove the OPTIONS statement from the SQL*Loader control file.

SQL*Loader-00273: READBUFFERS may be used only in direct path.\n
Cause: The READBUFFERS specification was not entered as part of a direct path.

Action: Use the direct path or remove the READBUFFERS specification from the SQL*Loader control file.

SQL*Loader-00274: At least 2 read buffers have to be specified.\n
Cause: Fewer than 2 read buffers have been specified.

Action: Specify at least 2 read buffers in the READBUFFERS statement, in the SQL*Loader control file.

SQL*Loader-00275: Data is in control file but "INFILE *" has not been specified.\n\n
Cause: The INFILE specification was not entered in the SQL*Loader control file.

Action: If data in the SQL*Loader control file is to be read, specify INFILE * in the SQL*Loader control file.

SQL*Loader-00276: Local storage option overrides global storage.\n
Cause: A storage clause has been specified in the table level options statement and also in the global options statement.

Action: This is only a warning message. Table level options take precedence over global options. Drop the table level options statement if this is not the intent.

SQL*Loader-00277: Local file specification overrides global file specification.\n
Cause: A filename has been specified in the table level options statement and also in the global options statement.

Action: This is only a warning message. Table level options take precedence over global options. Drop the table level options statement if this is not the intent.

SQL*Loader-00278: Incorrect file specification for parallel load.\n
Cause: The filename used to perform the parallel load was entered incorrectly.

Action: Correct the filename and re-invoke parallel loader.

SQL*Loader-00279: Only APPEND mode allowed when parallel load specified.\n
Cause: INSERT, REPLACE, or TRUNCATE mode was used in a parallel load specification.

Action: Change the SQL*Loader control file to use the APPEND keyword and re-invoke the parallel loader.

SQL*Loader-00280: table *string* is a temporary table\n
Cause: The sqlldr utility does not load temporary tables. Note that if sqlldr did allow loading of temporary tables, the data would disappear after the load completed.

Action: Load the data into a non-temporary table.

SQL*Loader-00281: Warning: ROWS parameter ignored in parallel mode.\n
Cause: Specifying save points using the ROWS parameter is not supported for parallel loads.

Action: Remove the ROWS parameter from the command-line arguments or specify a non-parallel direct load to have save points performed.

SQL*Loader-00282: Unable to locate character set handle for character set ID (*number*).\n
Cause: SQL*Loader could not find the character set handle for the given character set ID.

Action: The character set ID was obtained from the database server, the SQL*Loader client does not have knowledge of the given character set ID. Possible mis-match of NLS data on the client and server side.

SQL*Loader-00283: file processing string "*string*" ignored for INFILE *\n
Cause: The SQL*Loader control file specified INFILE * for a load data file along with an optional file processing string. This message is a warning that the file processing string will be ignored since SQLLDR will expect the data to have the same record format as the SQL*Loader control file.

Action: If the data in the SQL*Loader control file is in the same format as the rest of the SQL*Loader control file, then you don't need to do anything. Removing the file processing string will get rid of this error message. If the data in the SQL*Loader control file has a different record format, then you need to copy the data into a separate file and use that file's name in the INFILE clause.

SQL*Loader-00284: Warning: Input data file *string* specified multiple times.\n
Cause: The same input datafile is loaded multiple times. This can occur if the INFILE keyword is placed out of order in the load syntax statement, which causes the filename of the first datafile loaded to default to the name of the control file with an extension or file type of DAT.

Action: Check that INFILE keyword is not placed after one of these - BADFILE/ BADDN/DISCARDFILE/DISCARDDN/DISCARDS.

SQL*Loader-00285: *string* may be used only in conventional path.\n
Cause: HIDDEN can only be specified in the conventional path load.

Action: Use the conventional path load.

SQL*Loader-00286: ROWS parameter is not supported when loading an IOT.\n
Cause: Specifying save points using the ROWS parameter is not supported when loading an IOT.

Action: Remove the ROWS parameter from the command-line arguments.

SQL*Loader-00287: No control file name specified.\n
Cause: No control file name was provided at the control prompt.

Action: Provide the name of a valid control file at the prompt or on the command line.

SQL*Loader-00288: Delimiters may not be specified for collections stored in SDF.\n
Cause: A TERMINATED BY or ENCLOSED BY clause was found along with an SDF (secondary data files) clause for a nested table or varray field.

Action: The TERMINATED BY or ENCLOSED BY clauses may be specified only if the nested table or VARRAY data is stored in the record in the main data file. If you are loading nested table or VARRAY data from a secondary data file, then you must use COUNT to indicate the number of elements in the secondary data file that are stored in the file.

SQL*Loader-00289: SQL string for column *string* occludes SQL string for column *string*.\n
Cause: A SQL string has been associated with both a column object and one of its attributes in the control file. Because the SQL string of the column object will replace the entire column object in the VALUE clause of the INSERT statement, the SQL string of the attribute is ignored. This could cause unexpected or incorrect values to be loaded.

Action: Correct the control file so that only the column object or its attribute has a SQL string, but not both.

SQL*Loader-00290: PIECED keyword (on column *string*) allowed only for lob or long columns\n
Cause: The PIECED keyword cannot be used for non lob or long columns.

Action: Remove the PIECED keyword or use lob or long column type.

SQL*Loader-00291: Invalid bind variable *string* in SQL string for column *string*.\n
Cause: A bind variable may not refer to a filler field or to a non-existent field. Also, when running in direct-path mode, a bind variable may not refer to field that represents a LOB stored in a secondary file or a collection.

Action: Remove the offending bind variable from the SQL string.

SQL*Loader-00292: ROWS parameter ignored when an XML, LOB or VARRAY column is loaded\n
Cause: Command-line arguments contained a ROWS parameter. Specifying save points using the ROWS parameter is not supported when any table being loaded contains a LOB or a column stored as a LOB. XML and VARRAY columns may be stored as a LOB.

Action: Remove the ROWS parameter from the command-line arguments.

SQL*Loader-00293: Missing XMLTYPE directive in control file for table *string*\n
Cause: A table of sys.xmltype must specify the XMLTYPE directive.

Action: Add XMLTYPE directive to control file.

SQL*Loader-00294: invalid name % specified in TREAT AS clause\n
Cause: The type name specified in a TREAT AS clause is invalid. It might contain characters that are not valid in the client character set or a quoted string might not be terminated or the name might be too long to contain a valid schema name and type name.

Action: Verify that the type name has valid characters and is not too long. Also, ensure that all quoted strings are terminated.

SQL*Loader-00295: Warning: Table *string*, Column *string* - Quoting rule of object attribute bind variables has changed.\n\n
Cause: The quoting rule of bind variables consisting of full object attribute names changed. The old quoting rule is incorrect because it can lead to ambiguous column references. For backward compatibility, current load will continue unless ambiguous column references are detected.

Action: This is only a warning message. Because the quoting rule of object attribute bind variables has changed, it is recommended that the control file be replaced with the new rule. With the new rule, a full object attribute bind variable name is not enclosed in its entirety in double quotes. Instead, each attribute name in the bind variable should be independently quoted as needed. Note that each attribute name is actually an identifier on its own and thus should follow the quoting rules for an identifier. For example, bind variable ':A.B.C' here consists of 3 attribute names (or identifiers): 'A', 'B', and 'C'.

SQL*Loader-00296: Bind variable *string* for column *string* is ambiguous.\n
Cause: A bind variable can only refer to one column in the control file. Current load could not continue due to ambiguous column references.

Action: Fix the bind variable. If this bind variable consists of quotes, check that the quotes are used correctly. For example, the old quoting rule of bind variables consisting of full object attribute names was incorrect because it can lead to ambiguous column references. Let's say we have an expression "LTRIM(:"A.B.C")". Using the old quoting rule, this bind variable can refer to object attribute columns '"A"."B"."C"', '"A.B".C', and '"A"."B.C"'. To avoid this confusion, use the new quoting rule for object attribute bind variables, which is to quote each attribute name independently as needed. In the preceding example, if the intended object attribute column is 'A.B.C', then the expression rewritten as "LTRIM(:A.B.C)" or "LTRIM(:"A"."B"."C") will not lead to ambiguities.

SQL*Loader-00297: Invalid syntax or bind variable in SQL string for column *string*.\n
Cause: See following error message for more information. A SQL string cannot have quoted strings improperly terminated. A bind variable in a SQL string cannot have a length of 0, cannot exceed maximum length of 30 characters, and cannot be missing a double quote.

Action: Fix the SQL string. See following error for more information.

SQL*Loader-00298: Filler field name is too long\n
Cause: The specified filler field name exceeded the maximum of 30 characters.

Action: Specify at most 30 characters.

SQL*Loader-00299: Virtual column *string* in table *string*.*string* cannot be loaded.\n
Cause: Virtual columns were specified in the control file.

Action: Virtual columns cannot be specified in the control file. Remove the virtual column from the SQL*Loader control file.

SQL*Loader-00300: error while attempting to enable tracing\n
Cause: An error occurred while executing an ALTER SESSION statement to enable tracing. This message will be followed by the error returned from ALTER SESSION.

Action: No action required.

SQL*Loader-00301: string for TERMINATED BY or ENCLOSED BY clause is longer than *number* bytes\n
Cause: The size of a string literal is longer than the maximum number of bytes allowed for an ENCLOSED BY or TERMINATED BY string. This error can also occur if the string needs to be converted to the character set of the data file and the resulting string is too long.

Action: Use shorter strings for the TERMINATED BY and ENCLOSED BY clauses.

SQL*Loader-00303: Non-hex character encountered where hex char expected\n
Cause: A non-hex character was found in a hexadecimal string.

Action: Change it to the intended hexadecimal character.

SQL*Loader-00304: Illegal combination of non-alphanumeric characters\n
Cause: The SQL*Loader control file contains a combination of non-alphanumeric characters that SQL*Loader does not recognize. For example, the combination != is recognized as "not equal", but the combination =! is not valid.

Action: Remove the unrecognized characters from the control file.

SQL*Loader-00305: More than one end of file character encountered\n
Cause: The file contains multiple end-of-file marks.

Action: Remove the excess end-of-file characters.

SQL*Loader-00306: Token longer than max allowable length of *number* chars\n
Cause: The SQL*Loader control file contains a single word or combination of characters (a token) that is longer than the maximum permissible value. The maximum possible value is shown. This error could result from missing spaces, so that multiple tokens are joined.

Action: Check that the proper SQL*Loader control file is being executed Separate tokens, if joined, or shorten the token.

SQL*Loader-00307: Warning: conflicting lengths *number* and *number* specified for column *string* table *string*\n
Cause: The SQL*Loader control file specifies two different lengths for the named column. There are three ways to specify the length of a field: --with the POSITION keyword: POSITION(1:3) -- with the length specifier: CHAR(6) -- with the implied length of a datatype; for example, INTEGER -- A conflict could occur between any two of these specifications (or among all three, but only two are shown). A common cause of this error is the specification of some numeric datatype, such as INTEGER, when the numeric external form is intended (INTEGER EXTERNAL). The external form consists of character data, so it is considerably longer than the numeric form, which consists of binary data.

Action: No action is necessarily required, because SQL*Loader uses only one of the lengths. Check the log file under the heading "Len" in the table-description section to see which length was used. Adjusting the SQL*Loader control file to produce uniform length specifications will remove the warning.

SQL*Loader-00308: *string* SQL string of column *string* must be in double quotes.\n
Cause: A SQL string was found that was not quoted or in single quotes.

Action: Use double quotes for the SQL string, rather than single quotes.

SQL*Loader-00309: No SQL string allowed as part of *string* field specification\n
Cause: Particular field types do not allow SQL strings as part of their field specification (e.g. field corresponding to a LOB column). This was violated and needs to be corrected.

Action: Remove the SQL string from the particular field specification.

SQL*Loader-00310: Interval partition values of table *string* must be in double quotes.\n
Cause: A string specified for interval partitioning was found that was not quoted or in single quotes.

Action: Use double quotes for the interval partitioning values string, rather than single quotes.

SQL*Loader-00311: Cannot load a sharded table when connected to a shard catalog database: *string*.*string*\n
Cause: SQL*Loader is connected to a database that is acting as the catalog database for a sharded database and the table identified by the message is a sharded table. SQL*Loader does not support loading sharded tables in a shard catalog database.

Action: Connect to each of the shard database.

SQL*Loader-00350: Syntax error at line *number*.\n
Cause: num identifies the line in the SQL*Loader control file at which the error occurred. This message is followed by another of the form -- Expecting str1, found str2 where str1 is a description of what SQL*Loader expected in the SQL*Loader control file, and str2 is what was found. Then SQL*Loader displays the offending line from the SQL*Loader control file, indicating the location of the error in the line by a carat (^) or an asterisk (*). An example follows: -- SQL*Loa er-350: Syntax error at line 28 -- Expecting column name, found keyword CHAR -- col3 ENCLOSED BY "", CHAR ENCLOSED """,

Action: Compare the DDL syntax against the syntax diagrams in Oracle7 Server Utilities and make any necessary corrections.

SQL*Loader-00401: End field position *number* must be greater than or equal to start *number*\n
Cause: The named field contains a (start:end) clause in which end is less than start.

Action: Modify the clause so that end is greater than or equal to start.

SQL*Loader-00402: Unable to determine length of column *string* from specification\n
Cause: The specified datatype does not have an implied length (for example, a numeric external or RAW datatype), it is not specified with delimiters, no length was specified, and a length cannot be determined from a POSITION clause.

Action: If a POSITION clause is specified, adding an end location to it produces a length specification. This clause then has the form POSITION(start:end) A length can also specified after the datatype, as in INTEGER EXTERNAL (6) Finally, the field could be specified with delimiters, or the datatype changed to one that has an implied length.

SQL*Loader-00403: Referenced column *string* not present in table *string*.\n
Cause: The named column is not present in the given table.

Action: Correct the column name or table name.

SQL*Loader-00404: Column *string* present more than once in *string*'s INTO TABLE block.\n
Cause: The named column is specified more than once in a single INTO TABLE statement.

Action: Remove the extraneous column specification.

SQL*Loader-00405: Need termination delim with optional enclosure delim: column *string* table *string*\n
Cause: The named column was specified with an optional enclosure delimiter, but no termination delimiter. Enclosure delimiters can only be optional when termination delimiters are present.

Action: Specify a termination delimiter or make the enclosure delimiters non-optional.

SQL*Loader-00406: If data is all generated, number to load cannot be ALL\n
Cause: When only generated data is loaded, a number to load must be given so SQL*Loader knows when to stop.

Action: Specify a number to load.

SQL*Loader-00407: If data is all generated, number to skip is meaningless\n
Cause: When all data is generated, no file is read, and there are no records to skip.

Action: Remove the number to skip.

SQL*Loader-00408: Physical record stack overflow\n
Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00409: Number to skip must be table-level, not load-level on continued loads\n
Cause: The SKIP parameter was specified on the command line or in the OPTIONS statement, but the load was specified as continued with CONTINUE_LOAD. When a multiple-table direct load is interrupted, it is possible that a different number of records were loaded into each table. As a result, the number of records to skip must be specified for each table when continuing the load. In this case, the load is specified as continued with the CONTINUE_LOAD statement, and the number of records to skip is given in each INTO TABLE statement. See also messages 410 and 411 for more information.

Action: Check the log file to determine the appropriate number of records to skip for each table and specify this number in the INTO TABLE statement for each table in a continued load or with the command-line SKIP parameter in a standard load.

SQL*Loader-00410: Number to skip must be load-level, not table-level\n
Cause: A SKIP clause was found in the INTO TABLE statement of a standard (non-continued) load. In a standard load, specified with LOAD DATA, it is not possible to skip a different number of records for each table. The number of records to skip must be specified for the entire load by using the SKIP parameter on the command line or in the OPTIONS clause. If table-level skip is required, because a different number of records were loaded into each table (only possible for a multiple- table direct load), then specify a continued load with the CONTINUE_LOAD statement. See also messages 409 and 411 for more information.

Action: If the load was not a multiple-table, direct path load, then move the SKIP clause from the INTO TABLE statements to the command line or to the OPTIONS clause. Otherwise, specify the load as continued with CONTINUE_LOAD.

SQL*Loader-00411: Only a direct path load may be continued\n
Cause: The load is specified with CONTINUE_LOAD, but DIRECT=FALSE. CONTINUE_LOAD is only possible for a direct path load and is only necessary for a multiple-table, direct path load when a different number of records have been loaded into each table. See also messages 409 and 410 for more information.

Action: If CONTINUE_LOAD is necessary, specify a direct load and put the number of records to skip in each INTO TABLE statement. Otherwise, use the command line or OPTIONS clause to specify the number of records to skip and use LOAD DATA instead of CONTINUE_LOAD.

SQL*Loader-00412: More columns specified for table *string* than the maximum (*number*)\n
Cause: More columns were specified for the table than the maximum number allowed by the database.

Action: Remove the extraneous columns.

SQL*Loader-00413: NULLIF or DEFAULTIF clause specified for filler field *string* in table *string*.\n
Cause: A NULLIF or DEFAULTIF clause was specified in the SQL*Loader control file for the named filler field. These options cannot be specified for filler fields.

Action: Remove the NULLIF or DEFAULTIF clause from the field definition.

SQL*Loader-00414: no columns to load for table *string*\n
Cause: There were no fields in the data file to be loaded for the table. Probably all fields were identified as FILLER fields.

Action: Verify that the FILLER attribute was set correctly for the fields.

SQL*Loader-00415: column *string* in table *string* cannot use and be the object of an SDF or LOBFILE\n
Cause: The named column is identified as the target of a secondary data file (SDF) or LOBFILE clause. However, the column also gets it's value from an SDF or LOBFILE. If a field name is named in an SDF or LOBFILE clause, then that field cannot have an SDF or LOBFILE clause.

Action: Verify that the SDF and LOBFILE clauses in the SQL*Loader control file name the correct fields. Also verify that the SDF and LOBFILE clauses are specified for the correct field.

SQL*Loader-00416: SDF clause for field *string* in table *string* references a non existent field.\n
Cause: The secondary data file clause for the field identified another field that doesn't exist in the table definition for the SQL*Loader control file.

Action: Verify the definition of the secondary data file to make sure it identifies the intended field.

SQL*Loader-00417: SQL string (on column *string*) not allowed in direct path.\n
Cause: Because the direct path bypasses SQL processing, the SQL string cannot be used.

Action: Remove the SQL string or use the conventional path.

SQL*Loader-00418: Bad datafile datatype for column *string*\n
Cause: The datatype in the data file specified for the column cannot be used to load the column. This message is often displayed for columns that need to be loaded with special features. For example, BFILE columns can only be loaded via the BFILE directive in the control file; same goes for REF fields. in the SQL*Loader control file. Similarly, REF columns can only be loaded with theREF datatype in the SQL*Loader control file.

Action: Determine the datatype of the column in the database check the documentation for the correct mechanisms to use to load columns of that type.

SQL*Loader-00419: input datatype for column *string* is not supported when loading varrays\n
Cause: The datatype in the SQL*Loader control file for the column is cannot be used to load data in a varray.

Action: Use a different datatype.

SQL*Loader-00420: unsupported datatype conversion requested for column *string* in table *string*\n
Cause: The columnn needs to have it's data converted to another datatype before loading the data. The required conversion cannot be done by sqlldr.

Action: Verify that the correct datatype was specified for the column.

SQL*Loader-00421: error converting data\n
Cause: This message can be displayed as one of the reasons for rejecting a row. The sqlldr utility was attempting to convert data for the column from its datatype in the data file to the datatype for the column in the database. This message should be followed with another message describing the conversion error.

Action: Correct the data in the data file so that it can be converted.

SQL*Loader-00422: constant element count of *number* for column *string* is greater than maximum, *number*\n
Cause: The number of elements specified for a varray column in a table is greater than the maximum number of elements allowed for the type of the varray column.

Action: Increase the number of elements allowed for the type or remove unwanted elements from the data file.

SQL*Loader-00423: element count is greater than maximum allowed for the column\n
Cause: When building a varray from the data file, SQL*Loader encountered more varray elements than are allowed for the column.

Action: The previous error messages contain the name of the column and the row number containing the bad data.

SQL*Loader-00424: table *string* makes illegal reference to collection field *string*\n
Cause: A WHEN, OID or SID clause for the table refers to a field declared inside of a collection.

Action: Move the data containing the value for a SID or OID clause outside of the collection definition.

SQL*Loader-00425: column *string* makes illegal reference to collection field *string*\n
Cause: A clause, such as NULLIF or BFILE clause, for the column refers to a field declared inside of a collection.

Action: Move the data containing the value for a SID or OID clause outside of the collection definition.

SQL*Loader-00426: count of elements in VARRAY *string* comes after the data for the varray\n
Cause: The COUNT clause for a VARRAY field indicates that the count of elements in the varray is stored in another data field. However, that data field comes after the varray data in the data file. Since finding the count field would require SQL*Loader to know the number of elements in the VARRAY first, SQL*Loader requires that the count field come before the VARRAY data.

Action: Move the count field to be before the collection data in the data file.

SQL*Loader-00427: invalid reference to a non-scalar field, expression or a LOB field *string*\n
Cause: The field condition referenced a field which is either a nested table, varray, column object, LOB, expression, or BFILE field. Fields with these types cannot be referenced by other fields.

Action: Correct the NULLIF, DEFAULTIF, REF, or WHEN clause to reference only non-LOB scalar data fields.

SQL*Loader-00428: count for field *string* not stored in character or integer field\n
Cause: The count clause for a field references another field, but the referenced field is not a character or integer datatype.

Action: Modify the count field so that it reference a a data field that has the count in an integere or character format.

SQL*Loader-00429: insufficient number of elements found for varray\n
Cause: The COUNT directive was specified for a varray, but the number of elements found is less than the number specified by the COUNT directive.

Action: Correct the data so that the count and the number of elements agree.

SQL*Loader-00430: NULL nested table element is not allowed\n
Cause: A row in a nested table was set to NULL. Nested tables cannot contain NULL fields.

Action: Correct the data so that there are no NULL rows in the nested table.

SQL*Loader-00431: illegal NULLIF or DEFAULTIF clause specified for nested table column *string*\n
Cause: Rows in a nested table cannot be set to NULL. SQLLDR displays this error when a NULLIF clause was specified for the element that defines the row that make up a nested table. SQLLDR also displays this error if a DEFAULTIF clause is specified for an element that is a named type, since SQLLDR will set a named type to NULL if the DEFAULTIF evaluates to TRUE.

Action: n/a

SQL*Loader-00432: converted data too large\n
Cause: This message is preceded by a message identifying a row and column. It is displayed when there is insufficient room to convert the data from the datatype in the input file to the datatype for the column in the database.

Action: Modify the data so that it fits in the database field.

SQL*Loader-00433: no attributes found for column object *string* in table *string*\n
Cause: No attributes are to be loaded for a column object named in the control file. This can happen if all fields in the definition for the column object in the control are designated as FILLER fields.

Action: Either specify attributes to load for the column object or remove the column object from the control file.

SQL*Loader-00434: Can not load LOB/XML in a nested table along with the parent table.\n
Cause: Loading LOBs and XML data within a nested table at the same time as the parent table is not supported.

Action: Load the nested table with the LOB or XML column separately from the parent table.

SQL*Loader-00435: invalid constant value *string* for nested table column *string*\n
Cause: A constant value was specified for the SETID of a nested table column. An error occured while translating the character constant into a SETID.

Action: Make sure the constant string contains valid hexadecimal characters and that there are 32 hexadecimal characters.

SQL*Loader-00436: error converting GUID\n
Cause: The value of the field named in the message is used to populate the column named in the messsage. Because column is a Set ID or an Object ID, the field needs to be converted. This message indicates that there was a conversion error. If the field is a character field, then the conversion error could be caused by too many or too few haxeadecimal charactersI. Also, one or more of the characters in the field might not be a valid hexadecimal character. If the field contains RAW data, then either too many or to few bytes were specified for the field.

Action: Fix the data and reload the row.

SQL*Loader-00437: enabled constraint not allowed on LOB column *string*\n
Cause: An enabled constraint was present on a LOB column.

Action: Disable the constraint and try again.

SQL*Loader-00440: Invalid table specified as scope of a REF\n
Cause: As part of the REF directive one specifies the table name or another fields name which contains the table name of the table which the REF references.

Action: Make sure that the right referenced table name is specified.

SQL*Loader-00456: end of collection found after *number* elements when looking for *number* elements\n
Cause: A count value was specified for a varray or nested table column and the number of rows found is less than the number of rows specified

Action: Verify that the count field has the correct value and that there is no missing data for the collection.

SQL*Loader-00457: Comparison text of CONTINUEIF LAST must have length 1 not *number*\n
Cause: The comparison text is too long. It can only be one character.

Action: Reduce the comparison text to one character.

SQL*Loader-00458: Comparison text ('*string*') of CONTINUEIF LAST must be non-whitespace\n
Cause: The comparison text is a whitespace character (blank or tab).

Action: Change the comparison text to a non-whitespace character.

SQL*Loader-00459: error fetching numeric value for sequence on column (*string*)\n
Cause: An attempt was made to retrieve a non-numeric value for a sequenced column.

Action: Verify that the data for the sequenced column is numeric. Then retry the operation.

SQL*Loader-00460: Column (*string*), form of use (*number*) does not match char set id of (*number*)\n
Cause: The given column with the given form of use does not have the same character set ID as a previous column with the same form of use.

Action: This should not happen. Contact ORACLE support and supply the following information: DDL for the table being loaded, and the SQL*Loader control file. ADDED in 8.1

SQL*Loader-00461: direct path loading of datatype for column *string* not supported\n
Cause: The datatype for the specified column is one that cannot be loaded with direct path.

Action: If the datatype is supported with conventional path, load the table using conventional path.

SQL*Loader-00462: error inserting LOB into column *string*, row %lld, table *string*\n
Cause: An error occurred while attempting to write a LOB into a row.

Action: See accompanying messages describing why the LOB could not be loaded, what actions sqlldr took (if any), and where the errors may be in order to reload.

SQL*Loader-00463: secondary data file for LOB is *string*\n
Cause: The secondary data file that was in use for populating the LOB when an error occured.

Action: n/a

SQL*Loader-00464: file offset for beginning of lob is *string*\n
Cause: The offset into the secondary data file that contains the start of the LOB that was being written when an error occured.

Action: n/a

SQL*Loader-00465: *string* directive expects *number* arguments, *number* found.\n
Cause: You specified a directive such as COUNT() or BFILE() in the SQL*Loader control file. This directive specifies a fixed number of arguments, but the SQL*Loader control file contains a different number of arguments.

Action: Correct the SQL*Loader control file so that the directive contains the correct number of arguments.

SQL*Loader-00466: Column *string* does not exist in table *string*.\n
Cause: The SQL*Loader control file specified a table column that does not exist.

Action: n/a

SQL*Loader-00467: attribute *string* does not exist in type *string* for table *string*.\n
Cause: The SQL*Loader control file specified an attribute that does not exist for the specified type. The table that contains the type is also identified in the error message.

Action: Verify that the correct table in the correct schema is named in the SQL*Loader control file. Also verify that the column name is spelled correctly.

SQL*Loader-00468: OID directive expects 1 argument, *number* found.\n
Cause: More than one argument was specified for an OID clause.

Action: Specify the name of the field containing the value to use for the OID. If the OID for the table is user-defined, then do not use the OID clause in the control file.

SQL*Loader-00469: SID directive expects 1 argument, *number* found.\n
Cause: More than one argument was specified for a SID clause.

Action: Only specify the name of the field containing the value to use for the SID in the SID clause.

SQL*Loader-00470: table *string* does not have system generated OID\n
Cause: You specified an OID clause for a table but the table is either not an object table or the table is an object table but the OIDs for the rows are not system generated.

Action: Verify that the you are loading the correct table. If you are, then you must not specify the OID clause for this table. You should use the OID clause only when the table is an object

table, has system generated OIDs and when you want to specify OIDs to be assigned to each row of the table.

SQL*Loader-00471: OID or SID clause has an argument that is CONSTANT\n
Cause: You specified a CONSTANT as an argument in an OID clause for an object table or in the SID clause for a nested table column. Since these columns must have unique values, SQL Loader does not allow the a constant to be specified for their values.

Action: Store the OID for each row in a filler field and specify the name of the filler field as an argument.

SQL*Loader-00472: collections can contain only one non FILLER field specification\n
Cause: More than one non filler field specification is found in a collection field's member field list.

Action: See correct syntax in the Utilities Manual. If indeed there is more than one attribute that makes up the particular collection, then it must be a collection of a object type which needs to be specified using the COLUMN OBJECT field specification syntax.

SQL*Loader-00473: nesting of collections is not allowed.\n
Cause: Nesting of one collection type field description within another is not allowed.

Action: Verify that collection nesting is attempted in the SQL*Loader control file. Correct the mistake.

SQL*Loader-00474: no value set for dynamic file for column *string* in table *string* row *number*\n
Cause: The data for the named column was in a dynamic LOBFILE or secondary data file. This message is returned when the field containing the name of the file with the data for this field has not been set or is NULL. This could be because the record in the data file does not match the format described by the SQL*Loader control file.

Action: Correct any errors in the data file or the SQL*Loader control file.

SQL*Loader-00475: field for dynamic file name is *string* in table *string*\n
Cause: This message is always displayed after message 474.

Action: n/a

SQL*Loader-00476: count of elements for collection is not set or null, 0 will be used\n
Cause: This message is displayed following a message that identifies the column and row that contained the problem. The message indicates that the collection field named in the previous message has the count of elements in the collection stored in another field. This message is displayed if the field containing the count does not have a value or is set to NULL. When this happens, SQL*Loader uses 0 as the number of elements.

Action: If 0 is not the count of elementsfor the collection, correct the data in the data file.

SQL*Loader-00477: REF directive for field *string* requires at least two arguments\n
Cause: The SQL Loader control file contains a REF directive for the field, but only one argument was supplied for the directive. The REF directive always requires at least two arguments.

Action: Supply the missing argument to the REF directive. Remember that you must always supply a table name to the REF directive even if the REF is scoped.

SQL*Loader-00478: unable to continue due to missing filename for LOBFILE or SDF\n
Cause: The name for a LOBFILE or secondary data file is either missing or NULL for the current row. SQL*Loader is unable to continue loading since it can't determine how to get the LOB for the next row.

Action: Correct the data file so that there are valid values for all fields containing the names of LOBFILEs and secondary data files.

SQL*Loader-00479: REF directive for column *string* expects *number* arguments; found *number*.\n
Cause: The number of arguments in the REF directive for the column is incorrect.

Action: Specify the correct number of arguments for REF. Remember that the REF directive always requires a table name. Also, primary key REFs require one arguments for each field in the primary key.

SQL*Loader-00480: EXPRESSION may not be used with elements of a collection.\n
Cause: The EXPRESSION keyword is followed by a required SQL string expression and is used to load a column with the result of the SQL string expression instead of with a value from the input data file. However, this capability is not allowed with elements of a collection.

Action: Remove the EXPRESSION keyword and associated SQL string from the collection element in the control file.

SQL*Loader-00481: HIDDEN may not be used with non-scalar fields.\n
Cause: The HIDDEN keyword is only allowed for scalar fields.

Action: Remove the HIDDEN keyword from the non-scalar field in the control file.

SQL*Loader-00486: sql-strings may not be specified for collection field *string*\n
Cause: A sql-string was specified as part of the description of the field that is inside a nested table or varray. Sql-strings cannot be used to load a field in a varrary or nested tables.

Action: Remove the sql-string from the field description. Modify the data file so that it contains the values to be loaded into the column in the collection.

SQL*Loader-00487: COUNT clause required for collection *string*\n
Cause: A VARRAY or NESTED TABLE was defined in the SQL Loader control file and all of the fields in the VARRAY or NESTED TABLE are generated by SQL Loader and do not come from a data file. SQL Loader requires a COUNT clause be specified so that it knows how many elements to add to the VARRAY or NESTED TABLE for each row.

Action: Add a COUNT clause to the VARRAY or NESTED TABLE definition.

SQL*Loader-00488: *string* not a named collection type for filler field *string*\n
Cause: The FILLER option was specified for a VARRAY or NESTED TABLE field in the SQL Loader control file. However, the type name specified for the field is not the name of a VARRAY or NESTED TABLE type.

Action: Verify that the correct type name was specified. If the type is defined in a different schema, also verify that the correct schema name is specified.

SQL*Loader-00489: cannot insert NULL object into object table *string*, row %llu \n
Cause: There was no data specified in the control file, a LOB file, or a secondary data file for this object column.

Action: Place valid data for this column in the appropriate file prior to invoking SQL*Loader to load data into this table.

SQL*Loader-00490: absolute position is not allowed for inline collections\n
Cause: The absolute position specification was used for inline collections. Specifying the absolute position for inline collections is not supported.

Action: Use relative positioning for inline collections.

SQL*Loader-00500: Unable to open file (*string*)\n
Cause: SQL*Loader could not open the named file.

Action: Check the operating system messages below this one in the log file.

SQL*Loader-00501: Unable to read file (*string*)\n
Cause: SQL*Loader could not read the named file.

Action: Check the operating system messages following this message in the log file.

SQL*Loader-00502: unable to open data file '*string*' for field *string* table *string*\n
Cause: An attempt to open a LOBFILE or secondary data file failed.

Action: Check the operating system messages following this message for information on why the open failed. Verify that the correct name is specified for the LOBFILE or secondary data file.

SQL*Loader-00503: Error appending extension to file (*string*)\n
Cause: SQL*Loader could not append the default extension to create the filename. The given name could be too long or contain illegal characters.

Action: Check the specified filename.

SQL*Loader-00504: Error skipping records in file (*string*)\n
Cause: SQL*Loader could not open the file or could not read from it.

Action: Check that the file is where it is expected and that read access has been granted.

SQL*Loader-00505: error reading LOBFILE\n
Cause: An attempt to read a secondary data file failed.

Action: Check the operating system message that follows this message for more information.

SQL*Loader-00506: formatting error reading SDF or LOBFILE *string* for column *string* in table *string*\n
Cause: The the record format of the named LOBFILE or SDF file is incorrect.

Action: Fix the record formatting problems in the file.

SQL*Loader-00507: unexpected EOF reading SDF or LOBFILE *string* for column *string* in table *string*\n
Cause: The end of file was reached for a secondary data file or LOBFILE before the data for the current row was found.

Action: If the file is a LOBFILE, verify the correct datatype was specified for the field. If the file is a secondary data file, make sure the record format is specified correctly in the SQL*Loader control file.

SQL*Loader-00508: record formating error in data file *string*\n
Cause: The data found in the data file does not correspond to the record format in the SQL*Loader control file.

Action: Verify that all records in the data file match the format as described in the SQL*Loader control file.

SQL*Loader-00509: System error: *string*\n
Cause: A platform-specific error was returned during an operation. This message is used to display the text of the error.

Action: n/a

SQL*Loader-00510: Physical record in data file (*string*) is longer than the maximum(*number*)\n
Cause: The datafile has a physical record that is too long.

Action: Use CONCATENATE or CONTINUEIF. Break up the physical records.

SQL*Loader-00511: Unable to initialize read functions\n
Cause: SQL*Loader could not initialize the read functions.

Action: Check the errors below this message in the log file for more information.

SQL*Loader-00512: Unable to free read buffer\n
Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00513: Unable to close file (*string*)\n
Cause: SQL*Loader could not close the named file.

Action: Check the errors below this message in the log file for more information.

SQL*Loader-00514: Error getting elapsed time\n
Cause: SQL*Loader could not get the elapsed time from the system.

Action: No action required.

SQL*Loader-00515: Error getting CPU time\n
Cause: SQL*Loader could not get the CPU time from the system.

Action: No action required.

SQL*Loader-00516: Control file (*string*) has no contents\n
Cause: The named file was found to be empty.

Action: Check that the intended file was referenced and that it is not empty.

SQL*Loader-00517: Error decomposing file name (*string*)\n
Cause: SQL*Loader could not break down the filename into its component parts.

Action: Check the filename for illegal characters.

SQL*Loader-00518: Error reassembling file name (*string*)\n
Cause: SQL*Loader could not put the filename back together again from its components.

Action: Check the filename for illegal characters.

SQL*Loader-00520: lfimknam failed for file (*string*)\n
Cause: LFI failed to make a name object for the file.

Action: Contact Oracle Worldwide Support.

SQL*Loader-00521: lfilini failed for file (*string*)\n
Cause: LFI failed to create or initialize a file object for the file.

Action: Contact Oracle Worldwide Support.

SQL*Loader-00522: lfiopn failed for file (*string*)\n
Cause: LFI failed to open the file.

Action: Check for any possible operating system errors and/or potential memory problems.

SQL*Loader-00523: error *number* writing to file (*string*)\n
Cause: Could not write to specified file.

Action: Check the following: the file actually resides in the specified location you have write privileges on the file you have sufficient disk space you have not exceeded your disk quota If all of these conditions are satisfied, then retry the operation.

SQL*Loader-00524: partial record found at end of datafile (*string*)\n
Cause: An incomplete record was found at the end of the indicated datafile.

Action: Make sure the last record in the datafile is complete and has the correct terminating character(s). Also, if fixed-length records are in use, verify that no record exceeds the platform-specific length for a single record.

SQL*Loader-00525: OCI return status: success\n
Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00526: OCI return status: success with info\n
Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00527: OCI return status: no data\n
Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00528: OCI return status: error\n
Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00529: OCI return status: invalid handle\n
Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00530: OCI return status: need data\n
Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00531: OCI return status: still executing\n
Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00532: OCI return status: continue\n
Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00533: OCI return status: unknown, value is *number*\n
Cause: An unknown status was returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00534: Warning: no files found for INFILE wildcard specification (*string*).\n
Cause: SQL*Loader could not find a file which matched the INFILE wildcard specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00535: Warning: no files found for INFILE subdirectory search specification (*string*).\n
Cause: SQL*Loader could not find a file which matched the INFILE subdirectory search specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00536: No files found for any data parameter specification or INFILE specification.\n
Cause: SQL*Loader could not find a file which matched any of the data parameter specifications or INFILE specifications.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00537: Warning: no files found for data parameter wildcard specification (*string*).\n
Cause: SQL*Loader could not find a file which matched the data parameter wildcard specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00538: Warning: no files found for data parameter subdirectory search specification (*string*).\n
Cause: SQL*Loader could not find a file which matched the data parameter subdirectory search specification.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00539: No files found for any data parameter specification in express mode.\n
Cause: SQL*Loader could not find a file which matched any of the data parameter specifications. Since there is no control file for express mode, there are no INFILE specifications.

Action: Check to make sure that the files exist in order for them to be loaded.

SQL*Loader-00551: internal error: error initializing slf\n
Cause: An internal error occured while trying to initialize the file I/O component.

Action: Call customer support.

SQL*Loader-00552: insufficient privilege to open file\n
Cause: SQL*Loader does not have the previleges required to open the file.

Action: Verify that the correct file was specified and that the file has the appropriate permissions.

SQL*Loader-00553: file not found\n
Cause: The specified file cannot be found.

Action: verify that the correct name exists and whether the file is in the intended location.

SQL*Loader-00554: error opening file\n
Cause: An error occurred while trying to open the file. No further information is available.

Action: Verify that the file is accessible.

SQL*Loader-00555: unrecognized processing option\n
Cause: The processing option specified for the file cannot be processed.

Action: Verify that the processing options specified for the file contain legal syntax for the platform where SQL*Loader is running.

SQL*Loader-00556: unable to allocate read buffer\n
Cause: Attempt to allocate the read buffer failed.

Action: If possible, try specifying a smaller size for the read buffer.

SQL*Loader-00557: unable to allocate memory\n
Cause: An attempt to allocate some memory to track I/O for the file failed.

Action: Contact customer support.

SQL*Loader-00558: attempt to use SKIP parameter with linked-in loader\n
Cause: SKIP parameter was specified with a linked-in file processor.

Action: Do not use the SKIP parameter in this case.

SQL*Loader-00559: error closing file\n
Cause: An error occured while closing the file.

Action: Contact customer support.

SQL*Loader-00560: error reading file\n
Cause: An error occurred while reading the file.

Action: Make sure the file is still accessible.

SQL*Loader-00561: end of file\n
Cause: End of file reached.

Action: n/a

SQL*Loader-00562: record too big\n
Cause: A record in the file is larder than the read buffer.

Action: Verify that the file is not corrupt. If not, try specifying a larger size for the read buffer.

SQL*Loader-00563: bad length for VAR record\n
Cause: The length protion of a VAR record contains non-numeric data.

Action: Fix the data in the file.

SQL*Loader-00564: illegal hexadecimal literal specified for record delimiter\n
Cause: A hexadecimal literal that contains the record delimiter for the file does not contain a valid hexadecimal string.

Action: Verify that the correct hexadecimal value was specified in the processing options for the file.

SQL*Loader-00565: unexpected error during skip\n.
Cause: an unexpected error occured while attempting to skip records.

Action: This message should be followed by another message giving more specific information about the error

SQL*Loader-00566: partial record found at end of datafile\n
Cause: An incomplete record was found at the end of file.

Action: Make sure the last record in the datafile is complete and has the correct terminating character(s).

SQL*Loader-00567: unable to derive file name\n
Cause: An error occured while attempting to build a name for a data file, bad file, discard file or log file.

Action: Instead of relying on SQL Loader to build these file names, try specifying full file specifications for these files in the control file or on the SQL Loader command line.

SQL*Loader-00568: error writing to file\n
Cause: Unexpected error occured while writing to a file. This message is followed by another message with more information about the error.

Action: n/a

SQL*Loader-00569: READSIZE parameter exceeds maximum value *string* for platform\n
Cause: The value specified for the READSIZE parameter on the SQL Loader command line was larger than the maximum size allowed on the platform executing the SQL Loader command

Action: Decrease the size of the READSIZE parameter to be less than the maximum size allowed on the platform.

SQL*Loader-00570: Warning: single bad file specification with multiple data files using *string* file may get overwritten.\n
Cause: The value specified for the BADFILE parameter contained something other than a directory specification (for example, it contained a file name). The INFILE specification had wildcards or the data command line parameter specification contained a comma-separated list or wildcards and the result was more than one data file. In that case, the BADFILE specification or the BAD command line parameter value should be a directory specification only and should not contain a file name.

Action: No action is needed. This is a warning. However, for a parallel load with external tables or express mode, the file may get overwritten or may get corrupted due to contention on the file by multiple parallel query slaves. Try the operation again with a directory only or omit the parameter and use the default bad file name.

SQL*Loader-00571: Warning: single discard file specification with multiple data files, using *string*, but file may get overwritten.\n
Cause: The value specified for the DISCARDFILE parameter contained something other than a directory specification (for example, it contained a file name). The INFILE specification had wildcards or the data command line parameter specification contained a comma-separated list or wildcards and the result was more than one data file. In that case, the DISCARDFILE specification or the DISCARD command line parameter value should be a directory specification only and should not contain a file name.

Action: No action is needed. This is a warning. However, for a parallel load with external tables or express mode, the file may get overwritten or may get corrupted due to contention on the file by multiple parallel query slaves. Try the operation again with a directory only or omit the parameter and use the default discard file name.

SQL*Loader-00572: Warning: cannot add "_\%p" to *string* for file *string*. Using file name as is.\n
Cause: SQL*Loader could not add "_%p" to the file name. The name specified or the derived name may be too long.

Action: No action is needed. This is a warning. However, for a parallel load with external tables or express mode, the file may be overwritten or may get corrupted due to contention on the file by multiple parallel query slaves. Try the operation again with a shorter file name.

SQL*Loader-00573: Error opening the directory (*string*), failed with return code [*number*].\n
Cause: An error occurred while trying to open the directory (see accompanying error code).

Action: Verify that the directory is accessible.

SQL*Loader-00574: \nCheck the log file:\n *string*\nfor more information about the load.\n
Cause: Informational only.

Action: No action is needed.

SQL*Loader-00575: \nCheck the log files:\n *string*\n *string*\nfor more information about the load.\n
Cause: Informational only.

Action: No action is needed.

SQL*Loader-00576: Error getting count of entries for directory (*string*), failed with return code [*number*].\n
Cause: An error occurred while trying to get the count of directory entries (see accompanying error code).

Action: Verify that the directory is accessible.

SQL*Loader-00577: Error reading the directory (*string*), failed with return code [*number*].\n
Cause: An error occurred while trying to read the directory (see accompanying error code).

Action: Verify that the directory is accessible.

SQL*Loader-00578: Error finishing wild card search in directory (*string*), failed with return code [*number*].\n
Cause: An error occurred while trying to finish a search for files in a directory that match a wild card specification (see accompanying error code).

Action: This is an informational message. No action is needed.

SQL*Loader-00579: switching to direct path for the load\n
Cause: SQL*Loader could not use the external tables load method for the express mode load. Therefore SQL*Loader tried to use direct path for the load instead of external tables. See any previous messages for more information.

Action: No action is needed. This is an informational message.

SQL*Loader-00582: Warning: cannot remove "_\%p" from *string* for file *string*. Using file name as is.\n
Cause: SQL*Loader could not remove "_%p" from the file name.

Action: No action is needed. This is a warning. The file name was used as is.

SQL*Loader-00583: ignoring trim setting with *string*, using value of LDRTRIM\n
Cause: SQL*Loader was doing a direct path or conventional path load. SQL*Loader only supports LDRTRIM for direct path and conventional path. Therefore, LDRTRIM trimming was used for the load. You can get the equivalent of NOTRIM trimming if you use a control file and use the PRESERVE BLANKS clause.

Action: No action is needed. This is an informational message.

SQL*Loader-00584: ignoring DEGREE_OF_PARALLELISM setting with *string*, using value of NONE\n
Cause: DEGREE_OF_PARALLELISM was not supported by SQL*Loader for direct path and conventional path loads. Therefore, the DEGREE_OF_PARALLELISM setting was ignored for the load and treated as a value of NONE.

Action: No action is needed. This is an informational message.

SQL*Loader-00585: defaulting DEGREE_OF_PARALLELISM to NONE since load=*number* was specified\n
Cause: DEGREE_OF_PARALLELISM was defaulted to NONE by SQL*Loader because load=n was specified. This assures consistency in the records which get loaded with load=n.

Action: No action is needed. This is an informational message.

SQL*Loader-00586: OID directive not allowed for table *string*\n
Cause: The OID directive was specified but the table is not a type table. The OID directive can be specified only for type tables.

Action: Verify that the name of the table is correct. If so, then remove the OID directive.

SQL*Loader-00587: SID directive not allowed for table *string*\n
Cause: The SID directive was specified but the table is not a nested table. The SID directive can be specified only for nested tables.

Action: Verify that the name of the table is correct. If so, then remove the SID directive.

SQL*Loader-00588: XMLTYPE directive not allowed for table *string*\n
Cause: The XMLTYPE directive was specified but the table is not an XML type table. The XMLTYPE directive can be specified only for XMLTYPE tables.

Action: Verify that the name of the table is correct. If so, then remove the XMLTYPE directive.

SQL*Loader-00600: Bind size of *number* bytes increased to *number* bytes to hold 1 row.\n
Cause: The space needed to contain a single row is longer than the specified bind size. The value used for the bind size will be increased to handle the larger size

Action: No action is required. This message will go away if the new value in the error message is specified for the bind size.

SQL*Loader-00601: For INSERT option, table must be empty. Error on table *string*\n
Cause: A non-empty table is being loaded with the INSERT option.

Action: Use the REPLACE keyword to empty the old table and store the new data in its place. Use the APPEND keyword to leave the table's contents intact and add the new data to it.

SQL*Loader-00602: Maximum converted length *number* of column *string* is too big for bind array\n
Cause: The named column cannot undergo the specified character set conversion and still be placed in a contiguous piece of memory on the system.

Action: Specify a shorter data column or eliminate the conversion.

SQL*Loader-00603: Maximum length *number* of column *string* is too big for bind array\n
Cause: The named column cannot be put in a contiguous piece of memory on the system.

Action: Specify a shorter data column.

SQL*Loader-00604: Error occurred on an attempt to commit\n
Cause: An error occurred while trying to commit changes to the database.

Action: Look at the message listed below this one in the log file for more information.

SQL*Loader-00605: Non-data dependent ORACLE error occurred -- load discontinued.\n\n
Cause: An error occurred that is independent of the data. For example, an out-of-space condition. Because all further rows will be rejected, the load is discontinued. (If the error were data dependent, then other rows might succeed.)

Action: See the errors below this one in the log file for more information.

SQL*Loader-00606: Object *string* in INTO TABLE clause is not a local table\n
Cause: The synonym specified in the INTO TABLE clause in the SQL*Loader control file specifies a remote object via a database link. Only a synonym for an existing local table can be specified in the INTO TABLE clause.

Action: Ensure that a local table name or a synonym for a local table is fully specified in the INTO TABLE clause. The table must already exist.

SQL*Loader-00607: partition not empty for INSERT option; table *string*, partition *string*\n
Cause: An attempt was made to use the INSERT option on a non-empty partition.

Action: Empty the partition, or use the REPLACE or TRUNCATE option.

SQL*Loader-00608: subpartition not empty for INSERT option; table *string*, subpartition *string*\n
Cause: An attempt was made to use the INSERT option on a non-empty subpartition.

Action: Empty the subpartition, or use the REPLACE or TRUNCATE option.

SQL*Loader-00609: value used for ROWS parameter changed from *number* to *number*\n
Cause: SQL Loader adjusted the value it was using for the ROWS parameter to the new value reported. This is an informational message and not an error. SQL Loader will adjust the value of the ROWS parameter if the amount of memory specified by BINDSIZE is not large enough to hold data for the number of rows specified. SQL Loader will also change the value of the ROWS parameter for conventional path loads if the value is larger than 65534. Conventional path load can load at most 65534 rows at a time.

Action: If the limit of 65534 rows for conventional path load is not being reached, then try increasing the value of BINDSIZE.

SQL*Loader-00610: cannot load system partitioned table *string*; partition name(s) required\n
Cause: An attempt was made to load a system partitioned table with no partitioning clause specified in the SQL*Loader control file.

Action: Specify the partition name(s) in the SQL*Loader control file.

SQL*Loader-00620: Initial enclosure character not found\n
Cause: A mandatory initial enclosure delimiter was not present. Either it is missing on the current field or the previous field is missing an identical closing delimiter.

Action: Supply the missing delimiters.

SQL*Loader-00621: Field in data file exceeds maximum length\n
Cause: A field exceeded its maximum allowable length. The maximum length is either the length specified in the SQL*Loader control file, or, for delimitable fields without a length specified, the default maximum length (255 bytes).

Action: Check for missing delimiters and/or shorten the field.

SQL*Loader-00622: Column not found before end of logical record (use TRAILING NULLCOLS)\n
Cause: The logical record ended before all specified fields were found.

Action: If the missing fields should be loaded as null, use the TRAILING NULLCOLS clause. Otherwise, correct the data.

SQL*Loader-00623: second enclosure string not present\n
Cause: The logical end of record or the end of a LOBFILE was reached before a second enclosure delimiter was found.

Action: Correct the data file to include the missing delimiter.

SQL*Loader-00624: no terminator found after TERMINATED and ENCLOSED field\n
Cause: No termination delimiter was found after the enclosed field ended.

Action: Supply the missing termination delimiter.

SQL*Loader-00625: Multibyte character error in control file.\n
Cause: Incomplete multi-byte character strings were found in the SQL*Loader control file.

Action: Edit the SQL*Loader control file to check that all multi-byte character data is valid.

SQL*Loader-00626: Character set conversion buffer overflow.\n
Cause: A conversion from the datafile character set to the client character set required more space than that allocated for the conversion buffer. The size of the conversion buffer is limited by the maximum size of a varchar2 column.

Action: The input record is rejected. The data will not fit into the column.

SQL*Loader-00627: Character set conversion graph not available.\n
Cause: A conversion from the datafile character set to the client character failed due to the conversion graph not being available.

Action: Contact Oracle support. Check NLSRTL installation.

SQL*Loader-00628: Character set conversion error.\n
Cause: A character set conversion error occurred.

Action: Contact Oracle support. Check NLSRTL installation. Provide a reproduceable test case.

SQL*Loader-00640: Variable length field was truncated.\n
Cause: The end of the logical record was encountered before the end of a variable length field. The length of each variable-length field is embedded in the field, so SQL*Loader knows that more data should have been present.

Action: Check the data for inadvertent truncation and verify the SQL*Loader control file specifications against the log file; the field may be starting in the wrong place.

SQL*Loader-00641: Invalid packed decimal nibble.\n
Cause: Each byte in a packed decimal field contains two 4-bit nibbles. Each nibble must have a valid value.

Action: Check the SQL*Loader control file's specifications against the log file to ensure that the field location was specified correctly. Check the contents of the field.

SQL*Loader-00642: Relative start position > absolute field end position.\n
Cause: A field specified as POSITION(*+n:y) had its relative start occur after the absolute position y.

Action: Check that a delimiter is not missing and that the values of n and y are correct.

SQL*Loader-00643: error executing INSERT statement for table *string*\n
Cause: A fatal error occured while attempting to insert data into the table.

Action: Refer to the messages that follow for more information. If you specified SQL stings for any of your columns, verify that strings are correct. Specifcally, check for balanced parenthesis and correct use of quotation marks. Another format error

SQL*Loader-00644: end of logical record found when reading length of varying length field\n
Cause: While attempting to read the length portion of a varying length field, then end of the logical record was reached.

Action: Verify that the SQL*Loader control file describes the data correctly and that the data in the data file matches the description in the SQL*Loader control file

SQL*Loader-00645: error converting character length field to a number\n
Cause: An error occurred while attempting to convert the characters containing the count portion of a VARCHARC or VARRAWC field.

Action: Verify that the count portion for the column has the correct value.

SQL*Loader-00646: lob set to EMPTY in column *string*, row %lld, table *string*\n
Cause: Encountered errors (for example, parsing errors in LOBFILE) while loading LOBs. The row will remain in the table and its LOB column will be initialized to empty. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00647: Integer to number conversion error\n
Cause: An error occurred while attempting to convert an integer to an Oracle number format.

Action: Verify that the integer field in the data file is a valid integer. If the INTEGER(N) syntax was used, then verify that the length specified is valid.

SQL*Loader-00649: Quoted string missing closing quote\n
Cause: A quoted string in the control file is missing a closing quote.

Action: Insert the closing quote as appropriate.

SQL*Loader-00650: incomplete lob data written for column *string*, row %lld, table *string*\n
Cause: Encountered errors (for example, parsing errors in LOBFILE) while loading LOBs using direct path. The row will remain in the table and its LOB column may not be complete. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00651: error skipping lob for column *string*, row %lld, table *string*\n
Cause: Encountered errors (for example, parsing errors in LOBFILE) while skipping LOBs.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00652: Invalid zoned decimal byte.\n
Cause: Each byte of a zoned decimal field must have a valid value based on the character set encoding used. ASCII-based zoned decimals must follow the formats specified in the VAX Architecture Reference Manual. EBCDIC-based zoned decimals must follow the formats specified in the ESA/390 Principles of Operations, version 8.1.

Action: Check the SQL*Loader control file's specifications against the log file to ensure that the field location was specified correctly. Check the contents of the field.

SQL*Loader-00653: XML data set to NULL in column *string*, row %lld, table *string*\n
Cause: Encountered errors (for example, parsing errors in LOBFILE) while loading LOBs into an XML column. The row will remain in the table and its XML column will be initialized to null. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00654: Variable length field exceeds maximum length.\n
Cause: A variable length field (with a leading length subfield) exceeded its maximum allowable length. The maximum length is either the length specified in the SQL*Loader control file, or, the default if not specified (4kb).

Action: Shorten the field and its length.

SQL*Loader-00655: cannot load object-relational XML attribute using direct path \n
Cause: The table being loaded contains a column object which contains an XML attribute with a storage type of object-relational. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

SQL*Loader-00656: position specification for column *string* is not allowed in external table loads\n
Cause: Use of a position specification was present in an external table load.

Action: Either remove the position specification, change the position specification to a field name reference, use direct path, or use conventional path.

SQL*Loader-00657: table *string* loaded using *number* passes, partition memory limit was *number*kb\n
Cause: Due to memory use, multiple passes were used to load some partitions.

Action: To decrease the number of passes, consider increasing the partition memory limit using the PARTITION_MEMORY command line option, or by increasing PGA_AGGREGATE_TARGET. Note that increasing the limit too much can cause the load to run out of memory.

SQL*Loader-00700: Out of memory while performing essential allocations [*number*]\n
Cause: SQL*Loader could not allocate the memory it needs.

Action: Check the operating system and process memory. Increase memory available to SQL*Loader, if possible. If using direct path, try lowering the columnarrayrows option (see log file for current default value).

SQL*Loader-00702: Internal error - *string*\n
Cause: An internal error has occurred.

Action: Make a note of the message and contact customer support.

SQL*Loader-00703: Internal error: argument *number*\n
Cause: An internal error has occurred.

Action: Make a note of the message and the number, then contact customer support.

SQL*Loader-00704: Internal error: *string* [*number*]\n
Cause: An internal error has occurred.

Action: Make a note of the message and the number, then contact customer support.

SQL*Loader-00705: Internal error\n
Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00706: Bad argument to ulerr [*number*].\n
Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00708: Internal error: unknown status *number* returned from sllf layer\n
Cause: An unknown status was returned by a call to the sllf layer.

Action: Contact customer support.

SQL*Loader-00709: Internal error calling SLTS layer: *string* failed\n
Cause: A nonsuccess status was returned by a call to the SLTS layer.

Action: Contact customer support.

SQL*Loader-00710: Internal error: direct path stream buffer not loaded\n
Cause: A direct path stream buffer was built but not loaded.

Action: Contact customer support.

SQL*Loader-00711: Internal error: bad address for little endian UTF16 conversion\n
Cause: Address for little endian UTF16 data not in a valid buffer.

Action: Contact customer support.

SQL*Loader-00712: Internal error: bad address for big endian UTF16 conversion\n
Cause: Address for big endian UTF16 data not in a valid buffer.

Action: Contact customer support.

SQL*Loader-00713: Internal error calling SLTS layer: *string* failed with return code [*number*].\n
Cause: A nonsuccess status was returned by a call to the SLTS layer.

Action: Contact customer support.

SQL*Loader-00800: *string* specified and ignored\n
Cause: An option was specified that is not supported by External Table load.

Action: Do not specify the unsupported option or do not use External Table load.

SQL*Loader-00801: all INTO TABLE clauses must have the same options (*string*)\n
Cause: At least two INTO TABLE clauses have different options set.

Action: Set the options to be the same or do the loads separately.

SQL*Loader-00802: numeric EXTERNAL with DEFAULTIF clause not supported by External Table\n
Cause: A numeric EXTERNAL type was specified with a DEFAULTIF clause which is not supported by external table load.

Action: Remove the clause if possible or do not use external table load.

SQL*Loader-00803: Field type *string* not supported by External Table\n
Cause: The specified field type is not supported by external table.

Action: Remove the specified field type or do not use external table load.

SQL*Loader-00804: SEQUENCES with intervals are not supported by External Table Load.\n
Cause: A sequence with an interval was specified which is not supported by external table load.

Action: Remove the interval from the sequence, or remove the sequence itself, or do not use external table load.

SQL*Loader-00805: Option *string* not supported by *string*\n
Cause: The specified option is not supported by external table or express mode load.

Action: Remove the specified option or do not use external table load or express mode load.

SQL*Loader-00806: unknown record format specified for data file\n
Cause: The osd string containing file processing options in the control file specified an unknown file processing option.

Action: Verify the correct options are specified for the platform being used.

SQL*Loader-00807: error loading table\n
Cause: An INSERT statement used to load a table from an external table or a temporary internal table failed. The statement that failed is shown immediately preceding this mesage.

Action: See subsequent messages for more information about the error.

SQL*Loader-00808: error creating sequence: *string*\n
Cause: An attempt to create a sequence needed for the load failed.

Action: See messages that follow this one for information about the failure.

SQL*Loader-00809: error dropping sequence: *string*\n
Cause: A sequence needed to be dropped either because SQL Loader found a sequence with the same name it is trying to create or because SQL Loader is cleaning up from sequences it created at the beginning of the load.

Action: See messages that follow this one for information about why the attampt to drop the sequence failed.

SQL*Loader-00810: error creating external table: *string*\n
Cause: An attempt to create the external table sued for the load failed.

Action: See messages that follow for more information about the failure.

SQL*Loader-00811: error dropping external table: *string*\n
Cause: An error occurred when trying to drop an external table. Note that the table may have been left from a previous load.

Action: n/a

SQL*Loader-00812: error creating internal table: *string*\n
Cause: An error was encountered trying to create a temporary internal table. The internal table is used only when loading multiple tables from the same data file. The internal table is loaded once and the target tables are loaded from the internal table.

Action: n/a

SQL*Loader-00813: error dropping internal table: *string*\n
Cause: An error was encountered trying to drop a temporary internal table. The internal table is used only when loading multiple tables from the same data file. The internal table is loaded once and the target tables are loaded from the internal table. The internal table may have been left from a previous build.

Action: n/a

SQL*Loader-00816: error creating temporary directory object *string* for file *string*\n
Cause: No existing directory object was found in the database for the directory containing the file. Since all files loaded by external tables must be in a directory named by a directory object, SQL Loader tried to create a directory object for the file.

Action: See error messages that follow this message for more information.

SQL*Loader-00817: error dropping directory object *string*\n
Cause: SQL Loader created a directory object as part of an external table load. An attempt to cleanup the directory object failed.

Action: See messages following this one for more information about the error.

SQL*Loader-00820: cannot create WHERE clause with POSITION syntax for table *string*\n
Cause: The EXTERNAL_TABLE parameter was specified for a multi-table load, and a WHEN clause for one of the tables contained a reference to a range of bytes in the record using POSITION syntax. SQL*Loader uses the WHEN clause from the control file to generate the WHERE clause in the INSERT statement. If the WHERE clause contains a reference to a range of bytes in the table, then a valid WHERE clause cannot be generated. Note that SQL*Loader will proceed as if GENERATE_ONLY was specified for the EXTERNAL_TABLE parameter.

Action: Modify the control file to only use field name references in the WHEN clause. Note that this may require creating a filler field. Another alternative is to create one control file for each table to be loaded and load the tables separately. In that case, SQL*Loader can use the access parameter list LOAD WHEN syntax to specify the range of bytes using POSITION syntax for a single table.

SQL*Loader-00821: switching to GENERATE_ONLY\n
Cause: SQL Loader is not able to execute the SQL statements it generated for loading the data using external tables. See previous messages for more information.

Action: n/a

SQL*Loader-00822: operation not supported on external organized table\n
Cause: User attempted on operation on an external table which is not supported.

Action: Don't do that!

SQL*Loader-00823: TREAT AS clause for object tables not supported for external tables\n
Cause: A TREAT AS clause was specified in the INTO TABLE clause for an object table in the SQL*Loader control file and the EXTERNAL_TABLES command line parameter was set to either EXECUTE or GENERATE_ONLY. External tables can be used to load the data, but SQL*Loader does not generate the correct SQL statements to do this.

Action: Use SQL*Loader direct path or SQL*Loader conventional path to load the table.

SQL*Loader-00824: column type *string* not supported by *string*\n
Cause: The column type was not supported by external table or express mode using the external table load method.

Action: Do not use external table or express mode using the external table load method. Try the load using conventional path or direct path as the load method.

SQL*Loader-00825: The database server does not support the load of Primary Key Reference column *string* by SQL*Loader.\n
Cause: An attempt was made to load a primary key reference column.

Action: Do not use primary key reference columns.

SQL*Loader-00901: Error logging on to ORACLE:\n
Cause: An attempt was made to log on to Oracle in direct path load mode.

Action: Ensure that the instance is up and running. Check the Oracle messages below this one in the log file for more information.

SQL*Loader-00902: Error opening cursor: [*number*] \n
Cause: An internal error has occurred.

Action: Check the Oracle messages below this one in the log file and contact customer support.

SQL*Loader-00903: Database must be at least version *number.number.number.number.number* for direct path\n
Cause: The direct path load mode is being used with an incompatible database.

Action: Upgrade the database to the specified version or else use the conventional path load.

SQL*Loader-00904: You cannot used the direct path when linked with v5 of the database\n
Cause: The direct path mode is being used after SQL*Loader has been linked with a Version 5 database.

Action: Use the conventional path.

SQL*Loader-00905: Error parsing SQL statement for upi: [*number*] \n
Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00906: Error executing SQL statement for upi: [*number*] \n
Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00909: Loader views must be loaded (as SYS) for direct path to be used\n
Cause: Database views required for the direct path mode are not present.

Action: The Oracle7 Server Administrator's Guide details how to run the required scripts as user SYS for loading the required views.

SQL*Loader-00910: Error binding input variables for upi: [*number*] \n
Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00911: Error defining output variable(s) for upi: [*number*] \n
Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00913: Error fetching results of select statement (upi): [*number*] \n
Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00914: Error locking table *string* in exclusive mode.\n
Cause: The direct path mode could not lock the named table.

Action: Check the message below this one in the log file for more information. Check that the necessary privileges have been granted.

SQL*Loader-00915: Error closing cursor: [*number*] \n
Cause: Header message.

Action: CCheck the message below this one in the log file for more information.

SQL*Loader-00916: Error checking path homogeneity\n
Cause: To do a direct path load load when the front end and back end of the database are on separate hardware systems, the systems must be identical, using the same machine, operating system, and character set. This error occurs when SQL*Loader detects a difference between the systems that will prevent a direct load from operating properly.

Action: Use a conventional path load for this configuration.

SQL*Loader-00918: The catalog must be loaded (as SYS) for SQL*Loader to be used\n
Cause: The catalog is not loaded.

Action: Logon as user SYS and load the Oracle7 catalog and the views in the script ULVIEW.SQL.

SQL*Loader-00919: Error during upi fetch: [*number*] \n
Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00925: Error while *string*\n
Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information. The table or column referenced may not be accessible.

SQL*Loader-00926: OCI error while *string* for table *string*\n
Cause: An OCI error has occurred.

Action: Check the message below this one in the log file for more information. The table or column referenced may not be accessible.

SQL*Loader-00929: Error parsing insert statement for table *string*.\n
Cause: The table's insert statement caused a parse error.

Action: Check all SQL strings that were used.

SQL*Loader-00930: Error parsing insert statement for table *string* column *string*.\n
Cause: The named column's INSERT statement caused a parse error.

Action: Check the message below this one in the log file for more information. Check the SQL string used for this column.

SQL*Loader-00931: OCI error while binding variable for column *string* in table *string*\n
Cause: An OCI error has occurred.

Action: Check the errors below it for more information. The SQL string for this column may be in error.

SQL*Loader-00932: Could not truncate table *string*.\n
Cause: Truncation of the table was attempted and failed.

Action: Check the following errors for more information. Truncation due to referential constraints should not occur.

SQL*Loader-00933: Specified file *string* not part of database\n
Cause: The specified filename to load the table is not a database file.

Action: Specify a valid datafile.

SQL*Loader-00934: Incorrect data file *string* specified for table *string*\n
Cause: A datafile name was given to load the table that is not a part of the tablespace in which the table resides.

Action: Specify a valid datafile.

SQL*Loader-00935: Error verifying required option for parallel load.\n
Cause: An error was encountered because a required option was not found or was invalid.

Action: Correct the problem as described in the accompanying Oracle message.

SQL*Loader-00937: parallel load requested and *string* has enabled triggers or constraints\n
Cause: A request was made for a parallel direct load, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00938: partition load requested and *string* has enabled triggers or constraints\n
Cause: A request was made for a direct load of a single partition, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00939: OCI error while *string* for table *string* partition *string*\n
Cause: Header message.

Action: Check the following errors for more information. The table or partition referenced may not be accessible.

SQL*Loader-00940: UPI error while setting NCHAR bind attributes for column *string* table *string*\n
Cause: An error occured while setting the charsetform attribute of an NCHAR column.

Action: This is an internal error. Report to ORACLE support.

SQL*Loader-00941: Error during describe of table *string*\n
Cause: Error while executing a describe of a select list on the given table. Check the error immediately preceding this error.

Action: n/a

SQL*Loader-00942: partition *string* not part of table *string*\n
Cause: the specified partition is not part of the specified table

Action: n/a

SQL*Loader-00943: incorrect datafile *string* specified for table *string* partition *string*\n
Cause: The specified datafile is not in the tablespace of the specified partition. Due to use of FILE= keyword on a partitioned table. When loading all partitions of a partitioned table, the partitions must be in the same tablespace. When loading a single partition, the tablespace of the partition being loaded must be the same as the tablespace in which the specified datafile file resides.

Action: n/a

SQL*Loader-00944: error preparing insert statement for table *string*.\n
Cause: A call to OCIStmtPrepare for the table's insert statement returned an error.

Action: Refer to the message that follows for information about the error returned by OCIStmtPrepare. Make sure the syntax is correct for all SQL strings specified in the SQL*Loader control file.

SQL*Loader-00945: record size *number* too large for direct path \n
Cause: The maximum size of records in the data file is larger than the maximum size supported by direct path, which is 65535

Action: Load the data file using conventional path.

SQL*Loader-00946: OCI error while *string* for table *string* subpartition *string*\n
Cause: Header message.

Action: Check the following errors for more information. The table or subpartition referenced may not be accessible.

SQL*Loader-00947: subpartition load requested and *string* has enabled triggers or constraints\n
Cause: A request was made for a direct load of a single subpartition, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00948: subpartition *string* not part of table *string*\n
Cause: the specified subpartition is not part of the specified table

Action: n/a

SQL*Loader-00949: incorrect datafile *string* specified for table *string* subpartition *string*\n
Cause: The specified datafile is not in the tablespace of the specified subpartition. Due to use of FILE= keyword on a subpartitioned table. When loading all subpartitions

of a subpartitioned table, the subpartitions must be in the same tablespace. When loading a single subpartition, the tablespace of the subpartition being loaded must be the same as the tablespace in which the specified datafile file resides.

Action: n/a

SQL*Loader-00950: Error shipping data structures across 2-task\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00951: Error calling once/load initialization\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00952: Error calling once/data file initialization\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00953: Error shipping read buffer across 2-task\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00954: Error shipping index to read buffer across 2-task\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00955: Error calling col array build, block formatter\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00956: Error calling once/data file finishing\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00957: Error shipping text string across 2-task\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00958: Error popping data relocation address stack\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00959: Error shipping buffer across 2-task\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00961: Error calling once/load finishing for table *string*\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00962: Error setting user-side Ctrl-C handler\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00963: Error clearing user-side Ctrl-C handler\n
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00965: Error *number* disabling constraint *string* on table *string*
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00966: Error *number* disabling all triggers on table *string*
Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00969: Error performing file name translation on kernel side\n
Cause: File specified for parallel load is probably not a valid database file.

Action: Specify a valid database file.

SQL*Loader-00970: enabled constraint on an XML column not allowed in direct path\n
Cause: An enabled check constraint existed on an XML column.

Action: Disable the check constraint before attempting to load the table data using the direct path mode, or leave the constraint enabled but use the conventional path mode instead.

SQL*Loader-00971: parallel load option not allowed when loading lob columns\n
Cause: An attempt was made to load lob columns using parallel=true. This error will also be issued when loading columns stored as lobs (such as varrays and xml types)

Action: Do not use the parallel option when loading lob columns.

SQL*Loader-00972: Warning: ROWS parameter ignored when NO_INDEX_ERRORS is used.\n
Cause: Specifying save points using the ROWS parameter was not supported with NO_INDEX_ERRORS=TRUE.

Action: Remove the ROWS parameter from the command-line arguments or do not specify NO_INDEX_ERRORS=TRUE.

SQL*Loader-00973: Warning: ROWS parameter ignored when PARTITION_MEMORY is used.\n
Cause: Specifying save points using the ROWS parameter was not supported with PARTITION_MEMORY=n.

Action: Remove the ROWS parameter from the command-line arguments or do not specify PARTITION_MEMORY=n.

SQL*Loader-00974: database is not available for update\n
Cause: The database was not opened for read/write access. SQL*Loader requires that the database be opened for read/write access.

Action: Verify that the database is opened for read/write access. Then retry the operation.

SQL*Loader-02026: the load was aborted because SQL Loader cannot continue.\n
Cause: The load cannot continue. See the error message before this * message for the cause of the error.

Action: See the action for the error message that precedes this one.

SQL*Loader-02050: Multibyte character error.\n
Cause: Text specified by POSITION or terminated by newlines is invalid.

Action: Edit the SQL*Loader control file or the data file to fix alignment of column.

SQL*Loader-02300: For CSV format files, all fields must be delimited fields. Field *string* is not delimited.\n
Cause: CSV format files did not have delimited fields. CSV format files must have all delimited fields so that SQL*Loader can process the fields.

Action: Make all of the fields delimited or remove the CSV specification and retry.

SQL*Loader-02301: For FIELD NAMES, all fields must be delimited fields. Field *string* is not delimited.\n
Cause: Data files with a FIELD NAMES record did not have delimited fields. Data files with a FIELD NAMES record must have all delimited fields so that SQL*Loader can process the field names.

Action: Make all of the fields delimited and retry.

SQL*Loader-02302: Data in the control file not supported with CSV format files.\n
Cause: CSV format file was specified with INFILE * indicating that there was data in the control file.

Action: Move the data to a separate data file and retry.

SQL*Loader-02303: Unable to process LOB Location Specifier field *string*.\n
Cause: The LOB Location Specifier field was not processed correctly.

Action: Make sure the LOB Location Specifier is formatted correctly.

SQL*Loader-02304: LOB Location Specifier for column *string* must be loaded into a LOB column.\n
Cause: The destination column for a LOB Location Specifier field was not a LOB data type.

Action: Make sure the destination column is a LOB data type.

SQL*Loader-02305: LOB Location Specifier for column *string* - invalid offset or length.\n
Cause: The LOB Location Specifier contained an invalid offset or length.

Action: The offset must not be a negative value. The length can only be negative if a value of -1 (for a NULL LOB) is specified.

SQL*Loader-02306: LOB Location Specifier for column *string* failed to read LOB file *string*.\n
Cause: The destination column for a LOB Location Specifier field was not a LOB data type.

Action: Make sure the LOB data file contains valid data.

SQL*Loader-02307: LOB Location Specifier for column *string* failed to read entire length request of *number* bytes from LOB file *string*.\n
Cause: The LOB Location Specifier length request exceeded the length of the lob file. The entire length requested could not be satisfied and will be less than the amount specified.

Action: Make sure the LOB Location Specifier length is correct.

SQL*Loader-02308: LOB Location Specifier failure seeking to offset *number* in LOB file *string*
Cause: The LOB Location Specifier specified an offset in the LOB file which resulted in a seek failure.

Action: Contact Oracle Support Services.

SQL*Loader-02309: error setting session parameter *string*\n
Cause: An error occurred while attempting to alter the user session with the parameter specified.

Action: See subsequent messages for more information about the error.

SQL*Loader-02310: The container map constraint for table *string* was ignored by direct path load.\n
Cause: The container map constraint was detected but was not verified or enforced during a direct path load.

Action: Use conventional path to enforce the container map constraint.

SQL*Loader-02311: The unique constraint for table *string* was ignored by direct path load for the Application Root rows.\n
Cause: The unique constraint was detected but was not verified or enforced for Application Root rows during a direct path load when the sharing level was extended data-linked.

Action: Use conventional path load to enforce the unique constraint including Application Root rows.

SQL*Loader-03120: Resumable parameters ignored -- current session not resumable\n
Cause: Current session is not resumable.

Action: Must specify RESUMABLE=TRUE to enable resumable session in order for the RESUMABLE_NAME and RESUMABLE_TIMEOUT parameters to take effect.

159

WLMD-02005 to WLMD-02019

WLMD-02005: Classifier {0} for PC {1} is too long.
Cause: The classifier for the specified performance class (PC) was too long.

Action: Shorten the classifier in the policy set.

WLMD-02006: Total classifier length for PC {0} is too large.
Cause: In aggregate the classifiers for this performance class (PC) were too long.

Action: Remove or shorten classifiers in the policy set.

WLMD-02011: The DBWLM application for the system {0} cannot be undeployed because it is still enabled.
Cause: The DBWLM application was undeployed when it was enabled.

Action: Disable the DBWLM application and then undeploy it.

WLMD-02014: Oracle Clusterware infrastructure has reported a failure.
Cause: There was a problem in the Oracle Clusterware.

Action: Check the exception and, if needed the Oracle Clusterware logs, and correct the issue reported there. Then enable Quality of Service Management (QoS) and retry this operation.

WLMD-02015: QoS configuration key {0} could not be retrieved.
Cause: The key did not exist in the Quality of Service Management (QoS) persistent storage.

Action: Contact Oracle Support Services for assistance.

WLMD-02017: Could not retrieve credential information for database {0}.
Cause: An attempt to open the database wallet and read the credential information failed.

Action: Re-enable the database for Quality of Service Management (QoS) from the associated Enterprise Manager console for that database.

WLMD-02018: The task {0} has failed to terminate.
Cause: This is an internal error.

Action: Please provide logs to Oracle Support Services. Quality of Service Management (QoS) restarted automatically.

WLMD-02019: Cluster {0} state change detected. The action requested may no longer be appropriate or possible.
Cause: There was a change to the Oracle Clusterware state since the action was recommended.

Action: Consider implementing actions from the current recommendation.

160

WLMF-03002 to WLMF-03028

WLMF-03002: The Quality of Service Management (QoS) user {0} is not authorized to perform this operation {1}.
Cause: The Quality of Service Management (QoS) user did not have the persmission to perform this operation.

Action: To enable the QoS user to perform the indicated operation, check the JAVA security policy setup and grant the QoS user the applicable security permissions.

WLMF-03003: The Quality of Service Management (QoS) service user does not have the necessary permission to retrieve the JAVA security Subject associated with the current access control context {0}.
Cause: The Quality of Service Management (QoS) user did not have the necessary permissions to retrieve the JAVA security Subject within the current access control context.

Action: To enable the QoS user to retrive the JAVA security Subject, check the security policy setup and grant this user the applicable permissions.

WLMF-03004: Version check failed or not performed. Operation could not be performed.
Cause: The operation to exchange the supported version numbers between the server and the client had not been called or had failed.

Action: This is an internal error. Contact Oracle Support Services for assistance.

WLMF-03005: Application .ear file is corrupt.
Cause: Quality of Service Management (QoS) .ear file was corrupt.

Action: Contact Oracle Support Services for assistance.

WLMF-03006: Unsupported version. The client supports versions {0} to {1}.
Cause: An attempt to start the Quality of Service Management (QoS) failed because the client's version was not supported by the QoS.

Action: Contact Oracle Support Services for assistance.

WLMF-03007: Required policy set does not exist.
Cause: There was no policy set in persistent storage.

Action: Create a new policy set.

WLMF-03008: Invalid argument. Argument {0} was provided with value {1}.
Cause: The specified value of the argument was invalid.

Action: Please contact Oracle Support Services.

WLMF-03009: The policy set is corrupt.
Cause: The Quality of Service Management (QoS) policy set retrieved from persistent storage was corrupt.

Action: Create a new policy set and enable Quality of Service Management (QoS).

WLMF-03010: There is no policy set in QoS persistent storage.
Cause: The policy set was not found in Quality of Service Management (QoS) persistent storage.

Action: Create a new policy set and enable Quality of Service Management (QoS).

WLMF-03011: QoS is not enabled.
Cause: Quality of Service Management (QoS) was not enabled for this operation.

Action: Enable Quality of Service Management (QoS) and retry the operation.

WLMF-03012: The component {0} tried to transition from state {1} to {2}, but the current state is {3}. This is illegal.
Cause: This is an internal error.

Action: Contact Oracle Support Services with trace information. Quality of Service Management (QoS) will restart automatically.

WLMF-03013: QoS implement action ID {0} has expired.
Cause: The Quality of Service Management (QoS) implement action ID has expired.

Action: Implement a current recommendation.

WLMF-03014: The What If Analysis could not be performed.
Cause: Quality of Service Management (QoS) is unable to perform the What If Analysis because its timestamp is invalid or expired.

Action: Perform another What If Analysis.

WLMF-03015: The action {0} is in progress and it will complete at {1}. The current time is {2}.
Cause: Unable to execute the action because a previous action has not completed.

Action: Wait until the current action is completed.

WLMF-03016: Internal error encountered.
Cause: This is an internal error.

Action: Contact Oracle Support Services with Quality of Service Management (QoS) log information. Clusterware has restarted Quality of Service Management (QoS) automatically.

WLMF-03017: The operating system has reported a failure.
Cause: There was a problem in the operating system.

Action: Check the exception and the accompanying error messages for details , and correct the issue. Then enable Quality of Service Management (QoS).

WLMF-03018: QoS service is not in the expected state.
Cause: Quality of Service Management (QoS) was not in the correct state to perform the requested operation.

Action: Retry the operation shortly.

WLMF-03019: Required library could not be loaded.
Cause: A library which Quality of Service Management (QoS) depends upon could not be loaded.

Action: Contact Oracle Support Services.

WLMF-03020: Requested action was not implemented.
Cause: Quality of Service Management (QoS) detected a change in system state that invalidated the performance projections.

Action: Implement a current recommendation

WLMF-03021: Persistent key {0} had invalid value.
Cause: Quality of Service Management (QoS) found a corrupt key value in its attempt to retrieve data from the persistent store when starting or restarting.

Action: Contact Oracle Support Services.

WLMF-03022: Policy set or policy corruption.
Cause: Quality of Service Management could not be restarted because it could not read its configuration data from the cluster registry.

Action: Contact Oracle Support Services.

WLMF-03023: Persistent storage not found.
Cause: Quality of Service Management (QoS) could not find the persistent storage when starting or restarting.

Action: Contact Oracle Support Services.

WLMF-03024: An unsupported parameter was passed to Quality of Service Management.
Cause: An attempt to start Quality of Service Management (QoS) was rejected because the deployment type was specified as GLOBAL rather than LOCAL.

Action: Contact Oracle Support Services.

WLMF-03025: Invalid argument. Argument {0} was provided with value {1} and it must be less than argument {2} with value {3}.
Cause: The specified value of the argument was invalid.

Action: Contact Oracle Support Services.

WLMF-03027: The Grid Infrastructure Management Repository version is incompatible with Quality of Service Management (QoS).
Cause: An attempt to enable Quality of Service Management was rejected because the current version was not supported by the Grid Infrastructure Management Repository (GIMR).

Action: Contact Oracle Support Services.

WLMF-03028: Data retrieval operation failed. Error {0} {1}, encountered.
Cause: Quality of Service Management (QoS) failed to retrieve the requested information.

Action: Retry the action. If it fails repeatedly contact Oracle Support Services.

161
WLMV-08000 to WLMV-08000

WLMV-08000: WLMV-8000: QoS schema of type <{0}> encountered errors.
Cause: The Quality of Service Management (QoS) schema validation encountered errors.

Action: Contact Oracle Support Services.

162
XAG-00001 to XAG-01104

XAG-00001: invalid verb '*string*' specified on command line
Cause: The agctl command was issued with an unknown verb arguement.

Action: Use agctl with the --help option to display all valid verbs and make sure that a valid verb is specified.

XAG-00002: invalid object '*string*' specified on command line
Cause: The object specified on the command line was not recognized.

Action: Use agctl with the --help option to display valid verbs, objects, and options. Ensure that a valid combination of verb and object is specified.

XAG-00201: missing mandatory option '*string*'
Cause: The specified mandatory command option was missing.

Action: Supply the required option.

XAG-00202: Directory or file '*string*' does not exist.
Cause: The directory or file specified on the command line does not exist.

Action: Specify a directory path or file that exists.

XAG-00203: Path '*string*' is not a directory.
Cause: The specified file system path is not a directory.

Action: Specify a file system directory.

XAG-00204: File '*string*' is not readable, (error: *string*).
Cause: An attempt to open the indicated file for read access failed.

Action: Ensure that the user has read permission on the indicated file.

XAG-00205: File '*string*' is not writable.
Cause: An attempt to open the indicated file for write access failed.

Action: Ensure that the user has write permission on the indicated file.

XAG-00206: invalid or unexpected text '*string*'
Cause: Text on the command line was neither an option nor part of a value.

Action: Refer to 'agctl --help' for information on command syntax and arguments.

XAG-00207: invalid instance name '*string*'
Cause: The specified instance name contained illegal characters.

Action: Ensure the instance name doesn't contain special characters '[].@#$%^&*()+='. Reissue the command with a valid instance name.

XAG-00208: Missing mandatory instance name.
Cause: The mandatory instance name was missing.

Action: Ensure an instance name is specified and reissue the command.

XAG-00209: Invalid number '*string*' for option *string*.
Cause: A value specified on the command line option is not numeric.

Action: Ensure the value contains only decimal digits 0-9.

XAG-00210: Option '*string*' must be followed by a value.
Cause: An option that requires a value was specified without one.

Action: Specify the option with a value. Refer to 'agctl --help' for additional information.

XAG-00211: The '*string*' and '*string*' options cannot both be supplied.
Cause: Conflicting options were specified on the command.

Action: Reissue the command specifying only one of the two options. Refer to 'agctl --help' for additional information.

XAG-00212: Instance '*string*' is not yet registered.
Cause: The instance name specified on the command line was not registered to Oracle Clusterware.

Action: Use 'agctl add' command to register an instance to Oracle Clusterware.

XAG-00213: Web server '*string*' does not exist.
Cause: The web server specified on the command line is not registered to Oracle Clusterware.

Action: Use 'agctl add webserver' command to register a web server to Oracle Clusterware first and then reissue the command.

XAG-00214: Instance '*string*' was already enabled.
Cause: The enable command failed because the instance is already enabled.

Action: If this is the expected state then this is not an error. If it is not then an instance can be disabled with the 'agctl disable' command.

XAG-00215: Instance '*string*' was already disabled.
Cause: The disable command failed because the instance is already disabled.

Action: If this is the expected state then this is not an error. If it is not then an instance can be enabled with the 'agctl enable' command.

XAG-00216: Instance '*string*' is already running.
Cause: The start command failed because the instance is already running.

Action: If this is the expected state then this is not an error. If it is not then an instance can be stopped with the 'agctl stop' command.

XAG-00217: failed to add type '*string*'
Cause: An error occured while creating a new resource type in Oracle Clusterware.

Action: Correct the problem indicated in the accompanying messages and then retry.

XAG-00218: invalid option '*string*'
Cause: The text specified on the command line was not a known option.

Action: Use agctl with the --help option to display all valid options, and make sure that a valid option is specified.

XAG-00219: Instance '*string*' is not running.
Cause: The stop command failed because the instance is not running.

Action: If this is the expected state then this is not an error. If it is not then an instance can be started with the 'agctl start' command.

XAG-00220: Instance '*string*' was already registered.
Cause: The instance name specified on the command line is already registered to Oracle Clusterware.

Action: If this is the expected state then this is not an error. If it is not then an instance can be removed with the 'agctl remove' command.

XAG-00221: No option was specified for 'modify *string*' operation.
Cause: An attempt was made to modify an instance, but no option is specified on the command line.

Action: Use 'agctl modify --help' command to display all valid options for modify command and make sure that a valid option is specified.

XAG-00222: User doesn't have root privilege to create VIP resource.
Cause: The network/ip/user VIP resource is to be created in Oracle Clusterware, but the user does not have root privilege to create the VIP resource.

Action: Ensure that user have root privilege to create VIP resource and then reissue the command.

XAG-00223: User doesn't have root privilege to remove VIP resource.
Cause: The network/ip/user VIP resource is to be removed from Oracle Clusterware, but the user does not have root privilege to remove the VIP resource.

Action: Ensure that user have root privilege to remove VIP resource and then reissue the command.

XAG-00224: User doesn't have root privilege to modify VIP resource.
Cause: The network/ip/user VIP resource is to be modified in Oracle Clusterware, but the user does not have root privilege to modified the VIP resource.

Action: Ensure that user have root privilege to modify VIP resource and then reissue the command.

XAG-00225: Server pool '*string*' does not exist.
Cause: The server pool specified on the command line is not registered to Oracle Clusterware.

Action: Ensure that server pool exists in Oracle Clusterware and then reissue the command.

XAG-00226: Instance '*string*' was already enabled at node '*string*'.
Cause: The enable command with node option failed because the instance is already enabled on specified node.

Action: If this is the expected state then this is not an error. If it is not then an instance can be disabled with the 'agctl disable' command.

XAG-00227: Instance '*string*' was already disabled at node '*string*'.
Cause: The disable command with node option failed because the instance is already disabled on specified node.

Action: If this is the expected state then this is not an error. If it is not then an instance can be enabled with the 'agctl enable' command.

XAG-00228: VIP name '*string*' does not exist.
Cause: The VIP name specified on the command line is not registered to Oracle Clusterware.

Action: Ensure that VIP name exists in Oracle Clusterware and then reissue the command.

XAG-00229: Removing running resource '*string*' requires the --force option.
Cause: An attempt was made to remove resource that is still running.

Action: Use the --force option with the remove command.

XAG-00230: Failed to stop running instance '*string*'.
Cause: An attempt was made to stop an instance that is still running.

Action: Correct the problem indicated in the accompanying messages, and then retry.

XAG-00231: The *string* instance does not exist.
Cause: An attempt to add the an instance specified in the message failed because the instance did not exist.

Action: Use 'agctl add' command to register an instance to Oracle Clusterware and then reissue the command.

XAG-00233: Database '*string*' does not exist or is not registered.
Cause: The specified Oracle database does not exist or is not registed to Oracle Clusterware.

Action: Add the database to Oracle Clusterware using 'srvctl add database'.

XAG-00234: Invalid database name '*string*'.
Cause: The specified database name is not confirming to Oracle database name standards.

Action: Correct the database name.

XAG-00235: Incorrect qualifier '*string*' specified for database.
Cause: An incorrect qualifier was specified for a database. The only acceptable value is: 'global'

Action: Correct the qualifier.

XAG-00236: Database service '*string*' does not exist or is not registered.
Cause: The specified Oracle database service does not exist or is not registered to Oracle Clusterware.

Action: Add the database service to Oracle Clusterware using 'srvctl using service'.

XAG-00237: File system resource '*string*' does not exist or is not registered.
Cause: The specified file system resource is not registered to Oracle Clusterware.

Action: Add the file system resource to Oracle Clusterware using Clusterware administrative tools.

XAG-00238: The IP address is already registered to Oracle Clusterware with *string* resource.
Cause: The specified IP address is already registered to Oracle Clusterware with another resource.

Action: Use an IP address that is not associated with another Oracle Clusterware.

XAG-00239: duplicate options *string* '*string*' specified
Cause: A command line option was specified more than once.

Action: Omit one option or the other; refer to 'agctl --help' for additional information.

XAG-00240: Siebel instance '*string*' already registered with Siebel Enterprise name '*string*' and Siebel Server name '*string*'
Cause: The Siebel instance with Enterprise name and Server name was already registered to Oracle Clusterware.

Action: Use 'agctl add siebel_server' command to register an instance with a different Enterprise name or Server name.

XAG-00241: PeopleSoft Application Server instance '*string*' is already registered with PeopleSoft Server Domain name '*string*'.
Cause: The PeopleSoft Application Server instance with Server Domain name was already registered with Oracle Clusterware.

Action: Reissue the 'agctl' command to register an instance with a different Server Domain name.

XAG-00242: PeopleSoft Batch Server instance '*string*' is already registered with PeopleSoft Scheduler Database name '*string*'.
Cause: The PeopleSoft Batch Server instance with Scheduler Database name was already registered with Oracle Clusterware.

Action: Reissue the 'agctl' command to register an instance with a different Scheduler Database name.

XAG-00243: PeopleSoft Web PIA Server instance '*string*' is already registered with PeopleSoft Server Domain name '*string*'.
Cause: The PeopleSoft Web PIA Server instance with Server Domain name was already registered with Oracle Clusterware.

Action: Reissue the 'agctl' command to register an instance with a different Server Domain name.

XAG-00244: 'uniform' is not a valid 'instance_count' without the 'server_pool' option.
Cause: An attempt to register an instance using the 'agctl' command failed because 'uniform' was specified as the 'instance_count' option, but the 'server_pool' option was not included.

Action: Reissue the 'agctl' command and include the 'server_pool' option to register the instance with 'instance_count' specified as 'uniform'.

XAG-00245: The value of 'instance_count' option is invalid.
Cause: An attempt to register an instance using the 'agctl' command failed because the specified 'instance_count' option was invalid. The 'instance_count' option must be either 'uniform' or a number greater than zero.

Action: Reissue the 'agctl' command specifying the value of the 'instance_count' option as either 'uniform' or a number greater than zero.

XAG-00250: Node '*string*' duplicated in the node list.
Cause: An attempt to register an instance using the 'agctl' command failed because a node name appears more than once in the node list.

Action: Reissue the 'agctl' command specifying a node list without duplicates.

XAG-00251: Node '*string*' is not a member of the cluster.
Cause: The specified node was not a member of the cluster.

Action: Reissue the 'agctl' command specifying only nodes that are in the cluster.

XAG-00252: Clusterware internal VIP '*string*' cannot be used by applications.
Cause: The application could not be registered because a VIP reserved for CRS was specified when registering.

Action: Create an application-specific VIP resource using appvipcfg and specify it when registering the application.

XAG-00253: Parameter '*string*' value is not valid, must be one of '*string*'.
Cause: A wrong parameter value was passed to agctl.

Action: Pass a valid value from list of permissible values.

XAG-00254: The value of 'mysql_type' option is invalid.
Cause: An attempt to register an instance using the 'agctl' command failed because the specified 'mysql_type' option was invalid. The 'mysql_type' option must be either 'MYSQL' or 'MONITOR'.

Action: Reissue the 'agctl' command specifying the value of the 'mysql_option' option as either 'MYSQL' or 'MONITOR'.

XAG-00255: The 'monitor_agent' option is invalid for MySQL type of 'MONITOR'.
Cause: An attempt to register an instance using the 'agctl' command failed because the 'monitor_agent' option was specified for MySQL type of 'MONITOR'.

Action: Reissue the 'agctl' command without specifying the 'monitor_agent' option.

XAG-00256: Monitor Agent '*string*' does not exist.
Cause: The MySQL Enterprise Monitor Agent specified on the command line is not registered to Oracle Clusterware.

Action: Use 'agctl add mysql_server' command with mysql_type of 'MONITOR' to register a MySQL Enterprise Monitor Agent to Oracle Clusterware.

XAG-00257: The Monitor Agent '*string*' specified is invalid.
Cause: The Monitor Agent specified on the command line is not a valid MYSQL_TYPE. The Monitor Agent must be a 'MONITOR' MYSQL_TYPE.

Action: Reissue the 'agctl' command specifying the Monitor Agent with a 'MONITOR' MYSQL_TYPE.

XAG-00258: The Oracle GoldenGate OGG_HOME directory '*string*' is already registered with '*string*' Oracle GoldenGate instance.
Cause: An attempt to add or modify an Oracle GoldenGate resource to Oracle Clusterware was rejected because another Oracle GoldenGate resource with the same OGG_HOME directory was already registered.

Action: Rerun the command 'agctl add or modify goldengate' to register an instance with a different Oracle GoldenGate OGG_HOME directory.

XAG-00259: The --use_local_services option was supplied without --db_services option.
Cause: An attempt to use the --use_local_services option was rejected because that option required also supplying the --db_services option, which was not specified.

Action: Reissue the command without the --use_local_services option, or with both the --db_services option and the --use_local_services option.

XAG-00260: The option '*string*' is invalid for this Goldengate installation type.
Cause: An option provided to agctl does not apply to the configured GoldenGate installation.

Action: Reissue the command by omitting the reported option.

XAG-00261: Goldengate installation type cannot be modified.
Cause: The option --service_manager cannot be specified for 'agctl modify'

Action: Reissue the command by omitting the '--service_manager' option.

XAG-00262: The user does not have root privileges to create Goldengate credentials.
Cause: The agctl command to register the GoldenGate instance with CRS was executed as a non-root user.

Action: Reissue the command as 'root'.

XAG-00263: The GoldenGate home directory '*string*' cannot be registered with Oracle Clusterware.
Cause: The specified GoldenGate installation directory does not contain the required files for integration with CRS.

Action: Reissue the command by specifying the correct GoldenGate location

XAG-00264: This Grid Infrastructure version is not supported for GoldenGate MicroServices Architecture.
Cause: An attempt to register a GoldenGate instance failed because the Oracle Grid Infrastructure version was older than 12.1.0.2.0.

Action: Reissue the command after upgrading to version 12.1.0.2.0 or higher.

XAG-00265: missing mandatory option : --user
Cause: An attempt to register a resource failed because the agctl command was run as superuser, but the --user option was not specified.

Action: Reissue the command by specifying the --user option.

XAG-00266: The resource cannot be registered with Oracle Clusterware using Standalone Agents.
Cause: An attempt to register a resource failed because an existing XAG resource was already registered to Oracle Clusterware with Bundled Agents.

Action: Use the 'agctl add' command from the Oracle Clusterware home or remove the existing XAG resource and then reissue the command.

XAG-00267: The resource cannot be registered with Oracle Clusterware using Bundled Agents.
Cause: An attempt to register a resource failed because an existing XAG resource was already registered to Oracle Clusterware with Standalone Agents.

Action: Use the 'agctl add' command from the Standalone Agents or remove the existing XAG resource and then reissue the command.

XAG-00268: The Oracle Grid Infrastructure Standalone Agents cannot be upgraded.
Cause: An attempt to upgrade a resource failed because an existing XAG resource was already registered to Oracle Clusterware with Bundled Agents.

Action: Remove the existing XAG resource from the Oracle Clusterware home and then reissue the command.

XAG-00269: The Oracle Grid Infrastructure Bundled Agents cannot be upgraded.
Cause: An attempt to upgrade a resource failed because an existing XAG resource was already registered to Oracle Clusterware with Standalone Agents.

Action: Remove the existing XAG resource from the Standalone Agents and then reissue the command.

XAG-00270: The Oracle GoldenGate container '*string*' specified is invalid.
Cause: The Oracle GoldenGate container specified on the command line was not a valid container.

Action: Reissue the 'agctl' command specifying a valid Oracle GoldenGate container.

XAG-00271: The --filesystems_always option was supplied without --filesystems option.
Cause: An attempt to use the --filesystems_always option was rejected because that option requires also supplying the --filesystems option, which was not specified.

Action: Reissue the command without the --filesystems_always option, or specify both the --filesystems option and the --filesystems_always option.

XAG-00272: The Oracle GoldenGate OGG_VAR_HOME directory '*string*' is already registered with '*string*' Oracle GoldenGate instance.
Cause: An attempt to add or modify an Oracle GoldenGate resource to Oracle Clusterware was rejected because another Oracle GoldenGate resource with the same OGG_VAR_HOME directory was already registered.

Action: Rerun the command 'agctl add or modify goldengate' to register an instance with a different Oracle GoldenGate OGG_VAR_HOME directory.

XAG-01001: failed to copy file '*string*' to '*string*' (error: *string*)
Cause: An error occurred while copying the specified file.

Action: If this occurs on an 'agctl remove' request, correct the indicated problem and then reissue the request. If it occurs on an 'agctl add' request, the instance has been registered so the request cannot be reissued. In this case, contact Oracle Support Services.

XAG-01002: Could not set ownership on '*string*' (error: *string*)
Cause: failed to set ownership on the specified file or directory

Action: If this occurs on an 'agctl remove' request, correct the indicated problem and then reissue the request. If it occurs on an 'agctl add' request, the instance has been registered so the request cannot be reissued. In this case, contact Oracle Support Services.

XAG-01003: failed to create directory '*string*'
Cause: An error occurred while creating trace log directory.

Action: Ensure the directory path exists and the user has write access to it, and reissue the command.

XAG-01004: failed to open trace file '*string*' for writing
Cause: An error occurred while opening trace log file for writing.

Action: Ensure the user has write access to the directory and file and reissue the command.

XAG-01100: The E-Business Suite Concurrent Manager is already registered with Oracle Clusterware.
Cause: An attempt to register an E-Business Suite Concurrent Manager instance with Oracle Clusterware was rejected because a Concurrent Manager instance was already registered.

Action: None

XAG-01101: The user does not have root privilege to create E-Business Suite Credentials.
Cause: An attempt to create E-Business Suite Credentials in Oracle Clusterware was rejected because the user did not have root privileges.

Action: Retry the operation logged in as the root user.

XAG-01102: E-Business Suite is not supported on this version of Clusterware.
Cause: An attempt to create an E-Business Suite Concurrent Manager (EBSCM) Clusterware resource was rejected because EBSCM was not supported for Clusterware versions older than 12.1.0.1.

Action: Install E-Business Suite Concurrent Manager in a Cluster that is at version 12.1.0.1 or later.

XAG-01103: The user does not have root privilege to manage the MySQL systemd service.
Cause: An attempt to create a MySQL resource with systemd was rejected because the user did not have sudo access.

Action: Reissue the command after root privileges to manage the MySQL service with systemd have been granted.

XAG-01104: The service name '*string*' is not registered to systemd.
Cause: An attempt to create a MySQL resource with systemd was rejected because the service name specified on the command line was not registered to systemd.

Action: Reissue the command after the service name has been registered to systemd.

163
XOQ-00101 to XOQ-02563

XOQ-00101: unknown error
Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00102: system failure
Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00103: An OLAP API method failed.
Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00104: not implemented
Cause: An OLAP API query was issued that requires an unimplemented feature.

Action: Check the classes and methods in the OLAP API Java documentation for alternative ways to construct the query.

XOQ-00105: unknown error
Cause: An unexpected internal error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00106: SQL query failed: "(*string*)"
Cause: A SQL query generated by the OLAP component failed to execute.

Action: Examine the error message to determine the possible cause of failure, or contact Oracle Support Services.

XOQ-00107: current operation cancelled
Cause: An Oracle operation was interrupted by CTRL+C or another cancelling operation.

Action: Continue with the next operation.

XOQ-00201: error opening connection
Cause: An error occurred while initializing the connection for the OLAP API.

Action: Ensure that Oracle Database is properly installed with the OLAP option. If the problem persists, then contact Oracle Support Services.

XOQ-00203: error retrieving connection information for the server
Cause: An error occurred while retrieving the connection parameter information.

Action: Ensure that Oracle Database is properly installed with the OLAP option. If the problem persists, then contact Oracle Support Services.

XOQ-00204: error initializing second DataProvider on a JDBC connection
Cause: The Java client tried to open multiple DataProviders over one JDBC connection.

Action: Close the first DataProvider before initializing the second DataProvider.

XOQ-00223: error executing an OLAP DML command
Cause: A syntactic or referential error in the commmand string prevented execution of an OLAP DML command.

Action: Correct the syntax of the OLAP DML command.

XOQ-00225: error closing the connection
Cause: An error occurred while closing the connection for the OLAP API.

Action: Report this error to Oracle Support Services.

XOQ-00229: cannot retrieve information for the connection
Cause: An error occurred while preparing OLAP API connection information.

Action: Report this error to Oracle Support Services.

XOQ-00232: error sharing the session
Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00233: error obtaining the system
Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00234: error obtaining the module version
Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00251: Default database is not set.
Cause: An unexpected error occurred.

Action: Report this error to Oracle Support Services.

XOQ-00286: error creating a definition manager
Cause: An error occurred while preparing an OLAP API query for use.

Action: Examine the ErrorStack for more detail about the reason for the failure.

XOQ-00287: error adding analytic workspace "(*string*)" to branch
Cause: An unexpected error occurred while adding an analytic workspace to a branch.

Action: Report this error to Oracle Support Services.

XOQ-00288: unable to commit transaction
Cause: An error occurred while trying to commit changes to a cube or dimension.

Action: Examine the error stack for more detail about the reason for the failure.

XOQ-00289: error executing DDL "(*string*)" for metadata object "(*string*)"
Cause: An error occurred while executing the DDL.

Action: Check the medatata object and examine the error stack for the reason for the failure.

XOQ-00400: failed to map CWM object "(*string*))" to XML or IDL
Cause: An error occurred while preparing a metadata object to return to the client.

Action: Check the metadata object for unusual characteristics, such as extremely long text attributes, unusual characters in text attributes,

XOQ-00401: a *string* could not be created with the name "*string*", because that name is already used by an existing *string*.
Cause: An error occurred while trying to create a metadata object with the name of an existing object.

Action: Rename one of the objects so that its ID is unique.

XOQ-00500: no metadata provider "(*string*)" available
Cause: A MetadataProvider could not be found for the specified type of metadata.

Action: Ensure that your code requests metadata type CWM.

XOQ-00501: table "(*string*)" and/or column "(*string*)" not found
Cause: A metadata object was mapped to a table or column that does not exist.

Action: Run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any reported problems with the metadata object.

XOQ-00502: cannot create more than one CursorManager for a source
Cause: An attempt was made to create a second CursorManager for a source in a transaction.

Action: Use only one CursorManager or upgrade to newer OLAP API jar files.

XOQ-00503: cannot create server cursor
Cause: An error occurred while executing the SQL for an OLAP API query.

Action: Examine the ErrorStack for details about the failure.

XOQ-00504: cannot execute the query
Cause: An error occurred while executing the SQL for an OLAP API query.

Action: Examine the ErrorStack for details about the failure.

XOQ-00505: The number of cursor inputs (*string*) does not match the number of bind sources (*string*).
Cause: The bind source specified in the cursor manager did not have matching cursor input.

Action: Specify a cursor input for each bind source.

XOQ-00506: cannot parse XML string from the client
Cause: An error occurred while parsing query or metadata definitions sent by the client.

Action: Examine the error output for details about the failure.

XOQ-00507: source definition not found with ID "(*string*)"
Cause: The query referred to a source definition that did not exist.

Action: Examine the error output for details about the failure.

XOQ-00508: metadata object not found with ID "(*string*)"
Cause: The query referred to a metadata object that did not exist.

Action: Correct the query so it refers to existing metadata objects.

XOQ-00509: Invalid value string "(*string*)" is used for a value of dimension "(*string*)".
Cause: The query contained an incorrectly formatted value string. The accepted formats are "HIERARCHY::LEVEL::VALUE" in hierarchy-qualified value mode, or "[Dimension].[Hierarchy].[Level].[Value]" in ODBO compatibility mode.

Action: Correct the value string used in the query, or select values using the localValue attribute. For example, dimensionSource.select(dimension.getLocalValueAttribute().getSource().eq("value"));

XOQ-00510: NULL key found in hierarchy
Cause: The hierarchy was not identified as a skip-level hierarchy, although it contained NULL values.

Action: Correct the metadata for the hierarchy to mark it as a skip-level hierarchy.

XOQ-00511: Query will result in a Cartesian product.
Cause: An incorrect join condition was used in the query.

Action: Examine the mappings for the metadata objects and correct the query.

XOQ-00600: internal error code, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]
Cause: A process encountered an exceptional condition. This is the generic internal error number for Oracle program exceptions.

Action: Report as a bug. The first argument is the internal error number.

XOQ-00603: Fatal error occurred: unwise to proceed.
Cause: An Oracle session was in an unrecoverable state.

Action: Log in to Oracle again so a new session is created automatically. Examine the session trace file for more information.

XOQ-00699: internal error, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]
Cause: An internal inconsistency was detected that did not end the process.

Action: Report a bug and include the internal error, which is the first argument in the error message.

XOQ-00700: error compiling OLAP DML command
Cause: A syntactic or referential error in the OLAP DML command caused a compilation error.

Action: Correct the syntax of the OLAP DML command. The error stack may provide more detail about the error. Before trying again, enable the OLAP DML BADLINE option to get more detailed messages.

XOQ-00701: error compiling OLAP DML expression
Cause: A syntactic or referential error in the OLAP DML expression caused a compilation error.

Action: Correct the syntax of the OLAP DML expression. The error stack may provide more detail about the error. Before trying again, enable the OLAP DML BADLINE option to get more detailed messages.

XOQ-00702: no OLAP DML code to compile
Cause: SPLExecutor:executeCommand was called with an empty command string.

Action: Ensure that an OLAP DML command is passed to SPLExecutor::executeCommand.

XOQ-00703: error executing OLAP DML command "(*string*)"
Cause: A syntactic or referential error in the commmand string prevented the execution of an OLAP DML command.

Action: Examine the error stack for more detail about the error. Correct the OLAP DML command and try again.

XOQ-00704: error evaluating OLAP DML expression
Cause: A syntactic or referential error in the expression string prevented the evaluation of an OLAP DML expression.

Action: Examine the error stack for more detail about the error. Correct the OLAP DML expression and try again.

XOQ-00705: no OLAP DML expression to evaluate
Cause: An SPLExecutor::evaluateExpression method was called with an empty expression string.

Action: Ensure that an OLAP DML command is passed to the SPLExecutor::evaluateExpression method.

XOQ-00850: cannot create fundamental snapshot: definition id "(*string*)" not recognized
Cause: A cursor could not be created because the source referred to an unrecognized metadata object.

Action: If the source uses an MdmDimension or MdmMeasure that is created with an MdmCustomObjectFactory, then ensure that the Mtm definition is complete and refers only to existing objects.

XOQ-00851: cannot create Mdm property: definition id "(*string*)" not recognized
Cause: A cursor was not created because the source referred to an unrecognized metadata object.

Action: If the source uses an MdmDimension or MdmMeasure that is created with an MdmCustomObjectFactory, then ensure that the Mtm definition is complete and refers only to existing objects.

XOQ-01000: A portion of the query results in an empty selection and a 0-extent cursor.
Cause: The selection for one or more dimensions of a source yielded no members, so no data was retrieved for the source.

Action: Check the dimension selections to ensure that all references to hierarchies, levels, and members are correct. Evaluate each dimension query separately to identify the faulty one.

XOQ-01100: Query is not supported by the current generator.
Cause: The source involved a construct that was syntactically correct but is not currently supported.

Action: Check the source for unsupported constructs. For example, some releases require that a measure source be joined to sources for hierarchies and not to sources for dimensions.

XOQ-01150: unknown problem with OLAP Catalog
Cause: An error occurred while reading the OLAP Catalog.

Action: Run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01151: OCI error:\n*string*
Cause: An exception was raised by Oracle Call Interface.

Action: Correct the problems identified in the error message.

XOQ-01200: metadata problem for MdmAttribute "*string*"
Cause: Metadata for the MdmAttribute was incomplete or inconsistent. Possible causes are: 1) The MdmAttribute did not have an associated MtmAttributeMap. 2) The MtmAttributeMap existed, but there was no mapped expression for a requested MtmDimensionMap.

Action: If the MdmAttribute is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmAttribute is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01201: metadata problem for MdmMeasure "*string*"
Cause: Metadata for the MdmMeasure was incomplete or inconsistent. Possible causes are: 1) The MdmMeasure did not have an associated MtmMeasureMap. 2) The MtmMeasureMap existed, but there was no mapped expression for a requested MtmBaseCube. 3) The MtmMeasureMap existed, but had no associated MtmCube.

Action: If the MdmMeasure is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmMeasure is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01202: metadata problem for MdmLevel "*string*"
Cause: Metadata for the MdmLevel was incomplete or inconsistent. The MdmLevel did not have an associated MtmLevelMap.

Action: If the MdmLevel is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmLevel is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01203: metadata problem for MdmHierarchy "*string*"
Cause: Metadata for the MdmHierarchy was incomplete or inconsistent. The MdmHierarchy did not have an associated MtmHierarchyMap.

Action: If the MdmHierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmHierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01204: metadata problem for MdmListDimension "*string*"
Cause: Metadata for the MdmListDimension was incomplete or inconsistent.

Action: If the MdmListDimension is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmListDimension was read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01205: metadata problem for MdmPrimaryDimension "*string*"
Cause: Metadata for the MdmPrimaryDimension was incomplete or inconsistent. The MdmPrimaryDimension (also known as MdmUnionHierarchy) did not have an associated MtmPrimaryDimensionMap.

Action: If the MdmPrimaryDimension is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmPrimaryDimension is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01206: metadata problem for cube "*string*"
Cause: Metadata for the cube was incomplete or inconsistent. This happened for one of the following reasons: 1) No MtmBaseCube was associated with a requested hierarchy combination. 2) One of the MtmMeasureMaps associated with an MtmCube was NULL. 3) Something was wrong with an MtmCubeDimensionality associated with an MtmBaseCube.

Action: If the hierarchy combination, measure map, or cube is created or modified using the OLAP Metadata API, then ensure that the objects are created and mapped correctly. If the attribute hierarchy combination, measure map, or cube is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01207: metadata problem for hierarchy combination "*string*"
Cause: Metadata for the hierarchy combination was incomplete or inconsistent.

Action: If the hierarchy combination is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy combination is read from the OLAP Catalog, then run PL/SQL procedure

CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01208: metadata problem for MtmBaseCube "*string*"
Cause: Metadata for the MtmBaseCube was incomplete or inconsistent. An MtmBaseCube had no associated MtmTabularSource.

Action: If the MtmBaseCube is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MtmBaseCube is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01209: metadata problem for attributes on dimension "*string*"
Cause: Metadata for the attributes on the dimension was incomplete or inconsistent.

Action: If the attributes or dimension is created or modified using the OLAP Metadata, then ensure that the objects are created and mapped correctly. If the attributes or dimension are read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01210: metadata problem for table map for list dimension "*string*"
Cause: Metadata for the table map for the list dimension was incomplete or inconsistent.

Action: If the table map or dimension is created or modified using the OLAP Metadata API, then ensure that the objects are created and mapped correctly. If the table map or dimension is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01211: metadata problem for MdmValueHierarchy "*string*"
Cause: Metadata for the MdmValueHierarchy was incomplete or inconsistent. Possible causes are: 1) The MtmValueLevelHierarchyMap for the MdmValueHierarchy did not have an associated MtmSolvedLevelHierarchyMap. 2) The MtmValueLevelHierarchyMap for the MdmValueHierarchy was invalid.

Action: If the MdmValueHierarchy or MtmValueLevelHierarchyMap is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmValueHierarchy or MtmValueLevelHierarchyMap is read from the OLAP Catalog, run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01212: aggregation metadata problem for cube "*string*"
Cause: Aggregation metadata for the cube was incomplete or inconsistent.

Action: If the cube is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the cube is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01213: metadata problem for MdmLevelHierarchy "*string*"
Cause: Metadata for the table mapping for the MdmLevelHierarchy was incomplete or inconsistent. The MtmLevelHierarchyMap for the MdmLevelHierarchy had no associated MtmTabularSource.

Action: If the MdmLevelHierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MdmLevelHierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01214: metadata problem with dimension order specification for "*string*"
Cause: Metadata for the custom sort column was incomplete or inconsistent. An MtmDimensionOrderSpecification had no associated OrderByExpression.

Action: If the MtmDimensionOrderSpecification is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the MtmDimensionOrderSpecification is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01215: metadata problem with mapped RDBMS column "*string*"
Cause: Metadata for the mapped RDBMS column was incomplete or inconsistent. There was a problem identifying the RDBMS table that owns the associated RDBMS column.

Action: If the RDBMS column is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the RDBMS column is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01216: metadata problem with mapping for snowflake hierarchy "*string*"
Cause: Mapping metadata for the snowflake hierarchy was incomplete or inconsistent. There was a problem identifying a mapping for the associated snowflake hierarchy.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01217: metadata problem with mapping for hierarchy "*string*"
Cause: Mapping metadata for the hierarchy was incomplete or inconsistent. A mapping for the associated hierarchy could not be identified. The problem may be the way the dimension was mapped in one of the cubes and may be in the GID column.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01218: metadata problem with mapping for hierarchy "*string*"
Cause: Mapping metadata for the hierarchy was incomplete or inconsistent. A mapping for the associated hierarchy could not be identified, possibly because of the way the dimension was mapped in one of the cubes.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01219: metadata problem with mapping for hierarchy "*string*"
Cause: Mapping metadata for the hierarchy was incomplete or inconsistent. The ET column for the associated hierarchy could not be identified.

Action: If the hierarchy is created or modified using the OLAP Metadata API, then ensure that the object is created and mapped correctly. If the hierarchy is read from the OLAP Catalog, then run PL/SQL procedure CWM2_OLAP_VALIDATE.VALIDATE_OLAP_CATALOG with type_of_validation OLAP API. Correct any problems.

XOQ-01300: invalid dimension member value "(*string*)"
Cause: An invalid dimension value was specified as part of an MdmCustomMember.

Action: Check the values passed to the MdmCustomMembers. All dimension members must be in unique value form. The problem could be in the memberValue, the parentValue, an attributeExpression, or the measureExpression.

XOQ-01301: invalid measure expression in MdmCustomMember "(*string*)"
Cause: A measure expression in an MdmCustomMember was invalid.

Action: Ensure that the measure expression in each MdmCustomMember is valid. Ensure that any square brackets are balanced.

XOQ-01302: query not supported in local value mode
Cause: Some feature of the query required unique value mode to be enabled.

Action: Either enable unique value mode, or rewrite the query to remove any features that depend on unique value mode. MdmCustomMembers require unique value mode.

XOQ-01303: incorrect cube dimensionality
Cause: The metadata that defines the dimensionality of a cube was incorrect.

Action: Check the metadata for the dimensionality of the cubes being queried. Ensure that the number of join columns on the fact table matches the number of join columns on the dimension table.

XOQ-01304: Custom members feature is not supported.
Cause: The query included custom members that could not be processed.

Action: Check if any solved cubes are in GROUPING SET or ROLLUP form in the query. Rewrite them in ET form.

XOQ-01305: invalid model assignment
Cause: The definition of a model assignment was invalid.

Action: Ensure that all assignments are defined so the assigned source does not have a qualified source as an input. The assignment may have been created explicitly, or it may have been created implicitly from a custom member definition.

XOQ-01306: cannot generate cursor manager for MdmValueHierarchy
Cause: A cursor manager could not be created on a query containing an MdmValueHierarchy, because the hierarchy had no LevelExpressions and was not compiled in an analytic workspace.

Action: Either add LevelExpressions to the SolvedValueHierarchyMap of the MdmValueHierarchy, or create a AWPrimaryDimensionOrganization on the hierarchy's MdmPrimaryDimension. Build the dimension using a COMPILE command.

XOQ-01307: Cannot generate MdmCubeMap "*string*" on MdmCube "*string*". The MdmCubeMap contains no MdmCubeDimensionalityMap for dimension "*string*".
Cause: The MdmCubeMap was missing an MdmCubeDimensionalityMap for the specified dimension.

Action: Ensure that the MdmCubeMap has an MdmCubeDimensionalityMap for each dimension of the MdmCube.

XOQ-01308: Primary dimension "*string*" on cube "*string*" has multiple dimension levels but no hierarchy.
Cause: A PrimaryDimension had more than one DimensionLevel, but no hierarchies and no MemberListMap.

Action: Add a Hierarchy or MemberListMap to the PrimaryDimension.

XOQ-01400: invalid metadata objects
Cause: One or more Mdm or Mtm metadata objects was invalid. A list of the invalid objects follows this error.

Action: Examine the list of invalid metadata objects and correct the errors reported for each object. For objects created or modified using the OLAP Metadata API, make the necessary changes on the client. For objects created from the OLAP Catalog, either modify the metadata tables or modify the Mdm and Mtm objects using the OLAP Metadata API.

XOQ-01401: validation error
Cause: An error occurred while validating an Mdm or Mtm metadata object, but the cause of the error could not be determined.

Action: Check the metadata object and its dependencies for inconsistencies.

XOQ-01411: attribute mapping not defined for hierarchy "(*string*)"
Cause: An MtmAttributeMap had no mapping for a requested MtmDimensionMap, and it had no default value.

Action: Use the OLAP Metadata API to create an expression that provides the attribute value for the required MtmDimensionMap. Add it to the MtmAttributeMap as a mapping for the given MtmDimensionMap. If the attribute is read from the OLAP Catalog, then correct the attribute mapping in the OLAP Catalog tables.

XOQ-01421: A hierarchy must contain at least one level.
Cause: An MdmHierarchy was defined without any levels.

Action: Add a level to the requested MdmHierarchy using the OLAP Metadata API. If the hierarchy is read from the OLAP Catalog, then add a level to the hierarchy in the catalog table, or remove the hierarchy from the table if it is no longer relevant.

XOQ-01422: Hierarchy does not match hierarchy map: hierarchy map does not contain level map for "(*string*)".
Cause: The levels contained in an MdmHierarchy were inconsistent with the level maps contained in the corresponding MtmHierarchyMap.

Action: Use the OLAP Metadata API to correct the hierarchy or hierarchy map so they are consistent.

XOQ-01423: Hierarchy does not match hierarchy map: hierarchy does not contain level "(*string*)".
Cause: The levels contained in an MdmHierarchy are inconsistent with the level maps contained in the corresponding MtmHierarchyMap.

Action: Use the OLAP Metadata API to correct the hierarchy or hierarchy map so they are consistent.

XOQ-01424: Hierarchy must be declared skip-level, because it contains level expressions that can be null.
Cause: One of the MtmLevelMaps of an MdmHierarchy was defined by a level expression that can be null. Hierarchies containing levels with nullable expressions must be declared skip-level.

Action: Either set the MtmHierarchyMap to be skip-level using the OLAP Metadata API, or declare the expression for the MtmLevelMap as not nullable.

XOQ-01431: Primary dimension must have at least one hierarchy.
Cause: An MdmPrimaryDimension was defined without any hierarchies.

Action: Add a hierarchy to the requested MdmPrimaryDimension using the OLAP Metadata API. If the primary dimension is read from the OLAP Catalog, then add a hierarchy to the primary dimension in the catalog table, or remove the primary dimension from the table if it is no longer relevant.

XOQ-01432: Primary dimension and union hierarchy map are inconsistent: union hierarchy map does not contain hierarchy map for "(*string*)".
Cause: The hierarchies contained in an MdmPrimaryDimension were inconsistent with the hierarchy maps contained in the corresponding MtmPrimaryDimensionMap.

Action: Use the OLAP Metadata API to correct the MdmPrimaryDimension or MtmPrimaryDimensionMap so they are consistent.

XOQ-01433: Primary dimension and union hierarchy map are inconsistent: primary dimension does not contain hierarchy "(*string*)".
Cause: The hierarchies contained in an MdmPrimaryDimension were inconsistent with the hierarchy maps contained in the corresponding MtmPrimaryDimensionMap.

Action: Use the OLAP Metadata API to correct the MdmPrimaryDimension or MtmPrimaryDimensionMap so they are consistent.

XOQ-01434: Time dimension must have EndDate and TimeSpan attributes.
Cause: A time dimension did not have an EndDate or a TimeSpan attribute.

Action: Create an EndDate and a TimeSpan attribute using the OLAP Metadata API, and add them to the time dimension using the appropriate functions. If the time dimension already has an EndDate and a TimeSpan attribute, then ensure that they have been added to the time dimension. If the time dimension is read from the OLAP Catalog, then define the EndDate and TimeSpan attributes in the catalog.

XOQ-01441: Measure does not contain cube dimension "(*string*)".
Cause: An MdmMeasure and its associated MtmPartitionedCube contained different sets of dimensions.

Action: Use the OLAP Metadata API to correct the MdmMeasure or the MtmPartitionedCube so they are consistent. If the measure and cube are read from the OLAP Catalog, then ensure that the dimensions are consistent in the catalog.

XOQ-01442: Measure contains dimension "(*string*)", which does not exist on the cube.
Cause: An MdmMeasure and its associated MtmPartitionedCube contained different sets of dimensions.

Action: Use the OLAP Metadata API to correct the MdmMeasure or the MtmPartitionedCube so they are consistent. If the measure and cube are read from the OLAP Catalog, then ensure that the dimensions are consistent in the catalog.

XOQ-01443: Measure contains dimension "(*string*)", which is not a primary dimension.
Cause: An MdmMeasure referred to dimensions that were not primary dimensions.

Action: Use the OLAP Metadata API to change the MdmMeasure to refer to primary dimensions. If the measure is read from the OLAP Catalog, then change the catalog so the MdmMeasure refers only to primary dimensions.

XOQ-01444: Cube is not partitioned.
Cause: An MtmMeasureMap referred to an MtmBaseCube instead of an MtmPartitionedCube.

Action: Use the OLAP Metadata API to change the MtmMeasureMap to refer to an MtmPartitionedCube. If the measure is read from the OLAP Catalog, then change the catalog so the MtmMeasureMap refers to the MtmPartitionedCube.

XOQ-01445: Measure is not a member of its partitioned cube.
Cause: An MtmMeasureMap referred to an MtmPartitionedCube as its owner, but the MtmPartitionedCube does not include the MtmMeasureMap among its measures.

Action: Use the OLAP Metadata API to add the MtmMeasureMap as a member to its MtmPartitionedCube. If the measure is read from the OLAP Catalog, then correct the catalog so the MtmPartitionedCube refers to the MtmMeasureMap.

XOQ-01446: Measure has no mapping for cube "(*string*)".
Cause: An MtmMeasureMap contained no mapped expressions for the requested MtmBaseCube, and it did not have a default mapped expression.

Action: Use the OLAP Metadata API to create an expression that provides the measure value for the required MtmBaseCube. Add the expression to the MtmMeasureMap as a mapping for the given MtmBaseCube. If the measure is read from the OLAP Catalog, then correct the measure mapping in the OLAP Catalog tables.

XOQ-01461: Partitioned cube has no base cube for hierarchy combination ("(*string*)").
Cause: A partitioned cube had no base cube for the requested hierarchy combination.

Action: Use the OLAP Metadata API to create a base cube for the required hierarchy combination. If the cube is read from the OLAP Catalog, then add a base cube to the partitioned cube in the OLAP Catalog tables.

XOQ-01462: Partitioned cube does not contain measure "(*string*)".
Cause: A partitioned cube and one of its base cubes referred to different sets of measure maps.

Action: Use the OLAP Metadata API to add or remove measure maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct the cube in the OLAP Catalog tables.

XOQ-01463: Base cube does not contain measure "(*string*)".
Cause: A partitioned cube and one of its base cubes referred to different sets of measure maps.

Action: Use the OLAP Metadata API to add or remove measure maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct the base cube in the OLAP Catalog tables.

XOQ-01464: Partitioned cube does not contain dimension "(*string*)".
Cause: A partitioned cube and one of its base cubes referred to different sets of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct its dimensions in the OLAP Catalog tables.

XOQ-01465: Base cube does not contain dimension "(*string*)".
Cause: A partitioned cube and one of its base cubes referred to different sets of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps as necessary to make the partitioned cube consistent with all of its base cubes. If the cube is read from the OLAP Catalog, then correct its dimensions in the OLAP Catalog tables.

XOQ-01466: Base cube does not contain dimension for dimensionality "(*string*)".
Cause: A base cube's dimensionalities contained a set of dimension maps that was inconsistent with the base cube's set of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps or dimensionalities as necessary to make the sets of dimension maps consistent. If the cube is read from the OLAP Catalog, then correct its dimensionalities in the OLAP Catalog tables.

XOQ-01467: Base cube does not contain dimensionality for dimension "(*string*)".
Cause: A base cube's dimensionalities contained a set of dimension maps that was inconsistent with the base cube's set of dimension maps.

Action: Use the OLAP Metadata API to add or remove dimension maps or dimensionalities as necessary to make the sets of dimension maps consistent. If the cube is read from the OLAP Catalog, then correct its dimensionalities in the OLAP Catalog tables.

XOQ-01468: Base cube solved status does not match dimensionality "(*string*)" solved status.
Cause: A base cube was solved, but one of its dimensionalities was unsolved, or the reverse.

Action: Use the OLAP Metadata API to correct the inconsistency. If the cube is read from the OLAP Catalog, then correct its dimensionalities in the OLAP Catalog tables.

XOQ-01481: Dimension "(*string*)" appears in multiple aggregation steps.
Cause: Every dimension in the cube must appear in one and only one aggregation step.

Action: Use the OLAP Metadata API to remove the extraneous aggregation steps from the cube. If the cube is read from the OLAP Catalog, then correct its aggregation specification in the OLAP Catalog tables.

XOQ-01482: no aggregation step found for dimension "(*string*)"
Cause: A dimension did not have an aggregation step. Every dimension in the cube must appear in one and only one aggregation step.

Action: Use the OLAP Metadata API to add an appropriate aggregation step to the cube. If the cube is read from the OLAP Catalog, then correct its aggregation specification in the OLAP Catalog tables.

XOQ-01483: Invalid aggregation step for dimension "(*string*)": Dimension is not part of the cube.
Cause: An aggregation step referred to a dimension that was not a dimension of the cube.

Action: Use the OLAP Metadata API to remove the extraneous aggregation steps from the cube. If the cube is read from the OLAP Catalog, then correct its aggregation specification in the OLAP Catalog tables.

XOQ-01484: Cannot modify "*string*" while in a branch in a way that invalidates its materialized view.
Cause: A change was attempted in a branch to an object that had an associated materialized view. The change would invalidate that materialized view.

Action: Disable the materialized view on the object before creating the branch.

XOQ-01485: Cannot modify "*string*" in the branch, because its analytic workspace is not in the branch.
Cause: A modification was attempted on an object whose analytic workspace had not been added to the branch.

Action: Add the associated analytic workspace to the branch.

XOQ-01486: Consistent solve has two aggregation steps over dimension "*string*".
Cause: A consistent solve had more than one aggregation steps over the dimension.

Action: Modify the consistent solve to remove or replace one of the aggregation steps.

XOQ-01487: Consistent solve has two precompute models over dimension "*string*".
Cause: A consistent solve had more than one precompute model over the dimension.

Action: Modify the consistent solve to remove or replace one of the precompute models.

XOQ-01488: Consistent solve has two dynamic models over dimension "*string*".
Cause: A consistent solve had more than one dynamic model over the dimension.

Action: Modify the consistent solve to remove or replace one of the dynamic models.

XOQ-01489: Consistent solve has a model "*string*" with invalid explicit dimension "*string*".
Cause: An explicit dimension of a model in a consistent solve was not a dimension of the cube and measure.

Action: Modify the consistent solve to remove or replace this model.

XOQ-01490: Consistent solve has a model "*string*" with invalid base dimension "*string*".
Cause: The base dimension of a model in a consistent solve was not a dimension of the cube and measure.

Action: Modify the consistent solve to remove or replace this model.

XOQ-01491: Consistent solve has an invalid aggregation step over dimension "*string*".
Cause: The aggregation step for a consistent solve was not over a dimension of the cube and measure.

Action: Modify the consistent solve to remove or replace this aggregation step.

XOQ-01492: invalid order of steps for consistent solve
Cause: A consistent solve did not list precompute models first, then aggregation steps, and dynamic models last.

Action: Reorder the steps in the consistent solve or remove some of the steps.

XOQ-01493: Invalid specification for dimension "*string*" in precompute condition for cube "*string*"
Cause: The precompute condition contained an invalid specification. When a precompute percent is also specified, the precompute condition can specify only that the last dimensions in the cube's consistent solve specification are not precomputed.

Action: Remove the cube's precompute condition or precompute percent, or rewrite the cube's precompute condition so that it specifies only NONE for dimensions at the end of the cube's consistent solve specification.

XOQ-01494: invalid target dimension or attribute "*string*"
Cause: The attribute and its target dimension or attribute were in different analytic workspaces.

Action: Remove the attribute's target, or specify a target dimension or attribute that is in the same analytic workspace.

XOQ-01495: cannot specify both a target attribute "*string*" and a target dimension "*string*"
Cause: The attribute has both a target dimension and a target attribute.

Action: Remove either the attribute's target dimension or its target attribute.

XOQ-01496: loaded data incompatible with data type "*string*"
Cause: A data type change could not be made because data loaded for the object could not be represented by the data type.

Action: Clear the data prior to making the data type change.

XOQ-01497: Data type "*string*" is not allowed for an indexed attribute.
Cause: An invalid data type was specified for an indexed attribute.

Action: Either change the data type or set CreateIndex to False, set PopulateLineage to False, remove any target attributes or target dimensions from the attribute, and remove the attribute from the list of UniqueKeyAttributes in all dimension levels.

XOQ-01498: Calculation model "*string*" specifies invalid explicit dimension "*string*".
Cause: A dimension calculation model specified the owning dimension as an explicit dimension.

Action: Remove the owning dimension from the calculation model's explicit dimensions.

XOQ-01499: Measure folder "*string*" cannot appear twice in a sequence of nested folders.
Cause: A measure folder was nested under itself as a subfolder.

Action: Remove the nested subfolder.

XOQ-01502: Consistent solve cannot vary the aggregation method of dimension "*string*" during aggregation.
Cause: The OVER clause specified the same dimension as either the AGGREGATE USING DIMENSION clause or the dimension of the attribute in the AGGREGATE USING ATTRIBUTE clause.

Action: Specify different dimensions in the OVER clause and the DIMENSION clause or ensure that the dimension in the OVER clause is not the dimension of the attribute in the ATTRIBUTE clause.

XOQ-01503: Consistent solve cannot vary the aggregation method because "*string*" is not a dimension or dimension attribute of the cube.
Cause: An attempt was made to vary aggregation methods by a dimension or attribute of a dimension not in the cube.

Action: Specify the aggregation methods by measure, dimension or indexed attribute of a dimension that is used in the cube.

XOQ-01504: The hierarchy level "*string*" is mapped to a constant but the level is not the top of the hierarchy.
Cause: A lower hierarchy level was mapped to a constant.

Action: Remap all lower levels to variable expressions.

XOQ-01600: XOQ-01600: OLAP DML error while executing DML "*string*"\n*string*
Cause: An OLAP DML expression in an analytic workspace failed.

Action: This is an unexpected error. Examine the rest of the error stack for more details.

XOQ-01601: error while loading data for *string* "*string*" into the analytic workspace
Cause: An error occurred while executing a generated SQL statement and loading the result into the analytic workspace. The error could be caused by bad SQL or bad data.

Action: Examine the rest of the error stack for more details. If build logging is enabled, the SQL will be displayed in the OUTPUT column of the cube build log.

XOQ-01700: Cube "*string*" is not part of an analytic workspace.
Cause: The cube was not built because it was not deployed in an analytic workspace.

Action: Remove the cube from the list of objects in the build process, or deploy the cube in an analytic workspace.

XOQ-01701: Dimension "*string*" is not part of an analytic workspace.
Cause: The dimension was not built because it is not deployed in an analytic workspace.

Action: Remove the dimension from the list of objects in the build process, or deploy the dimension in an analytic workspace.

XOQ-01702: Objects from multiple analytic workspaces cannot be built in a single process.
Cause: A single build process contained objects from more than one analytic workspace.

Action: Change the build process to include objects in only a single analytic workspace.

XOQ-01703: error during parse of build process script: "*string*", "*string*"
Cause: The current build process failed because of an error in the build script.

Action: Correct the error in the script.

XOQ-01704: unknown model "*string*"
Cause: The current build process failed because the model in the build script does not exist.

Action: Change the build script to refer to an actual model.

XOQ-01705: CLEAR command cannot run on a dimension.
Cause: A CLEAR command is in a build specification for a dimension.

Action: Remove the CLEAR command.

XOQ-01706: An unexpected condition occurred during the build: "*string*".
Cause: An internal error occurred during the build.

Action: Report this error to Oracle Support Services.

XOQ-01707: Oracle job "*string*" failed while executing slave build "*string*" with error "*string*".
Cause: A build job spawned by the current process failed.

Action: Examine the trace file for the slave build to determine the cause of the failure.

XOQ-01708: SOLVE command cannot run on a dimension.
Cause: A SOLVE command was in a build specification for a dimension.

Action: Remove the SOLVE command.

XOQ-01709: *string* command cannot run on a cube.
Cause: An invalid build command was in a build specification for a cube.

Action: Remove the invalid build command.

XOQ-01710: unknown build item "*string*"
Cause: A build item was not a cube or a dimension.

Action: Check the list of build items to ensure that they are all valid.

XOQ-01711: Aggregation path for hierarchies on dimension "*string*" is inconsistent.
Cause: The definition of parents was ambiguous among hierarchies, or a loop was defined within a hierarchy.

Action: Fix the mappings or delete the hierarchies.

XOQ-01712: "*string*" failed validation as a level hierarchy.
Cause: A member of the hierarchy had one of these problems: 1) The member's level was not part of the hierarchy. 2) The member's parent was at the same or a lower level of the hierarchy.

Action: Redefine the hierarchy as a value hierarchy or fix the level mappings.

XOQ-01713: "*string*" failed validation as a non-skip-level hierarchy.
Cause: A member of the hierarchy had one of these problems: 1) The member had no parent but was not in the top level of the hierarchy. 2) The member's parent was two or more levels above in the hierarchy.

Action: Mark the hierarchy as a skip-level hierarchy or fix the level mappings.

XOQ-01714: "*string*" failed validation as a non-ragged hierarchy.
Cause: A member of the hierarchy had no children but was not in the lowest level of the hierarchy.

Action: Mark the hierarchy as a ragged hierarchy or fix the level mappings.

XOQ-01715: Hierarchy "*string*" has no members for some levels.
Cause: No members existed for some levels defining this hierarchy.

Action: Fix the mappings or the hierarchy definition.

XOQ-01716: Definition of a hierarchy "*string*" does not allow raggedness.
Cause: Leaf members of a hierarchy were on different levels.

Action: Fix the mappings or the hierarchy definition.

XOQ-01717: illegal parent for calculated member "*string*"
Cause: The parent for this member was not a member of a dimension or hierarchy.

Action: Fix the calculated member parent data.

XOQ-01718: A calculated member "*string*" and its parent have inconsistent level definitions.
Cause: Levels of a calculated member and its parent are inconsistent with the current hierarchy.

Action: Fix level data for a calculated member or its parent.

XOQ-01719: incorrect level for a calculated member "*string*"
Cause: The level of a calculated member was invalid, or it was not in this hierarchy level.

Action: Fix the level data for the calculated member.

XOQ-01720: Calculated members in hierarchy "%(1)" cannot be organized.
Cause: A loop existed among calculated members.

Action: Fix the parent data for calculated members to remove the loop.

XOQ-01721: ValueHierarchy "*string*" does not have unique keys.
Cause: AddUniqueKeyPrefix was set to True on an AWPrimaryDimensionOrganization, and a load was attempted on a ValueHierarchy.

Action: Do one of the following: 1) Perform the load on DimensionLevels. 2) If the keys are in fact unique, then set AddUniqueKeyPrefix on the AWPrimaryDimensionOrganization to False.

XOQ-01722: Cube "*string*" mapping to "*string*" is invalid. Cubes must map to DimensionLevels for PrimaryDimensions whose keys are not unique.
Cause: AddUniqueKeyPrefix was set to True on an AWPrimaryDimensionOrganization, and a cube was not mapped to a DimensionLevel.

Action: Either map the cube to a DimensionLevel or, if the keys are in fact unique, set AddUniqueKeyPrefix on the AWPrimaryDimensionOrganization to False.

XOQ-01723: CLEAR AGGREGATES command cannot run within a FOR...BUILD group.
Cause: A CLEAR AGGREGATES command was found within a FOR...BUILD group as part of a build.

Action: Change the command to CLEAR VALUES or remove it from the FOR...BUILD group.

XOQ-01724: invalid USING clause
Cause: An invalid USING clause was specified on a cube or cube dimension with an associated materialized view.

Action: Specify a valid USING clause or omit the USING clause.

XOQ-01725: unknown named build specification "*string*"
Cause: A USING clause specified an unknown named build specification."

Action: Ensure that the name in the USING clause is correct.

XOQ-01726: The partition dimension "*string*" in cube "*string*" is missing an ET view.
Cause: The partition dimension was missing an embedded totals view. This may have been caused by using EIF import to create the analytic workspace."

Action: Ensure that the partition dimension has an ET view.

XOQ-01727: Specified refresh method "*string*" is invalid.
Cause: An invalid refresh method was specified for a build.

Action: Specify a valid refresh method.

XOQ-01728: Atomic refresh is not supported.
Cause: Multiple objects were specified in the build script, or the add_dimensions flag was set to true. Atomic refresh is not supported for builds involving two or more cube materialized views.

Action: Specify the atomic parameter as false, or build the objects individually.

XOQ-01729: Explicit SCN build is not allowed.
Cause: A build involving cube materialized views specified AS OF SCN for a build.

Action: Remove explicit SCN from the build script.

XOQ-01730: Refresh method "*string*" requires a suitable materialized view.
Cause: The cube was not associated with a FAST or REWRITE materialized view, as required by the specified refresh method.

Action: Change the refresh method or the type of materialized view associated with the cube.

XOQ-01731: Atomic build is not supported in a branch.
Cause: An atomic build was requested while there was an active branch in the session.

Action: Either run the build without the atomic setting or close the branch.

XOQ-01732: Object "*string*" cannot build in a branch because it has a materialized view.
Cause: A build was attempted in a branch on an object that has an associated materialized view.

Action: Turn off the materialized view on the object before creation of a branch.

XOQ-01733: Invalid cube map "*string*" is specified in a LOAD command.
Cause: A FROM clause was specified in a LOAD command that does not correspond to any cube map in the build cube.

Action: Remove the FROM clause or specify a valid cube map.

XOQ-01734: Time dimension "*string*" is specified in a COMPILE command, but attribute "*string*" on level "*string*" has no mapping.
Cause: One of the following attributes was specified but not mapped: END_DATE, START_DATE, or TIMESPAN.

Action: Define a mapping for the unmapped attribute.

XOQ-01735: Cube cannot be refreshed because dimension "*string*" is stale.
Cause: An attempt was made to refresh a cube with a materialized view when one of the cube's dimensions has a stale materialized view.

Action: Refresh the dimension's materialized view before refreshing the cube.

XOQ-01736: Cube "*string*" cannot be aggregated because it is compressed.
Cause: An attempt was made to run a nonconsistent solve aggregation on a compressed cube. This is not supported.

Action: Redefine the cube to be noncompressed or do not attempt to run the aggregation.

XOQ-01737: FAST_SOLVE cannot be used to build cube "*string*". Build must use COMPLETE.
Cause: An attempt was made to use FAST_SOLVE build on a cube that must use a COMPLETE build (for example, an initial build).

Action: Use a FORCE or a COMPLETE build on the cube.

XOQ-01738: Level of dimension member "*string*" cannot change from "*string*" to "*string*" within a single load.
Cause: A dimension member was mapped to more than one level.

Action: Change the mapping so each dimension member is mapped to only one level.

XOQ-01739: Unknown or invalid measure "*string*" is specified in an assignment.
Cause: The target of an assignment was specified as a measure that was not part of the cube being built.

Action: Specify a valid measure of the cube as the assignment target.

XOQ-01740: Unknown or invalid dimension "*string*" is specified in an assignment.
Cause: The target of an assignment was qualified by a dimension that was not part of the cube or attribute being built.

Action: Specify a valid dimension of the cube or attribute.

XOQ-01741: unsupported assignment qualification for dimension "*string*"
Cause: The target of an assignment was qualified by something other than a literal text value.

Action: Specify a literal text value for the qualified dimension member.

XOQ-01742: NO COMMIT option cannot be specified on build "*string*".
Cause: The NO COMMIT option was specified on a build that includes cubes backed by materialized views or that has non zero parallelism.

Action: Do not specify the NO COMMIT option for this build.

XOQ-01743: Cannot apply automatic order because circular dependency exists between build objects "*string*" and "*string*".
Cause: The build objects contained two or more metadata objects that depend on each other.

Action: Either do not specify automatic order, or remove one of the properties that cause the circular dependency.

XOQ-01744: The LOAD PRUNE command cannot be used with cube "*string*".
Cause: A build specification contained a LOAD PRUNE command for a cube that did not support the PRUNE option. To be compatible with the LOAD PRUNE command, a cube must have exactly one CubeMap; the CubeMap must contain a CubeDimensionalityMap for the partition dimension; the CubeDimensionalityMap for the partition dimension must specify a MappedDimension; and the MappedDimension object must contain a DimensionMap.

Action: Remove the PRUNE option from the LOAD command.

XOQ-01745: Unknown or invalid hierarchy "*string*" is specified in a maintain dimension command.
Cause: The hierarchy specified in a maintain dimension command was not part of the dimension being built.

Action: Specify a valid hierarchy of the dimension in the maintain dimension command.

XOQ-01746: Unknown or invalid level "*string*" is specified in a maintain dimension command.
Cause: The level specified in a maintain dimension command was not part of the dimension being built.

Action: Specify a valid level of the dimension in the maintain dimension command.

XOQ-01747: Dimension member "*string*" is not a valid member of dimension "*string*".
Cause: The member specified in the maintain dimension command was not a valid member of the dimension.

Action: Specify a valid member in the maintain dimension command.

XOQ-01748: Dimension member "*string*" is already a member of dimension "*string*".
Cause: The member specified in the dimension insert command was already a member of the dimension.

Action: Change the dimension insert command to a dimension merge command.

XOQ-01749: Dimension member "*string*" is not a member of dimension "*string*".
Cause: The member specified in the dimension update or dimension delete command was not a member of the dimension.

Action: Specify an existing member of the dimension in the dimension update or dimension delete command.

XOQ-01750: Dimension member "*string*" is already a member of hierarchy "*string*".
Cause: The member specified in the dimension insert command was already a member of the hierarchy.

Action: Change the dimension insert command to a dimension merge command.

XOQ-01751: Dimension member "*string*" is not a member of hierarchy "*string*".
Cause: The member specified in the dimension update or dimension delete command was not a member of the hierarchy.

Action: Specify an existing member of the hierarchy in the dimension update or dimension delete command.

XOQ-01752: Member "*string*" appears both in level "*string*" and in level "*string*" of dimension "*string*".
Cause: A modification to a dimension member was attempted that would cause the member to belong to two different levels.

Action: Change the maintain dimension command to modify the level of all hierarchies to which the dimension member belongs.

XOQ-01753: Unknown or invalid attribute "*string*" is specified in an assignment.
Cause: The target of an assignment was specified as an attribute that was not part of the dimension being built.

Action: Specify a valid attribute of the dimension as the assignment target.

XOQ-01754: SOLVE command cannot run on a subset of cube measures when sparse type is COMPRESSED and measure storage is INDEPENDENT.
Cause: The build specification contains a partial list of cube measures with COMPRESSED cube sparsity and INDEPENDENT measure storage.

Action: Correct the build specification in one of these ways: Remove the SOLVE command, list all measures of the cube, or build the entire cube.

XOQ-01755: Dimension member "*string*" requires a prefix to be created in dimension "*string*".
Cause: The AddUniqueKeyPrefix option was turned on, but the member name did not have a valid prefix.

Action: Turn off AddUniqueKeyPrefix or specify the member name with a valid prefix: the level name if the member is added to a level, or an underscore if it is not.

XOQ-01756: Member "*string*" appears inconsistently in level "*string*" across hierarchies of dimension "*string*".
Cause: A modification to a dimension member was attempted that would cause the member to belong to multiple hierarchies at different levels.

Action: Change the maintain dimension command to modify the level of all hierarchies to which the dimension member belongs.

XOQ-01757: Dimension "*string*" does not belong to build cube "*string*".
Cause: The specified dimension in the build script did not belong to the build cube.

Action: Specify dimensions that belong to the build cube.

XOQ-01758: Measure "*string*" does not belong to build cube "*string*".
Cause: The specified measure in the build script did not belong to the build cube.

Action: Specify measures that belong to the build cube.

XOQ-01759: The build specification includes an invalid ORDER BY clause.
Cause: The specified ORDER BY clause did not contain a single attribute of the partition dimension.

Action: Remove or correct the ORDER BY clause.

XOQ-01799: unspecified error
Cause: A mismatch existed between the C++ and the OLAP DML versions of the code.

Action: Verify the installation of the product.

XOQ-01800: ALTER privilege is required on object "*string*" in schema "*string*".
Cause: An attempt was made to modify a metadata object without having the ALTER privilege on that object.

Action: Request the ALTER privilege on the object from the DBA.

XOQ-01801: CREATE privilege is required for object "*string*" in schema "*string*".
Cause: An attempt was made to create a new metadata object without the necessary privileges.

Action: Request the CREATE ANY privilege to create the object in any schema or the CREATE privilege to create it only in your own schema.

XOQ-01802: DROP privilege is required for object "*string*" in schema "*string*".
Cause: An attempt was made to delete a metadata object without the DROP privilege on that object.

Action: Request the DROP privilege on the object from the DBA.

XOQ-01803: SELECT privilege is required for object "*string*" in schema "*string*".
Cause: An attempt was made to read a metadata object without the SELECT privilege on that object.

Action: Request the SELECT privilege on the object from the DBA.

XOQ-01900: The dimension level has invalid or no unique key attributes.
Cause: The dimension level had an associated materialized view, but it had no unique key attributes.

Action: Create at least one unique key attribute.

XOQ-01901: No measures or dimensionalities are in the cube.
Cause: Measures and dimensionalities were not added to the cube.

Action: Add at least one measure or dimensionality to the cube.

XOQ-01902: No analytic workspace is specified in the analytic workspace primary dimension organization.
Cause: An analytic workspace was not added to the analytic workspace primary dimension organization.

Action: Add an analytic workspace to the analytic workspace primary dimension organization.

XOQ-01903: The unique key attribute has no corresponding base attribute.
Cause: A dimension level whose primary dimension had an associated materialized view contained a unique key attribute that did not have an associated base attribute.

Action: Create a base attribute that corresponds to the unique key attribute.

XOQ-01904: The dimension level has no base attributes.
Cause: A dimension level whose primary dimension had an associated materialized view did not have base attributes.

Action: Create base attributes that correspond to the unique key attributes of the dimension level.

XOQ-01905: GenerateRefreshMV is not specified in AWCubeOrganization.
Cause: The AWCubeOrganization was not marked for a refresh materialized view, but it was marked for rewrite materialized view.

Action: Set GenerateRefreshMV on the AWCubeOrganization if it has been marked for GenerateRewriteMV.

XOQ-01906: The analytic workspace referenced by the AWCubeOrganization does not match that of analytic workspace primary dimension organization "*string*".
Cause: The analytic workspace referred to by the AWCubeOrganization did not match that of its corresponding analytic workspace primary dimension organization.

Action: Set the analytic workspace of the AWCubeOrganization to match that of its corresponding analytic workspace primary dimension organization.

XOQ-01907: The AWCubeOrganization is marked for GenerateRefreshMV, but analytic workspace primary dimension organization "*string*" is not.
Cause: The AWCubeOrganization was marked for GenerateRefreshMV.

Action: If the AWCubeOrganization is marked for GenerateRefreshMV, then mark the analytic workspace primary dimension organization also.

XOQ-01908: The cube has no dimensionalities.
Cause: The AWCubeOrganization was marked for GenerateRefreshMV, but there were no dimensionalities.

Action: Add dimensionalities to the cube and mark the analytic workspace primary dimension organization for GenerateRefreshMV.

XOQ-01909: The hierarchy level has an invalid or no associated dimension level.
Cause: Either a dimension level was not created on the primary dimension, or the primary dimension on the dimension level was not the same as the primary dimension on the hierarchy.

Action: Assure that the hierarchy level is associated with exactly one dimension level in the same primary dimension.

XOQ-01910: The level hierarchy has no hierarchy levels.
Cause: Hierarchy levels were not created on the level hierarchy.

Action: Create at least one level for the hierarchy.

XOQ-01911: The specified default hierarchy does not exist.
Cause: A default hierarchy was specified, but it was not created.

Action: Create a hierarchy on the primary dimension, then set it as the default hierarchy.

XOQ-01912: The cube has no organization.
Cause: Neither an AWCubeOrganization nor a ROLAP cube organization existed on the cube.

Action: Create either an AWCubeOrganization or ROLAP cube organization on the cube.

XOQ-01913: The base measure has an invalid or no data type specified.
Cause: A SQL data type on the base measure was either not specified or invalid.

Action: Create a valid SQL data type on the base measure.

XOQ-01914: The primary dimension has no organization.
Cause: Neither an analytic workspace primary dimension organization nor a ROLAP primary dimension organization existed on the primary dimension.

Action: Create either an analytic workspace primary dimension organization or ROLAP primary dimension organization on the primary dimension.

XOQ-01915: The hierarchy level has no hierarchy level map.
Cause: A hierarchy level map did not exist on the hierarchy level.

Action: Create a hierarchy level map for the hierarchy levels of dimensions with associated materialized views.

XOQ-01916: The AWCubeOrganization has no analytic workspace.
Cause: An analytic workspace was not specified for the AWCubeOrganization.

Action: Create an analytic workspace for AWCubeOrganization in which the cube will be deployed.

XOQ-01917: The base attribute has an invalid or no data type specified.
Cause: A SQL data type on the base attribute was either not specified or invalid.

Action: Create a valid SQL data type on the base attribute.

XOQ-01918: The sparse type must be COMPRESSED when the AWCubeOrganization is marked for GenerateRefreshMV.
Cause: When the AWCubeOrganization was marked for GenerateRefreshMV, the sparse type was not COMPRESSED.

Action: Set the sparse type to COMPRESSED on the AWCubeOrganization.

XOQ-01919: The sparse dimensions of the AWCubeOrganization must contain all dimensions or none.
Cause: The sparse dimensions did not contain either all dimensions or none, although the AWCubeOrganization was marked for GenerateRefreshMV.

Action: Set sparse dimensions on the AWCubeOrganization to include all the dimensions or none.

XOQ-01920: Sparse dimensions of the AWCubeOrganization must be specified with a subset of the cube dimensionalities.
Cause: The sparse dimensions did not specify a subset of the cube dimensionalities, although the AWCubeOrganization was not marked for GenerateRefreshMV.

Action: Set sparse dimensions on the AWCubeOrganization to include a subset of the cube dimensionalities.

XOQ-01921: The dimensionality does not reference a primary dimension.
Cause: A primary dimension was not specified on the dimensionality.

Action: Set the primary dimension on the dimensionality.

XOQ-01922: The dimension referenced in dimensionality "*string*" is specified more than once in this cube.
Cause: Duplicate dimensions were specified in the dimensionality of the cube.

Action: Remove duplicate dimensionality specifications.

XOQ-01923: Assignment "*string*" has no member expression and does not correspond to a custom member.
Cause: An expression or a custom member was missing in the assignment.

Action: Specify an expression for the assignment, or check that its name corresponds to a known custom member.

XOQ-01924: Custom member "*string*" has no member expression.
Cause: An expression was missing in the custom member.

Action: Specify an expression for the custom member.

XOQ-01925: PrecomputePercent cannot be used with this cube.
Cause: PrecomputePercent can be used only with a compressed cube.

Action: Remove the PrecomputePercent property from this cube.

XOQ-01926: PrecomputePercentTop cannot be used with this cube.
Cause: PrecomputePercentTop can be used only with a compressed partitioned cube.

Action: Remove the PrecomputePercentTop property from this cube.

XOQ-01927: invalid PrecomputePercent value
Cause: PrecomputePercent value was not in the valid range. A PrecomputePercent value must be between 0 and 100, and if the cube has a secondary partition level then the PrecomputePercent value cannot be 0.

Action: Change the PrecomputePercent value.

XOQ-01928: invalid PrecomputePercentTop value
Cause: PrecomputePercentTop value was not in the valid range between 0 and 100.

Action: Change the PrecomputePercentTop value.

XOQ-01929: incompatible values for PrecomputePercent and PrecomputePercentTop
Cause: A PrecomputePercentTop value can be greater than 0 only when the PrecomputePercent value is greater than 0.

Action: Change the PrecomputePercent value or the PrecomputePercentTop value.

XOQ-01930: The cube dimensionality map has no mapped dimension.
Cause: A mapped dimension was not specified for the cube dimensionality map.

Action: Specify a mapped dimension on the cube dimensionality map. The mapped dimension must be the dimension or hierarchy level that corresponds to the mapped data.

XOQ-01931: MeasureStorage is incompatible with MVoption.
Cause: MeasureStorage was defined as SHARED.

Action: Specify MeasureStorage as INDEPENDENT.

XOQ-01932: NullStorage is incompatible with MVoption.
Cause: NullStorage was defined as GENERIC.

Action: Specify NullStorage as MV_READY.

XOQ-01933: invalid list of sparse dimensions
Cause: List of sparse dimensions was not contiguous among all cube dimensions.

Action: Change the order of the cube dimensions.

XOQ-01934: Sparse dimensions are not last.
Cause: Sparse dimensions were not last in the list cube dimensions, as required for compressed cubes.

Action: Change the order of the cube dimensions.

XOQ-01935: invalid definition of SPARSE_GLOBAL cube
Cause: SPARSE_GLOBAL cube must have at least two dimensions, at least one sparse dimension, and partitions.

Action: Change the definition of the cube.

XOQ-01936: invalid partition dimension for SPARSE_GLOBAL cube
Cause: SPARSE_GLOBAL cube cannot have a sparse partition dimension.

Action: Change the definition of the cube.

XOQ-01937: incompatible HierarchyConsistencyRule and MVOption
Cause: HierarchyConcistencyRule must be set to STAR_CONSISTENT for this MVOption.

Action: Change the HierarchyConsistencyRule.

XOQ-01938: PrecomputeCondition cannot be used with this cube.
Cause: PrecomputeCondition was used with a compressed cube, but it requires an uncompressed cube.

Action: Remove PrecomputeCondition property from this cube.

XOQ-01939: MappedDimension "*string*" specified for a CubeDimensionalityMap is not mapped.
Cause: The MappedDimension property of a CubeDimensionalityMap pointed to a dimension that was not mapped.

Action: Change the MappedDimension property to reference a dimension that is mapped, or add a map to the current MappedDimension. For example, if MappedDimension points to a DimensionLevel, then the DimensionLevel must contain a MemberListMap.

XOQ-01940: BaseAttribute "*string*" is specified on a DimensionLevel as both a UniqueKeyAttribute and a VisibleAttribute.
Cause: A BaseAttribute on a DimensionLevel can be specified as either a UniqueKeyAttribute or a VisibleAttribute, but not both.

Action: Remove either the Visible or the UniqueKey setting for the attribute.

XOQ-01941: The HierarchyLevelMap for HierarchyLevel "*string*" must contain a KeyExpression and a Query.
Cause: HierarchyLevelMap missing a KeyExpression, Query, or both.

Action: Specify a KeyExpression and Query for the HierarchyLevelMap.

XOQ-01942: A BaseAttribute cannot be removed while it is a UniqueKeyAttribute on DimensionLevel "*string*".
Cause: The BaseAttribute is a UniqueKeyAttribute of a DimensionLevel.

Action: Remove the attribute as a UniqueKeyAttribute.

XOQ-01943: An AttributeMap refers to a nonexistent attribute.
Cause: An AttributeMap referred to a nonexistent attribute.

Action: Ensure all AttributeMaps point to an existing attribute.

XOQ-01944: BaseAttribute "*string*" already exists on this dimension object.
Cause: A BaseAttribute was added to a dimension object more than once.

Action: Do not add the same BaseAttribute to a dimension object.

XOQ-01945: The cube dimensionality map has no join condition.
Cause: A join condition was not specified for the CubeDimensionalityMap.

Action: Specify a join condition on the cube dimensionality map.

XOQ-01946: BaseAttribute "*string*" is mapped by more than one attribute map.
Cause: A BaseAttribute was mapped more than once.

Action: Do not map the same BaseAttribute more than once.

XOQ-01947: Measure "*string*" is mapped by more than one MeasureMap.
Cause: A measure was mapped more than once.

Action: Do not map the same measure more than once.

XOQ-01948: CubeDimensionality "*string*" is mapped by more than one CubeDimensionalityMap.
Cause: A cube dimensionality was mapped more than once.

Action: Do not map the same cube dimensionality more than once.

XOQ-01949: The AWCubeOrganization for cube "*string*" is marked as DENSE but contains SPARSE dimensions.
Cause: The AWCubeOrganization was marked as DENSE but contained SPARSE dimensions.

Action: Either mark the cube as SPARSE, or remove the SPARSE dimensions.

XOQ-01950: The AWCubeOrganization for cube "*string*" contains multiple BuildSpecifications with the same name.
Cause: The AWCubeOrganization contains multiple BuildSpecifications with the same name.

Action: Ensure all BuildSpecifications on an AWCubeOrganization are named uniquely.

XOQ-01951: A time dimension requires at least two of the following attributes: END_DATE, START_DATE and TIMESPAN.
Cause: A time dimension was created without the required attributes.

Action: Add the required attributes and mark them as the appropriate type.

XOQ-01952: The CubeMap for cube "*string*" must contain either a query or a From clause.
Cause: The CubeMap did not have a query or From clause.

Action: Specify a query or From clause for the CubeMap.

XOQ-01953: cannot commit changes to CWM or AWXML metadata
Cause: The transaction contained changes to metadata objects stored in CWM or AWXML format.

Action: Use the DBMS_CUBE.UPGRADE function to upgrade the metadata objects to a format that supports changes.

XOQ-01954: Object cannot be renamed to "*string*" because that name is already being used by an existing object.
Cause: The transaction attempted to change an object name to a name that was already taken.

Action: Change the object name to a different name and commit the transaction again.

XOQ-01955: Cannot rename object to "*string*" because that name is invalid.
Cause: The transaction attempted to change an object name to a name that was either too long or contained invalid characters.

Action: Change the object name to a different name, and commit the transaction again.

XOQ-01956: The object cannot be renamed.
Cause: The transaction attempted to change the name of a database object such as a table or a column. This object cannot be renamed through the OLAP API client. It must be renamed with a DDL statement such as RENAME or ALTER TABLE.

Action: Restore the object name to its previous value or rollback the transaction containing the rename. Then use an appropriate DDL statement to rename the object.

XOQ-01957: A cube cannot have both rewrite materialized views and either a ragged or a skip-level hierarchy. The hierarchy is "*string*".
Cause: The cube had rewrite materialized views and either a ragged or a skip-level hierarchy.

Action: Either mark the cube to exclude rewrite materialized views, or adjust the hierarchy so it is neither ragged nor skip-level.

XOQ-01958: The derived measure has an invalid data type or no data type.
Cause: Either a valid SQL data type was not specified on the derived measure, or the data type could not be derived from the expression.

Action: Create a valid SQL data type on the derived measure.

XOQ-01959: The derived measure has a missing or invalid expression.
Cause: An expression on the derived measure was either not specified or invalid.

Action: Create a valid expression on the derived measure.

XOQ-01960: Circular dependency exists between *string* "*string*" and *string* "*string*".
Cause: The OLAP API transaction contained two or more metadata objects that depend on each other.

Action: Remove either one or both of the properties that cause the circular dependency.

XOQ-01961: Object *string* "*string*" cannot be dropped while it is still a dependency of *string* "*string*".
Cause: An attempt was made to drop a metadata object that was referenced by another metadata object.

Action: Remove the reference to the metadata object being dropped.

XOQ-01962: Object "*string*" has an invalid name.
Cause: An attempt was made to create an object with a name that was too long or contained invalid characters.

Action: Use a valid name and commit the transaction again.

XOQ-01963: MappedDimension "*string*" does not match CubeDimensionality "*string*" specified for a CubeDimensionalityMap.
Cause: The MappedDimension property of a CubeDimensionalityMap did not point to a dimension or subdimension that had the same dimensionality as the CubeDimensionalityMap.

Action: Change the MappedDimension property to reference a dimension with the same dimensionality as the CubeDimensionalityMap.

XOQ-01964: Cannot drop MappedDimension "*string*" of the CubeDimensionalityMap.
Cause: An attempt was made to drop a dimension that is a MappedDimension of a CubeDimensionalityMap.

Action: Remove the reference to the dimension being dropped from the CubeDimensionalityMap.

XOQ-01965: Missing Cube Dimensionality Map for Cube Dimensionality "*string*".
Cause: A CubeDimensionalityMap was not found for a CubeDimensionality.

Action: Add a CubeDimensionalityMap for the CubeDimensionality.

XOQ-01966: Cannot drop PartitionLevel "*string*" of AWCubeOrganization.
Cause: An attempt was made to drop a dimension that is a PartitionLevel of an AWCubeOrganization Map.

Action: Remove the reference to the dimension being dropped from the AWCubeOrganization.

XOQ-01967: Attribute "*string*" is invalid.
Cause: An attempt was made to commit a dimension with an invalid attribute.

Action: Correct the attribute or delete it from the dimension.

XOQ-01968: UniqueKey attribute "*string*" has an invalid multilingual flag set.
Cause: The attribute had the multilingual flag set. An attribute cannot have this flag set and be a unique key.

Action: Remove this flag on the attribute or do not make the attribute a unique key.

XOQ-01969: Attribute cannot be both multilingual and indexed.
Cause: An indexed attribute had the multilingual flag set.

Action: Unset the createIndex flag on the analytic workspace attribute organization or unset the populate lineage flag on the attribute.

XOQ-01970: Attribute "*string*" has no attribute map.
Cause: The attribute had no corresponding attribute map on the hierarchy level.

Action: Create an attribute map on the attribute.

XOQ-01971: A dependency cannot be added on the organizationalSchema to the cube because measure "*string*" is invalid.
Cause: An attempt was made to commit an organizationalSchema that contained an invalid measure.

Action: Correct the measure.

XOQ-01972: A dependency cannot be added on the organizationalSchema to the cube because the cube has been deleted.
Cause: An attempt was made to commit an organizationalSchema that contained a deleted cube.

Action: Remove the cube reference from the organizationalSchema.

XOQ-01973: UniqueKey attribute "*string*" on the dimension level is invalid.
Cause: The uniqueKey attribute was invalid.

Action: Correct the uniqueKey attribute or delete it from the dimension level.

XOQ-01974: Attribute map "*string*" is invalid.
Cause: An attribute on the attribute map was invalid.

Action: Correct the attribute or delete it from the dimension.

XOQ-01975: The DimensionMap for Dimension "*string*" must contain either a query or a From clause
Cause: The DimensionMap did not have a query or From clause.

Action: Specify a query or From clause for the DimensionMap.

XOQ-01976: No key expression is defined on this dimension map owned by "*string*".
Cause: A key expression was not defined on the dimension map.

Action: Define a key expression on the dimension map.

XOQ-01977: Measure "*string*" does not exist in cube "*string*".
Cause: The measure associated with the measure map did not exist in the cube.

Action: Correct the measure map or add the measure to the cube.

XOQ-01978: The number of dimensionalities on cube "*string*" does not match the number of cube dimensionality maps on the cube map.
Cause: The number of cube dimensionalities did not equal the number of cube dimensionality maps on the cube map.

Action: Correct the cube dimensionality mappings.

XOQ-01979: Measure map "*string*" refers to an invalid measure, "*string*".
Cause: The measure was invalid.

Action: Correct the measure or delete it from the cube.

XOQ-01980: Dimension "*string*" is created before the attribute cube GID relation is added.
Cause: The dimension was created before the attribute cube GID relation was added.

Action: Add the attribute cube GID relation.

XOQ-01981: A generic metadata validation error has occurred.
Cause: An attempt was made to commit with invalid metadata.

Action: Correct the metadata.

XOQ-01982: A generic metadata validation error occurred against "*string*".
Cause: An attempt was made to commit with invalid metadata.

Action: Correct the metadata.

XOQ-01983: The dimension "*string*" is referenced more than once in the precompute list of the AWCubeOrganization.
Cause: Duplicate dimensions were specified in the precompute list of the AWCubeOrganization.

Action: Remove duplicate dimensions from the precompute list.

XOQ-01984: The dimension "*string*" referenced in the precompute list of the AWCubeOrganization is not part of cube "*string*".
Cause: A dimension specified in the precompute list of the AWCubeOrganization is not part of the cube.

Action: Remove the dimension from the precompute list.

XOQ-01985: The ET attribute prefix of "*string*" specified for dimension "*string*" of cube "*string*" is invalid.
Cause: The ET attribute prefix was invalid. The ET attribute prefix: 1) Must be fewer than six characters 2) Cannot be a substring of any MdmDimensionality or MdmMeasure columnn names.

Action: Correct the ET attribute prefix, or omit the prefix to use the default value.

XOQ-01986: The LevelHierarchy "*string*" contains more than one HierarchyLevel for DimensionLevel "*string*".
Cause: If HierarchyConsistencyRule is CONSISTENT or STAR_CONSISTENT, then a DimensionLevel within a LevelHierarchy can have only one HierarchyLevel.

Action: Correct the HierarchyLevels in the LevelHierarchy.

XOQ-01987: A subset of the following HierarchyLevels is ordered inconsistently in PrimaryDimension "*string*": "*string*".
Cause: If HierarchyConsistencyRule is CONSISTENT or STAR_CONSISTENT, then HierarchyLevels cannot form loops between LevelHierarchies.

Action: Eliminate the loop.

XOQ-01988: name conflict between *string* "*string*" and *string* "*string*"
Cause: Two metadata objects with the same parent had the same name. This duplication was allowed in Oracle Database 10 Release 2 (10.2) and earlier, but it is not valid for metadata objects in Oracle Database 11 Release 1 (11.1) and later.

Action: Run DBMS_CUBE.INITIALIZE_CUBE_UPGRADE which will populate a table (default name CUBE_UPGRADE_INFO) with new names to resolve the conflicts.

XOQ-01989: Level "*string*" is not uniquely mapped.
Cause: More than one level was mapped to the same expression. If a dimension has materialized views, it cannot have more than one level mapped to the same expression.

Action: Uniquely map all levels or create the dimension without materialized views.

XOQ-01990: Cube "*string*" cannot override the aggregation maps for this measure.
Cause: The consistent solve specification was invalid on the measure.

Action: Modify the cube so it is uncompressed with independent measure storage.

XOQ-01991: The data type of this measure in cube "*string*" or its mapped expression is incompatible with materialized views.
Cause: The data type of a numeric measure in a cube with a materialized view had restricted scale or precision.

Action: Change the data type to NUMBER without any qualifications.

XOQ-01992: The OLAP DML data type cube storage qualifications "*string*" in cube "*string*" are incompatible with materialized views.
Cause: The cube storage data type of the AWCubeOrganization with a materialized view had restricted scale or precision.

Action: Remove precision and scale restrictions on the NUMBER data type from the cube storage.

XOQ-01993: The data type of base attribute "*string*" or its mapped expression is incompatible with materialized views.
Cause: The data type of the attribute or its mapped expression is not supported by materialized views.

Action: Change the data type of the attribute or its mapped expression.

XOQ-01994: Primary dimension "*string*" and the cube have incompatible organizations.
Cause: The organizations of the primary dimension and of the cube were incompatible. If a cube has an AWCubeOrganization, then all of its primary dimensions must have analytic workspace primary dimension organizations.

Action: Create an analytic workspace primary dimension organization on the primary dimension.

XOQ-01995: Object "*string*" does not exist.
Cause: A cube or dimension was defined in terms of an object that does not exist.

Action: Create the missing object or redefine the cube or dimension.

XOQ-01996: The object cannot be renamed.
Cause: An attempt was made to rename an object without the necessary permissions to alter all of the dependent objects.

Action: Do not attempt to rename the object.

XOQ-01997: A partition level of the cube is invalid.
Cause: The hierarchy level specified as a partition level of the cube was invalid.

Action: Remove the partition level from the cube or specify a valid hierarchy level.

XOQ-01998: cannot partition a cube by two different dimensions: "*string*" and "*string*"
Cause: The cube was defined with partitioning by levels from different dimensions.

Action: Ensure that all partition levels for the cube belong to the same dimension.

XOQ-01999: More than one ORDER BY element is specified in the CUSTOMORDER clause.
Cause: The CUSTOMORDER contained more than one ORDER BY element.

Action: Specify only one ORDER BY element in the CUSTOMORDER clause.

XOQ-02000: PrimaryDimension "*string*" is not a valid TimeDimension for the time series expression.
Cause: PrimaryDimension was not a TimeDimension.

Action: Specify a TimeDimension for the time series expression.

XOQ-02001: table "*string*" not found
Cause: A table used to map a cube or dimension does not exist. It may have been deleted after the original mapping.

Action: Create the table or remap to a different table.

XOQ-02002: Table "*string*" does not contain column "*string*".
Cause: A column used to map a cube or dimension does not exist. It may have been deleted after the original mapping.

Action: Create the column or remap to a different column.

XOQ-02003: Expression "*string*" is only valid within a model.
Cause: The expression can only be specified as the right hand side of a model assignment.

Action: Redefine the expression to remove all model-specific features.

XOQ-02004: object *string* "*string*" not found
Cause: The referenced object may have been deleted.

Action: Specify an existing object.

XOQ-02005: The *string* "*string*" referenced from object "*string*" is not found.
Cause: The referenced object was not found. It may have been deleted.

Action: Specify an existing object.

XOQ-02006: invalid reference to table "*string*" in mapping "*string*"
Cause: An expression in a mapping object referred to a table that is not part of the mapping query.

Action: Make sure that all expressions in the mapping object refer only to columns from the mapping query.

XOQ-02007: cannot parse OLAP syntax string
Cause: The OLAP syntax string was invalid and could not be parsed.

Action: Replace the syntax with a valid syntax string.

XOQ-02008: cannot parse OLAP syntax string "*string*": *string*
Cause: The OLAP syntax string was invalid and could not be parsed.

Action: Replace the syntax with a valid syntax string.

XOQ-02009: Function "*string*" is not supported by the analytic workspace.
Cause: A function was specified that is not supported by the OLAP DML language.

Action: Remove the unsupported function from the expression.

XOQ-02010: Data type "*string*" is not supported by the analytic workspace.
Cause: A data type was specified that is not supported by the OLAP DML language.

Action: Use a supported data type.

XOQ-02011: invalid column expression "*string*"
Cause: The OLAP DML expression was invalid in this context.

Action: Replace the expression with a valid syntax string.

XOQ-02012: missing expression in object "*string*"
Cause: A mapping object did not contain all the expressions needed to perform the requested action.

Action: Add the necessary expressions to the mapping object.

XOQ-02013: Missing query and From clause in object "*string*".
Cause: A mapping object contained neither a query nor a From clause.

Action: Add the necessary query or From clause to the mapping object.

XOQ-02014: missing condition in object "*string*"
Cause: A mapping object did not contain all the conditions that were needed to perform the requested action.

Action: Add the necessary conditions to the mapping object.

XOQ-02015: Dimension or hierarchy has too many Grouping ID columns.
Cause: The number of Grouping ID columns exceeded the maximum allowed columns. Possible causes are: 1) Attribute spreading was enabled for some attributes in the dimension. 2) There were too many levels defined for the dimension or hierarchy.

Action: Do one of the following: 1) Disable attribute spreading for some or all of the attributes. 2) Eliminate some attributes. 3) Eliminate some levels.

XOQ-02017: The object "*string*" is duplicated in the syntax expression "*string*".
Cause: A list in a syntax expression contained a duplicated object.

Action: Remove the duplicated object.

XOQ-02100: cannot parse server XML string
Cause: An internal error occurred while parsing query or metadata definitions.

Action: Examine the error output for more detail about the reason for the failure.

XOQ-02101: Invalid object type is used for object reference with id "*string*".
Cause: An object of the wrong type was specified as an object reference in the XML document.

Action: Correct the XML document to reference an object of the correct type.

XOQ-02102: cannot find object "*string*"
Cause: An object that does not exist was referenced in the XML document.

Action: Create the referenced object or correct the XML document to reference an existing object.

XOQ-02103: invalid XML attribute "*string*" with value "*string*" for element "*string*" and object "*string*"
Cause: An XML attribute in the XML document was invalid.

Action: Correct the invalid attribute in the XML document.

XOQ-02104: invalid XML element "*string*"
Cause: An XML element in the XML document was invalid.

Action: Correct the invalid element in the XML document.

XOQ-02105: invalid XML element "*string*" for object "*string*"
Cause: An XML element in the XML document was invalid.

Action: Correct the invalid element in the XML document.

XOQ-02106: invalid property "*string*" with value "*string*" for object "*string*" in XML document
Cause: The XML document did not specify the object property correctly.

Action: Correct the invalid property in the XML document.

XOQ-02107: invalid property "*string*" with key::value "*string*" for object "*string*" in XML document
Cause: The XML document did not specify the object property correctly.

Action: Correct the invalid property in the XML document.

XOQ-02108: invalid XML document: *string* at line *string*
Cause: An internal error occurred while parsing the XML document.

Action: Examine the error output for more detail about the reason for the failure.

XOQ-02110: a *string* with ID "*string*" cannot be created because another object with that ID already exists.
Cause: An attempt was made through the XML to create an object with an ID that was already used on an existing object.

Action: Rename the new object or delete the existing one.

XOQ-02111: Object type "*string*" is invalid for export.
Cause: An attempt was made to export an object of an inappropriate type. Only objects of type analytic workspace, database schema, cube, cube dimension, measure folder, and cube build process are allowed for export.

Action: If the object is a subobject of a cube or cube dimension, then call the export procedure passing the cube or cube dimension as an argument instead of the object itself.

XOQ-02112: invalid XML attribute "*string*" with value "*string*" for element "*string*"
Cause: An XML attribute in the XML document was invalid.

Action: Correct the invalid attribute in the XML document.

XOQ-02113: Unable to parse XML because the compatibility setting is below the minimum setting of 11.0.0.0.0.
Cause: The compatibility setting was below the minimum for parsing XML.

Action: Set the compatibility to 11.0.0.0.0 or higher.

XOQ-02114: Unable to write XML because the compatibility setting is below the minimum setting of 11.0.0.0.0.
Cause: The compatibility setting was below the minimum for writing XML.

Action: Set the compatibility to 11.0.0.0.0 or higher.

XOQ-02115: Metadata object type "*string*" cannot be renamed on import.
Cause: The object type in the rename table was not a leaf object type, or the leaf object type could not be renamed.

Action: Enter a valid object type in the rename table.

XOQ-02116: Metadata object id "*string*" is not valid.
Cause: The object id in the rename table was null or contained invalid characters.

Action: Enter a valid object id in the rename table.

XOQ-02117: The new name "*string*" for object "*string*" is not valid.
Cause: The new name in the rename table was either null or empty.

Action: Enter a valid new name in the rename table.

XOQ-02118: Two new names for object "*string*" with type "*string*" are in the rename table.
Cause: The rename table contained two different new names for the same object.

Action: Remove one of the rows from the rename table.

XOQ-02200: cannot upgrade object "*string*"
Cause: The object could not be upgraded.

Action: Apply the modifications suggested by the other error messages that typically accompany this one. Then attempt the upgrade again. If you cannot correct the error, try exporting the XML definition for the object using DBMS_CUBE.EXPORT_XML, and reimporting the object into a different schema.

XOQ-02201: object "*string*" not found
Cause: The upgrade command referred to an object that did not exist.

Action: Correct the object identifier and try again.

XOQ-02202: Object "*string*" cannot be upgraded because its name is the same as an existing object.
Cause: The upgrade failed because the object name was the same as the name of an existing object. In earlier versions of Oracle Database, a cube, dimension, or measure folder could have the same name as a database table. In Oracle Database 11g and later, cubes, dimensions, measure folders, and RDBMS tables must all have different names.

Action: Change the object name and try the upgrade again.

XOQ-02203: Analytic workspace "*string*" cannot be upgraded because it contains customization "*string*".
Cause: The upgrade failed because the analytic workspace contained a customization. Customizations are not supported in releases after Oracle Database 10g.

Action: Remove the customization and attempt the upgrade again. To remove all customizations, call the upgrade procedure with the DeleteCustomizations option set to YES.

XOQ-02204: Cannot upgrade object "*string*": only analytic workspaces and database schemas are valid arguments to the UPGRADE command.
Cause: The identified argument of the UPGRADE command was an object that was neither type oracle.olapi.metadata.mdm.MdmDatabaseSchema nor type oracle.olapi.metadata.deployment.AW.

Action: If the object is in an analytic workspace or a database schema, call the UPGRADE command and use the analytic workspace or the database schema as an argument instead of the object.

XOQ-02205: Cannot upgrade analytic workspace "*string*": the analytic workspace version is too old.
Cause: An attempt was made to upgrade an analytic workspace that was formatted for Oracle Database 10.1.0.2 or earlier. Only analytic workspaces from Oracle Database 10.1.0.3 and later can be upgraded using DBMS_CUBE.UPGRADE.

Action: Upgrade the analytic workspace to release 10.1.0.3 or later using methods described in the OLAP documentation for Oracle 10.1.0.3. Then use DBMS_CUBE.UPGRADE to upgrade the analytic workspace to Release 11g.

XOQ-02206: Cannot upgrade object "*string*": the metadata is already using the current version.
Cause: An attempt was made to upgrade an analytic workspace that is already formatted correctly for the current version.

Action: Do not use the DBMS_CUBE.UPGRADE facility for this analytic workspace.

XOQ-02207: cannot process mapping "*string*": *string*
Cause: An object stored in an Oracle Database 10g analytic workspace contained an invalid mapping.

Action: Replace the mapping with a valid one. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02208: Object contains multiple mappings.
Cause: A dimension or measure stored in an Oracle OLAP 10g analytic workspace contained multiple mappings. This is not supported in releases after Oracle Database 10g.

Action: Modify the object to use only one mapping. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02209: cannot process aggregation "*string*": *string*
Cause: An object stored in an Oracle Database 10g analytic workspace contained an invalid aggregation.

Action: Replace the aggregation with a valid one. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02210: Legacy metadata contains invalid mappings.
Cause: An object stored in an Oracle Database 10g analytic workspace contained mappings that could not be converted to post-10g format.

Action: Examine the list of invalid mappings and correct the errors reported for each object using Analytic Workspace Manager in 10g compatibility mode. If the problem persists, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options.

XOQ-02211: The MdmPrimaryDimension cannot be upgraded because a compile step failed with this message: "*string*".
Cause: A dimension could not be compiled.

Action: Correct the compilation errors in the analytic workspace. If the problem persists, set the IgnoreCompileErrors option to YES in the UPGRADE options. This allows other objects in the analytic workspace to be upgraded. Then fix and recompile the problem dimension so you can use it.

XOQ-02212: The expression for this MdmMeasure cannot be read. Analytic workspace "*string*" was not attached when the connection was opened.
Cause: The Oracle Database 10g analytic workspace contained a derived measure. Derived measures can only be upgraded if the analytic workspace is attached before the first call to DataProvider.createSession or DataProvider.initialize.

Action: Attach the analytic workspace before calling DataProvider.createSession or DataProvider.initialize. Alternatively, set the IgnoreMappingErrors option to YES in the UPGRADE or COMMIT options to suppress this error message. The derived measure will become an MdmBaseMeasure after the upgrade.

XOQ-02213: cannot read legacy metadata
Cause: The database contained metadata stored in an Oracle Database 10g analytic workspace or in CWM format. The metadata could not be converted to post-10g format because of problems in the stored metadata.

Action: Examine the list of errors and make corrections to the metadata using Analytic Workspace Manager in 10g compatibility mode. If the problem persists and is preventing you from accessing 11g metadata, set the MetadataReaderMode option to 11_ONLY in the connection properties.

XOQ-02214: error reading legacy metadata object: *string*
Cause: One of the metadata objects, which was stored in either an Oracle Database 10g analytic workspace or CWM format, could not be converted to post-10g format.

Action: Make corrections to the metadata using Analytic Workspace Manager in 10g compatibility mode. If the problem persists and is preventing you from accessing post-10g metadata, set the MetadataReaderMode option to 11_ONLY in the connection properties.

XOQ-02300: Build completed with warnings.
Cause: The build completed successfully, but some of the data may be incorrect due to inconsistencies in the metadata or input data.

Action: If cube build logging is enabled, examine the OUTPUT column of the cube build log for more details.

XOQ-02400: An invalid cube dimension name was specified in a call to function DBMS_CUBE.GET_BREAKOUT_DIMENSIONS.
Cause: The cube dimension name was invalid.

Action: Specify a valid cube dimension name.

XOQ-02401: An invalid cube name was specified in the drillThrough operation.
Cause: The cube name was invalid.

Action: Specify a valid cube name.

XOQ-02402: Cube "*string*" is not dimensioned by "*string*".
Cause: The specified dimension was not a dimension of the cube.

Action: Specify a valid dimension of the cube.

XOQ-02403: QDR "*string*" is invalid.
Cause: The specified qualified data reference was invalid.

Action: Specify a valid qualified data reference.

XOQ-02404: The cube specified in QDR "*string*" is invalid.
Cause: The cube specified in the qualified data reference was invalid.

Action: Specify a valid cube in the qualified data reference.

XOQ-02405: The measure specified in QDR "*string*" is invalid.
Cause: The measure specified in the qualified data reference was invalid.

Action: Specify a valid stored measure in the qualified data reference. A calculated measure or an expression is not allowed.

XOQ-02406: Dimension "*string*" on cube "*string*" is not referenced in the QDR qualifier.
Cause: The specified dimensions referenced in the qualified data reference did not include all the dimensions on the cube.

Action: Specify valid dimensions in the qualified data reference.

XOQ-02407: The expression "*string*" for cube dimension "*string*" in the QDR is not supported.
Cause: A dimension specified in the qualified data reference is currently not supported.

Action: Specify a valid expression value for the cube dimension in the qualified data reference.

XOQ-02408: Cube "*string*" is not dimensioned by QDR qualifier "*string*".
Cause: The dimension specified in the qualified data reference was not a dimension of the cube.

Action: Specify a valid dimension of the cube in the qualified data reference.

XOQ-02409: Invalid ET column "*string*" specified in a call to function DBMS_CUBE.DRILL_THROUGH.
Cause: An invalid embedded-total column was specified for drill through.

Action: Specify a valid embedded-total column for drill through.

XOQ-02410: ET column "*string*" does not correspond to a valid metadata object.
Cause: An invalid embedded-total column was specified for drill through.

Action: Specify a valid embedded-total column for drill through.

XOQ-02411: Invalid mapped object "*string*" in drill through
Cause: An invalid mapped object was encountered when processing the ET columns during drill through.

Action: Specify a valid mapping for the metadata object.

XOQ-02412: Invalid member "*string*" in cube dimension "*string*" in the drill-through QDR
Cause: An invalid member value was specified in the qualified data reference for a cube dimension.

Action: Specify a valid member value in the qualified data reference for the cube dimension.

XOQ-02413: Drill through is not allowed on cube "*string*".
Cause: An invalid cube was specified in a call to function DBMS_CUBE.DRILL_THROUGH.

Action: Specify a valid cube to perform drill through.

XOQ-02414: Cube dimension "*string*" was specified more than once in QDR "*string*".
Cause: A duplicate dimension was specified in the qualified data reference.

Action: Specify a cube dimension for every dimensionality in the qualified data reference.

XOQ-02415: Specified dimension member not found in a valid hierarchy of cube dimension "*string*".
Cause: The dimension member is not part of any valid hierarchy.

Action: Ensure that the dimension member is included in a valid hierarchy.

XOQ-02416: More than one Hierarchy ET view on cube dimension "*string*" was specified for drill through.
Cause: More than one Hierarchy ET view on the same dimension was specified for drill through.

Action: Ensure that only one Hierarchy ET view per dimension is referenced in drill through.

XOQ-02500: Derived attribute "*string*" is not a DIM_KEY.
Cause: The derived attribute specified in the CUSTOMORDER clause was not the DIM_KEY. A derived attribute in a CUSTOMORDER clause can only be the DIM_KEY.

Action: Specify the DIM_KEY or use a base attribute in the CUSTOMORDER clause.

XOQ-02501: Attribute "*string*" is not part of the primary dimension.
Cause: The attribute specified in the CUSTOMORDER clause was not part of the primary dimension. An attribute in the CUSTOMORDER clause must be part of the primary dimension.

Action: Specify an attribute of the CUSTOMORDER clause that is part of the primary dimension.

XOQ-02502: Attribute "*string*" is not a visible attribute of the hierarchy.
Cause: The attribute specified in the CUSTOMORDER clause was not a visible attribute of the hierarchy. An attribute in the CUSTOMORDER clause of a hierarchy must be a visible attribute of the hierarchy.

Action: Specify a visible attribute in the CUSTOMORDER clause of the hierarchy.

XOQ-02503: No attribute is specified for the CUSTOMORDER clause.
Cause: The object specified in the CUSTOMORDER clause was not an attribute. Only an attribute can be specified in the CUSTOMORDER clause.

Action: Specify an attribute in the CUSTOMORDER clause.

XOQ-02504: The object contains multiple descriptions of type "*string*" for the language "*string*".
Cause: An object contained multiple descriptions for the same type on the same language.

Action: Ensure there is only one description on an object for each type for each language.

XOQ-02505: The CubeMap for cube "*string*" contains both a query and a From clause.
Cause: The CubeMap had a query and a From clause.

Action: Specify either a query or a From clause for the CubeMap but not both.

XOQ-02506: The DimensionMap for dimension "*string*" contains both a query and a From clause.
Cause: The DimensionMap had a query and a From clause.

Action: Specify either a query or From clause for the DimensionMap but not both.

XOQ-02507: The DimensionMap for dimension "*string*" contains a From clause with duplicate queries.
Cause: The DimensionMap had a From clause with duplicate queries.

Action: Remove the duplicate queries in the From clause for the DimensionMap.

XOQ-02508: The CubeMap for cube "*string*" contains a From clause with duplicate queries.
Cause: The CubeMap had a From clause with duplicate queries.

Action: Remove the duplicate queries in the From clause for the CubeMap.

XOQ-02509: Analytic workspace "*string*" has an invalid name.
Cause: An attempt was made to create an analytic workspace with an invalid name. Analytic workspace names cannot contain lower-case letters.

Action: Change the analytic workspace name to a valid name, and commit the transaction.

XOQ-02510: The SolvedMap for Object "*string*" contains a From Clause with multiple queries
Cause: The SolvedMap had a From Clause with multiple queries.

Action: Remove multiple queries in the From Clause for the SolvedMap.

XOQ-02511: The cube storage DATE data type is incompatible with materialized views.
Cause: The AWCubeOrganization had a cube storage data type of DATE, which was incompatible with materialized views.

Action: Either change the cube storage data type to DATETIME or create the cube without materialized views.

XOQ-02512: *string*\nXOQ-02512: OLAP DML error while compiling formula for measure "*string*"
Cause: The measure expression in the derived measure could not be compiled.

Action: Redefine the measure expression for the derived measure.

XOQ-02513: A rewrite materialize view cannot be created for cube "*string*" because the aggregation from the consistent solve specification is incompatible.
Cause: The consistent solve specification specified an aggregation that was not uniform over all dimensions and hierarchies or was not one of the supported aggregation operators.

Action: Change the aggregation on the consistent solve specification to be uniform and one of the supported aggregation types.

XOQ-02514: The attribute "*string*" is mapped to different expressions on the two HierarchyLevels "*string*" and "*string*".
Cause: An attribute was mapped to different expressions on two different HierarchyLevels that have the same DimensionLevel.

Action: Change the attribute mappings so that the target expression is the same on all HierarchyLevels having the same DimensionLevel.

XOQ-02515: The MVCreationOptions of REFRESH ON COMMIT, REFRESH START WITH, and REFRESH NEXT are not supported.
Cause: The MVCreationOptions of either an AWPrimaryDimensionOrganization or an AWCubeOrganization contained unsupported settings.

Action: Ensure that the MVCreationOptions of AWPrimaryDimensionOrganizations and AWCubeOrganizations do not set REFRESH ON COMMIT and do not specify REFRESH START WITH or REFRESH NEXT.

XOQ-02516: The MdmValueHierarchy has no value hierarchy map.
Cause: The MdmValueHierarchy did not contain a value hierarchy map.

Action: Add a SolvedValueHierarchyMap to all value hierarchies contained in dimensions with associated materialized views.

XOQ-02517: The data type "*string*" of the base attribute or base measure is different from the mapped expression "*string*".
Cause: Either the base attribute or base measure with the mapped expression was set to an inconsistent data type, or it was mapped to an expression of a different data type from its fixed data type.

Action: When changing a mapped expression for a base attribute or base measure, ensure that the expression has the same data type; otherwise, set the data type of the base attribute or base measure to NULL first. When a base attribute or a base measure has an existing mapped expression, do not set it to a different data type.

XOQ-02518: Object cannot be renamed to "*string*" because that name is already being used by an existing object.
Cause: A row in the CUBE_UPGRADE_INFO table had a value in the NEW_NAME column that was not unique.

Action: Fix the CUBE_UPGRADE_INFO table by using an UPDATE command or running DBMS_CUBE.INTIALIZE_CUBE_UPGRADE.

XOQ-02519: The mapped dimension in the cube dimensionality map of a cube materialized view must be either a dimension level or a hierarchy level.
Cause: "The mapped dimension in the cube dimensionality map of a cube materialized view was a primary dimension."

Action: "Change the mapped dimension in the cube dimensionality map of a cube materialized view to a dimension level or a hierarchy level."

XOQ-02520: The mapped dimension in the cube dimensionality map of a query-rewrite-enabled cube materialized view must be the lowest hierarchy level on all hierarchies in the dimension.
Cause: "The mapped dimension in the cube dimensionality map of a query-rewrite-enabled cube materialized view was not the lowest hierarchy level on a hierarchy in the dimension."

Action: "Change the mapped dimension in the cube dimensionality map of a query-rewrite-enabled cube materialized view to a hierarchy level or a dimension level that is the lowest hierarchy level on all hierarchies in the dimension."

XOQ-02521: The object description of type "*string*" for language "*string*" was truncated to the maximum number of characters (*string*).
Cause: An object had a description that was too long. The description was shortened automatically.

Action: No action is necessary. Consider rephrasing the description to make it fit within the maximum length.

XOQ-02522: The values for attribute "*string*" in level "*string*" must be unique.
Cause: The IsLevelUnique flag was set to true for the attribute, but the attribute values in the given level were not unique.

Action: Either set the IsLevelUnique flag to false, or load unique values into the attribute.

XOQ-02523: unsupported data type "*string*"
Cause: The data type specified for cube storage was invalid or not supported.

Action: Specify a supported SQL data type.

XOQ-02524: A SQL data type and an OLAP DML data type have both been specified and/or modified for cube storage. The OLAP DML cube storage data type specification will be ignored
Cause: The data type for cube storage was specified in both SQL and in OLAP DML resulting in the use of the SQL data type.

Action: Specify a supported data type in either SQL or OLAP DML format.

XOQ-02525: A mismatch exists between the measure data type "*string*" and cube storage data type "*string*"
Cause: Measure storage was defined as SHARED and the data type for the measure was not an exact match to that of the cube storage type. This may result in data inconsistencies.

Action: Specify an exact match between the measure data type and the cube storage data type when measure storage is SHARED. Either set the IsLevelUnique flag to false, or load unique values into the attribute.

XOQ-02526: UniqueKey attribute "*string*" has an invalid populate lineage flag set.
Cause: The attribute had the populate lineage flag set. This flag does not need to be set on a unique key attribute.

Action: Optionally remove this flag on the attribute or do not make the attribute a unique key.

XOQ-02527: Hierarchy levels "*string*" and "*string*" contain different unique key attributes that are mapped to the same expression.
Cause: Two different unique key attributes on different levels of a primary dimension were mapped to the same expression. Such mappings are not allowed if the dimension is part of a query-rewrite-enabled cube.

Action: Uniquely map the unique key attributes or create the cube without a REWRITE materialized view.

XOQ-02528: The derived measure "*string*" cannot be designated as the default measure for the cube.
Cause: A derived measure was designated as the default measure on a cube that has materialized views.

Action: To designate a default measure for the cube, choose a measure that is not derived, or remove the materialized views from the cube.

XOQ-02529: The base attribute "*string*" of dimension "*string*" cannot be given an NVL expression because it is indexed.
Cause: An NVL expression was specified for a base attribute that is indexed. An attribute is indexed if it is explicitly marked as indexed by the user, or if it is a unique key attribute, or if the populate lineage flag is set.

Action: Remove the NVL expression or change the attribute so that it is not indexed, is not a unique key, and does not have the populate lineage flag set.

XOQ-02530: A maintain dimension command cannot be specified as part of a default build specification or named build specification.
Cause: Either a named build specification or the default build specification for a cube or dimension specified a maintain dimension command.

Action: Remove the maintain dimension command from the default build specification or named build specification.

XOQ-02531: The sparse type must be COMPRESSED or SPARSE when a secondary partition level is specified.
Cause: A secondary partition level was specified for the AWCubeOrganization when its sparse type was not COMPRESSED or SPARSE.

Action: Set the sparse type to COMPRESSED or SPARSE on the AWCubeOrganization, or remove all secondary partition levels.

XOQ-02532: cannot specify a secondary partition level without also specifying a (primary) partition level.
Cause: A secondary partition level was specified for an AWCubeOrganization that had no (primary) partition level.

Action: Specify a (primary) partition level before specifying additional secondary partition levels.

XOQ-02533: The cube dimensionality map has neither a join condition nor an expression.
Cause: Neither a join condition nor an expression were specified for the CubeDimensionalityMap.

Action: Specify either a join condition, an expression, or both on the cube dimensionality map.

XOQ-02534: The data type "*string*" of the base attribute or base measure "*string*" is different from the mapped expression "*string*".
Cause: Either the base attribute or base measure with the mapped expression was set to an inconsistent data type, or it was mapped to an expression of a different data type from its fixed data type.

Action: When changing a mapped expression for a base attribute or base measure, ensure that the expression has the same data type; otherwise, set the data type of the base attribute or base measure to NULL first. When a base attribute or a base measure has an existing mapped expression, do not set it to a different data type.

XOQ-02535: The view name "*string*" defined on the object "*string*" is not unique.
Cause: The user-defined view name was already in use.

Action: Ensure that all user-defined view names are unique.

XOQ-02537: The procedure is not supported for the version of the analytic workspace of the cube or dimension.
Cause: The version of the analytic workspace of the cube or dimension was earlier than 12c.

Action: Do not use the procedure for the objects in the current analytic workspace.

XOQ-02538: Materialized views cannot be created for the cube dimension because it has no level hierarchies.
Cause: The cube dimension had no level hierarchies.

Action: Do not create a materialized view for the cube dimension.

XOQ-02539: Specified rewrite type is invalid.
Cause: An invalid rewrite type was specified for creating a materialized view.

Action: Specify a valid rewrite type.

XOQ-02540: Specified refresh type is invalid.
Cause: An invalid refresh type was specified for creating a materialized view.

Action: Specify a valid refresh type.

XOQ-02541: Specified USING constraints clause is invalid.
Cause: An invalid USING constraints clause was specified for creating a materialized view.

Action: Specify a valid USING constraints clause.

XOQ-02542: mismatch between MVOption and RefreshType
Cause: MVOption was set to COMPLETE_REFRESH, but RefreshType was set to FAST.

Action: Either set MVOption to FAST_REFRESH or REWRITE, or set RefreshType to COMPLETE or FORCE.

XOQ-02543: Specified version for the analytic workspace "*string*" is invalid.
Cause: An invalid version was specified for creating an analytic workspace.

Action: Specify a valid version.

XOQ-02544: The cube or dimension "*string*" has no analytic workspace organization.
Cause: No analytic workspace organization was specified for the cube or dimension.

Action: Specify an analytic workspace organization for the cube or dimension.

XOQ-02545: Invalid SQLMap in the cube or dimension.
Cause: The SQLMap feature is not supported.

Action: Use supported mappings for the cube or dimension.

XOQ-02546: A dimensionality cannot be specified on a measure.
Cause: A dimensionality was specified on a measure.

Action: Specify the dimensionality on a cube.

XOQ-02547: Object "*string*" cannot be mapped to ET view *string* because this transaction is also modifying the ET view.
Cause: An object being modified was mapped to an ET (Embedded Totals) view that required an update because of changes to its owning object.

Action: If the object is mapped to the ET view of another object, then split the updates into multiple transactions. If the object is mapped to its own ET view, then either specify a unique ET view name or ensure that the mapped source name already exists and allow Oracle OLAP to create a new default name.

XOQ-02548: The derived measure expression references invalid object "*string*".
Cause: The derived measure expression referenced an invalid object.

Action: Ensure the objects referenced in the derived measure expression are valid.

XOQ-02549: The cube name or cube dimension name is missing.
Cause: No cube name or cube dimension name was specified for creating a materialized view.

Action: Specify a cube name or cube dimension name.

XOQ-02550: Cannot create "*string*" while in a branch.
Cause: The creation of a top level object within a schema was attempted in a branch.

Action: Create the top level object outside of the branch.

XOQ-02551: Invalid loop type specified for the derived measure.
Cause: The loop type specified for the derived measure was invalid.

Action: Specify either INNER, OUTER, or DENSE for the loop type of the derived measure.

XOQ-02552: Invalid metadata property value "*string*" specified.
Cause: The metadata property contained both a single value and a list value.

Action: Specify either a single value or a list value for the metadata property.

XOQ-02553: cannot rename "*string*" while in a branch
Cause: The renaming of an object was attempted in a branch.

Action: Rename the object outside of the branch or, if the object is a custom member, you may drop it and re-create it with the new name within the branch.

XOQ-02554: Dimensions "*string*" and "*string*" cannot be mapped on the leaf level to the same dimension source table "*string*" when materialized views are enabled on the cube.
Cause: Materialized views were enabled when an attempt was made to map two dimensions to the same source table. This is not allowed unless the source table is a fact table.

Action: Specify a different mapping for one of the dimensions.

XOQ-02555: The join condition on CubeDimensionalityMap "*string*" is invalid.
Cause: The join condition did not refer to the fact table and the relevant dimension table.

Action: Specify a join condition that refers to the fact table and the relevant dimension table.

XOQ-02556: The named build process does not contain a build specification.
Cause: An attempt was made to create a named build process without providing a build specification.

Action: Provide build items for the named build process.

XOQ-02557: Object cannot be dropped while it is still a dependency of another object.
Cause: An attempt was made to drop a metadata object that was referenced by another object.

Action: Remove the reference to the metadata object being dropped.

XOQ-02558: The base attribute "*string*" of dimension "*string*" cannot be given an NVL expression because it is multilingual.
Cause: An NVL expression was specified for a base attribute that is multilingual.

Action: Remove the NVL expression or change the attribute so that it is not multilingual.

XOQ-02559: Cannot create or rename the object "*string*" because the object name conflicts with a reserved keyword.
Cause: An attempt was made to use a reserved name for an object.

Action: Rename the object.

XOQ-02560: Analytic workspace "*string*" referenced in "*string*" does not exist.
Cause: An attempt was made to modify an object that referenced a non-existent analytic workspace.

Action: Create the analytic workspace before referencing it.

XOQ-02561: Cube "*string*" cannot share the aggmap of "*string*" because "*string*" is not a cube in the same analytic workspace.
Cause: An attempt was made to share the aggmap of something other than a cube in the same analytic workspace.

Action: Remove the aggmap cube value or correct it to be the name of a cube in the same analytic worskpace.

XOQ-02562: Cube "*string*" cannot share the aggmap of "*string*" because "*string*" is sharing the aggmap of "*string*".
Cause: An attempt was made to share the aggmap of a cube that was itself sharing the aggmap of another cube.

Action: Modify or remove the shared aggmap property of at least one of the first two cubes.

XOQ-02563: Cannot rename "*string*" because the object is not existent.
Cause: An attempt was made to rename a nonexistent object in a branch.

Action: Create the object with a new name.
